INTRODUCTION

BY THE VERY REV. C. A. ALINGTON, D.D.,

Dean of Durham, late Headmaster of Eton.

TO attempt to "introduce" an Encyclopædia is a formidable task, but at least it cannot be thought to suggest a claim to encyclopædic knowledge on the part of the writer. On the contrary it marks him out at once from those few but fortunate people who have no need to consult books of reference or can dispense with a dictionary. In these days there can be few indeed who feel able without some assistance to discuss intelligently the vast variety of subjects which confront the average man and are presented for his consideration in our more responsible newspapers. Our memories, even the best of them, are very untrustworthy and very curiously specialised; some of us can remember pages of poetry, but have no secure grasp of fact; some with a wonderful memory for figures fail hopelessly to remember names, and many who love history have to resort to the humiliation of memorising formulæ before they can recall a date; most of us would have to confess that we deserve the gloomy criticism of the great Lord Halifax, "Some Men's Memory is like a Box, where a Man should mingle his Jewels with his old Shoes."

To all these and to many similar classes, this Encyclopædia offers a welcome support; it saves us from having to burden our memories with what they instinctively reject, and it brings before us much new knowledge which we have had no opportunity of acquiring. It is, by definition, "a literary work containing extensive information on all branches of knowledge," and, so far as my researches have allowed me to judge, it well deserves its title. The French Encyclopædists, with whom the word is most frequently associated, confined their attention to "*Les Arts, les Sciences et les Métiers*"; they would never have introduced you, for instance, to the Waterboatman whose acquaintance you will make in these pages probably for the first time. Again, they had a propagandist purpose before them; this Encyclopædia, on the other hand, confines itself to telling you, for example, that the Duke of Albemarle restored Charles II., and leaves you to form your own conclusions whether he was right in doing so.

There can be no doubt that a sound knowledge of fact must be the basis of all profitable discussion, and that we all need the power of checking not only the statements of our opponents, but also our own. A respect for accuracy, whether in the use of words or

PREFACE

“**R**EADING maketh a full man” Modern civilisation does not permit of the leisurely acquisition of knowledge that was for Bacon the *summum bonum* of life, yet its very complexity demands an all-round acquaintance with many subjects unnecessary in a simpler age. For this a compact book of reference is indispensable, and the *New Standard Encyclopædia* seeks to meet this need.

Its references cover a wide field. In biography, history and mythology it reaches far back into the past; in geography, science, politics and sociology it gives the up-to-date information required for an understanding of the modern world. In literature it touches both past and present; information about ancient writers is to be found side by side with that concerning living authors, and its scope is widened by its supplements. Copious cross-references link up the various aspects of connected subjects.

A practical feature is the space devoted to the needs of everyday life; medical entries, instructions regarding first-aid in the home, explanation of the commoner legal terms, and authoritative information about careers are all included. The lighter side of life also finds its appropriate place. The competition devotee, the wireless enthusiast and the sportsman will all find useful information both in the text and in the supplements.

Great care has been taken to ensure ease and rapidity of reference. Main entries stand out in bold clear type; subsidiary and connected meanings are emphasised, and special attention has been paid to the selection of a type for the text which can be studied at length without strain to the eyes, allowing at the same time the maximum amount of information to be contained in a book of handy size.

Rigid accuracy in the facts given and a true representation of the latest modern thought have been the first considerations. Every subject has been newly written and critically examined by experts, the professional institutions and societies have been widely consulted, and particular attention has been paid to the new knowledge not yet to be found in works of reference. In short, every effort has been made to provide an encyclopædia suitable for constant use in the home, school and business.

THE NEW STANDARD ENCYCLOPÆDIA

AACHEN German name for the old city more generally called Aix-la-Chapelle (q v)

Aal Native name for Indian shrubs of the madder family, *morinda citrifolia*, and *morinda tinctoria*. It is also used for the red dye obtained from their roots. A tree of the terebinth family grown in the Molucca Islands is called the aal. It has an aromatic bark which is used in seasoning food.

Aaland (or Aland). Group of islands, about 300 in number, at the entrance to the Gulf of Bothnia. They cover about 551 sq. m. and have (1930), 27,375 inhabitants, chiefly fishermen and farmers. Mariehamn is the capital and Aaland the largest island. For long the islands belonged to Sweden and the people are mainly Swedes. In 1809 they were transferred to Russia and in 1856, just after the Crimean War, Britain, France and Russia agreed that they must not be fortified. During the World War the Russians erected forts, the Swedes and Finns objected and they and the Germans sent soldiers there. In 1918 the people, by vote, asked to be made part of Sweden, but the Peace Conference decided that the islands should be under the League of Nations. This rule lasted until 1921 when they were given to Finland, to whom they now belong.

Aardvark Wild animal. It lives mainly underground, has a snout like a pig, large ears and a thick tail. As it feeds on ants it is sometimes called the ant bear. It is found in Africa, and the Dutch name means "ground pig."

Aardwolf Wild animal. It is found in parts of Africa, chiefly the south, and its Dutch name means "ground wolf." It rather resembles the hyena. Its grey coat is striped with black, it has a bushy tail, and it feeds chiefly on ants and carrion.

Aarhus City of Denmark. It stands on the east coast of Jutland, 110 m. from Copenhagen. There is a good deal of shipping, as much of Denmark's produce is sent from here to Great Britain and elsewhere. Pop. (1930), 81,279.

Aaron Elder brother of Moses. High priest of the Jews. He was as-

sociated with Moses in the work of leading the Israelites out of Egypt, where he acted as their spokesman. When they were in the wilderness Aaron made the golden calf for the people to worship and later rebelled against his brother. Both were forbidden, for disobedience, to enter the Promised Land, and Aaron died on Mount Hor. When the people murmured against Aaron (Num. xvii) his rod, taken from an almond tree, is said to have budded as a sign that he was the rightful high priest. An ornament in architecture is called on this account Aaron's Rod, and this is also one name of a plant, the common mullein.

The plants known as St. John's Wort and Mother of Thousands are sometimes called Aaron's Beard.

Abaco Two islands of the Bahamas, Great and Little Abaco. The former is also called Lucaya. Both are British possessions. Together they cover 880 sq. m. and have about 4000 inhabitants.

Abacus Instrument once used for making calculations. It consists of an oblong wooden frame with several wires stretched across it. On each of these are ten beads, five one colour and five another. By moving these beads about, children can learn the elements of arithmetic. Similar articles are used in China, Russia and other parts of the world. In some examples grooves and counters are used instead of beads and wires. The abacus of the Romans was a board covered with sand in which figures could be traced.

Abalone Sea molluscs of the family *halotidae*. The form of the shell, which bears a resemblance to the ear of a quadruped, has given the name sea ears to this group. The genus *halotis* has a shell of nacreous composition which presents beautiful iridescent hues when polished. It is used for button making and other commercial purposes. The flesh is dried and used as food in some parts of the East.

Abana River of Damascus. Mentioned by Naaman, the leper (II Kings v). It is thought to be the modern Barada. It flows across the plain of Damascus to lose itself in the desert beyond. By cutting canals it has been utilised to make the soil around Damascus very fertile.

more severe if the person abducted is the owner of property or the heiress to property. Special penalties are inflicted upon those who abduct girls under 18

Abdul Hamid Two sultans of Turkey. Abdul Hamid I reigned from 1773 to 1789. Abdul Hamid II, born Sept. 22, 1842, began to rule in 1876. Turkey was in dreadful disorder, and in his reign she lost much territory, but the Sultan himself was very clever in his dealings with Great Britain and other countries, who rarely got the better of him. The massacres of the Armenians made him known as the Great Assassin and Abdul the Damned, but he went on his way undisturbed until a revolt broke out in 1909. He was then deposed and was a prisoner until he died in Constantinople, Feb. 11, 1918.

Abd-ur-Rahman Name of several Arab rulers. Three of them were Caliphs of Cordova between 786 and 981. An earlier one led a vast horde of Saracens who were routed by Charles Martel (Charles the Hammer), at Tours in 732. Later an Abd-ur-Rahman was Sultan of Morocco, 1823-59, but the most famous was an Amir of Afghanistan. He seized the throne in 1880 and remained amir until his death, Oct. 3, 1901, during which time he won for his country an influential position.

Abecedarian Word, made of the letters A B C D, meaning "concerning the alphabet." Abecedarians were an Anabaptist sect founded in Germany in the 16th century by Nicolaus Storch. They refused to learn anything, even the A B C, their idea being that knowledge prevented the soul's close contact with the Deity. Abecedarian hymns are hymns or poems in which each verse or line commences with a letter of the alphabet in order, a, b, c, etc.

Abednego One of the three men who were thrown into the "burning fiery furnace" of Nebuchadnezzar (Daniel 1:3). His real name was Azariah.

Abel Second son of Adam and Eve. He was a shepherd and his story is told in Gen. iv. He and his brother Cain sacrificed to God. Abel's sacrifice was the more pleasing, whereupon Cain killed him.

Abel Sir Frederick Augustus. English inventor and chemist. He was born at Woolwich, July 17, 1827. In 1851 he was made Professor of Chemistry at the R.M.A., Woolwich, and in 1856 chemist to the War Office. In 1887 he became the first director of the Imperial Institute, and in 1890 President of the British Association. In 1893 he was made a baronet, and he died on Sept. 6, 1902. He invented the Abel Test for petroleum. Abel worked at finding out new explosives and with Sir James Dewar was the inventor of cordite.

Abel Robert. English cricketer, born at Rotherhithe, Nov. 30, 1859. In 1881 he first played for Surrey and for the next 20 years or more he was one of the greatest batsmen in England. In 1899 he scored 357 not out against Somerset, his highest score. He made over 70 centuries and between 1895 and 1902, when he was at his best, scored over 2000 runs in each season. In 1901 he scored over 3300. He played for England several times, and two of his sons played for Surrey.

Abelard Pierre. French scholar, and the lover of Heloise. He was born in Brittany in 1079 and, after spending some years in study, began to lecture in Paris.

Like other thinkers he was accused of heresy, and this interfered with his work. He left Paris and after a time became head of an abbey in Brittany. In Paris one of his pupils was the beautiful Heloise. The two were secretly married, whereupon the lady's uncle, Fulbert, thinking she had been seduced, caused Abelard to be mutilated. He died April 21, 1142, but Heloise, who became a nun at the time of the separation, lived until 1164. The letters between the lovers have been published. In 1877 they were buried together in Père Lachaise, Paris.

Abele Another name of the white poplar (*populus alba*). This is a British tree from 60 to 100 feet in height. It has a smooth grey bark, and the leaves are smooth on the surface and covered underneath with a soft, white cottony substance. The wood is used for flooring and box making. See POPLAR.

Abelia Evergreen shrub. A hardy plant, it can be grown out of doors in Great Britain. A sheltered position and a good deal of sun are desirable. They can be grown from cuttings taken in October.

Abeokuta Town of Nigeria. It is on the Ogun River, 60 m from Lagos. It has a good deal of trade and is the capital of the district of Egba.

Aberavon District of Glamorganshire, once a separate borough. In 1921 it was made part of the new borough of Port Talbot (q.v.).

Abercarn Town and urban district of Monmouthshire, 10 m from Newport on the G.W. Rly., and is chiefly a coal mining centre. Pop. (1931) 20,554.

Aberconway Lord. British iron-master Charles Benjamin Bright M'Laren, a nephew of John Bright, and a son of Duncan M'Laren, M.P., was born May 12, 1850, in Edinburgh, became a barrister, but soon adopted a business career, and in a few years was at the head of some very important concerns, being one of the leaders of the coal, iron and steel industries. He was a Liberal M.P., with intervals from 1880 to 1910, and he was made a baron in 1911, taking the title of Aberconway. He had been a baronet since 1902. Aberconway's younger son, Francis M'Laren, M.P., was killed while flying, Aug. 20, 1917.

Abercorn Duke of, Irish title held by the family of Hamilton. In 1603 James Hamilton, a Scottish nobleman, was made a baron. In 1606 he was made an earl and in 1790 his descendant became a marquess. The family settled in Ireland, and in 1868 James Hamilton, the 2nd marquess, was made a duke. He was Lord Lieutenant of Ireland. His family is described by Lord Beaconsfield in *Lothair*. The duke died Oct. 31, 1885.

James, the 2nd duke (1838-1913), was chairman of the British South African Co. James, the 3rd duke, was made Governor-General of Northern Ireland in 1922. His eldest son is called the Marquess of Hamilton.

Two places in Rhodesia are named Abercorn after the 2nd duke. One is a trading station about 10 m from Lake Tanganyika, where, on Nov. 14, 1918, the last Germans in arms in Africa surrendered. The other is 90 m from Salisbury.

Aberdare Market town and urban district in Glamorganshire. It is on the G.W. Rly., 4 m from Merthyr Tydfil, and 167½ m from London. Pop. (1931) 48,761.

Abano Italian watering place called in full Abano Bagni. It is 5 m from Padua and nearly 30 from Venice. It stands at the foot of the Euganean Hills. Its hot springs, famous in Roman times, are efficacious for persons suffering from fractures and other injuries, and its mud baths are recommended for neuralgia and the like.

Abattoir Place where animals are slaughtered for food. They are found in most large cities on both sides of the Atlantic. In Britain the abattoirs are divided into booths, but in America the killing is done in one large apartment. In addition to places for killing, an abattoir should have rooms for hanging the meat, for offal and condemned meat, as well as chambers for cold storage. In 1929 a new abattoir, one of the largest in the world, was erected at Liverpool.

Abba Aramaic word meaning father. It is found in the New Testament where it is used for God. In the Coptic Church it is a title of respect given to bishops.

Abbas Name of several Oriental rulers. Harun al-Rashid's Uncle Abbas became caliph of Baghdad in 750 and his descendants, called Abbasides, were caliphs until 1517. Another famous Abbas was Abbas the Great, shah of Persia. He became shah in 1586, took Baghdad from the Turks and won other victories.

Two rulers of Egypt were named Abbas. The first ruled from 1848 to 1854. Abbas II became khedive in 1892 and reigned until Dec., 1914, when he was deposed.

Abbess Feminine of abbot and the head of a convent or house for nuns. She is usually elected by the members of the order and has the same powers as an abbot, except that she cannot act as a priest. The title was first used in the 6th century and in the Middle Ages, especially in England and Germany, certain abbesses were very powerful. They were large land holders and took part in ecclesiastical assemblies. In Germany one or two ranked as princes. The most powerful abbess in England was the abbess of Ramsey.

Abbeville City of France. It is on the Somme, 28 miles from Amiens. It has a fine old cathedral and other old buildings. During the World War the British had hospitals and training grounds here. Pop. 21,000.

Abbey Building or set of buildings, where a community of monks or nuns resides. Its head is usually an abbot or abbess. St. Benedict was the real founder of the abbey which, in the Middle Ages, sprang up all over Christendom. Each had its cloisters round the quadrangle church, cloisters and chapter house, refectory or dining hall, kitchen, cellars and many other buildings. There was generally a guest house, as the abbots entertained travellers before inns were plentiful. In some the monks had schools for boys.

In one sense the abbey was a large country estate. The monks farmed some of the land, but other parts were let out. They did all the work themselves, growing and preparing the food, repairing the buildings and making the clothes. Each monk had his own particular duties. Some abbots kept sheep and sold the wool to traders. The abbots, chosen by the monks, were usually very rich and powerful, some of them sat in the House of Lords.

Most of the British abbey were destroyed at the Reformation, but the beautiful ruins at

Tintern, Fountains, Kirkstall, Melrose, Glastonbury and elsewhere show how large and magnificent they were. Westminster Abbey was the church of the abbey there, and the fine churches at Bath and Tewkesbury were also abbey churches. The Roman Catholics have abbays in England to day, two being at Downside, near Bath, and Ampleforth, near York. At Buckfastleigh in Devon, there is one which has been entirely built by the monks themselves.

Abbey Edwin Austin, American artist. Born in Philadelphia, April 8, 1862, he studied art, and drew for *Harper's Magazine* and other periodicals. In 1881 he came to England. His paintings soon found recognition, and he was elected A.R.A. in 1896, and R.A. in 1898. He died in Chelsea, Aug. 1, 1911. Abbey's work includes a series on the history of Pennsylvania in the Capitol at Philadelphia, a series at Boston, the official picture of the coronation of Edward VII, and "May Morning." In 1931 his house in Chelsea was bequeathed by his widow to the Royal Academy.

Abbey Theatre Dublin theatre built in 1904, which played a considerable part in the Irish dramatic renaissance. Here were produced the plays of W. B. Yeats, J. B. Synge, Lady Gregory, G. B. Shaw and others.

Abbot Word used for the head of an abbey or monastery. It is a variant of the word abba, meaning father. The French form is abbé. An abbot must be in priest's orders and at least 25 years old. In England, before the dissolution of the monasteries, some of the abbots had great power and their privileges included seats in the House of Lords.

Abbot's Bromley Village of Staffordshire, 14 m. from Stafford and 128 from London. It is famous because a mediaeval performance called the Horn Dance takes place here at the fair in July, and at the Wakes on a Monday in September.

Abbotsbury Market town of Dorset, 7 m. from Dorchester, on the G. W. Rly. There are ruins of an abbey. Here is Abbotsbury House, a seat of the earl of Ilchester, famous for its swannery and its sub-tropical gardens. Pop. 620.

Abbotsford Residence of Sir Walter Scott. It is on the River Tweed, 3 m. from Melrose, and quite near the border between England and Scotland. Sir Walter built the house and lived here until his death. Part of it is now a museum where are many Scott relics.

Abdomen Lower part of the trunk. The old name for it is the belly. It is divided into two parts: the abdomen proper containing the stomach, intestines, liver, spleen and kidneys, and the pelvis that contains the bladder and the genital organs. It is lined with a membrane called the peritoneum. To-day surgeons are able to open up the abdomen and in this way they have done some remarkable work in curing disease. All animals have abdomens, but in the lower orders there is no marked distinction between the abdomen and the chest.

Abduction Taking away a woman or child by force. In Great Britain this is a crime, provided it is done for purposes of robbery or of acting immorally. The punishment is penal servitude for not more than seven years, but the sentence can be

more severe if the person abducted is the owner of property or the helress to property. Special penalties are inflicted upon those who abduct girls under 18

Abdul Hamid Two sultans of Turkey. Abdul Hamid I reigned from 1773 to 1789 Abdul Hamid II, born Sept. 22, 1842, began to rule in 1876 Turkey was in dreadful disorder, and in his reign she lost much territory, but the Sultan himself was very clever in his dealings with Great Britain and other countries, who rarely got the better of him. The massacres of the Armenians made him known as the Great Assassin and Abdul the Damned, but he went on his way undisturbed until a revolt broke out in 1909. He was then deposed and was a prisoner until he died in Constantinople, Feb. 11, 1918

Abd-ur-Rahman Name of several Arab rulers. Three of them were Caliphs of Cordova between 786 and 961. An earlier one led a vast horde of Saracens who were routed by Charles Martel (Charles the Hammer), at Tours in 732. Later an Abd-ur-Rahman was Sultan of Morocco, 1823-59, but the most famous was an Amir of Afghanistan. He seized the throne in 1880 and remained amir until his death, Oct. 3, 1901, during which time he won for his country an influential position

Abecedarian Word, made of the letters A B C D, meaning "concerning the alphabet." Abecedarians were an Anabaptist sect founded in Germany in the 16th century by Nicolaus Storch. They refused to learn anything, even the A B C, their idea being that knowledge prevented the soul's close contact with the Deity. Abecedarian hymns are hymns or poems in which each verse or line commences with a letter of the alphabet in order, a, b, c, etc.

Abednego One of the three men who were thrown into the "burning fiery furnace" of Nebuchadnezzar (Daniel 1:3). His real name was Azariah

Abel Second son of Adam and Eve. He was a shepherd and his story is told in Gen. iv. He and his brother Cain sacrificed to God. Abel's sacrifice was the more pleasing, whereupon Cain killed him.

Abel Sir Frederick Augustus English inventor and chemist. He was born at Woolwich, July 17, 1827. In 1851 he was made Professor of Chemistry at the R.M.A., Woolwich, and in 1856 chemist to the War Office. In 1887 he became the first director of the Imperial Institute, and in 1890 President of the British Association. In 1893 he was made a baronet, and he died on Sept. 6, 1902. He invented the Abel Test for petroleum. Abel worked at finding out new explosives and with Sir James Dewar was the inventor of cordite

Abel Robert. English cricketer, born at Rotherhithe, Nov. 30, 1859. In 1881 he first played for Surrey and for the next 20 years or more he was one of the greatest batsmen in England. In 1899 he scored 357 not out against Somerset, his highest score. He made over 70 centuries and between 1895 and 1902, when he was at his best, scored over 2000 runs in each season. In 1901 he scored over 3300. He played for England several times, and two of his sons played for Surrey.

Abelard Pierre. French scholar, and the lover of Heloise. He was born in Brittany in 1079 and, after spending some years in study, began to lecture in Paris

Like other thinkers he was accused of heresy, and this interfered with his work. He left Paris and after a time became head of an abbey in Brittany. In Paris one of his pupils was the beautiful Heloise. The two were secretly married, whereupon the lady's uncle, Fulbert, thinking she had been seduced, caused Abelard to be mutilated. He died April 21, 1142, but Heloise, who became a nun at the time of the separation, lived until 1164. The letters between the lovers have been published. In 1877 they were buried together in Père Lachaise, Paris

Abele Another name of the white poplar (*populus alba*). This is a British tree from 60 to 100 feet in height. It has a smooth grey bark, and the leaves are smooth on the surface and covered underneath with a soft, white cottony substance. The wood is used for flooring and box making. See POPULAR.

Abelia Evergreen shrub. A hardy plant, it can be grown out of doors in Great Britain. A sheltered position and a good deal of sun are desirable. They can be grown from cuttings taken in October

Abeokuta Town of Nigeria. It is on the Ogun River, 60 m from Lagos. It has a good deal of trade and is the capital of the district of Egba

Aberavon District of Glamorganshire, once a separate borough. In 1921 it was made part of the new borough of Port Talbot (q.v.)

Abercarn Town and urban district of Monmouthshire, 10 m from Newport on the G.W. Rly., and is chiefly a coal mining centre. Pop. (1931) 20,554.

Aberconway Lord. British iron-master. Charles Benjamin Bright M'Laren, a nephew of John Bright, and a son of Duncan M'Laren, M.P., was born May 12, 1850, in Edinburgh, became a barrister, but soon adopted a business career, and in a few years was at the head of some very important concerns, being one of the leaders of the coal, iron and steel industries. He was a Liberal M.P., with intervals from 1880 to 1910, and he was made a baron in 1911, taking the title of Aberconway. He had been a baronet since 1902. Aberconway's younger son, Francis M'Laren, M.P., was killed while flying, Aug. 20, 1917

Abercorn Duke of Irish title held by the family of Hamilton. In 1603 James Hamilton, a Scottish nobleman, was made a baron. In 1606 he was made an earl and in 1790 his descendant became a marquess. The family settled in Ireland, and in 1868 James Hamilton, the 2nd marquess, was made a duke. He was Lord Lieutenant of Ireland. His family is described by Lord Beaconsfield in *Lothair*. The duke died Oct. 31, 1885

James, the 2nd duke (1838-1913), was chairman of the British South African Co. James, the 3rd duke, was made Governor-General of Northern Ireland in 1922. His eldest son is called the Marquess of Hamilton

Two places in Rhodesia are named Abercorn after the 2nd duke. One is a trading station about 10 m from Lake Tanganyika, where, on Nov. 14, 1918, the last Germans in arms in Africa surrendered. The other is 90 m from Salisbury

Aberdare Market town and urban district in Glamorganshire. It is on the G.W. Rly., 4 m from Merthyr Tydvil, and 167½ m. from London. Pop. (1931) 48,751.

ABANO

Abano Italian watering place called in full Abano Bagni. It is 6 m from Padua and nearly 30 from Venice. It stands at the foot of the Euganean Hills. Its hot springs, famous in Roman times, are efficacious for persons suffering from fractures and other injuries, and its mud baths are recommended for neuralgia and the like.

Abattoir Place where animals are slaughtered for food. They are found in most large cities on both sides of the Atlantic. In Britain the abattoirs are divided into booths, but in America the killing is done in one large apartment. In addition to places for hanging the meat, for offal and condemned meat, as well as chambers for cold storage. In 1929 a new abattoir, one of the largest in the world, was erected at Liverpool.

Abba Aramaic word meaning father. It is found in the New Testament where it is used for God. In the Coptic Church it is a title of respect given to bishops.

Abbas Name of several Oriental rulers caliph of Bagdad in 750 and his descendants. Another famous Abbas was caliph until 1517 shah of Persia. He became shah in 1586, took Bagdad from the Turks and won other victories.

Two rulers of Egypt were named Abbas. The first ruled from 1848 to 1864. Abbas II became khedive in 1892 and reigned until Dec., 1914, when he was deposed.

Abbess Feminine of abbot and the head of a convent or house for nuns. She is usually elected by the members of the order and has the same powers as an abbot, except that she cannot act as a priest. The title was first used in the 8th century and in the Middle Ages, especially in England and Germany, certain abbesses were very powerful. They were large land holders and took part in ecclesiastical assemblies. The most powerful two ranked as princes. The most powerful abbess in England was the abbess of Romsey.

Abbeville City of France. It is on the Somme, 28 miles from Amiens. It has a fine old cathedral and other old buildings. During the World War the British had hospitals and training grounds here. Pop 21,000.

Abbey Building or set of buildings, where a community of monks or nuns resides. Its head is usually an abbot or abbess. S. Bonedict was the real founder of the abbess which, in the Middle Ages, sprang up all over Christendom. Each had its cloisters round the quadrangle church, cloisters and chapter house, refectory or dining-hall, kitchen, cellars and many other buildings. There was generally a guest house, as the abbots entertained travellers before inns were plentiful. In some the monks had schools for boys. In one sense the monks were a large country estate. The monks farmed some of the land, but other parts were let out. They did all the work themselves, growing and preparing the food, repairing the buildings and making the clothes. Each monk had his own particular duties. Some abbots kept sheep and sold the wool to traders. The abbots chosen by the monks, were usually very rich and powerful, some of them sat in the House of Lords. Most of the British abbays were destroyed at the Reformation, but the beautiful ruins at

2

ABDUCTION

Tintern, Fountains, Kirkstall, Melrose, Glastonbury and elsewhere show how large and magnificent they were. Westminster Abbey was the church of the abbey there, and the fine churches at Bath and Tewkesbury were also abbey churches. The Roman Catholics have abbays in England to-day, two being at Downside, near Bath, and Ampleforth, near York. At Brookstall in Devon, there is one which has been entirely built by the monks themselves.

Abbey Edwin Austin American artist. Born in Philadelphia, April 8, 1852, he studied art, and drew for *Harper's Magazine* and other periodicals. In 1881 he came to England. His paintings soon found recognition, and he was elected A.R.A. in 1896, and R.A. in 1898. He died in Chelsea, Aug. 1, 1911. Abbey's work includes a series on the history of Pennsylvania in the Capitol at Philadelphia, a series at Boston, the official picture of the coronation of Edward VII., and "May Morning." In 1931 his house in Chelsea was bequeathed by his widow to the Royal Academy.

Abbey Theatre Dublin theatre built in 1904, which played a considerable part in the Irish dramatic renaissance. Here were produced the plays of W. B. Yeats, J. B. Synge, Lady Gregory, G. B. Shaw and others.

Abbot Word used for the head of an abbey or monastery. It is a variant of the word abba, meaning father. The French form is abbé. An abbot must be in priest's orders and at least 25 years old. In England, before the dissolution of the monasteries some of the abbots had great power and their privileges included seats in the House of Lords.

Abbot's Bromley Village of Staffordshire, 14 m. from Stafford and 128 from London. It is famous because a mediaeval performance called the Horn Dance takes place here at the fair in July, and at the Wakes on a Monday in September.

Abbotsbury Market town of Dorset, on the G. W. Rly. 7 m. from Dorchester. Here is Abbotsbury House, a seat of the earl of Ilchester famous for its swannery and its sub tropical gardens. Pop 620.

Abbotsford Residence of Sir Walter Scott. It is on the River Tweed, 3 m. from Melrose, and quite near the border between England and Scotland. Sir Walter built the house and lived here until his death. Part of it is now a museum where are many Scott relics.

Abdomen Lower part of the trunk. It is divided into two parts. The abdomen proper containing the liver, spleen and kidneys, and the pelvic organs the bladder and the genital organs. It is lined with a membrane called the peritoneum. To-day surgeons are able to open up the abdomen and in this way they have done some remarkable work in curing disease. All animals have abdomens, but in the lower orders there is no marked distinction between the abdomen and the chest.

Abduction Taking away a woman or child by force. In Great Britain this is a crime provided it is done for purposes of robbery or of acting immorally. The punishment is penal servitude for not more than seven years, but the sentence can be

more severe if the person abducted is the owner of property or the heiress to property. Special penalties are inflicted upon those who abduct girls under 18

Abdul Hamid Two sultans of Turkey. Abdul Hamid I reigned from 1773 to 1789 Abdul Hamid II, born Sept. 22, 1842, began to rule in 1876 Turkey was in dreadful disorder, and in his reign she lost much territory, but the Sultan himself was very clever in his dealings with Great Britain and other countries, who rarely got the better of him. The massacres of the Armenians made him known as the Great Assassin and Abdul the Damned, but he went on his way undisturbed until a revolt broke out in 1909. He was then deposed and was a prisoner until he died in Constantinople, Feb. 11, 1918

Abd-ur-Rahman Name of several Arab rulers Three of them were Caliphs of Cordova between 786 and 961 An earlier one led a vast hordo of Saracens who were routed by Charles Martel (Charles the Hammer), at Tours in 732 Later an Abd-ur-Rahman was Sultan of Morocco, 1823-59, but the most famous was an Amir of Afghanistan He seized the throne in 1880 and remained amir until his death, Oct. 3, 1901, during which time he won for his country an influential position.

Abecedarian Word, made of the letters A B C D, meaning "concerning the alphabet." Abecedarians were an Anabaptist sect founded in Germany in the 16th century by Nicolaus Storch. They refused to learn anything, even the A B C, their idea being that knowledge prevented the soul's close contact with the Deity Abecedarian hymns are hymns or poems in which each verse or line commences with a letter of the alphabet in order, a, b, c, etc.

Abednego One of the three men who were thrown into the "burning fiery furnace" of Nebuchadnezzar (Daniel 1:3) His real name was Azariah.

Abel Second son of Adam and Eve He was a shepherd and his story is told in Gen. iv He and his brother Cain sacrificed to God. Abel's sacrifice was the more pleasing, whereupon Cain killed him

Abel Sir Frederick Augustus English inventor and chemist. He was born at Woolwich, July 17, 1827. In 1851 he was made Professor of Chemistry at the R.M.A., Woolwich, and in 1856 chemist to the War Office In 1887 he became the first director of the Imperial Institute, and in 1890 President of the British Association In 1893 he was made a baronet, and he died on Sept. 6, 1902 He invented the Abel Test for petroleum. Abel worked at finding out new explosives and with Sir James Dewar was the inventor of cordite

Abel Robert. English cricketer, born at Rotherhithe, Nov. 30, 1859 In 1881 he first played for Surrey and for the next 20 years or more he was one of the greatest batsmen in England In 1899 he scored 357 not out against Somerset, his highest score He made over 70 centuries and between 1895 and 1902, when he was at his best, scored over 2000 runs in each season. In 1901 he scored over 3300 He played for England several times, and two of his sons played for Surrey

Abelard Pierre French scholar, and the lover of Heloise He was born in Brittany in 1079 and, after spending some years in study, began to lecture in Paris

Like other thinkers he was accused of heresy, and this interfered with his work. He left Paris and after a time became head of an abbey in Brittany In Paris one of his pupils was the beautiful Heloise. The two were secretly married, whereupon the lady's uncle, Fulbert, thinking she had been seduced, caused Abelard to be mutilated. He died April 21, 1142, but Heloise, who became a nun at the time of the separation, lived until 1164 The letters between the lovers have been published. In 1877 they were buried together in Père Lachaise, Paris

Abele Another name of the white poplar (*populus alba*) This is a British tree from 60 to 100 feet in height. It has a smooth grey bark, and the leaves are smooth on the surface and covered underneath with a soft, white cottony substance. The wood is used for flooring and box making See POPLAR.

Abelia Evergreen shrub A hardy plant, it can be grown out of doors in Great Britain A sheltered position and a good deal of sun are desirable They can be grown from cuttings taken in October.

Abeokuta Town of Nigeria It is on the Ogun River, 60 m. from Lagos It has a good deal of trade and is the capital of the district of Egba

Aberavon District of Glamorganshire, once a separate borough. In 1921 it was made part of the new borough of Port Talbot (qv)

Abercarn Town and urban district of Monmouthshire, 10 m. from Newport on the G. W. Rly., and is chiefly a coal mining centre Pop. (1931) 20,554

Aberconway Lord British iron-master Charles Benjamin Bright M'Laren, a nephew of John Bright, and a son of Duncan M'Laren, M.P., was born May 12, 1850, in Edinburgh, became a barrister, but soon adopted a business career, and in a few years was at the head of some very important concerns, being one of the leaders of the coal, iron and steel industries He was a Liberal M.P., with intervals from 1880 to 1910, and he was made a baron in 1911, taking the title of Aberconway He had been a baronet since 1902 Aberconway's younger son, Francis M'Laren, M.P., was killed while flying, Aug. 20, 1917

Abercorn Duke of Irish title held by the family of Hamilton. In 1603 James Hamilton, a Scottish nobleman, was made a baron In 1606 he was made an earl and in 1790 his descendant became a marquess The family settled in Ireland, and in 1868 James Hamilton, the 2nd marquess, was made a duke He was Lord Lieutenant of Ireland. His family is described by Lord Beaconsfield in *Lothair* The duke died Oct. 31, 1885

James, the 2nd duke (1838-1913), was chairman of the British South African Co. James, the 3rd duke, was made Governor-General of Northern Ireland in 1922 His eldest son is called the Marquess of Hamilton

Two places in Rhodesia are named Abercorn after the 2nd duke One is a trading station about 10 m. from Lake Tanganyika, where, on Nov. 14, 1918, the last Germans in arms in Africa surrendered. The other is 90 m. from Salisbury

Aberdare Market town and urban district in Glamorganshire It is on the G. W. Rly., 4 m. from Merthyr Tydfil, and 167½ m. from London. Pop. (1931) 48,751.

ABERDEEN

The title of Baron Aberdare was taken by Henry Austin Bruce, a landowner here, he was M.P. for Merthyr, 1852-73, and was Home Secretary 1868-73. He became a peer in 1873 and died Feb 25, 1895. The Aberdare Mts in E Africa are named after him.

Aberdeen City of Scotland and the county town of Aberdeenshire. Called the granite city, it is on the east coast of the country, round the mouths of the rivers Dee and Don. It is 112 m. from Edinburgh and 508 from London, and can be reached by the L.M.S. and L.N.E. Ry. It is an important seaport, a university town, and sends two members to Parliament. The city is the see of a Roman Catholic bishop. The chief buildings include Marischal College, King's College and other parts of the university, the Art Gallery and St. Machar's Cathedral, as a memorial to Samuel Seabury. The city crosses is nearly 250 years old. Two of the old bridges still stand. Balgownie built in the 13th century and Dee in the 16th, the latter famous for its coats of arms and inscriptions. There is a wireless station and several parks beautify the city. There is a promenade along the sea front, nearly 3 m. long. Fishing employs many of the inhabitants, and there is a large fish market. Shipbuilding yards, engineering and chemical works, and paper mills are other industries. Granite polishing is carried on. There is a large harbour and modern docks. Pop (1931) 167,259.

Aberdeen Earl of Scottish title borne first earl, George Gordon, was a lawyer and a baronet. In 1652 he was made Lord Chancellor of Scotland and Earl of Aberdeen, and he died April 20, 1720. His descendant, George Hamilton Gordon, became the 4th earl in 1801, and spent many years in politics. He helped make the peace of 1814 with France, and was Foreign Minister in 1828-30, and 1841-40, and Prime Minister, 1852-55. He died Dec. 14, 1860. His grandson John Campbell Gordon, became Marquess of Aberdeen and Temair in 1870, and in 1876 was made Lord Lieutenant of Ireland and Governor-General of Canada, 1893-98. With his wife, a daughter of the 1st Baron Tweedmouth, he wrote *W's Trica*, a book of memories and a further volume, *More Cracks with W's Trica*. The marquess owned much land in Aberdeenshire. He died in 1934, and his eldest son, Lord Haddo, became 2nd marquess.

Aberdeenshire County of Scotland. It is in the north-east, and has a long stretch of coast-line on the North Sea and its openings. It is 84 miles long and covers 1971 sq m. Aberdeen is the county town. Other places are Peterhead and Fraserburgh, on the coast, and Inverurie, Alford, Turriff and Huntly inland. With Kincardineshire it sends three members to Parliament. The railway lines are the L.M.S. and L.N.E. The county is divided into five districts, Mar, Garioch, Buchan, Formartine and Strathbogie, and the chief rivers are the Dee, Don, Ythan and Deveron. The district is famous for its associations with royalty. Here are Balmoral and Braemar around which are the royal and other deer forests. Some of the highest mountains in Scotland are herein, notably Ben Macdui (4296 ft.), and Cairn Boul (4241 ft.), two of the Grampians. The Gordons were long the great family in Aberdeenshire. Pop (1931) 300,430.

4

Aberdour Pleasure resort of Fifeshire. It stands on the Firth of Forth, 18 m. from Edinburgh, on the L.N.E. Ry. Near are the ruins of a castle, where the Earls of Morton lived. Pop 3100.

Aberdovey Pleasure resort, in Merionethshire. It is 4 m. from Dovey flows into the sea. Pop 1500.

Aberfeldy Burgh and market town of Perthshire. It stands on the Tay, 32 m. from Perth and 73 from Edinburgh, and is reached by the L.M.S. Ry. The scenery around, referred to by Burns in *The Birk of Aberfeldy*, is very beautiful, the Falls of Moness being a great attraction. Pop (1931) 1505.

Aberfoyle Village of Perthshire. It stands Glasgow, and 54 from Edinburgh on the L.N.E. Ry. In the midst of beautiful scenery, it is the scene of incidents mentioned in *Rob Roy*. There is the inn where Rob Roy met Bailie Nichol Jarvie, while the ruins of Jean Mac Alpine's Inn are just outside the village. Pop 1100.

Abergavenny Borough and market shire. It stands at the town of Monmouth, which here falls into the mouth of the G.W. Ry. Pop (1931) 8608.

The great family of Novilla, now in ruins, and in 1392 one of them took the title of Baron Abergavenny. In 1784 his descendant was made an earl, and in 1876 another descendant was made a marquess. Having sold much of its property here, the family is now chiefly associated with Sussex and Kent, where is Eridge Castle, his chief seat.

Abergele Watery place and market town of Denbighshire, 12 m. from Llandudno and 214 from London, on the L.M.S. Ry. Pop (1931) 2651.

Aberglaslyn Pass in Wales. It is near Beddgelert, on the borders of Carnarvonshire and Merionethshire, and is made by the little River Glaslyn flowing between steep rocks.

Abernethy John. English surgeon. April 3, 1764, and educated at Wolverhampton. For long he worked at St. Bartholomew's Hospital, London, and in 1814 he was made Professor of Anatomy at the Royal College of Surgeons, London. His chief work was to show that local diseases are chiefly due to digestive troubles. He died at Enfield, April 28, 1831.

Abersychan Urban district of Monmouthshire. It is 10 m. from Newport on the G.W. Ry. The chief industries are coal mining, tin and iron working. Pop (1931) 25,627.

Abertillery Town and urban district on the G.W. Ry., 16 m. from Newport. Coal miners, iron and tin workers, and their dependents form a large part of the population. Pop (1931) 31,799.

Aberystwyth Borough pleasure resort and market town of Cardiganshire. It is 210 m. from London, and can be reached by the G.W. Ry. The town has a good beach and a fine promenade along the sea front. In the neighbourhood is the Devil's Bridge and some of the most magnificent scenery in Wales. There is a small harbour. In 1872

ABERYSTWYTH

the first university college in Wales was opened here. The National Library of Wales is also in the town Pop (1931) 9474

Abeyance Period during which an estate or title has no holder. In England it is chiefly used in connection with peerages. Certain titles, when there are no sons, descend to daughters. If there is only one daughter who inherits, but if more than one the peerage goes into abeyance, as all are equally entitled to it. An abeyance is ended when only one heiress is left, or when the crown gives the title to one of the co-heiresses. Abeyance chiefly affects baronies created by writ of summons. In most other titles the patent states how the title shall descend. There is no abeyance in Scottish peerages.

Abiathar Jewish high priest. He was a son of Ahimelech, also high priest. He fled to David when his father was killed by Saul and became one of his friends. In the time of Solomon he revolted with Adonijah "so Solomon thrust out Abiathar from being priest unto the Lord" (1 Kings ii 27).

Abigail Two characters in the Bible. One was the wife of Nabal and afterwards of King David. When David was an outlaw in the wilderness of Paran and Nabal refused to feed him, he became acquainted with Abigail and after Nabal's death he married her (1 Sam. xxv.). The other Abigail was David's sister, the mother of Amasa.

Abingdon Borough of Berkshire. It is on the Thames, 6 m from Oxford, on the G. W. Rly. Clothing and carpets are made, and there is a trade in agricultural produce. As abbots' town the place grew up around an abbey, one of the richest in England, and was important in the Middle Ages, sending members to Parliament until 1885. Pop (1931) 7240.

The title of Earl of Abingdon has been held by the Bertie family since 1682. The present earl lives at Wytham Abbey, near Oxford, and his eldest son is called Lord Norreys.

Abington Frances English actress. Born in 1731, Frances Barton, as she was until her marriage, sold flowers and sang in the streets before appearing on the stage. In 1755 she appeared at the Haymarket Theatre, London, and after a few years was invited by Garrick to join him at Drury Lane. There, and later at Covent Garden, she was for over 20 years the leading actress. She played Lady Teazle when *The School for Scandal* first appeared, and her portrait was painted by Reynolds. She died in 1815.

Abishai Biblical character. A son of Zeruiah, he was a nephew of King David, who took him with him into Saul's camp where he had a chance to kill the sleeping king. Abishai's other exploits are told in 2 Samuel.

Abkhazia Soviet republic in the Caucasus. It is part of the Republic of Georgia. Sukhum is the capital.

Abner Biblical character. He was Saul's cousin and the captain of his army (1 Sam. xiv and 2 Sam. ii and iii).

Abney Park District of London. It is famous for its cemetery which was opened in 1840. It is in the borough of Stoke Newington and is named after Sir Thomas Abney.

Abo City and seaport of Finland, called by the Finns Turku. It stands on a river

near the Baltic Sea, 160 m from Helsinki. There is a good deal of shipping, and ship building is carried on. Pop (1930) 66,554.

Aborigines First inhabitants of a country. In North America the Indians are regarded as aborigines, and in New Zealand the Maoris. There are aborigines also in Australia.

The Aborigines Protection Society, now included in the Anti-Slavery Society, has done much to prevent their extinction.

Abortion Emptying of the pregnant womb. In English law it is a crime to use artificial means to expel the contents of the womb during pregnancy. Any person who assists in such an act, either by using drugs or instruments, may be charged with murder. Abortion may be caused by natural means, in which case it is popularly known as a miscarriage.

Aboukir Village of Egypt on Aboukir Bay, 10 m from Alexandria. Near are the ruins of Canopus and other remains of Egyptians and Romans. In the bay Nelson won the battle of the Nile (1794), and near the village Napoleon defeated the Turks, July 25, 1799, and Sir Ralph Abercrombie defeated the French, March 21, 1801.

Aboyne Village of Aberdeenshire, sometimes called Charleston. It is famous for its castle, a seat of the Gordons. It is 10 m from Ballater, and is on the L.N.E. Rly. Highland games are held here every year. Pop 1500.

Abracadabra Magic word, at one time used to charm away illness or danger. It was usually written out on parchment in the form of a triangle, each line being a little shorter than the one before it, and was worn round the neck.

Abraham Founder of the Jewish nation, also called Abram. He was the son of Terah and lived at Ur of the Chaldees, a Babylonian city, between 2000 and 1800 B.C. Later he moved into Canaan, taking with him his nephew Lot. Owing to famine he was for a time in Egypt, but soon he returned to Canaan and settled near Hebron. By his wife Sarah he had a son, Isaac, the ancestor of the Jews. His other sons included Ishmael, borne by another wife, Hagar. He was buried at Machpelah, where a Christian church and a mosque were built.

The incidents of Abraham's long life are found in Genesis, xi-xxv.

At one time lunatics from Bethlem Hospital, London, were allowed to go out and beg. As they came from Abraham's ward, as it was called, they were known as Abraham Men, and so were the many vagabonds who followed their example.

ABRAHAM, PLAINS OF. Heights outside the city of Quebec. Here, on Sept. 13, 1759, the British under Wolfe beat the French under Montcalm, and so won Canada. The Plains have been public ground since 1908, and on them is a monument to Wolfe and Montcalm.

Abrasive Polishing material employed in many manufacturing industries. Carborundum and emery are examples, both being used in preparing metal. A grindstone is an abrasive and so is pumice stone. Artificial abrasives are now made by electric power.

Abraxas Mystical word. It was engraved on precious stones used in rings and other ornaments. It contains seven Greek

ABRUZZI

letters which when used for numbers make up 365, supposed to be a mystic figure. It was first used by the Gnostics early in the Christian era. In the Middle Ages abraxas amulets were much worn as charms. The Abraxas Moth, sometimes called the Magpie Moth, is very harmful to small fruit trees.

Abruzzi Plural of Abruzzo and used to describe three districts in the central part of Italy. The title of Duke of the Abruzzi was given to Luigi, a cousin of the King of Italy. Born in Madrid, Jan. 28, 1873, he became famous as a mountaineer and explorer. In 1897 he ascended Mt. S. Elias, and in 1909 he went up 24,000 ft. in the Himalayas. Other feats stand to his credit, including expeditions to the North Pole. In the World War he commanded the Italian Navy.

Absalom David's favourite son. His mother was Bathsheba, and as he grew up he was noted for his beauty and his waywardness. He was exiled, so he headed a revolt and soon David was driven from Jerusalem, and Absalom took his place as king. In a battle which followed David's men won, and Absalom rode off on a mule. As he went, his hair caught on a tree and thus he was found and killed, against David's orders, by Joab (2 Sam. xviii).

Abscess Collection of pus or purulent matter formed in the body. Acute abscesses form quickly and cause great pain in so doing, cold abscesses form slowly with little or no pain, and are due to tuberculosis. Injury followed by septic germ infection may also produce an abscess.

Treatment—An Abscess of the Gum or Gumboil, causes severe pain and throbbing in the neighbourhood of the affected tooth, and a dentist should be consulted as soon as possible, since the removal of the tooth will probably be the only cure. If delay is unavoidable apply heat to relieve the pain—hot fomentations to the cheek and hold hot water in the mouth containing a mild disinfectant such as glycerine. An aspirin will also be helpful if the patient is able to take this drug.

A Painless Abscess sometimes forms at the root of a dead tooth, and is dangerous to health, since it continuously supplies germs and their poisons to the blood. In a persistent "run down" condition for which no cause can be found, it is a good plan to have the teeth X-rayed, when any such focus of infection will be revealed.

Abscess within the Ear.—Earsache accompanied by discharge, or of an unusually severe or persistent nature, should receive immediate medical attention, as an abscess may have formed and an operation may be imperative. Do not attempt any treatment other than the application of heat in the form of hot flannels or a rubber bottle to the outside of the ear.

Absinthe Liqueur containing a large proportion of alcohol. It is made from wormwood, anise, hyssop, angelica and other aromatic substances, the wormwood being the potent ingredient. It is green in colour. Much is made in Switzerland, its sale is forbidden in some countries, because of its destructive effect on mind and body if taken to excess.

Absolution Forgiveness of sins, pronounced by a priest to a penitent. In the Church of England it is pronounced by the minister at both morning and evening prayer, just after

6

ABYSSINIA

the people have said the general confession. In the Roman Catholic Church it is pronounced by the priest to the individual after confession and this practice is followed by some Anglican clergymen. The Roman Church has an office of absolution for the dead.

Absorption Sucking up of one substance by another. For instance, some light is absorbed by the air or water through which it passes and so it gradually loses strength. Gases are also absorbed, the absorption of carbon by plants being an example. Liquids as well as solids are able to absorb other substances.

Abu Arabic word for father. It is much used in the names of places. Abu Kleea and Abu Kru are in Egypt. Here on Jan. 17 and 18, 1885, a small British force going to relieve Gordon at Khartoum, was attacked by dervishes. The attack was beaten back, but the British leader, Sir Herbert Stewart, was killed. At Abu Simbel on the Nile there are some wonderful rock temples, with sculptured figures 65 ft. high, built by Rameses II. At Abu Tellul in Palestine the British defeated the Turks, July 14, 1918.

Abydos Name of two ancient cities where it is narrowest. One was on the Hellespont, just across to see Hero, and here the Persians under Xerxes crossed on a bridge of boats in 480 B.C. on their way to Greece. There was another Abydos in Egypt. On the Nile, 850 m. from Cairo, it was one of the greatest cities in the land and the burial place of many Egyptian kings. Here is the famous Table of Abydos, a list of the rulers of Egypt, carved in the stone by order of Seto I.

Abyssinia Country of Africa, its official name being Ethiopia. It is an independent state or empire. Its area is about 360,000 sq. m., or seven times that of England, and it has about 5,600,000 inhabitants. Egypt lies to the north, and to the east, but separated by a strip of Italian French and British territory, is the Red Sea. There are many mountains, especially in the north, and this makes the climate rather less hot than it would otherwise be. The numerous rivers help to feed the Nile. Lake Tsana in the north is the largest lake.

The capital is Addis Ababa, almost exactly in the centre. Other towns are Harrar Dire Dawa and Gondar. There is a railway from the capital to the Red Sea, and in 1928 the Italians agreed to allow Abyssinia to build a port on that coast. The dollar, worth about 2s., is the chief coin, but much trade is done by barter. The chief exports are coffee and skins, but rubber, sugar, cotton, bananas, oranges and other tropical fruits grow easily. In the forests, where elephants, lions and other wild animals roam, there is plenty of good hard timber such as ebony and mahogany. The people keep cattle, sheep and goats. A little gold is mined, but there are no manufactures. Very little was known about Abyssinia until modern times. At one time it consisted of three kingdoms. Tigre in the north, Amhara and Shoa. Amhara was generally the most powerful and to-day most of the people speak the Amharic language. The others, however, remained and there are now many Tigris and Shoaans in the land. Other peoples are the Gallas, who also are about half the population, and the Danakills. Most of these are Christians belonging to the Abyssinian church, a branch

of the Coptic Church from Egypt, but the Danakils are Mahommedans. There are also a number of Jews.

In 1868 a British army invaded Abyssinia, because the Emperor Thoodore, who had made himself ruler, imprisoned some British officials. Thoodore was soon defeated, and after a time, in 1889, Menelek, King of Shoa, became emperor. He made Abyssinia really independent, and there was great surprise when in 1896 his soldiers defeated an Italian army at Adowa. Menelek died in 1913, and there was a certain amount of disorder. The new ruler was deposed in 1916, and Menelek's daughter was declared empress. A regent, Ras Tafari, was appointed to govern and to succeed when she died. In 1928, after some trouble between the two, the regent was crowned king, and in 1930 emperor, under the style of Haile Silassie I. In 1923 Abyssinia joined the League of Nations.

In Oct., 1935, following a frontier dispute, Italian troops invaded Abyssinia, and a few days later war was declared. A notable incident in the 1935 operations was the fall of Adowa. The League of Nations, when peace plans fell through, imposed sanctions against Italy as the aggressor.

Acacia Name of several shrubs and trees, one being the wattle of Australia. They grow chiefly in tropical countries and are usually found on the edges of deserts. Drugs and gums are obtained from some of them. Some acacias will grow in greenhouses in England. The tiny flowers, which are grouped into globular heads, are yellow, white or red. The acacia tree which is found in British gardens is a false, not a real, acacia (*robinia*).

Academy Centre of learning. Plato lectured in a place near Athens called the Academy. This was a grove of olive and plane trees called after Acadæmus, who once owned it. Thus the word has come to be used for learned societies, schools, etc.

The most famous foreign academies are the Académie Française, founded in 1636 with its 40 members, known as the Immortals, and the Accademia della Crusca, founded in Florence in 1582. In Britain the chief academies are the Royal Academy of Arts which holds an annual exhibition of pictures at Burlington House, London, and the British Academy, for the promotion of historical, philosophical and philological studies, which was founded in 1900. Dublin has the Royal Irish Academy. The Royal Society and the Royal Society of Edinburgh are really academies. The Royal Scottish Academy of Painting, Sculpture and Architecture was founded in 1826 and incorporated in 1838. In Scotland schools are often called academies.

Acadia French name for Nova Scotia, (*qv*). It was used until the British took it in 1713. A university at Wolfville in that country is called Acadia University.

Acanthus Herb grown in Southern Europe, and sometimes seen in English gardens. There are two kinds—one smooth, the other prickly. They have very fine leaves and their design was probably copied by the Greeks when they first carved the capitals for their Corinthian columns.

Accent In pronunciation the prominence given to a certain syllable in a word. It is also used for the way in which a person speaks, as when we say a man has a French, a Cockney or Lancashire accent. An accent is also a mark used to help pronunciation.

These are not found in English, except occasionally in poetry to show that e, ed, or en are separate syllables. The French have three, the grave (˘) and the acute (˙), placed over the letter e, and the circumflex (ˆ) which shows that an s has been omitted. Spanish has an accent, the tilde (˜), which shows that n should be pronounced as ny, as in cañon. The cedilla (¸) placed under c to soften its sound, and the diæresis (¨) which shows that two vowels coming together must be pronounced separately are not really accents.

Accentor Name of a group of birds that includes the hedge sparrow, quite a different bird from the house sparrow. The Alpine Accentor lives in the mountains of Central Europe. It is a little larger than the hedge sparrow.

Acceptance Legal and business term. The acceptance of a contract makes it valid, but it must be acceptance without reservation. A bill of exchange (*qv*) is accepted when the person against whom it is drawn signs it and writes, or stamps, the word accepted across it.

Accessory Term used in English Law. There are two kinds of accessory, as a person who takes a secondary part in an offence is called. An accessory before the fact is one who, though he was absent when the crime was committed, yet assisted in some way. An accessory after the fact is one who, although he knows a crime has been committed, assists the committer of it to escape. Both accessories can be punished, though less severely than a principal.

Accident Happening or event that is without premeditation, or deliberation, something due entirely to chance. Accidents may be divided into industrial, those that happen in the course of one's employment, and non-industrial. Provided that he or she does not earn over £350 a year, every employee can obtain damages from his employer if he is injured, without negligence on his own part, while at work. The law is contained in the Workmen's Compensation Acts and the employers usually cover the risk by insuring.

Railways and other companies that carry passengers for hire are liable to pay damages if persons are killed or injured through any negligence on the part of the company's servants. Persons injured on the roads can obtain damages, if they can prove negligence, and motorists are now obliged to insure against accidents to third parties.

Some penny daily papers pay compensation to registered readers who meet with accidents, and accident insurance forms an important branch of insurance work. Accidents on railways and mines are followed by an inquiry into their causes. These are conducted by officials of the Home Office. Flying accidents are inquired into by the Air Ministry.

Accordion Small musical instrument. It was invented in Vienna in 1529. It has a keyboard and by pressing the keys the bellows force the wind on to metal reeds which sound the various notes.

Accountancy The profession of one who deals with accounts. It is an open one, that is, any person can practise accountancy in the United Kingdom without being required to hold any qualifications. He will, however, have a better chance of success if he qualifies for membership of one of the leading Institutes or Societies, which are as follows.—

ACCOUNTANCY

- (1) The Institute of Chartered Accountants of England and Wales, chief office in London
- (2) The Institutes of Chartered Accountants in Scotland, of which there are three, with offices in Edinburgh, Glasgow, and Aberdeen.
- (3) The Society of Incorporated Accountants and Auditors with its headquarters in London

Membership of (1) and (2) secures the right to the title "Chartered Accountant". In the case of (1) the distinctive letters F.C.A. and letters C.A. Members of the Society of Incorporated Accountants and Auditors use the letters F.S.A.A. and A.S.A.A. respectively, and are styled "Incorporated Accountants." Since 1919 women are admitted as members of the Society of Incorporated Accountants.

In the case of the universities of the United Kingdom of three years (reduced in the case of graduates under Articles of the Prospect of service under Articles of the Preliminary Examination in general educational subjects, unless he can produce certificates showing that he has satisfactorily passed another examination of similar character.

The Society of Incorporated Accountants and Auditors admits to its intermediate examination accountancy clerks who have passed the approved professional service. These candidates, when they have passed the Preliminary examination and have attained the age of 25, are permitted to sit for the Final examination, which may be anything from 100 to 300 guineas, according to the standing of the firm, and may even amount to 500 guineas.

The conditions of service, but since the war it has become largely the practice for a part as salary during the period of service to be repaid. The Preliminary Examination of service includes English, Mathematics, History, Geography, and two optional subjects selected from a long list, one of which must be a language. The Intermediate Examination, which is taken after half the term of service has expired, is in professional subjects including Book keeping, the Accounts of Limited Companies, Partnership and Executorship Accounts, Auditing and General Commercial Knowledge, whilst the Final Examination, which is taken two years after passing the Intermediate Examination (one year in the case of graduates) and at the termination of the above professional subjects with the addition of papers set in the Principles of the Law of Bankruptcy, Arbitration and Awards Mercantile Law, Costing and Taxation and the Principles of Banking or Economics.

The salary of a moderately successful accountant is, say, from £200 to £1000 per annum, but many are much more successful than this. It is usual after passing the examinations to serve with a firm of Accountants at an annual salary which may commence at £200 to £300 a year, whilst many very valuable mercantile posts and appointments in financial houses are open to those who can show an

8

Accountancy qualification description. (See also BUSINESS)

ACETONE

Capital of the Gold Coast Colony. It is on the coast of West Africa. There is a good deal of business in the town and from it ivory, gold dust and other products are sent to Europe. It has a wireless station and the Church of England has a bishop's house. A railway line runs to Kumasi As there is no harbour, goods are landed by lighters. Pop (1931) 59,895

Accrington Borough and market town of Lancashire. It is on the L.M.S. Rly., 20 m. from Manchester. It is one of the cotton manufacturing towns, the cotton being spun, bleached and dyed here. The town has also works where machinery is made. Pop (1931) 42,973

Accumulator

Apparatus for the storage of electrical or other forms of energy. An electrical accumulator, otherwise known as a storage battery or secondary cell, in its simplest form consists of a vessel (usually glass) containing a number of lead plates coated with red lead or litharge and placed in dilute sulphuric acid or litarge specific gravity. The cell or series of cells is then charged with an electric current. The storage capacity of the accumulator depends upon the size of the plates.

There are many kinds of storage batteries which are used in power stations and for smaller electrical installations, also portable accumulators of wireless apparatus, motor ignition and lighting, and for medical apparatus. In 1932 the jubilee of the invention of the accumulator was celebrated in London. Hydraulic Accumulators for storing water under pressure, and similar for driving steam or compressed air are substituted for especially in shipbuilding and heavy work. These accumulators usually consist of a cylinder in which works a loaded ram.

Ace

Playing card with one pip on it. In some games it ranks as the highest card, in others as the lowest. In doing it is always the lowest. An ace is a point at tennis and rackets. During the World War an airman in the French and German forces who brought down five opponents was called an ace.

Aceldama

Field purchased with the thirty pieces of silver given to Judas Iscariot for the betrayal of Christ.

Acetal

Colourless liquid. It is found in tilling a mixture of alcohol and manganese dioxide, sulphuric acid and water. The flavour of good wine is partly due to acetal. Its chemical formula is $C_4H_{10}O_2$.

Acetic acid

Acid found in the juice of certain plants. It can be made by purifying of the liquor obtained from the distillation of wood. Vinegar contains a good deal of acetic acid, from which it derives its sour taste. The strongest form is glacial acetic acid which is used to remove warts and salts called acetates which form the acid forms printing. Its chemical formula is $C_2H_4O_2$.

Acetone

Colourless volatile liquid. It is obtained by distilling wood or rather like peppermint and is used to make cordite chloroform and other substances. It is also used as a solvent for resins, fats, gun

cotton, etc., as a solvent for acetylene it is a very powerful illuminant, as it will take 24 times its volume of acetylene. Its formula is C_2H_2O .

Acetylene Gas used for lighting purposes. It is obtained by mixing calcium carbide, which is made by fusing lime and coke together in an electric furnace, with water. It gives out a white, but powerful light about 15 times stronger than ordinary gas. Acetylene generators are sometimes used to provide light for lamps on cycles, etc.

With oxygen, acetylene is used to make an oxy-acetylene flame, the hottest gas flame known. It has a temperature of 3500 degrees centigrade and is used for cutting iron and steel, and for welding metals.

Achaea One of the divisions of Greece in olden times. The name is still used for a district along the south side of the Gulf of Corinth. The Achaean League was an alliance of cities in Achaea. It was formed about 280 B.C. to resist the Macedonians, and was very powerful when Aratus was at its head. Ten cities composed it, but later Athens and many others joined. It lasted until 146 B.C. when it was destroyed by the Romans.

Achates Friend and follower of the hero Aeneas. He is always called by Virgil *fidus*, or faithful, and the phrase *fidus Achates* is proverbial for a stalwart friend or attendant.

Achelous A Greek river-god, the son of Oceanus and Tethys. The Greek river Aspropotamo was formerly called Achelous. It is 130 m long and flows south into the Ionian Sea.

Acheron River in Hades. It is referred to in classical mythology. There is actually a small river of this name in Greece and another in Italy.

Achi Baba Hill in Gallipoli. It is 600 ft high and is at the end of the peninsula. Fortified by the Turks, it was attacked several times by the British during the fighting in 1915.

Achill Largest island off the Irish coast. Also called Eagle Isle, it is a part of the County of Mayo in the Irish Free State. Achill Sound divides it from the mainland. It covers 57 sq. m., is mountainous and has about 5000 inhabitants. Dooagh is the chief place.

Achillea Group of hard, perennial plants. Some are suitable for the flower garden, others for the rock garden. They thrive in ordinary soil, produce double white flowers in summer, and spread rapidly. A sunny position suits them best. One kind (*achillea millefolium*), produces rose-coloured flowers.

Achilles Son of Peleus and Thetis and one of the greatest of the Greek heroes. His mother dipped him in the Styx to make him invulnerable, but the water did not touch his heel. He was king of the Myrmidons and went with the other Greeks to attack Troy. In the *Iliad* Homer tells of his wonderful deeds and of his quarrel with Agamemnon, after which he stayed in his tent and refused to fight. However, when his friend, Patroclus, had been killed, he went to the fight again and killed Hector. Achilles himself was killed by an arrow striking him on the heel.

The Achilles Club consists of athletes who form teams to engage in contests with public schools, etc.

Achromatism State of being achromatic or without colour. Achromatic lenses are used in telescopes and in cameras, etc., to refract light without breaking it up into colours as an ordinary prism of glass does. They are formed by two lenses, one concave and the other convex, each of a different kind of glass, usually flint and crown.

Acid Sour substance soluble in water. Acids are the opposites of alkalis. All contain hydrogen and most, but not all, contain oxygen. Those without oxygen are distinguished by *hydro*, e.g., hydrocyanic acid, and those with a high proportion of oxygen by *per*, e.g., perchloric acid. The science of measuring the amount of acid in solids or liquids is called Acidimetry.

Acis Sicilian shepherd. His sad story is told by Ovid. The son of Faunus he was loved by Galatea, so his rival, Polyphemus, killed him with a rock and the gods changed his blood into a little river.

Ackworth Town of Yorkshire. It is 4 m from Pontefract, and is famous for its school. This is chiefly for members of the Society of Friends and there John Bright was educated. It is on the L.N.E. and L.M.S. joint line. Pop. 4800.

Acland Famous English family. One of the Aclands was made a baronet in 1645, and this title came to his descendant, Thomas Dyke Acland (1787-1871) as the 10th baronet. Of his sons Thomas Dyke, the 11th baronet, was a Liberal politician. Henry Wentworth Acland, Professor of Medicine at Oxford, was made a baronet in 1890. J.B. Arundel Acland settled in New Zealand, where members of the family still live. Arthur Henry Dyke Acland (1847-1926), a Liberal politician and an authority on education, succeeded his brother as 13th baronet in 1919, and the 14th baronet was his son Francis, also a leading figure in the Liberal party. The Aclands own much land in Devon and Somerset, and their old residence is Holnicote near Taunton. They are buried in Selworthy Church.

Acle Market town of Norfolk. It is on the Bure, 11 m. from Norwich and 122 from London, and is on the L.N.E. Ry. It is a good centre for visitors to the Broads and the church is old and interesting. Pop. 1042.

Acne Skin disease. It causes small pimples to appear, especially on the face and upper parts of the body. The pimples are due to obstructions in the ducts of the sebaceous glands and the blackheads which are seen in their centres are the obstructed heads of these ducts. This, the ordinary form of acne, occurs usually in young people and is best cured by attention to the general health. A more severe form, often caused by alcohol, shows itself in the redness and inflammation of the nose.

Acolyte In the Roman Catholic Church a junior cleric. His duty is to attend on the higher clergy when they celebrate mass. They have been known since the 3rd century.

Acoma Indian village in New Mexico. It has the reputation of being the oldest inhabited place in the United States. It is 80 m from Albuquerque, and is on a rock 6000 ft above sea level. Here is a large Indian reservation.

Aconcagua Highest mountain in South America. It is an extinct volcano, in the Andes. Its height is 23,100 ft.

and it was first climbed in 1897. It is 90 m from Valparaiso on the borders of Chile and Argentina. A province of Chile is named after it, as is a river.

Aconite Flowering plant, of which there are several kinds. It is very deadly, as it contains aconitine, a most powerful poison. Minute quantities of this are sometimes given to ease toothache and other pains as it produces numbness. See MONKSHOOD.

Acoustics Science of sound. It comes from a Greek word meaning to bear. A knowledge of it explains the peculiarities of whispering galleries and the like, and is useful to architects when designing churches, theatres and other large buildings. In order that a building's acoustic properties shall be good it is necessary to prevent echoes. This can be done to some extent by putting up sounding boards, or hanging tapestries on the walls, but a better result is produced by having broken and not unbroken surfaces. A very high roof is bad for hearing. It has been proved that echoes are more noticeable in an empty building than in one full of people, as the very presence of bodies helps to break up the sounds. See SOUND.

Acre Seaport of Palestine, 80 m from Jerusalem. It was taken by the Crusaders and after Saladin had retaken it, Richard I won it again. The knights of St John held it for some years, this being why it is sometimes called St Jean d'Acre, and from 1517 until the end of the World War it was Turkish. A railway runs from here to Damascus but there is little trade and few remains of the past. Pop (1931) 7893.

Acridine Basic substance found in coal tar in association with crude anthracene. It is used as a dye stuff and also in electric snuff. Its chemical symbol is $(C_{11}H_7N)$.

Acropolis Highest part of a Greek city. It was fortified and so became the most important part of the city, for here was the citadel and often the temples. There was an acropolis at Mycenae, but the most famous was at Athens, where it was a rock 500 ft. high and inaccessible except on one side. On it were the greatest buildings of the city, including the Parthenon.

Acrostic Lines of printed or written matter, often in verse, of which the first letters taken together form a word. In a double acrostic the final letters also form a word, and a triple acrostic is sometimes seen in which the middle letters serve the same purpose.

In its modern form the acrostic is a puzzle. A proverb or rhyme gives a clue to the nights, as the words formed by the initial and final letters are called. Below these are lines each of which gives a clue to a word which begins and ends with the required letters.

Act Division of a play. For long plays, Shakespeare's being an example, were always divided into five acts, but there is now no fixed number. An act is divided into scenes.

In Great Britain an Act of Parliament is the proper name for a law. The Acts of each session are arranged in chapters and are quoted according to the year of the reign in which they were passed. For instance, the National Health Insurance Act, passed in 1928, is 18 and 19 Geo. Ch. 14, because it was passed in the eighteenth and nineteenth years of that king's

reign. The Parliaments of Canada, Australia and other parts of the Empire, have their own Acts.

An Act of God is something due to the violence of the elements, such as a storm at sea or something else for which no human being is responsible. The phrase is much used in insurance policies.

Actaeon Noted hunter in Greek mythology. He watched Artemis bathing. For this offence he was changed into a stag and chased, and killed by his own dogs.

Acting Art of representing historical or fictional characters, or scenes. The art of acting is much older than the Greeks, although from them our early ideas of it have come. It was associated with their religious rites and with the dances which were an important part of those ceremonies. At a later time plays were written for the actors to present and, disguised by masks, they declaimed the magnificent dramas of Aeschylus, Sophocles and the other great writers.

Acting flourished, too, among the Romans, one of whom, Roscius, made his name immortal. In the Middle Ages the acting of miracle plays under the leadership of the church was very popular, and then came the Elizabethan Age, which gave to acting, as to everything else, new and greater ideas. At this time and earlier there were no actresses, female parts being taken by men or boys. In England actors were obliged by law to take out a licence, otherwise they were treated as vagabonds and everywhere they were rather a despised class. They had little or no scenery to help them, as the plays were usually acted at fairs or in the yards of inns. Shakespeare's plays were often acted in this way.

In the 18th century, or perhaps a little earlier, women appeared on the stage, and acting took its modern form. This was partly due to the influence of David Garrick who, with Sarah Siddons, greatly raised the social status of actors and actresses. In the 19th century scenery became much more elaborate, theatres were built almost everywhere and plays were written in thousands. Acting was regarded as a profession with its clubs, organisations and training schools. The 20th century saw a remarkable development in stagecraft, but no advance in the quality of the acting.

Of modern English actors and actresses perhaps the greatest names are Henry Irving and Ellen Terry but many others are notable. France and Italy have also had great actors and there, as in Germany, acting has a great hold on the nation. In France, Sarr Bonnard and the older Coquelin, in Italy Eleanora Duse and Salvini are perhaps the outstanding figures. See DRAMA, THEATRE.

Actinic Rays of sunlight which produce chemical changes, on photographic plates, for instance. They are also called ultra violet (qu) because they fall in wave length beyond the violet end of the spectrum or Ripperian because they were discovered by Ripper. The actinometer is an instrument discovered by Sir John Herschel for measuring the power and properties of the sun's rays, and any variations are recorded by the actinograph which works with it.

Actinium Radio active substance. It was first found in 1899 in pitch blende where it is associated with thorium. It has the property of communicating radio activity to other bodies. It has not yet been isolated.

Actinomycosis Disease attacking cattle and sometimes men and women. It develops in the tongue or jaw where it causes a tumour which is sometimes called wooden tongue or lumpy jaw. It is due to a parasite, the "ray fungus," which is sometimes found on barley and makes its way into the animal when it is suffering from a sore. It is infectious.

Actium Headland of Greece. It was near here that one of the world's famous battles was fought, Sept. 2, 31 B.C., when Octavian, afterwards the Emperor Augustus, defeated Mark Antony and Cleopatra.

Acton Borough of Middlesex. It can be reached by the L.M.S., G.W. and District Rlys. The industries include factories for making motor cars, aircraft engines, etc., printing, dyeing works, and laundries. At one time Acton, which became a borough in 1921, was noted for its medicinal springs. Pop. (1931) 70,523.

Acton Lord English historian. John Emerich Dalberg Acton, was born at Naples, Jan. 10, 1834, his father being Sir J. F. E. Acton, an English baronet in the service of the King of Naples. He spent most of his time in studying and writing and was a Liberal M.P. from 1859-65. In 1869 he was made a baron. In 1895 he was chosen Professor of Modern History at Cambridge, and he died June 9, 1902. His famous library was presented to Cambridge University.

Acts of the Apostles Fifth book of the New Testament. It is regarded as having been written by St. Luke about A.D. 65. It relates the history of the Christian Church just after the Crucifixion and an account of the journeys and preachings of St. Paul with whom Luke was associated.

Actuary One who works out numerical calculations. These deal largely with averages and insurance charges.

Actuaries are employed by the big Insurance Companies, and also by the Government for Health Insurance and other purposes. The profession is under the control of the Institute of Actuaries in England and the Faculty of Actuaries in Scotland, the qualifying examinations of the societies entitling the successful candidate to the letters F.I.A. and F.F.A. respectively. Particulars of training and fees can be obtained from the Institute of Actuaries, Staple Inn Hall, Holborn, London, W.C.1, or the Faculty of Actuaries, 14 Queen Street, Edinburgh.

The Fellowship of the Institute of Actuaries or of the Faculty of Actuaries does not of itself entitle the holder to increased remuneration, as in most businesses payment is made for the class of work done rather than for the qualifications held. As a rule, however, an Actuary is of great use in various departments of insurance, and even if he does not obtain an official position he will hold a position of some responsibility.

As regards remuneration the salary of an Actuary, when he is the principal officer of a company, is usually between £1500 and £5000, but may, of course, be considerably more in the very largest companies.

Adalia Seaport of Turkey, on the Gulf of Adalia, a bay of the Mediterranean, 200 m. from Smyrna. It was one of the most important ports of the Levant in the Middle Ages and still does a certain amount of trade. Pop. 12,310.

Adam First man, according to the Bible story (Genesis i-v). He was the husband of Eve, and the two became the parents of the human race. Modern scholars regard the story as an allegory, and similar stories are found in the literatures of other early peoples.

Many places and things are called after Adam. A part of the larynx that may be seen bulging out in the neck is called Adam's Apple. Adam's Needle is a name given to some species of yucca, a flowering plant, not unlike the lily, that grows in the hotter parts of America. Its leaves are used as fibres for cloth, etc.

ADAM'S BRIDGE is a line of rocks and sandbanks between India and Ceylon. It is 17 m. long and at high tide is covered with water.

ADAM'S PEAK is a mountain in Ceylon. On it can be seen an impression resembling a huge foot, and here it was thought that Adam stood for many years. Others believe the mark was made by Buddha.

Adam Robert, Scottish architect. Born at Kirkcaldy in 1748, he studied architecture in Italy, where he was for eight years, and then settled in London. He built Lansdowne House in London, Osterley Park, Middlesex, Ken Wood, Hampstead, and many other residences, but more remarkable perhaps are the staircases, chimney pieces, chairs and other furniture which he designed. A room decorated and furnished by Adam cannot be surpassed for grace and beauty. Adam had three brothers, James, John and William, and the four built the part of London called the Adelphi. Robert died in London, March 3, 1792, and was buried in Westminster Abbey.

Adamant Name given to emery from Naxos. This was because of its unusual hardness, and since then anything exceptionally hard has been known as adamant.

Adamnan Irish saint. He is known because he wrote the *Life* of St. Columba. This has been translated from Latin into English and contains some valuable information about early days in Britain. He lived mainly at Iona, being abbot of the monastery there until his death, Sept. 23, 704.

Adams John, English sailor. He took part in the famous mutiny on the ship *Bounty* in the South Seas in 1789. Having married in Tahiti, he, with some others, settled on Pitcairn Island where he lived until his death in 1829. His real name was Alexander Smith.

Adams John, American president. A farmer's son, he was born in Massachusetts, Oct. 30, 1735, and became a lawyer. He came to the front during the trouble with Great Britain over the Stamp Act and had a share in the events that followed, ending with the declaration of independence and the peace treaty of 1783. He was head of the war department in Washington's cabinet and was American Minister in London 1783-88. From 1789-96 he was vice-president, and in 1796 he was elected president in succession to Washington, but in 1800 he was beaten by T. Jefferson. He died July 4, 1826.

Adams John Quincy, American president. He was born at Quincy in Massachusetts, July 11, 1767, and finished his education in Europe. From 1794 to 1802 he was in Europe, representing the U.S.A. at several capitals in turn, and from 1803 to 1809 was a senator. From 1809-14 Adams

was at St Petersburg and from 1815-17 in London. He next held the post of secretary of state under Monroe, when he was largely responsible for putting forward the Monroe doctrine, and in 1825 was chosen president. He was benten, however, in 1828, and died, Feb 23, 1848.

Adamson William. Scottish politician. Born in 1863, he worked in the coal mines of Fifeshire until 1902 when he became secretary of a trade union. In 1908 he was made general secretary of the Scottish miners, and in 1910 was elected M.P. for West Fifeshire. In 1917 he was chairman of the Labour Party in the House of Commons, and in 1924 Secretary for Scotland. He held the same post in the second Labour Government, 1929-31, but in Oct. lost his seat in Parliament.

Adana Town of Turkey, on the River Sihur, about 30 m from the Mediterranean Sea. Cotton goods, wool, wine and other commodities are sent for export to the port of Mersina. Pop 72,577.

Adaptation Modification in an animal or plant, or in any of its parts and organs, that enables it to live under the conditions that surround it. The skull of a bat has been adapted to stand great heat, and the eyes of the owl to see in the darkness. It is a very gradual process and its results only become noticeable after a long series of generations, through perhaps millions of years.

There are two theories of adaptation. Lamarck thought that animals, plants and their parts and organs became adapted to changed conditions through use or disuse or perhaps injury. These adaptations were then handed on from one generation to another. Darwin taught that only those animals and plants that adapted themselves to their conditions survived—those that did not do so died out.

Addax Kind of antelope found in the deserts of Arabia and Northern Africa. It is about three feet high and has twisted horns, sometimes nearly three feet long, and in winter grows a beautiful mane.

Adder See Viper.

Addington District of Croydon. There was a palace, once a residence of the Archbishops of Canterbury. It was built in 1772, probably on the site of the manor house of the village, and in 1808 was bought for the archbishop. In 1902 it was sold and it is now a country club with a golf course attached.

Addis Ababa Capital of Abyssinia. In a mountainous district 8000 ft. above sea level. In 1885 the Emperor Menelik made it his capital and built a palace here, previously it was only a collection of mud huts. A railway line goes from here to the Red Sea. Addis Ababa was the objective of the Italian forces in the Italo-Abyssinian War (1935). Pop 60,000.

Addiscombe Suburb of Croydon. It is notable because from 1812 to 1861 the East India Company had a college here for training officers for its army. This has now been pulled down and the district is covered with houses.

Addison Christopher. English politician. Born at Hogsthorpe, Lincolnshire, June 19, 1869, he was educated at Harrogate and in London and became a doctor. As lecturer at St Bartholomew's Hospital, professor at Sheffield, and Hunterian

Lecturer, he won a high reputation as an authority on anatomy, but soon he turned his attention to politics, and was concerned in preparing the Health Insurance Scheme. In 1910 he was elected M.P. for Hoxton as a Liberal, and in 1914 he became secretary to the Board of Education. Under Mr Lloyd George he was Minister of Munitions and Minister of Reconstruction and he was president of the Local Government Board when, in 1919, it became the Ministry of Health. Having put forward a housing scheme, he lost office in 1921, lost his seat in Parliament, and broke away from Lloyd George. He then joined the Labour Party and in 1929 was elected M.P. for the Swindon Division. In the Labour Ministry he was made secretary to the Ministry of Agriculture in 1929 and became head of the department in 1931. In Aug. he resigned office and in the following Oct. lost his seat in Parliament.

Addison Joseph. English essayist. The son of a clergyman, Rev Lancelot Addison, he was born at Milston, Wiltshire, May 1, 1672. He was educated at Lichfield, where his father became dean, at the Charterhouse, London, and at Oxford. He became a Fellow of Magdalen College where Addison's Walk is still a reminder of his residence at the university.

Having left Oxford, Addison was fortunate enough, through his friends to obtain a pension, on which he travelled in Europe for four years. He then returned to England and for the rest of his life was an active Whig politician. In 1704 he was made a commissioner of the excise and from 1708-11 was secretary to the Lord Lieutenant of Ireland, a post which he again filled in 1715. In 1717-18, he was a secretary of state. From 1710 to his death he was M.P. for Malmesbury, he also sat in the Irish Parliament. In 1710 Addison married Charlotte, the widowed Countess of Warwick. He died in London, June 17, 1719, and was buried in Westminster Abbey.

Addison wrote Latin verses at Oxford, in 1704 a poem on Blenheim and later several plays, only one of which, *Cato*, was a real success. But his name lives in his essays, which show him as one of the great masters of English prose. They appeared chiefly in the *Spectator*, founded by himself and his friend, Richard Steele, and the *Tatler*. Addison created the character of Sir Roger de Coverley.

Addison's Disease Disease of the suprarenal glands situated on top of the kidneys. Named after Thomas Addison, the Guy's Hospital physician (1793-1860) who first described it, this is usually associated with consumption. Its signs are a general feeling of weakness, then irritability of the stomach and feebleness of the heart. The skin becomes brownish and the sufferer thin and listless, as in anaemia. It is rarely cured, though in recent years the administration of suprarenal extract has been attended with hopeful results.

Addlestone Town of Surrey. It is reached by the S. Ry. Its industries include motor car, printing and leather dressing works. It is in the parish of Chertsey and a suburb of Weybridge. Pop 8000.

Address In Parliament, thanks sent to the king by each house at the opening of each session for his speech. The custom is for two private members to move and second the Address and in the debate that

follows the opponents of the Government can call attention to its failures and mistakes. They usually do this by proposing an amendment to the Address. If the House of Commons agrees to an amendment to the Address, as it did in 1924, the Government must resign.

Addressograph Machine used for addressing envelopes, wrappers, etc. Each address is engraved on a plate. The plates are fed into the machine one by one and after the addresses have been printed are returned to their drawers.

Adelaide Capital of South Australia. It is eight miles from the sea, where is its port, Port Adelaide. The river Torrens, which has been made into a lake runs through it. The principal buildings are the Parliament House, and those used by the Government, the city hall and two cathedrals, one Roman Catholic and the other Church of England. The city is laid out in modern style, with wide streets and many parks and other open spaces. Here are the headquarters of the important Bank of Adelaide founded in 1885. The university was founded in 1874.

As the business centre of the state Adelaide has a large trade in wheat, fruit, wool, wine and copper, and is an important railway centre. Its market for mining shares is notable. Pop (1931) 324,337.

Adelaide English queen, the wife of William IV. She was born in 1792, being the daughter of the duke of Saxe-Coburg-Meiningen. In 1818 she was married to William, then duke of Clarence, but the pair had no children. She was queen for seven years and queen dowager for twelve, but was never popular. Adelaide died at Bentlev Priory, near Stanmore, Middlesex, Dec 2, 1849. A street in London was named after her, and in this way Adelaide House, the great building near London Bridge, got its name.

Adelboden Health and pleasure resort in Switzerland. It is in the canton of Berno, over 4000 feet high, and is beautifully placed amid the mountains. The mineral springs are good for certain complaints, and winter sports are held here.

Adelphi District in London. It was laid out by Robert Adam and his brothers and is named from *adelphos*, the Greek for brother. It is between the Strand and the Thames, and its chief buildings overlook the river. It is now (1936) being pulled down. The Adelphi Theatre is in the Strand, just outside the Adelphi proper.

Aden Town and territory of Asia, both British possessions. The town stands on a little peninsula in Arabia, just at the entrance to the Red Sea, and is chiefly used as a coaling and calling station by ships going to and from the East by the Suez Canal. It has a good harbour and facilities for loading the coal and handling the goods that come from East Africa to be transhipped here. Otherwise the chief industry is obtaining salt from the sea water. The settlement, which consists of the town, the surrounding district and the island of Perim, covers 75 sq miles and has (1931) 48,338 inhabitants.

The protectorate, which is on the mainland of Arabia, covers about 42,000 sq miles and is governed from India. A railway runs from Aden into the interior. Aden belonged to the Turks and then to an Arab tribe until 1839, when Great Britain took it as the Arabs there were doing great damage to her shipping. It

became of great importance with the opening of the Suez Canal and in 1905 the boundaries of the Protectorate were marked out. There was fighting here during the Great War and part of it, including Lahaj, the chief town after Aden, was taken by the Turks, who did not restore it until the peace of 1918. In 1932 the Protectorate was separated from Bombay and placed under the direct control of the Government of India.

The Gulf of Aden is a branch of the Indian Ocean leading up to the entrance to the Red Sea.

Adenoids Excessive growths of lymphoid tissue at the back of the nose which interfere with respiration, and also cause general ill-health, should be suspected in children who habitually breathe through the mouth, who snore, who are deaf, or who suffer from recurrent attacks of nasal or bronchial catarrh.

The best informed opinion of to-day holds that most cases of adenoids are related to rickets and are due above all other causes to vitamin deficiencies in the diet. Adenoids have to be removed by an operation, which cannot generally be performed under five years.

Adige River of Italy. It rises in the Tirol and is about 250 miles long. It enters the Adriatic near Chioggia, making a joint delta with the Po. Near the mouth it has been canalised and linked with the Po. Verona and other towns stand on it.

Adipocere Curious substance. It is formed by allowing animal fat, such as butter, to decompose, when it becomes hard and rather like wax. This is done by burying it in damp earth or in water, or it may be done accidentally. In England the decomposition takes about twelve months. In warmer countries the change is more rapid.

Adirondacks Mountains in the state of New York. They lie between Lake Champlain and the S. Lawrence and are a very beautiful stretch of country. The highest is Mt. Marcy, 5341 ft. There are many small lakes in the district and the extensive forests make it a popular holiday resort. Part of the district is a state reserve, covering some 4000 sq m.

Adjaria Soviet republic in the Caucasus, and part of the larger Soviet republic of Georgia. The capital is Batumi.

Adjudication In English law word used for the act of declaring a man a bankrupt. It can only be done in a bankruptcy court, which for this purpose is usually the county court, and the judge must be satisfied that there is good reason for taking the step. Until it is done, the debtor, however much in debt, is not legally a bankrupt. See BANKRUPTCY.

Adjutant Bird very like a stork. It is about six feet high when standing and its wings from end to end extend for 14 or 15 feet. It has a bald head and a hanging pouch and feeds on dead and decayed matter, also on small fish and snakes. Owing to its utility as a scavenger it is protected in India, where it is chiefly found, by law.

Adjutant Officer in the British army. Each battalion, cavalry regiment, battery or other unit has an adjutant who is responsible for the secretarial duties, such as keeping the rolls and records and dealing with the correspondence. He also looks after the recruits, arranges the routine work

and in general assists the commanding officer whose orders are signed by him. The adjutant is chosen from among the officers.

The Adjutant General is one of the heads of the army. He is a member of the army council and the chief of the department looking after the supply of men, medical services, etc.

Admetus Greek hero. He joined in the Calydonian boar hunt and the voyage of the Argonauts. His wife was Alcestis. When he was ill the Fates promised Apollo that Admetus should live for ever if someone else agreed to die for him. Alcestis did so, and one account says she was brought back from Hades by Hercules.

Administrator Legal term. If a person dies without a will, or does not leave an executor, it is necessary for someone to look after property left by him or her. To do this a relative, if possible the nearest, should take out letters of administration and so become the administrator. He should apply at Somerset House, London, or at a Probate Registry, if he lives in the country, and must sign a bond that he will act according to law. He can then divide up the dead person's property according to the law concerning intestate estates.

Admiral Naval officer of high rank. It means commander of the sea, and was first used about 1300. All navies have admirals and at one time the British navy had a lord high admiral. To day there are four kinds of admiral, admiral of the fleet, admiral, vice admiral and rear admiral. They are called flag officers and their rank is shown by the number of rings on the cuffs. They wear respectively four, three, two or one, with a curl attached to the last one. There are also one or two honorary admirals, such as the lord mayor of London, who is admiral of the port of London.

Admiralty Board of Department that controls the British navy. Other countries have similar bodies, but such are usually known as the ministry of marine. It came into existence in 1628 to carry out the duties of the lord high admiral. In 1831 it took over the duties till then discharged by the navy board and the commissioners for victualling and since then has been responsible for the whole work of the navy. To day the board consists of a first lord, who is a member of the Cabinet, and two other politicians, the civil lord and the financial secretary. Five sailors are on it, the first, second and third Sea lords and the deputy chief and assistant chief of the naval staff. The first lord has a salary of £4500 a year and a house, less a reduction made in 1931. The headquarters are in Whitehall, London, S.W.

Until 1875 there was a separate court of admiralty, which dealt with matters concerning ships and cargoes. This is now part of the probate, divorce and admiralty division of the High Court. Scotland and Ireland had also courts of admiralty.

Admiralty Is Group of islands to the north of New Guinea. They are governed by Australia under a mandate from the League of Nations. Manus is the largest and the inhabitants are Papuans. The islands cover 600 sq. m. and are full of coconut trees. The Dutch discovered the islands in 1616. They were a German possession from 1885 to 1914 when they were taken by an Australian force. Pop. (1930) 14,067.

Adobe Spanish word for a brick dried in the sun. Adobe bricks are made of mud with chopped straw added to it, and are much used in hot countries. The straw prevents the bricks from cracking. The bricks used in ancient Egypt were of this kind.

Adonijah Son of David. He claimed to be his father's heir. Joab and Abiathar supported him, but the old king, persuaded by Bathsheba, caused Solomon to be anointed as the next ruler. He then pardoned Adonijah, but after his death Solomon had him killed.

Adonis Greek god. The Greeks thought of him as a youth of exceptional beauty and as loved by the goddess of beauty, Aphrodite. He was killed by a wild boar at the request of the goddess.

Adoption Taking permanent charge of someone or something. In Greece and Rome persons could legally adopt the children of others and many did this in order to prevent their families from dying out. Children can be adopted in Great Britain, and there are in London at least two societies that exist to find homes for parentless and unwanted children, but until 1926 there was no law on the subject. Since 1926, however, an adopted child can be put in exactly the same position as regards name, inheritance, etc., as a natural child. The conditions are that an adoption order must be made by a judge or magistrate and that the adopter must be at least 21 years older than the adopted child. A register of adopted children is kept at Somerset House, London.

After the World War devastated towns in France and Belgium were adopted by British towns, the idea being that the adopter would help to repair the damage done.

Adowa Town of Abyssinia, also called Adua. It is the capital of the province of Tigre and a trading centre. Near here, on March 1, 1896, the Abyssinians defeated the Italians in a famous battle, for which the Italians avenged themselves by the capture of Adowa in 1935, during the Italo Abyssinian War. Pop. 5000.

Adrenalin Powerful astringent. It is used to stop bleeding, as it causes the arteries to contract. It is a brown powder with a bitter taste, obtained from the suprarenal endocrine glands situated on top of the kidneys. Its use was discovered in 1901.

Adrian Name of six popes. Adrian IV is noted as the only Englishman who has ever been pope. His name was Nicholas Breakspear and he was born at Langley in Hertfordshire. He became a monk and was head of a monastery in France, where he was made a cardinal. He was pope from 1154 until he died at Anagni, Sept. 1, 1159.

Adrianople City of Turkey called also Edirne. It stands at the union of the Maritza and the Tunja about 140 miles from Istanbul, with which it is connected by railway. It exports silk, tobacco and manufactured goods. Pop. 35,000.

The city was rebuilt about 125 by the emperor Hadrian, who renamed it after himself. Later it was taken by the Turks and from 1361 to 1463, when they got Constantinople, it was the capital of their empire. In 378, near here, the Goths defeated the Romans in a great battle, the victory being chiefly won by the Gothic horsemen. In 1913 the city was taken, after a long siege, by the Bulgarians.

and Serbians; but the Turks recovered it and have since retained possession

Adriatic Sea Branch of the Mediterranean lying between Italy and Yugo-Slavia. The western and northern sides of the Sea are Italian, the eastern side belongs to Yugo-Slavia and Albania. It covers just over 50,000 square miles and is nearly 500 m long. The chief ports are Brindisi, Ancona, Venice, Trieste, Fiume and Pola belonging to Italy, Ragusa and Cattaro belonging to Yugo-Slavia and Durazzo and Arona belonging to Albania. The western coast is unbroken, the eastern, sometimes called the Dalmatian, is lined with islands.

Adullam Name of a cave in Palestine. Here David, when threatened by Saul, took refuge and was joined by a number of discontented persons (1 Sam xvii). The Liberals who, in 1866 left their party rather than agree to parliamentary reform, were lured by John Bright to these men, and called Adullamites. Their leader was Robert Lowe, Viscount Sherbrooke.

Adult Person 21 years old and over. An adult, unlike a minor, can do as he likes as regards marriage and dealing with money, provided he does not break the law.

Adult Schools are schools where, usually on Sundays, men and women are taught. They exist in many cities and towns of Great Britain, often being conducted by members of the Society of Friends. The British Institute of Adult Education is at 39 Bedford Square, London, W.C.1.

Adulteration Mixing a substance with an inferior or impure one. In Great Britain it is illegal to adulterate food and drink, that is to mix it with something of inferior quality. For example, wheat flour can be adulterated with flour made from maize or rice, butter with margarine, jam with vegetable pulp, cream with preservatives and milk with water.

Various Acts of Parliament have been passed to stop adulteration, and inspectors are appointed by the county and borough councils to visit shops and examine the articles sold. An inspector can buy a sample of anything he thinks is adulterated and have it analysed. If the analyst finds it is adulterated the offender can be heavily fined.

Adultery Sexual intercourse by husband or wife with some other person. The offender may be quite innocent, for instance may think his or her wife or husband is dead, but it is always adultery until the marriage tie is dissolved by death or otherwise. In English law a man can obtain a divorce if his wife has been guilty of adultery, but before 1923 a wife could not obtain one for adultery alone. Since 1923, however, the sexes have been equal in this matter.

Advent The four weeks before Christmas Day, i.e. the period just before the birthday of Christ. It is reckoned from the Sunday nearest St Andrew's Day (Nov 30). The Anglican Church and the Roman Catholic Church regard Advent as the beginning of the ecclesiastical year, and as a time of solemn preparation for Christmas. The Second Advent is the expected coming of Christ and the end of the world.

Advertising Term used for the business of making known the merits of the goods or services that a trader has for sale. It is also known as publicity.

These include not only articles of food and drink, clothing and furniture, but railway, shipping and other services, banking and insurance benefits, indeed almost everything that man and woman can need. Professional rules forbid medical men, solicitors, accountants and stockbrokers from advertising; but it has extended to almost every other trade and profession.

Advertising includes notices in the newspapers, posters on the walls and in vehicles, catalogues and circulars sent by post, leaflets delivered in the streets, samples given away, window dressing, electric signs, sky writing etc.

Advertising agents are firms, many of them very large, who arrange advertising for business houses. Further, most large firms keep an advertisement manager who, with his staff, controls the firm's advertising. Advertising consultants are experts who confine themselves to giving advice about the best way of advertising.

Until 1853 a duty on newspaper advertisements retarded the growth of advertising in Great Britain. The removal of this duty helped its development, but a greater impetus came from improvements in printing which enabled illustrations to be used on a lavish scale.

By law an advertisement becomes a contract as soon as a member of the public accepts the offer made to him. The goods must be of the nature described, or the buyer can obtain damages. The law of copyright is also of interest to advertisers, whose writings and drawings are protected by it. Under the town planning acts local authorities have the power to prevent the appearance of advertisements that disfigure the landscape. Indecent advertisements are illegal in Great Britain.

Advertising clubs are The Thirtv Club, The Aldwych Club, The Regent Club, etc., and the chief association is the Advertising Association at 10 Fleet Street, London, E.C.4. The chief papers for the trade are *The Advertising World* and *The Advertiser's Weekly*. There are also international advertising organizations and world conferences are held from time to time.

ADVERTISING AS A CAREER is of comparatively recent origin, but it is of continually increasing importance, affording interesting, varied and remunerative posts for both men and women.

Such is the scope of advertising, the personal qualifications for success cannot be pinned down, but whoever would rise to the top of the tree, must have quick wits, be interested in his business, both in and out of business hours, and have the capacity to work hard. Successful advertising is based on a knowledge of marketing methods, economic conditions, and the mode of living and spending capacity of mankind, as well as on the ability to write copy and an understanding of type faces and printing processes.

The best way to enter the advertising profession is to go as a junior into an advertising agency, or into the advertising department of a manufacturer, store or newspaper. The salary paid at the outset is purely nominal, but it takes six months to a year before a junior becomes reasonably useful.

During this period of training, the junior may study for the Advertising Association's Examinations at one of the Schools of Commerce or Technical Colleges where the syllabus is taught. These comprise a Preliminary (certain examinations exempt from this), an Intermediate consisting of:

Division A

English, Psychology, Principle of Accounts or Advertising Administration

Division B

Reproduction, Media, Layout and Commercial Art, Direct Mail Advertising or Market Research

and a Final which entails an advanced knowledge of Economics, Psychology and Advertising practice in all its spheres. The Intermediate and Final can each be taken in two parts as the Examinations are held annually. These examinations are rapidly becoming the hall mark of the trained Advertising man.

Salaries in Advertising are progressive and higher than in some professions, their present tendency, however, is to fall. Senior agency positions are usually worth from £500 to £1000 per annum, or, in exceptional circumstances, higher. The advertising manager of a news paper earns from £500 to £2000 per annum according to the status and circulation of his paper. The salaries of advertising managers of Trading Companies vary according to the amount of advertising done by their firms and under their control, these range therefore, from £250 to £1500 per annum, but the higher figure is exceptional.

Advocate In Scotland a lawyer, corresponding to the barrister in England. To become one a man must join the Faculty of Advocates and pass certain examinations. No person, unless he is an advocate, can plead in the higher courts of law. The Faculty, which was founded in 1562, possessed a wonderful library, which, in 1925, became the National Library of Scotland. Its head is the dean. The library was in Parliament House, Edinburgh, until a new building was erected for it.

Advowson Right of presenting a clergyman to a living in the Church of England. Its owner is the patron of the living. He may be the king, a bishop or a private person. The patron must not take money for presenting to a living, and advowsons can only be sold under certain conditions. In 1923 a measure was passed which made the advowson incapable of sale after two vacancies from the date of the measure.

Aeacus Son of Zeus by a nymph, Aegina. The Greeks believed the god Aeacus to be particularly just. After his death, therefore, Pluto made him one of the judges of the lower world.

Aedile Magistrate in Rome. The Aediles looked after the aedes or public buildings. Two in number, they were first appointed in 494 B.C., two others were appointed in 366 B.C.

Aegean Sea Sea that lies between Greece and Asia Minor, a branch of the Mediterranean. It is about 400 m long and 170 m wide and in it are many islands. The wonderful civilisation that existed in Greece, Crete and elsewhere in that region before the time of the Greeks is usually called Aegean.

Aegina Island of Greece. About 40 sq m in area, it is in the Gulf of Aegina, an opening of the Aegean Sea, and is noted for the springs found there. On it is a small town called Aegina.

Aegir One of the Norse gods. He was the giant of the seashore. His wife was the storm goddess and his daughters the billows. The tidal wave on the Trent is called the aegir.

Aegis Originally a shield, especially one carried by Zeus and other gods. It came, therefore, to mean protection, and in this sense the word is now used.

Aegospotami River of Greece. The name means "river of the goat." Here in 405 B.C. a battle was fought between the Athenians and the Spartan navies, in which the Athenians were beaten and lost the mastery of the sea.

Aeneas Hero of Troy and the subject of Virgil's famous poem, the *Aeneid*. In 12 books this tells of his adventures. He escaped from Troy with his father Anchises and his son Ascanius and travelled to Italy, calling on the way at Carthage where he met Queen Dido. Later he married Lavinia, daughter of Latinus, King of Latium, and was regarded as the founder of the Roman state.

Aeneas Silvius Name by which Pius II was known before he became pope. See PIUS II.

Aeolus King of Aeolia, one of the Lipari islands. He was the god of the winds, which he kept shut up in a cave in the mountains. He gave his name to the Aeolian Harp. This is a box across which wires or strings are stretched. If it is placed in a favourable position the wind will produce musical notes as it blows upon them. Aeolian deposits are deposits of sand and other materials brought in by the wind.

Aeration Method by which certain foods and drinks are aerated, or charged with carbonic acid gas. Bread is treated in this way, the gas being substituted for yeast. The manufacture of aerated waters is a considerable industry. The lemonade or other drink is made from essences and then the gas is forced into it by pressure.

Aerial Wire or wires used with wireless receiving sets in order to transmit or collect the electrical waves. The wire is supported at a height above the ground and insulated from it, except for a connection to earth through the transmitter or receiver. The insulators are pieces of non-conducting material used for fastening the aerial wire to its supports. They are generally made of glass or porcelain. A condenser or inductance, either fixed or variable, is connected to the aerial circuit of a transmitter or receiver in order to tune the circuit to a particular frequency. In Great Britain a private aerial for the reception of broadcasting must not be more than 100 feet long. Improvements have made it possible to do without external aerials in certain classes of receiving sets.

Aerodrome Term used for the area devoted to the arrival and departure of aircraft and the buildings associated therewith. It may consist of a hangar and workshop, or a large group of buildings such as exist at Croydon and Le Bourget. A modern aerodrome contains landing grounds properly marked and lighted with beacons and marked hangars for the machines, workshops for their repair, store rooms, wireless apparatus, etc. When passengers and goods are landed from abroad there must also be a customs station and a bonded warehouse. Waiting and refreshment rooms are also essential, as are offices and quarters for the staff. If airships are received there must be a mooring mast.

In Great Britain all aerodromes must be licensed and inspected by the Air Ministry.

Since the Great War they have been erected all over the country. In the London area the chief aerodromes are Croydon, Heston and London, Manchester, Liverpool, Bristol, Nottingham, Blackpool and other cities and towns possess aerodromes and many others have been planned.

Aerodynamics Science concerned with the effect of air on motion, a complementary branch being aerostatics. It is of great importance to aeronautics as it examines the resistance offered by the air to bodies moving therein and the pressure exerted upon them. The results reached by experiments of various kinds are studied closely by aeroplane engineers and have much bearing upon the type of machine that is built. There is an aerodynamics department at the National Physical Laboratory, Teddington.

Aeronautics Science and practice of navigation in the air. It may be divided into two branches, one dealing with balloons and airships and the other with aeroplanes, as the principle on which each works is quite different. Balloons and airships rise and move because the air or gas within them is lighter than ordinary air, aeroplanes, on the other hand, find support through forces which produce relative motion. In many ways they are superior to airships, but they have one disadvantage, they cannot be stationary. Both use the internal combustion engine driven by petrol. The airship, being much larger than the aeroplane, can carry much greater loads.

The practice of aeronautics, which is sometimes called aviation, may be divided according to the use to which the machines are put. The most important branch is *commercial flying*, and there are now air routes over which passengers, and, to a limited extent, goods, are carried to all parts of the world. Letters are also sent by air and a regular system of air mails is in operation.

In 1932 there were in use 136,000 miles of air lines, and during the previous year 600,000 passengers and 13,000 tons of goods were carried over them. In these services about 2000 machines are employed. The chief company in Great Britain is Imperial Airways, Ltd., which has daily services to Paris and other cities and regular services to India and still farther afield.

Associated with commercial flying is the use of aircraft for photography and surveying. The exploration of the Arctic and Antarctic areas has been much helped in this way.

The second branch is *military aeronautics*. This was developed to an enormous extent during the Great War, when thousands of machines were built for active service, and to-day each of the great countries, unless forbidden to do so by treaty, maintains an air force. In Great Britain the force was at one time divided into a military and a naval section, but later both were united as the Royal Air Force (RAF). The navy, however, has its flying boats and seaplanes, as well as aircraft carriers.

The third branch is *flying as a sport*. This has a direct bearing on the scientific side of the subject, as by it engines are tested and better types evolved. To encourage this branch various prizes are offered, such as the King's Cup and the Schneider Trophy. One of its developments is the establishment of aeroplane clubs, another is the introduction of flying dazeants.

The workers employed in aeronautics may be divided into several classes. First come the engineers and scientists who experiment with engines and designs. Some of these are in the works, others at the National Physical Laboratory, while a few are professors and students at universities and colleges. Next come the builders of the machines. These may be employed by the Government in the royal aircraft factory, or by private firms, several of which are concentrated at Cowes, or in the making of engines for aircraft at Derby, Acton, or elsewhere. Another class consists of the men who actually fly the machines, pilots and observers. They must pass certain tests and obtain a certificate of competency from the Air Ministry. Some of these are members of the air force, others are private individuals either employed by an air line, or persons flying for pleasure. Finally there are the men employed at the aerodromes and landing grounds in looking after the machines and their accessories. Many of these are trained mechanics.

The possibility of flying was long present in the human mind, even before Leonardo da Vinci experimented with it in the 15th century. The first successes were with balloons and the first successful experimenters were two Frenchmen named Montgolfier. In 1783 ascents were made both in France and the United States, with passengers. These early balloons were round and were filled with hot air, or hydrogen.

The next important step was to make a balloon, elongated or cigar-shaped, instead of round. One of these was built in England in 1834, and a more successful one in France in 1852, and after various experiments a method of directing them was evolved. Power was furnished by steam, later by gas and electricity and finally by petrol, and they did good service in the Franco-German war.

In 1897 a machine of sheet aluminium over a metal framework was built, and this may be regarded as the first airship, as distinct from the balloon. It was of the rigid type, and during the next few years both it and the non-rigid type were greatly improved, the latter owing a good deal to the genius and perseverance of Santos-Dumont. The next great development of the rigid airship was the building of the first Zeppelin in 1899. These and other mammoth airships were used during the Great War and afterwards for commercial purposes, but the results have been rather disappointing. Disasters, the most notable being the loss of R101 in 1930, have been frequent.

In 1843 an Englishman named Henson flew in an aeroplane driven by a small steam engine, a successor to one built by Sir G. Cayley in 1810. Other experimenters were Otto Lilienthal, Clément Ader, Sir H. Maxim, the American Langley, and then came the brothers Wright.

In Dec. 1903, the brothers Wilbur and Orville Wright rose 852 ft. in a machine driven by a petrol engine. The possibility having been proved, progress was rapid. In 1909 Bleriot flew across the English Channel, and Henry Farman flew 118 miles in three hours. The Great War led to fresh developments, and when it ended machines capable of great speeds were in existence. In 1931 a British officer travelled in a seaplane at 403.8 m. per hour in a demonstration flight, and in 1933 Warrant Officer Agello, of the Italian Air Force, made the record air speed of 423.76 m. p. h.

The distances flown tell the same story of progress. In 1919 Sir J. Alcock and Sir A. Whittell Brown made the first aeroplane flight across the Atlantic. They took 16 hrs 12 min. In June, 1930, Kingsford Smith crossed the Atlantic, the other and more difficult way (east to west), in 32 hrs 12 min. Other notable non-stop flights were Captain Lindbergh's New York to Paris (solo), 3639 m in 33½ hrs, Miss Earhart's solo flight from Newfoundland to the Irish Coast in 13 hrs 16 min, and the 4984 m from New York to Constantinople in 49 hrs by Boardman and Poland. The greatest height to which a machine has reached is 47,349 ft (1933). Of the flights by stages the most remarkable have included Sir Alan Cobham's 28,000 m from England to Australia and back in 230 flying hours, and the feat of Amy Johnson (Mrs J. A. Mollison), who did 9980 m to Australia in 19 days. In 1933 Charles Ulm, the Australian airman, flew from Britain to Australia in the record time of 6 days 17½ hours, beating Kingsford Smith's record (made nine days previously) by 10 hours 54 minutes. In 1934 this record was smashed by Scott and Campbell Black (Gt Britain), who flew from England to Australia in 2 days 22 hours 58 minutes.

Other notable flights were the Mount Everest flight in 1933, and (also in 1933) Wiley Post's solo flight round the world in 7 days, 18 hours, 49½ minutes.

Developments were made in the types and sizes of machines. Airships attained immense proportions, sumptuous aeroplanes to carry 38 passengers were built while for special purposes the flying boat and the seaplane both developments of the aeroplane, were perfected.

In Great Britain the chief society is the Royal Aeronautical Society at 7 Albemarle Street, London, W. There is an Institute of Aeronautical Engineers at 60 Chancery Lane, London, W.C., and a paper *The Aeroplane*, is published in the interests of the science. International flying is controlled by the *Fédération Internationale Aéronautique*. See **AEROPLANE**, **AIRSHIP**, **FLYING BOAT**, **SEAPLANE** etc.

Aeroplane Popular type of flying machine. It works on the following principles. A certain thrust is necessary before it can overcome the air resistance and the minimum speed at which this is possible is the starting speed. When this speed is reached the pressure of the air underneath the wing and the suction of the air enable the plane to rise. When it is flying level the total lift of the air must be equal to the total weight of the machine and it will rise or fall according as the weight is smaller or greater than the total lift. The resistance made by the weight of the machine depends on the horse power developed by the engine.

Aeroplanes have two, four or six planes or wings and are therefore known as monoplanes, biplanes and triplanes. Triplanes are not much used. Each of the other types has its particular advantage. The monoplane offers less resistance to the air and therefore needs less horse power. The biplane is more stable and will carry the greater load. The seaplane and the flying boat are developments of the aeroplane.

The wings or planes cambered or curved like the wings of a bird, are the lifting spaces of the machine. Some are fitted with slots, a device invented by F. Handley Page to secure greater safety. A rudder, like that of a ship, and other controls are provided for the

pilot for controlling the machine. The rudder controls direction. Longitudinal control is secured by elevators placed at the pilot's rear, and lateral control by ailerons, or flaps, fixed to the main planes. Other essentials are the engine, some with many cylinders the supply of oil, the screw or propeller, called the tractor or the pusher according to its position, and the gyroscope, and other devices for keeping the machine on an even keel. The body of the aeroplane, called the fuselage, contains the compartment for the pilot and observer, and accommodation for passengers and goods.

Aeroplanes are usually made of wood which is covered with fabric and then painted with dope or varnish. Metal machines, however, are being built of duralumin.

The largest aeroplanes carry 39 passengers and a considerable load, and fly at as much as 170 m an hour, but improvements are continually being made. In 1932 a fighting biplane was built which can ascend to over 20,000 ft. and travel at over 200 m an hour. A new high speed monoplane was built in Manchester in 1933—so far the largest passenger air liner ever built. Flying boats and seaplanes carry heavier loads and seaplanes have developed much greater speeds.

Aerostatics Science of the equilibrium and pressure of the atmosphere. It is thus of the highest importance in aeronautics. A balloon, or airship, can be kept in the air if it is filled with a gas that is lighter than air provided the weight of the whole vessel is lighter than the volume of air it displaces at ground level. This means that the envelope must be light. Air weighs 16 lb per 200 cubic feet, coal gas only weighs 8 lb and hydrogen only 1 lb. Helium is slightly heavier than hydrogen. An airship filled with coal gas, hydrogen, or helium however will rise until it reaches a point where the air within it is light enough to prevent its further ascent.

Aerschot Town of Belgium. It is on the little River Demer, 22 m from Brussels. In Aug. 1914, it was entered by the Germans who did a good deal of damage before they were driven out. On Sept. 9 they captured it again and it was in their hands until Nov. 1918. Pop. 8000.

Aeschines Greek orator. Born about 389 B.C., he lived at Athens, where he was contemporary with Demosthenes. His greatest speech was the one in which he opposed the suggestion to give a golden crown to Demosthenes, who replied in the famous oration *De Corona*. He died in 314 B.C.

Aeschylus Greek dramatist. He was born in 525 B.C., at Eulis and fought in the Greek army at Marathon. He died at Gela in the island of Sicily in 456 B.C. Before Marathon Aeschylus had competed for the prizes offered at Athens for a drama and in 484 he was successful. For these prizes and on other occasions he wrote 70 tragedies, but only seven are extant. These rank with the greatest literature in the world. The seven plays are *Agamemnon*, *Choephori* and *Fumenides*, *Pro metheus Vinculus* (Bound), *The Suppliants*, *The Persians* and *The Seven against Thebes*.

Aesculapius Greek god of medicine, also called Asclepius. He showed his power by raising the dead and so aroused the anger of Zeus, who killed him with a thunderbolt. He was placed among the stars. Aesculapius, who is mentioned by Homer, may have been an actual personage.

His symbol was a staff with a serpent twisted round it.

Aesir Name for the gods and goddesses in Scandinavian mythology. They lived together in Asgard and carried on a struggle against the powers of evil. The chief of them were Thor, Balder, Frey and Loki.

Aesop Greek fabulist. He was born in Samos. Later he went to Lydia, where he was employed by Croesus. He was killed when on a visit to Delphi because his remarks had angered the priests. Aesop was renowned as a wit. The extent of his share in the collection of fables called after him is unknown. Most of them were in existence before his time, but he may have collected and added to them.

Aesthetics Theory or philosophy of taste, or of the perception of the beautiful in nature or art. Its object is to examine the ideas of beauty which have prevailed in all ages and to find out, if possible, the fundamental principles on which such ideas rest. Its first great exponents were the Greeks, especially Plato and Aristotle. Its study was revived by German thinkers in the 18th century, Lessing and Schiller among them. Since then a great deal has been written about aesthetics, the chief modern writer being Benedetto Croce.

Most authorities agree with Plato that, behind the changes due to the progress of time and the differences of race, there is in the mind of man an idea of beauty that is absolute, and exists quite apart from all considerations of time and space. One of its essentials is harmony, another is truth, fidelity to an ideal, and one of its tests is the giving of pleasure.

Aestivation Term used for the summer sleep of animals, the opposite of winter sleep, or hibernation. It seems to be confined to animals and fishes that cannot live in the dry conditions of summer. They therefore escape by finding a refuge in the ground and there sleeping. Certain fish and some kinds of tortoise do this.

Affidavit Written statement which the witness swears is true. It is much used in legal proceedings and the person who makes one must sign it and take an oath before a lawyer or magistrate that it is true. He is called the deponent. If it is not true, he can be prosecuted for perjury.

Affiliation Proceeding to fix the paternity of an illegitimate child. The father of an illegitimate child can be made to contribute towards its keep by means of an affiliation order. The mother must take out a summons against the man and show that he was the father. If the magistrates are satisfied they will make an order compelling him to pay the expenses of the confinement and a sum not exceeding 20/- a week.

Affirmation Statement used legally as a substitute for an oath. In Great Britain a person who, for religious or other reasons, does not wish to take an oath when he is giving evidence in a court of law or taking up a public position can affirm. In this case, instead of kissing the Bible after repeating the oath, he simply states that he will speak the truth, or serve the king loyally. In 1853 Quakers, who objected to oaths on religious grounds, were first allowed to affirm and in 1898 the same privilege was given to others, provided they declared that they had no religious belief, or that the taking

of oaths was contrary to their religious belief. To give false witness after making an affirmation is perjury.

Afforestation Planting bare ground with trees. It should be distinguished from forestry, which is the care of the trees. Afforestation may be undertaken to replace trees cut down or to provide a supply of timber, or to improve the climatic or aesthetic conditions of a district.

Until recently afforestation in Britain was left to private individuals. To day it is supervised by the Forestry Commission. This body has planted 205,000 acres in Great Britain, including a considerable area called Breckland on the borders of Norfolk and Suffolk, and large tracts in the Highlands of Scotland. The trees chiefly planted are spruce, larch fir, and other coniferous trees, which grow much more quickly than the oaks and elms. See FORESTRY.

Afghanistan Kingdom of Asia. It lies between Indian territories ruled by Soviet Russia and Persia and covers 245,000 sq. m., but some of its boundaries are not very clearly defined. Kabul is the capital, other places of importance are Mazar-i-Sharif, Kandahar and Herat. It is now a king who is assisted in the government by a cabinet and national council. The people belong to a number of tribes, Afghans, Durani and Uzbeks among them, and in religion are Mohammedans. They speak Pushtoo, Persian or Turkish. A system of free education has been introduced.

Afghanistan is a mountainous country, especially in the north-east where are the peaks of the Hindu Kush, some being over 24,000 ft. high. The main routes to India are passes through the mountains, the chief being the Khyber from Kabul and the Bolan from Kandahar. The chief rivers are the Amu Darya, Murghab, Hari Rud, Helmand and Kabul.

In the valleys the soil is fertile and wheat, barley, rice, millet and other crops are grown, also a good deal of fruit. Many sheep are kept and wool and skins are the chief exports. There are some minerals and a few native manufactures. The country has no railways, its trade being done by caravans, but in 1932 a line was begun from the Russian to the Indian border. The army, which has been reorganised, numbers about 72,000 men, recruited by a kind of conscription, and a small air force. The population is about 12,000,000.

Before the Christian era Afghanistan was divided into several states. Later it was conquered by the Persians and invaded by Alexander the Great. It was conquered by Turks about 980 and was afterwards part of the Mogul Empire. In 1747 Ahmed Khan took Kandahar and founded a dynasty.

In the 19th century the country came within the sphere of British interests and in 1838, to protect these, a British force entered it. Kabul was occupied and a massacre there led to a further invasion, the war lasting until 1842. In 1878 there was a second war and another massacre, but in the end the British prevailed and by treaty secured control of the country's foreign policy. From 1861 to 1901 Abdur Rahman was ameer and relations with Britain were on the whole good. In 1907, however, they concluded a treaty which relieved the tension. During the Great War the Afghans were again restless and in 1919 there was a short war with Britain. In 1921 Britain recognised the independence of Afghanistan and questions about trade and boundaries were settled. In 1929

the Amanullah Khan created a good deal of discontent by his fondness for western ideas and a civil war broke out. The ameer was deposed and a soldier, Nadir Khan, secured the throne and took the title of king.

Africa One of the world's continents. It is surrounded by the sea except where the Isthmus of Suez joins it with Asia. On the west is the Atlantic Ocean and on the east the Indian Ocean. The Mediterranean Sea is on the north and the Red Sea on the north east. It is about 5000 m from north to south and about 4000 from east to west and covers some 11,500,000 sq m. The largest island off the coast is Madagascar.

Features of the continent are its unbroken coastline, its vast deserts and its great rivers and lakes. Of the deserts the greatest is the Sahara that divides the countries of the Mediterranean region from the rest of the continent. The largest lakes are Victoria, Chad, Tanganyika, and Nyasa, but there are many others, Edward and Albert among them. The principal rivers are the Nile, Congo, Niger and Zambezi, but here again there are many others of considerable size, as the continent except for its desert areas, is well watered. Africa is not mountainous, though there are high mountains and extensive mountain ranges therein. In the north are the Atlas Mts and in the south are the tablelands that reach their highest point (10,000 ft) in the Drakensberg Mts. The highest peaks are the extinct volcanoes near the east coast, Kilimanjaro reaches 20,000 ft.

The majority of the inhabitants are negroes. Others belong to the Bushmen and Hottentot races. There are Arabs in the north and Dutch and British have settled in the south. They are divided into four language groups, Bantu, Semitic, Hamitic and Sndanic. The continent contains many wild animals, including the lion, rhinoceros and elephant, as well as antelopes and smaller beasts.

Africa is rich in mineral wealth, but much of it is untouched. Notable are the rich gold fields of the Transvaal and the copper deposits in Rhodesia. Railways and roads have been built on a considerable scale, but a link is still wanting in the line from Cairo to the Cape. The rivers and lakes are used for navigation and there are air routes across the continent.

Long an unknown continent, most of Africa is now ruled by one or other of the European powers. France has the largest share, this including Algeria, Tunis, part of Morocco, Madagascar and a vast area, chiefly desert, in central and eastern Africa. In the British Empire are the Union of South Africa and the adjacent areas, Rhodesia, northern and southern, Basutoland, Swaziland and the protectorate of Bechuanaland. Elsewhere in the continent the British possessions are the five large protectorates of Uganda, Nigeria, Nyasaland, Kenya and Somaliland, Zanzibar, Gambia, Sierra Leone, Mauritius, the Gold Coast, the Sudan and several groups of islands. Tanganyika, South-West Africa, part of Togoland and part of Cameroon are governed under mandate.

Altogether Great Britain is responsible for 4,650,000 sq m of Africa and France for rather more. The remaining area includes two independent kingdoms, Abyssinia and Egypt. Of the rest, Italy has Eritrea, Tripolitania and Cyrenaica, Portugal has Angola and Mozambique, Spain has part of Morocco, Rio de Oro and Spanish Guinea and Belgium has the Belgian Congo.

Northern Africa has shared in the civilisation of Europe and Phoenicians, Greeks and Romans made settlements therein. The rest of the continent was unknown until Portuguese navigators began to sail along the coast in the 15th century. British and other seamen followed their example and in time trading posts were established at Capetown and elsewhere. In the 18th century the Dutch made settlements in South Africa and in the 19th the interior of the country was explored. As a result claims were staked out over most of the continent by the various European powers, among them Germany, but one consequence of the Great War was to deprive her of her African colonies and to give these to other nations to rule under mandate from the League of Nations. The German Territories so treated were Kenya, formerly German East Africa, South-West Africa, Cameroon and Togoland.

Afridi Asiatic Turks living on the frontiers of India and Afghanistan. They are Pathans in race, Mahommedans in religion and speak Pushtoo. They have frequently by their raids caused trouble on the Indian frontier.

Afrikaner Bond Association formed in Cape Colony by Reverend S. J. du Toit, with the object of making South Africa a self-governing republic, and securing the predominance of the Dutch in Cape politics. Its aims were partially achieved, but its hostile attitude to Britain was modified by Rhodes.

Agadir Seaport of Morocco which came into prominence in 1911. In July the German government sent the gunboat, *Panther*, to Agadir to promise the chiefs in the district support against France. The relations between France and Germany were consequently very strained for a time, but in the end an agreement was made between them.

Agag Biblical character. He was a king of the Amalekites. Saul made him prisoner but against the divine command spared his life. Therefore he was cut in pieces by Samuel at Gilgal (1 Sam. xv).

Aga Khan Name given to the hereditary chief of the Ismailite sect of the Mahommedans. His real name was Hasan Ali Shah and he was born in 1800. He became governor general of a province in Persia, but later settled in Bombay and helped the British in their wars against the Sikhs and the Afghans. He died in 1881.

His grandson, Aga Khan III, rendered great service to Britain during the Great War and took a prominent part in the discussions about the affairs of India in 1929-31. In 1930 he won the Derby with Blenheim, and in 1935 with Bahram. Bahram also won the Two Thousand Guineas and the St. Leger in the same year.

Agamemnon Greek hero and King of Mycenae, a son of Atreus and brother of Menelaus, the husband of Helen. He led the Greeks to Troy and while there had his famous quarrel with Achilles as to who should have the captive girl Briseis. On his return home he was murdered by his false wife Clytemnestra.

Agape Love feast held in the Christian church in early times. It was held before or after the Eucharist, and one of its objects was to assist the poorer members of the church. It is referred to by St. Paul (1 Cor. xi) and in Jude. Later the feasts became scenes of greed and gluttony, so they

were condemned by the church councils and after a time they ceased to be held

In 1859 Henry James Prince formed a community at Spaxton in Somerset which he called the agapemones. It consisted of both men and women who had all things in common. T. H. Smyth Piggett succeeded Prince as head in 1899

Agar Agar Malayan name for a seaweed, also called Ceylon kloss. It is used for making jellies and soups and also as a varnish for papers. A modern use is its adoption by scientists for the preparation of bacteriological media.

Agate Variety of stone. It is a siliceous and as it is very hard is much used in the making of scientific instruments. Coloured varieties are used for ornamental stones, under the names of cornelian, onyx and others. The bands which mark the stone are due to pauses in its growth

Agatha Christian saint and martyr. She was born in Sicily and was put to death in 251. She was canonised, her day being Feb 5

Agave Large flowering plant. A native of Mexico, it has large, thick leaves, some as much as five feet long. The stem which bears an enormous group of yellow-green flowers is sometimes 40 ft. high. The agave will grow in Great Britain. The chief kinds are *Americana*, *Applanata* and *Ferdz*. The plant does not bloom until it is 20 or more years old. To this fact it owes its name of the century plant, as it was believed to take a century before it flowered. It is also called the *American Aloe*, as it resembles the true aloe

Agent In English law one who acts for another called the principal. The relations between the two are defined by the law of agency. The agent differs from a contractor and from a servant, for although, like a servant, he must obey orders, he does not act under supervision. He has power to bind his principal to the extent of his authority, but this is revoked by the principal's death or bankruptcy. The agent must be reimbursed for his expenses, and is entitled to the agreed remuneration, but he must not make any other profit out of the transaction. An agent who takes a bribe can be prosecuted for a criminal offence

Agesilaus King of Sparta. He became king in 398 B.C. when the kingdom was at the height of its power, made war on the Persians, invaded their country and won a number of battles over them. The news that some other Greek cities were attacking Sparta forced him to return to Europe and he defeated the alliance at Coronea in 394. In 371 when the Spartans were defeated by the Thebans at Leuctra, the efforts of Agesilaus saved the independence of the country. In 301 he went to Egypt to renew the war against the Persians, but his plans failed. He was drowned in 360. Xenophon and Pintarch wrote biographies of Agesilaus

Agincourt Village of France. It is about 20 m. from the coast and rather more from Boulogne. Here on Oct. 25, 1415, the English under Henry V. defeated the French. The battle lasted about three hours and the French lost heavily

Agistment Word meaning "the practice of hiring grazing for cattle." In English law the person who allows the cattle to graze on his land in return for payment

must take reasonable care of them or he will be liable for damages.

Agni The god of fire in Hindu mythology. He is represented with two faces, three legs and seven arms and is usually attended by a ram

Agnosticism Condition of not knowing. It comes from the Greek and was first used in 1869 by T. H. Huxley to denote his attitude towards certain religious questions. It expresses the ideas of a large number of people who feel that upon such great matters as the existence of a personal God and the future life all we can say is that we do not know

Agony Column Part of a newspaper devoted to advertisements of a personal kind. It refers chiefly to those on the front page of *The Times*, because at first many of them were appeals from persons who had lost friends. At present it is used for personal advertisements

Agoraphobia Nervous disease which takes the form of a fear of large spaces. In the presence of such the sufferer's heart palpitates and he or she trembles and turns cold. It is a kind of anxiety neurosis and treatment is by means of psychological investigation or psychoanalysis. The word means "fear of the market place," as the *agora* was the meeting place, or market place, of a Greek city, corresponding to the Roman *forum*

Agouti Name of a rodent found in South America and the West Indies. It belongs to the genus *Dasyprocta*. It is rather like a rabbit, except that it lacks the long ears, and it has three toes on each of the hind limbs. The animal lives in the woods and does much damage to the sugar plantations

Agra City of India. It stands on the Jumna, 120 m. from Delhi. The city is now a great commercial centre. It has a trade in grain, cotton and sugar and also a number of manufactures

Agra is historically a place of considerable interest. It was founded by Akbar the Great in 1560 and for nearly a century was the capital of the Mogul Empire. The fortress built by Akbar still stands, round it is a wall 1½ miles long and 70 ft. high. Inside is the palace of the Shah Jahan. The city has two magnificent mosques and other native buildings, as well as Government House and the colleges connected with the university of Agra founded in 1927. Agra is the chief town of a district in the United Provinces of Agra and Oudh. Pop. (1931), 229,764

Agrapha Term used for those sayings of Jesus Christ that are not found in the Gospels. Such are the sayings found at Oxyrhynchus in 1897 and 1904, while others are in documents that have long been known. The term is also used by some for those sayings of Christ which, although found in the Gospels, are believed to have been inserted at a later date

Agreement In English law, a written undertaking to do a certain thing. At least two persons must be parties to an agreement, which, though not a contract, is governed by the law of contract. There are numerous kinds of agreements, e.g., between master and servant, publisher and author, landlord and tenant. An agreement must be stamped, usually with a sixpenny stamp; otherwise it cannot be used as evidence in a court of law

AGRICOLA

Gnaeus Julius Agricola Roman soldier. He was born in A.D. 37, and in 59 A.D. was in Britain as an officer in the Roman army. From 74-76 he was governor of Aquitania and in 77 he was consul. He led an army into Scotland and defeated the Scots in battle. He died in 93.

Agriculture

Science, art and practice of the cultivation of the soil. It is sometimes called farming, although this word suggests a somewhat smaller scale. It is usually regarded as including the production of food stuffs of all kinds.

Agriculture is the oldest of the world's industries and still the largest and most important, whether regarded from the standpoint of giving work, or producing wealth. It is also the most widespread. Although certain principles are common to all agriculture, its practice differs very widely according to climatic, economic and other conditions.

Taking the widest possible survey, agriculture may be divided into three great branches, although alternative classifications are legion. The three are—(1) The production of cereals, rice, sugar, tea, coffee and other foodstuffs. (2) The rearing of live stock, including cattle for milk, and poultry. (3) The growing of fruit and vegetables (market gardening). In addition there are branches less easily classified, such as the growing of tobacco, the cultivation of hops, and bees etc., as well as the keeping of goats and sheep. Modern developments include the establishment of farms where rabbits and foxes are bred for their fur.

From the earliest times, from the Iron Age to the 19th century, there was little change in agricultural methods. Men worked one generation after another, very much as their fathers had done. Very much the same implements were used. The plough and the sickle changed very little through the centuries. In England in the 17th century Jethro Tull did something to secure a more thorough tilling of the soil and Robert Bakewell was equally prominent in improving the breed of livestock. The growing of root crops made it possible to keep the cattle alive through the winter and another important change was an improved rotation of crops.

In the 19th century vast and unparalleled changes took place in agriculture, chiefly, but not entirely, the results of scientific developments. The introduction of steam made it possible to sow and reap on an enormous scale. Later, use was made of electricity and petrol for the former, not only as a source of power for the machines, but as a means of treating the soil. Other improvements were the discovery and use of artificial manures and artificial feeding stuffs. Great improvements were made in the breeding of animals and in the selection and preparation of seeds. Immense irrigation schemes made vast additions to the area of land that is capable of growing crops. Intensive farming, dry farming and other methods were introduced. Governments founded and conducted experimental farms, where new ideas were continually being tried out.

The economic side of agriculture is of enormous importance, though here again each country has its own problems. The provision of remuneration of the labour, long performed by women and slaves, is one aspect. In Great Britain the experiment of appointing district

boards to fix the wages of agricultural labourers is being tried after a short experience in fixing them by law. Another aspect is the ownership of land. Is it better to have state ownership, as in Soviet Russia, or ownership by the peasants as in France and Ireland, or as in Great Britain (although to a declining extent) ownership by a class of landlords who provide buildings and let out the land thus equipped to the farmer?

On the economic side the changes of the 19th century were sufficiently important to merit notice, although in their results they cannot compare with those brought about by science and invention. National credit was used on a large scale to assist men to acquire land for farming, and societies formed to give credit and so facilitate the sale of agricultural produce. In 1923 a national scheme for granting credits to farmers in Great Britain was introduced. Insurance schemes both for livestock and crops, have been devised. In some countries the co-operative movement has done much to help agriculture. Combinations of producers take the produce of the farm milk for instance, and sell the butter and cheese. Denmark is a country in which co-operation in producing bacon has been greatly developed.

Another help given by many Governments to the agricultural interest in the 19th century was the imposition of tariffs on imported foodstuffs—a form of assistance definitely abandoned by Great Britain in 1846. In 1931, however, there was another change of policy. Certain agricultural imports were subjected to a heavy tax and in 1932 others shared in the duty of 10 per cent. placed for revenue purposes on imports. The policy adopted to help agriculture included the regulation of the import of wheat by means of the quota system and preferences given to the produce of the Empire.

The result of all this energy, scientific and otherwise, became obvious in the 20th century. The crops of wheat, cotton, coffee and other products attained such proportions that vast stocks were left unconsumed. The result was a commercial crisis represented by a fall in the prices of nearly all primary products, and the consequent impoverishment and bankruptcy of thousands of producers.

Other aids, in advanced communities at least, have been provided by the institution of agricultural societies, shows and clubs. Of the many societies the chief British one is the Royal Agricultural Society at Bedford Square, London, W.C. Of the shows, the chief are the one held each year in London by the Smithfield Club and the one held in the country by the Agricultural Society. Great attention is paid to pedigree stock and records are very carefully kept. The Agricultural Organisation Society and other societies of that kind do valuable work in other directions. See **BARLEY, BUTTER, CHEESE, MAIZE, OATS, POULTRY, WHEAT**, etc.

AGRICULTURE AS A CAREER The prospects for a farmer in this country are none too promising, but in the Dominions the opportunities for an energetic and enterprising man are boundless.

The best training in agriculture is to be had by practical service on a working farm for a period of three years, and the annual premium is about £100. In addition to practical training there are many schools of agriculture in the country where sound theoretical and practical knowledge may be had, notably at Oxford, Cambridge, Leeds, Manchester, Newcastle-on-

Tyne, Edinburgh, Glasgow, Aberdeen, and Wales, where there are agricultural departments attached to the universities and at the independent schools of agriculture at Cirencester, Wye, Reading, Newport, Newton Abbot, Sutton Bonington and in Scotland at Glasgow, Edinburgh, Aberdeen, and Kilmarnock. Fees at Agricultural Schools vary from £80 to £150 per annum.

Agriculture does not, as a rule, offer much scope to women, though the Agricultural Colleges receive women students for the degree of B.Sc. in Agriculture, for which a three years' course is necessary.

In Dairy Work, however, there are considerable openings for women, whether with dairy farms of their own, as dairymaids on large estates, in the colonies, or as lecturers and instructresses on the subject. To obtain work as a lecturer, instructress, or a director of work, a diploma is necessary—given at the end of a two years' course at one of the Dairy Schools throughout the country. But for ordinary dairy work either at home or abroad, a considerably shorter course is all that should be necessary for any one with aptitude for the work, especially if experience has already been obtained in a dairy or on a farm.

The principal training centres, where both short and diploma courses may be taken, are the Dairy Schools of Sutton Bonington, of Reading, of Chelmsford, and of Kilmarnock in Scotland, but there are various other less well-known schools.

AGRICULTURE AND FISHERIES, MINISTRY OF Department of state. It looks after the interests of agriculture and fisheries for England and Wales, but not for the Irish Free State or Northern Ireland, which have their own boards, or for Scotland, which also has its own Board of Agriculture. It is also responsible for the Ordnance Survey and Kew Gardens. The ministry collects statistics and administers the law concerning diseases of animals and fixing of agricultural wages, and has departments for encouraging education and research. The Board of Agriculture was set up in 1889, and in 1903 took over the duties of the Fishery Dept. of the Board of Trade. In 1909 it was made a ministry. Its head offices are in Whitehall, London, S.W.

Agrirentum Greek city in Sicily. It occupied the site where Girgenti now stands and was one of the largest cities in the island. It was founded about 582 B.C. by some Greeks and soon became rich. In 405 it was destroyed by the Carthaginians, but was soon rebuilt, and flourished for several centuries. The city is famous for the ruins of its temple, one of the finest and most perfect examples of Greek architecture extant. It was dedicated to Jupiter. Other Greek remains have been found, some having been brought to light in 1932.

Agrimony Perennial of herbaceous growth. A wayside and meadow plant blooming in England in June and July, it bears terminal spikes of small yellow flowers about 2 ft. in height, and the stem leaves are interruptedly pennate. The root possesses astringent and tonic qualities, and also yields a yellow dye.

Agrippa Name of two rulers of Judaea. Agrippa I, a grandson of Herod the Great, is mentioned in *The Acts of the Apostles* and by Josephus. He was responsible for the death of S. James and the imprisonment of S. Peter, and met a loathsome end.

Agrippa II was the ruler before whom S. Paul appeared (*Acts xxv-xxvi*). After the apostle's speech he said "almost thou persuadest me to be a Christian." He was governor of Judaea when Jerusalem was destroyed after which he returned to Rome. He died in A.D. 100.

Agrippa Marcus Vipsanius Roman soldier. Born 63 B.C., he came to the front during the civil war that followed the death of Julius Caesar. He rendered great services to the cause of Caesar's nephew, Octavian, at first in Gaul and later in command of the fleet that won the battle of Actium, and after Octavian became emperor led the Roman armies in Europe and Asia, winning many successes. He was famed also as a builder and a patron of letters.

Agrippina Name of two Roman ladies. Agrippina the Elder was a daughter of Marcus Vipsanius Agrippa and a granddaughter of the Emperor Augustus. She married the Emperor Germanicus and was the mother of Caligula and Agrippina the Younger. She died A.D. 33, when she was in exile, by starving herself slowly to death.

Agrippina the Younger married first Gnaeus Domitius Ahenobarbus, and their child was the future Emperor Nero. She married as her second husband the Emperor Claudius, and by his influence secured the throne for Nero. She is believed to have poisoned Claudius, as she did others who displeased her, and in A.D. 59 she herself was put to death by Nero.

Ahab King of Israel. A son of Omri, he succeeded his father and reigned over Israel for 22 years (875-853 B.C.). He married Jezebel, daughter of the King of Tyre, and through her influence began to worship Baal. His story is told in 2 Kings.

Ahasuerus Name of several kings of Persia mentioned in the Old Testament. One of them, the husband of Esther, is usually identified with Xerxes. Ahasuerus is also the name of the chief character in the legend of the Wandering Jew.

Ahaz King of Judah. A son of Jotham, he succeeded his father as king and reigned for about 20 years (735-715 B.C.). He paid tribute to Tiglath-Pileser, King of Assyria, who had helped him against the kings of Israel and Syria (2 Kings, xvi, 2 Chron. xxviii).

Ahimelech High Priest of the Jews. The only recorded incident in his life is that he gave the showbread to David when he was hungry, and also Goliath's sword. For this he and his family were put to death by Saul (1 Sam. xxi-xxii). Another Ahimelech was one of David's associates (1 Sam. xxvi).

Ahithophel Friend of David. After acting as confidential adviser to the king he joined Absalom in his rebellion (2 Sam. xv, 17). Foreseeing failure he hanged himself. In Dryden's satire, *Absalom and Achitophel*, Ahithophel is the name given to the Earl of Shaftesbury.

Ahmadabad City of India. The chief town of Ahmadabad district, it is on the River Sabarmati, 310 m. from Bombay. The older part is still surrounded by its walls. Of the buildings, the chief are the great mosque, famous for its minarets, the ivory mosque and a Jain temple. The city has some flourishing industries, including the manufacture of cotton, thread, paper and pottery. Ahmadabad was a great city in the time of the Mogul emperors, and was the capital

of the kingdom of Gujarat. In 1818 it became a British possession Pop (1931), 313,789

Ahriman Name of the spirit of evil in the Zoroastrian religion. He is opposed to Ormuzd (*q v*) the spirit of good, the two being regarded as equal, but in the end he will be beaten. He is at the head of a band of spirits and corresponds to the Satan of the Old Testament

Ahura Mazda. See ORMUZD

Ai City of Canaan. It lay to the east of Bethel and is mentioned in Genesis. It was a great Canaanite centre when the Israelites invaded their land. The Israelites were defeated here, but later the city was destroyed by Joshua (Joshua vii-viii)

Aid In feudal times a payment made by landowners to the king. English kings first took aids from their tenants as often as they wanted, but in the 12th century it was recognised that there were only three occasions on which an aid would be taken by the king: (1) when his eldest son was knighted, (2) when his eldest daughter was married, (3) when he himself needed ransom. These aids continued until the reign of Charles II, when they were abolished

Aidan British saint. He became a monk at Iona, but his chief work was done in Northumbria in the 7th century. He settled on the Island of Lindisfarne and in 635 became its first bishop. He did a good deal to convert the people to Christianity. Aidan died at Bamborough, Aug 31, 651

Aide-de-camp In the fighting services an officer who attends on an officer of high rank. Every admiral and general when on active service had one or more aides-de-camp who carry out his orders and look after his comfort. Distinguished officers are appointed Aide-de-camp to the King. The usual abbreviation is A D C

Aigues Mortes Seaport of France. It is 24 m from Nîmes and 3 from the Mediterranean. A canal runs from the town to the sea, but the place has lost the importance it had in the Middle Ages. It is famous, however, because its walls and towers, built about 1280, are still almost complete making it one of the most perfect medieval towns in existence. Pop 4300

Ailsa Marquess of Scottish title held by the family of Kennedy. In 1482 Gilbert Kennedy was made a lord and in 1509 his descendant was made Earl of Cassilis. He was killed at Flodden and the 3rd earl was poisoned in France. In 1831 the 12th earl was made a marquess. The family seat is Culzean Castle, Ayrshire, and the eldest son is called Earl of Cassilis. The title is taken from Ailsa Craig, an island rock at the mouth of the Firth of Clyde

Ainley Henry Hinchcliffe. English actor. Born at Morley, near Leeds, Aug 21, 1879, he became a bank clerk at Sheffield. He soon left this to become an actor and, after touring with F. R. Benson, made his first appearance in London in 1900. Ainley has made successful appearances in many Shakespearean parts, also in *Trilby*, *Peter Pan*, *The Little Minister* and *The Great Adventure*. Since 1919 his pieces have included *Hassan*, *The Dancer Road*, *Oliver Cromwell*, *The First Mrs Fraser* and *Tobias and the Angel* (1932). He has also played in the United States and Australia

Ainsworth William Harrison English novelist. He was born in Manchester, Feb 4, 1805, and was educated at the grammar school there. He studied law, but soon gave it up for writing. In 1834, then living in London, he published *Rookwood*. This was his first success and for nearly 50 years he was writing novels. His most popular books are *The Tower of London*, *Old St Paul's*, *Jack Sheppard* and *Windsor Castle*. He edited *Bentley's Miscellany*, and for eleven years had his own paper, *Ainsworth's Magazine*. He died Jan 3, 1882

Aintree District outside Liverpool on the L.M.S. Rly. It is famous because here is the racecourse where the Grand National Steeplechase is run

Air Gas breathed by men and other animals in order to maintain life. It consists of nitrogen, 78 per cent, and oxygen, 21 per cent., the remaining 1 per cent. being argon, carbon dioxide, helium and other gases in very small amounts. The air extends around the earth to a distance of over 200 m, but as it becomes higher it becomes rarer, or less charged with oxygen. Consequently breathing becomes more difficult, until, as the climbers of Mt Everest found, it is impossible to proceed higher and live

The deleterious gas in the air is carbon dioxide. This is given out by human beings as they breathe and consequently the air around becomes more charged with it, unless it is counteracted by the action of trees and plants which absorb it. On this account great attention is paid by builders, medical men and others to the ventilation of houses and other buildings. In modern factories and workshops a certain amount of air, measured in cubic feet, is allowed to each worker

Air can be heated, liquefied, or compressed, and is used in these ways as a source of power. An air engine obtains its power by the alternate heating and cooling of air, which causes it to expand and contract

Air is compressed for use in engineering and manufacturing operations. In this way enormous force is given to it, and it is utilised in drilling, riveting, etc. Tools worked by compressed air are used for breaking hard surfaces and other purposes. The air lock, for raising water or oil, is worked by the same force, as is the air gun

Since the invention of aircraft the air has had a new significance. There is now a law of the air, just as there is a law of the sea, each country being responsible for the air above its territory. See AIRCRAFT, VENTILATION

Airbrush Device for spraying paint, lacquers, etc., upon a surface by means of compressed air, the instrument consisting essentially of a paint reservoir, air pump and holder with nozzles. At first used chiefly by artists, various types of airbrush are now used extensively in applying cellulose paints and enamels in the furniture, motor and other industries

Air Council Department of the British Government. It is responsible for the control of the Royal Air Force, and of flying generally. Its president is the Secretary of State for Air, and it consists of five other members and a secretary. The offices are at Gwydyr House, Whitehall, London S W 1

Aircraft Name of any airship, aeroplane or other flying machine. In Great Britain as in other countries all aircraft

must be registered, and in 1933 there were 1055 machines on the civil register which is kept by the Air Ministry. The machines are registered after having been passed by the Ministry or the British Corporation as airworthy. Of the machines 40% were privately owned and 80 belonged to clubs.

The system of marking aircraft is similar to that of marking motor vehicles. A letter is given to each country, and the machines marked with that letter followed by letters from AAA to ZZZ. Thus Great Britain has the letters G and M, so her machines are marked G.AAA or M.AAA, and so on.

The letters assigned to other countries are as follows:

Belgium, ON	Italy, I.	Sweden, SA.
France, F	Netherlands, PH	Switzerland, HB
Germany, D	Norway, LA	United States, L.
Spain, E.A.	Irish Free State, E.I.	

Aircraft Carrier Warship fitted for carrying seaplanes. In the British navy the first was the *Ark Royal*, launched in 1914. Others were added, these being cruisers converted to this use. Some were retained after the conclusion of the war, and in 1932 there were three carriers in commission, *Furious*, *Glorious*, and *Courageous*. The tonnage of these ships must not exceed 27,000 tons according to the agreement made at Washington in 1924.

Airdrie Burgh and market town of Lanarkshire, 11 m from Glasgow on the LMS Ry. The industries include engineering works, cotton and paper mills, while around are coal mines. Pop (1931) 25,954.

Aire River of Yorkshire. It rises in the Pennine Hills in Lancashire, but soon passes through the Aire Gap into Yorkshire, crosses the county and joins the Ouse near Howden. Its length is 70 m. The valley through which the Aire flows is called Airedale. This is a beautiful district stretching from Malham Cove to Leeds. The Aire and Calder Navigation is a system of rivers and canals that serves the large Yorkshire cities and towns. The chief branches are from Goole to Leeds and from Castleford to Wakefield.

The Airedale terrier is a breed of terrier first bred in Airedale. A good sporting dog, he may be either rough or smooth-haired.

Air Force Royal Name of the air service of Great Britain. It was created in 1918 when the Royal Naval Air Service and the Royal Flying Corps were amalgamated. The men wear a uniform of light blue and the motto is *per ardua ad astra*. It is controlled by the Air Council and is divided into commands, some at home and others abroad. It has a college for cadets at Cranwell and one for staff training at Andover. It has its own medical and nursing services. The commissioned officers rank as follows: marshal of the air, air chief marshal, air marshal, air vice-marshal, air commodore, group captain, wing commandor, squadron leader, flight lieutenant, flying officer, or observer, and pilot officer. The non-commissioned officers are flight sergeant, sergeant and corporal. The rank and file are aircraftsmen, who enter the service as apprentices. Officers enter after competitive examination, and a course at Cranwell. Air forces are organised in groups, wings and squadrons. In May, 1935, a new air programme (to be completed in March, 1937) was designed to raise the home strength to 1500 first-line machines and 55,500 men.

The distinctions given to airmen are the Air Force Cross and the Air Force Medal. The former is given to officers and warrant officers and the latter to non-commissioned officers and men.

Within recent years all the great powers—Great Britain, Germany, Russia, France, U.S.A., Italy, Japan—have increased their air strength enormously.

THE AIR FORCE AS A CAREER The Air Force offers a permanent career which is in general no less advantageous than either the Navy or the Army, and the inclusive cost including the provision of uniform at Cranwell, is at a maximum £250 for the two-year course. The curriculum comprises a wide variety of subjects, and a satisfactory standard of educational attainments coupled with a high degree of physical fitness are essential.

Boys enter the R.A.F. College as Flight Cadets at the age of 17½-19½; the necessary qualifications being success in the examination for admission thereto which is open to boys possessing the Schools Certificate or equivalent education qualifications, or who are nominated to take the entrance examination by the Headmaster of an approved school. Permanent Commissions may also be obtained through a recognised university by graduates between 20 and 25 years of age, and a limited number of exceptionally able men are promoted from Short Service Commissions or from the ranks.

In the ranks of the Air Force, which embrace many skilled trades, facilities are always offered for further education and for training to enter a civil career.

Airport Base where aircraft arrive and depart. They are usually known as aerodromes, but the term airport is coming into use, doubtless in consideration of their increasing size. In 1931 eight airports, i.e., places which have custom houses so that goods and passengers can land from abroad, were recognised. They are Croydon, Dover, Lympne, Heston, Woolston (Southampton), Barton (Manchester), Liverpool and Cardington.

Airship Form of aircraft that depends for its support upon gas that is lighter than air, and is contained in a balloon or other kind of envelope. The first airships were balloons from which one or more cars for engines, fuel and crew were suspended. These were known as non-rigid, and the earliest were built for naval and military purposes. The British Government built several, one being the *Nulli Secundus* and another the *Maidy*, which met with disaster.

The first rigid airships were the Zeppelins which were built in Germany and were very prominent during the Great War, although they did not fulfil the expectations of their creators. After the war several nations took up the building of airships. The British Government constructed R33 and R34, and later R100 and R101, but the disaster to R101 in 1930 put a stop to further developments in this direction.

A rigid airship of the latest type consists of a framework of girders of a light metal or alloy, aluminium or duralumin. This is divided into compartments for holding the gas which may be either hydrogen or helium. Outside is a fabric envelope with a space between it and the metal framework. The accommodation for passengers, engines, fuel, etc., is within the framework, but cars for controlling the vessel are suspended from it. The ship is driven by air screws which obtain their power from petrol engines. She is kept stable by fins on the tail.

and other accessories for directing her and the rudders and the elevator. To enable a ship to come to rest, mooring masts are necessary.

The largest airships are over 700 ft long. The R101 was 800 ft long, and the *Graf Zeppelin*, which in 1929 made a trip round the world, was 776 ft. The American *Zeppelin* (Z RS 4) called the *Akon*, which was caught in a thunderstorm and crashed into the sea off the New Jersey coast in 1933, was capable of a speed of 47 m per hour and was 785 ft long. Her gas capacity was 6,500,000 cubic feet and she could lift 180 tons.

Airwheel Name given the form of motor car tyre introduced in 1932. An aeroplane tyre on the same principle was introduced in 1930. The car airwheel is so called because it does away with the ordinary road wheel and acts as an air cushion against the inequalities of the road. The big low pressure tyre is mounted directly on the hub, without spokes or rim, and can be run on pressures as low as 10 lb to the square inch. Owing to its size and low pressure it can surmount obstacles such as kerbs with but little shock. It also offers from 2 to 2½ times more surface to the road and this, apart from possibly increased tractive effort, should materially reduce the risk of skidding and consequent side slip.

Aisle Part of a church. The aisles are at the sides, being usually separated by pillars from the nave, or centre. The word comes from the Latin *ala*, a wing, and the idea was copied from the Roman basilicas. Also used to denote the passage way between the seats in a church or theatre.

Aisne River of France. It rises in the west of the country and falls into the Oise near Compiègne. It is 175 m long. A department of France with Laon as its capital is named after it.

During the Great War there was almost constant fighting along the Aisne. In Sept. 1914, the French and British having turned back the German advance at the battle of the Marne, followed them to the Aisne. The Germans crossed the river and made trenches on the hills above from which they controlled the passage of the river for about 100 miles. The battle ended on Sept. 20, after which a long period of trench warfare began.

Another battle was fought in April and May, 1917. The French crossed the river and made an attack on the German forces. Some successes were gained, but the losses were high, and the enterprise was abandoned.

A year later the Germans attacked. They crossed the river and driving the French before them reached the Marne, recovering a great deal of ground they had won and lost in 1914. This took place in May, and a little later the final advance of the Allies began.

Aix-la-Chapelle City of Germany, also called Aachen. In the north west of the country, it is an industrial centre, an inland watering place and a town of much historic interest. It is well served by railways, stands on an important coalfield and has manufactures of woollen goods, chemicals, etc. The mineral springs, known to the Romans, bring many visitors, for whom there are indoor and outdoor attractions.

Historically Aix is known for its association with Charlemagne. He built here a palace and made the place his capital. He also built the cathedral in which he was buried although much of the present building is of later date.

In it are relics of the emperor. In the town hall, a fine building of the 14th century, is the coronation hall in which, until 1562, the German emperors were crowned. There is a Grashauss, used for the city archives. The Kurhaus, the Kursaal and many hotels may be mentioned, as may the Kurpark. Since 1897 the city has included Birtscheld. Pop. 156,000.

In 1748 the war of the Austrian Succession was ended by a treaty signed at Aix la Chapelle. A European conference was held here in 1818.

Aix-les-Bains Town and watering place of France. It is in Savoy, 8 m from Chambéry, on the main line from Paris to Turin. It is famous for its warm mineral waters, which are taken by persons suffering from rheumatism, gout and the like. The town has a casino and other attractions for visitors, while around is much beautiful scenery. Lake Bourget is only a mile away. The Romans used the waters, and there are remains of their temples and baths.

Ajaccio Capital of Corsica. It stands on the west coast of the island, on a bay called after it. The chief buildings are the cathedral and other churches, the museums and the library. The house (Casa Bonaparte) in which the great Napoleon was born, still stands. The city has a good harbour and from here steamers go regularly to Marseilles. Pop. 22,600.

Ajax Name of two legendary Greek heroes. One was the son of Telamon. With other heroes he went to the Trojan War and, after the death of Achilles, was one of the claimants for that hero's armour. When it was given to Odysseus he killed himself.

The lesser Ajax was a son of Oileus. He too, fought against the Trojans. Having profaned the temple of Athena, he was shipwrecked on the return home. He found refuge on a rock, but this was shattered by Poseidon, and the hero was drowned.

Ajmer City of India. It is in Rajputana, 220 m from Delhi, and is the chief town of the province of Ajmer Merwara. Founded by Albar the Great, it has some old buildings including a Jain temple converted into a mosque. The tomb of Kwanja, a saint of the 13th century, is a place of pilgrimage for Mohammedans. It is a railway centre and has some modern industries. Pop. 119,305.

Ajowan Fruit grown in Bengal, India. It is very like the caraway, and is produced on an umbelliferous plant. The fruits are dried and used in cooking, and also in medicine for relief of colic, flatulency, etc.

Akbar Mogul emperor known as the Great. He was born in Oct. 1542. In 1556 his father died and he became emperor. He continued the policy of conquest, and in a short time his empire covered a great part of India. Over this he ruled in a most enlightened way. Although a Mohammedan he allowed toleration to all creeds and employed Hindus in his service equally with his co-religionists. He forbade slavery and dealing in slaves, abolished iniquitous taxes and brought in other reforms that belong to a later age. He died at Agra, Oct. 15, 1605. Akbar's real name was Jalal-ed din Mahommed.

Akhenaton (or Ikhenaton, Amenhotep 4th) Pharaoh of Egypt about 1375 B.C. He is renowned for the amazing religious revival he instituted when he upset the old worship of Amon Ra, and

introduced the new cult of Aton, the sun, represented as the Divine Origin of All Life

Akka Race of pigmies. They are found in central Africa where they were discovered in some forests near the Congo in 1869. They have large heads, woolly hair and long arms. They average between 4 and 5 ft. in height and are of negroid race.

Akkad Ancient city of Assyria. It was apparently the capital of Sargon, King of Assyria, and was situated on the Tigris. In Genesis it is referred to as Accad. The site has been excavated and many proofs of its magnificence have come to light.

Akron City of Ohio. It is 36 m from Cleveland and is a great industrial centre, well served by railways and on the Ohio Canal. The great American ship *Akron* was named after the place. Pop (1930) 255,040. See AIRSHIP.

Alabama River and State of the United States. The Alabama River is over 300 m long and flows through the State until it joins the Tombigbee and becomes the Mobile. It is formed by a union of the Coosa and the Tallapoosa.

The State of Alabama is in the south east of the country, and, except for a short coastline on the Gulf of Mexico, is wholly inland. Its area is 51,998 sq m. Montgomery is the capital, but Birmingham and Mobile, its chief seaports, are larger. The rivers are the Alabama and the Tennessee. The area is level except in the north-east, and maize, cotton, rice and other crops are extensively grown. There are large pine forests. Pop (1930) 2,646,248, of whom 35.7 per cent are negroes.

The Alabama Question was a dispute which nearly led to war between Great Britain and the United States. The ship *Alabama* left Birkenhead in July, 1862, when the Civil War was in progress. She was commanded by a southerner and did great damage to the shipping of the northerners, who blamed Great Britain for allowing her to leave, the more so as her real aim was known to those concerned. After a long dispute the matter was referred to arbitration, and in 1872 it was agreed that Great Britain should pay £3,230,000 for damages done by the *Alabama*.

Alabaster Ornamental stone. It is really gypsum, which is a hydrated substance of lime. It is found in Great Britain, and when polished is suitable for domestic fittings, statuettes and other forms of ornamentation. The alabaster of the ancients was a harder mineral also used for ornamental purposes, a box of it being mentioned in Matthew xvi. It was a carbonate of lime and was found at Alabastron in Egypt.

Alaric King of the Visigoths. He became chief of the Visigoths in 376, and in 395 led them in their revolt against the Romans. He conquered Greece, was declared King of the Goths, and then invaded Italy. He led his men through Italy to Rome, which he sacked in 410. He then marched south, but died suddenly in Sicily in 410.

Alaric II became king in 485. He is known as the leader of the great host that was defeated by Clovis at Tours in 507. He was killed when escaping from the fight.

Ala Shan District in Asia. It is in Mongolia and is part of the great Gobi desert. On its eastern border is the great mountain range called also Ala Shan.

This is 150 m long, and its highest point is over 11,000 ft high.

Alaska Territory of the United States. In the north-west of North America, it covers 586,400 sq m and includes many islands along the coast of British Columbia including the Aleutian group. It is a cold and mountainous region, the highest point being Mt McKinley, over 20,000 ft high. The chief river is the Yukon. Juneau is the capital. The chief industries are salmon fishing and canning and the keeping and hunting of animals for their fur. Gold, coal and other minerals are worked, and some land is under crops. Another industry is the breeding of reindeer. Large areas are covered with trees. The land has a railway system. Alaska is governed by a governor and a legislative assembly. In 1867 it was bought by the United States from Russia for 7,200,000 dollars, and in 1912 was made a territory.

After a long dispute the boundary between Alaska and Canada was fixed by arbitration in 1903. This gave the fringe of islands south of Alaska to that country. Pop 58,760.

Alassio Watering place of Italy. It is 56 m to the south-west of Genoa and is much visited in the winter on account of its equable climate. The bathing is good and around is some beautiful scenery. Fishing is an industry. Pop 6450.

Alb Garment worn by priests in the Roman Catholic Church. Of white linen, it reaches to the foot and is gathered round the waist with a girdle. Sometimes it is trimmed with pieces of embroidery called apparels. The clergy always wear it when celebrating Mass, and sometimes acolytes wear it too.

Alban British saint and first British martyr. He was born at Verulamium and may have been a soldier. All that is known for certain about him is that he became a Christian, was martyred about 304 and gave his name to St Albans, where the martyrdom probably took place. His feast day is June 17, in the Church of England, and June 22 in the Roman Catholic Church.

Albani Dame Marie, Canadian singer. Her real name was Marie Louise Emma Cécile LaJouneuse, and she was born in Quebec in 1851. She lived in Albany, whence she took her professional name, and then studied singing in Paris and Milan. In 1870 she made her first public appearance. In 1872 she appeared in London and for the next 40 years she was one of the leading sopranos of the world. She retired in 1911, when she published *Forty Years of Song*. In 1878 she married Ernest Gye, and in 1925 she was made a D B E. She died April 3, 1930. In her honour Gounod composed *Mors et Vita*.

Albania An independent republic of Europe. In the Balkan area, it is bounded by Yugoslavia and Greece, with the Adriatic on its western side. It covers 10,629 sq m. Tirana is the capital. Other towns are Durazzo, Scutari and Valona. The district is mountainous with little fertile land and the chief occupation is the tending of cattle, sheep, and goats. A few crops are grown, and there are extensive forests.

Albania was for long part of Turkey. In 1913, after the first Balkan War, it was made an independent state, and in 1914 Prince William of Wied became its first ruler. When the Great War began his government came to an end, and in 1917 Italy took possession of

Albania. This was not very acceptable, and in 1920 the Albanians set up a government of their own. A republic was constituted, and in 1928 the president Ahmed Bey Zogu, became king as Zogu I. The country is governed by a council of ministers and a parliament of two houses. Pop (1930) 1,003,068.

Albany Old name for the part of Scotland north of the Forth and Clyde. Later it was used for a smaller district which for a short time had kings of its own.

Albany City of the U.S.A., the capital of New York State. It is on the Hudson, 146 m. from New York city, on the main railway line to Chicago and Montreal. Here are the State capitol, the city hall, two cathedrals and many public buildings. There are several manufactures and goods can be sent by the Erie and Champlain canals, as well as along the Hudson, or by rail, to all parts.

Founded by the Dutch, Albany was named after James II., the Duke of York and Albany, soon after it became British in 1664. In 1754 a convention, to arrange for a closer union among the American colonies, was held here and in 1797 it became the State capital. Pop (1930) 127,412.

Albany Town and pleasure resort in Western Australia. Albany is on the south coast, on Princess Royal Harbour, King George Sound. It is 350 m. from Perth, with which it is connected by railway, and mail boats call here. Pop 4000.

Albany is also the name of a river in Ontario and a province in S. Africa. The former is about 600 m. long. It rises in Lake St. Joseph and falls into James Bay where Fort Albany has been built. The province is in the south-east of the Cape Province. Here, in 1820, the first large body of British settlers made their homes. Grahamstown is the capital.

Albany Count of. Title assumed by the Young Pretender, Charles Edward, during the later part of his life. His wife, Louisa, the daughter of a German prince, was styled Countess of Albany. She was born at Mons, Sept. 20, 1752, and married the Prince in 1772. In 1784 they separated and the Countess joined the poet, Alfieri, with whom she lived for a time. Her later days were passed in Florence where she died, Jan. 29, 1824.

Albany Duke of. Scottish title. In 1398, and again in 1480 it was given to a son of the king. Later Lord Darnley was made Duke of Albany and this title passed to his son James I. and then to other Kings of Great Britain. In the time of the Georges there were three Dukes of Albany, all of whom died without children.

In 1881 Leopold, the youngest son of Queen Victoria, was created Duke of Albany. He was born at Buckingham Palace, April 7, 1853, went to Oxford, and afterwards owing to his delicate health lived very quietly. On March 28, 1884, he died at Cannes. In 1882 he had married Helena, a German princess, and they had two children. The daughter, Alice, married Prince Alexander of Teck, afterwards Earl of Athlone. The son Leopold became Duke of Albany and then Duke of Saxe-Coburg in succession to his uncle. As a German prince he fought in the World War and in 1919 his British title was taken from him. His mother the widowed Duchess lived in England until her death, Sept. 1, 1932.

Albatross Large sea bird. It is found in the southern hemisphere where it follows ships for great distances. Its

immense wings, often measuring 12 or 14 ft. from tip to tip, give it a great power of flight. The bird is only found on land in the breeding season; when it resorts to the islands and rocks of the southern part of the Pacific Ocean.

Albemarle Duke of. English soldier. George Monk was born at Great Potheridge in Devonshire, Dec. 6, 1608. He became a soldier, and for nine years fought in the Dutch army. In 1642 he served Charles I. in Ireland, was made a prisoner in 1644, and on his release in 1646 joined the parliamentary side. He helped to win the Battle of Dunbar.

In 1653 Monk was appointed a general at sea and won a victory over the Dutch. In 1654 he was made governor of Scotland and he was there when Cromwell died in 1658. After some delay he led his 6000 men across the border and entered London. He brought back the expelled members of the Long Parliament and declared for the restoration of Charles II., his services being rewarded with the dukedom of Albemarle.

In 1665 he was made Governor of London and in 1666 he went to sea again. He was defeated by the Dutch in one battle, but was afterwards successful in a second one. He died Jan. 3, 1670, and his dukedom became extinct when his son Christopher died in 1688.

Albemarle Earl of. English title held by the family of Keppel. It is taken from the French town Aumale, and in early days there were several Earls of Aumale, or Albemarle. In 1697 William III. gave the title to his friend, Arnold Joust van Keppel, who had come over with him from Holland and his descendants still hold it. The family seat is Quidenham Hall, Norfolk, and the Earl's eldest son is Viscount Bury.

Alberoni Giulio. Spanish statesman. Born of humble parentage near Piacenza in Italy, May 21, 1664, he became a priest and acted as secretary to a French nobleman. In 1713 he was sent to Madrid as agent for the Duke of Parma and in 1714 the King (Philip V.), attracted by his abilities, made him his chief minister. He filled the position for six years during which he improved the condition of Spain, both in a commercial and a military direction. His foreign policy, however, was somewhat aggressive and he made many enemies abroad, the result was that in 1720 he was banished. He died June 16, 1752.

Albert Town of France. It was formerly known as Ancre, on which river it stands. It lies about 18 miles from Amiens. The chief building is the church of Notre Dame. On this was a figure of the Virgin and Child, which was damaged early in the Great War and until March, 1918, when it fell, remained in a hanging position, an object of great interest. The town has some manufactures.

There was constant fighting around Albert during the Great War. The Germans often shelled it, but did not capture it until March 27, 1918. It was recovered in the following August. A battle fought between the French and the Germans, Sept. 20-30, 1914, just after the end of the battle of the Aisne, is called the battle of Albert.

Albert King of the Belgians. Born in Brussels, April 8, 1875, he was the second son of Philip, Count of Flanders, and a nephew of King Leopold II. He became king in Dec. 1909. In 1914 his country became involved in war with Germany and was soon

overrun. The king moved the seat of government to Le Havre and after four years of warfare had the satisfaction of recovering his land and re-entering his capital in Nov 1918. In 1900 Albert married Elizabeth, a Princess of Bavaria. In 1934 he died as a result of a mountaineering accident, and was succeeded by his elder son as Leopold III.

Albert Prince Consort and husband of Queen Victoria. He was born August 26, 1819, the younger son of Ernest, Duke of Saxe-Coburg-Gotha, his full name being Francis Charles Augustus Albert Emmanuel. He was well educated and had cultured tastes. He married Queen Victoria February 10, 1840, and was given the title of Prince Consort in 1857. Typhoid fever caused his death, December 14, 1861, at Windsor Castle.

The Prince had a wide knowledge of European politics and was the Queen's most valued adviser. His position was a very difficult one, but in spite of a somewhat narrow outlook, he made no conspicuous mistakes, while exercising his influence in the direction of peace and moderation. His life was written by Sir Theodore Martin and in 1932 a new life by Hector Bolitho appeared.

The Albert Memorial was erected in Kensington Gardens, London, in memory of the Prince Consort. In the Gothic style it was designed by Sir Gilbert Scott, and includes in its embellishment many sculptures and statuettes by eminent artists. It was unveiled on March 9, 1876.

Opposite the memorial is the Albert Hall, one of the largest halls in London. It was finished in 1871 and holds 10,000 people. It is used for public meetings, concerts, boxing matches, etc., and has a magnificent organ.

Alberta Province of the Dominion of Canada. It stretches from the North-West Territories to the United States frontier with British Columbia on the west and Saskatchewan on the east. It is mainly flat, except in the south-west where are the Rocky Mts., and is one of the prairie provinces. Its area is 255,285 sq. m., of which 2360 consist of water, and it is 760 miles from N to S.

Edmonton is the capital. The six other cities are Calgary, Lethbridge, Wetaskiwin, Red Deer, Medicine Hat and Drumheller. The province produces great quantities of wheat and livestock. There are large supplies of coal and natural gas and immense areas of forest.

Alberta was made a province in 1905. It is governed by an elected legislature of one house and a council, or cabinet, responsible to it. The Lieutenant-governor represents the King. It sends six senators and 16 representatives to the Parliament of the Dominion. Its forests and other natural resources were the property of the Dominion until handed over to Alberta in 1930. The province has a university founded in 1908 and situated at Edmonton. Pop (1931) 727,497. See CANADA.

Albert Medal British decoration. Instituted in 1866, it consists of an oval badge, hanging from a crimson and white ribbon. It was originally a reward for bravery in saving life at sea, but since 1877 has been conferred for similar deeds on land. There is also an Albert Medal, awarded by the Society of Arts, for notable achievements in science and invention.

Albert or Albert Nyanza

Lake of Africa. It is partly in Uganda and partly in the Belgian Congo and covers 1650 sq. m. Its length is 100 m., and it is 80 m. north-east of the Victoria Nyanza. The Nile flows through the lake, which was discovered in 1862.

Albertus Magnus Medieval philosopher. He was born in Swabia in 1206 and studied at Padua. He joined the Dominican Order and in 1254 was made head of the order in Germany and in 1260 Bishop of Regensburg. In 1262 he settled in Cologne and there he lived until his death in 1280.

Called the Universal Doctor, Albert was one of the greatest scholars of the Middle Ages. He was a follower of Aristotle and the extent of his learning won for him the reputation of a magician. 21 volumes of his works have been published. Among his pupils was Thomas Aquinas. In 1622 he was beatified and his festival is Nov 15.

Albertville Town of the Belgian Congo. It stands on the western side of Lake Tanganyika and has a railway station. It is an important point on some of the African trade routes.

Albigenses Religious sect. It first appeared in France about 1180 and took its name from Albi, a little town 41 m. from Toulouse. The members had a mystical and ascetic creed which was brought to France from the east of Europe. They believed that matter was wholly evil and that only by rigorous self-denial could men reach a good life. They denied that Jesus Christ had ever had a material existence, and strongly opposed the whole teaching of the Church of Rome.

The Albigenses increased rapidly in number in Aquitaine and soon attracted the notice of the ecclesiastical authorities. In 1209 Pope Innocent III decided on stern measures. A crusade was preached and Simon de Montfort was sent to carry it out. For some 30 years the crusade, which had a political side, was vigorously pursued. Help was given by the Inquisition and the sect was gradually reduced in strength. In 1245 its headquarters, Mont Ségur, was captured.

Albino Term applied to human beings and animals lacking the natural pigment of the skin, hair and eyes. Originally used by the Portuguese to describe white negroes found in Africa, it is now applied generally. In human beings albinism is evidenced by whitish hair, transparency of skin, and pinkish appearance of the eyes. Albinos can generally see best in semi-darkness. Definite albinism is sometimes found in birds, and some breed of rabbits have this peculiarity. Many creatures show a partial albinism in winter as a natural device to produce protective colouring.

Albion Old name for Britain. The usual explanation is that the Romans used it for the island when they saw the white cliffs of Dover, *albus* being the Latin for white.

Albion Metal Combination of tin and lead. It can be employed with great facility in the workshop, and is consequently a valuable material for the production of small ornamental articles, toys and fancy goods, and the cheaper forms of jewellery. The two basic metals are com-

ALBITE

combined under great mechanical pressure, and the product is distinct from the alloy formed by the fusion of tin and lead, which is known as pewter.

Albite

Mineral named from the Latin word *albus*, white. It is a soda felspar and consists of soda, alumina and silica, which form transparent crystals. It is found in rocks nearly all over the world.

Albuera

Village of Spain. It is 13 m south east of Badajoz and gave its name to a great battle of the Peninsular War. A French army under Soult was advancing to relieve Badajoz. The British under Beresford abandoned the siege of Albuera on May 16, 1811. After a hard fight and heavy losses on both sides, the British gained by Napier. The battle is described very vividly by the author in his *History of the Peninsular War* and in the *Midsex Regiment* gained the nickname of *Dio Hards*.

Albumin

Carbon compound essential to animal and plant life. It is a nitrogenous substance, soluble in water and coagulating with heat and is found only in living bodies. To-day it is classed as a protein. It was long believed that albumin could not be made synthetically, but in 1932 a German chemist claimed to have produced it from coal and coke. The allied word *albumen* is used for the white of the egg. Substances resembling albumins are known as albuminoids. Albuminuria, or the presence of albumin in the urine, is a sign of kidney, heart and blood diseases.

Albuquerque

Attonso D'Porto, administrator of Albuquerque in 1533. Little is known of him until 1593 when he sailed to the Indies. Mado, viceroy of the Portuguese possessions there, he conquered Goa and other places and showed himself a wise and equitable ruler. In 1515 he was deprived of his office and he died on the journey to Europe, Dec 16, 1515. Albuquerque's *Commentaries* have been translated into English.

Albury

Village of Surrey, 30½ m from London, can be reached from the Southern Rly. There is an old church and one built by the banker Henry Drummond for the Catholic Apostolic faith. The former is used as a mortuary chapel. Drummond lived at Albury Park, now a seat of the Duke of Northumberland. Near is the Silent Pool (Sherbourn Pond).

Albury

Town of New South Wales. It is 390 m by railway from Sydney and stands on the Murray River, which is navigable to this point. It is the centre of a district in which sheep are reared and wheat and tobacco are grown. Near is a large dam used for irrigating the land. Pop (1931) 9770.

Alcantara

River Tagus, on the chief object of interest is a bridge, which dates from Roman times. It is over 600 ft. long and was restored in 1860. The town gives its name to a Spanish order of knighthood founded in 1156 to fight the Moors. It was abolished more than once, but was always revived, the last occasion being in 1874.

Alcester

15 m from Warwickshire, on the G.W. Rly. The church from London on the old town hall is worth a visit and there is an old town hall. Here the little rivers Alce and Arrow unite. The town has a golf course and near is a Roman camp. Pop 2100.

30

ALCIBIADES

The title of Baron Alcester was taken by Sir Frederick Beauchamp Paget Seymour when, in 1882, he was made a peer. He was commander of the fleet that bombarded Alexandria in that year. He died March 30, 1895, leaving no heir.

Alcestis

Greek heroine. She was the wife of Admetus who was promised immortality if he could get someone to die in his stead. His parents refused to do this, but Alcestis offered herself. Euripides wrote a play *Alcestis*.

Alchemy

Early form of chemistry, associated with the Egyptians and was concerned chiefly with the transmutation of metals. The belief that the baser metals could be transmuted into gold or silver arose quite early and was held, among others, by the Egyptian alchemist, Hermes Trismegistus, who wrote on the matter. The transmutation was effected, so it was believed, by the philosopher's stone, called by Hermes an egg.

The Chaldeans associated the metals with the planets, there being seven of each, and believed that each planet exercised an influence on its particular metal. The Greeks studied alchemy, especially in connection with their theories of the elements, but the art owes more perhaps to the Arabs, who learned a good deal about it when they conquered Egypt and invaded the treasured learning of Alexandria. The Arab alchemists carried their knowledge into Europe where the subject was much studied during the Middle Ages both by them and by the English, French, Dutch and other nations.

Among the medieval alchemists were Roger Bacon, Albertus Magnus and Thomas Aquinas, but there were many others and quite a literature grew up on the subject. The more credulous occupied themselves with seeking to create living beings, while a number, Paracelsus among them, asserted that they had discovered the elixir of life, which was the philosopher's stone. In the 16th and 17th centuries the alchemists became more akin to the chemists of to-day.

The alchemists of this time included Edward Kelley, Christopher Glauver, Sir Kenelm Digby, and John R. Glauber. In the 18th century, James Price, called the last of the alchemists, professed to have discovered the philosopher's stone, but he committed suicide rather than repeat his experiment. Before his death, however, in 1783 Robert Boyle had founded the science of chemistry and the age of alchemy was over.

Alcibiades

Athenian statesman. He was born about 450, educated by his kinsman Pericles and became a friend of Socrates. His abilities soon made him prominent in Athens and about 422 he became leader of the party that favoured war with Sparta.

His expedition against Syracuse had just sailed when he was accused of mutilating some statues. Recalled to Athens for trial, he escaped to Sparta, but was sentenced to death in his absence. In Sparta, Alcibiades became an implacable enemy of Athens. In several directions his energy increased the circle of the city's foes, but soon the Spartans began to distrust him and he found a refuge in Persia. Through the influence of his friend Tissaphernes, he brought to Athens the support of Persia and so was able to return to Greece.

As leader of the Athenian army he won several battles over the Spartans and was for a short time the chief figure in the city. The failure of a further expedition however led to his downfall and once again he was exiled (406). He went towards Persia, but on his way, at Phrygia he was killed by some Spartans. His *Life* was written by Plutarch.

Alcinous Greek hero. He appears in Homer's *Odyssey* where he was a king in Scheria, probably Corfu. On this island Odysseus and his companions were shipwrecked and were entertained very hospitably by its king.

Alcohol Name used for the liquid, ethyl alcohol (C_2H_5OH). It is obtained by distilling a saccharine liquid, but it can be obtained synthetically from its elements, carbon, hydrogen and oxygen. It is the active principle of all intoxicating liquors.

Absolute alcohol is a colourless liquid with specific gravity 79 and a boiling point of $78^\circ C$. It is the essential part of all spirits, while beer and wines also contain it, although in smaller proportions. The amount may be as low as 2 per cent. in very light beer, or as high as 70 per cent. in a powerful liqueur. Proof spirit contains 43 per cent. alcohol. The system of testing the strength of alcohol in a liquor is called alcoholometry.

Alcohol is used in the manufacture of chloroform, ether, essences, perfumes, lotions and the like and as a solvent for oils, fats, resins and gums. It is also used as a source of power, in the form of methylated spirit. It can be made from potatoes, wheat, malt, rice, beetroot, molasses, honey, apples and many other sugar-containing foods. A variety called methyl alcohol is distilled from wood and is much used commercially.

The drinking of alcohol to excess brings about a condition known as alcoholism. It produces stupor or excitement, followed after a time by injury to the liver and other organs. In extreme cases insanity results, while the impairment of will power and brain activity is a usual symptom.

Alcott Louisa May American writer. She was born at Germantown, Pennsylvania, Nov. 29, 1832. She was for a time a teacher, but soon began to write. During the Civil War she served as a nurse, and wrote about her work in *Hospital Sketches*. Her other books, especially *Little Women*, *Little Men*, *Good Wives* and *Jo's Boys* are still very popular with children. She died at Boston, March 6, 1888.

Alcyone In Greek legend the daughter of Aeolus, god of the winds. She and her husband were changed by Zeus into seabirds. Legend says that for seven days in winter Alcyone hovered over the sea. During these days her father prevented the wind from blowing, and so they were called halcyon, or peaceful days.

Aldeburgh Borough and watering place on the coast of Suffolk, sometimes called Aldburgh. It is 25 m from Ipswich and 99 from London, on the L & N E Ry. The sea is encroaching. In the Middle Ages Aldeburgh was an important place. The poet Crabbe was born here. Pop (1931) 2480.

Aldehydes Term derived from *alcohol dehydrogenatum*, applied to a group of substances resulting from the oxidation of the primary alcohols with the

separation of two hydrogen atoms, and intermediate between alcohols and acids. By further oxidation the aldehydes are converted readily into acids, thus acetaldehyde, a colourless liquid formed from ethyl alcohol, may be oxidised into acetic acid, and the well-known formaldehyde, a gas soluble in water and derived from methyl alcohol, yields formic acid.

Aldenham Village of Hertfordshire. It is 3 m from Elstree, on the L M S Ry. The place is best known for its public school. This was founded in 1597 and has about 250 boys.

In 1896 Henry Hicks Gibbs, a London merchant, was created Baron Aldenham. He died in 1907, when his son a former M.P. for the City of London, became the 2nd baron.

Alder Small tree that grows freely in damp places in Great Britain and elsewhere in Europe, as well as in Asia and America. It is found chiefly by the sides of streams and brooks. The tree is usually 30 or 40 ft high. It bears rough oval leaves and two kinds of catkins in which are the male and female flowers. The bark is serviceable for tanning and the young shoots for dyeing.

The alder belongs to the genus *alnus*. The tree seen in Great Britain is *alnus glutinosa*, the black, or common, alder. Others are *alnus incana*, which grows very freely on the continent of Europe, *alnus cordifolia* and the green alder (*alnus viridis*) found in Central America.

Alderley Edge Urban district of Cheshire, 14 m from Manchester, on the L M S Ry. It is chiefly a residential district. The edge is a ridge of hills about 650 ft. high. Pop (1931) 3141.

Alderman Member of a town or county council in England and Ireland. The word is also used in Canada and the United States. Town and county councils consist of aldermen and councillors, the aldermen being chosen by the councillors for six years. The aldermen of the City of London are elected for life and from them the lord mayor is chosen. In Scotland the bailies take the place of aldermen. Aldermen or caldormen, are first heard of in Anglo-Saxon times, when they looked after a part of the kingdom. The present system was introduced in 1835.

Alderney One of the Channel Islands. It is only 8 m from Cape La Hague, being divided from it by the channel called the Race of Alderney. It is 4 m long and covers 3 sq m. St. Anne is the capital and the only town. The island is famous for its breed of small cattle.

Aldershot Borough of Hampshire, 34 m from London on the Southern Railway. The town is the centre of the chief military camp in England. The buildings and the industries are all connected with the military and its wants. The former include barracks, hospitals, schools, workshops, etc. The camp is divided into three sections called the Wellington, Marlborough and Stanhope lines, there is accommodation for infantry, cavalry and artillery, while the training grounds cover 70 sq miles. The town has a racecourse and other facilities for sport. A military tattoo is held here in June. Pop (1931) 34,281.

Aldwick Village of Sussex It is on the coast about a mile to the west of Bognor Here is Craigwell House, where King George V went to recuperate after his illness of 1928-29

Aldwych Street in London This name is taken from that of a Danish settlement It is a curve meeting the Strand at both ends, with Kingsway running from it to Holborn It was opened in 1905 The Aldwych Club, at 18 Exeter Street, London WC is for advertising and business men generally It was founded in 1911

Alekhine Alexander Russian chess champion He was born in Moscow, Nov 1, 1892, educated at Leningrad, took his degree in law and entered the foreign office As a chess player he became known in 1909, while still a youth, and his reputation grew until in 1927, by beating Capablanca, he became the world champion He held the title until 1935, when he was defeated by Dr Max Euwe

Alembert Jean le Rond d' French philosopher He was born Nov 16, 1717 and received a good education, later showing himself a brilliant mathematician and writing several mathematical books of high value He is better known perhaps for his association with Diderot in the preparation of the *Encyclopedie* He also wrote on literature, music, philosophy and other subjects He received many honours and was on friendly terms with Frederick the Great and Voltaire In 1772 he was made secretary of the French Academy and he died Oct 29, 1783

Alençon Town of France It stands on the river Sarthe, 67 m from Caen The town gives its name to a kind of lace The Counts of Alençon were prominent among the nobles of France in the Middle Ages and the title of Duke of Alençon was borne by several members of the royal family Pop 17,400

Aleppo City of Syria, called by the Arabs Haleb It is situated in a valley through which the river Kuwaik flows and is a station on the railway line from Adana to Damascus In the Middle Ages it was an important trading centre, being on the main trade route between Europe and Asia To-day it has a considerable trade in silk, tobacco, etc., which goes mainly through its port Alexandretta, 70 m away There are large Greek and Armenian elements in the population Aleppo was occupied by the British in Oct 1918 Pop 177,313

Aleutian Islands Group of islands off Alaska belonging to the United States They are very bare and rocky and there are many volcanoes. Unimak is the largest island The men are engaged chiefly in fishing The island of Unalaska, with a good harbour, is the centre of the American seal fisheries

In 1928 an expedition found on one of the islands some hodies in a perfect state of preservation. They are thought to belong to the stone age Pop 2000

Alexander Name of eight popes, of whom the most important was Alexander VI Alexander I was pope, or bishop, of Rome 107 to 116 Alexander II, one of Hildebrand's nominees, was pope 1061 to 1073 Alexander III was pope 1159 to 1181 He was the pope who made Henry II do penance for the murder of Becket in 1170

and received at Venice in 1177 the homage of the great Emperor, Frederick I Alexander IV was pope 1254 to 1261 and Alexander V 1409-10 Alexander VII was pope 1655-67 and Alexander VIII 1689 to 1691

ALEXANDER VI Pope from 1492 to 1503 Rodrigo Borgia was born near Valencia in Spain, Jan 1, 1431 He became a priest and when his uncle, Alphonse de Borgia, was made pope in 1455, his rise was rapid Chosen Archbishop of Valencia and soon made a cardinal, he passed his time in luxury and intrigue, chiefly in Rome, until elected pope in 1492 The eleven years of his rule were devoted to the amassing of wealth and power He scored a victory over Charles VIII of France and helped to bring Savonarola to his martyred end. The pope died Aug 18, 1503 See BORGIA.

Alexander King of Macedon, called the Great A son of King Philip II and his wife Olympias, he was born at Pella in 356 B.C., and in 336 succeeded the murdered Philip as king His first work, quickly accomplished, was to deal with rebellions among the Greeks and others under his rule, after which he started out on a career of conquest that has few if any parallels in the world's history

Taking up a project entertained by his father, Alexander decided to attack the huge Persian Empire, marched in 334 into Asia Minor and quickly mastered the cities in that country He then conquered with comparative ease Phoenicia and Syria, although he met with serious resistance at Tyre This, however, by the aid of a fleet, he overcame and the city was destroyed

Alexander went next to Egypt which submitted to him without a struggle Having founded the city of Alexandria, he set out upon a further career of victory He passed through Syria into Persia and marched up the valley of the Tigris, through the country known as Mesopotamia He captured Susa, Persepolis, Ecbatana and other Persian cities with their treasures and advanced to the Caspian Sea The barbarian tribes dwelling on the coast of this sea were brought in a sense under his rule The new empire was organised into provinces, each keeping its own traditions and institutions. About this time he crushed a rising led by Bessus, the successor of Darius

He next entered India In 326 he crossed the Indus near Attock and gained a great victory After some further conquest he returned through Baluchistan to Persepolis, then set himself to organise the great empire he had conquered In the midst of this work and while planning an expedition into Arabia, on June 20, 323, he died

Alexander was a great administrator as well as a great soldier, and spread the influence of Greece throughout the empire he had won but his time was too brief to weld it together, and on his death it fell rapidly to pieces

Alexander Name of three Tsars of Russia Alexander I was born Dec 23, 1777, a son of Paul I He became tsar in 1801 and reigned until 1825 The earlier part of his reign was occupied with wars against France, interrupted by the peace he made with Napoleon in 1807 He took a leading part in the peace negotiations of 1814-15, and was prominent as the author of the Holy Alliance, an association of rulers pledged to govern on Christian principles In his own country Alexander put his liberal ideas into operation, one result being the

grant of a constitution to Poland. He died Dec 1, 1825.

Alexander II Son of Nicholas I, he was born April 29, 1818. In 1855 he succeeded to the throne. Like his uncle, Alexander I, he had liberal ideas, but circumstances made it difficult for him to give them expression, and his reign did not differ much from the repressive rule of his father. It was marked by the end of the Crimean War, the war with Turkey, and the Treaty of Berlin, the activities of the Nihilists and the advance of Russia into Asia. The Tsar was murdered, March 13, 1881.

Alexander III A son of Alexander II, he was born March 10, 1845, became tsar on his father's murder in 1881, and ruled for 13 years. He made no serious change in the methods of government, which remained harsh. He died Nov 1, 1894. The tsar married a daughter of Christian IX of Denmark, and was therefore a brother-in-law of Queen Alexandra.

Alexander King of Greece. The second son of King Constantine, he was born Aug 1, 1893, his mother being a sister of the Kaiser. When his father abdicated in 1917 the Powers refused to allow his eldest son, George, to become king so the crown was given to Alexander. He reigned until his death, due to the bite of a pet monkey, Oct 25, 1920.

Alexander Three kings of Scotland. Alexander I, king from 1107 to his death, April 27, 1124, was almost an Englishman. His father was King Malcolm Canmore, but his mother was an English princess, and he married an English lady, a natural daughter of Henry II. Alexander II, a son of William the Lion, was king from 1214 to July 8, 1249, when he died. He married a daughter of King John, and was as much an English baron and landholder as a Scottish king. Alexander III was a son of Alexander II. He became king in 1249 when only eight years old. In 1251 he married Margaret, daughter of Henry III. On March 12, 1286, when riding along the cliffs near Kinghorn, Fifeshire, he and his horse fell over the cliff and were killed.

Alexander King of Serbia. He was born in 1876, a son of King Milan, and became king when his father abdicated in 1889. In 1893 he began to rule in person. In 1903 he married Draga Mashin, a lady of the court, and made himself a dictator. The result was a revolution, and on June 11, 1903, the king and his wife were killed.

Alexander King of Yugo-Slavia. Born Dec 17, 1888, he was a son of King Peter of Serbia. In 1909, his elder brother, George, having renounced his claim, he became heir apparent. He served with the army in 1912-13 against the Turks and also in the Great War. In Aug. 1921, he became king of the new state of Yugo-Slavia, an enlargement of Serbia, and in 1922 he married a princess of Rumania. A son, Peter, was born in 1923. In 1928 Alexander made himself dictator, but constitutional government was restored in 1931. He was assassinated on Oct 9, 1934.

Alexander Prince of Bulgaria. He belonged to the family that ruled over Hesse and was born April 5, 1857. He served in the Russian Army against the Turks in 1877 and in 1879 Russian influence secured for him the position of first Prince of

Bulgaria. He enlarged the area of the country and was successful in a war with the Serbians, but offended his Russian supporters. In 1886 he abdicated, and as Count Hartenau lived in retirement until his death, Nov 17, 1893.

Alexander Albert Victor. British politician. Born at Weston-super-Mare, May 1, 1885, he became associated with the Co-operative movement. He served with the forces during the World War and in 1920 was appointed secretary to the parliamentary committee of the Co-operative Congress. In 1922 he was elected M.P. for the Hillsborough Division of Sheffield, in 1924 he became parliamentary secretary to the Board of Trade, and in 1929 First Lord of the Admiralty. He resigned in August, 1931, and lost his seat in Parliament in the following October, but was again returned at the General Election of 1935.

Alexander Sir George. English actor. He was born at Reading, June 19, 1858. In 1880 he joined Irving, in whose companies he played for the next eight years. He then took his own theatre in London, the Avenue, but in 1891 he moved to the S. James's, where he remained until his death March 16, 1918. In 1911 he was made a knight.

Sir George was most successful in comedies of modern society, in which he took the part of a suave man of the world. This was seen when he played in such pieces as *Lady Windermere's Fan*, *His House in Order* and *The Second Mrs Tanqueray*.

Alexander Nevski Russian saint. He was born in 1220 and became a famous soldier. In 1240 he defeated the Swedes on the banks of the Nova, and was afterwards known as Nevski. He won his reputation as a saint by his charities. He died, Nov 14, 1263.

Alexander Severus Roman emperor. He was born in 205 and was adopted by a cousin, the Emperor Heliogabalus. In 222 he became emperor and conducted successfully a war against Persia, but was murdered in 235.

Alexandra Queen of Edward VII. She was born at Copenhagen, Dec 1, 1844, a daughter of the prince who, in 1863, became Christian IX, King of Denmark. Brought up very simply, as her parents were very poor for their station, the princess was betrothed in Sept. 1862, to the Prince of Wales, whom she first met in 1861. On March 10, 1863, they were married in St George's Chapel, Windsor. The beauty and charm of the princess made a great impression on the people of England.

For 38 years Alexandra was Princess of Wales, for nine years she was Queen, and for the remaining 15 years of her life she was Queen Mother. In each station she carried out her high duties to perfection. She had six children, four of whom survived, King George V and his three sisters, the Princess Royal, Princess Victoria and the Queen of Norway. Queen Alexandra's last days were mainly passed in retirement at her London residence, Marlborough House, and there she died, Nov 20, 1925.

Since 1912, June 26 has been kept as Alexandra Day to commemorate the day on which she landed in England in 1862. On this day roses are sold for the benefit of the hospitals.

In 1932 the national memorial to the queen was unveiled in the garden of Marlborough.

House It consists of the figures Faith, Hope and Charity, by Sir Alfred Gilbert, R.A. Altogether £230,000 was raised, most of it being devoted to a pension fund for nurses

Alexandretta Seaport of Syria, called also Iskanderun and Skanderoon It stands on the gulf of Alexandretta, an opening of the Mediterranean Sea, 70 m from Aleppo, with which it is connected by railway It has a harbour and is the port for Aleppo Alexandretta was founded by Alexander the Great. It was occupied by the British in Nov., 1918 Pop 13,997 See ALEPPO

Alexandria City and seaport of Egypt It is situated between the sea and Lake Marcotis, and is connected by railway with Cairo and by canal with the Nile It was founded by Alexander the Great, and the native name for it is Iskanderia There are two harbours, an old one and a modern one The city is divided into three parts, the Mohammedan the European and the Arab Pompey's Pillar, dating from 302, is a landmark The port has a large trade in cotton

Alexandria was at one time the most famous city in the world It was noted especially as a centre of learning and possessed the finest library in existence In it the great mathematicians, astronomers, theologians, philosophers and others settled and founded schools which exercised extraordinary influence The period of its glory lasted for nearly a thousand years, from 332 B.C. to 641 Near Alexandria was the Pharos lighthouse, and in the city were the two obelisks called Cleopatra's Needles, one now lying in London and the other in New York The ancient city was also a great centre of trade and, after its conquest by the Romans became their most important seaport In 641 the city began to decline, a process hastened after 1517, when it was taken by the Turks Its population once estimated at 750,000, fell to 6000 In the 19th century, however, it revived until it became again a great seaport It was taken by Napoleon in 1798 and by the British in 1802 after Sir Ralph Abercromby had defeated the French in a battle here In 1882, when Arabi Pasha rebelled, it was bombarded by a British fleet Pop 573,000

Alexandria Town of Dumfriesshire It stands on the Leven, 3 m from Dumfries, on the L.M.S. and L.N.E. Ryhs The town is a centre for the printing, bleaching and dyeing of textiles Pop 7804

Alexandrite Name of a semi precious stone, a variety of chrysoberyl It is dark green in colour, but gleams red in artificial light It is found in the Ural Mountains

Alexius Name of five Byzantine, or East Roman emperors. Alexius I, a member of the Comnenus family, was born in 1048 and became emperor in 1081, owing his elevation to a rising of the soldiers He reigned for 37 years, a period which covered the time of the first Crusade He died in 1118 The four other emperors of this name are unimportant

Alfalfa Species of medick (*medicago sativa*) It is a leguminous plant of the pea family grown for green fodder, and also found wild in fields and hedgerows. It has clover like leaves, hollow branching stems and bears racemes of purple, or some times yellow flowers It is cultivated largely

in America and parts of Europe as a forage crop See LUCERNE

Alfieri Vittorio Italian poet Born at Asti, Jan 17, 1749, absent 1772 he settled down to study at Turin Already he had written a drama, and during the rest of his life he produced a good deal of poetry which has a deserved place in the literature of Italy Alfieri is also known as the lover of the Countess of Albany, the wife of Charles Edward, the Young Pretender The two lived together from 1780 or thereabouts, until the poet's death at Florence, Oct 8, 1803

Alfred King of England, called the Great He was born at Wantage in 849, being a son of Ethelwulf, King of England He helped his brother, King Ethelred, to fight the Danes, winning fame at Ashdown in 871 In the same year Ethelred died and Alfred was chosen king At first he was King of Wessex only, but afterwards the whole of England acknowledged him as its overlord

The struggle with the Danes had intervals of peace which he used to organise the army and create something like a navy In 878 there was a serious Danish attack. Alfred was forced to take refuge in Somerset, but he soon collected an army and won a battle at Edington The result was a treaty with the Danish leader, Guthrum, which divided the country between them, Alfred received the south and west and was acknowledged by Guthrum as his lord In 884 and 892 new hordes of the invaders arrived, but Alfred held his own He died Oct. 20 or 28, 901, and was buried at Winchester

The Alfred Jewel, now in the Ashmolean Museum at Oxford, bears a portrait of the king and the words "Alfred had me wrought" It was found at Athelney in 1693

Alfreton Urban district of Derbyshire It is 14 m from Derby and is reached by the L.M.S. Ry The chief industry is coal mining, but there are hosiery factories here Pop (1931) 21,232

Alfriston Village of Sussex. It is 10 m from Eastbourne One of the most picturesque places in England, it possesses a large church called the Cathedral of the Downs, a clergy house owned by the National Trust, and the Star Inn dating from about 1500 Pop (1931) 590

Algae In botany a term used for the class of plants popularly known as seaweeds These have no vessels, no tissues and no organs other than those formed by the reproductive cells As they have no roots they absorb nutriment from the water or the air The Algae are divided, according to the colouring matter they contain, into green, brown, red and blue green algae

Algebra Method used in mathematical calculations, in which quantities are represented by letters and their relations by signs, an algebraic formula for some rule being more convenient and more easily remembered than the rule expressed in mere extended form To take a simple case, the area of a parallelogram is equal to the length of the base multiplied by the perpendicular height In algebraic form it may be represented as, $a = \text{base}$ $b = \text{height}$, and the area $= c$, then $a \times b = c$, or shortened to $ab = c$ The ordinary processes of addition subtraction, etc., can be performed by algebra, also the more complex mathematical problems are expressed and solved best in algebraic form

Algeciras Seaport of Spain. It is on the bay of Algeciras, 6 m. from Gibraltar. There is a harbour, fishing, and a little trade.

In 1906 a conference of European Powers was held at Algeciras to discuss the affairs of Morocco, and on April 7, a Convention was signed giving France a free hand to carry out certain reforms and restore law and order.

Algeria Country of Africa, a dependency of France. It covers 847,500 sq. m., and has a coastline on the Mediterranean Sea. The Atlas Mts., running parallel to the coast, divide the country into a fertile coastal region and a belt of desert. Algiers is the capital; other towns are Oran, Constantine, Bona, Sidi-bel-Abbes, Philippville, Mascara, Tlemcen and Setif.

The chief industry is the growing of fruit, vegetables, wheat, barley, etc. Wine is made and there is a good deal of mining, especially of iron ore. The fisheries are valuable. The country has a railway system and many excellent roads.

Algeria is governed by a governor-general. A large army, including the Foreign Legion, is maintained in Algeria. The population is 6,553,451 (1931), of whom nearly 1,000,000 are Europeans. The natives are chiefly Arabs and Berbers.

Algiers Seaport and chief town of Algeria. It consists of an old town where the Arabs live and a modern one built by the French. There are two harbours and an extensive trade is done with France and elsewhere. The buildings include the Roman Catholic cathedral and several mosques, including the Grand Mosque. It has a university. The city is fortified and is a station of the French Navy. Algiers was long a centre of piracy, and on this account it was homed by a British Fleet in 1816. In 1830 it was taken by the French. Pop (1931) 257,122.

Algin Substance found on certain seaweeds. It resembles gelatin and dissolves in water, from it alginic acid is obtained. It is prepared during the process of making iodine, is used as a thickening for soups and as a size to prepare walls for paint.

Algoma District of Canada, now part of the Province of Ontario. It is about 70,000 sq. m. in area, and lies to the north of Lakes Superior and Huron. Sudbury is the chief town. Silver, nickel, and copper are mined and there are vast forests.

Algonkin Name given to a group of American Indian tribes. It included the Blackfeet, Mohicans, Shawnees and others who lived in Canada and the northern parts of the United States. In both countries there are some thousands of them to-day. The word means, "at the fish spearing place."

The term Algonkian is applied to certain rocks found in North America. They are of sedimentary origin, such as sandstone and limestone and are seen in the neighbourhood of Lake Superior, where they are rich in coal and copper. See AMERICAN INDIANS.

Alhambra Palace in Spain. It stands on the hills overlooking Granada, and was built by the Moors in the 13th and 14th centuries. It was a fortress and also a palace, and is the most striking example of Moorish architecture in the world. It is entered by the Gate of Justice and its

two greatest courts are the Court of the Lions and the Court of the Fishpond. Its rooms are decorated with sculptures, columns, carvings, etc., of the most exquisite kind.

Alias Word meaning an assumed or false name. It is quite legitimate to take another name, as writers sometimes do, but it is often done by criminals and others to hide their identity. Such when charged are described as A alias B.

Alibi Term used in English law. It describes a plea put forward by an accused person that he or she was somewhere else when the offence took place. This form of defence, however, is easily abused and is therefore regarded with suspicion.

Alicante City, seaport and watering place of Spain. It is situated on the Mediterranean. There is a good harbour and a trade in wine and fruit. The place is visited in winter on account of its pleasing climate. Pop (1931) 73,987.

Alice Springs Town of Australia, since 1927 the capital of the territory of Central Australia. It is 1120 m. from Adelaide on the railway line to Darwin.

Alien Anyone not a subject of the country in which he lives. Each country has its own laws on this subject and in all it is possible for an alien to become naturalised, and therefore no longer an alien. In English law a person born outside the Empire is an alien unless he or she is the child of British subjects, or the grandchild of such on the father's side. Since 1870 it has been lawful for an alien to own property in Great Britain, but he cannot vote at elections, nor can he hold a public position.

The entry of aliens is regulated by law in almost all countries, in the United States the quota system each year is in force. Other countries apply an educational, or a means test, while in some cases immigration especially of coloured men and women, is forbidden.

Into England until 1905 aliens were freely admitted, but in 1905 a law placed certain checks on their entrance. The authorities can now refuse admission to diseased, criminal, lunatic and pauper aliens. Aliens convicted of crime can be sent back to their own countries. Aliens refused admission can appeal against the decision, and are entitled to entry if they can prove that they are escaping from religious or political persecution. During the Great War the position of alien enemies, e.g., Germans and Austrians, created considerable difficulties. Many of the males were interned, and after the war were sent abroad.

The admission of aliens into Great Britain to-day is regulated by the Alien Order of 1920. Resident aliens must be registered. The controlling authority is a branch of the Home Office which has inspectors at the ports.

Alienism Medical term denoting the study and treatment of mental diseases. Alienation is a general term for the various forms of insanity and mental derangement. An alienist is the name for a physician who specialises in their treatment.

Alimony Legal terms for the allowance paid by a husband to a wife, or vice versa, in cases of separation. It comes from the Latin *alere* to nourish. After a separation has been ordered the court usually fixes the amount to be paid to a wife at such a sum as will make up her income to one-third

of the joint income, but it has a wide discretion in the matter. In Scots law alimony is called *aliment*.

Alington Cyril Argentine Dean of Durham The son of a clergyman, he was born in 1872 and educated at Marlborough and Trinity College, Oxford, where he won a fellowship at All Souls College. He became a schoolmaster and was ordained. Having been a master at Marlborough and Eton, he was head of Shrewsbury from 1908 to 1916. In 1916 he was chosen headmaster of Eton, and in 1933 became Dean of Durham. He has written a detective story, *Mr Evans*, as well as *Eton Fables* 1921, *Doubles and Difficulties*, 1920, and other books.

Aliwal Name of two places in South Africa. Aliwal North is in the Orange River in the Cape Province. It is on the railway from East London, 280 miles away. There is a park and a racecourse and near are sulphur springs. Pop. 5500.

Aliwal South is the old name of Mossol Bay. There is also a village of this name in the Punjab district of India.

Alkali Name given to a group of compounds, oxides or carbonates which are soluble in water and neutralise acids forming salts. They have a caustic taste and turn red litmus blue. The common alkalis, ammonia, caustic soda, caustic potash, sodium and potassium carbonates are of great commercial importance and are manufactured on a very large scale. The term caustic alkali is applied to caustic potash and caustic soda, and mild or fixed alkali to the carbonates of soda and potash.

Natural alkali deposits occur in many parts of the world, such as trona and natron (carbonates of soda) in California, British Columbia and Lake Magadi in East Africa.

Alkaloid Group of very complex basic nitrogenous substances forming the active principles of plants. They are extracted by percolation with alcohol, and are obtained in a crystalline form although a few occur as liquids. Alkaloids act as bases like ammonia, forming salts with acids. Some of them are extremely poisonous though of great medicinal value in proper doses. Typical alkaloids used in medicine are atropine, caffeine, cocaine, morphine, quinine and strychnine. They are regarded as derivatives of pyridine bases which are present in coal tar and bone oil, and in recent years great progress has been made in the synthetic production of alkaloids.

Allah Name used by Mohammedans for the Supreme Being. It was first used in this sense by Mahomet in the expression of his creed, "There is only one God and Mahomet is his prophet."

Allahabad City of India, the capital of the United Provinces of Agra and Oudh. It stands where the Jumna falls into the Ganges, 565 m. from Calcutta. It is an important trading centre. The objects of interest include the fort with an underground temple, the pillar of Asoka and the mausoleum of Khursu. The university, founded in 1837, has its headquarters here. To the Mohammedans Allahabad is a sacred city and a religious festival is held every year, when the pilgrims bathe where the rivers unite. The Hindu name for it is Prazag. There were serious riots in the city in April, 1932. Pop. (1931), 183,914.

Allan Sir Hugh Scottish shipowner. He was born at Saltcoats, Sept. 29, 1810, and went to Canada. About 1853 he formed the Montreal Ocean Steamship Co., later called the Allan Line. In 1871 he was knighted and died Dec. 9, 1882.

The Allan Line is now owned by the Canadian Pacific Ocean Services, Ltd.

Allegation In English law a statement which has not been proved in a court of law, but which its authors think is true. By using the word alleged newspapers can avoid actions for libel when mentioning crimes.

Alleghany River and mountain range of the United States. The river rises in Pennsylvania and flows through the state of New York before it returns into Pennsylvania and passes Pittsburgh. Later it unites with the Monongahela to form the Ohio. It is 300 m. long. Alleghany is also the name of a suburb of Pittsburgh. The Alleghany Mts. are a part of the Appalachian range (q.v.).

Allen Bog and lake in Ireland. In the counties of Leitrim, Ossory, Kildare and Westmeath the bog covers about 400 sq. m. with patches of fertile land here and there. The surface is peat which has a depth on the average of about 25 ft.

Lough Allen is one of the lakes formed by the Shannon. It is 5 m. long and covers about 15 sq. m. in the counties of Roscommon and Leitrim.

Allen Grant. English novelist. Charles Grant Blairfrankie Allen, the son of a clergyman, was born at Kingston, Ontario, Feb. 24, 1848, and educated at King Edward's School, Birmingham, and at Oxford, Merton College. For four years he was head of a college in Jamaica, but he spent the rest of his life in England. He died Oct. 24, 1899. Grant Allen wrote readable books on scientific matters in those he popularised Darwin's ideas. His novels include *The Woman Who Did* and *An African Millionaire*.

Allen William. English cardinal. He was born at Rossall in 1832, and educated at Oriel College, Oxford. He was made head of St. Mary Hall, Oxford, but after Elizabeth became queen he went to France. There he helped to establish the college at Douai and began the translation that is called the Douai Bible. The main work of his life was to help Philip of Spain, the Pope, Mary, Queen of Scots, and others in their schemes against England. In 1587 he was made a cardinal and he died Oct. 16, 1594.

Allenby Viscount. British soldier. Edmund Henry Hynman Allenby was born April 23, 1861, was educated at Haverbury and Sandhurst, and entered the army as a cavalry officer in 1879. He saw service in South Africa 1884-85 and 1888, and also in the war against the Boers. In 1902 he became colonel of a cavalry regiment, and having had charge of a brigade was in 1910 made Inspector of Cavalry. In 1914 he went to France at the head of the Cavalry Division and in 1915 took command of an army corps. He was promoted to lead the Third Army in 1917 and was then sent to Egypt. There he organised the force that drove the Turks from Palestine and won one of the most conspicuous successes of the war. From 1919 to 1925 he was High Commissioner for Egypt, and Captain of Deal Castle, 1925 and 1926. In 1915 Allenby was knighted and he received many other honours. In 1919 he was

he was made a field-marshal and a viscount, receiving also £50 000. He took the title of Allenby of Megiddo and Felixstowe. His only son was killed in 1917.

Allendale Village of Northumberland. It is 10 m from the market town of Hexham and is a centre for tourists visiting the district.

The title of Viscount Allendale is held by the family of Beaumont.

Alley Edward. English actor. He was born in London, Sept. 1, 1866, and became a prominent figure on the London stage. He was also concerned in building a theatre, his partner being Philip Henslowe. In 1604 the two were made Joint Masters of the King's Bears, Bulls and Mastiffs. He died, Nov. 25, 1926, and was buried at Dulwich.

Alley is known as the founder of Dulwich College. Old boys of the college are known as Old Alleynians.

All Hallows Seaside resort of Kent. It is on the estuary of the Thames, 33 m from London, opposite Southend. There is a station on the Southern Rly., which opened the place in 1932 as a pleasure resort.

Alliance Word used for a league or alliance between countries, sometimes used for an industrial league. Notable alliances were those formed against Louis XIV and against Napoleon, the Triple Alliance between Germany, Austria and Italy that came to an end in 1915, the Anglo-Japanese Alliance and the Holy Alliance. The greatest alliance in history is that formed in 1914 to carry on the war against Germany, Russia, France, Belgium, Great Britain, Serbia, Japan, Portugal, Italy, Rumania and other powers joined it. The United States never formally joined the alliance, and so the Peace Treaty speaks of the Allied and associated Powers.

Alligator Amphibious animal of the crocodile family. The name is a Spanish word for "lizard." It differs from the crocodile in having a shorter and broader head, without a fringing membrane, and toes incompletely webbed. The teeth and jaws are also different.

Alligators are chiefly found in the warmer parts of the world. They live in the Mississippi and other rivers and lay their eggs in the grass on the banks, where they are hatched by the heat of the sun. The alligator is about 16 ft. long, but a smaller variety is found in China. The skin makes excellent leather.

Allington Village of Kent. It stands on the Medway and is famous for its castle, which, now restored, is one of the finest examples of a medieval castle in the land.

Alliteration In poetry, and to some extent in prose, the use of words beginning with the same letter. Instances are the humorous lines beginning "An Austrian Army Awfully Arrayed," and Swinburne's, "O sleepless heart and sombre soul unsleeping."

Alloa Burgh and seaport of Clackmannanshire, Scotland, also the county town. It stands on the Firth of Forth, 6½ m from Stirling, on the L M S and L N E Rlys. Alloa House, a modern building, is the seat of the Earl of Mar and Kellie. Alloa Tower, dating from the 13th century, is an old stronghold nearly 100 ft. high. The in-

dustries include the making of hosiery and yarn and the distilling of whisky. A ferry crosses the river to South Alloa where there are large timber yards. Pop (1931) 13,322.

Allopathy Medical term, the exact opposite of homeopathy. Meaning in Greek "other feeling," allopathy is a way of treating disease by using remedies which produce results quite opposite to those produced by the disease itself.

Allotment Small piece of land used for growing crops, chiefly vegetables. By English law an allotment is defined as a piece of land not exceeding 1210 sq yards in extent.

To provide allotments in Great Britain several acts of parliament have been passed. County and district councils have power to acquire land and let it out in allotments and security of tenure is assured to the occupiers. During the Great War much land was cultivated in this way. In May, 1930, there were 965,000 allotments in England and Wales.

Allotropy In chemistry the ability to exist in two or more distinct forms. It is possessed by certain of the chemical elements and in a slight degree by the majority of them. Carbon which exists in the form of coal, diamond and graphite, is an example.

Alloway Village of Ayrshire. It is on the River Doon, about 2 m from Ayr, and is famed for its associations with Robert Burns. The cottage in which he was born is now a museum, and a monument has been erected near the old kirk mentioned in his poem *Tam o' Shanter*.

Alloy Compound formed by the mixing of two metals. They may be divided into three classes: 1. Mechanical mixtures which may be regarded as solidified solutions of one or more components in each other. 2. Definite chemical compounds. 3. Mixtures of these two classes.

Some alloys are found in nature, but most of them are prepared artificially. Their purpose is to increase hardness, flexibility or toughness, or to alter the colour, or to give a definite electric resistance. Iron is hardened by manganese, copper is toughened by arsenic and made more tenacious by aluminium. Gold is hardened for currency purposes by the addition of a baser metal.

Some of the most useful alloys are brass, formed of copper and zinc, bronze of copper and tin, gun metal of copper and tin, German silver of copper, nickel and zinc, Britannia metal of tin, antimony and copper, and pewter of tin and lead. Others are type metal, bell metal and bearing metal. Another kind of alloy is known as solder, this being composed of tin and lead. Some metals, such as iron and manganese, will unite in all proportions, but others only in certain definite ones. Steel is really an alloy, although its other ingredient is not a metal but carbon. Steel which contains chromium is becoming of increasing industrial importance. See STEEL.

All Saints' Day Church festival kept on Nov. 1. Formerly known as All Hallows, its Eve (Oct. 31) is still called Hallowe'en, especially in Scotland. It is observed in the Church of England and by Roman Catholics.

Allsopp English family. The founder of this family of brewers was Samuel Allsopp, who started a brewery business at Burton-on-Trent. His son, Henry, developed

it, and was made a peer in 1886, taking the title of Baron Hindlip. He died April 3, 1887.

Allspice Spice, also called Jamaica pepper. It is very fragrant, combining the aromas of cinnamon, nutmeg and cloves. It is made from the berries of a tree growing in the West Indies, Mexico and parts of South America, and is used for flavouring and in medicine.

Alluvion Word used for land added by the action of the sea, or a river. It is usually due to the action of the sea which recedes in one place and encroaches in another, or to the action of a river in changing its course. There are many instances of alluvion in England, one being the estuary of the Ribble.

Alluvion is sometimes confused with alluvium which is the deposit brought down by a river. It is usually the debris of rocks.

Alma River of the Crimea. On its banks on Sept. 20, 1854, a battle was fought between the British and French on one side and the Russians on the other. The fight was a stubborn one with local reverses on either side. In the end, however, the allies gained possession of the heights above the river and the Russians withdrew, with heavy losses.

Almack's London club. It was a gaming club founded in 1764 and kept by William Almack, really MacAll, at one time valet to the 7th Duke of Hamilton. It was afterwards called Goose-tree's and then Brooke's. Some assembly rooms in King Street, St. James's, were also called Almack's. These were opened in 1765 and remained a social centre until about 1863. Afterwards they were called Willis's Rooms. The present Almack's Club was founded in 1908. It is a social club, a resort of bridge players, and its house is 1 Hyde Park Place, London, W.2.

Alma Mater Latin phrase meaning "kind mother." It is used as a synonym for the university or college at which a person was educated.

Almanac Originally a book or other document giving particulars of the days of the year, with astronomical and other information, together with prophecies about the happenings therein. Almanacs of this kind appeared soon after the invention of printing and are still issued. Old Moore's and Zadkiel's are examples. Modern almanacs are year books, giving a mass of general information. The best known in Great Britain is Whittaker's.

The Almanach de Gotha, first published in 1763, is an international work of reference, in which a large section is devoted to the great European families.

Almandine Gum stone, a variety of garnet. Its old name is carbuncle. The stone rather resembles the ruby, but is less hard. It shows the same colour whatever the light. The stones are found in North and South America, especially Brazil, and in Ceylon.

Alma-Tadema Sir Lawrence English painter. He was born in Ireland, Jan. 8, 1836, and studied painting at Antwerp. His paintings became known in England where he settled in 1870 and where he lived until his death, June 25, 1912. In 1879 he was elected an R.A. he was knighted in 1889 and given the Order of Merit in 1905. He became an English subject and married an Englishwoman, Laura

Theresa Epps, who was also a painter. Tadema's pictures are mainly scenes from Greek and Roman mythology.

Almeh In Egypt the name of a class of women who are professional musicians, dancers, singers and players on instruments.

Almond Tree that grows in the southern part of Europe and to some extent in England. It bears white, pink or red flowers and blooms in the spring. It may be 10 ft high and is very ornamental, but the fruit will not usually ripen in Great Britain.

The fruit contains seeds which are dried and sold as a delicacy for the table. There are sweet and bitter varieties and they are imported into England chiefly from Italy, Spain, Greece, Morocco and California. The oil can be made from coal tar.

Almoner One who is responsible for giving alms in monasteries. One of the members was appointed to look after the giving of alms and there were almoners in the household of kings, princes and other high officials. To day in the Royal household there is an almoner with offices in Queen Anne's Gate, London, S.W. It consists of the Hereditary Grand Almoner, the High Almoner, and others. Most large hospitals call one of their chief officials the Lady Almoner and the chaplain of certain institutions is called the Almoner.

Almshouse Homes provided for the poor. They are usually built by private individuals and consist of a number of small residences in a single building. Some are for men and others for women, while there are a few for married couples. In many cases the inmates receive a monetary allowance.

In the Middle Ages many of these almshouses, or hospitals, as they were called, were founded in England, and some of them are very picturesque buildings. Notable almshouses are the hospital of St. Cross at Winchester and the Leicester Hospital at Warwick and the Charterhouse in London. To a later date belongs Morden College at Blackheath. Alms houses are maintained by some of the London livery companies.

The administration of the funds left for alms houses is now supervised by the Charity Commission.

Alnwick Urban district and market town of Northumberland, also the county town. It stands on the Aln, 334 m from Newcastle on the L.N.E. Ry. There is a trade in agricultural produce. Owing to its position Alnwick was often attacked by the Scots. In 1093 King Malcolm was killed here, and in 1172 William the Lion was made prisoner. Pop. (1951) 6882.

Alnwick Castle, the residence of the Duke of Northumberland, stands on a hill outside the town. There are slight remains of the old castle, but the present one is mainly modern, although built in the baronial style.

Aloe Evergreen plant. It has thick fleshy leaves and bears many tubular flowers. It grows in South Africa and other hot countries, and will thrive in the greenhouse in Great Britain.

There are many species of aloe and from them a drug is obtained, called bitter aloe, and used in medicine as a purgative. A coarse variety is used as a purgative for animals. It is obtained from the dried juice of the leaves. In colour it is yellowish brown and its principle is called aloin.

Aloes wood, called eagle wood, paradise wood

and calamba, is obtained from a tree that grows in Asia. It gives out a resinous substance, used as a perfume and in medicine. An oil is distilled from the wood.

Aloysius Italian saint. He was born March 9, 1568, the son of an Italian nobleman, and his name was Luigi Gonzaga. In 1585 he joined the Society of Jesus, but six years later he died of the plague caught while tending the sick in Rome (June 21, 1591). Aloysius, this being the name he took, is associated with the education of boys and many schools are named after him. He was canonised in 1726.

Alpaca Animal found in South America. It is really a domesticated form of the guanaco, a small kind of llama. It is bred in Peru and Bolivia for the sake of its wool.

The hair is fine, silky and long, its colour being black, brown or grey. It is used for making the cloth called alpaca. Its manufacture in England was begun in 1836 by Sir Titus Salt, who erected mills at Saltaire, near Bradford.

Alpha First letter of the Greek alphabet.

Alphabet Collection of symbols, called letters, used to represent the various sounds made in human speech. The word comes from the first two letters of the Greek alphabet, alpha and beta. Each language has its own alphabet, with a varying number of letters, which is divided in most of them into consonants and vowels. The vowels give the breathing to the consonants which cannot be pronounced without them.

The earliest representations of human voice sounds were photographs, the figure of an animal or bird being used to convey a certain sound. These were succeeded by hieroglyphs and then by cuneiform, and other similar systems of writing in which a wedge or combination of wedges represented a sound. The Egyptians used the hieroglyphic system, which exercised some influence upon the formation of the alphabet.

The origin of the modern alphabet is usually attributed to the Phœnicians, but it probably goes back further than their time. Soon after 2000 B.C. there was a Semitic alphabet in use in Syria and discoveries made in 1932 proved this. It consisted of 22 letters, all consonants, and is regarded as the parent of the modern alphabet. It was used by the Jews and other Semitic peoples, but it was the Phœnicians who handed it on to the Greeks, and so to the modern world.

The Greek alphabet, when it took its final form in the classical age, consisted of 24 letters, now little used except in classical literature and as the foundation of the modern Russian and Greek alphabets. It was taken over with alterations by the Romans who evolved an alphabet of 23 letters, five being vowels, and introduced the symbols for them which, with slight modifications, are in use in most of the countries of the western world to-day. It had no *w* and lacked also *j* and *v*, *i* and *u* were used both as vowels and consonants.

The Romans carried their alphabet into England, and the Anglo-Saxon alphabet came into existence. In it three letters were added to the 23 of the Romans, two of these represented the sounds *th* and *ph*. The English alphabet dropped these letters, but introduced three others, *J*, *U* and *W*. Since then it has been unchanged, although it lacks perfection as certain letters are redundant, *Q* and *X*, for instance, and there is no symbol for the sound *ch*.

The French alphabet is very like the English, save that it lacks the letter *W*. The Germans employ Gothic not Roman symbols, but there is an increasing tendency to use the latter. Their alphabet has 26 letters but they do not exactly correspond to the 26 English ones. The Eastern languages contain far more letters than do the Western ones. The Japanese has 73, and the Sanskrit 49. For shorthand and similar purposes phonetic alphabets have been prepared, the universal languages such as Esperanto have also their own alphabets.

Alpha Particle Name given to the positively charged particles of the alpha rays emitted from radioactive substances. These particles travel at a velocity of several thousand feet per second and have the property of causing scintillations of light when they strike a phosphorescent substance. Their mass is four times that of a hydrogen nucleus and their charge twice that of an electron.

Alphonso XIII. Former King of Spain. He was born May 17, 1886, and was king from the day of birth, as his father, King Alphonso XII, was then dead. He was declared of age in 1906; before then his mother, Maria Christina, a member of the Hapsburg family, had been regent. On May 31, 1906, he married Victoria (Irene), daughter of Princess Henry of Battenberg and cousin of King George V. Their family consists of four sons and two daughters. In Spain the king made himself popular, although there were several attempts on his life—one on his wedding day—and he had to face grave political troubles. In 1930, there was serious disorder, which forced the king and his family to leave Spain. A republic was proclaimed, but the king refused to abdicate. With the queen and their children he took up his residence in France. Alphonso has shown a great liking for England, and was a frequent visitor to this country. In 1932 his property in Spain was confiscated by the state.

Alpine Club London club. It was founded in 1857 for men interested in mountaineering, especially in the Alps. It is now the headquarters of that interest and since 1864 has issued the *Alpine Journal*. Its house is at 23 Savile Row, London.

Alps Mountain range in Europe. It extends from the Rhône in France into Hungary and covers something like 80,000 sq. m., with a length of 600 m. and a breadth, north to south, varying from 50 to 150 m. The range enters the countries of France, Switzerland, Italy, Bavaria, Austria and Hungary. The various sections of the Alps bear distinguishing names, such as the Rhaetian, Pennine, Gratin and Cottian Alps, the Bernese Oberland and the Dolomites.

The usual division of the Alps is into three parts, western, central and eastern. The western extends from the Mediterranean Sea to Mt. Bianco, the central from Mt. Bianco to the Brenner Pass, and the eastern from the Brenner Pass into Hungary. The general elevation of the range is between 5000 and 7000 ft. Above this are some hundreds of peaks, the highest being in the west. There are Mt. Bianco and Monte Rosa, the only two that exceed 15,000 ft. The most famous of the Alpine peaks, apart from Mt. Bianco, are in Switzerland. They include the Jungfrau, the Matterhorn, the Ebnsteraarhorn, the Schreckhorn and the Wetterhorn, all over 12,000 ft.

high. Further east the peaks are less lofty, though there are many over 10,000 ft. high, among them the Gross Glockner and the Wildspitze. Many rivers, including the Rhone, the Rhine and the Danube, rise in the Alps, and most of them flow into the Danube.

Between the mountains lie beautiful valleys and lakes. Of the lakes the most famous are those in Switzerland and Italy, Lucerne, Geneva, Constance, Thun, Garda, Como and Maggiore. The passes of the Alps are notable, especially those leading into Italy, which have a long history. Five of them are now cut by railway lines: the Mount Cenis, the S. Gotthard, the Simplon, the Brenner and the Arlberg. The two S. Bernard passes are famous. There are many glaciers in the range, especially in Switzerland. The Alps, especially the region in Switzerland, Italy and Bavaria, are a favourite holiday centre, and have been called the playground of Europe.

The Alps are also a paradise for climbers. One after another the peaks were scaled until all have now been ascended. Guides and rest houses are provided.

Alsace District of France. It lies between the Rhine and the Vosges Mts. to the north of Switzerland. With Lorraine it forms the district of Alsace-Lorraine. The chief town is Strasbourg. Other places are Colmar and Mulhouse. In the west is a mountainous region, but much of the land is fertile, and agriculture, including vine growing, is the chief occupation of the people. The Ill is the principal river. The area is 3200 sq. m.

Alsace was part of Germany in the Middle Ages and later, but in 1884 it was seized by France. Germany recovered it in 1871, but in 1919 it was returned to France.

ALSACE-LORRAINE District of France. It consists of Alsace and much of Lorraine and is the region taken from France and added to Germany in 1871. From then until 1919 it was governed by officials appointed by the German Emperor with a council elected by the people. In 1879 it was allowed to send 15 members to the Reichstag and in 1911 its local council was made into a legislature of two houses. In 1919, when Alsace-Lorraine was returned to France, it was divided, as it had been before 1871, into the departments of Haut-Rhin, Bas-Rhin and Moselle. Its area is 5600 sq. m.

Alsatian Large dog. This is a wolfhound originally used to protect the sheep in Alsace. Early in the 20th century it became popular in Great Britain, and it is now bred as a companion and a watch dog. The animal is rather untrustworthy. The colour varies, but white is not favoured. The ears should be stiffly erect, and other points are a deep chest and strong feet.

Altai Mountain range in Asia. It covers an area of over 50,000 sq. m. in Siberia and Mongolia, and is divided into two main divisions. The highest point is Mt. Bieluka, which is about 15,000 ft. high. The district is rich in minerals, and the soil in the valleys is very fertile.

Altamira Village of Spain. It is in the province of Santander and is famous for its caves. There in 1879 some paintings on the cave walls were discovered. They represent bison, deer and other animals and are said to be about 6000 years old.

Altar Originally a place of sacrifice. The altars of the Jews, Greeks and other peoples were raised structures on which offerings were sacrificed to God, or to the gods.

There are frequent references to these altars in the Bible.

The word is generally used in the Roman Catholic and other churches for the table, or stone, on which the sacred elements are placed at the eucharist, or communion. It stands at the eastern end of the church, and in the Roman Church must be a consecrated slab of stone. Legally there are no altars in the Church of England, they are, as described in the Prayer Book, holy tables, or communion tables, and they must be movable and of wood.

Some altars, especially in S. Peter's and other great Roman Catholic cathedrals, are magnificent works of art, often adorned with priceless paintings as altar pieces. In most cathedrals there is a principal, or high altar, and several secondary ones. The back of the altar is called the reredos.

Altazimuth Instrument used by astronomers to fix the exact position of a star at any time. It consists of a telescope which is connected with a graduated vertical circle. The whole mechanism rotates about a vertical axis, and the angle of rotation is shown by a graduated horizontal circle. There is a fine example in Greenwich Observatory.

Altcar Village of Lancashire. It is 11 m. from Liverpool, on the L.M.S. Rly. On the flats here the Waterloo Cup is competed for every February.

Alternator Form of dynamo that generates electric current. See DYNAMO.

Alton Urban district of Hampshire. It is 46 m. from London, on the S. Rly. Its chief industries are dealing in agricultural produce, brewing beer and making paper. Here is an hospital for cripples founded by Sir W. Treloar. Other buildings are the chapel of S. Lawrence, and the Assembly Hall built to celebrate the peace of 1918. Pop. (1931) 6172.

Altona City and seaport of Germany. It stands on the Elbe, just to the west of Hamburg. It has three harbours and is perhaps the chief fishing port in Germany. Other industries are the making of tobacco, perfumery and margarine, and there is a good deal of shipping. Pop. (1930) 227,433.

Alton Towers Pleasure resort in Staffordshire. Once a seat of the Earl of Shrewsbury, it is about 4 m. from Cheadle, on the L.M.S. Rly. It is famous for its gardens, which are decorated with temples, grottoes, fountains and statues, which stretch down to the little River Churnet.

Altrincham Market town and urban district of Cheshire, 8 m. from Manchester, on the Bridgewater Canal. Its market gardens supply Manchester with fruit, flowers, and vegetables. Pop. (1931) 21,356.

Alum Mineral substance. White and transparent, it is the crystallised double sulphate of aluminium and potassium. The name also describes a similar substance obtained from ammonia, silver, sodium or thallium as well as double sulphates, in which no aluminium is present, obtained from iron, chrome and manganese.

Alum made from alunite, or alum stone, has been produced for many years, but in the 19th century a somewhat different variety was made from ammonia and other substances. Later plum was produced from bauxite. Alum made from alunite is mixed with fuel in a furnace, roasted and exposed to the air. After

THE KING EMPEROR

[Camera Portrait by Hugh Cecil

hot water has been added to it the liquid is drawn off and left to crystallise

The rocks in which alumina (the only aluminium oxide) is present in large quantities are called alum shales. These are found in both England and Scotland

The chief uses of alum are in dyeing and in making paper and other commercial materials. It is also used in fire resisting processes and for softening water. In medicine it is a caustic and an astringent

Aluminium Metallic element, the basis of the mineral alumina. Its symbol is Al and its atomic weight 27.4. It is not found native, but there is an enormous amount of it in the rocks of the earth's surface, as it is found in clays, shales, slates and granites. It is white with a bluish tinge. Its commercial value consists chiefly in its lightness and tensile strength. It also resists rust well.

Aluminium was not isolated until 1827, although the possibility of treating the ore in order to obtain it had been recognised since 1722. The chief supplies come from bauxite.

Aluminium has many uses. It is employed in the building of airships and aeroplanes and for parts of engines, etc., of ships and motor cars. It is very popular for household utensils. It enters into several alloys one being duralumin and another aluminium bronze, an alloy of aluminium and copper, which is much used for parts of machinery that require great strength or must stand much salt water. It is also used for cheap jewellery. It combines easily with most metals, lead being an exception.

The world output of aluminium is about 175,000 tons, the United States being the largest producer. The price is regulated by an international cartel.

Alva Burgh of Clackmannanshire, Scotland. It is 7 m from Stirling on the L N E Ry. The chief industry is the manufacture of woollen goods. Pop (1931) 3820.

Alva Duke of Spanish soldier Fernando Alvarez de Toledo was born in 1508. He became a soldier and won a reputation in Italy, Hungary and North Africa, when serving in the army of Charles V. In 1538 he was made commander-in-chief, and his successes against France won for him the title of duke. He helped Charles against the German rebels and gained other successes, including several in Italy. In 1557, Charles having abdicated, Philip sent Alva to the Netherlands as governor-general. For six years he tried to destroy the religious and political liberties of the people, but only succeeded in ruining the country and stiffening the resistance of the inhabitants. In 1573, admitting his failure, he retired to Spain. In 1580 he led a successful expedition into Portugal. He died Jan 12, 1582.

Alverstone Viscount. English lawyer. Richard Everard Wobster, the son of a barrister, was born Dec 22, 1842, and educated at Charterhouse and Trinity College, Cambridge, where he showed himself a fine athlete. In 1868 he became a barrister and entered upon a successful career. In 1885 he was elected Conservative M.P. for Launceston and was made Attorney-General, a post he filled also from 1886 to 1892, and from 1895 to 1900. In 1900 he was made Master of the Rolls and a baron, and in the same year became Lord Chief Justice. When he retired, in 1913, he was made a viscount. He died Dec 15, 1915, when his title became extinct.

Wobster, who was M.P. for the Isle of Wight 1895-1900, prosecuted C.S. Parnell before the Royal Commission and represented Great Britain on the Alaska Boundaries Commission.

Alyssum Flowering garden plant. There are both annual and perennial varieties. The common sweet alyssum is an annual bearing white fragrant flowers in summer. A dwarf alyssum is a pleasing and popular edging to flower beds.

Of the perennials the best is the yellow alyssum. This reaches a height of 9 inches and bears masses of golden blooms. It thrives best in a light soil. A variety called citrenium bears beautiful yellow flowers, and another called alyssum spinosum, which bears white flowers, is very suitable for the rock garden.

Alyth Burgh of Porthshire, Scotland. It is 23 m from Dundee, on the LMS Ry. Linen is manufactured and near is the forest of Alyth. Pop (1931) 1860.

Amadeus Salt lake of Australia. It is about 200 m long. In Northern Territory and is

Amalekites Tribe mentioned in the Bible. They were nomads and lived in the desert to the south of Canaan. Their descent is traced (Genesis xxxvi) to Amalek, the grandson of Esau.

Amalgam Mixture of one or more metals with mercury. It thus differs from an alloy which is a mixture of one metal with another. It is made by placing the metal and the mercury in dilute acid. The most useful amalgams are tin, silver, zinc, gold and copper. They are used for silvering and gilding ornamental and other articles, such as mirrors, and also in electric apparatus. Amalgams are also used by dentists. They may be either liquid or solid, liquid amalgams containing a high proportion of mercury.

Amalthea Heroine of Greek legend. She was a daughter of the King of Crete. She is known as the nurse of Zeus whom she fed on goat's milk. Her reward was the horn of the goat, which supplied all her wants, and was called the horn of plenty (*cornu copiae*).

Amara Town of Iowa. It is the seat of a religious community called the Community of True Inspiration. This was established in Württemberg in 1714 and its members emigrated to America, settling at Iowa in 1855. It was dissolved in 1932.

Amara Town of Iraq. It stands on the Tigris, 130 m from Basra on the way to Bagdad. On May 31, 1915, the British attacked the Turks near here and drove them out of their positions. They entered the town on June 4. Pop 8000.

Amazon River of South America. There is some doubt as to where it rises, and consequently different estimates of its length are put forward. Its sources are the headwaters of the Marañon, and its course from there to the ocean is between 3500 and 4000 miles. It has hundreds of tributaries coming from Peru, Bolivia, Ecuador and Venezuela, as well as from Brazil, and drains some 2,700,000 sq m. Its tributaries include the Negro, Purus, Madeira, Tocantins, Yapuna, Amana and Xingu.

The Amazon is navigable by large steamers as far as Iquitos, 2500 miles from its mouth. With its navigable tributaries it supplies some 30,000 miles of waterway. Its course is almost

due east It flows from Peru right across Brazil until it enters the Atlantic Ocean near Para At its mouth it is 50 miles wide It is subject to floods and in it are many rapids The river was first navigated by a European in 1541 Several expeditions, one in 1914, have explored the vast and largely unknown region around the river

Amazon Name for a female warrior It appears in Greek legend where the Amazons are represented as having a kingdom near the Black Sea In art they are represented as armed and mounted on horses which they rode in triumph over their fallen foes They visited other tribes in order to propagate their race, but the boys born to them were killed One of the labours of Hercules was to obtain the girdle of the Amazon queen, Hippolyte

Ambassador One who represents his country in a foreign land Ambassadors form the highest rank in the diplomatic service and only those who represent a great power in the capital of another great power are called by this name They are either ordinary or extraordinary, the latter being sent on special missions of high importance As the representative of the sovereign, an ambassador has many privileges, including precedence at state ceremonies and direct access to the ruler In great Britain they are usually selected from the diplomatic service

The duties of an ambassador are to keep his own government informed of the state of affairs in the country to which he is sent, and to convey to that country the opinions and wishes of his own government on matters of mutual concern At present (1933) there are 14 ambassadors in London, and Great Britain sends ambassadors to 14 countries—Argentina, Belgium, Brazil, Chile, France, Germany, Italy, Japan, Poland, Portugal, Russia, Spain, Turkey and the United States The representatives to other countries are of lower rank

Amber Fossil resin. It is used for ornamental purposes as it polishes very easily In colour it is of a golden hue sometimes with bluish tints sometimes, but not always, it is transparent Flies and other insects are often found in it and its source is coniferous trees that have been rotting in the ground When rubbed amber produces negative electricity, a quality known to the Greeks, who, like other early peoples, used amber as an ornament Green and blue amber exists, but is rare

Amber is found in great quantities in the southern or Prussian shores of the Baltic Sea It is also found occasionally on the east coast of England It is mined in East Prussia, Greenland, Sicily, China, Siam and other countries

Amber is used for heads, tobacco pipes, cigarette holders, umbrella handles etc The powder obtained from the amber can be distilled to give oil of amber which is used as a liniment and in making scent Amber is also made by artificial means This is compounded of copal, camphor and turpentine and, unlike the real article, will melt in cold ether

Ambergris Fatty substance that comes from the intestines of the sperm whale It is grey in colour and is found floating on the water, or washed up on the shore in hot latitudes It is much used in making scent on account of its agreeable smell

Amble Urban district, market town and seaport of Northumberland It

stands near the mouth of the Coquet. The chief industry is fishing Pop (1931) 4208

Ambleside Market town and urban district of Westmorland. It stands at the head of Lake Windermere in the Lake District The River Rothay runs through it, and there is some fishing Sheep fairs are held twice a year and a rush hearing festival is celebrated in July The roads around are excellent Pop (1931) 2343

Ambo Rear desk with steps leading up to it very like the modern pulpit. They were used in churches in early times and may sometimes be seen to-day

Amboyna Island in the East Indies belonging to the Netherlands It covers 386 sq m It is mountainous but fertile, and here rice, sago, cloves, sugar, coffee and other tropical products are grown The town of Amboyna is the capital and the chief seaport It has a good harbour and a wireless station Amboyna wood, a very popular wood for cabinet making is grown The Bay of Amboyna cuts the island almost into two peninsulas

Ambrine Remedy for burns and scalds. It is made of resin of amber and melted paraffin, and was invented in 1904 It was used to relieve rheumatism, but later proved most efficacious in the treatment of burns

Ambrose Saint and bishop He was born about 340 at Trèves although other cities claim the honour His father was a high official of the Roman Empire and the son, having been educated in Rome, was given an important post in Italy In 374, although not yet ordained priest, he was made a bishop of Milan, and he remained there until his death

He had much trouble with the Arians, to whom he showed himself very hostile, and is known for his action in compelling the emperor, Theodosius, to do penance for a massacre He won respect too, by his charities to the poor He is remembered as the author of several hymns and for the Ambrosian chant The valuable Ambrosian Library at Milan is named after the saint, who died April 4 397 He is the city's patron saint and its magnificent cathedral is dedicated to him

Ambrosia In Greek and Roman mythology, the food of the gods It was therefore supposed to make those who ate it immortal

Ambry Cupboard, especially a church cupboard. In medieval times the host and the sacred vessels were kept in an onphoard, or niche, near the altar and this was the ambry In some churches the word has survived In Scotland an ambry is a pantry or cupboard

Ambulance Vehicle, or other conveyance, used for removing sick and injured persons In London and other cities and towns ambulances are provided by local authorities and can be quickly summoned in case of accident A nurse is in attendance, and the vehicle contains material for emergency treatment The London County Council maintain a very large service, which, in 1929, answered over 43,000 calls Ambulances are also provided to carry persons suffering from infectious diseases to hospitals

Field Ambulances are much used in time of war for the removal of the wounded They were introduced in the time of Napoleon, and first used in the French army Great Britain lacked

an efficient service until after the Crimean War, but to-day her organisation is equal to the best. The service is in the hands of the Royal Army Medical Corps, but great assistance is given by the S. John Ambulance Association and the S. John Ambulance Brigade which has over 35,000 members, who receive instruction in first-aid methods. In 1864 it was agreed that ambulances should be respected by the combatants, and to show their nature they are now marked with a red cross. See FIRST AID.

Amen

Hebrew word meaning so let it be. It is much used in religious worship, in the sense of agreement or emphasis. Prayers end with it, and in the Church of England and many other churches it is said or sung at the end of the psalms and the creeds. Mohammedans also use the word.

Amendment

Word chiefly used in Parliament and at public meetings when laws are being made or decisions taken. It means an alteration in a bill or resolution. The custom is that any one desiring an alteration shall propose an amendment. This is voted on before the resolution to which it refers; if it is lost the way is clear for the resolution. If it is carried it becomes part of the resolution, which is then voted upon as amended. In Parliament wrecking amendments are sometimes proposed. An example is an amendment to insert the word "not" in law an amendment is the correction of an error in a legal document.

Amen-Ra

Egyptian god also called Ammon. He was originally worshipped at Thebes, but gradually his cult spread to other parts of the land. He came in time to be the principal god of the Egyptians and the attributes of the god Ra, the sun god, and other gods were given to him. He was regarded as the creator of the universe. Amen-Ra is represented in art either with the head of a ram, or as a human being with two lofty feathers on his head.

Amenti

Name given in the Egyptian religion to the lower regions. Through it souls passed to their homes in the land of happiness. Osiris was lord of this underworld, and in his presence the souls of the dead were weighed.

America

Name of the great continent that forms the land area of the western hemisphere, and is known some times as the New World. It is named after Amerigo Vespucci, an Italian who stated that he was the first white man to land on the mainland. His statement, however, is not accepted by historians, but his name, rather than that of Columbus, has remained attached to the continent. America occupies something like 17,000,000 sq. m. stretching from the Arctic circle to Cape Horn, a distance of some 7000 m. It is usually divided into two continents, North America and South America, with Central America linking them together. It includes the islands known as the West Indies.

The inhabitants of the continent in 1492 were called Indians, and have since been known as American Indians. The bulk of the people to-day are of European race. In South America they are chiefly Spaniards and Portuguese. In North America British (English, Scots, Irish, Welsh) and French predominate, but there are many Germans, Poles, Swedes and others.

The word America is used in a narrower and looser sense for the great country called the United States of America. The inhabitants of this country call themselves Americans, and are

thus distinguished from Canadians, Mexicans, Brazilians, Peruvians and other people on the continent. See CENTRAL AMERICA, NORTH AMERICA, SOUTH AMERICA, UNITED STATES.

America's Cup

International yacht race. It originated in 1851 when a cup, the Queen's Cup, was offered by the Royal Yacht Squadron. An American yacht the America, won it and since then it has been known as the America's Cup, and the race has been sailed in American waters. It has never been won by an English yacht, although the Earl of Dunraven and later Sir Thomas Lipton built several boats that competed for it. Sir Thomas Lipton built five *Shamrocks*, as they were called, and *Shamrock V* competed in 1930. In 1934 Mr. T. Sopwith's *Endeavour* (British) was beaten by the American *Rainbow*.

American Civil War.

See UNITED STATES.

American Indians

Name given to the early inhabitants of the American Continent. The word "Indians" was used by Columbus, about 1492 (because he thought he had reached India), and has since been generally employed.

Known also as the red man, or red skin, the race is distinguished by its straight black hair, copper coloured skin, aquiline nose, prominent jaw and pointed skull. The Indians are tall and strong, with extraordinary powers of enduring hardship and resisting fatigue.

In all it is said there are 1500 tribes of Indians, who at one time lived in the vast area between Hudson Bay and Cape Horn. It is possible to make certain generalisations about this people as they were in the time of Columbus. They had their own religion, a pantheistic one. They worshipped spirits, who, they believed, watched over the tribe and its possessions. They had their own language a feature of which is that every sentence forms a single verbal unit. They knew something of the arts of weaving and spinning and made baskets and rough pottery. They were very fond of music and dancing, and their songs have been collected. They could paint and used paint to adorn their bodies. Their food was obtained chiefly by hunting. They knew something of agriculture, as they grew maize, but the men never settled down willingly to occupations of this kind. Fighting occupied much of their time, and the feuds between one tribe and another were carried on with terrible and prolonged rancour, coupled with the infliction of the most fiendish cruelties. The fighting men, trained and organised in the most efficient manner, were led by chiefs of proved experience in war.

The arrival of the Spaniards in America, and later the advent in North America of the French and British, was followed by wars between the white men and the red men, which led to a great decrease in the numbers of the latter. Though in the 18th and 19th centuries many Indians were occupied in collecting furs for sale to the white man, in North America especially the land over which they roamed was gradually occupied by the whites and the area left to them was steadily reduced.

To-day the remnants of the race, in the United States and Canada, live in reservations which have been set aside for them. In Mexico, Central America and South America, they roam about much as of old, although on a more restricted area.

The racial purity of the Red Indian race has been impaired by associations with the white

man, but they still form a class apart. In the United States their reservations cover 108,000 sq m, and the population thereon is 332,397. It is notable that from 1900 it increased from 270,500. In Canada there are over 100,000, in Mexico 4,620,880. The number elsewhere is conjectured. There are probably 2,000,000 in Central America, and 6,500,000 in South America.

AMERICAN REVOLUTION (or War of Independence) See UNITED STATES

Amerongen Village in the Netherlands. It is 20 m from Utrecht and is noted because, in Nov. 1918, the German Emperor found a home in the castle here, the residence of his friend Count Bentinck.

Amersham Market town of Buckinghamshire. It is 24 m from London on the Metropolitan and L N E Rlys. The chief industries are brewing and chair-making. Pop. 4221.

Amery Leopold Charles Maurice Stennett, English politician. Born in India, Nov. 22, 1873, he was educated at Harrow and Balliol College Oxford. He became a fellow of All Souls College, and in 1899 went to South Africa to represent *The Times*. He edited *The Times History of the War* and then turned his attention to politics. As a strong tariff reformer he stood for Parliament more than once, and in 1911 was elected for a division of Birmingham. He served at the front during the Great War, and later did confidential work in London and Paris. In 1910 Amery was made Under Secretary for the Colonies, and in 1921 Parliamentary Secretary to the Admiralty. In 1922-24 he was First Lord of the Admiralty, and in the Unionist ministry of 1924-29 he was Secretary for the Colonies and Dominions.

Amesbury Town of Wiltshire. It stands on the edge of Salisbury Plain, 7 m from Salisbury, and from it Stonehenge can easily be visited.

Amethyst Popular gem stone. In colour it is purple violet or blue, and it is found in veins of iron and manganese. It is mined in India, Ceylon and some parts of South America.

Amherst Seaport of Nova Scotia. It is on Chignecto Bay, 135 m from Halifax and 700 from Montreal, on the C.N. Rlys. The industries include shipping. Pop. (1931) 7450.

Amherst Earl. English title held by the family of Amherst. The soldier Sir Jeffrey Amherst, made a baron in 1776, had a nephew William Pitt Amherst, who inherited his title. William went on a mission to Peking in 1816 and was Governor-General of India from 1823 to 1828. In 1826 he was created an earl. The family seat is Montreal, near Sevenoaks, and the earl's eldest son is called Viscount Holmesdale.

The title of Baron Amherst of Hackney, which dates from 1892, is quite distinct from the earldom. Jeffrey Amherst, the 1st baron, was born at Riverhead Kent Jan. 29, 1717, and became an ensign in the Guards in 1731. In 1753 William Pitt appointed him to lead an expedition against the French in Canada, where he took Louisbourg and marched to Montreal. He was made Governor-General, and was in Canada until 1763. In 1772 he was made Commander-in-Chief, and in 1776 a baron. He died Aug. 3, 1797.

Amides Group of organic compounds. They are obtained from am-

monia by replacing a portion of the hydrogen by an acid radical or a metal. Amides are made by the action of ammonia on acid chloride, or on esters, or by heating ammonium salts. Amide powder is an explosive made from ammonium nitrate, charcoal and saltpetre.

Amiens City of France. It stands on the Somme 81 m from Paris, and is an important railway junction. The cathedral considered the finest in France, was erected in the 13th century and has been restored.

The capital of the department of the Somme, Amiens is an important trading centre. Its manufactures include various classes of textiles, machinery, chemicals, etc. There is some shipping along the river, and it is a centre of market gardening. Pop. (1931) 90,211.

Amiens was an important place in the Middle Ages as the capital of Picardy. There Louis IX. arbitrated between Henry III. and his barons in 1264 in favour of the English king.

Amiens was important during the Great War. The battle of Aug. 1918, in which the Allies opened their final and victorious offensive, is called the Battle of Amiens. Nearly 40,000 prisoners were taken.

The Treaty of Amiens was signed here between Great Britain and France, March 25-27, 1802.

Amines A group of substances formed by replacing one or more of the hydrogen atoms of ammonia by alcohol or other radicals. The amines resemble ammonia in having a strong smell, basic and other properties. Methylamine, dimethylamine and trimethylamine give the peculiar fishy odour to herring brine. Some amines are gases, others liquids or solids.

Amirantes Group of islands in the Indian Ocean. They belong to Great Britain and are a dependency of the Seychelles Islands. They are of coral formation, and from them turtles and coconuts are obtained.

Amŵlŵch Market town seaport and urban district of Anglesea. It is on the north coast of the island 24 m from Bangor, on the L.M.S. Rly. There is a harbour. Marble is exported, but the trade is much less than formerly. Pop. (1931) 2561.

Amman Capital of Transjordan. It is 30 m from Jericho on the Hejaz Rly, and occupies the site of Rabbath-Ammon mentioned in the Bible. It was captured by the British in Sept. 1918, and when the new State of Transjordan was created became its capital.

Ammanford Market town and urban district of Carmarthen shire. 12 m from Swansea and 1984 from London on the G.W. Rly. The chief industries are tinplate works and coal mines. Pop. (1931) 7160.

Ammeter Instrument for measuring the strength of an electric current in amperes. In the ordinary type the passage of current through a coil of low resistance gives the coil magnetic properties and so affects a permanent magnet that is placed on pivots within the magnetic field. The intensity of the coil magnetism varies with the strength of its current. A light pointer fastened to the magnet shows the current strength in amperes on a graduated scale.

Ammonia Colourless gas composed of nitrogen and hydrogen (NH₃), having a pungent suffocating odour.

and basic qualities. It is very soluble in water, the saturated solution forming the well-known *liquor ammoniac*. Like other alkaline bases it turns red litmus blue and combines with all acids to form salts, many of which are of great commercial importance. Ammonia is produced commercially as a by-product in the manufacture of coal gas and synthetically by combining nitrogen and hydrogen under great pressure. It is used in the preparation of dyes and in the dyeing industry, also in medicine, alkali manufacture and in liquefied form for refrigerating purposes.

Ammonite High explosive used in coal mines for blasting. It is a compound of nitrogen and is certified as a safety explosive. Another ammonite is a fertiliser. It is made from the offal of rendering establishments and contains a high proportion of nitrogen.

A marine mollusc now extinct is called the ammonite. It resembles the nautilus.

Ammonites Canaanitish tribe. They claimed descent from Lot (Gen. xiv 38).

Ammunition Material used for charging guns. With the development of means of attack, there has come about a great increase in the variety of ammunition. It now includes the great projectiles used by the 15 in guns on battleships, smaller ones for guns of lesser calibre, the high explosive shells used by the artillery, bombs for trench warfare, shells emitting gas and smoke, bombs used by and against aircraft, as well as cartridges and other necessities for rifles, revolvers and small arms generally.

It is made in government factories at Woolwich and elsewhere and by a certain number of private firms. It is carefully inspected and is then handed over to the Royal Army Ordnance Corps. See ARTILLERY, MUNITIONS.

Amnesia Greek word meaning forgetfulness. It is used by doctors to describe loss of memory, but shock or injury to, or disease of the brain may cause it. Rest, or, in some cases, an operation to the brain, may effect a cure.

Amnesty Word meaning "a general pardon." Of Greek origin, it means forgetting an offence and it is practically equal to an indemnity (*qv*).

Amoeba Word meaning "change" or "alteration," and used for the lowest class of animal life. It consists of shapeless, microscopic pieces of jelly, lives on the floors and sides of ponds and can move itself by means of pseudopodia, or false feet, which are merely a succession of pulsations. The food, which is vegetable matter, can be taken into any part of the body. When it reaches maturity the amoeba splits in two and so reproduces itself.

Amok Word used for an outbreak of madness. It consists of running wild and injuring any one who may be met. It originated among the Malays who sometimes act in this way, rushing about and using their knives indiscriminately. It may be due to a sudden fit of madness, or to the use of drugs.

Amontillado Spanish wine, sweet and light in colour, being very similar to sherry. The name comes from Montilla, near Cordova, where the vines are grown.

Amor The Roman god of love. He was the son of Venus and the equivalent of the Greek Eros (*qv*).

Amorites Semitic race mentioned in the Old Testament. They lived in Canaan when the Israelites invaded the land and are sometimes called Canaanites. The word means either "highlanders," or "people of great stature."

Amos Prophet of the Old Testament. He was a shepherd and a forester about the time of Uzziah, King of Israel, and Jeroboam II, King of Judah. Amos wrote one of the prophetic books of the Old Testament.

Amoy Town and seaport of China. It stands on an island at the mouth of the Lung-kiang and is a treaty port. There is a foreign settlement and a trade in cotton, tea and other commodities. Pop 300,000.

Ampère The practical unit of electrical current, equal to one-tenth absolute electro magnetic units. An ampère-hour is a current of one ampère flowing for an hour. The name is taken from the physicist André Marie Ampère. He was born at Lyons, Jan 22, 1775. His father was beheaded in the Revolution and the son became a teacher. Later he was professor at the College de France, and he died at Marseilles, Jan 10, 1836. His chief work was to advance the study of electrodynamics.

Amphibia Class of vertebrate animals that can live both on land and in water. They are placed between the reptiles and the fishes and include frogs, toads, and newts. The salamander and the axolotl also belong to this class.

Amphibia pass through several life stages. The eggs are usually laid in fresh water and are hatched by the heat of the sun. They next pass through a larval stage in which they possess gills and live in the water. Later, limbs and lungs are provided and the adult stage, in which they live on land, is reached. Amphibia do not drink, but take in moisture through the skin. Hence they always inhabit damp places. All are carnivorous. These remarks apply to most of the amphibia, but there are exceptions. In some the young are born fully developed by viviparition. See FROG, NEWT.

Amphion To the Greeks a son of Zeus, his mother being Antiope. He and his twin, Zethus, were brought up by shepherds and took a terrible vengeance on Dirce, the woman who had supplanted their mother. She was tied to the horns of a bull and gored to death. The incident is the subject of the "Farnese Bull," a magnificent piece of statuary in Naples. Amphion was also famous for his skill on the lyre, which Hermes taught him. It is said that when the brothers built walls around their city of Thebes, the stones moved to their places as Amphion played. *Amphion* was the name of a British light cruiser sunk by a mine on Aug 5, 1914.

Amphitheatre Roman building used for public entertainments. Open to the sky, it consisted of an arena, in which beasts and gladiators fought, and tiers of seats for the spectators, the two parts being divided by a wall. Perhaps the greatest of the amphitheatres was the Colosseum at Rome which held 50,000 spectators. Those at Verona and Arles are in a more perfect state of preservation. In England there was one at Dorchester, the lines of which may still be traced, and in 1932 the remains of one at Chester were excavated.

Amphitryon In Greek legend a prince of Thebes. His wife

Aicmeno was visited by Jupiter, who assumed the form of her husband for this purpose, and in consequence she gave birth to Hercules. Mollero wrote a play on Amphitryon whom he represents as a host. Other plays on the subject are by Plautus and Dryden.

Amphora Vessel used by the Greeks and Romans. Made of earthenware, it had two handles and was used for holding wine and oil. It was also a measure of capacity, the Greek amphora holding nine gallons and the Roman amphora six. It tapered to a point in order that it could be placed in the ground. Later amphorae were used as cinerary urns.

Amplifier In wireless installation an apparatus used to increase the strength of electric oscillations so that the sounds can be heard more clearly on the telephone or the loud speaker. There are of two main kinds. If amplification takes place before the high frequency oscillations are rectified by the detector, the amplifier is a high or radio frequency one. If it takes place after the oscillations are rectified it is a low, or audio, frequency amplifier.

The degree of amplification depends upon the magnifying power of the thermionic valve used, or the ratio of its grid voltage change to its plate voltage change. This may be from 2 to 20. Several valves may be connected together so that the incoming impulses are increased in strength step by step.

Amptill Urban district and market town of Bedfordshire. It is 8 m. from Bedford, on the L.M.S. Ry. Amptill House is the seat of Lord Amptill. Pop. (1931) 2167.

The title of Baron Amptill was taken in 1881 by Odo William Leopold Russell, a son of Lord George Russell and a grandson of the Duke of Bedford. Born Feb. 20, 1829, he entered the diplomatic service and from 1871 to his death, April 25, 1884, he was ambassador in Berlin, his term of office covering the important years 1878-79. His son, the 2nd baronet, was Governor of Madras 1899-1906, and a prominent seaman. He died in 1935.

Amritsar City of India. It is in the Punjab, 33 m. from Lahore, and is reached by railway. The chief building is the Golden Temple with the Pool of Immortality, the centre of the Sikh religion. There are manufactures of textile goods and a considerable trade. Amritsar is the chief town of a district and a division. Pop. (1931) 264,840.

In April 1919 there was a serious riot at Amritsar. A mob of 5000 or 10,000 persons assembled and set fire to some buildings as a protest against the deportation of two agitators. Thinking the position dangerous, General Dyer ordered the troops to fire and some 400 were killed and 1500 wounded. A public inquiry was held and the action of Dyer was censured.

Amsterdam City and seaport of the Netherlands. It stands on the River Amstel just where that little river falls into the IJ or Y. The national museum contains the finest collection of Dutch art in existence.

The city has a large modern harbour connected with the North Sea by a ship canal 15 miles long, opened in 1876. Through the port a good deal of the colonial trade of the country passes, timber and tobacco being prominent. Other industries are diamond cutting, sugar refining and printing. The city

is also a great banking and financial centre. Pop. (1930) 752,000.

Amu-Daria River of Asia. Known in ancient times as the Oxus, it rises in two streams in the Pamirs on the frontier of India and Afghanistan. These unite and flow into the sea of Aral. It is 1400 miles long and for part of its course is navigable.

Amundsen Roald, Norwegian explorer. He was born in 1872 and was educated at Oslo. He studied medicine, but forsook that career to become a seaman. In 1901 he went to the Arctic and later made other voyages in that area, one being the navigation of the North West Passage. In 1910 in the *Fram* he sailed to the Antarctic and on Dec. 16, 1911, he reached the South Pole. He joined the air service of Norway, but his attempts to reach the North Pole by air failed until in 1926 he crossed it in an airship and landed in Alaska. In 1928 he set out in a seaplane to rescue the Italian explorer, Nobile, and met his death on the expedition. Amundsen wrote several books, including *My Life as an Explorer*.

Amur River of Asia. It is formed by the Shilka and the Argun in Siberia and flows in a north-easterly and then a southerly easterly direction. Its length is 1700 miles and it is navigable in the warm weather. It enters the ocean at the sea of Okhotsk, having received the waters of the Sungari, Ussuri and other tributaries. Another name for it is the Hellung Kiang.

Anabaptists Protestant sect prominent in the 16th century. It originated at Zwickau in Saxony and its leader was Thomas Munzer. The members did not believe in infant baptism, but they became prominent because of their positive revolutionary ideas. They wished to overthrow the existing order and had a share in the revolt of the peasants in 1525, after which Munzer was put to death. In 1533, under John of Leyden, they captured Münster where for a short time they put their ideas, which included polygamy, into practice. In 1535 the town was taken from them and many of them were killed.

Anaconda Name of a large water snake. It is found in Brazil and other parts of South America where it lives on the river banks and feeds upon birds and animals. In colour it is brown with black spots and its average length is 26-30 feet.

Anacreon Greek poet. Born in 563 B.C., lived at Samos, Athens and elsewhere and died in 478. Anacreon wrote a number of lyrics in the Ionic dialect on wine, love and other subjects of everyday life. Of these only fragments exist. The so-called Anacreon odes were written in imitation of his work, at a later date. These were translated into English by Thomas Moore.

Anaemia The term anaemia includes several conditions brought about by deficiency in certain of the elements of the blood, and characterised by headache, constipation, mental irritability, and general lowering of the vitality. Healthy conditions continued over a long period form the essence of treatment, diet should be simple and nutritious, fresh air and sunshine are vital, constipation must be relieved—with saline laxatives if necessary, sufficient rest is imperative, and iron tonics are necessary.

In cases of Pernicious Anaemia, a very serious form occurring in the middle aged and characterised by severe pallor of the lips and gums and yellowness of the skin, the "liver cure" is now usually administered. Half a pound of raw or very lightly cooked liver, or its equivalent in some special pharmaceutical preparation, is given daily. An unhealthy condition of the intestines, throat, or teeth is an aggravating cause of this disease and must be remedied.

Anaesthetic Drug or other substance that produces unconsciousness and insensibility to pain. They may be divided into two classes, general and local. General anaesthetics produce complete insensibility, local produce only insensibility to pain in a certain part of the body. The former are used for most major operations, the latter are used much by dentists and also for operations on the eye. The condition produced by an anaesthetic is called anaesthesia.

The idea of relieving the pain attendant on surgical operations has existed for centuries and opium and other drugs were used in a rough and ready way on occasions. In 1800 Sir Humphry Davy suggested the use of nitrous oxide, called on account of the effects it produced, laughing gas, but it was some years before anything practical was done. In 1842 ether vapour was used as an anaesthetic in the United States with satisfactory results and in 1846 it was used in London. In 1847 chloroform vapour was used in Edinburgh by Sir J. Y. Simpson, while other experimenters tried nitrous oxide, known popularly as gas. The use of gas, however, was hindered because the methods of administering it were not satisfactory, but in 1867 this handicap was overcome and it is now one of the most general of anaesthetics.

The chief general anaesthetics in use today are the three mentioned, nitrous oxide, ether and chloroform together with two others, ethyl chloride and a mixture of chloroform and ether. Local anaesthetics are cocaine, eucaine and stovaine and others, which are usually sprayed around the part it is desired to treat.

Anagram Word or sentence made from the letters of another word or sentence. Thus "repots" is an anagram of "poster" and "webs ran hard" of "Bernard Shaw". Anagrams were popular among the Greeks and Romans and in modern times are much used in crosswords.

Analyst Name given to a chemist or other scientist whose business is to analyse food, drink and other substances. Public analysts are employed by town and county councils and other authorities to examine specimens of food and drink that may be adulterated. Most of them are trained chemists and belong to the Society of Public and Other Analysts, at 85 Eccleston Square, London, SW 1. See ADULTERATION, CHEMIST.

Anarchy Greek word, meaning "no government." It indicates the condition of a country without a government, or with a government that is powerless to maintain order. Men who aim at overturning the government of a country by violence are called anarchists.

Some persons, however, regard anarchy as a form of government, in which there is no compulsion in the shape of laws, but only desire on the part of the people to act together for their mutual benefit.

Anatolia Name used for Asia Minor. It is a Greek word meaning "the east" and is used by the Turks. The Anatolian Riv. runs from Constantinople to Angora, with branches in other directions.

Anatomy Scientific study of the body of man and the lower animals, sometimes called dissection. It is part of the course of study of all medical students, who work in the dissecting room before passing to deal with the living patients.

Anatomy observes the form of the various organs and tissues and the materials of which they are composed and is thus distinguished from physiology which deals with the functions of these parts. One branch is descriptive anatomy, another microscopic anatomy and another morbid anatomy, the study of diseased or abnormal structures.

Anatomy was studied by the Greeks, but after their time little progress was made until modern times. John Hunter was the greatest English anatomist and in France Cuvier added much to our knowledge. Great advances were made in the 19th and 20th centuries, one of the most potent influences being the use of radiography.

Anaxagoras Greek philosopher. Born about 500 B.C. in Asia Minor, he made his home in Athens and taught there, but after a time his teaching was condemned as impious and he returned to Asia Minor. He died in 428 B.C. at Lampsacus. Anaxagoras believed that matter was composed of atoms of varying nature, brought together into an ordered universe by an infinite Intelligence. This was opposed to the accepted teaching of the philosophers that all matter was one element.

Ancestor Worship Form of primitive religion, which is found in many different ages and countries. To day it figures prominently in the native religions of China and Japan, while the "totem" pillar of the American Indians, and the "ancestor tablet" of the Maoris are also signs of this cult. It probably began with the offering of posthumous honour, and then of worship to great heroes and wise men, the custom being assisted by the natural strength of the family bond.

Anchovy Small fish. It belongs to the herring family and is found in the Mediterranean and other European waters, and is caught chiefly for use in making sauce and relishes.

Anchovy Pear Fruit that grows in Jamaica and other islands of the West Indies. It grows on a tall tree, with bare stem, which often reaches a height of 50 feet and has leaves 3 ft. long. The fruit is edible and tastes rather like the mango.

Anchusa Perennial flowering plant, known also as alkanet. It bears blue flowers and is suitable for garden borders. It reaches a height of 4 ft. or more and blooms in June.

Ancient Lights Term used in English law. An ancient light is a window that has let in the light for 20 years or more. It is illegal for anyone to build so as to cut off this light.

Ancona Seaport and city of Italy. It is on the Adriatic Sea 130 m. from Rome. The principal industry is shipping, and there are some manufactures. It is also a naval station. It has Roman remains including a triumphal arch erected by Trajan and

columns of a temple of Venus Pop (1930) 84,437

The Ancona Fowl is a species of Leghorn It does well in Great Britain, being noted for the early age at which it begins to lay eggs

Ancre River of France It rises near Bapaume and flows into the Somme near Albert. It is about 25 m long The river came into prominence during the Great War The continuation of the Battle of the Somme in the winter of 1916-17 is called the Battle of the Ancre because it was fought mainly along the river's course

Andalusia District of Southern Spain It has a coastline on the Atlantic Ocean and the Mediterranean Sea The Guadalquivir flows through it and it is full of remains of the Moorish occupation as it includes the district of Granada Its area is about 34,000 sq m. and in it are Cadiz, Seville and Gibraltar

A breed of poultry, introduced into England from Spain, is called the Andalusian

Andaman Group of islands in the Bay of Bengal They belong to India and cover about 2260 sq m being 120 m from the nearest mainland There are five large islands, called North, Middle, South, Rutland and Baratar and about 200 small ones Port Blair is the capital and has a good harbour There are extensive forests Rubber is grown and cattle are kept Pop 17,800

Andersen Hans Christian Danish author Born at Odense, April 2, 1805, his father was a cobbler He himself took up no settled calling but soon began to write In 1830 he published a volume of poems, and he spent some time in travel which gave him material for other books He made his name, however, by his fairy tales which have been translated into English and many other languages, and read by millions of children all over the world Andersen died in Copenhagen Aug 4, 1875

Anderson Elizabeth Garrett. English doctor Born in 1836, she was a daughter of Newton Garrett of Aldborough Suffolk She studied medicine and in 1865, although she had been unable to enter a medical school was given a licence to practice In 1870 she secured a medical degree in Paris In 1866 Miss Garrett opened a dispensary in London and this became the New Hospital for Women She worked there for many years and was lecturer at the London School of Medicine for Women where she was also dean In 1871 she married J G S Anderson, a shipowner Of their children Sir Alan Garrett Anderson was prominent in shipping circles and Louisa Garrett Anderson followed her mother's profession Mrs Anderson died at Aldeburgh Dec. 17, 1917

The first woman to become a doctor in England, she was also the first to become a mayor, filling that office at Aldeburgh in 1908-09 She had a good deal to do with the movement that resulted in women being allowed to receive the degrees of the British Medical Association

Anderson Mary Antoinette American actress Born July 28, 1859 at Sacramento, California In 1875 she made a first appearance on the stage, and soon became one of the leading actresses of the day In 1883 she came to London where for some years she had an extraordinary popularity She appeared in *A Winter's Tale* *Romeo and Juliet*

and other Shakespearean plays as well as in *The Lady of Lyons* In 1889 she retired and in 1890 married a Spanish gentleman, Antonio de Navarro (died 1932) In 1896 she published *A Few Memories*

Andes Mountain system of South America, the largest in the world It stretches down the west coast of the continent from the Isthmus of Panama to Cape Horn, passing through Colombia, Bolivia, Brazil, Argentina, Peru, and Chile Its total length is 4400 miles, its breadth varies The system is divided into two parallel ranges and it is known in the different parts by various names, Cordillera de la Costa and others

The average height of the system is stated to be 13,000 ft. The highest point is Aconcagua (23,000 ft.) Other peaks over 20,000 ft. in height are Chimborazo in Ecuador, Sorata, Illimani and Illimane in Bolivia, and Hnas caran in Peru Many of the peaks are active volcanoes, the highest of these being Cotopaxi The Amazon and other great rivers of the continent rise in the Andes, which are very rich in gold, silver and other minerals

In April, 1932, eight volcanoes, in the range between Chili and Argentina, long regarded as dormant, suddenly became active An immense amount of damage was done, especially in the Argentine province of Mendoza, and 3000 tons of volcanic dust fell on Buenos Aires Santiago and Monte Video, the latter, 800 miles away, were also affected by the discharge

Andirons Iron supports placed on the hearth to hold logs At first they stood in the centre of the room and were in general use before coal fires became popular They were made in two parts, the logs being on the lower part, while cooking was done on the upper To-day they are used for ornaments or for supporting fireirons

Andorra Republic in the Pyrenees It lies between France and Spain and covers 191 sq m The people live mainly by agriculture, growing vines, barley, etc., and keeping cattle The land is rich in minerals The republic is under the protection of France and the Bishop of Urgel Andorra la Vella is the capital There was trouble in the state in 1933 the outbreak was quelled by French troops Pop 5230

Andover Borough and market town of Hampshire It stands on the little River Anton, 66 m from London, on the Southern Ry The industries are brewing and milling Pop (1931) 14,290

Andrea del Sarto Italian painter He was born in Florence, July 17, 1486 the son of a tailor, hence his name Sarto He studied art and soon became famous He died Jan 22, 1531 Andrea painted some famous frescoes now in Florence, where are also some of his greatest pictures, including several Madonnas in the National Gallery London, is a self portrait and a Holy Family Read Browning's poem "Andrea del Sarto"

Andrew Christian apostle and saint He was a fisherman at Bethsaida and a brother of Simon Peter He followed John the Baptist, but later joined Jesus Christ he and his brother being the first of the disciples After the crucifixion he is said to have preached in Asia and Europe and to have been put to death at Patrae in A.D. 70 He was bound to a cross in the shape of the letter X which has since been known as S.

Andrew's cross Andrew is the patron saint of Scotland, his day is Nov. 30

Andrewes Lancelot English divine Born in Barking in 1555, he was educated at Cambridge He was ordained and in 1589 was made master of Pemroke Hall and vicar of a London church In 1601 he was appointed Dean of Westminster and in 1605 Bishop of Chichester In 1609 he was elected Bishop of Ely and in 1619 of Winchester He died Sept. 26, 1626 Andrewes helped to prepare the authorised version of the Bible and wrote *The Manual of Private Devotion* and other works

Androcles Roman slave In the first century A.D. he was sentenced to death as a Christian He entered the arena but instead of mauling him the lion showed a friendly feeling towards him The reason was that, when hiding in a cave in Africa, Androcles had pulled a thorn out of the paw of this very lion

Andromache Trojan heroine, the wife of Hector After the capture of Troy, Neoptolemus took her to Greece, and afterwards she is said to have married Hector's brother Helenus By Hector she had a son, Astyanax, and the parting between the three just before Hector went to his death is one of the finest passages in the *Iliad* (Book VI)

Andromeda Greek heroine. She was a daughter of the King of Ethiopia The Nereids, incensed by the report of her great beauty, persuaded Poseidon to send a monster into her country To rid the land of this incubus Andromeda must be sacrificed, so she was chained to a rock, but was rescued by Perseus (q.v.), who turned the monster into stone by exhibiting the head of Medusa A constellation of stars in the northern hemisphere is called Andromeda

Anemometer Instrument for measuring the velocity of the wind There are several kinds. In one four metal hemispherical cups are fixed on four arms at right angles so that their concave surfaces are in the same direction of rotation The arms are revolved by the wind striking the concave surfaces Cog wheels are thus turned and an indicator moves on a dial on which a scale is printed This gives the velocity of the wind in miles per hour.

Anemone Genus of perennial flowering plants of the genus *ranunculaceae*, also called windflowers They are found in the temperate regions of Europe and bear handsome flowers There are many varieties The wood anemone is a wild flower which grows freely in England, bearing white flowers The poppy anemone bears flowers of many colours, crimson, scarlet, purple, etc

Aneroid See BAROMETER

Aneurism In human beings a dilation of an artery It is filled with blood and if it ruptures death may ensue Aneurisms are much more common in men than in women They are due to syphilis and to excesses of one kind or another, including excessive physical work. The best treatment is rest and abstinence from excess.

Angary In International law the seizure of vessels belonging to a neutral, which are in the ports of the seizer A country has the right to use the ships for its own purposes, but

compensation must be paid In early times angary meant the provision of horses and messengers for the public service

Angel Spiritual being They are regarded in the Bible and in other sacred literature as the messengers of God The traditional Christian belief is that they were created by God to serve him in heaven and to visit and help his people on earth Led by Satan some of them rebelled and lost their places in the heavenly presence See ARCHANGEL

Angelica Perennial herb It bears fine leaves and large umbels of white, or purple flowers There are several species, all of which grow in the temperate zones One species (*angelica sylvestris*) grows in the woods of Great Britain It reaches a height of 5 ft.

At one time Angelica was regarded as an antidote for poison and a cure for infection To-day the stalks are made into a sweetmeat Formerly it was blanched and eaten like celery

The Angelica Tree is a shrub found in North America It bears berries which, infused in spirits, are sold as a cure for rheumatism and colic

Angelico Fra Italian painter Born in 1387 he was baptised Guido, but took the name of Giovanni when he entered a Dominican monastery at Fiesole in 1407 On account of his lovable disposition he was called Angelico and as brother, Fra (frater) He passed his days at Fiesole, Florence and Rome, and died in Rome, March 18, 1455

Extant works include the frescoes in the monastery of San Marco at Florence and many pictures in the galleries of Florence, Rome, London and Paris All his paintings deal with religious subjects One of the most notable of his pictures is "The Last Judgment," in Florence.

Angell Sir Norman English author. Born Dec 26, 1874, Ralph Norman Angell Lane was educated in France and passed some years in the United States, where he became a journalist. In 1899 he settled in Paris and in 1910 made a reputation with his book *The Great Illusion*, an analysis of the ruinous effects of war on all parties. His other books include *The Fruits of Victory*, 1921, *The Story of Money*, 1930, and *The Great Assassins* 1932 From 1929 to 1931 he was Labour M.P. for Bradford North, and in 1931 he was knighted He is editor of the periodical *Foreign Affairs*

Angelus Service in the Roman Catholic Church It is said three times a day, at 6 a.m., noon, and 6 p.m. It is in honour of the annunciation of the Virgin Mary and the name is that of the first word of the service

Angina Pectoris Sudden pain accompanied by a feeling of intense oppression around the heart It is a symptom of heart disease and usually attacks persons in middle life as a result of undue exertion The attack, which is marked by impeded breathing, perspiration and great pain, may pass away as quickly as it came, but not infrequently it is fatal Persons liable to this complaint should exercise great care in their movements The inhaling of nitrate of amyl will give relief, but there is no real cure

Angiosperm Botanical term Seed bearing plants are divided by botanists into two classes, those in which the seeds are covered and those in which they are naked. The former are the angiosperms, or

ANGKOR

plants having their seeds in vessels are the chestnut and the beech

Angkor Ruined city of Cambodia. Near is the ruined temple of Angkor Wat, one of the architectural wonders of the world. It dates from the 12th century and was used for the worship of Brahma and then of Buddha. The word is a corruption of Nôgara Thom

Angle In geometry the difference in direction of any two lines, whether straight or curved. Angles are measured in degrees, or in grades or in circular measure. The circumference of a circle is divided into 360 degrees, one quarter of which, or 90 degrees, forms a right angle. A smaller one is acute and a larger obtuse. When three or more planes meet at a point a solid angle is formed. The complement of an angle is 90° less the angle. The supplement is 180° less the angle. Angles are of importance in aeronautics. The gliding angle is the angle of decent which the aeroplane makes when gliding to the ground in still air with the engines out of action. The angle of incidence is the angle formed by the chord of the wings with the line of flight of the machine.

Angler Fish sometimes called the sea fish and gab. It belongs to the class called *Teleostei*, or bony fishes, and is from three to five feet in length with a huge head and mouth. It is found around the coasts of Great Britain and elsewhere in Europe, as well as in America. A pair of fins enable it to walk. It lives on small fish for which it angles, hence its name.

Angles Tautonic tribe living in Anglo land, the modern Schleswig. Some of them came over to England in 449 and later and settled there giving their name to East Anglia and afterwards to all England. Bede says they founded the Kingdoms of Mercia, Bernicia and Deira.

Anglesea or Anglesey County and island of Wales. It lies off the coast of Cornwallshire, from which it is separated by the Menai Strait. Its area is 275 sq m. The county town is Beaumaris. Other places are Amlwch and Llangefni. Holyhead stands on the Holy Island which is part of the county. The LMS Rly crosses the county. Fleet and fertile. Anglesea is an agricultural area although copper, lead and other minerals are mined and there are marble quarries. Anglesea, known as Mona was a stronghold of the Druids before it was conquered by the Romans in A.D. 78. Pop (1931) 49,025.

The title of Marquess of Anglesey has been held by the family of Paget since 1815. The first earl was Henry William Paget, (1768-1854) who commanded the cavalry at Waterloo where he lost a leg. The eldest son of the marquess is called the Earl of Uxbridge and his chief seat is Beanddesert in Staffordshire.

Anglicanism Term used for the teaching and practice of the Church of England. This has spread from England into the various British Dominions and colonies. Although the archbishops of the Church of England have no actual authority over these branches yet all agree in looking to them for leadership and direction. Meetings of the bishops are held periodically at Lambeth and these help to keep the churches united in the common faith and practice which

50

is for convenience called Anglicanism. Each church has its own form of worship, its own prayer book and its own organisation, but all accept episcopacy and other fundamental beliefs of the Church of England (q.v.)

Angling Practice of catching fish with rod, line and bait. It is usually practised as a sport or pastime, in counter distinction to fishing which is done for a livelihood. It is carried on in rivers and lakes, and to a certain extent in deep water, either from the bank or from a boat.

In England the favourite fish for the angler is the trout as owing to its cunning and agility, it affords excellent sport. Angling for salmon, chiefly done in Scotland, Norway and British Columbia requires also considerable skill and at times a good deal of strength, as the salmon is a powerful fish. The fish chiefly caught in English inland waters are the roach, dace, gudgeon, perch, carp, pike, eel, chub, tench, bream and rudd. Some of these the carp and the tench are usually found in lakes and ponds. There is a close season for these and other fish. The interests of anglers are looked after by the Anglers Association.

There is a vast literature on angling and some of the works thereon go back to the time when printing was invented. The most famous of all is *The Compleat Angler* of Izaak Walton.

Anglo-Catholic Term used for the high church party in the Church of England. Their view is that the Church of England is a branch of the Catholic Church and that, therefore, its fundamental beliefs are the same as those of the Catholic Church which includes the Church of Rome and the Greek Church.

Anglo-Saxon Word used to day to describe the people who invaded England. It thus includes the people of England, the English people in Canada, Australia and elsewhere and many of the inhabitants of the United States but it does not include the Celtic peoples of Scotland, Ireland and Wales. It is however, sometimes loosely used to describe all who speak the English language.

The Anglo Saxons were dominant in England for 600 years. The chief relic of their literature is the *Anglo Saxon Chronicle*, a history of the country which extends beyond their period begun about 900. It is especially valuable for the 8th, 9th and 10th centuries.

Their language has, with accretions, become the tongue of the English people. They had an elaborate system of law with payments for offences and much use of the oath and the ordeal.

Angmering Seaside resort of Sussex on the Southern Rly. It is 15 m. from Brighton known for its tennis tournaments while there are other attractions for visitors. It has an interesting church.

Angola Colony of Portugal. Situated in West Africa to the south of the Congo, it has a coastline of over 1000 miles on the Atlantic Ocean. Its landward boundaries are the French Congo, the Belgian Congo, Rhodesia and South West Africa. Its area is 486,079 sq miles. The chief towns are Sao Paulo de Luanda—called Luanda—the old capital Cabinda, Benguela and Nova Redondo, which are also seaports. In 1928 Huambo now called New Lisbon, was made the capital. The chief products are maize, coffee, sugar, rubber and coconuts. There are large supplies

ANGOLA

of coal, copper, iron and petroleum. Pop (1931) 4,141,730

Angora Now Ankara Capital of the Turkish Republic It is on the Angora river, in Asia Minor, 220 m by railway from Istanbul There are a number of industries and a considerable transit trade Pop 75,000

The goat bred in the district is called the Angora It is valued for its long hair from which mohair is made

Angostura Bark of a tree that grows in Venezuela Called also casparia, it produces an aromatic drug, which has a medicinal value It is used as a carminative and also as a tonic From it angostura bitters, drunk as an appetiser, is made

Angus County of Scotland formerly called Forfarshire It has a coastline on the North Sea, with the Firth of Tay to the south, and covers 873 sq m In it are some of the Grampian Hills, the Sidlaw Hills and the valley called Strathmore Forfar is the county town, but Dundee is the largest place Other towns are Brechin and Kirriemuir Inland, and Arbroath and Montrose on the coast. Pop (1931) 270,190

Anhalt State of the German republic. It lies on both sides of the Elbe, and has an area of 890 sq m Dessau is the capital, Bernburg, Kothern and Zerbst are next in importance Cattle are reared and wheat and other crops grown, while there are extensive forests and large deposits of potash It is governed by a ministry of state and a land tag and sends representatives to the Reichstag in Berlin Pop (1930) 351,000

Anhydrite Mineral consisting of calcium sulphate It is found in salt deposits and contains a little salt It is white, grey, blue or red in colour It absorbs water and is thus converted into gypsum (q v)

Ani Name of an Egyptian scribe The papyrus of Ani, named after him, depicts the rites at an Egyptian funeral It was fashioned about 1500 B.C. and is 78 ft. long It forms part of the *Book of the Dead*, and is now in the British Museum

Aniline Colourless liquid used in the manufacture of aniline dyes It was first prepared by the dry distillation of indigo, the Portuguese name for which is *anil* It is manufactured to-day by distilling nitrobenzene, scrapings of iron and a little hydrochloric acid. Lime is added when the reduction is complete and the aniline is distilled with steam It can be made, too, by the electro reduction of benzene It was first produced in this way in 1856

Aniline ($C_6H_5NH_2$) boils at 183° and has a specific gravity of 1.024 at 16° It is only slightly soluble in water, but will dissolve easily in alcohol or benzene It is very poisonous if taken internally and the inhaling of its vapours is injurious Aniline is much used in making dyes and in preparing benzene derivatives See DYEING

Animal Term used in relation to living organisms apart from plant life The distinction between these two forms of living creatures becomes one of great difficulty, as among the lowest types many of the characters usually associated with animal life are shared by plant organisms The fundamental basis of all living organisms is protoplasm in which are inherent the vital activities of locomotion, respiration, food absorption, secretion and excretion, response to external

stimuli, and reproduction In the multicellular organisms some degree of specialisation of tissues for the carrying out of these functions occurs, giving rise to organs

In the animal locomotion is general respiration consists of the absorption of oxygen and the removal of carbon dioxide the response to stimuli is performed by some form of nervous system, digestion is characterised by absorption of organic and inorganic food materials with associated secretory and excretory organs and reproduction occurs by simple or complex processes and organs Some degree of consciousness is present, shown as instinct and intelligence in the higher types

Animism Attribution of a living soul to inanimate objects and natural phenomena The first use of the word was for what is now called vitalism, a belief that all the phenomena peculiar to the animal world are produced by a spirit (*animus*) The present and generally accepted use of the term is due to E. B. Tylor in his book, *Primitive Culture*. Animism is seen in the belief, highly developed among the Greeks, that spirits are attached to trees and fountains and in the wider idea that they form part of the human entity but are distinct from the actual body

The existence of spirits was probably first suggested to primitive man when he contemplated sleep or death From the belief in spirits a number of ideas were evolved The spirits might do good or harm to the living man or to his possessions If harm they could perhaps be propitiated by gifts or kept away by magical rites In some races the belief in the transmigration of spirits or souls arose and most adopted some kind of belief in a life beyond death

Aniseed Fruit of a perennial herb An umbelliferous plant the anise grows in the southern parts of Europe and bears small white flowers Another variety, which grows in China and Japan, belongs to the magnolia family The anise is chiefly grown for its seeds which produce a fragrant essential oil This aniseed is used in confectionery as a flavouring and as a remedy for indigestion

Anjou One of the provinces of France before the Revolution It was the district around Angers, its capital and its chief river was the Maine It is now covered by the departments of Maine-et-Loire, Indre-et-Loire, Mayenne and Sarthe

The duchy was lost by King John in 1203, and its later counts were members of the royal family of France In 1360 the count was made a duke and the dukes ruled it until 1584 when it became a province of France

Ankle Joint that unites the leg with the foot. It is a hinge joint with three ligaments anterior, internal and external It articulates between the two bones of the leg, the tibia and the fibula

Bearing, as it must at times, the whole weight of the body, the ankle is very strong but nevertheless sprains and dislocations (q v) are frequent

Ankylostomiasis Disease due to the presence of a hookworm in the human intestine It is chiefly found in tropical countries, but also in Great Britain and parts of Europe It attacks chiefly brickmakers, miners and others who work with their hands Its effects are progressive anaemia accompanied by sickness and pain. The parasite can be expelled by purgatives, or killed by the use of thymol

Anna Indian coin. It is divided into four pice, or 12 pic, and 10 of them go to the rupee. It is worth rather more than a penny.

Annam District of Indo-China. It is a French possession covering 30,758 sq m, and has a long coastline on the China Sea. It is ruled by a king, under the protection of France. The capital is Hue, but Binh-Dinh is equally large. Tonraac and other ports are open to European trade. Rice, cotton, maize and other crops are grown as well as sugar, tobacco, and various other tropical products. Irrigation works have been put in hand. There are mines of coal and iron ore also salt works. Pop 5,300,000.

Annan River of Dumfriesshire, Scotland. It flows for about 50 m south to the Solway Firth. The district through which it passes is called Annandale. Annandale is also the name of a suburb of Sydney.

Annan Burgh and seaport of Dumfriesshire. It stands near where the River Annan falls into the Solway 17 miles from Carlisle, and is served by the L.M.S. Riv. The burgh has associations with Carlisle and Edward Irving. Pop (1931) 3959.

Annapolis Town of Nova Scotia. The French founded it in 1604, and it is said to be the oldest town in North America. They called it Port Royal, and it was renamed Annapolis in honour of Queen Anne, after the English obtained it in 1713. It stands on Annapolis Bay. Pop 739.

Annates Payment of money for ecclesiastical purposes. At one time every holder of any ecclesiastical office was supposed to pay the first year's revenue to the Pope. In England, in 1524, Henry VIII took these annates for himself and this lasted until 1703, when they became part of the fund called Queen Anne's Bounty (q.v.).

Annatto Colouring matter. It is obtained from the seeds of a plant that grows in South America and is called *bixa orellana*. In colour it is red and it is soluble in alcohol or in alkaline solutions. Known as bixion it is mixed with potash and used for dyeing textile fabrics. It is employed more, however, to colour cheese and butter and to mix with varnishes and lacquers, as well as oil.

Anne Christian saint. Tradition says she was born at Nazareth and married Joachim, becoming the mother of the Virgin Mary. Her feast is on July 25 and she is regarded as the patron saint of married women.

Anne Name of several queens consort. Two were wives of Henry VIII. The first, Anne Boleyn, was a daughter of Sir Thomas Boleyn, Earl of Wiltshire. Henry VIII made love to her, and was secretly married to her. In Sept., 1533, Anne's only child, Elizabeth, was born. Soon the King tired of his queen and Anne was tried for adultery. Found guilty, she was beheaded on Tower Green London May 19, 1536.

The other, Anne of Cleves, was Henry's fourth wife. She was born Sept. 22, 1515, the daughter of the Duke of Cleves, a Protestant, and was married to Henry, Jan. 6, 1540. The king disliked her from the first, as, before the marriage, he had only seen her portrait, and the union was dissolved in July. Anne died at Chelsea, July 16, 1557.

Anns of Denmark the queen of James I. was the daughter of the King of Denmark and Norway. She was born Dec. 12, 1574, and was married at Oslo in 1580. She had five children and died March 2, 1619, six years before James. The house at Greenwich, built for her by James, is now a naval museum.

Anne Queen of Great Britain. The younger daughter of James II and his wife Anne Hyde, daughter of the Earl of Clarendon, she was born in London Feb. 6, 1665. In July, 1683, she was married to George, Prince of Denmark. When her brother in law, William of Orange, landed in England, Anne deserted her father, but was soon concerned in intrigues for his restoration. As arranged Anne became Queen on William's death in March 1702, and reigned for twelve years. Her reign was an important one, made glorious by the victories of Marlborough and the writings of Addison and others, but she herself was commonplace and much under the influence of her favourites, the Duchess of Marlborough, and later Mrs Masham. She died Aug. 1, 1714.

Anne Name of two rulers of Russia. The first, a daughter of Ivan V, was born in 1693 and married the Duke of Courland in 1710. He died the next year and she ruled Courland until 1730 when she was chosen Empress of Russia. She ruled the country, aided by her favourite, Biren, under a system of terrorism, until her death in 1740. The second Anne, born in 1718, was a German princess. She was adopted by the Empress Anne and in 1739 married the Duke of Brunswick Wolfenbützel. They had a son, who, as Ivan VI, became Tsar in 1740. His mother ruled for him until 1741 when she was deprived of her position. She died in 1746.

Annealing Process by which glass and metals are made tough and durable. It consists of heating and then gradually cooling the substance, being thus the opposite of tempering (q.v.). It is applied to steel bars and other materials that are subject to strain.

Annealing results in a certain rearrangement of the crystals or fibres of the material. Internal stresses which might otherwise be present in the metal are avoided. It is carried out in special furnaces. The object having been heated to the proper temperature is covered with ashes. Gas is used for heating the furnaces. The rate of cooling depends to some extent upon the metal, but copper can be cooled quickly or slowly.

Annelid Group of segmented worms. They include earth worms, blood worms, leeches and leeches. In all the body is divided into a number of rings or segments. Many of them live in the water, but some on land, where they burrow in the soil or the sand. Some form round themselves a dwelling made of excretions from their bodies.

Annuity Periodical payment of money for a limited time. It is an investment on which the owner receives not only interest on his money, but a return of his capital over a period of years, usually the duration of life. Annuities can be bought through the Post Office Savings Bank, or from insurance companies. Their price is worked out by actuaries. Every £100 will purchase a certain annual income which varies according to the age and sex of the annuitant. The older a person is the more he or she will get per year.

Annuit is sometimes used for a pension, or an allowance

Annunciation Announcement of a forthcoming event. The word is chiefly used for the announcement made by the angel Gabriel to the Virgin Mary that she should be the mother of Jesus Christ (Luke 1). In the Church of England and the Roman Catholic Church the Feast of the Annunciation has always been kept on March 25 which is therefore called Lady Day

The Order of the Annunziata was founded in 1362 by a Count of Savoy. It is now the chief Italian Order and its badge is a representation of the annunciation

Annunzio Gabriele D' Italian poet and novelist. He was born at Pescara in 1864 and was educated in Rome. When a boy he began to write poetry, and in a few years he had made himself known as a writer, both in prose and verse. He has written some exquisite sonnets and a number of novels, some of which have been translated into English. These include *The Child of Pleasure*, *The Virgin of the Rocks*, *The Dead City* and *The Pleasures of Life*. He has also written tragedies. In 1915 Annunzio joined the air force and served against the Austrians. In 1919 he organised and led an expedition that took Fiume on behalf of Italy. He also took Zara, but after a time the difficulties were composed and he withdrew. In 1924 he was made a prince

Anode In electrolysis the electrode through which the current enters the electrolyte. The direction of the current is from the anode, through the liquid, to the cathode. In the thermionic valve the anode is usually a metal cylinder towards which the electrons move.

Anodyne Drug used to ease pain. Opium is an example.

Anointing Religious and ceremonial use of oil, or ointment. It is mentioned in the Bible and was practised by the early Christians, who used it at baptisms, confirmations, ordinations and in times of illness. The Roman Catholic Church still practises anointing, which is part of the sacrament of extreme unction. It is used to some slight extent in the Church of England and elsewhere. The king and queen are anointed at their coronation.

Anselm English saint and prelate. He was born at Aosta in 1033 and, after an unsettled life, entered the famous monastery at Bec in Normandy in 1060. In 1063 he was made its prior and in 1078 its abbot. In 1093 he was appointed Archbishop of Canterbury, but was soon at variance with the king, William II, and in consequence left the country and was abroad when William died. His refusal to do homage to the new king, Henry I, for his lands, led to a second exile. In 1105 a compromise was made between the claims of the church and the state. Anselm then returned to England and remained at Canterbury until his death, April 21, 1109. He was canonised in 1494.

Anson Lord English sailor. George Anson was born April 23, 1697, at Shugborough, Staffordshire. In 1712 he entered the navy, and in 1740 he was put in command of a squadron, England being then at war with Spain. All his ships save one were lost, but in this he returned home with treasure worth £500,000. In 1747 he defeated the French fleet off Cape Finisterre and was made

As First Lord of the Admiralty from 1751 to 1762 he organised the marines. He died at Moor Park, Hertfordshire June 6, 1762. The head of the Anson family is the Earl of Lichfield.

Anstey, F. Name taken by the novelist, Thomas Anstey Guthrie. He was born Aug. 8, 1856, and was educated at King's College, London and Trinity Hall, Cambridge. He contributed to *Punch* and made his name with the humorous story called *Vice Versa* in 1882. A number of other books in the same vein followed including *The Tinted Venus*, *The Brass Bottle*, *The Talking Horse* and *Baboo Jabberjer*, B.A. His other writings include plays, especially *The Man from Blankley's* and the volumes called *Voices*, *Populi* and *Salted Almonds*.

Anstruther Market town of Fifeshire. It stands on the Firth of Forth, 9 m from S. Andrews, on the L.N.E. Ry. The chief industry is fishing, for which there is a good harbour. The town consists of three old burghs, Anstruther Easter, Anstruther Wester and Kilrenny.

Ant Class of insects allied to the bees and the wasps, and sometimes called the emmet. They belong to the order *hymenoptera*. There are about 2000 species. The white ant, or termite, is not related to the ordinary ant.

There are male, female and neuter ants with a queen, who is larger at their head. The females are larger than the males. The neuters are sterile females who do the work. The males and females have wings, but the neuters have not. They mate while flying, soon afterwards the males die and the females, having shed their wings, lay their eggs which are tended by the neuters. In a few days the eggs become pupae and in a few more perfect insects. Ants are specially fond of sugary substances. They have stings and eject a poison called formic acid.

The homes of the ants are passages in the ground, or in the trunks of trees, but they are often found in garden soil or beneath stones. They communicate with each other by means of their antennae.

Antaeus In Greek legend a son of Poseidon and Gaia. A giant, he was a noted wrestler, being always victorious, as whenever he touched the earth, of which his mother was goddess, his strength came back to him. He was killed by Hercules, who held him above the ground and squeezed him to death.

Antananarivo Capital of Madagascar. It stands on the hills about 100 m from the east coast and is connected by railway with its port, Tamatave. Pop (1931) 92,475.

Antarctica Name for the south polar continent. Except the outlying South Georgia and the South Sandwich groups it lies within 60° S latitude which roughly demarcates the floating icebelt. It is conventionally divided into the Enderby, Victoria, Ross and Weddell quadrants, or more usefully into the African, Australian and American sectors. Its land area exceeds 5,000,000 sq m.

In 1928, "by virtue of discovery," the British Government stated that the following were regarded as part of the Empire:

(1) The outlying part of Coats Land—namely, the portion not comprised within the Falkland Islands dependencies, (2) Enderby Land, (3) Kemp Land, (4) Queen Mary Land, (5) the area which lies to the west

of Adelle Land and which, on its discovery by the Australian Antarctic Expedition in 1912, was denominated Wilkes Land, (6) King George the Fifth Land, and (7) Oates Land

Antarctic Exploration

The first man knowingly to cross the Antarctic circle was James Cook in 1773. Between 1819 and 1822 the South Shetland, South Orkney and other islands were discovered by sealers. In 1821 Bollnshausen first discovered land within the circle at Peter I Island, and other expeditions, led by Weddell, Biscoe, Ballony, Ross and other explorers followed. In 1839, in the *Erebus*, made extensive discoveries including the volcanoes Erebus and Terror.

Work on modern lines began with the *Challenger*, the first steamship to cross the circle (1874), but it was not crossed again until 1893. In 1898, explorers wintered for the first time in these regions. In 1901 the *Discovery*, under R. F. Scott, set out and made some extensive and valuable discoveries during the next three years. The party found and named King Edward VII Land, and explored Victoria Land, while about the same time good work was being done by expeditions under Nordenskiöld, Drygalski, a German, and Charcot, a Frenchman. Another, led by W. S. Bruce, discovered Coats Land. Together they made certain the existence of a vast antarctic continent.

In 1908, E. H. Shackleton led an expedition that had valuable results. Its members got to within 100 m. of the pole and on Jan. 16, 1908, determined its position, this represented an advance of over 400 m. to the south over any previous expedition. The honour of being the first to reach the pole, however, fell to Roald Amundsen, who, with a party on skis, arrived there on Dec. 16, 1911. A month later using sledges Scott, with four companions reached it, but met his death on the return journey.

Since the discovery of the pole, exploration work has been continued with renewed vigour, great assistance having been given by aircraft. In 1911-14 some valuable discoveries were made by an expedition under Sir D. Mawson. In 1914 Shackleton set out in the *Endurance* and made some adventurous journeys, as he did in 1922 when he died on the way home. In 1929 Sir Hubert Wilkins led another expedition, and about the same time an American expedition set out under Richard Byrd. Both these explorers flew over the pole. Under Sir D. Mawson an expedition went out in 1929, mainly to seek information that would help to preserve the whale from extinction. In 1933 Rear Admiral Byrd led an American expedition to the South Pole. In 1935 the American airman explorer Dr. Lincoln Ellsworth with Mr. Harold Gatty, set out on a 2000 mile flight across the Antarctic. Missing from 24th Nov. they were sighted by the Royal research ship *Discovery II*, and rescued at the Bay of Whales on 16th January 1936.

As part of a memorial to Capt. R. F. Scott a Polar Research Institute was founded at Cambridge, and a building for it was begun in 1932.

Anteater Mammal feeding on termites and ants. The name choloivi indicates three quadrupeds inhabiting Central and South America. The great anteater (*myrmecophagus*) with a tubular muzzle and long viscid tongue, is a ground dweller measuring 7 ft. including a very long tail. The lesser

(*tamandua*) and the pigmy (*cyclothurus*) are arboreal. Australia possesses the banded anteater, one of the few pouchless marsupials, and two epony anteaters (*echidna*).

Antelope Generalised name for hollow horned ruminants. They are distinguished from goats by being hairless, and from cattle and sheep by their more solid horns. Asia possesses the Indian antelope (sasin), the Indian nilgai and four horned choneingha, the Tartary saiga, the Tibetan chiru, and many gazelles. Most of the 150 species are confined to Africa, Arabia and Syria. Besides gazelles they include the eland, kudn, hushbuck, oryx, addax, springbuck, quiker, hartebeest andgnu. The size ranges from the eland, about 6 ft. high to the royal antelope, about the size of a hare. Chamois, goral, serow and takin form a goat antelope sub family. The so called American antelope, or pronghorn, forms another sub family.

Antennae Feelers or jointed appendages appearing before the mouth in single pairs in crustaceans, myriapods and insects. Crustaceans have also a smaller supplementary pair called antennules. Crustacean feelers may serve as ears, claspers, stilts or for burrowing in the sand. In some myriapods and insects they are the organs of sense being used for feeling and smelling. The antennae may greatly exceed the length of the animal's body. Butterflies are distinguishable from moths by their clubbed horns.

Anthology Collection of poems epigram or prose pieces by various authors. The first Greek anthology was compiled by Meleager about 60 B.C., and Constantino Cephalas, about A.D. 920, extended it to 300 authors. Medieval and modern Latin anthologies are also known. Outstanding English anthologies include Palgrave's *Golden Treasury*, The Oxford Book of English Verse, and Robert Bridges' *Spirit of Man*. The word comes from the Greek word for a flower.

Anthony Christian saint. He was born in Egypt about 251, his parents being Christians, and became a hermit. He lived in the desert for some 15 years and won a great reputation for piety. In 305 he founded a monastery, or hermitage, for his followers near Memphis, and is claimed to be the originator of monasteries. He died in 356 and his festival is Jan. 17.

Anthony Christian saint. He was born in Liebon in 1195 and became a monk. About 1220 he joined the Franciscan Order and became noted as a preacher. He died at Vorcell June 13, 1231. In 1232 he was canonised and his festival is June 13. He is known as S. Anthony of Padua.

Anthrax Non bluminous coal. It is hard and dense and of brilliant lustre, and rarely coils the fingers. Its carbon content ranges from 90 per cent. to 95 per cent. It burns with intense heat and a nearly non luminous flame, and is smokeless.

Anthrax Virulent infectious disease which attacks sheep, cattle and pigs and also human beings. It is caused by the bacillus found in contaminated food and water, and attacks are sudden and often fatal. In Great Britain cases of anthrax must be reported at once to the Ministry of Agriculture, and steps taken to isolate the infected animals.

Among human beings anthrax chiefly attacks those who tend animals or handle their hair, leather dressers and wool sorters, for instance

It may come on suddenly and be fatal within 24 hours. Cases must be notified to the medical officer of health. To prevent an outbreak from spreading drastic cleansing by fire and disinfection should be employed. Persons with cuts or wounds should be specially careful when in contact with possible sources of infection.

Anthropoid Variety of ape. They are the most like men of all the lower animals. There are four classes: orangs, gibbons, gorillas and chimpanzees. They live in Asia and Africa. They resemble men in having no tail, in the number and arrangement of the teeth, and in the position of the thumb. They live largely on fruit and make their homes in trees.

Anthropology Science of man. The study of mankind has a physical and a cultural side. Physical anthropology treats of the natural history of man, and incidentally of his precursors. It seeks aid from palaeontology, which studies the fossil bones of early man and his organic contemporaries, while his present constitution is the concern of biometry and physiology.

Cultural anthropology, called by Herbert Spencer sociology, unfolds the story of civilization. For studying racial origins and human distribution the aid of ethnology is invoked. To understand the course of human migrations importance attaches to anthropogeography. When first brain and hand began that mutual reaction which raised man above the brute man the toolmaker was born, thus the story of culture demands also close application to technology, which from the very outset expounds the growing complexity of the food quest. The primary inventions, developed out of the arts of life, include fire making, personal ornament, clothing, shelter, weaving, pottery, animal and plant domestication and metal working. Articulate speech led to momentous developments, culminating in the art of writing.

Anthropology is a subject of study at many universities, and professors of the subject exist at Oxford, Cambridge, London, Liverpool and elsewhere. The study is aided by collections in the museums; in London in the British Museum and the Natural History Museum, for instance. In England the headquarters of the study is the Royal Anthropological Institute at 52 Upper Bedford Place, London, W.C.1.

Anthropometry Art of measuring man. The British Association schedules about 36 measurements, half for the living body and limbs and half for the head, besides 24 measurements for the skull and skeleton when dead. For studying ethnological factors the minimum requirements are skin colour, eye colour, hair type, and measurements determining the cephalic, facial and nasal indices, dimensions of thigh bone, shoulder blade and pelvis, and total height.

Anthropomorphism Ascription to human attributes. It represents a stage of early religion when supernatural powers were made intelligible to man by being endowed with human qualities and affections. The assembly of gods on Olympus described by Homer is frankly anthropomorphic. The anthropomorphic language of the Old Testament, which speaks of the eye and hand of God, is a necessity of human thought, as man cannot apprehend beings above himself except in his own likeness.

Anthropophagi Tribe of cannibals. They are mentioned by Pliny and other writers as living near the Caspian Sea. They ate the flesh of their parents, possibly as a religious rite.

Antibes Seaport and winter resort on the French Riviera. It is 12½ m south west of Nice and has a good harbour. The industries are fishing, the making of perfumes and catering for visitors. Pop. 12,000.

Antichrist Person or power antagonistic to Jesus Christ. In the New Testament the term occurs only in the Epistles of St John, but St Paul's "man of sin" (2 Thess. ii) may embody the same idea. Some leaders of the Reformation identified the Papacy with Antichrist.

Anticline In geology an arched fold in sedimentary rocks caused by crustal pressure. The summit of the ridge, which may be symmetrical or irregular, forms the axis. If the beds dip in all directions from a centre the result is a dome, an anticline may therefore be regarded as an elongated dome. See **SYNCLINE**.

Anticosti Island of Quebec. It is in the gulf of the St. Lawrence and is 122 m long, covering 2600 sq m. It is a preserve for certain wild animals and is a centre for the fisheries in the river.

Anticyclone Atmospheric phenomenon. In an area of high barometric pressure is caused by descending air and the pressure decreases towards the edges of the area. When mapped by means of isobars it is seen that the form is often that of a circle or oval. The descending air becomes dry and warm and so transmits radiation freely. The centre of the system is calm, but from it winds blow out, in the northern hemisphere in one direction and in the southern in the other. Anticyclonic weather is marked by clear air and frost in winter, and blue sky and heat with heavy dew in summer. See **CYCLONE**.

Antigone In Greek legend a daughter of Oedipus by his mother, Jocasta. After he resigned the Theban throne, Antigone guided the blinded Oedipus in his wanderings until his death at Colonus. Her brothers, Polyneices and Eteocles, slew each other in single combat at Thebes, whither she returned. For burying the body of Polyneices against King Creon's edict she was imprisoned in a cave, where she hanged herself.

Antigua Island of the British W. Indies. It is 28 m long, with an area of 108 sq m. The chief place is St. John, which is the capital of the Leeward Islands. The island produces sugar, tobacco, cotton. Pop. (1931), 31,235.

Antilles Name collectively applied to the West Indian Islands south of the Bahamas. There are two groups, both within the tropics. The Greater Antilles comprise Cuba, Jamaica, Haiti and Porto Rico and some smaller islands. The Lesser Antilles include the Leeward and Windward groups, and also the British islands of Barbuda, Antigua, St. Christopher, Montserrat, Dominica, St. Lucia, St. Vincent, Barbados, Grenada, Tobago and Trinidad, and the French islands of Guadeloupe and Martinique.

Antimony Metallic element. Its symbol is Sb, and its atomic weight 120. It is crystalline, brittle, lustrous, bluish-white, and melts at 432° C.

It appears sporadically in nature, but the unrefined commercial metal called regulus is mainly derived from its sulphide stibnite, which is mined in China, Australia, Borneo, France and Mexico. As antimony expands when solidifying it is a constituent of alloys for sharp castings such as type metal, and also of anti-friction metals. Its tin alloy furnishes Britannia metal and sometimes powder.

Antimony is used in medicine as an emetic. In large doses it is an irritant poison.

Antinomianism Term denoting the doctrine that Christians are freed by the Gospel from the obligation to observe the Mosaic law. It perverts the doctrine of justification by faith propounded by St Paul (Romans). It emerged into prominence in the 16th century in Germany, where Johannes Agricola taught views which Luther stigmatised as antinomianism.

Antioch Ancient city in Asia Minor. Its site is 200 m from Smyrna, and it was a flourishing city in Roman times.

Antioch Town of Syria. It stands on the Orontes, 60 m from Aleppo. There are some industries, but its interest is mainly historical. It was founded about 300 B.C. and, named after Antiochus, King of Syria, was later one of the greatest cities in the Roman Empire. Here the followers of Christ were first called Christians. It was destroyed by the Persians in 540, but, although rebuilt by the Romans, never recovered its former greatness. Under Turkish rule the place then gradually decayed. Pop. 30,000.

Antipodes Term denoting places diametrically opposite to each other on the earth's surface. A line joining them passes through the earth's centre. New Zealand is approximately the antipodes of Great Britain. A cluster of uninhabited rocks 13 sq. m. in area, nearly 500 m. south-east of Dundee, is called the Antipodes Islands.

Antipope Pontiff not rightfully elected. Some 31 persons have been elected in opposition to a reigning pope, and are therefore called antipopes.

Antirrhinum Genus of many-coloured flowering plants sometimes called snapdragon. There are about 25 species, natives of Europe and Asia, and some have been developed as garden plants. They occur as annuals, biennials and perennials.

Anti-Semitism Opposition to the Jewish race. In its modern form the movement became conspicuous in Europe during the last quarter of the 19th century, and in 1882 was the cause of many brutal outrages in Russia and Hungary. During the same period an Anti-Semitic League was at work in Germany to restrict the liberty of the Jews, and from 1913 an organised anti-Semitic campaign on a large scale was carried out in Germany under the leadership of Herr Adolf Hitler, the Chancellor. The Dreyfus case is an illustration of Anti-Semitism in France. The movement appears to be based on economic rather than religious or political causes.

Antiseptic Substance which destroys or arrests the development of micro-organisms, thereby preventing putrefaction or fermentation. Antiseptic surgery originated by Lord Lister who introduced the swabbing of wounds with carbolic acid solutions, has since utilised such substances as

corrosive sublimate, boracic acid, iodine, zinc chloride, salicylic acid and cresol. Aseptic treatment includes cleansing the surgeon's hands, sterilising the instruments and dressings and preventing access to the wounds of pathogenic organisms.

Modern chemotherapy injects into the blood stream microbes destroying substances such as salvarsan, sodium hypochlorite and acriflavine. Research is continually searching for drugs capable of destroying specific infections internally without injuring the tissue.

Antitoxin Substance which neutralises a bacterial toxin. The microbes causing specific infections usually operate, not directly, but through chemical poisons produced by them. Persons become immune to such toxins after the appropriate antitoxin has been introduced into the blood serum. Each antitoxin neutralises only the toxin against which it was produced. It is drawn from the blood serum of a living animal which has been immunised against a bacterial toxin by repeated inoculations. The most efficient are the diphtheria and tetanus antitoxins.

Antler In deer the outgrowth of the frontal bone. Except in reindeer antlers are confined to the male and grow in pairs from pedicles on the skull above the eyes. During their rapid growth they are protected by a furry skin called velvet which withers and leaves the bone hard and insensitive. Antlers are used for offence and defence during the rutting season, after which they fall away. A branched antler comprises the beam and one or more branches or tines.

Ant Lion Larva of a neuropterous insect. It is found in Europe but not in Great Britain. It forms in the sand a small pit into which ants and other wingless insects fall only to be seized by the ant lion lying at the bottom and being thrown about to disabie the prey. The victim is then sucked dry and its skin thrown away. When the larval stage is over the ant lion appears as an insect with four wings.

Antofagasta Seaport of Chile, about 750 m. north of Valparaiso and connected by railway with La Paz in Bolivia. There is no harbour so ships discharge their cargoes by lighters. The town is quite modern. The chief industry is the smelting of silver from the neighbouring mines. Pop. (1930) 53,591.

Antonines Age of the Period of Roman history between the accession of Titus Antoninus (Pius) A.D. 138 and the death of his adopted son, Marcus Aurelius A.D. 180. It was a period of great prosperity within the Roman Empire, both emperors being men of moderation and high ideals.

Antoninus Pius Roman emperor Antoninus Titus Aurelius was born in A.D. 86 of good family, and in 120 was made consul. Later he was proconsul in Asia Minor and was adopted by the Emperor Hadrian as his successor. He became emperor in 138 and reigned for 23 years, a period of peace. A wall built between the Forth and the Clyde bears his name. He died March 7, 161.

Antonio Antonello D'Italian painter. Born about 1414, he studied painting in oils in Bruges and is said to have taken the new medium to Italy. He passed the rest of his life at Venice and died in 1493.

In the National Gallery, London are paintings by him—"St Jerome in his Study," "Salvator Mundus" and "The Crucifixion"; he is represented in Paris, Dresden and Rome

Antrim County of Northern Ireland. It is in the N.E. of the country and has a long coastline on the N and E. A good deal of it is hills or bogland, but there is much fertile soil whereon flax, potatoes, etc., are grown. Lough Neagh is partly in the county, which includes Rathlin Island and the Skerries. The chief rivers are the Lagan and the Bann. The area is 1176 sq. m., and it is the most populous county in Ireland as Belfast is therein. Antrim is the county town. Other places are Carrickfergus, Lisburn, Ballycastle, Ballymena, Larne and Ballymoney. Portrush is one of several watering places. The county sends two members to the British parliament. Pop (1926) 191,618 (excluding Belfast).

Antrim Market town and county town of Co. Antrim, Northern Ireland, connected by railway with Belfast, 22 m. away. The castle stands in fine grounds. The round tower, 95 ft. high, is regarded as the finest in Ireland. Linen and woollen goods are made. Pop. 2000.

The title of Earl of Antrim has been held by the family of McDonnell since 1620.

Antung Seaport of Manchuria. It is on the Yalu River, 7 m. from its mouth, and is connected by railway with Mukden and other places in the interior. It is a treaty port. Pop. 72,500.

Antwerp City and seaport of Belgium, called Anvers by the French. It stands on the right bank of the Schelde, 27 m. from Brussels and about 50 from the open sea. It is connected by railway and canal with the great industrial regions of France and Belgium. A canal linking it with Liège was begun in 1932.

The finest of many buildings is the cathedral of Notre Dame, remarkable not only for its size, its six aisles and its lofty tower, but also for its beautiful design, its stained glass and its pictures by Rubens. The church of St. Jacques is closely associated with the Rubens family and there are many others.

The town hall dates from the 16th century, and the exchange was rebuilt in the 19th on the model of the earlier one.

Antwerp, with its extensive docks, quays, warehouses, etc., is one of the great trading ports of Europe. The industries include shipbuilding and repairing, oil and sugar refining, and the manufacture of cloth, linen, silk and other textiles.

HISTORY. In the 15th century Antwerp replaced Bruges as the chief port of the Netherlands, and in the 16th it was probably the greatest port in Europe. Its decline was aided by the destruction done by the Spanish soldiery in 1576 and its capture by the Duke of Parma in 1585, and in 1648 the Schelde was closed by the Treaty of Westphalia. Antwerp, therefore, remained quite unimportant until early in the 19th century when it was for a short time in the hands of the French. The Schelde was again opened to commerce and new harbour works were begun. The result was that, after 1830, when Belgium became independent, it became once more a scene of great trading activity. It has been enlarged by taking in several adjacent places such as Berchem. Pop. (1931) 284,811.

On Sept. 27, 1914, the Germans attacked the city and its forts, a detached group around

the city, were silenced one by one. A naval division was sent from Britain to aid in defending the city but this could not avert its fate. On Oct. 9, it surrendered and it remained in the hands of the Germans until the end of the struggle.

Anu Babylonian god of heaven. At first worshipped as a local sky deity in Erech, he came to be regarded as supreme in a triad which included Bel of Nippur and Ea of Eridu, who were deemed to rule heaven, earth and sea respectively.

Anubis Egyptian god of the dead. He developed from a canine divinity who guarded the cemetery to the servant and messenger of the gods. As such he came to preside at embalmings, and watched the balance while Thoth recorded the result at the soul weighing of the dead before Osiris. Often represented in pictorial and sculptural art, when he has the head of a jackal he was identified with the Greek Hermes. Osiris and Nephthys were his reputed parents.

Anzac Term colloquially denoting the Australian and New Zealand troops who served in the European war of 1914-18. Derived from the initial letters of the Australian and New Zealand army corps, it was adopted as a distinctive name for a cove on the coast of the Gallipoli Peninsula near Gaba Tepe. Here the Australian and New Zealand troops landed on April 25, 1915. The Anzac cemeteries in Gallipoli were subsequently protected by treaty. See GALLIPOLI.

Aomori Seaport of Japan. It stands on the north shore of Hondo Island on Aomori Bay and is a railway terminus. There is a good harbour improved in the 20th century. The port was opened to foreign trade in 1906. Pop. 58,800.

Aorta Main artery of the body. It starts from the left ventricle of the heart and in the human adult is about 18 inches long. First ascending it arches to the left and, in descending, divides into the thoracic aorta and then, passing through the diaphragm, the abdominal aorta. Branches from these serve the whole arterial system except the pulmonary arteries. The backflow of blood to the heart is prevented by the aortic valve. See ARTERY.

Apache Group of North American Indian tribes. They formerly ranged from Texas and Arizona southward to the Mexican state of Durango. They were at constant feud with the whites until rounded up in 1886. They now live in reservations in New Mexico, Arizona and Oklahoma, and number 6500.

The name was applied to boogymen of French or alien origin in the underworld of Paris who, early in the 20th century, began to practise murder and outrage.

Apatite Mineral in which anhydrous calcium phosphate is associated with a variable proportion of the chloride or fluoride of the same metal. It appears as minute lustrous needles scattered through igneous rocks or as hexagonal prisms, up to a foot long, embedded in limestones, gabbros and gneisses. In this crystallised form it is mined in Canada and Norway. Still more important supplies of mineral phosphate for artificial fertilisers are derived from varieties of apatite called phosphorite.

Ape Word used for certain kinds of monkeys. At one time it described any kind of monkey, but to-day it is confined

to the anthropoids, e.g. the gorilla and to the tallest or short tailed ones See ANTHROPOID, MONKEY

Apelles Greek painter Born in the 4th century B.C., he proceeded to the Macedonian court, where Alexander the Great made him his painter. He portrayed his patron wielding a thunderbolt, for the Temple of Diana at Ephesus. His picture of Aphrodite rising from the sea was afterwards transferred to Rome by Augustus. All have perished.

Apennines Mountain range of Italy. It stretches right down the country for about 800 miles and reappears in Sicily. The average height is 4000 ft., and the highest peak is Monte Corno, 9560 ft., in the Gran Sasso d'Italia. Geographers distinguish three divisions (1) northern, (2) central, (3) southern, there are local names for various parts. The range is cut by several passes through which are roads and railways.

Aphasia Loss of the power of speech. It is due to brain lesions and the causes operate as in apoplexy. Sensory aphasia, or the loss of the power of perceiving spoken or written words, comprises word deafness and word blindness. Motor aphasia is the loss of the power of producing spoken words.

Aphis Genus of insects known to gardeners as plant lice or green fly. They are very common in Great Britain. They feed on plants and leave thereon an excretion called honeydew which is eagerly eaten by ants, but is injurious to vegetation. They reproduce sexually once a year and in the spring the eggs hatch out into females, who give birth by division to others in a few days. The others repeat the process, and so the insects increase in number enormously. The males are only born in the autumn.

The pests include the rose aphis and those that live on the apple, bean, cabbage, hop, cherry and other plants and trees. There is also a vine aphis, the phylloxera. Birds and other insects keep down the pest, but the best treatment is to spray or fumigate the plants.

Aphonia Loss of voice due to disease of the vocal chords in the larynx or to nervous disorders. Hysterical conditions produced by worry, overwork or shock, notwithstanding the desire and capacity for speech, may paralyse the vocal apparatus. This results, if complete, in dumbness, and, if incomplete, in reducing speech to a whisper.

Aphorism Concise sentence embodying an important truth. Differing from an axiom, which is self-evident, an aphorism seeks to systematise human experience. The word was first used of a collection of medical propositions made by Hippocrates which began with the words "Life is short, art is long." The best known collection of aphorisms is contained in the Book of Proverbs.

Aphrodite To the Greeks the Goddess of Love. One legend made her the daughter of Zeus and Dione. In another she rose from the foam of the sea, this being the meaning of her name. She became the wife of Hephaestus (Vulcan), and had as her lovers Hermes, Ares, Poseidon and other gods, as well as Anchises a mortal. By Ares she was the mother of Eros (Cupid).

Aphrodite was regarded as the Goddess of fruitfulness and the ideal of female beauty. Her worship, marked by excesses, was very widespread in the Greek cities, and her girdle was said to be able to arouse the passion of

love. The name *aphrodisiac* is given to drugs that excite the passions.

Apia Seaport of the Samoan Islands. It is on the north coast of Upolu, and has a trade in copra and other tropical products which are exported, although there is no harbour. Near is Vailima where R. L. Stevenson lived and died. See SAMOA.

Apis Sacred bull of Memphis. He was selected for his black hide with a white forehead and was reverently tended, being regarded during life as the second life of the god Ptah. As each animal died the remains were enshrined in a sarcophagus.

Apocalypse Greek title of the Book of Revelation. The word means "unveiling," and apocalyptic thought which purports to reveal the future, grew out of Hebrew prophecy, and emerged incidentally, even in the prophetic age, in Ezekiel and Isaiah. Its classical Old Testament example is the Book of Daniel. It was a favourite literary form with Jewish and Christian writers from the 2nd century B.C. to the 4th A.D. Among uncanonical books *The Book of Enoch*, *The Testaments of the XII Patriarchs*, *The Apocalypse of Baruch* and *The Psalms of Solomon* may be described as apocalyptic. See REVELATION.

Apocrypha Religious writings of Jewish or Christian origin that are not found in the Hebrew canon of the Old Testament. They are found in the Greek Septuagint and the Latin Vulgate, but not in the ordinary English translations, although at one time they were bound up with the authorised version. In the 39 articles they are declared to be suitable for example and instruction. There are 14 of these apocryphal books: 1 *Esdras*, 2 *Esdras*, *Tobit*, *Judith*, *The Additions to Esther*, *The Wisdom of Solomon*, *Ecclesiasticus*, *Baruch*, *The Song of the Three Holy Children*, *The History of Susanna*, *Bel and the Dragon*, *The Prayer of Manasses*, 1 *Maccabees*, 2 *Maccabees*.

There is also a New Testament apocrypha. This includes *The Epistle of Barnabas*, *The Gospel of Peter* and *The Shepherd of Hermas*.

Apogee Point in the moon's orbit farthest from the earth. When the earth was regarded as the world's centre, the sun and planets were each assigned an apogee. Copernican astronomy making the sun central, assigns to the earth and the planets an aphelion. The sun, therefore, is in apogee when the earth is in aphelion.

Apollinaris Alkaline spring near Nona nahr in the Rhineland. The water contains per gallon 170 grains of solids, principally sodium salts; there are also 251 grains of gaseous carbonic acid. It is bottled for use as a table water and is beneficial to the digestion. The spring was discovered in 1851.

Apollo Greek god. He was reputed to be the son of Zeus and Leto, and Artemis was his twin sister. At first a sender of plagues, he was regarded later as the god of healing and the father of Aesculapius. He was supposed to have the gift of prophecy and to him the famous temple, with its oracle, at Delphi was dedicated. He was also the god of song and music, and his emblems included the lyre and the bow.

There were many representations of Apollo in classical art. The finest existing example

is the statue of the Apollo Belvedere now in the Vatican at Rome

Apollos Early Christian convert associated with S Paul He was an Alexandrian Jew, traditionally one of the 70 disciples, and his great ability and expository power led to disputes in the Christian community at Corinth, and S Paul's first Epistle to the Corinthians opens with a dignified effort to heal the schism Luther's view that Apollos wrote *The Epistle to the Hebrews* is widely held

Apollyon Destroyer The word appears in the New Testament (Rev ix 11) as the Greek form of the Hebrew Abaddon, personified as "the angel of the bottomless pit" It is immortalised in Bunyan's *Pilgrim's Progress*

Apologetics Branch of theology which concerns itself with the grounds and defence of the Christian faith It animated the work of Justin Martyr, Origen, Augustine, Anselm, Aquinas and Abélard, and was systematised in the 18th century by Butler and Paley From the argument from design, miracle and Biblical authority, on which stress was formerly laid, modern apologetics has developed a constructive attitude which emphasises the moral ideal, and vindicates Christianity as the perfect faith for mankind at large

Apologue Moral fable Its characters are drawn from the animal, vegetable or mineral kingdom, never from mankind, except when parts of the human body are personified, as in *The Bely and its Members* recorded by Livy Jotham's story of *The Trees Choosing a King* (Judges ix) is a scriptural example The classical collections are those of Aesop and Phaedrus, the medieval ones are typified by *Reynard the Fox*, and agreeable examples come from La Fontaine and Gay

Apology Expression of regret for something wrongfully said, or done By the law of England an apology must be as public as the original statement. Actions for libel are avoided by the offender publishing an apology at his own expense, and paying costs This applies also to infringements of patents, trade marks and trade names See LIBEL.

Another kind of apology is a writing in the nature of a defence, e.g., Plato's *Apology for Socrates*, Sir P Sidney's *Apologie for Poetrie*, and J H Newman's *Apologia pro Vita Sua*

Apoplexy Stroke or apoplexy is a loss of consciousness caused by a sudden interruption of the normal circulation in the brain (such as occurs with the bursting or blocking of a blood vessel) It usually occurs in stout, elderly men after a heavy meal or strenuous exertion

Symptoms—The face is red, the breathing laboured, and there may be partial or complete unconsciousness, while a further sign is that the pupils of the eyes have become insensible to light and may be contracted unequally One half of the body is usually paralysed

Treatment—Loosen the clothing, apply cold water bandages to the head and keep the patient absolutely still To prevent a recurrence of the attack, the patient should avoid alcohol, rich, heavy food, and habits of over-eating Violent exertion, mental excitement or exposure to great heat are also dangerous A stroke may leave paralysis of one side of the body, impaired speech, or some mental or emotional defect.

Apophthegm Pithy utterance embodying a philosophic truth Plutarch compiled a collection of such apophthegms which he dedicated to Trajan It should be shorter than an aphorism, and dwell more vividly in the memory Example Knowledge is power See APHORISM

Apostasy Term denoting defection, but now generally employed to designate reproachfully the abandonment of a faith In Roman Catholic ecclesiastical law it covers the renunciation of monastic vows, or of the clerical profession At times religious persecution has induced much apostasy, genuine or pretended, among Jews, Christians and Moslems The Roman Emperor Julian, who, on his accession, publicly reverted to paganism, was surnamed the Apostate

Apostle Term, denoting messenger, adopted by Jesus Christ to designate the twelve men sent forth to preach the gospel (Luke vi) The names of the twelve are Simon Peter, Andrew, James, John, Philip, Bartholomew, Thomas Matthew, James the Less, Thaddaeus, Simon the Canaanite and Judas Iscariot The 70 disciples sent forth subsequently (Luke x) are also, in the Eastern Church, entitled apostles After the betrayal of Judas Iscariot his place was allocated to Matthias The title was extended to Barnabas, traditionally one of the 70, and was claimed by S Paul

In imitation of S Paul, the apostle to the Gentiles, later Christian missionaries have acquired by general consent similar titles, such as S Augustine, apostle of England, S Patrick of Ireland, S Boniface of Germany, S Francis Xavier of the Indies and others

Apostles' Creed Confession of the Christian faith It was used at baptisms quite early in the Church's history and took its present form in, or before, the 7th century

Apothecary Person who mixes drugs In England there is a society of apothecaries dating from 1617 It holds examinations and its degree of L.S.A. enables the holder to practise medicine The society, which is one of the London livery companies, has a hall in Water Lane, Blackfriars, in which are some valuable portraits and books In Dublin, at 95 Merlion Square there is an Apothecaries' Hall of Ireland founded in 1791

Apothecaries weight used in weighing drugs is as follows

20 grains	1 scruple
3 scruples	1 drachm
8 drachms	1 ounce

The weight of a scruple is 1.296 grammes

Apotheosis Attribution of divine honours to distinguished persons, living or dead A development of ancestor worship, it was practised under the ancient empires and was given to Lycurgus, Alexander, the Ptolemies, Romulus, Julius Caesar, Augustus and his successors The worship accorded to the Roman emperors, especially in the provinces, continued in some cases long after their death

Appalachian Mountain system of North America It extends for over 1500 m in the E from Maine to Alabama, sometimes quite near the coast It is divided into several groups, of which the most important is the Alleghany Others are the Green, Blue, White and Black Mts and the Adirondacks.

Appeal, Court of Court of law in which the decisions of the lower courts can be reviewed, and, if necessary, reversed. Every legal system has its courts of appeal. In England appeals from the lower courts, held by magistrates and recorders, go to the High Court of Justice. From this court, with its three divisions, appeals go to the Court of Appeal, which consists of the Master of the Rolls and five lords justice. Appeals from this court go to the House of Lords, which is the supreme court of appeal, except for ecclesiastical cases, which go to the judicial committee of the Privy Council. The judicial committee is also the supreme court for appeals from the courts of India, the Dominions and Colonies, although the Irish Free State contests this right. Its members include judges from India and the Dominions.

In Scotland the inner house of the Court of Session hears appeals from the outer house, Northern Ireland has a court of appeal on the English model, and from both countries appeals can be taken to the House of Lords. Canada, Australia, South Africa and New Zealand have also their courts of appeal and a final appeal to the Privy Council in London. Foreign countries have courts of appeal on similar lines. In the German Republic the court sits at Leipzig. These courts deal only with civil cases. For criminal cases there is a court of criminal appeal in England established 1907, and in Scotland, established 1926.

Appendicitis Inflammatory disease of the vermiform appendix. The illness may be a consequence of tuberculosis, but it is more usually due to bacterial infection associated with constipation. It is caused sometimes by the presence of a foreign body, such as a grape seed, in the appendix. It attacks persons of all ages, but more frequently the young.

Symptoms—Sudden and severe pain low in the abdomen near the right thigh, with sickness, faintness, feverishness, etc.

Treatment—External heat will help to relieve the pain. No aperient or enema should be administered, and only water should be given by the mouth until medical advice is obtained. An operation is usually necessary, and neglect may have very serious consequences.

Appendix In the human body the small blind gut projecting from the caecum. Its full name is the vermiform appendix. Its length varies but the average is about 4½ in. The organ has no known function, so it is surmised that it represents one that has ceased to be used.

Apperley Charles James, English writer known as 'Nimrod'. Born in Denbighshire about 1778 and educated at Rugby, he began to write on sporting matters, of which he had a wide knowledge, and soon made a reputation. His books include *The Life of John Mytton*, *The Life of a Sportsman* and *Nimrod's Hunting Tours*. He died in London May 19, 1843.

Appian Way Road in Italy, made in 4 B.C. Leaving Rome by the Appian Gate it was an important highway to Brindisi (Brundisium).

Appin Coastal district of Argyllshire including Glencoe. The Appin murder, celebrated by R. L. Stevenson in *Kidnapped* and *Catriona*, was a famous case. On May 14, 1752, Colin Campbell was murdered and Alan

Breck Stewart was charged with the crime. He fled to France, but James Stewart, an accomplice, was arrested, sentenced to death and hanged. The real murderer is unknown.

Apple Tree or bush bearing a popular fruit. The botanical name is *pyrus malus*, and it is very widely grown in Great Britain. It flourishes also in various parts of Europe and in Canada, California and Australia, and is the most popular fruit in the western world. It is eaten raw and used in making pies, tarts, etc., and to a certain extent in jam. Some of the best known varieties are the Blenheim Orange, Cox's Orange Pippin, Bramley's Seedling and Newton Wonder. Apples of a different kind are grown for making cider.

The usual form of the apple tree is the standard grown in orchards, about 70 per acre. The pyramid and the bush are suitable for restricted space as the branches are trained accordingly. Apples can also be grown on cordons or espaliers trained against a trellis or a wire fence. Pyramids should be 10 ft apart and espaliers 5 ft, but espaliers, in which the branches are trained out, need 20 ft and cordons only 2 ft. The trees can be grown in pots in a cold greenhouse.

Enormous quantities of apples are grown in California, Canada, Australia, especially Tasmania, New Zealand and elsewhere for the British, European and American markets. Carefully graded and packed, they are available practically all the year round. A system of grading and marketing English apples was introduced in 1928, and a packing station opened at Cottenham in Cambridgeshire and another later in Kent. In 1932 the British import of apples was 7,775,000 cwt.

Appleby Borough market and county town of Westmorland. It stands on the Eden in delightful country 30 m from Carlisle and is reached by both the L.M.S. and L.N.E. Ryds. The chief buildings are the castle, of which the keep is Norman, the parish church, the town hall, the shire hall, and the grammar school. There is an agricultural trade. Until 1832 the borough sent two members to Parliament. Pop. (1931) 1918.

Appointment In English law a limited power of disposing of money. A person often leaves his money in trust for someone, giving to that person the power of saying to whom it shall go. Thus a man may leave his money to his wife and give her the power of appointing how it shall be divided among their children.

Appraiser In English law a man licensed to value or appraise property of all kinds. He is usually also an auctioneer. Goods taken by distraint must be valued by two appraisers before they can be sold. The licence for an appraiser costs £2 a year. See AUCTION.

Apprentice Person bound for a term of years to a master who undertakes to instruct him in his trade. The system originated in England in the 14th century and at first applied to all occupations, manual and professional. It was part of the guild system and to become a member of a guild, and therefore a recognised trader, a man must have served his apprenticeship. This was enforced by custom and later by law. Apprenticeship became less general as the 19th century advanced. The parents of the apprentice paid a premium and signed with

the employer a contract called articles, which was stamped, and laid down the conditions of service. The master had a good deal of power over the apprentice who was often an inmate of his household. The conditions of the 20th century were all against service of this kind and, though after the Great War efforts were made to revive it, the system has steadily declined.

Apricot Fruit tree of the natural order *rosaceae*. A native of Asia. It was introduced into England in the 17th century. It is cultivated in France and California, whence fresh and tinned apricots are sent to Great Britain.

Apse In church architecture a space at the end of the nave. It is semicircular in shape and found only in cathedrals. It was introduced into the basilicas of Rome and was copied by many of the early Christian churches. St Paul's has a magnificent apse and there is one at Peterborough.

Apteryx Genus of birds peculiar to New Zealand. It has a long beak with the nostrils at its tip, a unique feature, and is about the size of the domestic fowl. The tail and wings are small and useless for flight. It lives on insects and lays a single egg, which is incubated by the male bird. The native name is Kiwi.

Aquarium Receptacle made in which to keep fish or plants alive in water, either fresh or salt. It has usually four sides, one at least being of glass in order to permit observation. Slate or zinc are used for the bottom.

The word is also used for a building in which fish are displayed. There is a famous one at the Battery, New York, and another at Brighton. Zoological gardens often include an aquarium among their buildings, as in the Zoological Gardens at Regent's Park and the Scottish Zoological Gardens at Corstorphine, Edinburgh.

Aqueduct Artificial channel used to convey water above the ground. The Romans were great builders of aqueducts and there are remains of their work in Italy, at Nîmes in France, Mainz in Germany and Segovia in Spain.

These aqueducts were built usually of stone, the water being carried in chambers lined with cement and covered over. Hills were avoided and the water carried by the force of gravity.

To-day water is conveyed usually by pipes laid underground, but overland structures are sometimes necessary. In England an aqueduct carries the Bridgewater Canal over the Manchester Ship Canal. In the United States there are large aqueducts such as the Catskill, 126 m long, that supplies New York with water. Much longer aqueducts carry water to Los Angeles and San Francisco.

Aquila New Testament character. A Jew, born at Pontus, he was converted to Christianity. With his wife, Priscilla, he entertained St Paul at Corinth and saved his life at Ephesus.

Aquila is also the name of a constellation in the northern hemisphere. Altair is its chief star.

Aquilegia Genus of flowering plants. They belong to the order *ranunculaceae* and the best known is the columbine (*q.v.*)

Aquinas Thomas, Italian saint and theologian. He was born of a

noble family at Aquino, near Naples, in 1226, sent to the Benedictine monastery of Monte Cassino, and then studied at the University of Naples. He joined the Dominican order, but his brothers fetched him home against his will, two years later he escaped and went to Cologno where he was influenced by Albertus Magnus. He studied in Paris for two years, after which he began to teach.

Thomas soon won a reputation as the greatest scholar in his order and perhaps in Christendom. He taught in Rome, Pisa, Bologna and Naples, but refused to accept any high office in the church. He died March 7, 1274. His body was given to Toulouse, and in 1323 he was canonised. His day is March 7.

Aquitaine District of France. It lies between the Garonne and the Pyrenees. It is divided into Guienne to the N and Gascony. The name Aquitania was given to it by the Romans, then it reached N to the Loire. Eleanor, the daughter of one of the ruling dukes, married Henry II of England. In this way Aquitaine came under English rule and parts of it remained so until 1453.

Arab Semitic race, including all the Semites except the Jews and found in many parts of Asia and Africa. They were settled in Arabia at the time of Mahomet, but his teaching induced them to spread their new faith. They invaded Africa and later Spain, founded an empire in India and settled in various parts of Asia. To-day they number nearly 10,000,000, practically all Mohammedans. Among their numerous dialects the language of the Koran is regarded as the standard of purity. Mathematics and philosophy are prominent in their literature, and the Arabic schools of learning at Bagdad and elsewhere have contributed to the sum of human knowledge. See ARABIA.

Arabesque Form of design used by the Arabs in architecture and painting. Griffins, dragons and other fabulous animals are introduced into it, and it usually takes the form of an ornamental frieze or border. The Moors brought it to Europe, although something of the kind was known to the Romans.

Arabia Country of Asia. It is a peninsula in the SW of the continent, surrounded by the Persian Gulf, the Indian Ocean and the Red Sea, in area about 1,000,000 sq m, and about 1800 m long. Much of the land is desert, but there are fertile strips along the coast and in the oases. In the S, on both sides of the great plateau, are mountains rising to 10,000 ft. The climate is hot and dry. Pop (approx) 10,000,000.

HISTORY. Arabia was divided by Ptolemy into three parts, Arabia Deserta, Arabia Felix and Arabia Petraea, or the stony, in the NW. Its inhabitants consist of the wandering Bedouins of the interior and the Arabs who have settled near the coast. The former keep the famous camels and horses, and rear sheep and goats. Since the Great War Bertram Thomas and H. S. John Philby among others have, by their journeys, added greatly to our knowledge of the country.

In the 7th century Arabia became the headquarters of Mohammedanism. In the 16th century the Turks began to conquer the country and it was more or less under their rule when the Great War began.

In 1916 the Sherif of Mecca threw off the authority of the Turks, and help was given to him by Great Britain and his army organised

by Col T E Lawrence. One of the problems before the Peace Conference in 1919 was to make a settlement that would meet the new situation in Arabia, from which the Turks had been expelled.

It took six years of warfare before a stable political condition was reached. The kingdom of Saudi Arabia, in which are the cities of Mecca and Medina, includes the principalities of Asir, formerly independent, and dominates the E coast of the Red Sea. Below is the Yemen, part of which forms the Aden protectorate and part is under two native rulers at Sana and Sabia. The adjoining district called the Hadramaut is a British protectorate. On the other side of the country are the state of Kuwait under British protection, and the independent state of Oman.

Arabi Pasha Egyptian leader. Ahmed Arabi born about 1839 of humble parents, entered the army and made himself prominent by leading an agitation against Turkish and other interference in Egypt. In 1882 he became Minister for War and aroused the suspicions of the European powers. The British took action and after the bombardment of Alexandria an army was landed and Arabi's troops were beaten at Tel-el Kebir. Arabi was sentenced to death, but this was not carried out and he was exiled to Ceylon. In 1901 he was allowed to return to Egypt and there he died, Sept. 21, 1911.

Arabis Genus of flowering plants also called rock cress. It bears white or purple flowers and is a favourite plant for horders. The chief varieties, the double white and single flowering arabis thrive in a light soil and can be planted at any time from pots in spring or autumn.

Arable Land which can be ploughed or cultivated, as opposed to that which is only suited for pasture. The amount of arable land in Great Britain has shown a steady decline since the middle of the 19th century. In 1901 it the average amount was 15,106,928 acres, in 1932 it was 12,493,000 acres.

Arachnida Class of arthropods. It is derived from the Greek word for spider and includes spiders, scorpions and mites. They are chiefly carnivorous and have usually six pairs of limbs, four for walking and the others for seizing food. They have no antennae, simple eyes varying from 2 to 12, and the head and thorax are fused together. See SPIDER.

Aragon Kingdom of Spain. It lay to the south of the Pyrenees and had a coastline on the Mediterranean. Its capital was Saragossa and its chief river the Ebro. The kingdom arose in the 11th century under Ramiro. Later kings extended its area, one of them took the Balearic Islands from the Moors while others secured Naples, Sicily and Sardinia. In 1469, John who ruled all these lands, save Naples, married his son, Ferdinand to Isabella of Castile, making one kingdom called Spain. Aragon had its cortes, or national assembly in the 12th century or earlier, and in this the towns were represented.

Aral, Sea of Lake of Asia, situated in the territory of Soviet Russia about 80 m to the E. of the Caspian Sea. Over 250 m long and covering 28,000 sq m, it is full of fish, and seals are caught. The rivers Amu Daria and Syr-Daria flow into it, but none flow out. It is very shallow, and evaporation is steadily reducing its size.

Aram Semitic name for Mesopotamia, Syria and other countries in that area. Its language, Aramaic, of considerable importance, is divided into two branches, western or Syriac and eastern, wrongly called Chaldean. There were several Aramaic dialects, one having been spoken in Palestine in the time of Jesus Christ. He and His disciples spoke a Galilean dialect. The Targums were written in Aramaic and it was used in parts of the Old Testament and the Talmud. It was superseded by Arabic, but is still spoken by small communities in Persia and Mesopotamia.

Aram Eugene, English criminal. Born at Ramsgill, in Nidderdale, Yorkshire, in 1794, his father was a gardener. He became a schoolmaster at Knaresborough, but left the town in 1745, suspected of fraud. He was associated with a certain Daniel Clark whose body was found some years later in a cave. Aram was arrested at King's Lynn in 1759, was found guilty and executed on Aug. 6. Before the end he confessed to a share in the crime which, he alleged, was actually committed by another.

Aran Group of islands off the coast of Galway. The three largest are Aranmore, or Inishmore, Inishmaan and Inishkeer, and they cover 18 sq m. There are ruins of an abbey, and the islands were once a centre of religion and learning. Fishing is the main industry.

Ararat District of Armenia, named from its chief river Aras, or Araxes. On Mount Ararat the Ark is said to have rested (Genesis viii). It is an extinct volcano with two peaks, 17,000 ft high. The Armenians call it the Massis, and the Persians the Mountain of Noah.

Ararat Town of Victoria. It is a railway junction, in a farming district. Mining is carried on and there are some small industries. It is 130 m from Melbourne by railway. Pop (1931) 5350.

Arbitration Method of deciding disputes without resort to law, strikes lock outs or war. There are three kinds of arbitration, legal, industrial or international.

The arbitrator who is a lawyer, is appointed by the parties concerned, or by the court. Sometimes the court orders an arbitration. The price of land taken for public purposes is often settled by arbitration.

Industrial arbitration is employed to settle disputes between employer and employee. In Great Britain there is an industrial court in the Ministry of Labour.

Compulsory arbitration, tried during the Great War in Britain, has been introduced into Australia and New Zealand, with only qualified success.

International arbitration has been used many times, notably in the Bering Sea fisheries dispute between Canada and U.S.A. In 1893 an industrial court was established at the Hague in 1899 and many nations, including Great Britain, France and U.S.A., have signed treaties undertaking to submit their disputes to arbitration. These treaties have been deposited with the League of Nations.

Arbor Vitae Evergreen coniferous tree. There are two main kinds, the American and the Chinese. Both give out a strong aromatic scent. The tiny leaves are pressed against the twigs and branches.

Arbroath Burgh, market town and sea port of Angus (Forfar), in full

Aberbrothock. It stands near the mouth of the River Brothock, 17 m from Dundee. There is a good harbour and shipping is the chief industry. The abbot of the now ruined abbey is immortalised in Southey's poem *The Abbot of Aberbrothock*. Pop (1931) 17,637.

Arbutus Evergreen shrub. It bears white or reddish flowers in clustered sprays and flourishes in a warm, sunny sheltered position in moist soil. It should be grown in pots until ready for planting out. Seeds can be sown in a frame or cuttings of young shoots may be taken in July and struck in a frame. The long straggling shoots should be trimmed back in April and the dead wood cut out.

Arc Portion of a curved line so called because it represents a drawn bow (Latin, *arcus*). The straight line that joins its extremities is called the chord. The length of the arc of a circle can be determined if the angle subtending the arc at the centre and the radius, or circumference, are known. If a is the radius the circumference equals $2\pi a$. Thus, if a is the angle subtending the arc, the length of the arc is $\frac{a}{360}$ of the circumference.

ARC LAMP Special type of electric lamp for lighting purposes. It consists of a pair of carbon rods through which a high voltage current is passed, producing a luminous glow or arc between the poles of the carbons. As the carbons are burnt away during the process, a mechanism is attached to regulate the distance between the poles. In one type of lamp the carbons are exposed to the air, and in another they are enclosed in a glass globe.

Arcade Range of arches supported by piers, or columns. In some there is a gallery behind the arches, but in others they are part of the wall. They form a feature of Gothic architecture and perhaps the finest in the world are those of the doge's palace at Venice. To-day the term is used for a covered way which is lined with shops.

Arcadia District of Greece. It was a mountainous region in the S., and its inhabitants were regarded as living a simple, rural life. Consequently Arcadia became used for a land of peace, plenty and contentment.

Arcadius Roman emperor. A son of Theodosius the Great, he was born in Spain in 377. In 395, when his father died, the empire was divided between his two sons, Honorius and Arcadius, and the latter, making Byzantium his capital, became the first of the East Roman emperors. He showed no ability and his vast realm was ruled by the prefect Rufinus and his wife, Eudoxia.

Arch Architectural term. It describes a structure spanning vertically an opening or recess, and serving as a support. There are two main kinds, round and pointed, or Roman and Gothic, and several varieties of each.

The arch was used by the Egyptians and other early peoples, though not to any extent by the Greeks. The modern round form originated with the Romans and is seen in existing Saxon and Norman buildings. The pointed, Gothic arch developed later and was first used by the Mohammedans, and, like them, the Christians adopted it as a symbol of their faith, in the great cathedrals of the Middle Ages, in which the arch determined the structure of the building in the Decorated and Perpendicular periods.

The Tudor arch is confined to the secular buildings of that period.

The triumphal arch was erected by the Romans to celebrate a victory. Three still stand in Rome—the arch of Constantine, of Septimius Severus and of Titus. There are fine examples in other cities, notably at Orange. Napoleon copied the idea when he erected the Arc de Triomphe in Paris. The Marble Arch in London is another Roman model.

Arch Joseph English politician. Born at Barford, Warwickshire, Nov. 10, 1826, the son of an agricultural labourer. He became a local preacher and soon took the lead in trying to improve the condition of his fellow labourers. In 1872 he formed the National Union of Agricultural Labourers. In 1885-86 and again 1892-1900 he was Liberal M.P. for N.W. Norfolk. He wrote an *autobiography* and died Feb. 12, 1919.

Archaeology Study of the ruined buildings and other material remains of ancient civilisations. One of the earliest workers was Sir Henry Layard who examined the ruins of Nineveh and Babylon in the years around 1850. Since then an enormous amount of work has been done in the Mediterranean region, the cradle of human civilisation also in America and the farther parts of Asia.

Wonderful results were achieved by the German, T. Schillemann, when excavating the ruins of Troy. Sir Wm Flinders Petrie's equally valuable work enabled us to build up the early history of Egypt. Sir Arthur Evans has excavated in Crete, Sir W. Ramsay in Asia Minor, Sir Aurel Stein in Central Asia, and Howard Carter in Egypt.

In the 20th century interest was directed largely to finds of the highest value at Ur in Mesopotamia, where the Sumerian and other civilisations have been revealed to us. The excavations of archaeologists in Rome and Athens are of supreme importance for early Greek and Roman history. Small scale work in London has given it an archaeological society of its own.

In Britain's limited field much work has been done, adding greatly to our knowledge of Celtic civilisation and Roman influences by unearthing the cities of Silchester and Uricolium, and by examining the remains at Bath, Chester, Colchester and elsewhere.

Archaeology is now a subject of study at nearly all universities. There are schools or institutes of archaeology in Athens, Rome, Jerusalem, Egypt and elsewhere. Expeditions are sent out regularly by the British Museum or are organised by the universities, those of America being, perhaps, foremost. Others are financed by private individuals.

Headquarters in England are the Archaeological Institute of Great Britain and Ireland at Lancaster House, S. James's, London, S.W., and the British Archaeological Association at 22 Russell Square, London, W.C.1. There is also an Archaeological Society at 207 Bath Street, Glasgow. In 1932 arrangements were made for the establishment of a central Archaeological Institute in connection with the University of London. *The Archaeological Journal* is published in the interests of the study.

Archangel Superior order of angel. Four are recognised in Christian literature, Michael, Gabriel, Raphael and Uriel. Three others have been named, Chamuel, Jophiel and Zadkiel.

Archangel Seaport and city of Soviet Russia. It stands where the river Dvina falls into the Gulf of Archangel an opening of the White Sea. It is 700 m from Moscow, with a railway line. There is a good harbour, open only in summer. Pop 128 800.

In Aug 1918, in order to help those Russians who supported the cause of the Allies an allied force, chiefly British, landed at Archangel after a little opposition. There was a good deal of fighting, but no definite results were achieved. It was then decided to withdraw, and Lord Rawlinson was sent to direct this operation which was completed on Sept. 27, 1919.

Archbishop High official in the Christian church. The title first appeared in the 6th century, and since then the archbishop has been the head of a group of bishops, the district under his control being known as a province.

In the Church of England there are two archbishops, Canterbury and York, each with his province. The former ranks immediately after the Princes of the blood royal and has the right of crowning the Sovereign. The latter ranks after the Lord Chancellor and has the right of crowning the Queen Consort.

There is an Archbishop of Wales and Anglican archbishops in Ireland, Australia, Canada and other parts in and out of the Empire. In Ireland the archbishops are Armagh and Dublin. The Roman Catholic church has four archbishops in England and Wales: Westminster, Cardiff, Birmingham and Liverpool, two in Scotland, St Andrews and Edinburgh and Glasgow, and four in Ireland, Armagh, Dublin, Cashel and Tuam, as well as many in other parts of the world.

Archdeacon Official in the Church of England. He existed in the early church as chief of the deacons attached to a cathedral. Later he appeared as the assistant of the bishop in diocesan affairs. In time the archdeacons became almost independent of the bishops, their duties being concerned with the financial and business side. In this connection they won an unenviable reputation for rapacity.

In the Church of England to day every diocese is divided into several archdeaconries. They are appointed by the bishop and wear gaiters. They supervise church buildings and the admission of churchwardens, and hold courts.

Archer Small fish, found round the coasts of the East Indies and Australia. It is so called because it can squirt drops of water at the insects on which it lives.

Archer Frederick James. English jockey. He was born at Cheltenham, Jan 11 1857, rode his first winner at Chesterfield in 1870, and had a wonderful, although short, career for he shot himself at Newmarket, when ill of typhoid fever Nov 8, 1886. From 1873 to 1885 Archer was at the top of the list of winning jockeys. Five times he rode a Derby winner, altogether he won 2748 races.

Archery The art of using the bow and arrow. It was formerly used in hunting and in warfare, but to-day it is solely a pastime. Archery began with the invention of the bow and was practised by the Egyptians. There are many references to archers in the Bible and the Persians were noted for their skill. We hear of Greeks and Romans, Arabs and Turks as noted archers.

Archery was the deciding factor in the battles of the Middle Ages, e.g. Hastings and Crecy. Despite the introduction of gunpowder archery flourished in England until the 16th century, though mainly used in hunting.

Late in the 18th century archery was revived in England as a sport. In 1781 the Royal Toxophilite Society was founded, and in 1785 the Woodmen of Arden formed their society at Meriden. The pastime is now controlled by the Grand National Archery Society, founded in 1861, with several meetings a year at which men and women shoot for championships. There is a considerable literature on archery, an early book being the *Toxophilus* of Roger Ascham.

The Royal Company of Archers is a body of Scottish noblemen and gentlemen founded in 1676. It is the sovereign's bodyguard for Scotland and membership is a coveted distinction.

Arches Court of English court of law. It is the court of the Archbishop of Canterbury and hears appeals from the lower courts in his province. It is presided over by a judge called the Dean of the Arches. Appeals from this court go to the Privy Council. It is so called because the sittings are held in the church of St Mary le Bow, London.

Archil Violet dye sometimes called orchil. It is obtained from several species of lichen which grow in warm climates. It was discovered by a citizen of Florence and was much used until superseded by aniline dyes.

Archimandrite Name used in the Greek church for the head of a monastery or group of monasteries.

Archimedes Greek mathematician. He was born at Syracuse about 287 B.C. and there passed practically the whole of his life. His discoveries and writings prove him to have been the greatest mathematician of antiquity. He made some engines to defend Syracuse against the Romans, but was killed in 212 B.C. when the city was taken.

Archimedes discovered the use of the lever and invented the Archimedian screw for raising water. He established the principle that a body plunged in a fluid loses as much of its weight as is equal to the weight of the displaced fluid. His theoretical work related chiefly to the relations of spherical and rectilinear surfaces and bodies. His works have been translated into English.

Archipelago Group of islands. The name was first given by the Greeks to the islands in the Aegean Sea, and was afterwards used for other groups. Archipelagos are most common in the southern part of the Pacific Ocean.

Architect Person who plans buildings and supervises their erection. In olden times it meant a master builder.

In 1931 an Act, entitled 'The Architects' Registration Act, 1931', was passed, whereby a person possessing the prescribed qualifications may, upon application to the Architects' Registration Council of the United Kingdom, be admitted to the Register of Registered Architects, and thereupon is entitled to use the title 'Registered Architect.' The Architects' Registration Council Offices are situated at 18, Abingdon Street, Westminster, London, S.W. 1. Training for the profession is provided in Great Britain in ten schools, one controlled by the Architectural Association in London and others associated with Oxford, London, Liverpool and other universities. Women are eligible for the profession on the same conditions as men.

In 1925 the Royal Institute absorbed the Incorporated Society of Architects. It gives every year a gold medal to a leading architect. Its membership is about 8500 and there are probably 4000 architects in Great Britain outside it. There is a Royal Corporation of Architects in Scotland and a Royal Institute of Architects in Ireland at 8 Merrion Square, Dublin.

Architecture Art of designing and constructing buildings. Civil architecture is concerned with the building of houses, bridges, and other structures of ordinary utility, ecclesiastical deals with churches, and naval and military with the construction of ships and fortifications respectively.

The beginnings of the art are seen in the primitive wattle huts of lake dwellings and other early communities, in the so-called cyclopean buildings of massive unwrought stone and in the sun-dried brick palaces of the Euphratean valley. The early flat roofs with horizontal beams (trabeated style) gave place to the use of the arch (arcuated style), which from a rounded form in time became the pointed arch of Gothic architecture. In Greece the art reached its almost perfect development, the buildings showing symmetry of form, unity of design and correctness of outline, characteristics which have served as standards for later times. The development of Christian architecture from the Byzantine and Romanesque to the Gothic and Renaissance style is a history in stone of the changing ideals and artistic conceptions in Europe.

ARCHITECTURE AS A CAREER. Architecture is a vocation which demands a keen appreciation of the beauty of structural form together with a strong creative ability.

Entry to the profession is gained by passing through the three examination stages of the Royal Institute of British Architects (See ARCHITECT).

- (1) Preliminary—Registration as Probationer R.I.B.A.
- (2) Intermediate Examination—Election as Student R.I.B.A.
- (3) Final Examination—Election as Associate R.I.B.A.

Exemption from the R.I.B.A. examinations may be gained by taking a course at one of the Schools of Architecture recognised for exemption from the examinations. The fees at these schools vary from 15 guineas to 72 guineas a year.

The schools recognised for exemption from the R.I.B.A. examinations are divided into two classes—those recognised up to the Intermediate stage only, and those recognised for both the Intermediate and Final stages. The course at a school recognised for exemption from the Intermediate examination is generally of three years' duration, while that at a school recognised for exemption from both the Intermediate and Final examinations is generally of five years' duration.

A pamphlet giving full particulars to those desirous of entering the profession is issued by the R.I.B.A., 9 Conduit Street, London, W. 1.

The R.I.B.A. offers Prizes and Studentships to a total value of about £3000 annually.

The principal assistantships in the offices of practising architects carry attractive salaries, and many of the Government Departments employ architects and pay salaries ranging from £800 to £900 for senior posts, and £300 to £500 for lower appointments. Large

municipalities also employ architects and pay the superintending architect as much as £1000 a year.

Architrave In architecture the stone beam carried by the capital of the columns and supporting the frieze above it. It is seen in classical architecture but has no place in those forms in which the arch springs direct from the capital. The word is sometimes used for the frame over a window or door.

Archives Word used for a collection of official papers and documents, used also for the building in which they are kept. Each country has its archives. In Great Britain each department of state keeps its own, but there is a collection of the older ones in the Public Record Office in London.

Arcot City of India. It is 65 m from Madras on the river Palar, and is reached by railway. North Arcot and South Arcot are two districts in the presidency of Madras.

In 1751 the fort of Arcot, then the capital of the Carnat, was seized by Clive with a small force and besieged by the French, much more numerous than the defenders. Clive beat off a series of attacks and after seven weeks the siege was abandoned. It was taken by the French in 1758, but the British recovered it in 1760. After being in the hands of Hyder Ali it became British again in 1801.

Arctic Exploration This began when sailors, in the 15th century, started on the search for a N.E. and a N.W. passage to the Pacific, and the earliest discoveries of land in the Arctic were made by Frohisher, Hudson, Davis, Baffin, and others, whose names are recorded on the map. For 200 years after the last of these men died work in the W. area was confined to the discoveries in the Hudson Bay region made by Mackenzie and others, and in the E. to the discoveries of Russians and others intent on finding a way to the Pacific.

A new era began early in the 19th century when the British Government offered a prize for a further advance. Ross, Parry and others not only rediscovered the lands found by the earlier navigators, but discovered others, till then entirely unknown. In 1845 Sir John Franklin went out with the *Erebus* and the *Terror* on the voyage from which he never returned, and the expeditions which set out to find him resulted in valuable additions to the geography of the regions visited. The existence of the N.W. passage to the Pacific was proved and a little later, in 1878-79, Nordenskiöld sailed through the N.E. passage. British, American, Russian and Scandinavian explorers vied with each other in their efforts to find further land, and by the end of the century the Arctic regions had been mapped out with considerable, though not absolute, accuracy, and much valuable information about their geology, climate, resources, etc. obtained. The most important in the 20th century corrected the prevailing idea about the size and shape of Greenland.

But in 1900 the pole had not been reached. One by one, in the 19th century, explorers had approached nearer their goal, e.g. the Americans, Greely and Lockwood in 1881-84 when 83° 24' was reached. In 1893 Nansen had left the *Fram* and made a dash for the pole but this failed, in 1897 Andrée had tried to reach it by balloon, but lost his life and his traces were only discovered in 1930.

The pole was actually reached on April 6, 1909, by Robert E Peary, who, for some years, had been exploring in the Arctic. In 1926 Roald Amundsen flew over the pole, as did the American Richard E Byrd, and two years later Sir G H Wilkins Amundsen, who had the honour of being the first to traverse the N W passage, also voyaged through the N E one. Another disaster to add to the long record of Arctic exploration is the one that befell the Italian airship expedition under General Nobile in 1928, in a voyage to find his old comrade Amundsen lost his life. Further expeditions are (1930) in progress, e.g., the Soviet Sadko Expedition, which made a world record in navigation by reaching latitude 82° 7' N.

Arctic Ocean One of the world's five oceans. It consists of the waters round the North Pole and includes the Barents, White, and Kara Seas. It is connected by Davis Strait and other openings with the Atlantic, and by Bering Strait with the Pacific. The ocean is sometimes regarded as the area within the arctic circle, i.e. the polar region enclosed by a line of latitude 23½ degrees from the North Pole, but it is generally assumed to be somewhat larger, its area being placed at something between 6,000,000 and 6,000,000 sq m. The chief islands in the area are Greenland, Spitzbergen, Novaya Zemlya, Wrangell Island, Banks Land, Ellesmere Land, and others.

Ardee Market town of Co Louth, Irish Free State, 48 m from Dublin, on the G N of Ireland Rly. The chief building is the old castle now used for public purposes. Pop 1700.

Arden District in N Warwickshire, at one time a forest, covering a very large area. The name is borne by some of the villages, e.g., Henley in Arden. Shakespeare describes the forest in *As You Like It*.

Ardennes Range of hills in France and Belgium, extending into Luxembourg. It is on either side of the Meuse and is part of an old forest famed for its wild heaths.

Ardnamurchan Point, or headland of Argyllshire, the most western point of the Scottish mainland. It has a lighthouse, and names a large tract of country, mostly deer forest.

Ardrossan Seaport, hugh and watering place of Ayrshire, 30 m from Glasgow, on the L M S Rly. There is a good harbour and the chief industries are shipping and fishing. From here steamers go to Belfast, Arran, and elsewhere. Pop (1931) 6888.

Ardley Urban district of Yorkshire (W R.), 4 m from Wakefield and consists of East and West Ardley. The industries are coal mining and woollen manufacture. Pop (1931) 0215.

Areca Genus of palm trees, grown in the tropical parts of Asia. Areca catechu is grown for its seeds which are known as betel nuts. See BETEL NUT.

Areopagus Hill at Athens, W of the Acropolis, also the council of elders that met thereon, in the temple of Ares. The powers of this governing body were first curtailed by the law giver, Solon. S. Paul addressed the men of Athens on the Areopagus or Mars Hill (Acts xvii).

Ares Greek god of war. He is represented both as a headless man and as a headless youth. He was the son of Zeus and Hera and is identified with the Roman god Mars.

Arethusa In Greek legend a nymph was seen by the river god, Alpheus. As he followed her she begged Artemis to change her into a fountain.

A light cruiser called the *Arethusa* took part in the naval operations of the Great War until destroyed by a mine in the North Sea on Feb 14 1916. A training ship for seamen moored off Greenwich in the Thames is called the *Arethusa*.

Argali Variety of wild sheep found on the steppes of Siberia and other parts of Asia. It is about the size of a donkey and has fine branching horns. In colour it is pale brown with a white face.

Argentina Republic of South America. On the E it has a coastline on the Atlantic Ocean and on the W the Andes separate it from Chile. Its other boundaries are Paraguay, Uruguay, Bolivia and Brazil. Stretching for 2800 m N to S it consists of a vast area covering 1,079,965 sq m. The S part is known as Patagonia. Buenos Aires is the capital, lesser cities are Rosario, Cordoba and La Plata. In the N E are many fertile valleys and in the centre and S are the plains called pampas. The country is mountainous and well watered, its chief rivers are the La Plata, Parana, Uruguay, Rio Negro and Chubut. The climate is temperate, save in the S where it is very hot. Pop (1932) 11,682,844.

Agriculture is the country's main industry. Cattle are reared in immense numbers and the beef and mutton are chilled for export. Wheat and maize are exported, also hides, wool and butter, and wine is produced. The minerals mined include gold, coal, tin and copper. There is much oil, the wells having become national property in 1933. There is a good railway system and good roads. Air services have been established.

Argentina is a federation governed by a president and a cabinet. The legislature is the congress of two houses, the senate of 30 members and the chamber of deputies, who are elected for four years. The constitution, modelled on that of the United States, was drawn up in 1853 and has since been amended. Each of the four provinces has its own legislature. The official religion is Roman Catholicism. Education is compulsory and, in its elementary stages, free. The army is recruited by compulsory service, and there is a small air force. The republic has a state bank. The unit of currency is the peso, divided into 100 centavos, and worth about 4s. The metric system of weights and measures is compulsory.

HISTORY The country was first visited by the Spaniards in 1516 and a little later they founded a settlement at Asencion. For nearly 300 years it remained a Spanish possession. In 1776 Buenos Aires was made the capital of the vast region that included Paraguay, Bolivia and Uruguay, and in 1806 it was besieged by the English. In 1810, when Joseph Bonaparte was King of Spain, Argentina took the first steps towards independence. A war followed in which the Spaniards were beaten and a dictator gained authority, but it was not until 1842 that Spain recognised the country's independence. These early years were marked

by continual civil wars and wars with neighbouring republics, and in 1838-42 with France.

Towards the close of the 18th century Argentina entered upon a more peaceful and prosperous period. Europe offered an immense market for its products and wealth rapidly increased. This continued almost until the Great War when Argentina was neutral. In the direction of affairs the leading figure was Hipólito Irigoyen, who became president in 1916. He carried out a number of reforms to improve the condition of the workers and refused to admit any kind of interference in South America on the part of the United States. He was re-elected in 1922-28, but in 1930 a revolution put an end to his term of office. Augustín Justo became president in 1932.

Argentite One of the commonest ores of silver also called silver glance. It consists of silver sulphide and contains about 87 per cent of the metal. It is a soft, blackish-grey fusible mineral which is soluble in nitric acid and usually occurs in massive form or as small cubes resembling galena or lead sulphide. Its sectile character serves to distinguish it from galena or similar minerals. Argentite is found in Cornwall, Norway, Mexico, Chile, Peru and other localities.

Argives Word used by Homer for the Greeks. Strictly it only refers to the inhabitants of the Greek city, Argos (7 r).

Argol Crust of impure cream of tartar or acid tartrate of potassium. It is deposited in wine casks or vats during the fermentation of the grape juice. It is a fine crystalline powder, varying in colour from whitish to brown or red according to the kind of wine from which it is derived. From argol is prepared commercial cream of tartar, tartaric acid and Rochelle salts. It is exported from Portugal, Messina and Bologna.

Argon Colourless, inodorous gas characterized by its inertness or inability to combine with other elements. It is a constituent of the atmosphere to the extent of about 1 per cent, and was discovered by Lord Rayleigh in 1894. It was noticed that nitrogen obtained from the air was heavier than when prepared in other ways, and this discrepancy led to the discovery of argon. It is used instead of nitrogen for filling tungsten electric bulbs.

Argonaut Family of cephalopodic molluscs known also as cuttle fish. They are found in the warm seas of Asia and one species in the Mediterranean. The male is smaller than the female, which has a beautiful translucent shell in which the eggs are kept. See CUTTLE FISH.

Argonauts In Greek legend the men who sailed in the ship Argos to fetch the golden fleece. Their leader was Jason and the fleece was at Colchis on the Black Sea. They set out from Iolcus in Thessaly to which they eventually returned with the prize. See JASON.

Argonne Wooded region in France. It lies between Toul and Mézières and covers some 300 sq. m. in the departments of the Ardennes and Meuse.

There was a good deal of fighting in this region during the Great War owing to its nearness to Verdun. In the summer of 1918 the French began the task of clearing the Germans from the Argonne, and this was completed just before the armistice.

Argos City of Greece. In the S it is a railway junction on the line to Corinth. Pop. 10,000.

The ancient city was one of the oldest and most famous in Greece, the capital of a kingdom, and carried on wars with Sparta and other neighbouring states. Its importance is proved by the fact that the Greeks were called Argives.

Argosy Any ship laden with goods or spoil. It is probably derived from Argos, the ship in which Jason and his companions carried the golden fleece.

Argus In Greek legend a male being with 100 eyes. Of these only two slept at the same time. Hera made him guardian of the heifer Io, but Hermes, having soothed him to sleep with his lyre, managed to steal the animal for Zeus. Hera then put his eyes on the tail of a peacock. The dog of Ulisses was also named Argus. He fell dead from joy when his master returned from his wanderings. On account of its associations with vigilance the word argus is sometimes used for a news paper, e.g., *The Melbourne Argus*.

Argyll Duke of Scottish title borne by the family of Campbell. About 1400 Duncan Campbell of Lochoy was made a lord of parliament and in 1457 his grandson, Collin, was made Earl of Argyll. He and later earls were prominent in the life of their time. One being Archibald, the 2nd earl, who was killed at Flodden.

Archibald, 8th Earl of Argyll, made a marquess in 1641, was prominent during the civil war. He was a leader of the covenanters but after the execution of Charles I supported Charles II, whom he afterwards deserted. In May, 1661, he was executed for treason. His son, Archibald, the 9th earl, was executed for taking part in the rebellion of the Duke of Monmouth in 1685. The estates were recovered in 1689 by Archibald, the 10th earl who, in 1701, was made a duke.

John, the 2nd duke, was made Duke of Greenwich, a title which died with him. John, the 5th duke, married the beauty, Elizabeth Gunning. More famous, however, was George Douglas, the 8th duke, born April 30, 1823. A Liberal politician he was Lord Privy Seal, 1853-55, and again, 1859-66, Postmaster General, 1855-58, and Secretary for India, 1868-74. In 1880-81 he was again Lord Privy Seal. He died April 24, 1900.

John Douglas Sutherland Campbell, who became the 9th duke, married Louise, daughter of Queen Victoria. He was an M.P., 1868-78 and 1895-1900. From 1878-83 he was Governor-General of Canada, being then known as the Marquess of Lorne. He died Nov. 2, 1914, when a nephew, Niall Diarmid, became the 10th duke. The duke has large estates in Argyllshire where is his seat, Inveraray Castle. His eldest son is called the Marquess of Lorne, and he holds several high, but now honorary offices in Scotland.

Argyllshire County of Scotland. It is on the W coast and includes a large number of islands. The coastline is very much indented, being altogether nearly 2300 m. long, and the interior mountainous. Ben Cruachan and several other peaks exceed 3000 ft. in height. The county contains Loch Awe and much beautiful scenery. The islands include Mull,Islay, Jura, Coll, Tiree, Colonsay, Staffa and Iona. There are in the county many sea lochs among them Linnhe, Fyne and Long, and the great peninsula of Kintyre which is cut by the

Orinán Canal The Awe and the Orchy are the chief rivers. Inveraray is the county town, other places are Oban, Dunoon, Campbeltown and Lochgilphead. The industries include the rearing of sheep and cattle, but the soil is very unfertile and much of the land is occupied by deer forests. Slate and coal are mined to a small extent and there are salmon and other fisheries. The county has long been the home of the Campbells. It sends one member to Parliament. Its area is 3213 sq m. Pop (1931), 63,014.

The Argyll and Sutherland Highlanders, formerly the 91st and 93rd regiments of foot, are associated with the county. The former was raised in Argyllshire in 1794. The Episcopal Church of Scotland has a Bishop of Argyll and the Isles.

Ariadne In Greek legend the daughter of Minos, King of Crete. She showed Theseus how to escape from the labyrinth of the monster by the help of a thread. The two then went to Naxos. There Theseus deserted Ariadne, but she soon found a husband in Dionysius who placed her among the stars.

Arianism Belief that Jesus Christ is not the equal of God the Father. It is thus opposed to the orthodox Christian belief in the Trinity of three equal personages. Arianism was first preached by Arius, a priest who lived at Alexandria in the 4th century. It was denounced at the Council of Nicea in 325, and was explicitly condemned in the Athanasian creed. It took root, however, among the Goths and other converts to Christianity, but after a time disappeared. It reappeared later as Unitarianism.

Ariosto Lodovico, Italian poet. Born Sept. 8, 1474, at Reggio, the son of a rich man, he studied law at Bologna. In 1504 he entered the service of the Este family, wherein he remained for the rest of his life. He died June 6, 1533, and was buried at Ferrara.

Ariosto's great poem is *Orlando Furioso*, an opus of the age of romance and chivalry.

Aristides Greek statesman. He was born about 529 B.C. in Athens, and served in the army against the Persians. He became known as an opponent of Themistocles and, as a result, the people decided in 483, by vote, to expel or ostracise him. Nevertheless, he took part in the war against Persia when it was renewed fought at Salamis and commanded the Athenians at Plataea. He organised the Delian League, and in 477 was responsible for the change by which any citizen of Athens could become an archon. Aristides who was called the Just, died in 468 or 467.

Aristocracy Word meaning, in its Greek origin, government by the best men. It was one of the three forms of government described by Aristotle as good. To day the word is loosely used for a superior class, superior by birth, or position.

Aristophanes Greek dramatist. He was born about 445 B.C. probably at Athens. Little is known of his life except that he had three sons and died in 385. Aristophanes ranks as the world's greatest comic dramatist. He wrote 54 plays, but only 11 are extant. The best known are *The Knights*, *The Clouds*, *The Wasps*, *The Birds* and *The Frogs*. All have been translated into English.

Aristotle Greek philosopher. He was born in 384 B.C. at Stagira in Macedonia, and is sometimes called the Stagiritis. His father, Nicomachus, was physician to the King of Macedonia, and he himself studied that art. In 367 he went to Athens to complete his education, and there he remained for 20 years, much of his time being spent with Plato, whose greatest pupil he was. On Plato's death in 347 B.C., he left Athens and went to the court of a prince in Mysia where he married his patron's niece, Pythias.

About 343 Aristotle was invited to Macedonia by King Philip to supervise the education of his son Alexander. He remained there until Alexander became king, and in 335 returned to Athens. There, following the example of Plato, he founded a school called the Peripatetes (covered walk). In 323 B.C. he left the city for Chalcis in Euboea. There he died in 322.

Probably the greatest thinker who has ever lived, certainly possessing one of the world's supreme intellects and rightly called 'the master of those who know,' Aristotle has exercised a great influence on European thought.

Some of Aristotle's writings are contained in a volume called *Organon*, in which he discusses and expounds his ideas on logic, ethics, politics and philosophy. Aristotle does not accept the belief of Plato that ideas are everything. Instead he expounds a philosophy in which the real and the ideal are harmoniously blended. Of the other parts of the *Organon*, the *Politics* is the basis of nearly all modern political philosophy, the *Ethics* is a treatise on the Greek idea of virtue, the *Poetics* laid the foundation of modern aesthetics, and gave logic the form it has retained for 2000 years. There are many English translations of his works. Besides the *Organon* his extant works include *The History of Animals*, *On the Parts of Animals* and *On the Generation of Animals*. In 1891 another writing, *The Constitution of Athens* was published. *De Anima* (Concerning the Spirit), is a work of the highest value.

Arizona State of the United States. In the south west of the country, it covers 113,950 sq m and is almost square. Its natural features are the Colorado River, with its famous canyons and extensive deserts. Much of the land is a plateau over 5000 ft in height, and the highest point is nearly 13,000 ft. The soil is not fertile, although irrigation has improved its quality. Cattle and sheep are reared, but the chief products are minerals, chiefly copper and silver. Phoenix is the capital. Arizona is governed by a legislature of two houses and sends one representative and two senators to Congress. Pop (1930) 435,573.

Ark Large vessel. Two arks are mentioned in the Bible. One was the vessel built by Noah (Gen. vi. 14). It was 300 cubits (400 ft.) long, smeared with pitch and consisted of three storeys, with a flat bottom.

The other ark was the receptacle in which the Israelites in their wanderings kept their sacred treasures. It contained the two tables of the law and was placed in the Tabernacle. It was taken by the Philistines (1 Sam. iv. 7), but they returned it, and it was placed in Solomon's temple at Jerusalem.

Arkansas Southern state of the U.S.A. covering 53,335 sq m. It is hilly in the N and W, and the soil is fertile. The chief rivers are the Mississippi, Arkansas

and Red Little Rock is the capital. The main products are cotton, wheat, maize and fruit. Much timber is cut and coal and other minerals are mined. It is governed by a legislature of two houses and sends two senators and seven representatives to Congress. Arkansas became a state in 1836. Pop. (1930) 1,554,482.

Arklow Seaport of Wicklow, Irish Free State. It stands on the Avoca, 49 m. from Dublin, on the Gt. S. Rlys. It is a fishing port and has oyster beds, while from here copper and lead are shipped. There is a factory for the manufacture of explosives. Pop. 5042.

Arkwright Sir Richard English inventor. Born at Preston Dec. 23, 1732, he became a barber and opened a shop in Bolton. He also dealt in human hair and travelled about for the purpose of buying it. His attention was attracted by the primitive appliances used for spinning cotton, and with John Kay, he invented a spinning frame. He began to work this at Preston but popular feeling was against him and he moved to Nottingham where he opened a factory for spinning cotton. In 1771 he joined with Jedediah Strutt in opening a factory at Cromford where water power was used, and this became a prosperous business. He was involved in expensive law suits to protect his patents, while in 1779 his mill at Chorley was burned down, the cry being put about that the inventions reduced the demand for labour. Arkwright, however, continued his improvements and was one of the first to use steam power in the factory. In 1786 he was knighted. He died Aug. 3, 1792.

Arles Town of France. It stands on the Rhone, 53 m. from Marseilles. The industries include a little shipping, but its interest is chiefly historical. Its Roman remains are remarkably fine, especially those of the amphitheatre. Other remains are of the forum, palace, baths and aqueduct. Arles became the capital of a little Roman kingdom, its bishop was the primate of Gaul and several church councils were held there. Pop. 3000.

Arlington Earl of English politician. Henry Bennet was born at Arlington, Middlesex, in 1618, and was educated at Westminster School and Christ Church, Oxford. He fought for the king during the civil war and later served the exiled Charles II as agent in Madrid. In 1662 he was made Secretary of State and became a member of the group called the cabal. Carrying out the policy of Charles II to dispense with Parliament, he retained that office until 1675 when he was impeached, but the case against him failed. He then became Lord Chamberlain, but his political career was over. In 1663 Bennet was made a baron, and in 1672 an earl. He died at Euston, Suffolk, July 28, 1685.

Arless George English actor. Born in London, April 16, 1868, he first appeared on the stage in London in 1887. In 1901 he went to the United States, where he made his reputation, and remained for the next 30 years. His successes include parts in *The Darling of the Gods* and *The Green Goddess*. Later he turned to the films and won great fame in the name-parts of *Disraeli*, *The Iron Duke*, *Richelieu*, etc.

Arm Name given to the two upper limbs in man, and by analogy to a branch of anything, as an arm of the sea or an arm

of the law. The human arm is divided into the upper arm, in which the bone is the humerus which fits into the shoulder blade, and the lower arm, or forearm, in which the bones are the ulna and the radius. These two join with each other, with the humerus to form the elbow, and at the other end with the bones of the wrist. The deltoid is one of the muscles used to raise the arm.

Armada Spanish word for an armed force. It is specially used for the fleet that was sent by Phillip II of Spain to invade England in 1588. About 130 vessels left Cadiz on July 12, carrying, in addition to the sailors, about 20,000 soldiers.

To defend England a fleet under Lord Howard of Effingham put to sea from Plymouth on July 19. The Spanish plan was to reach the Netherlands via the English Channel and take on board an army there under the Duke of Parma. They were attacked by the English ships, most of them much smaller than the great Spanish ones which were damaged in the fight. The Spanish ship, reached Calais Roads on July 27, when they were further damaged by fireships. To escape these they put to sea, but were followed by the English, who sank, or captured a number in a fight off Gravelines. The Spaniards then decided to make for home by rounding Scotland and on the journey a gale made further havoc among the battered vessels. Many were wrecked and only 53 reached Spain.

Armadales Burgh of West Lothian. It is 21 m. from Edinburgh on the L.N.E. Ry. It is a centre for the mining of coal and ironstone and has chemical works. Pop. (1931) 4854.

Another Armadales is a village in Skye. A third Armadales is a village in Sutherlandshire, 24 m. from Thurso.

Armadillo Mammal found in South America. It belongs to the family dasypus, and is so named because its body is protected by bones and scales which form two shields not unlike armour. The head and limbs are also protected and the animal can curl itself up like a hedgehog. Its strong claws are used for burrowing in the ground and it feeds on snakes, snails, beetles and other insects, and sometimes on carrion. The giant armadillo measures as much as 3 ft., but the "fairy" only 6 in.

Armageddon Name used in the Book of Revelation (ch. xvi) for the last great battle between the forces of good and evil.

Armagh City and market town of Co. Armagh, Northern Ireland, also the county town. It is 89 m. from Dublin. It is chiefly known as an ecclesiastical centre, and from it the heads of the Anglican and Roman Catholic churches in Ireland take the title of archbishop. Armagh was the ecclesiastical metropolis of Ireland and a noted seat of learning early in the Middle Ages. The weaving of linen is the chief industry. Pop. 7350.

Armagh County of Northern Ireland. In the province of Ulster it covers 512 sq. m. In the south it is hilly, but the soil is fertile, and wheat, oats and potatoes are grown. The Bann, the Blackwater and the Newry are the chief rivers, and Lough Neagh is partly in the county. Armagh is the county town, other places are Lurgan, Portadown and Bessbrook. Pop. (1926) 110,070.

Armaments Term used for all the armed forces of a country, naval, military and air. Since the Great War

Army Corps Unit of a modern army It consists of two or three divisions of infantry with the necessary auxiliaries of artillery, engineers, etc., and usually numbers 30,000 or 40,000 men. It is commanded by a Lieutenant general. In the Great War Britain had over 20 army corps in the field. In France and Germany, before 1918, the country was divided into districts, each of which had its own army corps.

Army Council Body responsible for the control of the British Army. The president is the Secretary of State for War and there are five other members. These are the Financial Secretary to the War Office and four soldiers, the chief of the Imperial General Staff, the Adjutant General, the Quartermaster General and the Master General of the Ordnance. The offices are in Whitehall, London, S.W.

Army Medical Corps Royal Unit of the British Army. It is responsible for the health of the troops and for the care of the sick and wounded in time of war. It sprang from the Army Hospital Corps founded at the time of the Crimean War and dates from 1873. It was reorganised after the South African War of 1899-1902. Its motto is *In arduis fidelis*, and its badge is a wreath surmounted by a crown with the rod of Aesculapius, with a serpent entwined within it. It is under the director of medical services and has hospitals at Aldershot, Woolwich and elsewhere. The Territorial Army has a branch of the service and there are allied corps in Canada, Australia, New Zealand and South Africa. There is also an Indian Medical Service.

The Corps has a college in Grosvenor Road, London, S.W.1. Men who have obtained a degree enabling them to practise medicine are admitted to it after a competitive examination. After a course there they pass to the training establishment at Aldershot. During this time they are commissioned officers on probation, on passing the final examination their commissions are confirmed. The uniform of the corps is blue.

Army Ordnance Corps Royal Unit of the British Army. In its present form it was organised in 1881, but there was previously a board of ordnance, this having been established in 1450. It was responsible for supplying the forces with artillery and for the equipment of the engineers, but as time went on other duties were added. It is now responsible for supplying the troops, not only with munitions of war, but also with clothing and other necessities. The headquarters of the corps are at Woolwich and there are depots at Aldershot and other camps. It is under the Master General of the Ordnance and there is a school of instruction at Cosham. The badge is a shield bearing three cannon balls in a row above three cannon one above the other. The motto is *sua tela tentant*, the uniform is blue. The corps is organised in companies and the Territorial Army has a branch.

Army Pay Corps Royal Branch of the regular army responsible for paying the troops. Its headquarters are in Whitehall, London and it has branches wherever the units of the army are stationed. Officers of the regular army and clerks form the personnel. Its motto is *fide et fiducia*.

Army Service Corps Royal Depot of the British Army. It is responsible for supplying the army with food, clothing and stores, but not munitions, and also for transporting them from place to place. It took its present form in 1888 and during the Great War the number in its ranks exceeded 300,000. There are still a few horse transport companies, but most of the work is done by mechanical transport. The headquarters are at Deptford, and there are supply companies at Aldershot, Woolwich and other military stations. The uniform is blue and the facings white. The duties include the driving and care of motor vehicles and there is a driving school at Feltham and a school for artificers at Aldershot. There are allied corps in Canada, Australia, New Zealand and South Africa.

Army Veterinary Corps Royal Unit of the British Army. It dates from 1881 and looks after the horses of the army. The depot is at Woolwich and the school at Aldershot.

Arne Thomas Augustine English musician. Born in London March 12, 1710 and educated at Eton, he studied music and became a skilled violinist. His opera *Rosamund* was produced in 1733. *Tom Thumb* was a comic opera and he also wrote two oratorios *Abel* and *Judith*. Arne's high reputation rests rather upon the music he composed for Shakespeare's songs, for *Rule Britannia* and for Milton's *Comus*. He died in London, March 5, 1778.

Arnica Genus of plants found in Europe. They belong to the order *compositae*. *Arnica montana*, which grows in the Alps, contains an oil from which tincture of arnica is obtained.

Arno River of Italy. It rises in the Apennines and flows across the country, S. and then W. until it falls into the sea near Pisa. It is 130 m. long and on it stands the city of Florence.

Arnold Urban district and market town of Nottinghamshire. It is 4 m. from Nottingham. The industries are the making of hosiery and lace. Pop. (1931) 14,470.

Arnold Matthew English author. A son of Thomas Arnold (q.v.), he was born at Laleham, Dec. 24, 1822, and educated at Winchester, Rugby and Balliol College Oxford. He won the Newdigate prize for a poem and was chosen fellow of Oriel College. He was an inspector of schools from 1851 until 1883. From 1857 to 1867 he was professor of poetry at Oxford. He died at Liverpool, April 15, 1888.

Arnold is best known as a poet and a critic. Influenced by Wordsworth he wrote a good deal of poetry, much of it of high value. Some of his most notable pieces are *Thyrsis*, *The Scholar Gypsy*, *Sohrab and Rustum*, *Rugby Chapel* and *Requiescat*. He was also a master of the sonnet. As a critic he showed considerable powers and won renown by his denunciation of the uncultured life he called Philistinism. His critical books include *On Translating Homer*, *Essays in Criticism*, *Culture and Anarchy* and *Literature and Dogma*.

Arnold Thomas English headmaster. Born at Cowes June 13, 1795, he was educated at Westminster, Winchester and Corpus Christi College, Oxford, where he won prizes for classics. He was elected a

THE VICEROY'S HOUSE AND GARDEN, NEW DELHI

fellow of Oriel College and was ordained, but soon left Oxford. In 1828, having had only a little experience of teaching by taking pupils into his house at Laleham, he was chosen headmaster of Rugby School. He reformed the school and left his mark on the public school system of England. In 1841 he was made Professor of Modern History at Oxford. He died at Rugby, June 12, 1842. He wrote *A History of Rome* and other books.

Arosa Pleasure resort of Switzerland. It is 19 m from Coir, high amid the pine woods, which makes it suitable for consumptives.

Arquebus Early kind of firearm. It was invented in the 15th century when gunpowder made its use possible. It resembled a small cannon, and was carried by the troops, although a rest was used when it was fired. It discharged a small stone, or leaden ball, fired by matchcord or tinder and was used by the infantry in the 16th century.

Arrack Spirituous liquor. It is made in India and adjacent regions from fermented rice, or molasses, flowers of the mahwa tree and other substances. It contains just over 50 per cent of alcohol.

Arraignment In law the formal act of summoning a prisoner to the bar of the court to answer a charge. It is done by calling out his name, telling him the nature of the charge against him and asking if he is guilty or not guilty. The chief assistant of the clerk of assize is called the clerk of arraigns.

Arran Island of Scotland. It is in the Firth of Clyde and covers 165 sq m. There are harbours at Brodick and Lamlash, which are reached by steamer from Glasgow and elsewhere. In the south the land is cultivated, but elsewhere the surface is mountainous and un fertile. The highest point is Goat Fell, 2860 ft high. In the island there are some beautiful glens and it is a popular pleasure resort. Much of the land belongs to the Duchess of Montrose, the heiress of the Duke of Hamilton, her seat is Brodick Castle. The industries include sheep rearing, fishing and catering for holiday makers.

The title of Earl of Arran is borne by the Duke of Hamilton. In 1503 it was given to Thomas Hamilton, whose son, the 2nd earl, was Regent of Scotland for Mary, Queen of Scots, 1542-54. A later earl was made Duke of Hamilton. There is an Irish title of Earl of Arran held since 1762 by the family of Gore.

Arras City of France. It stands on the Scarpe, 28 m from Amiens and 120 from Paris. It was at one time the capital of Artois. Most of the buildings are new since the Great War e.g., the town hall, with its lofty belfry, a copy of the beautiful older one, the cathedral, the Abbey of S Vaast, the prefecture, the museum and the church of S Nicholas.

The industries include a trade in corn and other agricultural produce and some manufactures. In the 16th century the town was famous for the tapestry which was known as arras. Rebespierre was born here. Pop 29,000.

In Sept. 1914, Arras was entered by the Germans, who were soon forced to retire, but their lines remained quite close to the city. In April, 1917, the British made a great attack called the Battle of Arras, but it failed in its objective. The great German attack of March, 1918, was delivered in this area, but Arras remained untaken and in Sept. the advance

of the allies drove the enemy from the neighbourhood. In 1932 a British war memorial was erected here.

Arrest Restraining the liberty of a person in order that he shall attend a court of justice to answer a charge against him. By English law a person is usually arrested on a warrant. This must give the name of the person, as general or unnamed warrants are illegal. A warrant must be signed by a magistrate or a judge of the high court and the arrest is carried out by the police.

A police constable can arrest a person without a warrant if there is reason to suspect him or her of committing a felony or causing a breach of the peace. The arrested person must, without undue delay, be charged with an offence and brought before a magistrate.

Arrow Missile shot from a bow. It is one of the oldest of weapons and was much used for hunting and fighting in very early times. The arrow used by the English archers was made of a straight piece of hard wood, pointed at the end often with a piece of iron. Flint was used in early times for this purpose. At the other end were feathers which gave steadiness to the flight. Savage tribes sometimes put poison into their arrows. With the crossbow a heavier and more powerful arrow was used.

Arrowroot Starchy substance obtained from various plants. The true arrowroot is obtained from a perennial herb grown in the West Indies called *maranta arundinacea*. Other arrowroot is obtained from a species of zamia and from various species of curcuma. English arrowroot is obtained from potatoes and Portland arrowroot from the corms of the cuckoo pint.

Arsenal Building used either for the storage or manufacture of arms and ammunition. The word means "a house of trade". These were called at first armouries and then arsenals, one being the Tower of London. Later, places where guns and ammunition were manufactured, were called arsenals, as they are to-day.

The chief British arsenal is at Woolwich, but there are others at Portsmouth, Plymouth and elsewhere. The arsenal at Venice is now a museum.

Arsenal English football club playing the association game. It was founded by employees of Woolwich Arsenal in 1886 and for some years had a ground there. Before the Great War it was moved to Highbury in N London. In 1927 it reached the final of the Association Cup which it won in 1930. In 1932 the Arsenal was defeated by Newcastle United in the final. In 1934 and 1935 Arsenal was at the top of the League.

Arsenic Strictly speaking a chemical element. Its atomic weight is 75 and the specific gravity of the vapour is 150. The word is also used for arsenious oxide, or white arsenic, (As₂O₃).

Arsenic proper has some of the qualities of a metal, but it does not form a base with oxygen. It is found free in Siberia, Germany and the United States, but more abundantly with ores of cobalt, nickel, tin, iron, etc., and other metals and minerals. It darkens on exposure to the air and when roasted gives up an odour like garlic. It is prepared by heating in earthenware tubes and is much used in the preparation of alloys.

White Arsenic is produced by roasting the

ore in a furnace. The vapours pass through long flues and then condense. The result is a white powder which is the arsenic in ordinary use. It is used in the preparation of aniline dyes, in the manufacture of pigments, as a weed-killer in the garden and for a sheep dip. Arsenical soap is used by taxidermists. Arsenic is also used in medicine, but only in small quantities and under medical direction. It acts as a tonic in nerve and other disorders. The best known preparation is Fowler's solution. It is sometimes used externally as a caustic.

Arsenic is a poison and its sale is strictly supervised. Particulars of every sale made must be entered in a book by the chemist. The compounds are also very poisonous and for its detection there are certain recognised chemical tests.

Persons who work in the preparation of arsenic are liable to poisoning. Powerful emetics and the stomach pump are the necessary remedies. Cases of persons being wilfully poisoned by doses of arsenic have been fairly frequent, owing to its being a common ingredient of weed killers and insecticides. It is readily detected in the body after death.

Arson In English law setting fire to a building or church, or other public edifice, with malicious intent, not accidentally. It is a felony and the maximum punishment is penal servitude for life. In Scotland arson is called "fire raising."

Art Expression of the emotions and creative imagination in terms of line, form and colour, or in sound, gesture and rhythmic movement. Such a definition includes music, literature and drama, but art in a more restricted sense implies architecture, sculpture, drawing and painting.

Artistic expression in its primitive stages is seen in the famous cave paintings of Altamira. In Hellenic art sculpture at least reached its highest stage of perfection of technique, and decorative painting was at a high level. Still later, the part played by religion in moulding artistic style is seen in Byzantine art, followed by a revival of classical ideals and naturalism in the Italian Renaissance School, while portraiture and genre painting reached its height in the Dutch school.

The numerous art schools in London and elsewhere afford instruction in art subjects, and the Royal Academy and kindred societies hold exhibitions, while the National Gallery and other art collections afford opportunities for the study of representative works. In 1931 by the generosity of Mr S. Courtauld, an Institute of Art was opened in connection with the University of London.

COMMERCIAL ART AS A CAREER To be a successful artist an unusual creative ability, is necessary, together with adaptability, great patience and an extensive experience.

Training at an art school costs anything from five guineas per session in the provincial schools up to thirty guineas at the very best London Art Schools, and thirty guineas at the Royal College of Art. Most schools have a special course in commercial or illustrative art, but it should be stressed that most of the knowledge that is of practical value when it comes to earning a living is gained only by experience.

Magazine illustrations, book jackets, posters, advertising illustrations and industrial designs are in greater demand than they have ever been. All branches of the work offer abundant scope for everyone of creative ability, whilst

those of special appeal, such as the illustration of children's books, are practically in the hands of women.

At the same time the standard of work has gone up and the competition between artists is keener than ever before. The best way to sell work is to take specimens round to likely buyers yourself. Advertising agents, consultants, and printers are pleased to see good work, and if a really good idea should present itself, try the advertisers personally.

There are opportunities for clever artists in the large commercial studios, but here the individuality of the artist is apt to be sunk in that of the studio, although this is where valuable experience may be gained. Advertising agents also employ artists with the right spirit, and a successful man may reach £800 or over a year.

Except to a few at the top, commercial art is not a profession that is well paid. What the artist earns he earns by hard work and painful effort, and severe application is needed to make the career a success.

For Art Teaching as a career, see under **TEACHING**.

Artemis Goddess of Greek legend. The daughter of Zeus and Leto, she was the twin of Apollo. She was a goddess of nature, but afterwards became the goddess of hunting, being represented with bow and arrows.

Artemisia Queen of Halicarnassus. She was the wife of Mausolus and after his death in 350 B.C. built a magnificent tomb called the mausoleum. An earlier queen of Halicarnassus, also Artemisia, fought on the side of the Persians at the battle of Salamis.

Arterio-Sclerosis Disease characterised by the thickening and hardening of the coats of the arteries. It may arise from excessive indulgence in alcohol, or from gout, while syphilis is also a cause. To some extent it comes on with advancing years. It may lead to death from heart disease, or apoplexy.

Artery (Gr. *airein*, to raise) Channel in the body which conveys blood from the heart to another part. The walls of the artery consist of three coats, an external, a middle and an internal. The main artery is the aorta which rises from the left ventricle of the heart and by means of its branches conveys the blood to all parts of the body. The pulmonary artery rises from the right ventricle of the heart and with its branches supplies impure blood to the lungs for purification. The arteries are subject to hardening, or arterio-sclerosis and also to aneurism.

Artesian Well See **WELL**.

Artevelde Jacob Van Flemish politician. Born at Ghent about 1290, he was a brewer. He led the Flemings in a revolt against their count in 1337 and was soon practically ruler of Flanders. He kept his power for about eight years, but in July 24, 1345, he was killed during a tumult.

Artevelde's son Philip van Artevelde, born about 1340, led the men of Ghent in a revolt against the count. Like his father he made himself ruler of the country, but in a short time he was defeated and killed in battle with the King of France, Charles VI. This took place at Roosebeke, Nov. 27, 1382.

Arthritis Inflammation of the joints. The variety known as rheumatoid arthritis, may be either acute or chronic. In

the acute form the symptoms resemble those of rheumatic fever. The chronic form, which is much commoner, begins with pain and swelling in one of the joints. This is followed by deformities of the joints, which become stiff and sometimes quite useless, and the muscles waste.

Established rheumatoid arthritis is regarded as incurable, but its progress can be arrested by careful dieting, suitable medicines and the use of mustard and other counter irritants. Massage is also useful in keeping the joints supple and the waters of some of the English and other spas are efficacious.

Arthropoda In Zoology a class of invertebrates. The word means jointed feet and the group includes insects, spiders and crustaceans, such as shrimps and crabs, as well as millipedes and centipedes. The body is formed of rings and like the limbs is covered with a horny skin. The appendages, such as the jaws and feet, are in pairs. See INSECT, SHRIMP, ETC.

Arthur King of the Britons. Very little is known about his life. In fact, he may be entirely a legendary figure. According to one account he lived in the 6th century and was killed in battle.

The Arthur of legend was a son of a king, Uther Pendragon. He became a great warrior, conquered the heathen tribes around him and founded an order of Knights of the Round Table. His capital was Camelot. He married Guinevere, but she proved false to him. The order was then broken up and the king mortally wounded in battle. He was carried to the Isle of Avalon where he died. It was long believed, however, that he would return. His story is told by Geoffrey of Monmouth and other early chroniclers, but the chief source of the legends are in the writings of Sir Thomas Malory.

Arthur Chester Alan. American president. He was born Oct. 5, 1830, became a lawyer and held an administrative position during the Civil War. From 1871 to 1878 he was collector of customs at New York. As a republican he was elected vice-president in 1881 and very soon, the president, J. A. Garfield, having been murdered, he succeeded to the presidency. His term ended in 1885 and he died in New York, Nov. 18, 1886.

Arthur's Seat Hill near Edinburgh. It is about 820 ft high and overlooks the city, the view from the summit being one of remarkable beauty.

Artichoke Edible vegetable. There are two distinct kinds, the globe artichoke and the Jerusalem artichoke. The Chinese artichoke is a variety of the Jerusalem. Both grow in English gardens, but the Jerusalem is perhaps the more popular. The edible part of the globe artichoke is the leaves, of the Jerusalem, the tubers.

Article Statement, or proposition, usually one of a series. In religious matters examples are the 39 articles embodying the creed of the Church of England and the statute of six articles passed in 1539. In secular matters there are the articles of association which by English law every limited liability company must have. These must be prepared before the company is registered and lay down the condition under which the company will work. All interested in the company are entitled to a copy of the articles. The law provides a model set of articles which a company can adopt.

Other articles state the conditions under

which a person serves a solicitor in order to learn his business. Like other articles these must be stamped.

Articles of war are the code of discipline for the British Army. The first set dates from the 15th century, the present one from 1881.

Artificial Respiration A method of resuscitation of a person whose respiratory function is suspended, as in cases of drowning, narcotic poisoning, the effects of noxious fumes, collapse, or the asphyxia of new-born children. In Sylvester's method the patient is placed on his back on the floor and his arms raised above his head pulled forward and downward to expand and contract the chest alternately, but Schäfer's method is more generally adopted now as being more effective. The patient is laid face downwards with arms extended and the face turned to one side. The operator kneels across the body, with the hands flat over the lowest ribs. He then throws the weight of his body slowly and gradually on to his hands, then raises his body slowly, removing the pressure, but without removing his hands. This movement is repeated twelve times a minute without pause. In severe cases two hours' work may be necessary.

Artificial Silk Fibre resembling natural silk but produced by machinery. Its correct name is rayon. The idea of making a fibre of this kind was put forward in the 18th century, but it was not until 1886 that it was successfully produced.

Rayon is made by treating cellulose in solution so as to draw it out into fine threads. This was first done at Besançon by Hilaire de Chardonnet in 1886 who discovered and used the nitro-cellulose process. In this cotton, the raw material, is made into gun cotton, or nitro cellulose, which is dissolved in equal parts of ether and alcohol. The solution called collodion is forced through capillary tubes into water. The product is dried and denitrated by treatment with an alkaline hydro-sulphide.

Another kind of artificial silk is called viscose. In this the cellulose is obtained from wood pulp and is treated with caustic soda to make an alkali cellulose. This is then united with carbon bisulphide to form viscose. The viscose is then filtrated and coagulated by heat, the threads being drawn out by a machine.

Cellulose is the stiffest of all these silks and is least affected by water. It is therefore used for fishing lines and as an insulator in electricity, as well as, like the other substances, for articles of clothing and household use. The world's output of artificial silk is estimated at about 215,000 tons. There is a duty (1932-33) of 33½ per cent on all imports of artificial silk into Great Britain.

Artificer Name given to a rank in the British Navy. They are engineers who enter the service after the age of 21 and serve in the engine room. They become chief petty officers and can rise to warrant and even commissioned rank. There are also artificers in the army and the air force.

Artillery Name used for the guns employed in land warfare. In England it dates from the 14th century and the Honourable Artillery Co. was founded in the 16th, a sign that attention was paid to artillery, though it was very different from the artillery of to day. It was used in the wars of the 17th and 18th centuries, but it was only of secondary importance until the 19th, when the invention of stronger and larger guns,

ARTOIS

more devastating missiles and more powerful propellants added vastly to its importance. The artillery of the British Army is organised in a single regiment, the Royal Regiment of Artillery with headquarters at Woolwich. It dates from 1716. Its motto is *Ubique* (everywhere) and *Quo fas et gloria ducunt* (where right and glory lead). It was divided at one time into horse, field and garrison artillery, but the two latter have been amalgamated. It now consists of a few brigades of horse artillery and a much larger number of mechanical ones divided into field brigades, light brigades, medium brigades and heavy brigades. A 20th century development is the formation of anti-aircraft brigades and there are Indian mountain brigades. The brigades are divided into batteries.

The school of artillery is at Larkhall on Salisbury Plain and there is a school for coast artillery at Shoeburyness. The head of the regiment is called the master gunner. In the Great War this regiment was over 600,000 strong and its casualties over 135,000 of whom 35,000 were killed.

Artois District of France. It is the region around Arras and before the Revolution was one of the provinces. At one time it was ruled by the counts of Flanders and later was part of Burgundy. During the Great War there was a good deal of fighting in Artois especially in May and June, 1915, when the French directed a great attack in this area.

Arts Term used in the universities and elsewhere for these branches of study which are not scientific. The medieval universities taking the idea from the Greeks called philosophy, logic and other subjects of study arts, and their degrees were called masters and bachelors of arts.

Arts, which includes the classical and other languages is still the chief branch of learning at most universities, but many other subjects have been added and degrees are given in medicine, commerce, etc. The studies are divided into faculties, the oldest of which is the faculty of arts.

Arundel Borough of Sussex. It stands above the Arun 55 m from London and 10 from Chichester on the S R. Apart from the castle the chief buildings are the Roman Catholic Cathedral and the old parish church of St Nicholas. The town has an agricultural trade. Pop (1931) 2489.

Arundel Castle, the seat of the Duke of Norfolk, occupies the site of one built in the 10th century. This was destroyed during the civil war, but was restored in the 18th century. It is a magnificent building in the baronial style, one of the finest in the land. The keep dates from the 10th century. Around is a park over 1100 acres in extent.

Arundel English title the oldest of its kind in the peerage. There were earls of Arundel in the 12th century and with the castle the title passed in the 13th century to the family of Fitzalan. The Fitzalans died out in 1550 and their lands were inherited by a grandson of the last earl Philip Howard (1557-95). In 1627 the title was formally given to the Howards and since 1660 has been held by the dukes of Norfolk.

Aryan Name given to the race from which the inhabitants of India and Europe have sprung, also to their language group. The Aryans are believed to have lived originally on the borders of Europe and Asia, but scholars

differ on this point and some think the cradle of the race was around the upper waters of the Amur, or Oxus. From there, perhaps 20,000 years ago, they migrated into Europe. The Aryan group of languages is divided into an eastern branch and a western branch. The former includes the Slavic, Indian, Armenian and others. The latter includes the Teutonic and Celtic.

Asa King of Judah. A son of King Ahijah, he is known for the vigorous measures he took against idolatry and for his wars. (1 Kings xv, 2 Chron xiv xvi)

Asbestos Mineral belonging to the hornblende group. It has a silky fibrous character more or less incombustible with low electrical and thermal conductivity. The term however is more widely applied to other minerals of different composition but possessing similar characters. Most of the commercial asbestos is a form of chrysotile a variety of serpentine, but some blue asbestos is a hornblende mineral, or clidolite.

Canada supplies most of the asbestos of commerce with Rhodesia and South Africa following in order of importance. The longer flexible fibres are woven into fire proof fabrics, ropes and millboard while the shorter fibres and waste form insulating material and cements. Asbestos is also used in making paint and putty and is an ingredient in this balls placed in gas fires. It is also used in textile factories as it resists corrosive gas.

Ascalon City of the Philistines. It stood on the Mediterranean Sea, 12 m from Gaza and 14 from Jerusalem, and was one of the five chief cities of the Philistines. Hero Herod the Great was born and in his time and later it was a flourishing city. There was fighting near here during the Crusades and in 1187 the city was captured by Saladin. Nearly a century later it was destroyed. The modern village on the site was entered by British troops Nov 9 1917.

Ascanius Son of Aeneas. His father took him after the fall of Troy to Italy. There he is said to have ruled over the Latins. He founded the city of Alba Longa and was named Julius.

Ascension Final disappearance of Jesus Christ from the earth. It took place 40 days after the Resurrection in the presence of the apostles who were assembled on Mt Olivet. It is described in the gospels of Mark and Luke and in the Acts of the Apostles.

Ascension Island in the Atlantic Ocean and is used as a coaling station. About 700 miles to the north west of St Helena. It covers 34 sq m. The interior is mountainous. Georgetown which has a harbour is the chief place. The island was discovered by the Portuguese on Ascension Day, 1501 and became British in 1815.

Asceticism Practice of enduring hardship and refraining from pleasure. It is usually done for religious motives by those who believe that the material body is evil and wish to cultivate the spiritual side of human nature.

Asceticism has been practised in many religions and still persists among the Brahmins and other Hindus. It appeared early among the Christians and many of them carried it to extremes lengths. They underwent at their own requests tortures and floggings, while

one of its usual manifestations was abstinence from food. It was a recognised part of the discipline of monastic life.

With the growth of rationalism asceticism tended to decline and in the western world it has, in its extreme forms at least, disappeared. Vestiges still persist, however, in the observance of fast days in the Roman and other churches.

Ascham Roger English scholar. Born in Yorkshire in 1515, he was educated at Cambridge. He became reader in Greek at St John's College and in 1548 was appointed tutor to the Princess Elizabeth. He lived for a time at Ingham, where he was secretary to a diplomat, and then, returning to England, became secretary to Queen Mary and, later Elizabeth. He died Dec. 30, 1568.

Ascham's fame rests on his writings, especially *The Scholemaster*, which give his ideas on education, *Toxophilus*, a book on archery, of which he was very fond, and *A Report of the Affairs and State of Germany*.

Asche Oscar English actor. Born at Geelong, Australia, Aug. 26, 1872, he was educated at Melbourne. Having studied acting at Oslo, he appeared on the stage in 1893 and played under F. R. Benson and H. B. Tree. He also toured in the United States, Australia and South Africa. In 1904 he became manager of the Adelphi theatre, London, and in 1907 of His Majesty's and then of the Globe. He is best known as the producer of *Chu Chin Chow*, in which he played the title rôle. He married the actress Lily Brayton.

Ascot Village of Berkshire. It is 29 m. from London and six from Windsor, on the Southern Rly. It is famous for the race meeting, which is held here each June and is a great social function. This originated in 1711. The chief event of the meeting is the race for the gold cup.

Asgard In Scandinavian mythology the home of the gods, or Aesir. It was approached by the bridge called Bifröst. In it the gods had a great hall with twelve seats and houses for themselves and the goddesses. It contained also Valhalla, or the home of the heroes.

Ash British tree (*fraxinus excelsior*). It reaches a considerable size in meadows or open positions in woodlands. It is a graceful tree with widespread branches, thickly leaved. It bears masses of minute flowers in early spring before the leaves appear. The flowers are succeeded by clusters of scales each containing a seed. The wood is tough and elastic and is used for making oars, tool handles and other articles. Varieties of ash include the weeping ash and the mountain ash or rowan, which bears clusters of scarlet berries.

Ashanti District of West Africa. It is long to Great Britain. It covers 24,379 sq. m., and is part of the Gold Coast Colony. The capital is Kumasi and the chief river the Volta. Togoland lies to the east and French possessions to the west. The country possesses dense forests in which there is valuable timber. Gold is mined and rubber and cocoa are grown, tobacco and bananas are other products. Pop. (1931), 578,702.

The inhabitants, the Ashanti, are negroes who lived under a native ruler until 1896, when the land became a British protectorate, it was annexed in 1901.

There have been several wars between the Ashanti and the British, the first in 1821-31, the second in 1874, when Kumasi was entered

and burned. The Ashanti then agreed to withdraw from the land they had invaded. In 1896 a British force marched to Kumasi and made King Prempeh a prisoner.

Ashbourne Market town and urban district of Derbyshire. It is 13 m. from Derby, near the River Dove, on the L.M.S. Rly. Ashbourne Hall has historic associations. Around is some of the loveliest of the Derbyshire scenery. Pop. (1931) 4507.

Ashburton Lord English title borne by the family of Baring. Alexander Baring was born in 1774, being a son of Sir Francis Baring. From 1816 to 1835 he sat in the House of Commons as a Tory. In 1834 he was President of the Board of Trade, and in 1842 he went to Washington where he arranged the treaty called after him. This settled the boundary between Canada and the United States, and dealt with other matters between the two countries. About 12,000 sq. m. were ceded to the States. Ashburton died May 13, 1848.

The Ashburton Shield is a prize for shooting, founded in 1861 by the 3rd Lord Ashburton. It is shot for each year at Bisley by teams from the public schools.

Ashburton Market town and urban district of Devonshire. It is 24 m. from Plymouth, on the Gt. Western Rly. Until 1885 Ashburton was a stannary town. Pop. (1931) 2505.

A town of New Zealand is called Ashburton. It is in South Island on the Ashburton River, and is a railway junction, 53 m. from Christchurch. Pop. 2850.

Ashby-de-la-Zouch Market town and urban district of Leicestershire. It stands on the Mease, 21 m. from Leicester and 118 from London, on the L.M.S. Rly. The chief object of interest is the ruined castle. This is associated with Ivanhoe and was later the seat of the Hastings family. The town has some mineral springs and baths, used by those suffering from rheumatism. Hosiery is manufactured, and around are coal mines. Pop. (1931) 5093.

Ashdod City of the Philistines. The modern Esdud, it lay between Gaza and Joppa, being 22 m. from the latter town, on the road leading to Palestine and Egypt. Here, in the temple of Gagon the Philistines placed the ark when they took it from the Israelites. Ashdod was destroyed by the Maccabees, but was rebuilt and became, as Azotus, a centre of Greek and then Roman culture. It is mentioned in the New Testament.

Ashdown Forest district in Sussex. It is a part of the old Andreds-wald and stretches for almost 5 m. from Cholwood Gate to Crowborough. Its area is about 14,000 acres.

Ashdown Park, in Berkshire, is the seat of the Earl of Craven. It is 3 m. from Lambourne and is believed to be the Assandune where, in 871, King Ethelred and his brother Alfred defeated the Danes. Near is the cave of Wayland the Smith.

Ashes The term which originated in 1882, when a burlesque obituary notice in the *Sporting Times* announced that the Ashes of English cricket were being taken to Australia. This referred to Australia's first victory over England, 1882, marking the first serious challenge to England's cricket supremacy. The Ashes came to Britain in 1933.

Ashfield Baron English business man Born in Derby in 1875, Albert Henry Stanley was a son of Henry Stanley who emigrated to the United States. There young Stanley was educated and gained his experience of railway management. In 1910 he became managing director of the Underground Railway of London, and during the next 23 years he was the head of the great combine of tram and road services that was formed round it. In 1914 he was knighted, and in 1916 he joined the Ministry as President of the Board of Trade. He retained office until 1919 when he was made a peer as Baron Ashfield. From 1918 to 19 Stanley was M.P. for Ashton-under-Lyne.

Ashford Market town and urban district of Kent. It is 14 m. from Canterbury, on the Stour, and is an important junction on the S. Rly. The staple industries are railway shops, a cider factory and an agricultural trade. Pop. (1931) 15,239. Another Ashford is a village in Middlesex. It is 2 m. from Staines on the S. Rly.

Ashington Urban district of Northumberland. It is 4 m. from Morpeth, on the N.E. Rly. It is a coal mining centre. Pop. (1931) 29,418.

Ashmole Elias English antiquary. Born May 23, 1617, at Lionfield, he studied law. He served the king during the civil war, during which he also found time to study at Brasenose College, Oxford. In 1660 he was appointed a herald to Charles II. He died May 18, 1692.

Ashmole wrote *A History of the Order of the Garter* and was interested in astrology. He is best remembered, however, because he presented in 1682 to the University of Oxford a collection of antiquities, out of which the Ashmolean Museum has developed. Many additions were made to the original gift, and these were long housed in a building between High Street and Broad Street. In 1893 a new building was erected in Beaumont Street and in 1931 plans to enlarge this were put forward.

Ashridge Estate in Hertfordshire. It is near Berkhamstead. The grounds covered about 2200 acres and the present mansion was built early in the 19th century. When in 1921 the estate was sold, some of it was bought for an outdoor zoological garden while the house and gardens were acquired by Mr. U. H. Broughton and presented to the Unionist Party to serve as a training centre. This is called the Bonar Law College and there persons are trained as workers in the Unionist cause. See WHITEHEAD.

Ashtaroth City of Palestine. The exact location is doubtful. In the Old Testament (Deut. 1, Joshua ix 12-13) it is mentioned as being the capital of Og, King of Bashan. Ashtaroth is also a name given to the goddess Astarte.

Ashtead Village of Surrey. It is 16 m. from London on the S. Rly. The industries include the making of pottery. The village has a large common on which a Roman villa was unearthed in 1925.

Ashton-in-Makerfield Urban district and market town of Lancashire. 4 m. from Wigan on the N.E. Rly. There are cotton mills and manufactures of hardware and pottery. Pop. (1931) 20,541.

Ashton-under-Lyne Borough and market town of Lancashire, on the Tame, which here separates Lancashire from Cheshire. Its suburb of Dukinfield is in the latter county. It is 6 m. from Manchester, on the L.M.S. Rly. The industries include the making of cotton goods, silk fabrics and hats. There are collieries near by. Pop. (1931) 51,573.

Ash Wednesday First day of Lent. It has been observed in the Christian church since the 9th century, and owes its name to the use of ashes in the services of the day. They are still used in the Roman Catholic church. In the Church of England the communion service is read at the services on this day.

Ashwell Lena English actress. She was born in 1872, the daughter of Commander Pocock, R.N. She studied music, but in 1891 made her first appearance on the stage. She soon made a reputation, her successes including parts in *Mrs. Dane's Defence*, and *The Darling of the Gods*, but she is perhaps better known as a manager. In 1907 she opened the Kingsway Theatre, London, which she controlled for over 20 years, and after the Great War she organised the Lena Ashwell Players who gave performances regularly in the London suburbs. During the War, she acted as Hon. Organiser of Concerts at the Front. She is the wife of Sir Henry Simson, the obstetric surgeon. In 1929 she published her memoirs under the title of *The Stage*.

Ashwell Village of Hertfordshire, 4 m. from Baldock, on the L.N.E. Rly. Another Ashwell is a village in Rutlandshire known as a hunting centre.

Asia Largest, most populous and richest in natural resources of the world's continents. It covers 17,300,000 sq. m. Its greatest length from E to W is 6700 m. and from N to S 5300. It is bounded by the Arctic Ocean on the N., the Pacific on the E., and the Indian Ocean on the S. On the west the Ural and the Caucasus divide it from Europe. Other boundaries here are the Caspian, Red, and Mediterranean Seas. A narrow strip of land, the Isthmus of Suez, connects it with Africa. In the N.E., the narrow Bering Strait separates it from America.

Asia is best described country by country, as in this work, but certain general features may be noted. It contains every variety of climate from the cold of the Arctic to the burning heat of the Malay Peninsula or the Arabian deserts. In it are the loftiest mountains in the world, the Himalayan peaks, as well as the Altai, Karakoram and other great ranges. With immense tracts of fertile soil, it possesses vast deserts. The Gobi, or Shamo, is equal in size to the Sahara, and there are many deserts in Arabia and Persia.

The rivers are worthy of the Continent. In India are the Ganges, the Indus and the Brahmaputra; in China the Yangtze, Kiang and the Hwang ho; in Indo-China the Mekong and the Salween, and in Burma the Irrawaddy. The Obi, Yenisei and Lena are in Siberia, and in Iraq are the Tigris and the Euphrates. Others are the Amur, once famous as the Oxus and the Amu Darya. There are no great lakes.

Asia is enormously rich in mineral wealth and produces foodstuffs such as rice and maize on a vast scale. Tea, rubber and other tropical products are grown. Trees and plants of every

known kind abound. Lions, tigers, wolves, elephants and other wild animals still roam the forests

The population of Asia is estimated at 850,000,000, chiefly Buddhists and Mohammedans. The three chief races are the Mongolians in the E., the Caucasians in the W., and the Malays. The most populous areas are India and China, which together contain more than half the population of the Continent.

Several European countries have territory in Asia. Great Britain governs India, in which Burma is included, Ceylon and the Malay States, and has interests in Palestine, Arabia and Iraq. France has possessions in Indo-China and interests in Syria. Soviet Russia rules the great area known as Siberia, as well as some adjacent areas covering altogether 6,000,000 sq. m., or over a third of the Continent. Unlike the British possessions, these lands are very thinly peopled. The independent countries include China, Japan, Persia, Afghanistan, and Siam. With these may be classed Tibet, Hejaz and Iraq, countries that sprang into existence as a result of the Great War, and Manchuria was declared independent in 1932.

Scholars consider Asia as the cradle of the human race. The earliest civilisations had their homes in the region around the Caspian Sea, and remains of others have been found in the central deserts. Mesopotamia contained at an early date rich and powerful empires where culture reached a very high level, and the civilisations of India and China are among the oldest in the world. To Asia, also, the world owes its great religions.

Asiago Town of Italy. It is a small place amid the mountains, 25 m from Vicenza. In Nov 1917, after their success at Caporetto, the Austrians gained some successes here, the battle lasting till the end of December. In 1918 the position was strengthened by the arrival of British and French troops and when in June the Austrians made a further attack they were beaten back. The third battle of Asiago took place in October. The British took Asiago itself which had been lost in 1917 and with the other Allies drove back the Austrians.

Asia Minor Name given to a peninsula forming the W end of the Continent of Asia. It has the Mediterranean on the W. and S. and the Black Sea to the N. On the E. it is linked to the mainland area. Most of it forms the Republic of Turkey. It is sometimes known as Anatolia. See TURKEY.

Asir District of Arabia. It consists of a strip of land along the coast of the Red Sea, 180 m in breadth. Although nominally subject to Turkey, it was for a long time practically independent. In 1926 it was conquered by the Wahhabi, Ibn Saud, and in 1930 became part of the kingdom of the Hejaz. The soil is fertile. The capital is Sabia.

Askari African soldier. Derived from an Arabic word meaning "army," it is used for native soldiers who are trained and led by European officers.

Askern Village of West Riding of Yorkshire, 6 m from Doncaster, on the L.N.E. Ry. It is a populous mining centre, and there are works for carbonising the coal. At one time the place was visited for its medicinal springs.

Askwith Baron English publicist. Born Feb 17, 1861, George Ranken Askwith was educated at Marlborough and Brasenose College, Oxford. He became a barrister and practised successfully until 1907

when he was appointed an assistant secretary to the Board of Trade. He was soon in charge of the department that dealt with labour disputes, and from 1911 until his retirement in 1919 he was Chief Industrial Commissioner. In 1911 he was knighted, and in 1919 made a peer Lord Askwith has written much on the subject of trade disputes, of which he has an unrivalled experience.

Asoka Emperor of India from 264 to 232 B.C. He was the grandson of Chandragupta, who had torn the Indian possessions of Alexander the Great from Seleucus. A renowned Buddhist, he ruled over territory corresponding in size to British India, without Burma, and was greatly revered. He left behind many valuable inscriptions.

Asp Poisonous snake of the viper family. The word is also used for any poisonous snake, such as the horned snake that killed Cleopatra. The asp proper, about 12 in long, is found in the countries around the Mediterranean.

Asparagus Genus of plants of the *liliaceae*. There are many species, one being widely cultivated as a table vegetable. The common asparagus grows wild in many parts of Europe on the seashore, or on river banks, and is occasionally seen in Britain. It contains a substance called asparagine, used by doctors as a diuretic and for its action on the urinary organs.

Much asparagus is grown in France, where a good deal is forced in hothouses for the English and other markets. Since 1931 this early crop must pay an import duty of 50 per cent on entering Great Britain. Other varieties of asparagus are eaten in some countries, but the bitter asparagus, which resembles the common variety, is unfit for food.

Asparagus is usually served with sauce as a separate dish. It can be boiled for soup.

A beautiful ornamental fern called the asparagus fern is grown indoors and used for table decoration.

Aspasia Greek lady. She was born at Megara, or Miletus, the daughter of Axiochus. She settled in Athens where her intellectual gifts made her known. Pericles, having divorced his wife, married her in 445. After his death she became the mistress of Lysicles. There is a bust of Aspasia in the Vatican at Rome.

Another Aspasia was the wife of Cyrus the younger, and later the mistress of Artaxerxes.

Aspatria Market town and urban district of Cumberland, on the River Ellen, 7 m from Maryport, on the L.N.E. Ry. Around it are coal mines. Pop (1931) 3239.

Aspen Species of poplar (*populus tremula*). Owing to the long leaf-stalks the leaves flutter with the faintest breath of wind. In olden days the wood was used for making arrows. See POPLAR.

Asphalt Brown or black natural form of bitumen. It consists of a mixture of various hydrocarbons and occurs either in a pure state, or impregnating limestones as in the case of the Val de Travers rock in Switzerland. Asphalt is solid or viscous, with a conchoidal fracture and pitch-like odour. It is obtained chiefly from the famous Pitch Lake of Trinidad, also from similar deposits in Venezuela and Cuba. The Val de Travers rock is used for paving purposes.

Ashfield Baron English business man Born in Derby in 1875, Albert Henry Stanley was a son of Henry Stanley who emigrated to the United States. There young Stanley was educated and gained his experience of railway management. In 1910 he became managing director of the Underground Railway of London and during the next 23 years he was the head of the great combine of tram and road services that was formed round it. In 1914 he was knighted, and in 1916 he joined the Ministry as President of the Board of Trade. He retained office until 1919 when he was made a peer as Baron Ashfield. From 1916-19 Stanley was M.P. for Ashton-under-Lyne.

Ashford Market town and urban district of Kent. It is 14 m from Canterbury, on the Stour, and is an important junction on the S. Rly. The staple industries are railway shops, a cloth factory and an agricultural trade. Pop (1931) 15,239.

Another Ashford is a village in Middlesex. It is 2 m from Staines on the S. Rly.

Ashington Urban district of Northumberland. It is 4 m from Morpeth, on the L.N.E. Rly. It is a coal-mining centre. Pop (1931) 29,418.

Ashmole Elias English antiquary. Born May 23, 1817, at Lichfield, he studied law. He served the king during the civil war, during which he also found time to study at Brasenose College, Oxford. In 1660 he was appointed a herald to Charles II. He died May 18, 1692.

Ashmole wrote *A History of the Order of the Garter* and was interested in astrology. He is best remembered, however, because he presented in 1682 to the University of Oxford a collection of antiquities, out of which the Ashmolean Museum has developed. Many additions were made to the original gift, and these were long housed in a building between High Street and Broad Street. In 1893-94 a new building was erected in Beaumont Street and in 1931 plans to enlarge this were put forward.

Ashridge Estate in Hertfordshire. It is near Berkhamstead. The grounds covered about 2200 acres, and the present mansion was built early in the 19th century. When in 1921 the estate was sold, some of it was bought for an outdoor zoological garden, while the house and gardens were acquired by Mr. U. H. Broughton and presented to the Unionist Party to serve as a training centre. This is called the Bonar Law College and there persons are trained as workers in the Unionist cause. See WHIPSNADE.

Ashtaroth City of Palestine. The exact location is doubtful. In the Old Testament (Deut. 1, Joshua 17, 12, 13) it is mentioned as being the capital of Og, King of Bashan. Ashtaroth is also a name given to the goddess Ashtar.

Ashtead Village of Surrey. It is 15 m from London on the S. Rly. The industries include the making of pottery. The village has a large common on which a Roman villa was unearthed in 1925.

Ashton-in-Makerfield Urban district and market town of Lancashire, 4 m from Wigan on the L.N.E. Rly. There are cotton mills, and manufactures of hardware and pottery. Pop (1931) 20,541.

Ashton-under-Lyne Borough and market town of Lancashire, on the Tame, which here separates Lancashire from Cheshire. Its suburb of Dinkinsford is in the latter county. It is 6 m from Manchester, on the L.M.S. Rly. The industries include the making of cotton goods, silk fabrics and hats. There are collieries near by. Pop (1931) 51,573.

Ash Wednesday First day of Lent. It has been observed in the Christian church since the 9th century, and owes its name to the use of ashes in the services of the day. They are still used in the Roman Catholic church. In the Church of England the communion service is read at the services on this day.

Ashwell Lena English actress. She was born in 1872, the daughter of Commander Pocock, R.N. She studied music, but in 1891 made her first appearance on the stage. She soon made a reputation, her successes including parts in *Mrs. Danc's Defence*, and *The Darling of the Gods*, but she is perhaps better known as a manager. In 1907 she opened the Kingsway Theatre, London, which she controlled for over 20 years, and after the Great War she organised the Lena Ashwell Players who gave performances regularly in the London suburbs. During the War, she acted as Hon. Organiser of Concerts at the Front. She is the wife of Sir Henry Simson, the obstetric surgeon. In 1929 she published her memoirs under the title of *The Stage*.

Ashwell Village of Hertfordshire, 4 m. from Baldock, on the L.N.E. Rly. Another Ashwell is a village in Rutlandshire known as a hunting centre.

Asia Largest, most populous and richest in natural resources of the world's continents. It covers 17,300,000 sq. m. Its greatest length from E to W is 6700 m. and from N to S 5300. It is bounded by the Arctic Ocean on the N, the Pacific on the E, and the Indian Ocean on the S. On the west the Urals and the Caucasus divide it from Europe. After his death she became the mistress of Lysicles There is a bust of Aspasia in the Vatican at Rome

Another Aspasia was the wife of Cyrus the younger, and later the mistress of Artaxerxes

Aspatria Market town and urban district of Cumberland, on the River Ellen, 7 m from Maryport, on the LNE Riv Around it are coal mines Pop (1931) 3239

Aspen Species of poplar (*populus tremula*) Owing to the long leaf-stalks the leaves flutter with the faintest breath of wind In olden days the wood was used for making arrows See POPLAR

Asphalt Brown or black natural form of bitumen It consists of a mixture of various hydrocarbons and occurs either in a pure state, or impregnating limestones as in the case of the Val de Travers rock in Switzerland Asphalt is solid or viscous, with a conchoidal fracture and pitch-like odour It is obtained chiefly from the famous Pitch Lake of Trinidad, also from similar deposits in Venezuela and Cuba The Val de Travers rock is used for paving purposes,

and ordinary asphalt for waterproofing roofs, cisterns, iron pipes, etc., also for making a black or brown paint

Asphodel Herbaceous perennial plant. It is native in the southern parts of Europe, but will grow in English gardens. It bears white or yellow flowers and will thrive in any soil provided it gets plenty of sun. The Greeks planted it on graves. Homer speaks of the meads of asphodel in the lower regions.

Asphyxia Condition which, by depriving the body of oxygen for breathing purposes, produces death, as in drowning, strangling and gas poisoning. The absence of oxygen leads to quick respiration, followed by convulsions. Insensibility and cessation of movement follow and death occurs within a few minutes.

Treatment—The treatment is the same as for drowning (*qv*)—artificial respiration and the application of warmth. In gas poisoning the victim must be removed to the open air. A doctor should always be sent for.

If scalding liquid or corrosive poisons are swallowed, the patient must be kept sitting before a fire, and an ice bag or hot fomentations should be applied to the throat.

Aspidistra Evergreen plant of the family *liliaceae*. It grows in China and Japan, and was introduced about 1822 into Great Britain as an indoor decoration.

Aspirin Drug efficacious for giving relief to pain, especially from neuralgia, sciatica, and rheumatism as well as for head aches and colds. It is a white crystalline substance not easily soluble in water, and is called by chemists acetylsalicylic acid. It is usually taken in tablet form. The dose is from 5 to 16 grains. If taken for a cold, the patient should go at once to bed as the drug tends to cause sweating. If taken regularly aspirin loses some of its beneficial effects, and tends to depress the action of the heart.

Asquith Family name of the Earl of Oxford and Asquith. Herbert Henry Asquith who in 1925, was created Earl of Oxford and Asquith, left seven children, two being by his second wife Margot, daughter of Sir Charles Tennant. The eldest son, Raymond Asquith a barrister was killed in action while serving with the Grenadier Guards, Sept. 15 1916. His son Julian became Earl of Oxford on his grandfather's death in 1928 and his two daughters were given the rank of an earl's daughter. Herbert Asquith the second son wrote novels and verses, the novels including *Wind's End* and *Young Orlando*. He married Lady Cynthia Charteris daughter of the Earl of Wemyss known as a writer of books for children. The third son, Arthur Melland won the DSO in the Great War and afterwards became associated with some important trading companies in London. The fourth son Cyril is a barrister. The fifth Antony, is a film producer. Lord Oxford's two daughters are Lady Violet Bonham-Carter, wife of Sir M. Bonham-Carter, and Elizabeth the wife of Prince Antioch Bibesco, Rumanian minister in Madrid.

Ass Animal belonging to one of the divisions of the genus horse (*equus*). It has a tufted tail and long ears and is popularly known as the donkey. The ass is found wild in Asia and Africa. It was domesticated at an early date and in the 16th century was intro-

duced into England, where it has since been used as a draught animal. It is crossed with the horse for the breeding of mules.

Assab Port on the Red Sea. It is in Eritrea and belongs to Italy. An outlet for the produce of Abyssinia, it has a good harbour but no railway.

Assam Province of India. It lies between Bengal and Burma, with Bhutan and Tibet to the north and covers 53,000 sq. m. The surface is hilly and in the north, where are the Himalayas, it is mountainous. The Brahmaputra and the Surma are the chief rivers. The soil, especially in the valleys, is very fertile, and the province is famous for its tea. Another product is rice while coal and oil are mined. There are extensive forests in which is much valuable timber. Shillong is the capital. The province is under a governor and a legislative council. Within its boundaries is the native state of Manipur.

Assam was taken by Great Britain from Burma in 1826 and in later years, from 1874 to 1905, it formed a separate province, but from 1905 to 1912 it was united with Bengal as it had been before 1874. In 1912 it was again made a separate province. Pop. 8,622,251.

Assassins The Sect formed by Hasan-i-Sabbah towards the end of the 11th century. They flourished in Persia and Syria until they were crushed in the 13th century. Under their chiefs they acquired great power, their practice of 'assassinating' their enemies causing them to be greatly feared.

Assault In English law an attack on a person without just cause, or the threat of an attack if in more than mere words, with at least an intention to hurt. The crime is punishable on summary conviction by fine or imprisonment. Assaults on females and young boys, which are more seriously punished, are known as aggravated assaults. A person assaulted can bring an action for damages.

Assaying Term applied to the methods followed in the estimation of a metal in an ore or alloy. This may be done by dry or wet assaying. In a dry assay the ore mixed with solid reagents is subjected to heat, thus isolating the metal which is weighed and the percentage calculated.

By the wet method solvents and other reagents are used, and by solution and precipitation the metals present are separated and weighed. In some cases gaseous reagents are used or the fused one may be subjected to an electric current. Volumetric assaying is a rapid method of estimation by determining the volume of a standard reagent necessary to effect a certain change in the solution.

Assegai Weapon used by some African tribes. It is a light spear made of a hard wood tipped with iron, and thrown at the advancing enemy. It was used by the Zulus in their wars with the British.

Assent Consent or agreement. In Great Britain and other countries of the British Empire a measure that has passed through both Houses of Parliament needs the royal assent before it becomes law. This is given in England by three commissioners, members of the House of Lords who sit in front of the throne. The title of each bill is read out and the clerk of the Parliament replies to each *le roy le veult* the king wishes

it." The royal assent has not been refused for over 200 years.

Assessment Process of valuing houses and land for the purpose of deciding what rates and taxes they shall pay. It is done by officials of the county or borough councils who put a yearly value on every factory, warehouse, shop, house or piece of land, and on this rates are charged. This is usually something less than the rent, in theory it is the rent less an allowance for repairs. Since 1925, when the rating system was altered, every county, borough or other rating authority, must have an assessment committee which is responsible for assessing all property within its area. *See RATES*

The word is also used for fixing the amount of income on which a person must pay income tax and for the amount of damages awarded by a jury in a lawsuit.

Assessor In English law an expert who assists judges and arbitrators. Since 1873 it has been the custom to call upon assessors when difficult points are at issue, as in the Court of Admiralty and in cases about patents. When ecclesiastical cases come before the judicial committee of the Privy Council, one or more of the archbishops or bishops usually sit as assessors. Assessors are also recognised in Scotland where they assist the magistrates.

Assets Term used for the property of a person or company as distinguished from his or its liabilities. The assets of a limited company are its buildings, machinery, goodwill, etc., and appear on the right-hand side of the balance sheet. The assets of a bankrupt are the funds available to pay the expenses and a dividend to the creditors.

Asshur Assyrian god. He was the chief and creator of all the other gods. The city of Asshur stood on the Tigris, 55 m. from Mosul, and Assyria was named after it.

Assignment Formal transfer of property from one person to another. Thus a bankrupt assigns his property to a trustee for the benefit of his creditors. The corresponding word in Scots law is assignation.

Assiniboia District of Canada. It was at one time part of the North-West Territories. Nearly 90,000 sq. m. in area, it is now part of the provinces of Saskatchewan and Alberta. The name is that of a tribe of Indians, and is also borne by the River Assiniboine which flows into the Red River at Winnipeg. It is about 700 m. long.

Assisi City of Italy. It is 15 m. from Perugia and stands on a hill, over 1300 ft. high. The Franciscan monastery contains work of some of the early Italian artists. It has one church built over another. Near the city is the church of S. Maria degli Angeli, containing the cell in which S. Francis died, and the oratory of the original monastery. Pop. 18,500.

Assiut Town of Egypt. It stands near the Nile, 248 m. south of Cairo. It is a calling place for caravans, and is famous for its dam. Near are some famous rock tombs. At one time Assiut was famous for its pottery and other works of art. Pop. 57,000.

Assize Word meaning "an enquiry," and the results of such an enquiry. The results took the form of laws, and in the Middle Ages many of the laws were called assizes. Some were called after the place

where the laws were issued, e.g., Clarendon or Northampton, and others after the subject with which they dealt, e.g., the assize of arms. The word was also used for a legal action, and this use of it continued until the 19th century.

Assizes In the older sense an enquiry. It is now used in England, Ireland and other countries for the visits of the judges to the cities and towns in the provinces which are called assize towns. The assizes are held three or four times a year for the trial of important cases, both criminal and civil. Judges of the King's Bench division of the High Court of Justice preside over the assizes. For this purpose the country outside the London area is divided into circuits, and a judge goes through each circuit. To assist him there is for each circuit a barrister called the clerk of assize.

Associate Word used for a member of a society, usually a learned society, who is not a full member. Thus the Royal Academy has associates, known as A.R.A., and from these the full members, R.A., are elected. Another kind of associate is an official in the law courts. He acts as an assistant to the judge, by recording the verdicts, and in other ways.

Association Society or organisation existing for a common purpose, such as looking after the interests of a trade or profession, or, in former times, protecting the life of a sovereign. The association of ideas in the human mind is a subject to which philosophers and psychologists have devoted much attention. Some explain all our mental processes by the theory of the association of ideas.

Association Cup Trophy awarded every year to a club playing football according to the rules of the Football Association. It was first given in 1871 and has increased steadily in popularity ever since then. There are preliminary rounds in which the weaker clubs are weeded out, and six rounds in the competition proper. From the first two of these the stronger clubs are excused, but they come into the third round in which there are 64 competitors. These are reduced by the sixth round to four, and the four play in the semi-finals, and the victorious two in the final. Since 1923 the final has been played at the Stadium at Wembley.

WINNERS OF THE ASSOCIATION CUP SINCE 1900

1900-Bury	1920-Aston Villa
1901-Tottenham Hotspur	1921-Tottenham Hotspur
1902-Sheffield United	1922-Barnsley
1903-Bury	1923-Bolton Wanderers
1904-Manchester City	1924-Newcastle United
1905-Aston Villa	1925-Sheffield United

1915-Sheffield United	1935-Sheffield Wednesday

Assuan Town of Egypt. It stands on the Nile and is famous for its dam. This was opened in 1902 and enlarged in 1912. Its reservoir has a capacity of 2,420,000,000 cubic metres.

Assuan has a long and interesting history under the Egyptians and the Romans. Near are the granite quarries from which the Egyptians obtained the stone for many of their temples. There are some slight ruins of the

ancient city, and the place is visited by tourists
Pop 16,458

Assumption Act of taking the souls of the dead into heaven. The chief use of the word is for the assumption of the Virgin Mary, this being a festival in the Roman Catholic Church. Held on Aug 15, it is a day of obligation. Many great painters, including Titian and Rubens, have pictured the assumption.

Several orders of women in the Roman Catholic Church have been founded in honour of the assumption. These include the Little Sisters of the Assumption, a nursing order, and the Oblates of the Assumption, who teach and visit.

Assyria Empire of the ancient world. It was the district round Asshur, a city on the Tigris. Its people were Semites related to the Babylonians. They were ruled by kings who were also priests. Their religion, with its hierarchy of gods and goddesses, was very like that of Babylon. Sacrifices were an important part of its ritual.

Assyria existed as early as 2500 B.C., but as a dependency of Babylon. About 1400 it became independent and for a short time Babylon was a subject state. For the next 800 years its kings conducted almost incessant wars against the Hittites and other peoples on their borders, the result being that their dominion was greatly extended, although it never covered an area equal to that of Babylon. It was, however, in the time of King Tiglath-Pileser I, who reigned about 1100 B.C., the greatest power in the world.

After a period of decline the power of Assyria revived under Tiglath-Pileser IV, who lived about 700 B.C. and conquered a good deal of Asia Minor, including Palestine and Syria and also parts of Arabia. Later Esarhaddon included Egypt in his realm, which was divided into 22 nomes or provinces. Babylon and the rest of Mesopotamia (Iraq) had previously been conquered. The end came soon after this period of glory. Instead of one ruler there were several, and unity was quickly lost. Egypt became independent, and a little later Babylon followed her example. Other parts of the realm threw off their allegiance to the king at Nineveh and in 607 B.C. the Medes took that city, and the Assyrian Empire came to an end.

Excavations at Nineveh and elsewhere have revealed much of the culture of the Assyrians. They were skilled craftsmen, working in gold and silver, weaving cloth and making pottery. They were great traders and evidence has come to light that they had banks. They wrote on tablets of brick and in this medium they had immense libraries, the books including grammars and treatises on science.

The Assyrians were perhaps greatest as builders, and the size and splendour of their buildings, as revealed by excavations, is one of the marvels of the world. Temples, palaces and tombs were decorated in a most gorgeous fashion. The ruins of Nineveh when explored proved that it was one of the greatest cities of the world. More recently excavations have shown the existence of buildings, perhaps equally magnificent at Sargon's capital the modern Khorsabad where valuable finds were made in 1932.

Astarte Goddess of the Phoenicians or Sidonians. She shared with Baal the position of chief of the gods. She was the goddess of fertility and was sometimes represented as a cow. The moon was her emblem.

She had temples at Erech, Nineveh, Arbela and elsewhere, and was worshipped with licentious rites. This is referred to in the Bible (2 Kings xxiii).

Aster Genus of flowering plant, also called the Michaelmas daisy. They have undivided leaves and flowers not unlike the daisy. They are in many colours and are both annuals and perennials.

Asteroid Name used for the minor planets. They lie between Mars and Jupiter, and the first of them, Ceres, was discovered in 1801. Others were soon found and after 1847 a number were discovered each year. In the 20th century this work was aided by photography, and in one year (1908) 117 new asteroids were found. Now over 1000 are known and one authority estimates that there are altogether something like 50,000.

All the asteroids are very small. Ceres, the largest, is only 480 m in diameter, the next largest are Vesta, Pallas, and Juno. The smallest is only 3 m in diameter. The total volume of all the asteroids together is vastly less than that of the earth. One of them, Eros, discovered in 1908, is very near the sun, and its movements are therefore of great value to astronomers.

Asthma Chronic disease of respiratory tract, characterised by acute attacks of bronchial catarrh and spasmodic difficulty of breathing (with a wheezing sound), for which change of climate is often beneficial.

Immediate relief in an attack is sometimes gained by propping up in bed, and by the use of drugs under medical supervision. Inhaling the fumes from burning a preparation such as stramonium or nitre paper will relieve the spasms and aid expectoration in severe attacks. No heavy meals should be taken at bedtime and the diet should be carefully studied, as individual idiosyncrasies for certain foods are often present. Other exciting factors may be dust, pollen, feather beds, etc.

Astigmatism Defect in the refracting surfaces of the eye, resulting in clear vision of horizontal and vertical objects being attained at different distances. It is most usually found in the cornea, but sometimes in the lenses. It can be corrected by the use of cylindrical glasses.

Astley Philip Circus proprietor. He was born at Newcastle-under-Lyme in 1742. He joined the army in 1759 and soon became very clever at managing and training horses. Leaving the army he gave performances of horsemanship. Next he opened circuses, in London and Dublin. In London, Astley's was on the south side of the Thames, opposite the Houses of Parliament. He died in 1814.

Aston Manor Until 1911 a borough of Warwickshire. In that year it was made part of Birmingham. Aston Hall is now a museum and art gallery, and its grounds a public park.

Aston Villa Association football club. It was founded in 1874 at Villa Cross, Handsworth, Birmingham. Its first members belonged to a Wesleyan Church. The club won several cups and was one of the first to engage professionals when about 1880 association football was taken up by the masses. The Villa has a wonderful record, probably unequalled, at the game. It has won the Association Cup on six occasions, 1887, 1895

1897, 1905, 1913 and 1920, and the championship of the League on six occasions. Its ground is at Aston, Birmingham.

Astor American family John Jacob Astor was born at Waldorf, near Heidelberg, July 17, 1763. In 1783 he went to New York and soon acquired a fortune by trading in furs with the Indians. He founded Astoria in Oregon as a centre for his business, and bought land in New York which became very valuable. He died in 1848. His great-grandson, William Waldorf Astor (born March 31 1848) was for a time American minister in Rome. In 1890 he settled in England, where he bought Hever Castle and Cliveden and acquired some weekly and other journals. In 1899 he was naturalised, in 1916 he was made a baron, and in 1917 a viscount. He died Oct 18, 1919.

Astor left two sons. The elder, William Waldorf Astor, born May 19, 1879, was M.P. for Plymouth from 1911 to 1919. From 1918 to 1921 he was a member of the Coalition Government, taking a special interest in questions affecting agriculture, temperance and public health. In 1906 he married Nancy Y. Witcher, daughter of C. D. Langhorne of Virginia. In 1919 she was elected in succession to her husband, Unionist M.P. for a division of Plymouth, being the first woman to sit in the House of Commons. She held her seat at subsequent elections and won a distinct place for herself in the House. The younger son of the first viscount, John Jacob Astor, was elected M.P. for Dover in 1922. In 1922 he became principal proprietor of *The Times*. He must not be confused with his kinsman, another John Jacob Astor, who was drowned in the *Titanic* in 1912.

Astrakhan Town and river port of Russia, on the Volga, and partly on an island in the river, about 50 m. from the Caspian Sea. The centre of the city is the citadel, or kremlin, wherein is the cathedral. Another part is called the White City. Astrakhan does a considerable trade both by land and water, and has a number of manufactures. Its market and bazaar have been famous for three centuries. Pop 199,000.

The name astrakhan is used for a material employed for clothing. It is made from the skin of Persian lambs, but is also made artificially from wool. It resembles a fur and was at one time very popular.

Astrolabe Instrument used by the ancients and also in medieval times for taking altitudes and marking the positions of sun, moon and stars. As used by the early seamen, it consisted of a circle with two radial pointers, one fixed and the other movable, both being fitted with sights. It thus measured the angle between two stars, or between a star and the horizon. It was used until the 18th century when it was replaced by the quadrant. It was also used by surveyors, and in a more elaborate form by astronomers, but it has now been replaced by more modern instruments.

Astrology Science based upon the assumption that planetary influences affect human affairs, and formerly regarded as identical with astronomy. In early times astrology was in great repute, and its symbolism permeates the ancient religions and philosophies. Traces of astrological ideas occur in the use of the terms, ill-starred, jovial, saturnine, mercurial, lunatic, etc., in our language. The deductions were based upon

the positions of and the relations between, the Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn and in modern times, Uranus and Neptune. The signs of the zodiac also play an important part in astrology.

Natural astrology is concerned with the supposed effect of planetary influences upon changes in the weather etc., while judicial astrology treats of the effects upon human affairs. In this latter branch of the science, the horoscope or chart of the heavens at the birth of an individual forms the basis for the predictions of the astrologer.

Astronomer One who studies the heavenly bodies. In England there is an Astronomer Royal who has charge of the observatory at Greenwich. John Flamsteed was the first holder of the office. There is also an Astronomer Royal for Scotland, and one for the Cape of Good Hope. Other astronomers are in charge of the various universities and other observatories.

Astronomy Science which treats of the celestial bodies and their nature, position, motions etc. It is one of the oldest of the sciences and was studied in China as far back as 2300 B.C., and from a much earlier period in Egypt and Babylon, where a high technical skill was reached. The Greeks, deriving their knowledge chiefly from Babylonian sources, further developed the science under Thales, Hipparchus, Eudoxus, Ptolemy, and other astronomers, handing on their knowledge to the Arabs, whose translations of Greek writings and independent observations formed the basis of European astronomy.

Copernicus in the 15th century, Kepler and Galileo a century later, and Newton in the early 18th century, purged the science of its earlier errors and placed astronomy upon a more scientific basis. The discovery of the telescope gave a great impetus to the study of the heavens, and observational work became of increasing importance from the 18th century onward. In the latter part of the 17th century the Greenwich and Paris observatories were founded, and since that time similar centres have been established in many parts of the world. The invention of the spectroscope and the improvements in astronomical telescopes have brought the science to a very high level.

Modern astronomy is divided into observational or telescopic astronomy, astrophysics dealing with the spectroscopic study of the celestial bodies and photographic astronomy.

For encouraging the study of astronomy there are the Royal Astronomical Society and the British Astronomical Association while photographic, spectroscopic and other investigations are carried out at the various observatories.

Astrophysics Subsidiary branch of astronomy dealing with the nature of light and heat from the stars and the physical constitution of the heavenly bodies in general. The study of astrophysics began in the latter part of the 19th century with the use of the spectroscope and the application of photography to astronomy. By means of these and other appliances, such as the radio-micrometer and photo electric cell, the study of the nature of nebulae and star-clusters, also the classification of stars and their velocities have been made possible. Upon these observations various theories of stellar evolution have been founded.

Asturias District in the north of Spain, bordering the Bay of Biscay. The name is that of the Astures an early tribe. At one time it was an independent kingdom this being founded about 720 by some Christians who refused to accept the rule of the Moors. The Moors got the worst of several battles with these Christians, and the kingdom of Asturias grew larger and stronger. About 910 it became known as the kingdom of Leon, this city being its capital. Oviedo was the earlier capital. Until 1930 the heir to the Spanish throne was called the Prince of Asturias, which thus corresponded to our title of Prince of Wales.

Asuncion Capital and river port of Paraguay. It is on the Paraguay River, 650 m from Buenos Aires. It has a university. The industries include shipping, shipbuilding and some manufactures. It is also a banking and general trading centre for the republic. The town was founded on Ascension Day, 1537. Pop (1931) 91,156.

Asylum Place of refuge. In the first instance it was a place, a temple for instance, in which criminals and other offenders were safe. The Jews had asylums or cities of refuge and they existed in Greece and Rome. In England a sanctuary was an asylum of this kind. The right of asylum is the right possessed by one country of giving admission to fugitives from another country.

To day an asylum is an institution in which the insane, i.e. those suffering from severe mental disease are treated. The term "Mental Hospital" has now replaced that of "Asylum." Such institutions are maintained by county and borough councils, and are supervised and inspected by a government department called The Board of Control.

Atacama Desert in Chile. It extends over 70,000 sq m and stretches from the Pacific coast to the Andes. Much of it is mountainous. There is little vegetation but it is rich in minerals and from it large quantities of nitrate, salt, borax, silver, copper etc are obtained.

Atacamite Rare mineral. It is found in the desert of Atacama and also in Saxony and Sicily. It is usually green in colour and its specific gravity is 3.7. Its symbol is CuCl , $3\text{Cu}(\text{OH})$. It is worked as an ore of copper.

Atalanta In Greek story a maiden of Arcadia. Her father Iasus desiring a son left her to die but she was nurtured by a wolf. Very fleet of foot she avoided marriage by challenging her suitors to a race, in which she was invariably successful. Her suitors as the penalty of failure were killed by her. At last a certain Milanion beat her by a ruse. As he ran he dropped some golden apples given to him by Aphrodite. Atalanta stopped to pick them up and lost the race. She therefore married Milanion.

Atavism (Lat. *atavus* a man's ancestor). Term used by biologists for a reversion to a characteristic of an ancestor. It is found not only in men but also in animals and plants. The red hair or very blue eyes possessed by an ancestor might, after being absent during three generations reappear in a member of the fourth.

Atbara Town and town of the Sudan. The river rises in Abyssinia and joins the Nile near Berber. The town is a railway junction on the line to Khartoum.

On April 8, 1898, a British and Egyptian army under Lord Kitchener defeated a force of dervishes on the banks of this river, and so prepared the way for the advance to Khartoum.

Atē In Greek story a daughter of Zeus or of Eris (Strife). She was the goddess of mischief and appears much in Greek tragedy. Her rôle was to induce the guilty to perform further evil deeds and so bring about their own punishment. She was thus the personification of retribution.

Athabaska River and lake of Canada, also called the Elk and the Reindeer. The river rises in the Rocky Mts and flows mainly east and north until it falls into Lake Athabaska. It is 550 m long and is navigable for a good part of its course, although interrupted by the Grand Rapids. Navigation begins at Athabaska Landing about 100 m north of Edmonton.

The lake, which covers 2842 sq m and is 190 m long, is in Alberta and Saskatchewan. It was discovered in 1771.

Before 1905 a great district in Canada was called Athabasca. It covered 261,000 sq m and was situated in the North West Territories. In 1905 parts of it were given to Saskatchewan and Alberta and in 1912 the rest became part of Manitoba.

Athaliah Biblical character. A daughter of Ahab King of Israel and his wife Jezebel, she married Jehoram King of Judah. She fostered the worship of Baal among her husband's subjects. Her son, Ahaziah, became king on his father's death, but he was soon killed. His children were thereupon murdered by Athaliah, save one Joash who escaped. Athaliah ruled the country for 6 years, but was killed when the high priest arranged for the coronation of Joash (2 Kings xi, 2 Chron. xxii, xxiii).

Athanasius Christian saint. Born at Alexandria, about 297, he was ordained and became prominent at the Council of Nicea. In 326 he was made bishop, or patriarch, of his native city. His career was occupied with disputes with the followers of Arius. In 335 for refusing to restore Arius to his position in the church, he was deposed, and in 336 banished by the Emperor Constantine. Thereafter he was several times in exile before he was finally restored in 363. He then remained at Alexandria until his death, May 2, 373.

Athanasius is famous in the history of the church as the champion of the belief in the Trinity, which was not fully accepted by the Arians. This is expressed in the creed named after him, although his exact share in its compilation is uncertain.

Atheism Disbelief in the existence of God. It may be disbelief in the existence of a personal god, or disbelief in the existence of a first cause of any kind. If the former it is held by a large number of thinking men. It differs from materialism and agnosticism. Deism such as was held by Voltaire has sometimes but wrongly been called atheism which is strictly the opposite of theism or belief in God.

Athelney District of Somerset. A marshy region near the union of the rivers Tone and Parret. It is often called an island. Here Alfred the Great took refuge in 878 and there are slight remains of a monastery he is said to have founded. There is a memorial to Alfred here.

Athelstan King of England Born about 895, he was a son of Edward the Elder and a grandson of Alfred the Great In 928 he succeeded his father as king and he reigned for 15 years The great event of his reign was his victory over a group of enemies at Brunanburh in 937 He died at Gloucester, Oct. 29, 940

Athena Greek goddess The daughter of Zeus, she is said to have sprung fully-armed from the head of her father She was the goddess of wisdom, but also the goddess of war and of agriculture and other arts and crafts, as well as of literature and art, while Athens was under her protection She was called sometimes Pallas, or Pallas Athene, and her Roman counterpart was Minerva She is represented as wearing a helmet with a shield on which was the gorgon's head Other symbols of the goddess were an owl, a serpent and an olive branch

Athenaeum Temple built in honour of Athena In time the word came to be used for a school, Athena being the goddess of wisdom, and there were athenaeums in Athens, Corinth, Alexandria and later in Rome The one in Rome was founded by the Emperor Hadrian in A.D. 135 They were the precursors of the university of a later date The word is still occasionally used in this sense

The Athenaeum Club is regarded as the most distinguished of the London clubs Its members are men of distinction in all departments of public life The fine building fronts Waterloo Place The club was founded in 1824 The weekly journal named *The Athenaeum* was founded in 1828 by James S. Bucklingham It existed as a weekly journal until incorporated in 1921 with *The Nation*

Athenry Market town of Co. Galway, Irish Free State It is 12 m. from Galway on the Great Southern Rly Pop. 900

Athens City of Greece and the capital of the country It is in the plain of Attica, surrounded by hills, four miles from the sea and from its port the Piraeus Its interest is chiefly historical, as it is one of the two most famous cities of the ancient world and the ruined buildings on the hill called the Acropolis are the finest remains of their kind extant Below is the modern city with wide, straight streets and buildings of modern type After a great war a new water supply was provided Athens is named after the goddess Athena and its reputed founder was Theseus Pop. 453,000

The buildings include the academy, the library and the university, all built of white marble in the classical style The stadium was restored for the Olympic Games

Around the Acropolis are remains of the wall that once enclosed it and on it are the Parthenon, the Erechtheum and the Theseum, all carefully preserved and giving in their ruined condition some idea of their original beauty The Theseum has been the least damaged by time

Athens began as a little state ruled by a king, but was soon the capital of Attica The kings disappeared and tyrants, Peisistratus being the most famous, took their place about 1000 B.C. Later the city became a democracy Its citizens took a leading part in defeating the Persians when they invaded Greece in 490 B.C. and 480 B.C.

The Persians did indeed reach and damage the city, but the loss was more than made good and Athens entered upon its great age It became the most powerful of the Greek cities, and head of the Athenian Empire Many cities were subject to it, while others, as members of the Delian League, were its obedient allies Its army and navy were both in a high state of efficiency

In the age of Pericles which began about 440 B.C., Athens was at the height of its power Art flourished and there arose those noble buildings and that wonderful statuary that culminated in the Parthenon and the statue of Athena by Pheidias

In 431 Athens became involved in a war with Sparta and this continued with intervals of peace until 403 B.C., when the city was entered by the Spartans and forced to give up her ships and her colonies Her decline had been aided by the disastrous expedition to Syracuse In the next century the Macedonians inflicted further humiliations upon the city which in A.D. 146 became part of the Roman Empire Both its Macedonian and its Roman rulers, however, by erecting temples and other buildings, added much to its beauty

Atherstone Market town of Warwickshire It is 102 m. from London on the L.M.S. Rly. Near are the ruins of Merevale Abbey, a Cistercian house The town gives its name to a hunt. Pop. 6000

Atherton Market town and urban district of Lancashire It is 5 m. from Bolton, on the L.M.S. Rly. The industries include cotton mills and coal mines Pop. (1931) 19,985

Athletics Any kind of physical game, contest, or exercise It thus includes, not only running and jumping, but games such as football and cricket, and contests such as boxing and wrestling In one form or other athletic sports have been practised by almost every people and in every age, but the Greeks with their organised games, were its greatest exponents and produced the finest athletes The Romans were less interested in this form of activity, but they had their games

Athletic games and sports were common during the Middle Ages and every fair was enlivened by physical contests of one kind or other Games of this kind lost their popularity in the 17th and 18th centuries, but running and other contests came into favour

Modern athletics date from the 19th century when athletic meetings were organised One such was held in 1807 In 1850 one was held at Oxford and in 1864 the annual athletic meeting between Oxford and Cambridge was inaugurated Other meetings were started in various places and the Amateur Athletic Association was founded to supervise them. This association holds a meeting each year in London To-day almost every college and school has its athletic sports and there are army and other meetings Athletic clubs are attached to churches, business houses and social organisations

The movement is by no means confined to Great Britain It has been taken up in the United States and the British Dominions and international competitions are held For instance, athletes from Great Britain meet those from Italy, France and other countries, and Oxford and Cambridge regularly meet Harvard and Yale In 1896 the modern

Olympic Games, a great international contest, were started and are held every four years See OLYMPIC GAMES

Athlone Market town, county town and urban district of Co Westmeath, Irish Free State. It stands on both sides of the Shannon 78 m from Dublin on the GS Rlys. There are some manufactures and an agricultural trade, while it is a fishing centre. Pop 7472

Athlone Earl of British title. It was borne from 1692 to 1844 by the family of Van Rensselaer. The first earl was a Dutch general who distinguished himself at the siege of Athlone and was made an earl in 1692. The title became extinct when the 9th earl died in 1844. In 1917 it was given to Alexander, Prince of Teck, a brother of Queen Mary. He married Alice, daughter of the Duke and Duchess of Albany, served in the army and from 1923-30 was Governor General of South Africa. In 1932 he was elected Chancellor of the University of London

Atholl Duke of Scottish title borne by the family of Stewart Murray. An earldom of Atholl was held by the family of Stewart until it became extinct in 1696. The estates passed then by marriage to William Murray, Earl of Tullibardine and in 1699 his son became Earl of Atholl. The 2nd earl was made a marquess in 1676 and the 2nd marquess was made a duke in 1703.

The titles came in 1917 to John George Stewart Murray as 8th duke. As Marquess of Tullibardine he was M.P. for West Perthshire, 1910-17. He married Katherine Marjory, daughter of Sir James H. Ramsay. She was elected to the House of Commons in 1923 and at subsequent elections, and was parliamentary secretary to the Board of Education, 1924-29.

The duke's seat is Blair Castle in Perthshire around which are his extensive estates. His eldest son is called the Marquess of Tullibardine and he himself sits in the House of Lords as Earl Strange.

Athos Mountain of Greece. It is about 80 m from Salonika, near the Aegean Sea and is over 6000 ft high. The name is also given to the peninsula which is connected with the mainland of an isthmus and which is about 30 m long. There are about 20 monasteries and 6000 monks in the region.

Athy Market town and urban district of Co Kildare, Irish Free State and 45 m. from Dublin. It has a trade in agricultural produce. The chief objects of interest are two castles and some monastic remains. Pop 3535.

Atlanta City of Georgia, also the capital of the state. It is a great distributing centre, one of the greatest in the southern states, and is served by several lines of railway. It has also a number of manufactures cotton and tobacco being among the materials treated. Pop (1930) 270,366.

Atlantic City City and seaside resort of the United States. It is on an island off the coast of New Jersey, 60 m from Philadelphia, and within easy reach also of New York and other popular centres. It has a magnificent bathing beach and indoor and outdoor attractions of every kind. The promenade is 8 m. long. Pop 66,198.

Atlantic Ocean One of the world's great oceans. It

lies between the old world and the new and extends for some 8500 m from north to south. It covers 30,000,000 sq m, being inferior in size only to the Pacific Ocean. In places it is over five miles in depth, but much of it is shallow and it contains the most valuable fishing grounds in the world. It is traversed by a long ridge which is within two miles of the surface. The ocean includes such openings as the Mediterranean Sea, the Baltic Sea, the North Sea and the Gulf of Mexico. It is crossed by several cables. The ocean derives its name from the mythical island Atlantis (q.v.).

In May, 1919, after several attempts the Atlantic Ocean was first crossed by an American seaplane. In June, 1919, J. Alcock and A. W. Brown crossed it for the first time in an aeroplane, and in May, 1927, it was crossed by O. Lindbergh who flew without stopping from New York to Paris. These and other successful Atlantic flights were from America to Europe, the more difficult crossing, Europe to America, was first made in April, 1928, by two German airmen. Others have crossed the ocean by air, one of the vessels to do so being the German airship Graf Zeppelin. On 21st May, 1932, Miss Amelia Earhart flew alone from Newfoundland to Londonderry, almost 2000 miles, in 16 hours.

Atlantis Imaginary island. The ancients believed that there was such a land and Plato mentions it as having been destroyed by the sea on account of the wickedness of its inhabitants. It was placed somewhere in the Atlantic Ocean. Bacon's *New Atlantis* describes an ideal state.

Atlas Range of mountains in the north of Africa. It curves from Cape Nun on the Atlantic Ocean through Morocco, Algeria and Tunisia to the Mediterranean Sea at Cape Bon. Its length is 1600 m. The range is divided into three groups. The chief is the Great Atlas in Morocco; this has many peaks over 10,000 ft in height. The highest of all is Tagharat, nearly 15,000 ft. high. The other sections are the Lesser Atlas in the north and the Anti Atlas on the south. In Algeria and Tunisia are the Tell Atlas and the Sahara Atlas. The lower parts of the range are densely forested.

Atlas In Greek legend a giant, one of the Titans. For rebelling against Zeus he was sentenced to stand near the garden of the Hesperides and support the universe on his shoulders. For this reason a collection of maps is called an atlas. Sculptured figures of men, made as supports to buildings in the classical style, are called Atlantes, this being the plural of Atlas. They serve as substitutes for columns.

Atmosphere Gaseous material surrounding the earth and other planets. The earth's atmosphere consists of 21 per cent. of oxygen, 78 per cent. of nitrogen and 1 per cent. of argon and other gases. It varies slightly in different localities. A moist atmosphere contains about 3 per cent. of water. At the earth's surface the temperature of the atmosphere varies with the latitude. It decreases with altitude by about 1° C for every 600 ft. Thus the summit of Mont Blanc is 16° C colder than the summit of Ben Nevis which is two miles lower. The reason is that the warmth of the air is obtained not from the passage of the sun's rays through it but from direct contact with land or water surfaces. The height to which the atmosphere extends is

uncertain. It may be as much as 200 miles, but at such heights it is exceedingly rare. Indeed, at 3½ m the pressure of the atmosphere is only half what it is at the sea level. *See AIR.*

Atmospherics Term used for irregular electro-magnetic disturbances due to natural electrical phenomena such as thunderstorms, which produce noises difficult to eradicate in the telephone or loud speaker of a wireless receiver.

Atoll Coral reef forming a circular piece of land around a lagoon. They are found in the Indian and Pacific Oceans and are usually grown over with coconut palms. There are several theories about their origin. The most generally accepted is that they are due to the upgrowth of coral reef over islands that have gradually subsided, the rising of the one and the falling of the other taking place at the same rate. *See CORAL.*

Atom According to Dalton's Theory a chemical atom is the smallest indivisible unit of an element. Now, however, experiments prove that the atom itself is made up of two kinds of smaller particles, "electrons" and "protons." The electrons are carriers of negative electricity, and they may be looked upon as the atoms of electricity. Owing to modern physical research an atom is regarded as an open grouping of electrons which revolve in orbits around a central comparatively heavy nucleus of positive electricity ("proton"). In the lighter atoms the electrons are few in number and farther from the nucleus than in the heavier atoms, in which the electrons are many and more closely aggregated around the nucleus.

By the grouping together of atoms compounds are formed, and these atomic groups are known as molecules, as for example, the molecule of common salt consists of one atom of chlorine and one atom of sodium. The relative weights of the atoms of the different elements and their distinctive properties seem to be determined by the number and arrangement of the electrons, and recent experiments designed to change this number have succeeded in "disintegrating" the atom into an atom of a different element.

For further study of the atom and its nature the reader is referred to the works of Sir Oliver Lodge, Sir William Bragg and Prof. Andrade.

Atonement In Christian theology, the cancelling of man's sin by the sacrifice of Jesus Christ. He being "the propitiation for our sins." The idea of propitiating the gods by sacrifice is very firmly rooted in primitive religions and has passed into the more advanced faiths. It was held firmly by the Jews and there are many references to it in the Old Testament.

From the Jews the idea came to Christian thought and it culminated in the belief that the consequences of sin could be expiated, or atoned for, by the one supreme sacrifice, the death of Jesus Christ. Christ himself referred more than once to his coming death as an offering of this kind, and the Christian belief in salvation was built up on it by St. Paul and others. In this view the human race can only be saved from the just wrath of God, which is a consequence of its sins, by a belief in the atoning power of Christ.

The Day of Atonement is the great fast day of the Jewish year. It is celebrated on the tenth day of the month Tishri, i.e., in Sept.

or Oct. Its observance is ordered in the Mosaic law, and it is probably an atonement for the worship of the golden calf.

Atrophy Decrease in the size of a tissue or organ due to degeneration of the cells. It occurs in plants as well as in animals. It may be either local or general. Local atrophy takes place at certain stages of life, as when in old age the jaw shrinks. General atrophy is due to disease such as cancer or tuberculosis. It may also be due to lack of nutrition.

Attaché Junior official in the diplomatic service. Those who enter the service usually gain this early experience of serving as attaché at an embassy. There are also naval and military attachés. These are sailors and soldiers attached to an embassy to report on matters of naval, or military concern. Another class are commercial attachés who report on the commercial possibilities of the country to which they are sent.

Attachment In English law a writ by which a person is arrested, or attached. It is used in cases where a person has disobeyed an order of the court. In such cases the court may order him to be attached, but he can avoid this by obeying the order, which may be the payment of a debt.

Attainder Legal proceeding now abolished. A person was attainted, that is declared to possess tainted blood, if he was found guilty of treason or felony. The result was that his lands were forfeited and no one could inherit anything through him. The custom began in England in the 14th century and was much used during the Wars of the Roses. At this time bills of attainder were passed through Parliament and prominent persons were declared guilty of treason, or put to death. Thomas Cromwell and later, William Laud, were executed after the passing of bills of attainder. The last case of the kind was Lord Edward Fitzgerald in 1798. Attainder was abolished in 1870.

Attar of Roses *See OTTO.*

Attestation Act of witnessing, or testifying. It is usually done by affixing the signature, but it may be done by oath. In English law wills must be attested by two witnesses and deeds and other documents require one witness.

In 1915-16 a form of enlisting for active service was introduced, and was known as the Derby scheme. Under it men attested, or signed, an undertaking to come up for active service when required.

Attica District of Greece in ancient times. It formed a peninsula on the east coast, lying between two arms of the Aegean Sea and contained Athens. Its inhabitants had a very high standard of intelligence and culture which was attributed to the bracing air. This reputation persisted and the best qualities of the Greek, the best speech, the best oratory, were all known as Attic.

Attila King of the Huns. He was born about 406 and in 434 he and his brother succeeded their uncle as rulers of the race that by then had settled in the east of Europe. Having killed his brother, Attila brought many other barbarians under his rule and was soon at the head of a vast host. In 447 he led them across the Danube and their ravages made a terrible impression on the

Byzantine Empire Attila's borders now swept across Germany and entered France reaching Orleans. Aëtius, the Roman, and Theodoric, the Vandal, collected a great force to resist them and the battle took place on the Catalaunian Fields, near Châlons, in June, 451, when the Huns were utterly defeated. They retired, but were soon on the march again, invading and devastating Italy. Attila died in 453, and the empire began to decay. He was called the scourge of God. In 1932 it was stated that his tomb had been discovered in a village near Buda Pest.

Attleborough Market town of Norfolk, 16 m from Norwich, on the L N E Rly. Pop 2450.

Attock Town of the Punjab, India. It is on the Indus, 45 m from Pesbawar. It is important because it is on the main route into India, the one taken by Alexander and other invaders. Here is a bridge across the Indus. Attock was founded as a fort in 1581 by the Emperor Akbar.

Attorney Person who acts for another in legal matters. A solicitor is therefore an attorney and before 1873 the official name for such was attorneys at law. The word is still used in this sense in the United States.

The attorney general is the chief law officer of the British government. He is a member of the House of Commons and sometimes of the Cabinet, and his duty is to advise on matters of law and to conduct cases on behalf of the crown. His salary is £2000 a year but before 1931 it was £7000, and he also receives fees. He is knighted on appointment.

Power of Attorney is the authority given by one person to another to do business on his behalf. It is done when a man leaves the country for a considerable time. It enables the person who receives the power to deal with his dividends and other income and in general to act for him. It should be drawn up in proper form by a solicitor and must be stamped.

Attraction Term used in physics for the force which causes particles to be attracted or drawn together. This mutual attraction occurs whether the bodies are at rest or not. In chemistry the attractive force acting between atoms is termed chemical affinity, that between molecules of the same substance cohesion, and between molecules of different bodies adhesion. Capillarity is the attractive force by which liquids rise in tubes of very small bore. In all these forms of attraction the force acts through small distances, but when bodies tend to draw together through greater distances the term gravitation is used. Magnetism and electricity are forces which manifest by attraction and its opposite repulsion.

Aubergine Plant of the natural order *solanaceae*. It is an annual and is usually grown in Great Britain in pots, although it will thrive out of doors in the summer if in a warm sheltered position. It may reach a height of 3 ft and bears blue flowers. Its white or purple fruit is shaped like an egg and the plant is sometimes called the egg plant. It is edible.

Aubers Village of France. It is about 4 m to the north of La Bassée. Near are some low hills about 100 ft. high known as the Anbers Ridge. On May 9, 1916, the British made an attack on the ridge, but it failed with heavy losses.

Auburn Village of Co Westmeath, Irish Free State, its real name being Lissoy. It is 7 m from Athlone and owes its fame to the reference in Goldsmith's *Deserted Village*.

Auchinleck Town of Ayrshire. It is 4 m from Manchinle and 15 from Ayr, on the LMS Rly. The family of Boswell, to which James Boswell belonged, were lords of Auchinleck and lived at Auchinleck House. Here in 1716 Sir Alexander Boswell set up a printing press. The manuscripts from the house are now in the National Library in Edinburgh. The chief industry is coal mining. Pop 3500.

Auckland City of New Zealand. It stands on a fine harbour on the coast of North Island and is connected by railway with Wellington and other places. The buildings include the Anglican and Roman Catholic cathedrals, many other churches, the town hall, government house and law courts. A fine museum has been erected as a war memorial. There is a university college and a grammar school and the city is well provided with parks. The industries include shipping for which there are large modern docks. Timber, butter and other products are exported. In April 1932, there were serious riots in the city, and a great deal of damage was done. They were largely due to discontent on the part of public servants. Pop (1932) 218,400.

The Province of Auckland, of which the city is the capital, covers about half of North Island.

Auckland Group of islands in the Pacific Ocean. They are 180 m south of New Zealand and cover 329 sq m. The largest is Auckland, which covers 280 sq m and on it is Port Ross, with a good harbour. The islands, which are uninhabited, belong since 1863 to New Zealand.

Auction Sale at which a person offers property for sale on the understanding that the highest bidder obtains it. The seller or vendor may put a reserve price on the property below which it will not be sold but it is illegal for him to employ a person, called a puffer, to bid up the price, unless he states openly that he is so doing. By a law passed in 1928 it is illegal to offer consideration to any person in order to induce him to abstain from bidding at an auction sale. The person making the offer and also the one accepting it can be punished by fine or imprisonment. A Dutch Auction is the reverse of an ordinary auction. The property is started at a high price which is reduced by stages until someone makes a bid.

Auctions are conducted by auctioneers. Any one can act as an auctioneer provided he takes out a licence which costs £10 a year. Auctioneers usually combine their calling with that of a valuer or appraiser and sometimes of an estate agent. They have a professional organisation, the Auctioneers & Estate Agents Institute at 29 Lincoln's Inn Fields, London WC. This provides training for those who wish to enter the profession.

Auction Bridge Card game, a form of ordinary bridge. The essential difference is that the right of making trumps is put up to auction instead of being taken by the players in turn.

Beginning with the dealer each player may bid in turn the one who bids highest securing the right to declare trumps. No trumps ranks highest and then follow spades,

hearts, diamonds and clubs. The values per trick are 10, 9, 8, 7 and 6 respectively. To secure the declaration a player must make the highest bid in points. Thus he will not secure it by bidding four clubs if an opponent bids three no trumps, because three no trumps (30) is higher than four clubs (24). Players can double and redouble a call and in this case the number of points lost or won is doubled or redoubled. Thus, if a call of three no trumps is doubled and redoubled, the declarer, if victorious, will count 40 points per trick.

As in ordinary bridge the one who secures the bid plays also his partner's hand which is exposed on the table. He scores below the line, or towards game, for every trick made in excess of six, his opponents cannot score below the line. Both sides, however, can score above the line, which does not count towards game, but adds to the points obtained. Failure to make the number of tricks declared counts 50 each trick to the opponents. Honours are scored according to a scale. Little slam, or 12 tricks, counts 50 points, grand slam, or 13 counts 100. Game is made by the first side to score 30 points below the line and rubber by the first side to score two games. Rubber counts 250 points above the line. See BRIDGE, CONTRACT BRIDGE.

Aucuba Hardy evergreen shrub of the laurel family. It may be grown in shady places in the garden, or in large pots. It should be planted in March or October, and can be propagated by taking cuttings either sown in a frame, or rooted in the open in the autumn.

Audenshaw Urban district of Lancashire, 5 m from Manchester, on the L.M.S. Rly. It has engineering works and cotton mills. Pop (1931) 8460.

Audiphone Instrument for assisting hearing. It consists of a plate of thin vulcanite bent and kept by strings in a certain degree of tension. The edge is placed in contact with the front teeth and so by carrying the sounds to the brain makes them audible to persons with defective hearing.

The audiometer is an instrument invented in 1873. It is an electrical apparatus used to test the sense of hearing.

Audit Formal examination of the accounts of a company or association of any kind. It is usually conducted by auditors who are trained accountants. The national accounts are audited by officials in the office of the comptroller and auditor-general.

In former days the term audit was used for the occasion on which tenants came to pay their rent to their landlord. It was usually marked by a dinner or other feast, and at some of the colleges of Oxford and Cambridge a special ale, called audit ale, was brewed for use on these occasions.

Auditor Person who audits the accounts of a company. By English law every limited liability company must have an auditor who is elected by the shareholders. He must examine the books and accounts of the company and make his report on the balance sheet. To day auditors are almost invariably chartered, or other accountants. They are employed also to audit the accounts of municipal corporations and other public bodies.

Audley Urban district of Staffordshire, 4 m from Newcastle-under-Lyne, on the L.M.S. Rly. It is a coal mining centre. Pop (1931) 13,619.

Audley End Village of Essex, just outside Saffron Walden, on the L.N.E. Rly. The house called Audley End is the seat of Lord Bravbrooke. Built between 1603 and 1616, it is a magnificent house in the Elizabethan style and contains some wonderful treasures.

Augean Stables In Greek legend some stables owned by Augeas, King of Elis. Hercules, as one of his labours, was ordered to cleanse these stables which held 3000 oxen. He did this by turning two rivers through them. Augeas refused to give to him the promised reward of 300 oxen and thereupon he was killed by Hercules.

Augsburg City of Bavaria, 37 m from Munich. Its buildings include the cathedral and the churches of S. Ulrich, S. Anna, S. Maurice and the Holy Cross, all with features of interest. The town hall, with its golden hall, the hall of the butchers, the arsenal and the Perlach Tower are notable secular edifices. The Fuggerei, a collection of houses for the poor, was built about 1530. The Fuggerehaus is one of several mansions dating from the great period of the city's history. The gateways and bastions of the fortifications still stand and the city is adorned with several squares and some beautiful fountains. Augsburg manufactures cotton and woollen goods, and there are engineering works and paper mills.

The city owes its name to the Emperor Augustus in whose time it was a Roman settlement. In the Middle Ages it was a great trading and financial centre, one of the most important in Europe, and was a free city until 1806 when it was given to Bavaria. Pop 170,000.

The Confession of Augsburg, drawn up in the city in 1530, is a statement of the Lutheran faith. It was the work of Melancthon.

The League of Augsburg was formed in 1686 against Louis XIV of France who had just seized Strasbourg and other parts of Alsace. Its members were the Emperor Leopold I, the Kings of Spain and Sweden, the Netherlands and several German and Italian princes. In 1688 it was joined by Great Britain and it carried on the war against France that was ended in 1697 by the Treaty of Ryswick.

Augur In ancient Rome a priestly official. Their business was to foretell events from signs and omens, such as the flight of birds, the movements of beasts, etc.

Augustan Age Name given to the period during which Augustus ruled over the Roman Empire. It was remarkable for its literary glories as Virgil, Horace, Livy, Ovid and others lived and wrote at this time. In England the reign of Anne is sometimes called the Augustan age.

Augustine English saint and archbishop. He became a monk and later prior of a monastery in Rome. In 597 Pope Gregory I sent him to England at the head of 40 monks to convert the English. The party landed in Kent and by the kindness of King Ethelbert was allowed to settle in Canterbury. In 597 Augustine was consecrated a bishop, and in 601 was made archbishop over

England. He died May 26, 604, and was buried in Canterbury. Later he was canonised.

Augustine Christian saint and theologian. Aurelius Augustinus was born at Tagaste in Tunisia, Nov. 12, 353, his parents being Patricius, a Roman official, and Monica, a Christian. He was educated at home and then went to the university of Carthage. He became a teacher of rhetoric in his native town and then in Carthage, Rome and Milan.

In 387, having accepted Christianity, he was baptised. He then passed some years in retirement studying hard, before being made a presbyter and then a priest. He was sent to assist the Bishop of Hippo and in 395 was himself elected bishop there, a position he held for the rest of his life. He died during the siege of Hippo by the Vandals, Aug. 28, 430.

Augustine's writings include two books of supreme value. One is his *Confessions*, perhaps the greatest work of its kind and one of compelling interest; the other is *De Civitate Dei* (The City of God), a defence of the Christian Church, and its place in the world. He also left many letters and sermons, and some commentaries on the Scriptures.

Augustinian Order of canons in the Roman Catholic Church. The date of its foundation is uncertain, but it was reorganised in the 12th century, and was strong in England, and more so in Scotland, until the Reformation. The canons occupy themselves with ordinary clerical work, although they live in communities. Their most famous house is the hospice on the Great St. Bernard Pass, and they have several in England. They claim to have been founded by St. Augustine and are sometimes called Austin canons. There is a similar order for women.

Augustinian, or Austin friars is an order of mendicant monks dating from the 5th century. They had a house in London in the street called Austin Friars.

Augustus Roman emperor, born Sept. 23, 63 B.C., a son of Gaius Octavius and Atia, a daughter of Julius Caesar's sister. After his father's death he was adopted by his uncle and took the name of Gaius Julius Caesar Octavianus. When Caesar was murdered in 44 B.C., he was studying away from Rome, but returned at once to take his place. Having been elected consul, he formed an alliance with Antony, from which sprang the triumvirate—Lepidus making the third member—that restored order in Rome by a ruthless severity towards its enemies. In 42 the triumvirs led an army against Brutus, who was killed at Philippi. A breach with Antony followed, but this was soon closed, and the Roman realm divided among the three. Octavian took the western portion and Antony the eastern, leaving Africa to Lepidus.

Octavian next crushed the aspirations of Pompey, and removed Lepidus from power before entering upon his final quarrel with Antony. This broke out in 42 B.C. contributory causes being Antony's intrigues with Cleopatra in Egypt and his repudiation of his wife, a sister of Octavian. Octavian's fleet under Agrippa won the famous sea fight at Actium in 31 B.C., after which both Antony and Cleopatra committed suicide.

Octavian was now sole ruler of the whole Roman world. A visit to Egypt was followed by a splendid triumph in 29 B.C., when the title of Augustus was given to him. He already possessed the extraordinary powers bestowed

upon him by the Senate, but these, in 27 B.C., he offered to resign. Instead, further powers were given to him, including the command of the army with the title of imperator.

For the next 41 years Augustus, as he was now called, was, except in name, an emperor with unlimited powers. These years were a period of peace and prosperity of no ordinary kind. The empire was well governed, special attention being paid to the provinces, although its borders were not extended. Reforms of various kinds, financial and others, made easier the lot of the people and created the idea of *Pax Romana*, a world of ordered peace. Rome was rebuilt, and its literary glories made the Augustan age. He died Aug. 19, A.D. 14.

Augustus Name of two kings of Poland. Frederick Augustus was born at Dresden, May 12, 1670, being a son of the elector of Saxony. In 1694 he became elector of Saxony on the death of his brother, and in 1697 he was chosen King of Poland, taking the name of Augustus. In 1704 he was defeated by the Swedes and deposed, but he returned in 1709, and remained king until his death at Warsaw, Feb. 1, 1733.

Auk Two birds of the family alcidæ. The great auk, now extinct, is remarkable because it lacked the power of flight. It was about the size of a goose, with black plumage on the head, and was found in the northern hemisphere, especially Newfoundland and Spitzbergen. It fed on fish, and laid a single large egg. Great numbers were killed for the feathers, and the bird became extinct before 1860. The eggs are valued by collectors. The little auk is still found in the northern hemisphere. It is about 8 in. long and can fly.

Auld Reekie Nickname of Edinburgh (qv).

Aumonier Stacey, English writer. He was born in 1887, the son of a sculptor and was educated at Cranleigh School. He became an artist, exhibiting at the Royal Academy, and also appeared as an actor chiefly in sketches written by himself. His reputation, however, was made by his writings, especially his short stories, of which a great number appeared in the magazines and in a volume form. He also wrote several novels. Aumonier died Dec. 21, 1928.

Aurangzeb Famous Mogul ruler of Hindustan. He was born in November, 1618, and died March 8, 1707. He spent his youth in struggles with his brothers for their father's throne, and during his reign, his religious zeal, coupled with the growth of the Mahratta power, weakened his empire beyond repair.

Aurelian Roman emperor. Lucius Domitius Aurelianus was born of poor parents about 213, became a soldier and one of the generals of the Emperor Claudius. On the death of Claudius in 270 he was declared emperor by the troops. His short reign was occupied in beating back the barbarians who had invaded his empire, and in other wars. He crushed a rival who had set himself up in Gaul and was rewarded with the title of the restorer of the world, and a splendid triumph in Rome. His other deeds included crushing rebellions in Rome and in Egypt, and in introducing reforms into the army and the state. He was murdered near Byzantium while on a campaign against the Persians in 275.

Aurelian began the building of the great wall in Rome which was named after him. Parts of it still stand. It was 12 m. in circum-

ference and 60 ft. high. Begun in 271, it was finished in 280.

Aureole In Christian art the radiance placed by artists around a divine or holy figure. It should be distinguished from the nimbus, which surrounds the head only.

Auricula Flowering plant. A native of Switzerland, it will also grow in Great Britain, where it is a popular garden flower. It has a rosette of smooth leaves and bears flowers on the top of a leafless stem. The original auricula was yellow, but varieties in many colours have been produced. The auriculas are suitable for the border and do well in ordinary soil. In addition to the Alpine auricula there is a show auricula which is grown in pots in a frame, or in a cold greenhouse.

Aurochs Large animal now extinct. A kind of wild ox, it was found in Europe and from it the domesticated ox has sprung. It seems to have disappeared in the 17th century, its last habitat being Lithuania. Bones of the animal have been found in Great Britain, and these show it to have been an animal of enormous size.

Aurora Goddess of the dawn and as such the goddess of youth and beauty. She was the Latin equivalent of the Greek Eos, and was believed to rise every morning in the east and cross the sky in a chariot drawn by two horses. Her husband was Tithonus.

The aurora borealis is a phenomenon seen at night in northern latitudes. It consists of beams of many coloured lights quivering in the sky. It is seen in the north of Norway and in corresponding latitudes. A similar phenomenon in the southern hemisphere is called the aurora australis, or southern lights. The cause of the phenomena is unknown, but it has been suggested that it is connected with emanations of an electro-magnetic nature from the sun.

Auscultation Medical term meaning listening to sounds in the body. The method is employed by doctors who use the stethoscope for this purpose. In this way they obtain some knowledge of the condition of the heart and the lungs.

Austen Jane English novelist. A daughter of Rev. George Austen, she was born at Steventon in Hampshire, Nov. 16, 1775. She was educated at home and in cultured surroundings, and read a good deal. In 1801 she went to live in Bath and in 1805, her father being dead, moved to Southampton. In 1809 she settled at Chawton, and died at Winchester, July 18, 1817. She was buried in the cathedral there.

Jane Austen wrote six novels and these give her an assured place in English literature. In order of appearance they are *Sense and Sensibility*, *Pride and Prejudice*, *Mansfield Park*, *Emma*, *Northanger Abbey* and *Persuasion*. All but the last two were published anonymously. The novels deal with a narrow social circle and lack entirely the elements of sensation and surprise, but within these limitations they are perfect. The characters are depicted with remarkable fidelity and consistency, and not a little humour.

In 1871 *Lady Susan*, written when she was very young, was published. In 1928 *The Watsons* appeared, an unfinished novel completed by other hands. Her *Life and Letters* have been written by W. A. and R. A. Austen Leigh, and there are many other books on her work and influence.

Austerlitz Town in Moravia. It is about 14 miles from Brunn and is famous because here Napoleon won one of his greatest victories. The French had just taken Vienna, and the Austrians were gathering help to recover it. The Prussians had not yet arrived, but Austrian and Russian troops were assembled near Austerlitz, and there Napoleon decided to attack them. Their strength was over 80,000, he had about 65,000 men. On Nov. 28 the two armies came into touch, and on Dec. 2 the battle was joined. At first the French were pressed back, but the emperor countered this by attacking the Russians' flank. There was a desperate struggle, but in the end the Russians were driven back and a like fate was suffered by their reserves. The French cavalry and artillery did much damage and the allies lost altogether nearly 30,000 men. The French lost about 7000.

Austin Alfred English poet. Born at Headingley, Leeds, May 30, 1835, he was educated at Stonyhurst, Oscott and the University of London. He became a barrister, but worked as a journalist, being editor of *The National Review* 1883-93. He wrote a good deal of poetry, and in 1896 was made poet laureate. He died June 2, 1913.

Austin John. English jurist. A miller's son, he was born near Ipswich, May 3, 1790, and after entering the army turned to law, and in 1819 became a barrister. He was made Professor of Jurisprudence in the University of London in 1826, a post he held until 1832. He died at Weybridge Dec. 1859, having passed some years in France and Germany.

Austin's fame rests upon his writings, given first in the form of lectures. They are contained in two volumes, *The Province of Jurisprudence Determined* and *Lectures on Jurisprudence*. His definitions are remarkable for their precision, and are regarded as permanent contributions to the history of law. He is responsible for the Austinian theory of law. This confines law to the commands of a sovereign who has power to enforce it, and does not regard customs and usages which belong to an earlier age as within this category.

Austin Sir Herbert. English manufacturer. Born at Little Missenden, Bucks, Nov. 8, 1866, he was educated as an engineer. He spent a few years in Australia, but in 1890 returned to England and became connected with a firm making machinery for sheep shearing. The possibilities of the motor-car soon attracted his attention, and in 1890 he started in business for himself at Northfield, Birmingham. In a few years he was one of the largest makers of motor-cars in the country. He was specially successful with the small cars known everywhere as "baby Austins". From 1919 to 1924 Austin, who was knighted in 1917, was M.P. for the King's Norton division of Birmingham.

Australasia Word used for Australia, New Zealand and their dependencies. It thus includes, as well as Tasmania which is part of the Commonwealth of Australia, New Guinea, New Caledonia, New Hebrides, the Solomon and Fiji Islands, and other groups.

Australia Continent, island and also a self-governing commonwealth under the rule of King George V, and as such part of the British Empire. It covers 2,974,581 sq. m. and had, in 1932, a population estimated at 6,549,076. These figures include Tasmania,

which is not part of the island, but is included in the Commonwealth. There are about 60 000 aborigines.

The continent has a coastline of about 8000 m. It extends for about 2000 m from north to south, and rather more from east to west. Much of the country is a great plain, but there is a considerable mountain range, the Australian Alps, in the east. Mt. Kosciuszko, 7300 ft., is the highest point. The three great rivers are the Murray, Darling and Murrumbidgee, all in the east. Torrens is the largest of many lakes. Sydney and Melbourne are the greatest centres of population, and Sydney the principal seaport.

The Commonwealth was founded in 1901 when the six states, New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania, were united in a federation. Northern Territory, not being a state, came under the rule of the Commonwealth which, in 1928, divided it into two parts, North and Central. The Commonwealth has a foreign possession in Papua, and under mandate from the League of Nations administers the Bismarck Archipelago, part of New Guinea and certain of the Solomon Islands, formerly German colonies. To serve as the federal capital a new city called Canberra was laid out. In May, 1927, the Parliament buildings there were opened by the Duke of York.

The Commonwealth is governed by a governor general, representing the king and a cabinet which is responsible to a parliament of two houses. One of these is the Senate to which each state sends six representatives. The members of the other, the house of representatives, vary in number according to the populations of the several states, but it was 76 in 1932.

Australia's chief industry is the rearing of sheep for their wool, and the world's wool is largely supplied from here. Cattle are kept, and beef and mutton exported. Agriculture suffers from the want of water on vast areas, but irrigation schemes have done much to overcome this handicap. Wheat is extensively grown, and in the hotter parts—for one third of the country is within the tropics—cotton, sugar and the rarer fruits are cultivated. The vine is grown, and Australia produces a good deal of wine for export. Butter, flour and hides are other exports. Of minerals, the output of gold and silver is less than formerly. Coal and lead are also mined, lead being especially an Australian product. Timber is cut and exported.

A high proportion of Australia's inhabitants live in cities and towns, and there manufactures of all kinds are carried on. An important group is the one that turns the native metals into finished or semi-finished articles. Another is concerned with the preparation of foodstuffs, and a third with the spinning and weaving of cotton and other textile materials. Australia protects her industries by placing high tariffs upon imported goods. Preferences, however, are allowed on goods sent from Great Britain and some other parts of the Empire. These vary according to the class of goods, but they are substantial, and provide a good deal of revenue. Other revenue comes from an income tax, customs duties, death duties and a land tax.

Australia uses the British systems of coinage and weights and measures. The Commonwealth Bank, a state institution, controls the issue of bank notes and the banking system follows the English model. The legal system

is also English, and includes a court of appeal. A simple form of land transfer is in operation.

Compulsory military training was introduced in 1907, and in the World War the Australian forces won undying fame. There is a navy and an air force. The railway system, 26,000 miles in all, is mainly owned by the nation. There is a trans-continental line in being, and another, north to south, is projected. The Post Office, with the telegraph and telephone services, is a national institution. The country has set up a service of air mails and a chain of wireless stations. The state provides pensions for the aged and infirm, and benefits for cases of maternity. Australia is represented in England by a High Commissioner whose headquarters are at Australia House, Strand, London. W. C. In 1932 a new departure was the appointment of a cabinet minister, Mr. S. M. Bruce, to reside in London.

HISTORY—In 1685 Australia was visited by William Dampier, but the first settlement was only made in 1788, eighteen years after Captain Cook's arrival. By thus settling at Sydney the English obtained possession of the continent, but for a time it was only used for convicts who were sent to Botany Bay. About 1790 free settlers began to arrive, and these made their homes on or near the coast. Within the next fifty years or so the five states came into being, New South Wales being the senior. Representative institutions were soon given and then followed responsible government, the last to secure this being Western Australia in 1890. During these years, especially between 1817 and 1871, the interior of the country was explored and surveyed.

In 1851 the discovery of gold in Victoria led to an increase in its population.

On the political side the chief event of the late 19th century was the desire for a federal union. This came to fruition in 1901. Since then perhaps the outstanding features of Australia's political life have been the strength of organised labour, tested in several costly strikes and the twin determination to keep the country for the white man and to protect its industries against external competition.

After 1901 the Government of the Commonwealth was conducted by the party under Sir E. Barton and Alfred Deakin that represented the more conservative elements in the country, although for a time the latter was only able to remain in office by an alliance with labour. In 1908 Mr. Andrew Fisher, the leader of the Labour Party, was Premier, as he was again in 1910 and 1914-15. In 1915 he was succeeded by his colleague, W. M. Hughes who remained in power until 1922 and represented Australia at the peace conference. His government was, however, in practice, a national one.

In 1922 Hughes was defeated and a Conservative, S. M. Bruce, became Premier. He was in office until 1929 when Labour again was successful at an election and its leader, J. H. Scullin, took charge of affairs. His period of office was marked by grave economic difficulties, the culmination of a policy of excessive borrowing coupled with serious falls in the prices of the commodities produced. The credit of Australia gave way and drastic measures were taken to support it, taxation was increased, expenditure reduced, imports restricted. The interest on loans was reduced, and agreements made for balancing the Commonwealth and the state budgets.

In 1931 New South Wales refused to meet the

interest due on its loans in London and New York, but the Commonwealth shouldered the burden, and in 1932 passed legislation for the attachment of revenues in New South Wales to cover the payments made Mr Lang, premier of the state, opposing the Federal Government in its purpose, was dismissed by the Governor, Sir Philip Game. Before this Mr Scullin had been defeated at a general election in 1931, and a Coalition Government had been formed under Mr J A Lyons, a former colleague. In Western Australia at this time there was an agitation for secession from the Commonwealth, but the United Australia party held its ground, and was returned to power at the 1934 election. Mr Lyons is still (1936) Prime Minister. Since 1931 Australian finance has made a progressive recovery.

In 1914 Australia sent a large contingent to assist in the war against Germany. Conscription was rejected, but 400,000 men volunteered and nearly 60,000 were killed. The Australian corps did splendid service in Gallipoli and Palestine, but its feats there were more than equalled by those on the Western Front in 1917 and 1918, especially in and around Pozieres. The Australian Navy did good service to the allied cause.

Australia Day National holiday in Australia. It is Jan 26, the anniversary of the day on which Sydney was founded. It is sometimes called Wattle Day.

Austria Republo of Europe, created in 1918. It has an area of 32,369 sq m, and in 1931 had a population of 6,732,625. Its own people call it Oesterreich. It consists of nine provinces, Burgenland, Lower Austria, Upper Austria, Salzburg, Carinthia, Styria, Tyrol, Vorarlberg, and the capital, Vienna. The government is conducted by a president, elected, as in the United States, every four years, and a parliament of two houses.

The members of the Lower House (Nationalrat) are elected every four years, all men and women over 21 voting. The members of the Upper House (Bundesrat) are chosen by the parliaments or diets of the provinces. They can advise only. There is a council of ministers, or cabinet, responsible to the parliament. The national flag has three horizontal stripes, the top and bottom being red and the centre white. Vienna is the largest city. Other populous places are Graz, Linz, Innsbruck and Salzburg.

In 1922, when the finances of the new country were in a serious condition, the League of Nations appointed a committee to inquire into the matter. A loan was raised, and many reforms were carried out, the result being that Austria's financial condition became, for the time being, satisfactory. In 1929, however, fresh difficulties arose, and in 1932 the financial position was again very grave. In April a conference met in London with the object of finding out how Austria and the other Danubian states could be saved from bankruptcy. In 1933 Dr Dollfuss (assassinated, July, 1934) became dictator, taking over the entire state executive.

The basis of the coinage is the gold schilling, a new coin worth 10,000 kronen. The coins in circulation are mostly token money. The National Bank, opened in 1923, is a private, not a state, institution.

Austria has an army, but not compulsory service. Her only navy consists of a few gunboats on the Danube. By the treaty of St Germain, 1918, the army must not exceed 30,000 men. The same treaty forbids the

country to have an air force, or to manufacture or import aircraft. Flying for commercial purposes, however, is developing, and Vienna is an important air port.

Although many people work on the land, Austria, like Great Britain, imports food stuffs. Wheat, rye, barley, oats and potatoes are grown. Sugar and tobacco are produced, and there are some manufactures. Coal and iron ore are mined, and a good deal of timber is cut. Tariffs are charged on all goods entering the country. Some of the railways are owned by the State.

There is much traffic on the Danube, but Austria has no seaports. A canal to unite the Rhine and the Danube now (1933) being cut, will it is hoped, be of great benefit to the country. Austria has a Consul-General at 18 Belgrave Square, London S.W.1.

Austria was originally a mark or border district on the Danube, being the East Mark. In 1156 it was made into a duchy, and in 1282 it passed under the rule of a member of the Hapsburg family, a rule that lasted until 1918. Enlarged at the close of the Middle Ages it covered about 50,000 sq m. From the time of the emperor, Charles V, its rulers were also heads of the Holy Roman Empire, and historians of the 17th and 18th centuries use Austria and the Empire as synonymous terms. In 1804, just before the Holy Roman Empire was dissolved, the Emperor Francis took the title of Emperor of Austria, and this empire lasted until the close of the World War. Its symbol was the double-headed eagle which its rulers took as successors of the old Roman emperors.

Austria-Hungary Empire of Europe. It lasted from 1867 to 1918, and had only two rulers, Francis Joseph and Charles. It was formed in 1867, when Austria and Hungary made an agreement or *Ausgleich* much as England and Scotland did in 1707. Before that time they had been quite independent of each other, although ruled by the same sovereign. It was often called the Dual Monarchy, and its joint affairs were looked after by three departments of state, each under a minister, and by two delegations, as they were called, one representing each country. The monarchy broke up as a result of the World War and Austria and Hungary again became independent of each other.

Austria-Hungary had an area of 261,000 sq m and a population of over 50,000,000. It consisted of the various provinces of Austria, of Bohemia, Silesia, Moravia and other dependent districts, and of Hungary, including Croatia-Slavonia, Bosnia and Herzegovina were added in 1878.

Austrian Succession War of the European war. It began in 1740, when Frederick the Great of Prussia invaded Silesia, and ended with the Peace of Aix-la-Chapelle in 1748. It was caused partly by Prussia's desire for revenge on Austria for alleged double dealing, partly by the growing spirit of Prussian aggrandisement. It involved most of the great European nations, France, for diplomatic reasons, especially urging the partition of Austria and the election of the Elector of Bavaria as Emperor.

Auteuil Suburb of Paris, famous for its racecourse. It lies to the south-west of the city between the Bois de Boulogne and the Seine. Races take place here nearly all the year round.

AUTHOR

Author Person who produces or creates something. To-day however it relates chiefly to one who writes, and so creates a piece of literature or music whether novel, article, play, poem, opera, or saana. The writing is the author's property until he sells it, and as such is protected in all civilised countries by the law of copyright.

In Great Britain there is an Incorporated Society of Authors, Playwrights and Composers that exists to protect the interests of authors that was founded in 1883 and any writer can become a member on payment of a small subscription. The offices are at 11 Gower Street, London W.C. The Authors' Club is at 2 Whitehall Court, S.W. 1. See COPYRIGHT.

Authorised Version

Autobiography Biography written by oneself. Notable autobiographies are those of Gibbon, Benvenuto Cellini and John Stuart Mill. The famous *Diary of Pepys* is an autobiography, as is the *Confessions* of Rousseau. Others are the *Confessions* of St. Augustine and the *Confessions of an Opium Eater* by De Quincey and the *Apologia* of J. H. Newman. Sir E. Gosse's *Father and Son* is an excellent modern example.

Autochthones People who had always lived in a country its first or original inhabitants. It is therefore equivalent to aborigines (q.v.).

Autocracy Form of government in which the ruler or autocrat, does as he likes. Such do not exist to-day, but they were known to the Greeks and others of the ancient world. The Government of Russia as it was before 1916, may fairly be called an autocracy.

Auto da Fé (Act of faith). Name given to a ceremony associated with the Spanish Inquisition. After sentence had been passed on heretics, a procession and service took place the chief figures therein being the officials of the Inquisition and the condemned persons. Mass was celebrated and the demned persons read out. The sentence which was then carried out, usually took the form of burning the condemned in public and this gave to the auto da fé its sinister meaning.

Autogiro

See GYROPLANE. Originally a document in one's own handwriting. A document to-day it means a signature only. A document wholly in one hand writing is called a holograph. The collecting of autographs is a hobby with many persons and some collections are very valuable. One of the best was that made by the late Alfred Morrison at Basilston Park. Reading Albums in which persons ask their friends to write their autographs were popular in the 16th and 17th centuries and there are examples in the British Museum.

Autolycus Greek hero. A son of Hermes, he lived at the foot of Mt. Parnassus, and was known as a thief. As he could change everything in escaping detection he was very successful in escaping detection but at last Sisyphus thought of a ruse. He burned his name into the hoofs of some cattle which Autolycus quickly stole. Sisyphus then found them when visiting the thief.

Automatic Writing Name given to a form of writing which psychic subjects produce when in a trance or semi hypnotic condition. It first

appeared in America about 1850-60, and is associated to-day with the planchette. It is used effectively in connection with investigation into abnormal mental states.

Automatism Theory that all the actions of living beings men included are automatic that is, they are brought about by the action of the body, not by the action of the brain. The brain will, according to this doctrine does not originate or cause any action, it merely records it. This idea was taught by Descartes.

Automaton Anything that works by itself strictly an automaton machine. Man commonly however, it means the figure of a man or animal or bird that does certain actions such as walking or slaying by itself. Automata of this kind were made by the Greeks and through the ages ingenious men have tried to produce them. In recent years Mr. J. N. Maskelyne produced an automaton that could play cards and chess, and also do problems in figures. The robot is a modern form of automaton. See ROBOT.

Automobile Usual word in the United States for the motor car. In Great Britain the great motoring societies use it, e.g. the Royal Automobile Club and the Automobile Association. The former was founded in 1897. Its club house is 89-91 Pall Mall, London S.W. 1, and it has a country club at Woodcote Park, Epsom. There is a similar club in Paris and other countries. The Automobile Association exists to look after the interests of motorists as regards using the roads and such matters. It dates from 1905 and its headquarters are at Farnham House, New Coventry Street, London W. 1.

Autoplasty Surgical operation to replace a damaged or lost part of the body by using skin, bone or other tissue from other parts of the same body. It was employed in England many years ago. During the Great War much progress was made and some extraordinary feats of autoplasty were performed. Skin, bone and flesh were grafted on to injured parts and terrible disfigurements were successfully dealt with.

Autopsy Internal examination of a dead body often called a post mortem. To perform this operation a medical man must obtain the consent of the relatives of the deceased, unless foul play is suspected. In this case the Home Office or the coroner may order an autopsy.

Autun City of France, on the river et Loire. It is famous for its cathedral. There are remains of several Roman buildings including two fine gateways. The town has manufactures, and agricultural produce is marketed here. Pop. 15,500.

Auvergne District in the centre of France. It was once a separate province and had its own dukes. Before the Revolution it was divided into two parts the capitals being Aurillac and Clermont. In the west are the Auvergne Mountains, extinct volcanoes, one or two of which are over 6000 ft. high.

Auxerre City of France on the river Yonne. 110 m. to the S.E. of Paris. Its chief glory is the beautiful cathedral with its Gothic choir and the stained glass windows. The capital of the department of Yonne. Pop. 22,000.

Ava Deserted city of Burma on the Irrawaddy River, 10 m. from Mandalay.

From 1364, when it was founded, until 1782 it was the capital of Burma. It was again the capital 1823-37. In 1839 an earthquake did much damage and the city's importance gradually declined. There are remains of its walls and palaces and of several temples. Lord Dufferin took the title of Marquess of Dufferin and Ava, and his eldest son is called the Earl of Ava.

Avalanche Gigantic mass of snow or ice, mixed with stones and earth, which falls from the mountains into the valleys. It often causes great loss to life and property. These falls occur chiefly in the Alps. Scientists have divided avalanches into four kinds. A drift avalanche is just snow driven by the wind. A rolling avalanche is a mass of hard snow that rolls down and gets larger as it goes on. A sliding avalanche is one that moves by its own weight, which also gets greater as it goes. The most dangerous are glacial avalanches. These are masses of frozen snow and ice, which in spring, when the snow begins to melt, break loose from the parent glacier and begin to move. See GLACIER.

Avalon To the Celts the place to which the heroes went at death. There they feasted and rested after their deeds of valour. Thither, according to Malory, King Arthur was taken, after he had been wounded. Tennyson makes use of this legend in *The Idylls of the King*, calling it the "island valley of Avilion." Avalon has been associated with Glastonbury, but there is no warrant for this.

Avars Tribe, or group of tribes. They came from Asia into Europe, where the Emperor Justinian made use of them to conquer the Bulgarians. They settled down in Pannonia, the modern Hungary, and were very troublesome neighbours to the Byzantine Empire, as well as to the Franks, Lombards and other peoples to the west of them. In 796 Charlemagne put an end to their raids.

Avebury Village of Wiltshire. It is 7 m. west of Marlborough, and is noted for the monuments of the Druids that have been found there. These are circles of stones, the outer circle being about 500 yds in diameter. Some of the stones are as much as 20 ft. high, and 12 ft. thick. Scholars think they formed a Druid temple.

Avebury Lord John Lubbock was born in London, April 30, 1834. He went to Eton, became a baronet on his father's death, and from 1870 to 1890 was an M.P., first as a Liberal, and then as a Liberal-Unionist. He was a banker, an aviator, calling in his family, but he is better known for his books and for his work in securing bank holidays, which was done by an Act of 1871. His books were very popular indeed, especially perhaps *The Pleasures of Life*, *The Use of Life*, and those about ants and bees. In 1900 he was made a baron and he died at Kingsgate, near Margate, May 28, 1913.

Avens Plant, a species of geum. There are two kinds, common avens and water avens. They are perennials, and belong to the order *rosaceae*. The common avens grows in hedgerows nearly all over Great Britain. It has yellow flowers not unlike buttercups. The flowers of the water avens which grow in damp places are much larger.

Aventine One of the seven hills of Rome. It is on the left hand of the Tiber to the S.W. of the Palatine. Servius Tullius, one of the early kings, made it part

of the city and on it built a famous temple to Diana. For long the hill was the plebeian quarter.

Aventurine Name both of a stone used for ornament and a glass made chiefly in Venice. The stone, which is found in the Ural Mountains, is reddish brown, or greyish brown in colour and has a brilliant look. The glass, however, is more brilliant in appearance.

Average In the ordinary sense the mean of a number of figures. It is obtained by adding together the figures and dividing the total by their number. Thus, if a man on six days works these hours 6, 7, 8, 4, 5, 6, or 36 hours altogether, he works 6 hours a day on an average.

All insurance is based on averages, the average ages at which people die, the average number of accidents in a given industry, and many others. In marine insurance average is used in a special sense. Losses to cargo are worked out either on a general or a particular average. This work is done according to elaborate rules by skilled men called average adjusters.

On the Stock Exchange, to average is to buy some more shares at a lower price than was given for those already bought.

Avernus Lake in Italy, 100 m. from Naples, and once the crater of a volcano. It is 2 m. round. The ancients looked upon it as the entrance to the infernal regions, hence Virgil's line *Facilis descensus Averno*. The Romans made it a harbour and cut a canal to link the lake and the sea. In 1536 these works were destroyed by an earthquake.

Averroes Name given to the Arab philosopher, Abul-ibn-Roshd. In 1126 he was born at Cordova, and he became both a lawyer and a doctor. He died, Dec. 12, 1198. His name lives, however, because of his *Commentaries* on Aristotle, for whose teaching he had a profound respect. He took Aristotle's ideas and gave them a new currency, founding a school of thought to which Roger Bacon belonged. This flourished for many years, and Averroes was regarded by several generations as the great exponent of Aristotle's ideas.

Aviary (Lat *avis*, a bird.) Place where birds are kept in captivity. An aviary should be of metal, as such can be kept clean more easily than wooden ones. Care must be taken in selecting the birds, as some birds do not agree well with others. Birds from tropical countries need special temperatures, and food and drink must be carefully provided. In Great Britain to-day the tendency is to replace the aviary by the bird sanctuary, which has the great advantage of giving a freedom which the best aviary cannot do. This, however, only applies to domestic birds, foreign birds, if kept, still require an aviary. See BIRD.

Aviation Science and practice of flying machines, or aeronautics. There is little to choose between the two terms, but aeronautics is perhaps the more generally used. See AERONAUTICS.

Avignon City of France, standing on a hill above the Rhône, 53 m. from Marseilles, on the direct railway line from Paris. The chief building is the great palace in which the Popes lived from 1309 to 1378. Near is the cathedral of the Notre Dame dating from the 12th century and round the city are the old walls. There are some manufactures. The city

remained the property of the Pope until 1797, when it was sold to France Pop (1931) 57,228

Avlona Alternative name for the capital of Albonia, generally called Valona

Avoca Vale in Wicklow, Irish Free State It is regarded as one of the beauty spots of the country The little rivers Avon more and Avonbeg unite to form the Avoca, which runs for nine miles to the Irish Sea at Arklow The valley through which it flows is the Vale of Avoca, about which Thomas Moore wrote some famous lines It is one of the few parts of Ireland where minerals are found

Avocet genus of birds Their characteristics are red feet, long legs, bare thighs and a long, slender bill curving upwards They are found nearly all over the world, but not in England, although at one time they were common in the fen district.

Avogadro Amadeo Italian scientist He is famous for the discovery of a law which is named after him Briefly stated Avogadro's law is that under the same conditions of pressure and temperature equal volumes of all gases contain an equal number of molecules Born in 1776 he was Professor of Physics at Vercelli, and then Professor of Mathematics at Turin. He died in 1856

Avoirdupois System of weight in use in Britain and America

16 drams	=	1 ounce (oz.)
16 ounces	=	1 pound (lb.)
28 pounds	=	1 quarter (qa.)
4 quarters or		
112 pounds	=	1 hundredweight (cwt.)
20 hundredweights	=	1 ton

In it also a stone of 14 lb is used

The word is of French origin, meaning goods of weight. Its basis is a grain of wheat, and a pound is supposed to be equal in weight to 7000 grains

Avon Three short rivers in England and two in Scotland The word means water The Warwickshire Avon is nearly 100 miles long, and is associated with Shakespeare as it flows past Stratford. It runs from Naseby in Northamptonshire, past Warwick and other places, to the Severn at Tewkesbury The Bristol Avon rises in the Cotswolds and flows by Bath and Bristol to the Severn at Avonmouth It is 70 miles long and carries the shipping of Bristol. The Wiltshire Avon is only about 50 miles long It flows from Devizes past Salisbury, to the English Channel at Christchurch One of the Scottish Avons is in Bonfshire, a tributary of the Spey The other, in Lanarkshire, is a tributary of the Clyde Each is about 30 miles long

Avonmouth Seaport of Gloucestershire It stands at the mouth of the Avon 6 m. from Bristol and is the outport of that city It was founded in 1877, and its docks can accommodate very large vessels The G W and L M S Ry's run into it

Avory Sir Horace Edmund English lawyer Born Aug 31, 1851, he was educated at King's College, London and Cambridge He became a barrister and in 1889 was made junior counsel to the Treasury There he earned a great reputation as a prosecuting counsel especially in criminal cases. In 1910 he was made a judge and he has tried some of the most sensational cases of fraud such as the Hatry case in 1930 He died June 13, 1935

Avranches Town of France, on the west side of the Cotentin, the peninsula that juts out into the English Channel, 7 m. from Cherbourg In its splendid cathedral, which was destroyed at the Revolution, Henry II was solemnly pardoned for his share in the murder of Becket A stone in the square shows where he knelt on that occasion Pop 7000

Awe Loch in Argyllshire It is the longest in Scotland, and one of the most beautiful It is 23 m. long and covers about 15 sq. m. Its width varies the broadest part being 3 m. across There are several islands in the loch, and on these are ruins of a castle and churches dating back to a time when the country population was greater than it is today The little river Awe, only 5 m. long flows from Loch Awe to Loch Etive, through the Pass of Brauder It is a good salmon river The loch is reached from Oban, 22 m. away

Axenstrasse Highway in Switzerland part of the S. Gottard Road It is really a tunnel through the solid rock and runs for 7 m. by the side of the lake of Lucerne It was finished in 1866

Axholme District in the north of Lincolnshire Called an island, it lies between the rivers Don, Idle, Torne and Trent. It covers about 75 sq. m. and the soil is very rich At one time it was a marsh, but about 1630 it was drained by the Dutch engineer, Cornelius Vermuyden Epworth and Crowle are on the island, which is famous for its potatoes

Axinite Mineral also called axestone because the Maoris and others use it for the heads of axes Very hard, it is greenish in colour and is found in Cornwall as well as in China and other parts of Asia

Axminster Urban district and market town of Devonshire It is on the River Axe, 27 m. from Exeter and 146 from London, on the S. Ry. It gives its name to a variety of carpet, but this is no longer made in the town Pop (1931) 2327

Axolotl Larva, or early form of the salamander Found in North America, it resembles a large newt and for long was believed to be a kind of newt It becomes a salamander when it is deprived of water, and so loses its gills

Aye-aye Curious animal belonging to the lemur family, it is only found in Madagascar Very little is known about it, although there are specimens in European zoological gardens About the size of a cat, with a very bushy tail and paws like those of a monkey, it lives chiefly on insects prowling about for them at night, but will also eat sweet vegetables A strange feature is its middle finger, which is long and thin

Aylesbury Borough and market town also the county town of Buckinghamshire It is 41 m. from London, and is on both the L N E and L M S Ry's It has large printing works and other manufacturing establishments, but lives largely on its agricultural trade Around is the Vale of Aylesbury, with some of the richest land in England. The King's Head and some houses date from the 15th century The town gives its name to a duck bred in the district chiefly for the table Pop (1931) 13,382

Aylesford Village of Kent It is 38 m. from London by the Southern Ry. and 3 m. from Maidstone It is visited because here is a famous omelech called Kit's Coty

House, and other remains of early man. Near here took place the fight in which Horsa, one of the invaders of England was killed in 455.

Aylesford English title held by the family of Finch Henage Finch, a son of the first Earl of Nottingham, a prominent lawyer in the reigns of Charles II and James II, was made an earl in 1714, five years before his death. The title has since been held by his descendants. The earl's estates are in Kent and his eldest son is called by courtesy Lord Guernsey.

Aylesham Town of Kent, just outside Dover. It was planned in 1921 as a garden city, and houses the workers at the Snowdown Colliery. 400 houses have been built, and the place has a population of about 2,500. Through the centre of the town is a boulevard 100 ft wide. This runs into a market square, and on either side of it streets branch off.

Ayr Burgh and county town of Ayrshire, also a manufacturing town, a seaport and a watering place. It stands at the mouth of the River Ayr (33 m long), 40 m from Glasgow, by the L.M.S. Rly. The town itself is on the right bank of the river, the suburbs of Newton and Wallace town are on the left. There are engineering and chemical works, and factories for making woollen goods. The harbour is equipped for dealing with coal, the chief article of trade.

Race meetings are held four times a year. The historic interests include the "Two Brigs" made famous by Burns. St John's Church and the Wallace Tower are reminders of the town's important past. Pop (1931) 36,784.

Ayrshire County of Scotland. It has a long line of coast facing the Irish Sea. In olden times it was divided into three parts, Carrick, Kyle and Cunningham. It is 79 m long and covers 1132 sq m. In the south are some hills, but elsewhere the country is mainly flat. Ayr is the capital. Other towns are Ardrossan, Kilmarnock, Irvine and Saltcoats. Smaller ones include Troon, Beith, Fullarton, Cumnock and Stewarton. There are a number of short rivers, Ayr, Irvine, Gurnock, Doon and Girvan, and several lochs. Farming is the chief occupation but there are some coal mines. The county is specially noted for its cows and its cheese.

For the visitor the chief interest of Ayrshire is its association with Burns. James Boswell is another famous native. Other places of interest include Turnberry Castle and Crossraguel Abbey, both in ruins. The great Ayrshire family is the Kennedys. Prestwick with its golf course is in the county. Pop (1931) 285,182.

Aytoun William Edmonstoune Scottish poet. He was born in Edinburgh, Jan. 31, 1812, and educated there and in Germany. He became a lawyer, but spent much of his time in writing. Besides writing the *Bon Gaultier Ballads*, in which he was helped by Sir Theodore Martin, Aytoun made two collections, *Ballads of Scotland* and *Lays of the Scottish Cavaliers*. He died Aug. 4, 1865, having been for some time Professor of Rhetoric at Edinburgh University.

Ayuthia City of Siam. Until 1767 it was the capital of the country. It is built on piles in the middle of the River Menam, 42 miles from Bangkok, and has some notable ruins of Hindu temples. Pop 12,000.

Azalea Genus of deciduous shrubs belonging to the order *Ericaceae*, and botanically allied to the rhododendron. Originally brought from North America, China and Japan, they have been extensively cultivated in England both for garden and greenhouse. They are largely grown in Holland and Belgium for export. A British variety *A. procumbens* is found on some Scottish moors.

Azerbaijan Soviet republic allied to the U.S.S.R. To the west of the Caspian Sea it is about the size of Sootland, being 32,686 sq m in extent. Its population is about 500,000. They are mostly peasants engaged in growing corn, cotton, vegetables and other products, and in keeping cattle, but some are employed in and around Baku in getting and refining the oil. In race they are mostly Tartar. The capital is Baku.

Azimuth Word used by astronomers for the distance of a star in angular measure from the north or south point of the meridian, as the case may be.

Azo Word, much used by chemists, meaning without life. It is a shortened form of azota, a name given by Lavoisier to nitrogen. Azo-compounds, therefore, are organic substances derived from aromatic hydrocarbons which contain nitrogen in the molecule. Azobenzene is one of the most important, and its derivatives are very useful dyes.

Azores Group of islands in the Atlantic Ocean. They belong to Portugal, which is some 900 miles away, and cover altogether about 922 sq m. The largest, in order of size, are S. Michael's, Terceira, Pico, Fayal, S. George and Graciosa. Angra do Heroismo on Terceira is the capital. Ponta Delgada on S. Michael's is the largest town; and Horta, the capital of Fayal, has the best harbour. The climate is very mild. The inhabitants are mainly of Portuguese descent. They earn their livelihood by growing fruit, tea and sugar, fishing and making baskets and other articles, as well as wine. Pop 253,596.

Portugal secured these islands by colonising them in the 15th century. Off Flores took place the famous fight between Sir Richard Grenville in the *Revenge* and the Spaniards.

Azov Sea of Gulf in the south of Russia. It lies to the north of the Black Sea, is 220 m long and covers 14,660 sq m. The Strait of Kertch, or Yenikale, joins it to the Black Sea. Its currents make navigation difficult, but there are some seaports on the coast, notably Taganrog and Mariupol. The Don flows into it and its waters are almost fresh. The town of Azov stands on the Don, about 10 m from the sea.

Aztec Indian people living in Mexico when the Spaniards invaded it in the 15th century. The name is that of the land to which they are said to have come when they settled in Mexico about 1100. There they founded a powerful kingdom, their capital being where Mexico City now stands. This was destroyed by Cortes in 1519. The race and its language still survive, the latter is a Nahuatl dialect spoken to-day by about a million persons of Aztec blood.

The Aztecs knew something of astronomy, and had their own method of reckoning time. They used picture writing, worshipped many gods, and their priests had great power. Human sacrifices were demanded.

BAAAL Heathen deity. The word means lord and was given, therefore, to a number of gods, but it was never the name of a particular one unless the Baby Ionian Bel is a form of Baal. The Semites had a host of Baals, gods of springs, trees, animals, and other things, and the Jews were constantly attracted to the worship of one or other of them. Baal worship may be described as the worship of the male forces of nature. In some places, but not in all, Baal was the sun god.

Baalbek Former city of Syria, 35 m from Damascus. It was founded by the Phoenicians, and was soon a centre for the worship of their god, Baal. Its ruins, mainly from Roman times, include two massive temples, dedicated to Jupiter and Bacchus, the great Temple of Jupiter and the Acropolis, excavated in 1902-3. Baalbek was an important place until the time of the Crusades, and later, when it belonged to the Arabs. From 1840 to 1918 it was Turkish. In Oct., 1918, it was entered by British troops.

Babar Founder of the Mogul Empire. A Khan, or chieftain, in Central Asia in 1526, he burst into India, took Delhi, Agra and other places, and set up his empire, Agra being his capital. He died in 1530. Babar wrote some *Memoirs* which have been translated into English, and also some poems. His name means "tiger," a tribute to his ferocious character.

Babbacombe Small seaside resort, just outside Torquay. It is a very popular place for pleasure seekers, but is remembered in a more gruesome connection. In 1885 John Lee was charged with having murdered his employer, Miss Keyse, in her house here. He swore innocence, but was found guilty and sentenced to death. Three times the hangman tried to execute him, but each time was unable to do so. Lee, therefore, was kept in prison until released in 1907. See KENT'S CAVERN.

Babel Tower built by the ancients. It was erected (Genesis 11), by the descendants of Noah against the will of God, who destroyed the plan by making the builders talk a variety of languages. The builders hoped, by its means, to escape the consequence of another flood. It has been thought that the tower was built at or near Babylon and there the ruins of two towers have been discovered, but nothing certain can be said on the subject. To day the word babol is used for noise or confusion.

Bab-el-Mandeb Strait between Asia and Africa. Only 15 m wide, it separates Asia from Africa, leading from the Indian Ocean to the Red Sea. Perim is in the strait, which is divided by that island into the large and the small strait. The Arabs call it "the gate of tears" in memory of many disasters therein.

Babeuf François Noel. French politician. He was born at St Quentin, Nov 23, 1760, and was a clerk when the Revolution broke out. He soon made himself conspicuous as a leader. He started a paper and had the courage to stand up to Robespierre. In 1796

when there were serious disasters in Paris, he was again prominent, suggesting a new reign of terror. He was arrested, and executed May 27, 1797.

Babism Word describing a form of Mohammedanism that arose in Persia about 1843. It is named after its founder, who called himself Bab el Din. His teaching became very popular, but the shah and his ministers disliked it, and, in 1850, Bab was taken and executed. The sect, however, flourished, and his followers are still found in China, India and Japan, as well as in Persia, and a few in the United States. Babism contains intermixtures of Christianity and Buddhism, and is free from some of the crudities of Mohammedanism. For instance, Bab taught the equality of women with men. He believed he was the incarnation of God.

Babington Anthony. English politician. He was the son of a rich man in Derbyshire, and when Mary, Queen of Scots, was a prisoner at Sheffield, was one of her pages. In 1586, being then 25 years old, he formed a plot to free the queen, but spies told the authorities in London. Babington, with other plotters, was arrested, and executed, London, Sept 20, 1586.

Babirusa Curious animal of the same family as the pig. In the male the upper teeth are not in the mouth at all, but grow through the skin of the face, and then turn backwards over the forehead. It is found in certain parts of the East Indies.

Baboon Kind of monkey. They belong to the genus called dog headed, a mandrill being an example. Ferocious, ugly and strong, they can travel easily on all fours as their arms and legs are about equal in length. The baboons are natives of Asia and Africa, and live chiefly in rocky places.

Babu Hindu designation. Its English equivalent is Mr, but we understand by it a native of India who knows a certain amount of English, an Anglicised Hindoo.

Babul Tree of the acacia family. Its wood is suitable for sleepers, and it produces arabic. A dyo for tanning is obtained from the bark.

Babuna Pass in the Balkans, in Serbia, on the road from Voles to Monastir. Here in Nov, 1915, a battle was fought between the Serbians and the Bulgarians, who forced their way through the pass.

Baby Farming Practice of taking over the care of babies for payment. Baby farming led to so many abuses that Parliament intervened, 1871. A series of measures, culminating in the Children Act, 1908, has considerably checked a traffic which frequently caused the death of children whom the "farmers" found it profitable not to maintain.

Babylon Ancient city of Asia. It stood on the Euphrates about 60 m south of Bagdad, and was the capital of the Babylonian empire. Its great period was from about 1800 500 B.C., but its foundation may go back 3000 years earlier, or even more. It stood on both sides of the river, and as recent excavations show, was an enormous city.

filled with magnificent palaces, temples and other buildings. Its hanging gardens were counted one of the seven wonders of the world. Its ruins cover something like 50 sq m.

In 689 B.C. Babylon was partly destroyed by Sennacherib, but was rebuilt and in the time of Daniel was at the height of its glory. When Cyrus took it from Belshazzar it passed to the Persians. Alexander the Great, who died here, included it in his empire, but after his time decay set in and it was soon a deserted mass of ruins. Excavating work has been done on the site, and discoveries are constantly being made.

Babylonia One of the great empires of the ancient world. Babylonia is sometimes called the land of the Chaldees. It was the country through which the Tigris and the Euphrates flowed, the modern Iraq.

The country was probably inhabited by civilised man as far back as 9000 B.C., but little is known of it before 4300 B.C. It was at first divided into a number of City States. The chief people were the Sumerians, to whom Babylonia owes its earliest culture, in the south, and the Akkadians in the north.

Of the City States the chief were Akkad, Lagash, Ur, Kish, Erech, Sippar, Opis, Umma and Adab. Each was ruled by a patesi, as he was called, but later kings appeared. The greatest of these was Sargon, King of Akkad, who lived about 3800 B.C.

About 2300 B.C. the Kingdom or Empire of Babylonia came into being and survived until 539 B.C. Of its first dynasty the greatest king was Hammurabi, the law giver, who founded Nippur and by his wars made his country larger and greater. Other dynasties followed, but before 1200 B.C. the power of Babylonia was on the wane. To some extent it was restored by Nebuchadnezzar I, who lived about 600 B.C. but he could not bring Assyria again under the rule of Babylonia.

A second period of decline was checked, although only for a short time, by a second Nebuchadnezzar, the king of the Bible story. After his death in 561, however, the end came quickly. In 539 the Persians entered Babylon as conquerors and the empire disappeared.

The Babylonians had good houses, a knowledge of art and letters, and an elaborate system of law. Their religion was polytheistic, Bel being their chief god, and the priesthood was very powerful.

The Babylonian Captivity is the name given to a series of three deportations of the Jews by Nebuchadnezzar, as mentioned in the book of Jeremiah. The captivity gave rise to some of the most touching of the Psalms. After the overthrow of the Babylonian Empire by the Persians the return to Jerusalem took place, under the leadership of Ezra and Nehemiah (q.v.).

Baccarat Card game in which heavy gambling is possible. Baccarat is much played in France, at Monte Carlo and elsewhere, but it is illegal in Great Britain. There are various forms, and some of the baccarat clubs have their own rules.

The game is between a banker, who may be an official of the club or casino, or one of the players, and the players are called punters. The banker, using several packs of cards shuffled together, deals two cards to each player and two to himself. The value of the cards is 1 for the ace, 2 for the two, and so on to the nine. The ten and court cards count nothing. The banker receives money, accord-

ing to the stakes arranged, from those whose cards total less than do his own, and also from those whose cards total over 9. He pays to those who are nearer 9 than he is himself. In the case of a tie, the stake remains for the next coup or round. The banker starts the game by staking a certain sum of money, if this is lost the players are said to have broken the bank.

Bacchus Roman god of wine and fertility. Bacchus is identical with the Greek god Dionysus. Legends tell how he travelled, teaching people to grow the vine, and how he married Ariadne, whom he met in Naxos. His oxen and other evils were due to the hatred of Juno.

The name of Bacchus is usually associated with drunkenness and licentiousness. Enrolled among the gods, his worship was soon widely prevalent, and many festivals were held in his honour. A feature of these was the presence of women attendants, called Bacchae, or Bacchantes. In Rome the festivals, called Bacchanalia, grew more and more objectionable, until, in 186 B.C., they were forbidden. The Dionysia, as the celebrations were called in Greece, were marked by much drinking of wine and were equally licentious. Bacchus is identified with the Egyptian Osiris.

Bacchylides Greek poet. Born at Ceos, for long he was considered one of the great lyric poets of Greece, although few of his poems were known. In 1896, however, twenty poems by him were discovered in Egypt. The manuscripts are in the British Museum. He died about 450 B.C.

Bach Johann Sebastian. German musician. He was born at Eisenach, Saxony, March 21, 1685. Taught by his father, Johann A. Bach, he was in turn organist at Arnstadt, Mühlhausen, Weimar and Köthen. At Leipzig, where he was from 1723 until his death, July 28, 1750, he was director of music at the two chief churches and at the university.

Bach produced a great quantity of work and had an enormous influence on the development of music. His most famous pieces, perhaps, were written for the organ, but he also wrote for the violin and the clavier. The improvements he introduced into the playing of the latter instrument had much influence on the playing of the modern piano. His compositions were issued in 52 volumes by the Bach Society at Leipzig, 1850-1900. They include the magnificent Mass in B Minor, the Passions of St. Matthew and St. John over 200 cantatas, sacred and secular, and a great number of other pieces. In London there is a Bach Choir, founded in 1876, which exists to give performances of his works.

Three of Bach's sons were musicians. The eldest, Wilhelm, was organist at Dresden and Halle. Carl Philipp was a prolific composer and was employed by Frederick the Great. Johann was at one time a musician at the court of George II in London.

Bacillus Minute organism in shape like a tiny rod. The study of these is called bacteriology (q.v.). The word means "a small rod."

Back Sir George. English explorer. He was born in Stockport, Nov. 6, 1796, became a sailor and went with Sir John Franklin on a voyage of discovery. In 1833, when in command of an expedition, he discovered the river in Canada which is sometimes called the Black River, although better known

as the Great Fish River. He became an admiral and a knight and died June 23, 1878.

Backache A common complaint in human beings. It is often present in persons who are anaemic or debilitated and is a frequent symptom in hysteria and neurasthenia. A variety of causes may give rise to it. It may be an early symptom of any infectious fever, or due to kidney disease, certain liver troubles, rheumatism or neuralgia. In women it is most commonly due to slight displacements of the womb. In cases of frequent backache, which may be caused by rheumatism, adopt a vegetarian diet and drink large quantities of water between meals, avoiding coffee, strong tea, and alcohol. Massage is beneficial, and undue muscular fatigue should be avoided. See LUMBAGO.

Backbarrow Village of Lancashire. It stands on the little River Leven, not far from Lake Windermere. Here is a waterfall, which is used to generate electricity for near by works and for supplying power to Barrow in Furness.

Backgammon Indoor game. Backgammon is played by two persons on a special board, which is divided into two parts by a raised bar. This gives each player a home or inner table on the left and an outer table on the right. Each player has 15 men, one playing with the white ones, and the other with the black, not unlike draughts. Two dice are also required. The board is marked with points for scoring, six at each end.

The object of each player is to move his men from their outer table through the two parts of the enemy's territory to their home table, and then to remove them from the board. He throws the two dice together and according to their fall, moves his pieces. He can either move two of these at once or move one piece twice. The name refers to the fact that the pieces go back. A variant of the game is known as Russian backgammon.

A form of backgammon called chonettes has been introduced. At this more than two persons can play.

Backhaus Wilhelm German pianist. Born at Leipzig, March 28, 1884, he first appeared in public in 1900 and his genius won immediate recognition. In 1905 he was made professor of piano playing at the Royal College of Music, Manchester, but in the same year he won the Rubinstein prize in Paris and resigned his post. He was then free to undertake tours throughout Europe and America, and he played in most of the great centres to enthusiastic audiences.

Backsheesh In India and other parts of the East, a present of money given in return for a favour of one kind or other, often a trading privilege. Put plainly, it means a bribe. The word is spelt in several ways.

Bacon Popular article of food. It is the flesh of the pig after it has been cured, curing being a process of pickling and drying and sometimes smoking. The people of Great Britain eat of bacon and ham together about 600,000 tons a year. Bacon has a high food value. It is sold according to the brand. Wiltshire, for instance, but the names refer to day rather than the method of curing than to the place of production.

Great Britain imports much bacon from Ireland, Canada, Denmark and the United States, but a good deal is produced at home.

Greater attention is now paid to the required breed of pig, and bacon factories, on the Danish model, have been established. These are usually co-operative undertakings. Bacon is still cured in the farm kitchen, but only on a small scale. In the United States and Denmark, all bacon must be passed by state officials before it can be sold. Bacon was not included in the articles on which an Import duty was placed when Great Britain's fiscal policy was changed in 1931-32, but in April, 1932, a commission was set up to reorganise the marketing of bacon and other pig products.

Bacon Francis English statesman and thinker. Born in London, Jan. 22, 1561, he was the son of Sir Nicholas Bacon, a successful lawyer. Sir William Cecil, the great Lord Burghley, was Bacon's uncle.

Having studied at Trinity College, Cambridge, Bacon went to Paris with the English ambassador, but in three years he was again in London studying law. In 1582 he became a barrister of Gray's Inn, and in 1584, M.P. for Melcombe Regis. For twenty years or so he lived a busy life, and won fame as orator, writer and lawyer. In 1607, being then Sir Francis, he became Solicitor General, in 1613 Attorney General, and in 1616 Lord Chancellor and a peer, taking the title of Viscount St Albans. As Chancellor, Bacon was charged with taking bribes. The result was prison, fine and the loss of office, but pardon came quickly, and the loss and discomfort were slight. He died April 9, 1626.

Bacon's writings are among the greatest contributions to human thought since the time of the Greeks, notably his *Essays*. His *Novum Organum* marks him as the great forerunner of the modern system of scientific research. Other books are the *New Atlantis*, in which he anticipated the use of the telephone, *The Advancement of Learning*, and a *Life of Henry VII*.

It has been argued, with some measure of success, that he was also the author of Shakespeare's plays.

Bacon Roger English scientist. He was born at Ilchester in Somerset, in 1214. He studied at Oxford and in Paris, and became a Franciscan friar, thus arose the name Friar Bacon. At Oxford he was engaged in what to day is known as scientific research. He invented the magnifying glass, and something very like gunpowder, and started a belief in the possibility of inventions that have since come about, such as the steamship and the telescope. Like other men who were in advance of their age, he was not left in peace by the authorities. He was a prisoner for eight years and again, for ten years. On both occasions his books were condemned. The greatest of these is his *Opus Majus*, an encyclopaedia of the sciences. The friar was again a free man at Oxford when he died in 1294.

Bacteriology The study of bacteria or microbes, really a branch of biology. These bacteria or bacilli, are minute vegetable organisms that pervade all forms of life, and play an important part in the causation of disease. Not all of them, however, are harmful.

The science is quite modern, although in the 17th century the connection of microbes and disease was pointed out by more than one observer. Pasteur did as much as anyone to establish its principles, and another great name was Koch. Its great progress has been made

possible by two inventions powerful lenses which enable the bacteria to be examined, and aniline dyes which make their different parts visible

Bacteriologists cultivate bacteria and study the results of inoculating animals with them. Medical science in its campaigns against various diseases owes much to bacteriology, which is also of great value in enabling experts to test the purity or otherwise of food supplies. Bacteria are utilised in many trade processes.

Bactria Former country of Asia. It extended from the Hindu Kush to the Oxus. It is now part of Afghanistan, being almost identical with the district of Balk. Its capital was Bactra, and it was famous for its camels. It was conquered by Cyrus, and then by Alexander the Great, who settled Greeks therein. About 250 B.C. the kingdom of Bactria was set up, but this only lasted for about 100 years.

Bacup Town of Lancashire. Bacup is on the Irwell, 22 m from Manchester, on the L.M.S. Rly. Its chief industry is the spinning and weaving of cotton, but there are several others, among them paper making and dyeing, for which the river water is specially suitable. Bacup has been a borough since 1832. Pop. (1931) 20,606.

Badajoz City of Spain. Only four miles from the frontier of Portugal, it was long an important fortress. During the Peninsular War the French besieged it more than once, and at last got hold of it. It was then the turn of the British. Wellington's assault in April, 1812, ranks as one of the great feats of the British army. The siege began on March 17, and on April 6 the city was stormed. The attack is described by Napier in his *History of the Peninsular War* (Vol. IV). The city stands on the Guadiana, 315 m from Madrid. It has a cathedral and an old castle.

Baddow Two villages in Essex called Great and Little. Great Baddow is 2 m from Chelmsford and Little Baddow about 4 m, the latter being on the Chelmer. Pop. 2,582.

Baden Republic of Germany and a state of the German Republic or Reich, being the fourth largest state therein. Its size is 5,820 sq. m., and its population over 2,312,500. The Rhine divides it from Alsace, and on the south is Switzerland. Karlsruhe is the capital, but Mannheim has more people. Another place herein is Heidelberg with its university. It is a mountainous and beautiful district, as it includes the Black Forest and one side of the Lake of Constance.

Baden began as several little German states which were united in 1771 under one ruler, the margrave. In 1871 it became part of the new German Empire. In 1919 a republic was set up, and a new constitution framed. This consists of a single elected house and a cabinet under a president responsible to it. Proportional representation is in force and the people have the right of using the initiative and the referendum.

Baden Name of two European towns. One is 17 m from Vienna, and the other in Switzerland, 13 m from Zürich. Both have mineral springs. Near the Austrian Baden is Meierling, the house where, in 1889, the Crown Prince Rudolph committed suicide. In 1714 at the Swiss Baden there was signed one of the treaties that ended the War of the Spanish Succession. From 1426 to 1712 it was the capital of the Swiss Confederation.

Baden-Baden Watering place of Germany. Sometimes called Baden, this place is in the Black Forest, 23 m from Karlsruhe. Many visit it for the waters, which were known in Roman times. For some time Baden was the chief town of the state of Baden. Before 1871, when it was included in the German Empire, it was one of Europe's greatest gaming centres. Pop. 22,000.

Badenoch Name of a district in the S.D. of Inverness-shire, Scotland. It is about 40 m long, and may be described as the Valley of the Spey. A mountainous area, it is mainly deer forest, and contains Loch Eriocht. King Robert II had a son called the Wolf of Badenoch who ruled this district. Later it became the property of the Marquess of Huntly, who bears the title of Lord of Badenoch.

Baden-Powell Lord Robert Stephen-Powell, the founder of the Boy Scout movement, was born Feb. 22, 1857, entered the army, and in 1896-7 was in the force that defeated the Matabele. About this time he obtained his knowledge of scouting, but it was not until 1899 that he became a popular hero as the defender of Mafeking. Baden-Powell was afterwards head of the constabulary in South Africa, and Inspector-General of cavalry in England. In 1908 he founded the Boy Scout movement, and in 1909 he was knighted. He has written several books, mostly about his wars and adventures and on scouting. He was made a baron in 1929. See Boy Scouts.

Badge Something worn on a person to show that he or she belongs to a certain society or organisation, or is of a certain rank. The various regiments of the British Army have each their distinctive badge, other badges shew the rank of the wearer. The navy and air force have also their badges, as have various associations of civilians. Between badges and coats-of-arms there is a distinct difference. Any society can adopt a badge, but to take a coat-of-arms certain formalities are necessary. In 1930 the king granted a new badge to baronets. See Arms.

Badger Animal found in Great Britain and elsewhere. It lives mainly underground and feeds on insects, roots, and, at times, mice and young birds. Its average length is about 3 ft., and it is grey in colour, save that its head is striped with black. It is found in Great Britain, in various parts of Europe and in China, where it serves for human food. In Great Britain its only practical use to-day is to provide hair for brushes. Formerly it provided both food and sport, and baiting the badger with dogs was a popular amusement until forbidden in 1580. An old English name for it is the brock.

Bad Lands Distinctive name for a considerable area on the E. side of the Rocky Mountains in the United States. It is so called, because, on account of its dryness, practically nothing will grow. The states concerned are North Dakota, South Dakota, Nebraska, Wyoming and Montana. The Bad Lands contain very many fossils of mammals.

Badminton Seat of the Duke of Beaufort. It is in Gloucestershire, 14 m from Bristol and is a large house, fairly modern, in a park of 9 m circumference. As the Dukes of Beaufort have been noted sportsmen, the name of their chief residence

has been given to a game, a club, a drink, and a library. The club is a London sporting club in Piccadilly, founded in 1876. The library consists of books on sporting subjects. Badminton has a station on the G W Rly.

Badminton Outdoor or indoor game. It came from India into Great Britain about 1873. It is not unlike lawn tennis, but can be played indoors. The implements are a shuttlecock and racquets lighter and smaller than those used for lawn tennis. It is also played in the open, and a special ball is often used in such cases, as the shuttlecock is too light to resist wind.

As in lawn tennis two or four persons take part in a game. The court should be 44 ft long and 20 ft wide, and be divided into four parts. The net should be about 5 ft high. The server must send the shuttlecock into the court diagonally opposite to him, and the player there must return it or lose the point. No faults are allowed in serving, which must be underhand. Points are scored by aces, and 15 aces make a game. In Great Britain the game is controlled by the Badminton Association and since 1899 and 1900 there have been matches for the annual championship, both in singles and doubles. International matches are also played between England, Scotland, Ireland and other countries.

Baedeker Karl German publisher. Born Nov 3, 1801, he was the son of a bookseller. In 1827 he started in business in Coblenz, and in 1839 with John Murray, the London publisher, he issued a guide book to Holland, Belgium and the Rhineland. Others followed, and, before the World War, these guides were the most popular of their kind. They were published in English and French, as well as in German. Baedeker died Oct 18, 1898. His business is carried on by his descendants at Leipzig.

Bael Plant akin to the orange, spelt also Bhel. It grows in India, and its fruit is used as a cure for dysentery. A perfume and a dye are obtained from the rind, and the seeds are used to make cement. It is usually dried before it is ripe, and in dried slices is imported into England.

Baffin William English explorer. He was a Londoner by birth. In 1612 he went as pilot with an expedition to discover the N.E. passage, and in 1615 he made a like voyage. It was on the latter occasion that he explored Baffin Bay. At other times he was engaged in whaling. He was killed in a fight at Ormuz Jan 23, 1622.

Baffin Bay Inland sea of North America between Canada and Greenland. It is entered by Davis Strait from the Atlantic. Other openings lead into the Arctic Ocean. It is about 825 m long and contains whales and seals. It is navigable for about four months in the year. West of the bay is Baffin Island. This is 337,000 sq m in area, being thus the largest island in the world after Australia and Greenland. Its only inhabitants are a few Eskimos on the east coast.

Bagamoyo Seaport of Tanganyika. It is on the coast just opposite Zanzibar and at one time was a noted caravan station. Before the World War it was in German East Africa, but in 1916 the British took possession of it. Pop 12,000.

Bagatelle Indoor game. It is a form of billiards, although it probably developed from shovel board. The

table is 10 ft. long and 3 ft. wide, covered with green cloth. At the top end are nine holes or snops, numbered one to nine, and the players, using a cue, try to get the balls into these holes. There are four white and four red balls as well as a black ball which is spotted when play begins. If this is sent into a hole it counts double. The aim of each player is to score as many points as possible with the nine balls. In another form of the game an arch with nine holes in it is placed across the board and the balls are sent into them. There are bagatelle boards with pockets, but the game in this case, as cannons are essential should rather be described as billiards on a small scale.

Bagdad City of Iraq. Standing on both sides of the Tigris, 300 m from the Persian Gulf, it is the chief town of Iraq and an important trading centre. There is a considerable trade along the river in the products of a rich land and the presence of the British administration introduced new interests and increased activity. Its communications are good. In addition to the caravan routes goods go by water up and down the Tigris, and there are railway, motor car and air services.

Bagdad is a typical Oriental city. Founded in 763 by one of the caliphs, it became, under Haroun al Raschid, one of the world's splendid cities, the capital of a great empire famous for its buildings and as a seat of learning. This lasted until 1258, when the Mongols ravished it. The city became Turkish in 1638, and remained so until 1917 when the sultan lost it.

Bagdad figured in the World War. The British reverses in Mesopotamia were retrieved by Sir F. S. Maude, who, having retaken Kut in February, 1917, chased the Turks up the Tigris. On March 11 the city was entered by the British. Pop 250,000.

Bagdad Railway Railway of Asia Minor. It was planned to unite Constantinople with the Persian Gulf, Bagdad being an important place on the route. As far as Koneh there was already a line in existence, the Anatolian Railway, the Bagdad line was intended to continue this from Koneh in Asia Minor to the Gulf. Its total length was 1500 m.

In 1899 the Turkish Government granted the necessary permission. The idea was that Great Britain, Germany and France should be jointly responsible for it, but in 1903 Great Britain withdrew, and Germany, with France as a junior partner, went vigorously to work. The alliance of Germany and Turkey during the World War made further progress possible, and during the struggle the main line was continued. Of the branch lines one went to Aleppo and another to Alexandretta.

When the armistice came and the line was handed over to the Allies, 1200 miles of it were working. Soon the section from Bagdad to Basra was working and the only unfinished section was the one from Nisibiu to Samarra.

Bagehot Walter English writer. Born at Langport in Somerset, Feb 3, 1826, the son of a banker there, Walter was made a partner in the bank, but much of his time was occupied in writing. He wrote a good deal for reviews, and in 1860 he became editor of *The Economist*, a paper founded by James Wilson his father in law. His books, all lucid and popular, are *The English Constitution*, *Lombard Street* and *Physics and Politics*. He died at Langport, March 24, 1877.

Bagirmi Name of a country in Africa and of the people who live therein. A French possession, it lies south of Lake Chad, and has a population of about 150,000. The people are of negroid race, ruled by a sultan. Massena is the capital.

Bagnalstown Market town of the Irish Free State, also called Bagnalstown. It is in Co. Carlow, 10 m from Carlow, and 62 m from Dublin, on the Gt. S. Rlys. The town is named after the Bagenals, one of whom, called King Bagenal, lived at Dunleckny about the end of the 18th century. He was a remarkable figure, very fond of drinking and of company, he dined with loaded pistols in front of him, and when 79 years old fought a duel seated in his chair. Pop. 1800.

Bagnigge Wells Old London pleasure resort. A tavern, Ye Olde Bagnigge Wells, in King's Cross Road, marks the site. It was opened in 1757 because a medicinal spring was found here. Later it became one of London's pleasure gardens, and remained so until about 1841.

Bagpipe Musical instrument. It is chiefly associated with the Scottish Highlands, but there are also Irish and Northumbrian bagpipes. It consists of a series of pipes attached to a windbag. On one, called the chanter, the melody is played. The others are the drones that produce the accompaniment. The chanter has a double reed, the drones a single one each. In the Scottish pipes the wind is supplied by the player, in the Irish bellows are used. The Irish pipes have the greater compass.

The bagpipe was known in Scotland in the 12th century, or earlier, and the kings and chieftains had their pipers, often an hereditary calling. Schools for pipers were kept by some of these families. Shakespeare mentions a Lincolnshire bagpipe and an instrument like the bagpipe was used in very early times in Europe. There is a great deal of music for the bagpipe in existence, especially in Scotland.

Bagshot District in the N.W. of Surrey near Windsor. Called in full Bagshot Heath, at one time it was a royal forest, and it is still Crown property. Bagshot Park, the residence of the Duke of Connaught, is on the site of a house used by James I. when hunting. The village of Bagshot is 27 m from London by the Southern Rly.

Bagshot Beds are a series of sands overlying the London clay in the South of England. Examples can be seen at Studland in Dorset or at Alum Bay in the Isle of Wight.

Bagster Samuel English publisher. A Northampton man, he was born in 1772. Having started in business in London, he made a name for himself by publishing cheap Bibles. These were chiefly polyglot Bibles with notes, and so he was able to sell them without encroaching upon the privileges of the universities, the only publishers of the Bible proper. He died March 28, 1851.

Bahadur Title of honour. In India natives use this word, which means "brave" as a title of respect when speaking to officers. Lord Roberts was to them Bobs Bahadur.

Bahamas Group of islands in the West Indies, called by the Spaniards Los Cayos. They belong to Great Britain, and stretch for about 650 m. almost from

Florida to Haiti. They number nearly 700, but most of them are little more than rocks. Great Abaco, about 1600 sq. m. in extent, is much the largest, others are Grand Bahama, New Providence, Eleuthera, San Salvador, Acklin, Cat and Long Island. They cover about 4400 sq. m., and have a population of about 62,000. Nassau, on New Providence, is the chief town. The people are chiefly negroes, the descendants of slaves. Fruit is grown on the islands and fishing is another industry. Sponges are cultivated, as is sisal. There is a governor, and associated with him are two councils, executive and legislative, and an elected parliament.

The Bahamas were discovered by Columbus, in 1492, but were not settled until 1629, when some Englishmen made their homes here. It was not until 1783, however, that Spain finally ceased to claim them. Two events in the history of the United States have brought great prosperity to the Bahamas. One was the Civil War, when they were used by blockade runners, and the other the introduction of prohibition. Their nearness to the American coast makes the Bahamas a favourite resort for those who wish to drink what they like.

Bahia Seaport of Brazil. Its full name is Sao Salvador de Bahia, or the Bay of San Salvador. It is 800 miles from Rio de Janeiro, and has a large trade with Europe. It has a good harbour, is a railway terminus and has regular services to Liverpool and other ports. Bahia was founded by the Portuguese in 1510, and was the capital of Brazil before 1763. It is now the capital of a state of the same name. Pop. 330,000.

Bahia Blanca Seaport of Argentina. It is 425 m from Buenos Aires and stands on the River Naposta, about 6 m from its mouth, where a good harbour has been constructed. Several railway lines converge on the port, through which passes a good deal of grain. In addition to Bahia itself on the river, there are three harbours on the bay, all being part of the port. Ingeniero White has elevators for grain, and good accommodation for ships, and the same can be said of Puerto Galvan, both being provided by the railway companies. Puerto Belgrano is a naval station, but has also facilities for cargo. The name means "White Bay". Pop. (1931), 102,430.

Bahr Arabic word, meaning river or lake. The various parts of the Nile are, Bahr-el-Abiad, the White Nile, Bahr-el-Azrek, the Blue Nile, and Bahr-el-Aswad, the Black Nile. Bahr-el-Jebel is the Upper Nile.

Bahrain Group of islands in the Persian Gulf and under the protection of Great Britain. Bahrain, or Aval, is the largest, others are Maharaq and Sitra. Manama is the capital, the only other town is Maharaq. Pearl fishing is the main industry, and fruit is grown.

Bahrain has good roads, a wireless station, and a regular steamer service with India. A remarkable feature is a cemetery covering many miles and dotted with enormous burial mounds, some being 50 ft high. This island covers about 200 sq. m., the others are much smaller. The islands are ruled by a native chief and Great Britain has a political resident at his court. Pop. 120,000.

Baikal Lake in the S. of Siberia, the largest freshwater lake in Asia. It is 300 m long, of varying breadth, and covers about 13,000 sq. m. Around it are the

Balkal Mountains, and in it are several islands. There are many fish in the lake, one of them, the golomyinka, being found nowhere else.

Bail Term used in English law. In Great Britain a person accused of an offence may either be kept in prison until his trial comes on, or be let out on bail. If the latter, he and one or two other persons promise that, if he does not appear when requested, they will forfeit a certain sum of money, which is fixed by the magistrates. Bail is allowed in England only for minor offences. Much is left to the discretion of the judge.

Baildon Urban district in the West Riding of Yorkshire. It is 4 m from Bradford and the chief industry is the manufacture of chemicals. Pop (1931) 7794.

Bailey Part of a medieval castle. The bailey was at first a wall, this being the Latin meaning of the word. It now means the court that lies between the outer wall and the keep. In some castles there were both an outer and an inner bailey. There is a good example in the castle at Durham.

Bailey Sir Ahe S African mine owner. He was born in Cape Colony Nov 16, 1864. He was educated in England, but soon returned to Africa, and was one of those who were imprisoned in 1895 for agitating against the dominance of the Boers. He fought in the war of 1899-1902, and was a politician, but his main energies were devoted to business especially in Rhodesia. His wife, Lady Bailey, is one of the first and most daring of airwomen.

Baillie Official in Scotland. He corresponds somewhat to the English alderman. The burgh council has bailies among their members, these being elected by the councillors as the aldermen are in England. The bailies are also magistrates.

Bailiff English official. Officials of the county courts in England are called bailiffs, as are the men who, under the sheriff's orders, distrain for rent and debts of other kinds, serve writs, collect fines, and do similar work.

Another kind of bailiff is a man employed by a landowner to look after an estate or farm. In the Channel Islands the bailiff is an important person, as he is the president both of the law courts and of the parliament. In former times certain English cities, Westminster for instance, had a high bailiff. There was also a bailiff of Dover Castle and of other strongholds.

Bailleul Town of France, 46 m from Calais. The Germans took it in April, 1918, but the British won it back in the following August. Much damage was done to it during the fighting but this has now been repaired. Pop 13,070.

Baillie Lady Grizel Scottish heroine and poetess. A daughter of the Earl of Marchmont, she was born Dec 25 1666. She helped her father, a Covenantor, to escape from his enemies, and later went with him to Holland. After 1688 she returned to Scotland, and in 1692 married George Baillie of Jerviswood. Her poems are still remembered in Scotland. She died Dec. 6, 1746.

Baily Francis English astronomer. His name is perpetuated because, during an eclipse of the sun on May 15, 1836, he discovered what are now known as Baily's Beads. These are parts of the sun's edge left visible as the ragged rim of the moon passes

over it, as then lit they look like beads. Baily was born at Newbury, April 28, 1774, and became a stockbroker. When he had made a competence for himself, he began to study astronomy, and his observations proved most valuable. He died Aug 30, 1844.

Baird Sir David Scottish soldier. Born at Newbyth, Dec. 6, 1757, he entered the army in 1779 and led the force that stormed Seringapatam. Later he commanded a force in Egypt, in Capetown and one in Copenhagen. He was in Spain with Wellington, and was wounded at Corunna, losing his left arm. Made a baronet in 1810, he died Aug 18, 1829.

Baireuth Town of Bavaria, also called Bayreuth, and a famous musical centre. It is on the Main, 60 m from Nuremberg. Until 1791 it was the chief town of a tiny state, ruled by a branch of the Hohenzollern family. Its reputation is really due to Richard Wagner who lived here. King Louis II of Bavaria, a great lover of music, made it possible for a theatre to be built according to Wagner's ideas. Called the Wagner Theatre, it was opened in 1876, and in it, from time to time, festivals are held in honour of Wagner. Pop 35 000.

Baize Coarse woollen or cotton cloth, with a long nap on both sides. It is usually dyed red or green, and is used for coverings of various kinds, also for curtains and aprons. It is now made in and around Halifax, but at one time it was made at Colchester and the neighbourhood. French and Flemish settlers introduced it there about 1500, and the word bay an older form, is still found at Colchester and Dedham.

Bakehouse Place used for baking bread, cakes and pastries. Bakehouses are subject to the Factory Acts, and must be kept clean and ventilated and proper provision made for those who work in them. The Factory Act of 1901 provides for a pure water supply. No underground place can be used for a bakehouse unless the district council or other authority approves of it. No place on the same level as a bakehouse and part of the same building may be used as a sleeping room unless the two are completely separated.

Bakelite Commercial material. It owes its origin and its name to H. Baekeland a chemist. Consisting of phenols and formaldehyde, it is made hard by the application of heat. It is not unlike celluloid, save that it is harder and does not catch fire. It is used for making buttons, umbrella handles and other articles where its peculiar qualities are desirable. A liquid form is used to harden certain materials fibre and paper, for instance. Brass articles are protected by a coating of bakelite varnish, and paper impregnated with it is suitable where electric insulation is necessary.

Baker Maker of bread. The earliest professional bakers were a few men employed by rulers and noblemen elsewhere. The housewives were the bakers. The advance of civilisation and the increase of population, however, called into existence a class of bakers. To-day the baker makes extensive use of machinery and produces bread on a large scale. One of the London livery companies is the Bakers. A company of white bakers existed about 1300 in London. Later this was united with the brown bakers to form a livery company. The hall is in Harp Lane, London, E.C.

In London a school for bakers and confectioners is carried on at the Borough Polytechnic, Borough Road, S.E. They have a trade organisation. The National Association of Master Bakers, Confectioners and Caterers, and their own trade papers, among them *The Baker and Confectioner*

Baker Sir Samuel White. English explorer. Born in London, June 8, 1821, in 1861 he began his African journeys, explored the source of the Nile and discovered and named the Albert Nyanza. Later the Khedive of Egypt successfully employed him to put down the slave trade in his territories. Baker, who was made a knight and a pasha, was a famous hunter of big game and wrote several books dealing with his travels and adventures. He died in Devonshire, Dec. 30, 1893.

Bakewell Market town and urban district of Derbyshire. It is 26 m. from Derby, on the Wye, and has a station on the L.M.S. Rly. The town is surrounded by magnificent scenery and is a centre for the Peak district. Chatsworth, Haddon, and other places of interest are not far away. All Saints' is a beautiful old church, and there is a 17th century grammar school. There are some old almshouses and a very old cross, probably 8th century. Pop. (1931) 3012.

Bakewell Robert. English agriculturist. Born in 1735, he was a farmer in Leicestershire, and was continually trying experiments in breeding and growing. Some failed, but he succeeded in rearing heavier sheep and cattle and in growing improved foodstuffs. He had a special breed of black horses and started a club for breeding purposes. At his farm he made a collection of skeletons and carcasses for purposes of comparison. He died Oct. 1, 1795.

Baking Powder Cooking ingredient. It consists of tartaric acid and bicarbonate of soda, mixed with ground rice and flour. When dampened the acid acts on the bicarbonate and gives off carbonic acid gas. It is used, like yeast, for raising bread and pastry.

Bakst Leon Nicolaievitch. Russian artist. Born in 1866 he studied in Petrograd, but his chief work has been done in Paris, where he settled in 1906. There he made a great reputation by his designs for stage costumes and decorations, especially, perhaps, for the Russian ballet.

Baku Capital of the Soviet Republic of Azerbaijan. It is a port on the Caspian Sea and a great oil centre. Railways connect it with the interior of Russia and Batum on the Black Sea, 560 m. away, and steamships with other ports on the Caspian. Before the war the output of oil from the wells and refineries in and around Baku was enormous, but during the struggle much damage was done.

Once in possession the Soviet Government lost little time in reviving the industry. A great output was again secured, but nothing was done to compensate the dispossessed owners of the oil fields. The town is a station on the air route from Moscow, and its trade with Persia is still very considerable. Its population is estimated at about 452,000.

In 1918 Great Britain sent an expedition to Baku to check, if possible, the advance of the Turks in that area. Major-General R. C. Dunsterville leading his small "Dunster Force," as it was called, left Bagdad in Jan,

1918, but it was not until June that he reached Enzali on the Caspian. The next event was the seizure of Baku by some Armenians and Persians, who asked Dunsterville to join them. The Turks, however, continued their advance, the Armenians and Persians proved unreliable, and in Sept. the British withdrew, losing heavily in the necessary fighting. In Nov., after the Armistice, Baku was again occupied by the British, but they left it in Aug., 1919, since when the Bolsheviks have been in undisputed possession.

Bakunin Mikhail. Russian politician. Born in 1814, he was an aristocrat and an army officer, but he soon went abroad, and became a revolutionary. He was sent to Siberia, but escaped, and lived in the United States and then in London. He died at Berne, June 13, 1876. He taught a doctrine of anarchy, really a kind of despotism, not unlike the Bolshevism of to day.

Bala Lake and town of Merionethshire, Wales. The lake is 4 m. long and the Dee begins its course here.

The market town and urban district of Bala stands at the north end, on the G.W. Rly., 12 m. from Corwen. It has a golf course. Pop. (1931) 1395.

Balaam Biblical character. He was a magician who was bribed by Balak, King of Moab, to curse Israel. On his way to do this he was stopped by an angel and reproved by his own ass, which was given the gift of speech (Numbers xxii).

Balaclava Village and harbour on the Black Sea. It is 8 m. from Sebastopol and in 1854, during the Crimean War, it was used as a base by the British. On October 25, 1854, the Russians made an attack here, but they were beaten back by a charge of the heavy cavalry brigade under Lord Scariett. Then followed a charge of the light brigade which lost nearly half its number of 673 in the attempt. Afterwards it was realised that the order was a mistake, but the feat made the name of Balaclava immortal.

A Balaclava helmet is a woollen cap made to fit over the head and ears. They were worn in the Crimea, hence the name.

Balance Apparatus for weighing, often called scales. They are used for weighing goods of all kinds and may be divided into arm balances, lever balances, and the older weight balances. In addition there are spring balances that are used for weighing heavy loads. Apart from these although the principle is the same are the delicate balances used by scientists, and the immersion balance is one that finds the weight of an article by dipping it in water.

Balance of Power Phrase meaning the preservation, especially in Europe, of an equality of strength between countries or groups of countries. The idea that no one country shall become too powerful for the safety of the others grew up in the 16th century, and was behind the various coalitions against France formed in the 17th and 18th centuries, and the later alliances that existed in Europe before the outbreak of the World War. That struggle changed fundamentally the structure of the European States, but the idea of a balance of power among them still exists.

Balance of Trade Phrase meaning the excess of imports over exports or vice versa. If a country imports more than it exports, the balance of

trade is against it, if the reverse is the case the balance is favourable. In the case of Great Britain, and also of some other countries, invisible imports must be included, these being such things as interest on loans, shipping charges, and the like. Although imports greatly exceed exports in value exports, taking the above facts into account, state that in most years the balance of trade has been favourable to Britain.

This, however, was not so in one or two years after the War. In 1928 there was a small adverse balance, but in the succeeding year (1927) the balance was again favourable. In 1931, however, the balance was the other way—£110,000,000, and in August a serious position arose. To remedy this, Great Britain abandoned the gold standard and placed heavy duties on certain classes of imported goods. A general tariff followed in 1932. The figures for 1932, 1933 and 1934 (£56,000,000, £4,000,000 and £1,000,000) show how the debit balance decreased. Details for 1934 are as follows—

Excess of Imports over Exports	£295 000 000
Excess of Government receipts	9 000 000
National Shipping Income	70,000,000
Overseas Investment Income	175 000 000
Short Interest and commission	30 000 000
Miscellaneous	10,000 000
	£194 000 000

Balata Substance made from the gum of the billet tree. It is employed to make belting for machinery and as a substitute for gutta percha. It is also used for insulating purposes and for the soles of boots and shoes. Sometimes called Surinam gutta percha, the gum is found in Dutch Guiana, in Surinam, and in British Guiana, Venezuela and elsewhere. A tree about 20 in. in diameter will give out about 2 lb. of balata.

Balaton Largest lake in Hungary. The subject of many legends and of much poetry, it is 47 m. long and covers about 250 sq. m. It is 55 m. from Budapest. On the north side are hills covered with vines the south side is less picturesque. Its waters are carried to the Danube. Plattensee is another name for the lake.

Balboa Port of Panama. It is also called Port of Ancon. At the Pacific end of the Panama Canal, it has a good harbour which can accommodate the largest vessels, and has facilities for storing great quantities of coal and oil. There is a wireless station. An electric railway runs from here to Panama. United States officials manage the port. Pop. 8000.

Balboa Vasco Nunez de Spanish explorer. Born at Xeres, Spain, in 1475, when young he crossed the Atlantic. At first he lived in Santo Domingo, but he went to Darien and became governor of that country. He lost his position in 1514, and his life, three years later, being beheaded. It was Balboa and not Cortez who in 1513 was the first European to see the Pacific. In Panama a silver coin, equal to the American dollar, is called the balboa.

Balbriggan Town and watering place of the Irish Free State. In Co. Dublin, it is 22 m. from Dublin on the G.N. of Ireland Rly. It was once noted for the hosiery produced here, called Balbriggan. Pop. 2300.

Balbus Roman consul, in full Cassius Cornelius Balbus, he lived in the

times of Caesar, Cicero and Pompey. A native of Cadix, he was made a Roman citizen, and in 40 B.C. was chosen consul. Before this he had been prosecuted for assuming the rights of a citizen, but had been triumphantly defended by Cicero.

Baldachino Canopy over an altar. Baldaccho is the Italian word for Bagdad, and from that city came the materials of which some of the canopies were made. Others were of wood, stone or metal. They were supported by four columns. The finest example in the world is in St. Peter's at Rome. Another form of the same word is baldacchino, which describes the silk canopy that covers the host when it is carried in procession, or covers a prince of the Roman Church in like circumstances.

Balder Sun god of Norse mythology called "the beautiful". His father was Odin, his mother Frigg, and his wife Nauna. Fearing for her son, Frigg persuaded all nature, except the mistletoe, to swear not to harm him. The evil Loki having learned the secret, secured a dart of mistletoe. Innocently, Balder's blind brother used this dart and Balder fell dead.

Baldmoney English wallflower. The flowers which many people in England call by this name are species of the gentian (*g.v.*)

Baldness Hereditary baldness is incurable, but since the hair is affected by the general state of the health, the condition may be caused by overwork, worry, malnutrition, lack of fresh air and sunlight, constipation, decayed teeth, etc. The constant pressure of hard hats interfering with the blood supply of the scalp is also a predisposing cause.

A type of baldness (*Alopecia Areata*), in which sudden loss of hair in patches occurs, is due to constitutional causes. In all such types of baldness the predisposing cause should be ascertained and removed, attention paid to the general health, plenty of fresh air obtained—removing the hat whenever possible—and treatment sought by ultra violet light. Scalp massage is also beneficial. (See also DAND RUFF)

Baldock Urban district of Hertfordshire, on the L.N.E. Rly., 37 m. from London. In 1925 a Roman cemetery was unearthed here and some interesting finds were made. Here is a Post Office radio receiving station. Pop. (1931) 3171.

Baldric Girdle or belt worn by soldiers in the Middle Ages. Made of leather it was worn either over the shoulder or round the waist, being used to hold a sword or hugle. The strap round the neck which held the shield was also called the baldric.

Baldwin Name of several European soldiers. A number of Baldwins were counts of Flanders, one of them being the father in law of William the Conqueror. A later Baldwin was a crusader and when, in 1204, Constantinople was taken, he was made its emperor. His nephew, another Baldwin, was also emperor, but he lost Constantinople in 1261, twelve years before his death.

Other Baldwins were successful crusaders. Baldwin, Count of Boulogne, took Jerusalem, and was king there from 1100 to 1118, when he was succeeded by his nephew, another Baldwin. Later three other Baldwins ruled in Jerusalem. One of them Baldwin III., was a famous

soldier The last of the five, only a child, was poisoned by his mother in 1187

Baldwin Stanley English statesman He was born at Bewdley, Worcestershire, Aug 3, 1867 His father was Alfred Baldwin, the son of an ironfounder, who built up the great engineering business now included in Baldwins, Ltd His mother was a Macdonald, the gifted daughter of a Wesleyan minister He went to Harrow and Trinity College, Cambridge, and later entered his father's business Business and family responsibilities did not, however, prevent him from taking part in county affairs

In 1908 he became M.P. for the Bewdley division and head of the family business Before the Great War began the control of the business passed, by amalgamation, to other hands, and Baldwin was free to give his whole time to politics In 1917 he was made a Junior Lord of the Treasury and then Joint Financial Secretary to the Treasury In 1921 he became President of the Board of Trade and a member of the Cabinet

These offices were in a Coalition Government, and for the destruction of the Coalition Baldwin was as much responsible as any man He believed that Conservative principles were best for the country, but that they would have no chance until their supporters were unfettered by an alliance with those who held other views The result was that in October, 1922, Bonar Law became Premier and Baldwin Chancellor of the Exchequer As Chancellor he went to Washington and arranged for a settlement of Britain's debt to the United States

In May, 1923, Bonar Law resigned, and Baldwin became Prime Minister In December, believing that tariff reform was essential if unemployment was to be reduced, he decided to dissolve Parliament The result of the election was unfavourable to his views, and in January, 1924, he resigned

In October, 1924, another election took place This time the Unionists secured a large majority, and again Baldwin became Prime Minister In 1927 he went on a short visit to Canada, the first Prime Minister to do so

In 1929, after the general election had proved unfavourable to his party, he resigned office and was leader of the opposition until 1931 In Aug., 1931, he helped to form a national government, serving under Mr Ramsay MacDonald, and himself Lord President of the Council and deputy Prime Minister When Mr MacDonald for health reasons resigned the premiership in June, 1935, Baldwin became leader of the national government, continuing in office after Nov., 1935, when he was given substantial support at the General Election

On England and Our Inheritance are published volumes of his non-political speeches His many honours include the Chancellorship of the University of Cambridge

Mr Baldwin married Miss Ridsdale, and his family consists of two sons and four daughters The elder son, Oliver, has pronounced socialistic opinions From 1929 to 1931 he was socialist M.P. for Dudley He has written books dealing with his travels and adventures, in 1932 he published *The Questing Beast*, and in 1933, *Unborn Son*

Bale Heavy package covered with canvas and usually bound round with hoops or rope The bales are usually put in a press to reduce their size In a sense a bale is a measure of weight A bale of American cotton weighs 500 lb., one of Egyptian weighs 700 lb.,

and one of West African 400 lb The bale of wood is not quite such a fixed quantity. It averages about 320 lb Jute and coffee are also packed in bales

Balearic Islands Group of four islands and eleven islets in the Mediterranean They cover 1935 sq. m., and form one of the provinces of Spain, which is 134 m. away The inhabitants earn their living by growing fruit and wheat, fishing and making wine Salt and marble are other exports The four large islands are Majorca, Minorca, Iviza and Formentera Palma is the capital, Port Mahon is another seaport, Iviza has a magnificent harbour Pop 360,000 In Roman times the islands were famous for their slingers, who were hired by both the Romans and the Carthaginians For 100 years after 1232 the islands formed the little kingdom of Mallorca, but later became part of Aragon and then of Spain

Balfe Michael William Irish musician He was born in Dublin, May 15, 1808 He studied music in various centres and became famous owing to his fine baritone voice Later he lived in London, and wrote a number of light operas, such as "The Bohemian Girl" and "The Puritan's Daughter" Some of his songs for example, "Killarney" and "Come into the Garden, Maud," are still popular He died Oct 20, 1870

Balfour Earl of British statesman and philosopher Arthur James Balfour was born at Whittingehame, Haddingtonshire, July 25, 1848, the eldest son of James Maitland Balfour, his mother being a daughter of the Marquess of Salisbury His school was Eton and afterwards he went to Trinity College, Cambridge

In 1874 Balfour became Conservative M.P. for Hertford, and in 1878 Private Secretary to his uncle, Lord Salisbury He was associated with the Fourth Party In 1885 he became M.P. for East Manchester and President of the Local Government Board A little later he was made Secretary for Scotland, and in 1887 became Chief Secretary for Ireland His success in that difficult, even dangerous post, has passed into English political history

In 1891 Balfour became leader of the Unionist Party in the House of Commons In 1895 he became First Lord of the Treasury, and again head of the Government in the Commons, and in 1902 he succeeded Lord Salisbury as Prime Minister A difficult period, the years 1902-5 were perhaps the least successful part of Balfour's career His party was divided on tariff reform, the result being the election of January, 1906 Just before this Balfour had resigned his post as Prime Minister, but he continued to act as the head of his party until 1911 Then 63 years of age, he resigned and his political career was regarded as closed

The formation of a Coalition in 1915, however, proved that this idea was wrong Balfour became First Lord of the Admiralty at a critical time, May, 1915, and Foreign Secretary in Dec., 1916 It was at this time that he paid his memorable visit to America, helping thus to bring the United States into the war In 1919 he became Lord President of the Council, and in 1922 he was made an earl He remained Lord President under Mr Bonar Law and Mr Baldwin, and returned to the same position in 1925 in Mr Baldwin's second ministry He left office with the other members of the Cabinet in 1929 and died March 19, 1930

Lord Balfour's best known books are *The Foundations of Belief* and *The Defence of Philosophic Doubt*. His honors are almost numberless, among them President of the British Academy, chancellor of the universities of Cambridge and Edinburgh, Knight of the Garter, F.R.S., and the Order of Merit.

Two of Balfour's younger brothers were men of note. Gerald William Balfour, who became the 2nd earl in 1930, was a brilliant classical scholar at Cambridge. From 1885 to 1906 he was an M.P., and from 1895 to 1906 he was in turn Chief Secretary for Ireland, President of the Board of Trade, and President of the Local Government Board. Francis Maitland Balfour, although only 31 when he was killed in the Alps in 1882, had made such a reputation at Cambridge by his scientific work that a professorship was created for him. Another brother, Eustace Balfour, who also died young, married Frances, daughter of the Duke of Argyll. Lady Frances Balfour, known as a champion of women's rights, wrote in 1930 a book of memories called *Ne Obliviscaris*.

BALFOUR DECLARATION Term used for the promise of the British Government, made through Lord Balfour as Foreign Secretary in 1917, to make Palestine into a "national home" for the Jews after the Great War. Thanks largely to this declaration, Britain became the mandatory power for Palestine under the League of Nations in 1919.

BALFOUR NOTE Note addressed by Lord Balfour for the British Government in 1922 to the European Powers, undertaking that Great Britain would not demand more in reparations and allied debts than she required to liquidate her own debt to the U.S.A.

Balfour Jabez Spencer. British financier. Born in 1849, he founded about 20 years later, the Liberator Building Society, in which great sums were invested. It seemed sound until 1892 when the crash came, over £8,000,000 being involved. Balfour was arrested at Buenos Aires and was found guilty of fraud, the sentence being 14 years. In 1906 he was released and he died at Newport, Mon. Feb. 23, 1916. He was a Liberal M.P. for Tamworth 1880-85, and Burnley, 1889-93, the first Mayor of Croydon, and gave away considerable sums of money.

Balfour Sir Arthur. English manufacturer. He was born in London in 1873. Having settled in Sheffield, he founded the firm of Arthur Balfour & Co. and became a dominant figure in the steel industry. He served on various committees and was a leader in industrial matters. In 1923 he was knighted, and in 1929 received a baronetcy. As he was chairman of a committee appointed in 1924 to inquire into the export trade its reports are often called the Balfour Reports.

Balfour of Burleigh Lord. Scottish title dating from 1607. In 1716 it was forfeited as the holder was a Jacobite, but in 1869 it was restored to a descendant, Alexander Hugh Bruce. Reckoned as the sixth baron he was Secretary for Scotland from 1895 to 1903 when he resigned as he was a free trader. He died July 6, 1921, and the title passed to his son.

Balfrush Town of Persia. Also spelled Barfurush and Balfurush, it is on the River Bhawal only 12 m. from the Caspian Sea. It has a considerable trade with Russia which goes partly by caravan and partly on the Caspian. Pop. 30,000.

Balham District in the south west of London. It is part of the Borough of Wandsworth, a thickly populated region, on the S. Ry., and a tube line. Tooting Common is near Balham and Tooting unite to send a member to Parliament.

Bali Island in the East Indies belonging to The Netherlands. It lies to the east of Java and is sometimes called Little Java. It covers over 4100 sq. m., and has about 1,000,000 people. The Dutch have owned it since 1849. The inhabitants are Brahmans who grow cotton, sugar, rice and coffee and work in metal. Buleleng is the capital. On the island, which is subject to earthquakes, is a great volcano over 10,000 ft. high.

Baliol Name of a Scottish family. Of French origin it took its name from Balliol. In 1290, when Scotland had no king, one of the claimants was John Baliol, a descendant of King David I. Edward I, the overlord of Scotland, favoured him and he was crowned. Later however, he took the side of France against England and in 1296 he gave up the kingdom. He died in 1315.

His eldest son, Edward, was crowned King of Scotland at Scone in 1329, as a rival to David II. The Scots turned him out and he only came back by the help of the English king. In 1356 he gave up the throne and in 1367 he died, the last of his family.

Balk In hilliards a line drawn across the table 28½ in. from the bottom onshion. When a ball is in balk it can only be played at indirectly. Another balk is the ridge of land left unploughed between two ploughed areas, and a third is a roughly squared beam of timber.

Balkan Peninsula District of Europe occupied to day by the countries of Yugoslavia, Greece, Bulgaria, Rumania and Albania. It covers about 350,000 sq. m., and has about 40,000,000 people. Its boundaries are the Danube and the Save on the west, the Black Sea on the east and the Mediterranean with its subsidiary seas elsewhere. It is sometimes called the Near East.

The Peninsula is a mountainous district, although there are plains in Rumania and Yugoslavia. The Balkan Mountains run through it, and there are other ranges. The rivers, except the Danube are short and rarely navigable.

After 1453, when the Turks took Constantinople, they conquered the Balkans and this region they kept until the 19th century, when their hold was gradually loosened. One by one the independent or semi-independent states emerged, the World War finished the process, and to day the Turk has no foothold in the Balkans for Constantinople (Istanbul) may fairly be regarded as outside it. See BULGARIA, RUMANIA, YUGOSLAVIA ETC.

Balkan Wars Two wars in 1912 and 1913 waged by the several Balkan states, including Turkey. In 1912 Bulgaria, Serbia, Greece and Montenegro, formed an alliance to free Macedonia from Turkish rule. Mobilisation began, and early in Oct. Montenegro declared war on Turkey. The other members of the league formally asked for the independence of Macedonia. This was refused, and Turkey declared war on Oct. 17. Immediately Macedonia was invaded.

The chief areas for the fighting were Thrace and Macedonia. In Thrace the Bulgars, who had about 300,000 men in the field, besieged Adrianople. On Oct. 23-24 they won a great

battle at Kirk Kilmise, and a few days later another at Lule Burgas, but they failed on Nov 17-18 to get possession of the Chatalja lines. In Macedonia the Serbians and Greeks, also about 300,000 strong, were operating. The Serbians took Novi Bazar, and won a battle at Kumanovo in Oct., in Nov they took Monastir, while the Greeks entered Salonika.

The Great Powers renewed their efforts to stop the war, and on Dec. 3 Bulgaria and Serbia, but not Greece, signed an armistice with Turkey. In Feb the war began again. Defeat again was the lot of the Turks. Adrianople at last surrendered, and the first war ended. By the Treaty of London Turkey gave up all she possessed west of a line drawn from Midia on the Black Sea to Enos on the Aegean.

The Second War The Balkan allies quickly quarrelled over the spoil. Serbia and Greece agreed to act together and in June they were attacked by Bulgaria. Having first arranged for her price, the cession of the Dobrudja, Roumania joined the alliance against Bulgaria, and seizing the opportunity, Turkey quickly recovered Adrianople. Several defeats were inflicted on the Bulgarians, who were soon forced to make peace. A treaty signed at Bukarest ended the second war.

Turkey regained Adrianople and Thrace, east of the Maritza. Her lands west of the Maritza went to the conquerors, Serbia, and Greece and Montenegro, as agreed, obtained the Dobrudja. Another result of the war was the creation by the Powers of an independent Albania.

Balkhash Great lake in Central Asia. About 120 m from the frontier of China, it is about 330 m long, and covers 8500 sq m. Like the Caspian Sea its waters are salt. Another name for it is Tengis.

Ball Albert. English airman. The son of an alderman in Nottingham, Ball was born Aug 21, 1896. In 1914 he joined the army, but soon became an officer in the Royal Flying Corps. In that service he performed some remarkable feats, at least 40 successful air fights being to his credit. He became a captain, won the MC and DSO, and was made a freeman of Nottingham. On May 7, 1917, he fought his last fight and probably met his death on that day. The VC was awarded posthumously, and a statue erected to him in the castle grounds at Nottingham.

Ball John. English social reformer. He was a priest, who went about the country preaching the equality of man, and the need for social reform.

His words did much to stir up the peasants in 1380, but he was in prison at Maidstone when Tyler led them to London. The rebels freed him, but when all was over he was seized and was hanged at St Albans, July 15, 1381.

Ball John. English golfer. Born at Hoylake in 1863, he became noted as a golfer. In 1894, although an amateur, he won the open championship, and he was amateur champion in 1888, 1890, 1892, 1894, 1899, 1910 and 1912, a unique record. He also won the Irish open championship three times.

Ball Sir Robert Stawell. British astronomer. He was born in Dublin, July 1, 1840, and was educated at Trinity College there. He was chosen Astronomer Royal of Ireland in 1874. He was knighted in 1886, and in 1892 he became Professor of Astronomy at Cambridge. He died, Nov 25, 1913. Ball is best known for his lectures and writings, which simplified astronomical facts for average men and women.

Ballad Story or song, usually in short verses.

We cannot say when the first ballad was written, but certainly before printing was invented. Many of the old ballads had probably been altered considerably as they have been passed down the generations, such, for instance, as those, among the old English ballads that describe the deeds of Robin Hood. Perhaps the most notable of old ballads are those of Scotland and the Border region, such as the *Ballad of Chevy Chase*. Of many collections of ballads mention may be made of Bishop Percy's *Reliques*, and Sir Walter Scott's *Border Minstrelsy*. Sometimes humorous verses, such as the *Bab Ballads* and the *Bon Gaultier Ballads*, are called by this name, but these are not ballads proper.

Ballade Form of poem first used in France. It consists of four stanzas, the first three of 7 or 8 lines each, having a common refrain. The rhymes, when 8 lines are used, are a-b, a-b, b-c, b-c. The fourth stanza consists of four lines, and is in the nature of a summary. Villon and Verlaine wrote ballades, and English readers will find examples in the poetry of Swinburne and Andrew Lang.

Ballantrae Village on the west of Ayrshire, Scotland. It is famous because of its association with R L Stevenson's romance, *The Master of Ballantrae*. It is 12 m from Girvan and its people are chiefly fishermen and their families. At one time it was noted for its smugglers. Pop 1100.

Ballantyne Robert Michael Scottish author. Born in Edinburgh, April 24, 1825, in 1841 he went to Canada as a clerk in the Hudson Bay Company's service. In 1848, just after his return to Scotland, he published his first book, *Hudson's Bay*. After this came no less than 80, mostly straightforward stories of adventure. Among them are the popular *Coral Island* and *The Lighthouse*. He died in Rome Feb 8, 1894.

Ballarat City of Victoria, Australia. It is 74 m from Melbourne and is the second largest city in the state. East Ballarat, which adjoins it, is a separate town. The city is chiefly known as a centre of the gold mining industry. Here, in 1851, a rich gold field was discovered. Pop (1931) 41,750.

Ballast Material—iron, stone, gravel or anything heavy that is put in a ship to steady her. A merchant ship is said to be in ballast when she has a cargo. Some ships take ballast in the form of water, kept in tanks and let in or out as required. For the same purpose ballast is carried by balloons.

Ballater Village of Aberdeenshire, 43 m from Aberdeen, on the LMS Rly. Balmoral is reached from here.

Balleny Group of five islands in the Antarctic, called after John Balleny, a whale fisher, who discovered them in 1839. On one of them is a volcano, 12,000 ft. high.

Ballet Combined performance of professional dancers. It is a combination of dance and music by a number of performers acting together, and is usually given as a public spectacle. In this form it dates from the 15th century. In Italy and in France very elaborate ballets were performed and in their composition the greatest artists and musicians were employed. Corneille and Molière, Mozart and Beethoven may be mentioned in this

connection Earlier, Leonardo da Vinci had worked on a hallet

The ballet was introduced into England in the 18th century and was very popular during the early part of the 19th It then fell somewhat out of favour, but in 1908 Serge Diaghileff introduced the Russian ballet into England, where it made a great impression It was greatly helped by the dancing of Pavlova, Genée and Isadora Duncan Other names associated with the modern ballet are those of Bakst, Max Reinhardt and Gordon Craig

Ball-flower Ornament found in Gothic architecture It consists of a ball almost enclosed by the sculptured petals of a flower and is effectively used in mouldings of the Decorated Period of the 13th century There are fine examples in the cathedrals of York, Lichfield and Hereford

Ballina Market town and seaport in Mayo, Irish Free State It is on the River Moy, and has a small harbour It is the chief town for the trade of Mayo, and has a suburb, Ardnaree, across the river in Sligo In 1798 the French were for three weeks masters of Ballina Pop 4700

Ballinasloe Market town of Co Galway, Irish Free State, on the River Snick, 93 m from Dublin, on the G S Rly Its fair, held in October, where horses, sheep and cattle are sold is one of the largest in Ireland There are also some industries A race meeting is held here in July It is the terminus of the Grand Canal which leads to the Shannon Pop 5100

Ballinrobe Market town of Co Mayo, Irish Free State It is on the little River Robe, 15 m from Clannorris, on the G S Rly A race meeting is held here in Sept. Pop 1600

Balliol College College of the University of Oxford It was founded in 1263 by John de Balliol, father of the King of Scotland Some of its buildings date from the 15th century Its modern reputation for scholarship began in 1870 when Benjamin Jowett became master Under him were trained Asquith, Grey, Lansdowne, Milner and Curzon, and other distinguished people Earlier members included Cardinal Manning, Archbishop Temple and Matthew Arnold, and earlier still was Adam Smith The buildings are in the angle formed by Broad Street and S Giles.

Ballistics Science of gunnery It is studied by artillery officers whose business it is to know how projectiles of various weights and shapes will travel when fired It deals with the force of gravity, the resistance of the air and other matters that affect the flight of a bullet or a shell

Balloch Village of Dumbartonshire It stands at the south end of Loch Lomond and is a calling place for steamers on the lake Ballochmyle in Ayrshire is immortal because of Burns's poems *The Lass of Ballochmyle* and *Farewell to Ballochmyle*

Balloon A device consisting of a bag filled with a gas lighter than air With balloons the science of aeronautics may be said to have begun The idea that man could invent a machine that could travel in the air is by no means new but it was 1783 before the brothers Montgolfier produced a fairly satisfactory balloon The first balloons were filled with hydrogen, a very expensive form of inflation, but after 1825 coal gas was used

Balloons slowly became more serviceable They were used for exploring the upper air, and in the American Civil War were first used as an aid to military operations A great increase to their utility came with the invention and perfecting of the dirigible balloon Although to some extent superseded by the aeroplane and the airship, the balloon still has its uses Meteorologists find small balloons, called balloon sondes, useful for examining the atmosphere, as, carrying automatic recording instruments, these can rise to heights where man cannot possibly live

The military uses of the balloon were fully proved during the World War, when captive balloons were much used for observation purposes Some of these, the sausage balloons, a German invention, were of stronger material and could remain in the air during a gale

The ordinary balloon is made either of varnished cloth or goldbeater's skin Over this is a network of fine cord which holds the car in which the passengers sit. Apparatus for releasing the gas if necessary, and ballast to be thrown overboard, are also provided

A balloon race for the Belgian Gordon Bennett Cup is held periodically In 1927 an American balloon, the *Deloit* was successful Germany holds the ballooning record of 1895 m The British record is 1117 m

In 1931 an Austrian professor named Auguste Piccard, ascended nearly 10 m in a balloon With a companion he was in an hermetically sealed cylinder, and they were in the air for 17 hours The ascent was made from Augsburg In 1933 a Soviet balloon rose about 12 m into the stratosphere

Ballot Method of secret voting At one time little balls were used for this purpose, as they are to day in certain clubs, and this accounts for the name To day voting papers are employed On one of these the voter makes a mark (x) against the name of the candidate or candidates he prefers and then places it in a sealed box Vote by ballot was first used in England in 1870 at an election for the London School Board In 1872 an Act of Parliament ordered it to be used at all Parliamentary and other public elections. It is used now at elections in all the countries of the civilised world

Ballybunnion Village on the coast of Kerry, Irish Free State It is 9 m from Listowel a monorail running between the two It has a wireless station.

Ballycastle Seaport in Co Antrim, N Ireland On Ballycastle Bay, it is 68 m from Belfast Opposite is Rathlin Island There is some fishing and a little shipping, also a wireless station Pop 1500

Ballyclare Market town of Co Antrim, N Ireland It is 9 m south of Belfast The hatching of linen is the chief industry Pop 3300

Ballymena Urban district of Co Antrim, N Ireland It is on the River Braid 33 m from Belfast, on the L.M.S (Northern Counties of Ireland) Rly, and turns out a great quantity of linen Pop 11 300

Ballymoney Market town of Co Antrim, N Ireland It is 8 m from Coleraine Linen is manufactured, and the market is a fairly important one Pop 3100

Ballymote Market town of Co Sligo, Irish Free State It is 14 m.

from Sligo, and is on the G S Rly There are ruins of a castle there Pop 900

The Book of Ballymote, now in the Royal Irish Academy, contains some valuable information about the early history of Ireland It is written in Gaelic, on vellum A facsimile of it was published in 1887

Ballynahinch Market town of Co Down, N Ireland. It is 21 m to the south of Belfast and on the Belfast and Co Down Rly People visit it to drink the waters Pop 1600

Ballyshannon Seaport and market town of Co Donegal, Irish Free State It is built on both sides of the River Erne, 3 m from Lough Erne, and 15 m from Donegal, on the G N Rly Small vessels can enter the harbour, and the place is a centre for salmon fishing To the old Irish Parliament Ballyshannon sent two members Pop 2300

Balm Anything with a soothing or healing quality The word is a shortened form of balsam Balm of Gilead, or oleo-balsam, is obtained from trees that grow in Arabia and Abyssinia, where it is valued as a medicine and as a scent In N America there is a poplar called Balm of Gilead The buds of this provide a medicine See BALSAM

Balmain Town of New South Wales, and really a suburb of Sydney It stands on the western side of Darling Harbour, and is an industrial area, with factories for the making of soap and other articles, and also shipbuilding yards There is a coal shaft, said to be the deepest in the world

Balmerino Lord Scottish title It is taken from a village in Fifeshire, 4 m from Dundee In 1604 Robert Elphinstone was made Lord Balmerino, and his descendant, Arthur, the sixth lord He was taken prisoner at Culloiden and was beheaded on Tower Hill, London, Aug 11, 1746, the last person to die in this way in England.

Balmoral Royal residence in Aberdeenshire It is 8 m from Ballater, which is its railway station The Dee flows by it, and the scenery around is magnificent The estate was bought by Prince Albert in 1848, and soon afterwards the castle was built Queen Victoria spent a good deal of time here The estate now covers about 25,000 acres, much of which is a deer forest. It then became the Scottish residence of King Edward VII, and later of King George V

A Scottish cap is called the Balmoral

Balquhiddy Beauty spot of Scotland The Braes of Balquhiddy, famous for connection with Rob Roy, are in Perthshire, near Loch Vail The village is on the L M S Rly, and in its churchyard Rob Roy was buried in 1734

Balsa Tree growing in S America The wood is very light and therefore very useful for many purposes, e.g., the construction of aircraft It is used by the Indians for rafts, and on this account the raft is called a balsa The logs are connected together and sometimes covered with hide, and are then propelled by oars or sails

Balsam Herb and resin Balsams are of two kinds, although the one is related to the other. One class are herbs and the other resins They possess fragrant or healing properties, perhaps both

As herbs the balsams are a large genus Most of them grow in tropical countries, but some are found in Great Britain and other parts of Europe

and N America A large group called *impatiens* have a curious characteristic When the seeds are ripe the seed vessel rolls up suddenly and bursts scattering the seeds with much force The common balsam and the giant balsam grow in gardens The latter has a stem 10 ft. high The yellow balsam called touch-me-not, grows wild, as do other kinds The balsams of India have white and red flowers Australia has its own variety of balsam trees

The gums and resins called balsams are obtained from certain trees, usually by cutting the bark They give out a pleasant if pungent, odour and are much used in making drugs and medicines Some are used to make incense and varnish Balsam of Peru and Balsam of Tolu are obtained from trees growing in Central and S America Balsam of Copaiba from the same area, is one of the most useful From its resin an oil is distilled, which has a high medicinal value

The balsam fir is a tree that grows in the United States and Canada Sometimes called the balm of Gilead fir, it grows at times to 60 ft. high From it is obtained a fluid called Canadian balsam, very useful as a cement

Balta One of the Shetland Islands Balta Sound is the strait separating that island from Unst The name is also that of a town in Ukraine

Baltic The Company of merchants in London Named after the Baltic Sea, its full title is the Baltic Mercantile and Shipping Exchange It has about 2500 members—shipping merchants, shipowners and shipbrokers The offices are in St Mary Axe, E 6 The older Baltic was a company of merchants, founded in the 16th century, who traded with ports in the Baltic The present company, although it keeps the name, by no means confines itself to the Baltic trade

Baltic Port Small seaport in Estonia It is 33 m from Reval or Tallinn It is the only harbour in the gulf of Finland that is open all the year The Estonian Government has made it a free port, and a railway runs from here to Reval

Baltic Sea Great sea of N Europe It is almost a lake, as only narrow channels between Denmark and Sweden connect it with the North Sea The Kiel Canal is a shorter and safer route between the two seas

The Baltic covers 170 000 sq m, and in it are the Gulfs of Bothnia, Finland and Riga The countries bordering it are Sweden, Denmark, Germany and Russia, as well as the newer ones, Finland, Latvia, Lithuania, and Estonia, which are called the Baltic States In it are many islands, Gothland and Dago among them, and several belonging to Denmark Many rivers flow into it, the longest being the Vistula and the Oder The chief ports are Copenhagen, Stockholm, Helsingfors, Leningrad, Stettin, Lubeck, Riga, Liban, and Reval Navigation is hindered during some months by ice, but ice breakers do something to lessen this handicap to trade

In the 16th and 17th centuries the Baltic Sea was, from the commercial point of view, far more important than it is to-day Its ports were among the richest and most prosperous in the world and in union they formed the powerful Hanseatic League

During the World War there was some fighting in the Baltic between the Russian and the German Navies The difficulty of entering the sea isolated the Russian Navy from its

allies, but British submarines got through, and in 1915 and 1916 harassed the German ships therein.

Baltimore City of the United States, the capital of the State of Maryland and an important seaport. It stands on the Patapsco River 11 m. from Chesapeake Bay and 185 from New York, and owes its importance to its position near the sea on the one side and the great producing areas of coal, cotton, wheat and other necessities on the other.

Baltimore is a modern city with straight streets on the American plan. Its area was enlarged in 1918. The Johns Hopkins University, the Johns Hopkins Hospital and the Enoch Pratt Library are notable features.

Shipping is the city's chief industry. There are two harbours which are well provided with docks and all modern facilities for storing and handling cargoes. Steamers go regularly to ports on both sides of the Atlantic. Baltimore is a great railway centre, and lines radiate in all directions. Many manufactures are carried on and much food is preserved here. The city was founded in 1729 and much of it was burned down in 1904. Pop. (1930) 804,874.

Baltimore Village of Co. Cork, Irish Free State. It stands on Baltimore Bay, 8 m. from Skibbereen, on the G.S. Rly. The people are chiefly fisherfolk, and here, in 1887, the Baroness Burdett-Coutts set up a school for teaching the technique of fishing.

Baltimore Lord, Irish title. It is chiefly famous because of the connection of its early holders with the American colonies. George Calvert, a York-shire man, became an M.P. and was from 1610 to 1625 Secretary of State. After he resigned he crossed the Atlantic in order to found a colony in Newfoundland and just before his death, April 15, 1632, he had secured a large slice of land further south. This became the property of his son Cæcilius (1606-75), who founded there the State of Maryland. Its capital was called Baltimore.

Baluchistan Province of India. It is of importance because of its position on the frontier, Persia and Afghanistan being its neighbours. It has a coastline of 600 m. on the Arabian Sea and consists of three parts. The smallest part is British Baluchistan, a British possession since 1879. Next is the British Agency Territories under the direct rule of the Indian Government.

The largest part of Baluchistan consists of the native states of Kalat and Las Bela. These have their own rulers but a political agent watches their affairs in the interests of India as a whole. Altogether the country covers 134,638 sq. m. and has (1931), 868,617 inhabitants.

Baluchistan is mountainous, and has a few short rivers. The people are chiefly Baluchis, Pathans and Persians, who live a somewhat primitive life. They grow cotton, cereals and dates, rear camels and horses and trade with India and Persia. From time to time its tribes cause anxiety to the Indian Government, as, for instance, in 1918 when an expedition was sent against them.

Balzac Honoré de, French novelist. He was born May 20, 1799, at Tours, obtained his education at Vendôme and in Paris and was for a time in a lawyer's office. However, he refused to become a lawyer and began to write, living in the meanwhile in poverty in Paris. His first books

brought him very little, and in a short time he was home again.

The change in Balzac's fortunes began in 1829 or thereabouts, and *The Chouans*, 1829, and *The Wild Ass's Skin*, 1831, mark the change. For twenty years he wrote almost incessantly. He lived in various places, associated with all kinds of people and recorded his observations in his books. He died on Aug. 18, 1850.

Balzac must obviously be compared with Dickens. Both wrote a great deal, both drew largely from their own wide experiences of life, both showed an intimate knowledge of the human heart. Balzac is the coarser, Dickens has the more genuine humour. The greatest of Balzac's productions is *The Human Comedy*. This and his other books have been translated into English.

Bamberg City of Bavaria. It is 36 m. from Nuremberg, near where the River Regnitz falls into the Main. There is an upper and a lower town. The interest of the city lies in its cathedral, rebuilt in the 13th century, and other old buildings. Two palaces are reminders of the time when the Bishops of Bamberg were great princes ruling a wide territory, at one time this covered 2000 sq. m. The city carries on various manufactures and has some shipping along the river. Pop. 50,152.

Bambino Representation of the Infant Jesus Christ in swaddling clothes. They are much seen in Italy where some are the work of the great artists. The most famous, in the church of Ara Coeli in Rome is believed to work miracles. It is shown on the Epiphany Jan. 6, which is the Feast of the Bambino. The word is Italian, meaning 'baby'.

Bamboo Malayan name for a grass. It grows in great profusion in India, China and other parts of Asia. It is also found in America and Africa especially the West Indies, and some species will grow in English gardens. The stem of the bamboo, which sometimes grows to a height of 100 ft. or more, combines lightness and strength, and is therefore very useful for building furniture, etc. The young shoots and seeds are eaten, and paper is made from the mature plant.

Bamburgh Village on the coast of its ruined castle. Bamburgh is 4 m. from Belford. It was, in the 6th century, the residence of the Kings of Northumbria, and on a rock looking out to sea King Ida built the first castle. Being near the Scottish border was often attacked, and after the Wars of the Roses became a ruin. In 1894 it was restored. St Aidan's Church is a 7th century building and in the churchyard Grace Darling is buried.

Bampton Village of Devonshire. It is 7 m. from Tiverton, on the G.W. Rly. It is famous for the fair held every October, when ponies, sheep and cattle are sold. Pop. 1100. Another Bampton is a village in Westmorland.

The Bampton Lectures are eight sermons or lectures delivered in Oxford every year by a leading theologian of the Church of England. They are afterwards published. The fee to the preacher is £120 a year, left by the Rev. J. Bampton, Canon of Salisbury, who died in 1761.

Banana Tropical tree and fruit, also called the plantain. The fruit of the banana tree is a popular article of food to-day, and its cultivation has become a great

industry in the West Indies, East Indies, Uganda and other tropical countries. The tree, of which there are several varieties, will grow to a height of 20 ft. It has a high food value and contains less water than most fruits.

Great Britain's supply comes chiefly from the West Indies, Columbia and the Canary Islands. The banana, however, has other uses. The fruit is dried and ground into a meal, or used in making an intoxicating liquor. Bananas are exported in bunches when green, being allowed to ripen later, and special vessels have been built to carry them. In 1932 16,823,000 bunches of bananas were imported into Great Britain. In 1927 Jamaica decided to tax the bananas exported.

Banat Hungarian district, 11,000 sq. m. in area, bounded by the Danube and the Theiss. Its capital is Temesvar and its full name the Banat of Temesvar. It became part of Hungary in 1718. After the war the Peace Conference decided to divide it between Rumania and Yugoslavia.

Banbridge Market town of Co. Down, N. Ireland. So called because it stands on the River Bann. It is 24 m. from Belfast, on the Great Northern (Ireland) Railway, and is famous for the linen produced here. Pop. 5000.

Banbury Borough and market town of Oxfordshire. It is 77 m. from London and 21 from Oxford, on the G.W. and L.M.S. Rlys. Its cross, familiar through the nursery rhyme, was pulled down in 1610. The present cross is modern. There are some manufactures, but Banbury is chiefly a market for the sale of corn, cattle, etc. A horse show is held in August. Pop. (1931) 13,953.

Banbury Lord English politician. Frederick George Banbury was born in 1850 and educated at Winchester. He became a stockbroker and was long chairman of the G.N. Rly. In 1892 he entered the House of Commons as a Unionist, first as M.P. for Peckham, and then for the City of London. In 1902 he was made a baronet. In the House where, except for a few months, he remained until made a baron in 1924, he was a most persistent questioner. Nothing escaped his notice and the slightest inaccuracy in procedure was quickly pointed out by him. His only son was killed during the Great War.

Banca Island of the Dutch East Indies. It is 150 miles long and covers about 4550 sq. miles. Muntok is the capital. A great deal of tin and some other metals are mined, bananas, rice and other tropical products are grown, and much of the island is covered with forest. The Strait of Banca separates Banca from Sumatra. Of the population of 120,000, about 40,000 are Chinese.

Banchory Health resort and market town of Kincardineshire. It is on the Dee, 17 miles from Aberdeen, on the L.N.E. Rly., and is a popular holiday resort. Pop. 1800.

Bancroft George. American historian. Born at Worcester, Mass., October 3, 1800, he was educated at Harvard and travelled in Europe, where he made friends with Goethe and Hegel. In his own country he was in turn a schoolmaster, a collector of customs at Boston and a politician as Secretary of the Navy. This led to a post abroad and he was minister in London from 1846 to 1849, and in Berlin from 1867 to 1874. He died in Washington Jan. 17, 1891. Bancroft was the

author of an authoritative *History of the United States*.

Bancroft Sir Squire. English actor. Born in London May 14, 1841, he first appeared on the stage in Birmingham. In 1865 he appeared in London, where he made a reputation by playing in T. W. Robertson's comedies, *Society*, *Caste*, and others. More important, as an aid to success, was his marriage in 1867 to the actress Marie Wilton. Spoken of as the Bancrofts, the pair acted together and from 1879 to 1885, when they retired, they managed the Haymarket Theatre. London. In 1897 Bancroft was knighted and on April 19, 1925, he died. Lady Bancroft died May 22, 1921. The Bancrofts wrote *On and Off the Stage and Recollections of Sixty Years*.

Banda Name given to twelve small islands in the Dutch East Indies. They are 60 miles south of Ceram, and cover 18 square miles. At one time a British possession, they have been Dutch since 1814. The chief town is also named Banda and the sea in which they are is the Banda Sea. The islands are subject to volcanoes and earthquakes.

Bandana Handkerchief made in India of fine silk. It is usually very brightly coloured, with designs or spots in white on a coloured ground. The word is also used for a material of silk or cotton that is made in much the same designs and colours.

Bander Abbas Seaport of Persia, also called Bender or Bunder Abbas. It is near the entrance to the Persian Gulf. Through it passes a good deal of Persia's trade, the exports including dates and carpets. As the harbour is an open roadstead lighters are used to carry the goods to and from the shore. During the Great War the harbour was controlled by the British. Pop. 10,000.

Banderillero Participant in a bull fight. They are the men who plunge banderillas, or small darts about 18 in. long, into the bull to enrage him.

Banderole Long, narrow flag which flies at the masthead of a fighting ship, or sometimes carried at the funeral of a great man. The word was also used for the streamer fastened to the lance of a knight and had other meanings now obsolete. Another spelling is Bannerol.

Bandfish Fish with a long, thin, flat body. They have tiny scales and are red in colour, but are rarely seen in Great Britain.

Bandicoot Animal found in Australia. There are several kinds. Like the kangaroos they are marsupials, i.e. they carry their young in pouches, and the hind legs of the two are similar. The bandicoot however, is smaller, only about the size of a rabbit. With a pointed nose, it feeds chiefly on insects.

Band of Hope Temperance Organisation. In 1848 societies called by this name were founded, chiefly among the pupils in Sunday Schools conducted by Nonconformists. The members promise to abstain entirely from the use of intoxicants. In 1855 the Band of Hope Union was established as a central organisation. Its offices are at 59 and 60 Old Bailey, London, E.C. It issues a paper, *The Band of Hope Chronicle*. Scotland and Ireland have each a Band of Hope Union.

Bandolier Belt worn by soldiers over the left shoulder for the purpose of carrying cartridges. These are placed in loops sewn in the belt. An ordinary bandolier holds about 90 rounds

Bandon Town and river of the Irish Free State. The town, properly called Bandonbridge, is a market town in Co. Cork, 20 miles from Cork, on the G. S. Rlys. Its industries include brewing and distilling. It was founded in 1608 by the Earl of Cork for Protestants. Pop 3100. About 5 m. down the river is Bandon Quay, or Kilmacsimon Quay, where there is a certain amount of shipping.

The River Bandon is 40 m. long. It flows past Bandon into Kinsale harbour and is noted for its salmon.

Bandon Earl of Irish title, held since 1800 by the family of Bernard. In 1755 Francis Bernard, an M.P. and a landowner in Co. Cork, was made a baron, and in 1800 an earl. He died in 1832. The family seat is Castle Bernard, near Bandon, and his oldest son is called Viscount Bernard.

Bandy Kind of hockey played on the ice. Eleven players take part on each side. The ground should be 150 yards long by 100 wide, although the game can be played on a smaller area. The sticks, or bandies, should not be more than two inches wide and four feet long and the ball, or cat, is of hard rubber, about the size of a lawn tennis ball. The goalposts are 12 feet wide.

Baneberry One of the names for a herb found wild in copses in the north of England, chiefly on limestone. It bears small white flowers and black berries which are poisonous. The herb christopher is another name.

Banff Burgh, seaport and market town, also the county town of Banffshire. It stands on the Moray Firth, facing north, and is 50 miles from Aberdeen and 72 from Inverness, being reached by the L.N.E. Rly. The industries include fishing and shipping, for which there is a harbour with good accommodation. As a pleasure resort Banff has many attractions, including two golf courses and fishing in the Deveron. Pop (1931) 3489.

Banff Pleasure resort of Alberta, Canada. In the Rocky Mountains, it is an important station on the main line of the C.P.R. It is on the Bow River, 88 miles from Calgary, and stands in an immense national park. Around it is magnificent scenery, while further attractions are hunting and fishing. Banff has some medicinal springs. Pop 1000.

Banffshire County of Scotland. In the north-east of the country, it covers 630 square miles and has a coastline of 30 miles on the Moray Firth. Much of it is mountainous, but there is some low and fertile land near the coast. It contains Ben Macdui, the second highest mountain in the British Isles. The chief rivers are the Deveron, Spey and Avon. Banff is the county town. Other places are Cullen and Buckie on the coast, Keith, Macduff and Dufftown. The Dukes of Fife and the Duke of Richmond are landowners. Pop (1931) 54,835.

Bangalore Capital of the Indian state of Mysore. To the Hindus "the city of beams," it is 225 miles from Madras, from which it can be reached by railway. Standing high, about 3000 feet, it is healthy and on that account has a considerable

European colony. The most interesting building is the fort, in which are the remains of Tipu Sultan's palace. Bangalore was founded in 1537 and was taken by the British in 1791. To day it is an important military station. Pop (1931) 306,470.

Bangkok Capital of Siam and its chief seaport. It stands on the River Menam about 20 miles from its mouth. The old city is surrounded by walls. Outside are other cities, the native quarter, the populous Chinese quarter and the commercial quarter. Bangkok is the centre of an excellent railway system and from it main lines go to all parts of the country. In the city itself are many canals which are used as highways and on which many people dwell in boats.

Bangkok is the banking and commercial centre of Siam, but its chief industry is shipping. Owing to a bar in the river, large ships load and unload on the island of Kohli Chang. Bangkok has a wireless station. Pop 452,000, about a third being Chinese.

Bangor City of Caernarvonshire. It stands on the Menai Strait, 8 miles from Caernarvon and 235 from London, and is reached by the L.M.S. Rly. Here the tubular and suspension bridges cross the strait, as Bangor is on the direct road to Holyhead. The industries include the export of slate from the Bethesda quarries. Here is the University College of North Wales and it has had a bishop since the time of St. Deiniol in the 6th century. The present cathedral was built in the 16th. Pop (1931) 10,959.

Another Bangor is a village in Flintshire and another a town in Maine, U.S.A.

The Bangorian Controversy was a dispute in the Church of England about the nature and extent of the church's authority over individuals. It was started in 1717 by Benjamin Hoadly, Bishop of Bangor.

Bangor Seaport and market town of Co. Down, Northern Ireland. It stands on Belfast Lough, 12 miles from Belfast and is served by the Belfast and County Down Railway. The industries include fishing, but Bangor is better known as a watering place. Here was a famous abbey destroyed in the 9th century by the Normans. Pop (1926) 13,316.

Bangweolo Lake. Shallow lake, 3700 ft. above sea level, in N. Rhodesia, formed by the head streams of the Congo. It was first discovered in 1868 by Livingstone.

Banian Nautical term. To seamen banian days are days on which the food is poor, or on which no meat is served. At one time there were two banian days each week in the British Navy and later one no meat being provided. The phrase comes from the bania, a caste of Indians, chiefly traders and moneylenders, who do not eat meat.

Banishment forcible removal from one's own country. It differs from outlawry which, strictly speaking, is to put a man outside the protection of the law, and from transportation which is sending a criminal to a definite place.

Banjermassin Capital and seaport of Dutch Borneo. It is on the south coast, built on both sides of the River Martapura. There is a certain amount of shipping and all round are rice fields. As it lies very low the town is often flooded and consequently many of the houses are built on piles. Here in 1700 the East India Company set

up a trading station. It became a Dutch possession in 1817. Pop 50,000.

Banjo Instrument used to accompany singing. They are made with five, six or seven strings, and are played by plucking the strings with the fingers, or striking them with the backs of the nails. The banjo may also be played with a plectrum.

Bank Place where money is kept and where dealings in money are conducted. In Great Britain banks are regulated by special laws which make it practically impossible for a private person to carry on a bank, as was done before 1834.

Banks are of several kinds: (1) International banks, such as the Bank for International Settlements opened at Basel in 1930. (2) State banks, such as the Commonwealth Bank in Australia and the Federal Reserve Banks in the U.S.A. (3) Joint stock banks, such as Lloyd's the Midland, the Chartered Bank of India and others that have branches throughout the countries which they serve. (4) Banks such as Baring's and Rothschild's that are occupied chiefly with foreign business. (5) Savings Banks, including the Post Office Savings Bank, which receive and pay out money, but do not carry on other banking business. In this class are municipal savings banks such as the one at Birmingham.

The settling of accounts between the different banks is carried out by means of clearing houses. The chief of these is in Post Office Court, Lombard Street, London, E.C. Valuables such as jewellery, plate, etc., can also be deposited at a bank for safety, the banker acting as a bailee.

Banker Card game. It can be played by five or six persons. The full pack of 52 cards is used. The dealer deals out three cards to each player and then turns up for himself until an eight or a lower card appears. A pool having been provided by contributions from all, betting begins. Each player, other than the dealer, without looking at his cards, may bet, up to the amount of the pool, that one of his cards in the same suit is higher than the one which the dealer has turned up. At the end of the round the contents of the pool go to the dealer. Another player then deals and the game continues.

Banket Kind of rock. Gold is obtained from various kinds of rock and other material, for instance the sand in river beds. Its most prolific source, however, is the rock in what is called banket formation, as that of the Rand.

Bankhead Tallulah American actress. She was born in Duntreville, Alabama, U.S.A. Jan. 31, 1902 and began her stage career as Gladys Sinclair in *Squab Farm* at the Bijou Theatre, New York, in 1918. Her first London appearance was as Maxine in *The Dancers* in 1923. In 1930 she played the heroine's part in *The Lady with the Camellias*.

Bank Holiday Day on which by law banks and public offices must be closed. Other business houses also close on these days which have become general holidays. In England and Wales the bank holidays are Easter Monday, Whit Monday, the first Monday in August, and Dec. 26 (Boxing Day), if it is a weekday, and if not, Dec. 27. Good Friday and Christmas Day are not strictly speaking bank holidays, although they are general holidays. The reason is that they were holidays before the passing of the Act of 1871 that established bank holidays. Ireland

has an additional bank holiday—St. Patrick's Day (March 17). In Scotland the bank holidays are New Year's Day, the first Monday in May and the first Monday in August, also Christmas Day and Good Friday. Other days, for instance, a coronation day, can be made bank holidays by royal proclamation.

Banking Business of receiving and lending money. The banking system is based on the fact that in consideration of safety and accessibility people are willing to lend money at nominal or even no interest and to allow it to be lent by the banker to others at a substantial rate of interest. The banker, in short, makes his profit by borrowing cheap and lending dear. To this primary business modern banking has added the issue of notes, which were in origin and still are in theory promissory notes, and the facilitation of commercial transactions by the buying and selling of bills of exchange.

Money is placed with a banker either on current account or on deposit. In the former case the money may be withdrawn at any time and as a rule no interest is allowed. In the latter case notice of withdrawal is required. Of the money received by the banker only sufficient is kept in cash to meet the daily requirements of customers. A certain amount is invested in gilt-edged securities, but the bulk of it is used for loans on approved security.

The first bank in the modern sense was the Bank of Amsterdam founded in 1609. Until the establishment of the Bank of England in 1694, such banking as there was in England was carried on by goldsmiths who received deposits of money and valuables and issued receipts which by usage were treated as negotiable instruments. The issue of notes by the Bank of England, which was a new feature of banking, may have been based on this practice.

In the 18th century all over the country private banks sprang up and these did the banking business of the land in a haphazard fashion until the 19th century. The important legislation of 1834 made it practically impossible for further private banks to be established and a little later the limited liability company was introduced. Gradually most of the existing banks became companies of this kind, and as they had a considerable amount of uncalled capital they were able to offer good security to depositors who had lost heavily through the failures of private banks.

Towards the end of the 19th century a process of amalgamation set in with the result that in a few years the ordinary banks, save one or two, were gathered into five great organisations, Midland, Lloyd's, Barclay's, Westminster and National Provincial. Some retained their name and identity, but they are none the less part of one of the "big five," which also controlled banks in Scotland and Ireland.

The great development of banking in the 19th century was facilitated by the use of the cheque, which is really a bill of exchange. These are now used on an enormous scale for transferring money from one person to another, and dealing with cheques forms a very large part of the banker's daily business.

Entrance to a bank is usually obtained after examination by a director. To protect the interests of the employees there is a Bank Officers' Guild. For the profession as a whole there is the Institute of Bankers at 5 Bishopsgate, London, E.C.4. This holds examinations, the passing of which is necessary to any serious

advancement in the profession Scotland and Ireland have similar institutes

BANKING AS A CAREER An application for an appointment to a clerkship in a bank should, as a rule, be addressed to the Staff Department at the Head Office of the Bank, though in some cases appointments are made locally. It should be supported by the introduction of a substantial customer of the bank or of some responsible person connected with it. All candidates will be required to produce evidence of a good general education, and if their application is favourably considered, must pass an entrance examination, which is usually, though not invariably, exoused to holders of a Matriculation or School Certificate.

The usual ages for admission to Clerkship are from 17 to 19 and the commencing salary at the earlier age is from £70 to £90 a year in London and about £20 a year less in the country. For the first fifteen years there is a scale of salaries which in normal cases will bring the salary at the end of that period to a sum varying from £350 to £400 a year.

As a rule all the administrative positions are filled by appointments from the clerical staff, and there is therefore the fullest opportunity to rise to positions which in some cases command very high salaries. Salaries are paid free of Income Tax, and in all the large banks pensions are available on retirement at the age of 60 and 65 and Provident Funds or other arrangements exist by means of which provision is made for allowances in case of a breakdown in health and for grants to widows and orphans in the case of death.

After appointment clerks are expected to pass the Associate Examination of the Institute of Bankers. This examination is in two parts, preceded by a Qualifying Examination, exemption from which is granted to holders of the recognised School Certificates (i.e. the "First Examinations" according to the classification of the Board of Education).

The subjects of the Associate Examination are the Practice and Law of Banking, Economics, English Composition, Foreign Exchange, Commercial Geography, Accountancy, and the chief commercial languages.

It is usual to make a monetary grant of £15 on completion of Part I and an additional £30 on obtaining the Associate Certificate. A good place in the pass list is an important element in future promotion.

Some of the larger banks offer appointments to the holders of a University Degree, the age of admission and the commencing salary being higher than in the case of ordinary appointments, and there is also a system of foreign scholarships for selected men willing to go abroad.

Banking Term used by airmen. It means making an aeroplane turn to one side. To bank his machine the airman raises one wing above the other so that he can turn it rapidly.

Bank Note Paper unit of currency. Notes are only issued by the Banks of England and Scotland. But in the 19th century any bank could issue them although after 1834, only under strict conditions. In Scotland notes for £1 are issued. In England the lowest was for £5 but since 1928 Bank of England currency notes for 10s and £1 have been issued. They are legal tender.

English bank notes are printed on special paper made at Laverstock and great precautions are taken to prevent forgeries. The Chinese used notes in 2800 B.C. In 1658 the

Bank of Sweden issued them and soon they were found in most European countries. England and Scotland used them before 1700.

Bank of England Bank that acts as banker to the British Government. About 1691 a Scotsman, William Paterson, who was in favour with William III, propounded a scheme for the establishment of a central bank, and in 1694 parliamentary sanction was obtained for the issue of a charter creating a corporation styled "The Governor and Company of the Bank of England," with a capital of £1,200,000. The Bank was empowered to carry on all such transactions as were carried on by the continental banks and in addition was given the privilege of issuing notes.

By an act of 1826 the Bank was given a monopoly of issuing notes for London and 65 miles round, and by the Bank Act of 1844 the Bank was divided into two distinct sections—the issue department and the banking department. As the private banks disappeared it secured without further legislation the monopoly of issuing notes for the whole of the country, but this privilege was partially suspended during the World War when the Treasury superseded the use of gold as currency by issuing currency notes for £1 and 10s. In 1929 the issue of currency notes was transferred from the Treasury to the Bank.

The Bank of England carries out many state functions, such as fixing the bank rate, and acts as banker to the British Government and to the joint stock banks. Its headquarters are in Threadneedle Street, London, E.C., and it is under the management of a governor, a deputy governor and directors appointed by the stockholders, its principal officer being known as the comptroller. The work of rebuilding the Bank on a much enlarged plan was completed in 1931.

Bank Rate Rate of discount allowed from time to time by the central bank of a country, e.g., the Bank of England, on first-class bills of exchange. The effect of the bank rate is to regulate the rate of interest charged by bankers which is usually one per cent. above bank rate. The bank rate is determined by the state of the country's gold reserves. When these are depleted, the bank rate is raised, and the resulting dearthness of money attracts a flow of gold into the country.

Bank Return Statement of liabilities and assets which by law the Bank of England is required to publish weekly. It is divided into parts, the first showing the state of the issue department, i.e., the amount of notes outstanding and the gold and securities held against them and the second the state of the banking department.

Bankruptcy Condition of a person who has been declared by a court of law as unable to pay his or her debts. The English law of bankruptcy is contained in Acts passed in 1914 and 1926, both founded on an Act of 1883. Their object is to protect the debtor's property and to distribute his assets fairly among his creditors. A man can become bankrupt by filing his own petition, or can be made bankrupt by his creditors, if he owes them more than £50. After his property has been distributed among his creditors he is released from all his liabilities towards them, but his discharge can be suspended if there is reason for it. In that case he is an undischarged bankrupt and cannot trade in his own name. He is, however, liable

to punishment if he has been guilty of acts of fraud or has committed certain offences, such as not keeping proper account books.

There is a court of bankruptcy in Carey Street, London, W.C. Elsewhere bankruptcy cases are heard in the county court. There the bankrupts are examined before judges or registrars, who watch over the management of their affairs. In Scotland bankruptcy is called sequestration.

Banks Sir Joseph English naturalist. Born Feb. 13, 1743, he was a son of William Banks, M.P. for Peterborough. He studied natural science at Oxford, particularly botany. Having inherited a large fortune from his father, he made a scientific expedition to Newfoundland and Labrador in 1766. He went with Captain Cook to the Pacific in the *Endeavour* which was fitted out at his expense. In 1772 he made an expedition to Iceland. He was elected president of the Royal Society in 1778, created a baronet in 1781, and sworn of the Privy Council in 1797. He died, June 19, 1820, and bequeathed his collections to the British Museum.

Banks gave his name to an island in the Arctic Ocean and to Banks Strait which separates it from Melville Sound and connects Melville Sound with the Arctic. A group of islands in the S. Pacific is called Banks Islands, and there is a Banks Island off British Columbia.

Bankside District of London famous because here stood the Globe Theatre of Shakespeare's day. It is on the south side of the Thames. In the city of Southwark. In the time of Elizabeth there were several theatres here, also rings for bull and bear baiting.

Bann Two rivers of Northern Ireland, the Upper and the Lower Bann. The former rises in the Mourne Mts. in Co. Down and flows into Lough Neagh, the latter flows out of Lough Neagh and debouches into the Atlantic at the mouth of Lough Fovle. The lower Bann is the boundary between the counties of Antrim and Londonderry.

Bannatyne George Scottish collector. Born in 1545, he was a native of Forfarshire and carried on business as a merchant in Edinburgh. Having, in 1586, fled from Edinburgh, owing to an outbreak of plague, he amused himself in the country by collecting and writing out Scottish poems of the 15th and 16th centuries. He died in 1608. The Bannatyne Manuscripts (800 folios) are now in the National Library, Edinburgh, and are valuable sources for Scots poetry. In 1823 Sir Walter Scott was instrumental in founding the Bannatyne Club for the publication of Scottish historical and literary material.

Banner Name for a flag, especially a flag carried on festive occasions. In medieval times it was the flag, bearing the coat of arms of a noble, which was carried before him and his men when they were summoned to join the royal forces.

At one time there was an order of knights banneret, these being knights higher in rank than knights bachelor, but lower than baronets. A knight banneret was a man knighted on the battlefield for gallant conduct, the last case of the kind being Sir John Smith, knighted by Charles I. at Edgehill (1642). Earlier a noble who brought his vassals to battle under his own banner was a banneret.

Bannockburn Burgh near Stirling in the county of Stirling, Scotland. Originally a coal mining village, it has developed into a small town with various industries, chiefly textile.

Its name is celebrated for the decisive battle in which Robert Bruce defeated Edward II's attempt to relieve the English garrison at Stirling, and secured the independence of Scotland. It was fought on June 24, 1314. The exact site of the battle is doubtful. Recent research tends to show that the actual engagement took place about 2 miles east of the place that is traditionally known as the field of Bannockburn. In 1929 the site was bought for a national park.

Banns Announcement in a church that a marriage will take place between two persons named. The custom dates from the time when, there being no daily newspapers, forthcoming events were announced in a public place. Banns are used in the Church of England and the churches associated with it, the Roman Catholic Church and the Church of Scotland. In the Church of England they are obligatory, unless a licence from the bishop or a certificate from a registrar has been obtained. They must be read in the church of the parish or parishes in which the pair live. This is done at morning prayer on three consecutive Sundays and those who know of any "just impediment" to the proposed marriage are asked to declare it. See MARRIAGE.

Banshee Fairy or spirit that announces death. In Ireland and parts of the Scottish Highlands the people believe in a banshee, a fairy who makes mournful noises near a house when a person is about to die.

Banstead Village of Surrey. It is on the edge of Banstead Downs, a fine open stretch of common, and is 14 miles from London by the S. Ry.

Bantam Most western province of Java, Dutch East Indies. It covers an area of 3050 sq. m. The region is volcanic and there are numerous geysers and hot springs. The principal products are rice, indigo coffee and pulse. The capital and seaport is Serang, with a population of 21,656. The province has a population of 897,400.

Bantam Small fowl, produced by a special method of breeding. Nearly every ordinary breed of fowl has its bantam breed. The flesh of bantams is very succulent, but they are reared mainly for show purposes. The males are very pugnacious. The name is that of a district in Java from which bantams are said to have come.

Bantam is also used for anything small. In boxing bantam weights are fighters under 8 stone 6 lb. The bantam battalions in the World War were composed of men too small to pass the usual physical tests.

Banteng Wild ox found in the Malay peninsula and the islands in that region. They live in the jungle and are very fierce.

Banting Frederick Grant. Canadian scientist. Born in Canada, 1891, he was educated at Toronto. His name is associated with the insulin treatment for diabetes, which he discovered during investigations into pancreatic secretion, 1921-22. He was awarded the Nobel Prize, 1923, and an annuity to enable him to carry on his work.

Bantock Sir Granville English musician. He was born in London, Aug 7, 1868, and was educated for the Indian Civil Service, but abandoned that idea for music. He had a distinguished career at the Royal Academy of Music, being the first winner of the MacFarron scholarship for composition. He toured America and Australia as conductor of the Galety Orchestra and was musical director of the Tower, New Brighton. In 1900 he became director of the school of music in Birmingham and in 1908 professor of music at the university there. He conducted and adjudicated at various musical festivals. His compositions include a Hebridean symphony *The Seal Woman*, an opera *Omar Khayyam*, *Atlantia in Calhdon*, *The Song of Songs*, *The Burden of Babylon*, *Pilgrim's Progress*, incidental music to *Macbeth*, *Five Choral Songs* and *Dances and Prometheus Unbound*. He was knighted in 1930.

Bantry Market town of Co. Cork, Irish Free State. It is 58 m. from Cork City and has a station on the Gt. Southern Rlys. Its position at the head of Bantry Bay makes it a good centre for tourists, fishermen and others. Pop. 3120.

Bantry Bay Opening of the Atlantic on the south west coast of Ireland. It is 25 m. long and in it are Bere and Whiddy Islands. There was an aircraft station on the latter during the Great War. At the head of the bay is Glengarriff.

In Bantry Bay on Aug. 1, 1689, a battle was fought between the English and French fleets.

Bantu Negro peoples of Southern Africa. All belong to the same racial and linguistic stock. The original home of the Bantu seems to have been northern or equatorial Africa, whence they spread southward during historic times, conquering and supplanting the aboriginal inhabitants of whom the Bushmen and the Hottentots are the remnants. The Bantu tongue, though it has many dialectal variations, is the native speech of all Africa south of the equator.

Banville Théodore Faullain de French poet, novelist and dramatist. He was born in 1823 and his first work was a volume of poems entitled *Les Caryatides* (1842) which was followed in 1846 by *Les Stalactites*, and in 1857 by *Odes Funambulesques*, which established his position as a poet. A second series of these appeared ten years later and after the Franco-Prussian War, *Idylles Prussiennes*. Among his dramatic works is *Gringoire*, better known in England under the title of *The Ballad-monger*. He died in Paris, March 12, 1891.

Banyan Large tree that grows in the E. Indies. It sends out branches of enormous length from which shoots grow downwards and so form supports for the tree. They thicken until they resemble trunks and by their aid the tree is able to spread over a great extent of ground. Some of these trees can shelter thousands of persons and they are so called because the banyans, or Hindu merchants, used them as market places.

Baobab Tree of the order Sterculiaceae. It is found chiefly in Africa, but also in the East Indies and South America. Its trunk is often 30 ft. in diameter. The natives use the bark for making ropes and clothing, and the leaves, when made into a powder, as a condiment. They eat the fruit, which is called sour gourd and monkey bread, and make a medicine of its juice. It has been used for the manufacture of paper.

Bapaume Town of France. About 15 miles from Arras, it figured prominently both in the Franco-Prussian and the World War. In the former it was the scene of a bloody but indecisive battle in which the French claimed the advantage. In the latter it was an important position in the battle of the Somme, and still more in the battle of Bapaume. Peronne, which followed immediately upon the Battle of Amiens (Aug. 8-21, 1918). After the World War Bapaume was adopted by Sheffield. Pop. 4000.

Baptism Sacramental rite of initiation into membership of the Christian Church. It consists of a symbolic purification by water. It is performed by total immersion, or by sprinkling or pouring water on the head. In most churches it is bestowed upon infants, but the Baptists only confer it upon adults. They practise complete immersion.

Baptistery Part of a church which is used for baptisms. Usually it is the end or part of the building where the font is placed, but in some cases a separate building has been erected. In Italy there are some magnificent baptisteries, notably the one at Florence with its famous bronze doors and one at Pisa. In England there is a detached baptistery at Cranbrook.

Baptists Denomination of Protestants. They reject the practice of infant baptism on the ground that initiation into the fellowship of Christians should be confined to those who make a profession of Christian belief, of which infants are incapable, and hold that the only mode of baptism authorised by Scripture is immersion. Their denominational organisation is similar to that of the Congregationalists.

In Great Britain the Baptists arose in the 17th century and now form a considerable body. In the United States, where they have flourished since 1830, they form the largest evangelical denomination after the Methodists. Like most evangelical bodies they have from time to time split into various sects, the best known division being between the General (or Arminian) and the Particular (or Calvinistic) Baptists. In the 19th century these came together again. In Great Britain the Baptists have 4238 chapels, 1925 ministers and 890,000 members. In addition there are 600 churches and about 20,000 members of the Strict Baptists, who do not admit members of other churches to the communion. Most Baptist churches belong to the Baptist Union founded in 1813. The offices are in 4 Southampton Row, London, W.C.1. The Baptists have a missionary society and training colleges for ministers.

Bar In heraldry a bar is a narrow band across a shield. There may be four of these on any part of the shield or coat of arms. The bar sinister, a mark of illegitimacy, is really the head sinister.

In music a bar is used to divide the music into equal parts. It is represented by straight downward lines. Another bar is an obstruction at the mouth of a river. In some rivers navigation is made difficult, if not impossible, by the presence of bars composed of silt driven together by currents.

Bar Word used for the higher branch of the legal profession. It comes from the rail or bar which was used to divide one part of a law court from another. There is a similar bar in the House of Commons. Beyond this only members can pass and to it offenders against the privileges of the House are summoned.

The whole body of barristers constitute the bar, king's counsel being those who are called within the bar, and we speak of the English, Irish, Canadian and other bars

Barabbas Criminal released by Pilate on the demand of the Jerusalem mob in preference to Jesus. The name Barabbas is only a patronymic, and the suggestion has been made that his own name, like his fellow prisoner's, was Jesus (Joshna). Hence the point of the mob's cry, "Not this man but Barabbas," i.e. not Joshua Bar-Joseph, but Joshua Bar Abbah

Barbados Island of the British West Indies. About 80 miles east of St. Vincent, it is 21 miles long, and its greatest breadth is 14½ miles. Its area is 166 sq miles. The soil is fertile and the climate pleasant and remarkably healthy. The main industries are the growing of sugar and cotton. The capital is Bridgetown. The administration is vested in a governor, who is assisted by a nominated executive council and an elective house of assembly. Nine tenths of the inhabitants are negroes of a superior type. Barbados was annexed to the British crown in 1605. Pop (1931) 173,674.

The Barbados gooseberry, which grows in the West Indies, bears fruit very like the ordinary gooseberry. The tree reaches a height of 15 ft.

Barbara Christian saint who lived in the 3rd century. Tradition says that after her conversion she was beheaded at Nicomedia by her father who was then struck by lightning. Her feast is Dec 4.

Barbarian Term used by the Greeks for all who were not of their race, but especially for the Persians. The Romans used it in a like sense, but especially for the Goths, Vandals and others who harassed and devastated their land. To day it refers to people on a low plane of civilisation.

Barbarossa Name meaning "red beard" and given to two famous Barbary pirates. In the 16th century they plundered towns and vessels and were soon the most feared of all the corsairs of the time. Another noted Barbarossa was the emperor Frederick I.

Barbary Old name for a district on the north coast of Africa from Egypt to the Atlantic. Inhabited chiefly by Berbers and covered to-day by Tripoli, Tunisia, Algeria and Morocco, it is mainly of interest because of its pirates. They began operations on a large scale in the 15th century, when the Mediterranean was a great highway of trade. For three centuries from Algiers, Tunis and other ports, they made piracy a regular business, taking tribute from merchants who paid to be unmolested. Adventurers from England and other countries joined their ranks.

In 1801 their raids led to war between the United States and Tripoli and later between the same country and Algeria. This ended the payments of tribute to the pirates, who received another blow in 1816 when a British fleet bombarded Algiers and set free many prisoners.

The Barbary ape is a tailless monkey found in Tunis and Morocco and also at Gibraltar.

Barbecue Name given to a sheep or an ox when roasted whole, as is sometimes done on days of festivity. It was originally the framework that was placed above the fire in order to hold the

animal being roasted, but was afterwards used for the beast itself. In the United States a barbecue is a feast where animals are cooked in this way. Another barbecue is a floor raised in the middle and used for drying coffee.

Barbel Freshwater fish. It is so called because it has four barbels, or little beards, over its upper jaw. Not unlike the carp, it is found in some British rivers, but is rather coarse for food. Specimens may be as long as 2 ft and weigh 12 lb. In other parts of Europe there is a much larger species of barbel.

Barber One who attends to the hair and beard. Kings and great men had barbers in very early times, and in the 15th century and thereafter they ranked as a skilled profession being surgeons and dentists as well as barbers. There was a company of barbers in London in 1462, and this became in 1541 the Company of Barber Surgeons. In 1745 barbers were forbidden to act as surgeons and the company was divided. To day barbers, more generally called hairdressers, form a strong trade organisation and have their own trade paper, *The Hairdressers' Weekly Journal*. The Barbers' Company is one of the livery companies of the city of London.

Barberini Italian family. In the 11th century there were Barberinis in Florence, but it was not until Maffeo Barberini became Pope Urban VIII in 1623 that they became rich and famous. Urban made a brother and two nephews cardinals while another nephew was made a prince. The Barberini Palace was built in Rome and the library collected. In 1722 the last male Barberini died, and his daughter married a Colonna. The Barberini Library was sold to the Pope in 1902, and in 1930 Barberini Villa in the Alban Hills, was presented to him.

Barberry Shrub found in hedges in Britain, also in other parts of Europe and in the eastern states of the U.S.A. It grows to a height of 5 or 6 ft, bears small yellow flowers and red berries. The bark is useful in dyeing.

Barberton Town of the Transvaal. It is in the centre of a district where gold is mined, 283 m by railway from Pretoria. Pop 1900.

Barbette Platform in a fort from which guns fire over a parapet. It is more generally used, however, for the circular armour that protects the big guns in a battleship. The barbette differs from the turret inasmuch as it does not swing round with the guns. Barbettes were first used in British warships in 1876, and in those built until 1892.

Barbican Fortification, usually circular, that defended the entrance to a castle or sometimes an outpost connected with a town or castle. Barbicans can be seen to day at the castles of Alnwick and Warwick, while at Carcassonne there is a remarkably fine one. The name is retained by streets in London, Plymouth and elsewhere.

Barbieri Giovanni Francesco. Italian painter. A native of Ferrara, he was born in 1591, and first came into prominence during the short reign of Pope Gregory XV, whose patronage he obtained. In 1642 he settled in Bologna where he founded a school of painting. There are frescoes by him in the cathedral of Piacenza and other good examples of his work are in the Pitti Gallery, Florence, and the National Gallery, London. He died in 1666.

Barbizon French village, famous for its school of painting. About 5 m from Fontainebleau, on the edge of the forest, it is a most attractive spot. About 1840 some French painters settled here, working on a common idea—nature as it appeared to them, freedom from the conventional ideas that prevailed. The chief members of the group were Corot, Millet and Theodoros Rousseau.

Barbour John Scottish poet. Born in 1816, his chief work is *The Bruce*, an heroic poem on the life and adventures of King Robert the Bruce, and his lieutenant, the good Sir James Douglas. Several other early examples of Scots literature have been attributed to him. He was an ecclesiastic, and for some time held the position of Archdeacon of Aberdeen, but later entered the service of the Crown and became a high official of the Scottish Exchequer. Barbour who died in 1395, may be described as the father of Scottish literature.

Barcelona City and seaport of Spain, on the north east coast, 430 m from Madrid, and the second largest city in the land. There is a fine Gothic cathedral, museums and libraries, a university and a broadcasting station. Barcelona has many manufactures and around the old town are new industrial suburbs. There is a large shipping trade for which there is a commodious harbour. Pop (1931) 991,262.

Another Barcelona is a town in Venezuela.

Barclay Scottish family. It is chiefly famous for its connection with banking and broking. Like many other bankers, the first banking Barclays were Quakers. In 1736 James Barclay, a son of David Barclay, a linen merchant in Chancery Lane, London, joined his relatives, the Freemans, in a banking business carried on in Lombard Street at the sign of the Spread Black Eagle. Later, Barclay became the chief proprietor, and in the 19th century the firm was known as Barclay, Bevan, Tait & Co. Other banks were absorbed by it, as the era of amalgamations came on, one of these being the famous bank of Gurney & Co of Norwich. In 1896 it became a limited company, in 1917 it was renamed Barclay's Bank, and it is now one of the "big five". Another Barclay helped to found the brewing firm of Barclay Perkins.

Bard Poet or singer, especially a Celtic poet or singer. Many of them were kept in the homes of kings and chieftains to sing about their exploits, and the calling was at one time hereditary. They were especially prominent in Ireland and Wales, but were also kept in Scotland. In Ireland they existed as late as the 16th century. In Wales the Druids supplied many bards, but there were others. The tradition is kept alive to day by the election of bards at the Eisteddfods.

Bardsey Small island off the coast of Caernarvonshire, N. Wales. With an area of about 400 acres, it has a lighthouse and a harbour. It is associated by tradition with the old Welsh bards.

Barebone English politician. A leather seller in Fleet Street and a man of substance, he became noted as a preacher. Called "Praise God Barebone", he was elected for the City of London to the Parliament that met in 1653, and although he took little part in its business it was called after him. It consisted of 139 members and sat from July to Dec., 1653, when Cromwell

dissolved it. Barebone tried hard to prevent the return of Charles II. For this he was imprisoned, but he was soon released. He died in Jan., 1680.

Bareilly City of the United Provinces, India. It is 150 m from Lucknow and about the same from Delhi, and is an important railway junction, a busy city with some manufactures, the chief town of a district and division. Pop (1931), 144,031.

Barents Willem Dutch explorer. Three times he tried to find the north-west passage, but in vain. The third time (1596) his vessel was caught in the Arctic ice and he died in 1597 while trying to reach Lapland. In 1871 a Norwegian sailor found traces of his winter quarters there, and 4 years later part of his journal. The northern part of Novaya Zembla is named Barents Land. Barents Sea is a part of the Arctic Ocean. An island near Spitzbergen also bears his name.

Barfleur French seaport. It is 15 m. east of Cherbourg on the Cotentin Peninsula and was a prosperous seaport in the Middle Ages. From here in 1120 the *White Ship* that carried Prince William sailed on its fatal voyage. To the north is Cape Barfleur off which, May 19 1692, was fought a naval battle between the English and the French. It was an English victory, and on this account several English battleships have been named Barfleur.

Barge Board Sloping board which in timber houses was placed at the gable ends or over windows so as to mask the horizontal roof timbers and protect them from the weather. They were often elaborately ornamented and were much in vogue in the architecture of the Middle Ages. The correct name is verge board.

Barham Lord British seaman. Charles Middleton was born at Leith in 1726 and entered the navy. He did good service for several years in West Indian waters in the convoy and protection of trade. He was comptroller of the navy from 1778 to 1790, and was elected M.P. for Rochester in 1784. For a short time (1794-95) he was a Junior Lord of the Admiralty. In 1805 he was appointed First Lord of the Admiralty and was raised to the peerage. Barham died June 17, 1813, and his honours passed by special remainder to his daughter who married into the family of Noel, afterwards earls of Gainsborough.

Barham Richard Harris. Author of *The Ingoldsby Legends*. He was born at Canterbury, Dec 6, 1788, educated at St Paul's and Brasenose College, Oxford, took orders in 1813, and was presented to the living of Snargate, Romney Marsh. In 1821 he was appointed a minor canon of St. Paul's, and some years later became Vicar of St. Mary Magdalene and St. Gregory Cardar, and Priest in Ordinary to the Chapel Royal. From time to time he made various attempts in literature, but without success until 1837, when Bantley, the publisher, an old friend, asked him to contribute to his *Miscellany* of which Dickens was editor. Barham accordingly began to contribute, under the name of Thomas Ingoldsby, the tales in delightfully comic verse which have made his name famous. *The Jackdaw of Rheims* is regarded as the masterpiece of the Ingoldsby series. He died June 17, 1845.

Baring Maurice. English author and diplomat. Born in London April 24, 1874 and educated at Eton and

Cambridge, he served in the Diplomatic Service, 1898-1904, and then became a journalist and war correspondent, and was on the staff of the R F C during the War. His works include *The Russian People* (1911), *Diminutive Dramas* (1911), *R F C H Q* 1914-18 (1920), *Cal's Cradle* (1925), *Daphne Adeane* (1926), and *Coat without Seam* (1929).

Barium One of the metallic elements. It is not found in the pure state, but only in combinations as barium sulphate, or barium carbonate or witherite. It is prepared by electrolysis of the fused chloride. The compounds of barium are poisonous. Its chemical symbol is Ba, its atomic weight 137.37, and atomic number 56. The name is from a Greek word meaning heavy. The salts are used for various purposes. Barium chromate and barium sulphate are used as pigments, barium hydride is used in sugar refining, and barium nitrate is used to make blasting powder.

Bark Outer covering of the trunks and branches of trees. Some varieties are very useful for tanning and as a source of drugs. The bark used by tanners is from the oak, willow and other trees that contain tannic acid. Oak bark is also used as a mordant in certain dyes. The bark of the cinchona yields quinine, while from other barks eucalyptus, quonia, salicin and other drugs are obtained. Angostura, myrrh, cascara, cassia and other substances are also bark products. The value of cinchona, or Peruvian bark, was discovered by the Indians and handed on to the Jesuits, who introduced it into Europe about 1640. Bark cloth is a fabric made from the inner bark of several plants and used for clothing, matting, etc.

Barker Sir Herbert. English manipulative surgeon. Born at Southampton, April 21, 1869, he was under the tuition of Mr J Atkison, whose practice he took over in 1904. He has cured thousands of joint abnormalities and flat-foot, but has never been officially recognised by the medical profession. He was knighted in 1923 for his services in the War.

Barker Thomas. English artist. Born in 1769 in S Wales he moved to Bath and began his career by copying the Old Masters. Some of his pictures are in the National Gallery, London, and at S. Kensington, and his designs have been used for pottery and textiles. He died in Bath, Dec. 11, 1847.

His son, Thomas Jones Barker (1815-32), painted the meeting of Wellington and Blücher, so often seen as an engraving, and other military scenes.

Barking Borough and market town of Essex, near the confluence of the Roding with the Thames, 9 m from London. It can be reached by the L M S, L N E and District Rlys. It is now mainly an industrial area, which includes the works of the London Gas Light and Coke Co., and the sewage works of the London northern outfall at Barking Creek. Here, too, are works for generating electricity, greatly enlarged in 1931-32. Pop. (1931) 51,277.

Barley (*Hordeum sativum*) Cereal, probably the first to be cultivated by man. A wild species (*H. spontaneum*) is found in Western Asia. Three sub-species of cultivated barley are distinguished, viz, the two-rowed (*H. distichon*) which is the best for malting, the six-rowed (*H. hexastichon*), which is not much cultivated in Great Britain

owing to the poor quality of the grain, and the four-rowed (*H. vulgare*), commonly known as bere or bigg, which was formerly much used for malting, but has now been generally superseded by the two-rowed sub-species. Barley is the most hardy of the cereals, and at one time was largely used for breadmaking, but it is now cultivated mainly for use in brewing and distilling and in domestic cookery. It yields about 35 or 40 bushels to the acre, and the world production is about 180 million quarters, a quarter being 400 lb. The British Isles produce (1932) about 5,400,000 quarters and Canada 11,000,000. Barley imported from foreign countries into Great Britain must pay a duty of 10 per cent.

Barleycorn John. Name given to the personification of barley when it is used for making malt liquor. It is also used to denote the malt liquor itself, as in the poem "John Barleycorn," by Robert Burns. Barleycorn is also a measure, about one-third of an inch.

Barmecides (i.e., sons of Barmek). Persian family that rose to great influence under the Abbasid caliphs of Bagdad. One was the celebrated Ja'far, the intimate companion of Haroun Al Raschid. It is from the legend of him told in the *Arabian Nights* ("The Story of the Barber's Sixth Brother") that the proverbial expression, Barmecide feast, applied to any benefit that is purely illusory, is derived.

Barmouth Watering place and urban district of Merionethshire. It stands on the estuary of the Mawddach amid some of the finest scenery in Wales. It is 234 m from London, on the G W Ry. Pop. (1931) 2491.

Barnabas (son of consolation). Sur-name of Joseph, a Cypriot Levite. He is first mentioned (Acts iv-36) as one of the earliest adherents of the primitive church in Jerusalem. It was Barnabas who was sent out by the church to investigate the reports of the spread of Christianity in Asia Minor, and who brought Paul from Tarsus to Jerusalem.

Barnacle Term applied generally to members of the crustacean order *Cirripedia*, and in particular to the true or ship barnacle (*lepas*) and the common acorn shell (*balanus*). The former consists of a fleshy stalk and five calcareous shells enclosing six pairs of appendages (called cirri). The animal attaches itself to floating wood by means of the stalk, and the function of the cirri is to separate from the water the minute particles which form its food.

Barnacle Goose (*brantaleucopsis*) Migratory bird. In summer it is seldom found outside the Arctic circle, but in winter is found in large flocks on the western shores of the British Isles and other parts of the temperate zone.

Barnard Edward Emerson. American astronomer. Born at Nolville, Tennessee, Dec. 16, 1857, he studied astronomy, and was given charge of the observatory at Vanderbilt University, Nashville, where he was educated. In 1887 he was made an assistant at Lick, and in 1895 became Professor of Astronomy in the University of Chicago and director of the Yerkes Observatory. He died Feb. 7, 1923. Barnard's discoveries included one of Jupiter's satellites.

Barnard George Gray. American sculptor. Born May, 24 1863, he lived for

some years in Paris, where he studied art and began his work. This soon made him known in his own country, to which he returned about 1895. His bronze statue of Lincoln at Cincinnati was severely criticised, but all admit the excellence of the "Great God Pan" in Central Park, New York, "Let there be Light," and other pieces.

Barnard Castle Market town and urban district of Durham. Situated on the Tees, 15 m from Darlington, it is principally an agricultural centre but has some manufactures. It is served by the L N E Ry. The castle from which the town takes its name is now a ruin, it was the scene of Sir Walter Scott's *Rokeby*. The Bowes Museum has a fine collection of china and tapestry. Pop (1931) 3883.

Barnardo Thomas John Irish philanthropist. A native of Dublin he was born July 4, 1845. He did evangelistic work in the Dublin slums, and in 1866 began the study of medicine at the London Hospital with a view to qualifying as a medical missionary. In 1870 he founded in Stepney the celebrated Barnardo homes. He died Sept. 19, 1905.

The Homes are at 18 26 Stepney Causeway, London, E 1, and there are auxiliary homes in the country. The average number of children in residence is nearly 8000 and altogether over 100,000 have passed through. Many of the boys are trained and then sent to Canada.

Barn Dance Popular dance. It is danced by two persons to a tune not unlike a Scottish air. It was introduced into London at the Gaiety Theatre about 1890, the name coming from the U S A.

Barnby Sir Joseph English musician. Born at York, Aug. 12, 1838, he received his musical education at the Royal Academy of Music, London. He was appointed organist of St. Andrew's, Wells Street, London, in 1862, and two years later founded Barnby's Choir, which he continued to direct until 1871, when he became conductor of the Albert Hall Choral Society. In 1875 he was appointed precentor and director of music at Eton College and principal of the Guildhall School of Music in 1892 in which year also he was knighted. A popular composer of hymn tunes and part songs, he died Jan. 28, 1896.

Barnes Urban district of Surrey. It is bounded by the Thames and is 7 m from London by the S Ry. Here are the grounds of the Ranelagh Club, once those of the manor house of Barn Elms. Barnes Common is an open space. The river makes here a bend northwards and the district in the loop is called Casteinaw. Pop (1931) 42,439.

Barnes Ernest William English prelate and scientist. Born April 1, 1874, he was educated at King Edward's School, Birmingham, and Trinity College, Cambridge, and was for some years a fellow and tutor of Trinity. Having made numerous important contributions to mathematical and physical research, in 1909 he was elected F R S. In 1902 he was ordained, but held no pastoral office until 1915 when he was appointed Master of the Temple. In 1918 he became a canon of Westminster and in 1924 Bishop of Birmingham. Dr Barnes is the recognised leader of the Modernist school in the Church of England, and has devoted himself to the task of restating the essentials of the Christian faith in the light of modern science.

Barnes George Nicoll British politician. Born Jan. 2, 1859, he worked for some years as an engineer. He was appointed assistant secretary of the Amalgamated Society of Engineers in 1892 and general secretary in 1896. In 1906 he was returned to Parliament as Labour member for the Blackfriars (now Gorbals) division of Glasgow. On the formation of Mr Lloyd George's administration at the end of 1916 he took office as Minister of Pensions, and in the following year was included in the War Cabinet. In 1919 he relinquished his department, but remained in the Cabinet as minister without portfolio. He retired from political life in 1922, since when he has devoted himself to League of Nations work.

Barnes William Dorsetshire poet. He was born at Rushay in the vale of Blackmoor, Feb. 12, 1800. He started life as a solicitor's clerk and afterwards became a schoolmaster. In middle life he took orders in the Church of England and after holding a curacy in Whitcombe became Rector of Winterbourne Came, near Dorchester, where he remained for the rest of his life. He published in 1844 *Poems of Rural Life in the Dorset Dialect* and two more volumes in 1857 and 1863. A combined edition of his poems was published in 1879. Barnes died Oct. 7, 1880.

Barnet Residential area of Hertfordshire and Middlesex, consisting of three urban districts. The most southerly of these is Friern Barnet, so called because the manor formerly belonged to the Friary of St. John of Jerusalem, with a population (1931) of 23,081. Next is East Barnet. Pop (1931) 18,542. The most northerly is Chippling or High Barnet, an old market town which has a famous horse fair every Sept. Pop (1931) 14,721. All are served by the L N E Ry., and High Barnet also by the L M S line.

In the Wars of the Roses High Barnet was the scene of the battle of Barnet in which Edward of York (Edward IV) routed the Lancastrians and gained the throne. It was fought April 14, 1471.

Barnett Samuel Augustus English clergyman. He was born at Bristol, Feb. 8, 1844, and went to Wadham College, Oxford, where he took orders. In 1872 he was appointed Vicar of St. Jude's Whitechapel and, aided by his wife (Henrietta Octavia Rowland), he began a remarkable system of social and educational work in the east-end of London. He early enlisted the interest and co-operation of Arnold Toynbee (q.v.) and other helpers, chiefly from Oxford, which resulted in 1884 in the foundation of Toynbee Hall of which he was first warden. He was appointed a canon of Westminster in 1906, and he died June 17, 1913. Barnett House, at Oxford, was founded in his memory. His *Life* was written by his wife, who, for her services, was created a D B E.

Barnoldswick Urban district of Yorkshire (W R.). It is 7½ m south-west of Skipton, on the Leeds and Liverpool Canal. It has limestone quarries and cotton factories. Pop (1931) 11,915.

Barnsley County borough of Yorkshire (W R.). It is 15 m north of Sheffield on the river Dearne. It is served by the L M S and L N E Rlys, and is on the Leeds and Liverpool Canal. Barnsley lies in an important coalfield, and has numerous manu-

factures, including iron and steel, leather goods, linen and paper Pop (1931) 71,522

Barnstaple Borough, seaport and market town of Devon It stands on the estuary of the Taw, 40 m from Exeter and 187 from London, and is served by the G W and S Rlys Features of the town are Queen Anne's Walk, the Pannier Market and Butchers' Row, while the bridge across the estuary is notable for its length The town has some shipping and several manufactures, including the making of Barum ware, Barum being its old name Pop (1931) 14,693

Barnum Phineas Taylor American showman He was born July 5, 1810, in Connecticut In 1844 he exhibited General Tom Thumb, and this was the first of his successes In 1871 he began to make the collection of animals and freaks that, called the Greatest Show on Earth, a combination of circus and menagerie, was known everywhere as Barnum's He died at Bridgeport, Connecticut, April 7 1891

Baroda Native state of India Within the province of Bombay, it consists of four territories under British protection The total area is 8135 sq m, and the population, 2,126,522 The capital is also called Baroda. The ruler or Gaekwar celebrated the fiftieth anniversary of his accession, Jan, 1936

Barometer (Gr *baros*, weight, *metron*, a measure) Instrument for measuring atmospheric pressure It was invented in 1643 by Torricelli, a pupil of Galileo In its simplest form it consists of a glass tube closed at the upper end and filled with mercury The lower end is plunged into a cistern of mercury, and the height assumed by the mercury column is dependent upon the atmospheric pressure on the surface of the cistern thus falling mercury means falling pressure and probable rain

The aneroid barometer, a form which is convenient for certain purposes (such as the estimation of relative heights by airmen and mountaineers) consists of a "vacuum box" of thin corrugated metal, the sides of which respond to changes of atmospheric pressure A system of levers links up the box with an indicating needle or, in the barograph, with an automatic recording apparatus

Baron Title of honour Originally it was a title applicable to all the vassals of rulers, bishops and lords, the bishops of Durham, for instance, had their barons Later the term was restricted to the greater barons who in England alone had the right to receive a writ of summons to Parliament

To-day baron is the lowest of the five ranks in the peerage of the United Kingdom New barons are created of letters patent, which states how the title shall descend In the case of the older baronies, those created by writ, it descends to daughters equally if there is no son. The coronet of a baronet has on it six silver balls, and he is addressed as my lord His children are entitled to the prefix honourable The number of barons is about 440, and there are a few baronesses in their own right.

Baronet Holder of an hereditary title He is called Sir and to distinguish him from a knight the abbreviation Bart or Bt is placed after the name He is always addressed by his Christian name with Sir prefixed The first baronet was made in 1611 by James I Irish baronets were first created in 1619 In 1625 baronets of Scotland

were first created, and were called baronets of Nova Scotia To day all baronets created are baronets of the United Kingdom They take precedence of all knights except Knights of the Garter The badge of the order is the bloody hand of Ulster, as the first baronets were created in order to obtain money to help to settle persons in Ulster To-day there are about 1200 baronets, the senior being Sir H. Bacon In 1930 a new badge was prepared for them

Baronscourt Irish seat of the Duke of Abercorn In Co Tyrone 3 m from Newton Stewart, It is a fine modern house standing in beautiful grounds

Baron's Court is a district in London between Hammersmith and Earl's Court. It has a station on the District Rly

Baroque Term now used to describe any style of architecture distinguished by extravagant ornamentation More particularly it refers to the decadent style that flourished in Italy from the 16th to the 18th century.

Barotse Land Formerly a kingdom of C Africa, it is now a native reserve It is in the Upper Zambezi territory of N W Rhodesia, and became a British Protectorate in 1916, by the wish of the native King Lawanika, who was succeeded by his son, Yeta III The capital is Lualaba, but the chief station and British residency is at Mongu The district is well-watered, and the natives are adaptable and hard-working

Barracks Buildings for soldiers and marines Great advances have been made in British barrack construction, elaborate provision being made for the health, comfort and recreation of the men The newer barracks have been built on the light-construction principle, which substitutes for the old substantial buildings one storey buildings of steel and light brickwork Barrack buildings include, in addition to accommodation for the rank and file, the officers' mess, the sergeants' mess, recreation rooms, and separate quarters for men "married on the strength"

Barracuda Name of several fishes resembling a pike The great barracuda found in the West Indies is sometimes 6 ft long and as ferocious as a shark Those found in the Pacific and Indian Oceans are smaller and less savage This fish is eaten in Australia, S America and S Africa

Barrage Volume of artillery fire directed on a definite area A creeping barrage is a volume of fire intended to protect advancing troops It must be carefully timed and aimed so as to fall in front of them and to move forward at the same rate It is also called curtain fire These barrages were much used during the World War, the first occasion being during the battle of the Somme Another form used in the war was one fired behind the enemy in order to cut off reinforcements or supplies

Barrage has an older but allied meaning It is used for a har made in a river to increase the depth of water, e.g., the Nile barrages

Barras Paul François Jean Nicolas, Comte de French soldier and statesman Born, June 30, 1755, he came into prominence early in the Revolution when he identified himself with the Jacobin faction As commander of the Republican forces at the siege of Toulon, he was the first to recognise the merit of Napoleon Bonaparte, then a lieutenant

of artillery. He helped to organise the *coup d'état* of 9 Thermidor, 1794 by which Robespierre was overthrown. He was appointed chief of the Directory Government, but it was overthrown in 1799 by Bonaparte on his return from Egypt. For the rest of his life Barras lived in retirement. He died Jan. 20, 1820.

Barrel Legal measure of capacity for ale and beer. It is equal to two kilderkins, or 36 gallons. It is also used conventionally in certain trades as a dry measure of weight varying according to the commodity. Thus a barrel of beef equals 200 lbs., a barrel of butter equals 224 lbs., a barrel of flour equals 196 and 228 lbs., a barrel of gunpowder equals 100 lbs., a barrel of raisins equals 112 lbs., and a barrel of soft soap equals 256 lbs.

Barrès Maurice French scholar and politician. He was born Aug. 17, 1862 at Charmes (Vosges), studied law in Paris, but soon gravitated to journalism and literature. His first important work was *Sous l'œil des Barbares* (1888) which he followed up with *Un Homme Libre* (1889) and *Le Jardin de Bérénice* (1891). In 1897 he published *Les Déracinés* the first volume of a trilogy entitled *Le Roman de l'Énergie Nationale*. In 1906 he was elected to the Academy. During the World War he wrote *La Grand Pitié des Églises Françaises* (1914), *L'Âme Française de la Guerre* (1915) and other works. He died Dec. 4, 1923.

Barrett Wilton English actor and dramatist. Born, Feb. 18, 1846. After some years in the provinces, mainly in Yorkshire, he came to London in 1879 as manager of the Court Theatre, where his most notable achievement was to bring Modjeska before an English audience in a version of *La Dame aux Camélias*. In 1881 he began his long connection with the Princess's Theatre, where he produced *The Lights of London*, *The Silver King*, *Romany Rye* and other plays which established his reputation as a romantic actor and dramatist. His *Hamlet* (1884) was more a popular than an artistic success. He toured the United States four times. His later notable productions included dramatisations of *Ben-my-Chree* and *The Manxman*, and a religious drama with an early Christian setting, *The Sign of the Cross*, which ran for over 500 nights. In addition to plays he wrote several novels. He died July 22, 1904.

Barrhead Burgh of Renfrewshire. It is on the River Leven 9 m. south west of Glasgow, and is served by the L.M.S. Ry. Its chief industries are engineering, calico printing, and cotton spinning and bleaching. Pop. (1931) 12,308.

Barrie Sir James Matthew Scottish dramatist, novelist, and essayist. He was born at Kirriemuir in Forfarshire (Angus) May 9, 1860 and after graduating in the faculty of arts at Edinburgh University, worked for some time as a leader writer on *The Nottingham Journal*. Moving to London, he attracted attention by the charming sketches of Scottish country life which he contributed to the *St James's Gazette*, *The British Weekly*, and other journals. These were published in book form as *Auld Licht Idylls* (1888) and *A Hindoo in Thrums* (1889), which established him as a popular author. After two volumes of essays *My Lady Nicotine* and *When a Man's Single* he published in 1891 a Scottish novel *The Little Minister*, afterwards successfully dramatised. *Sentimental Tommy* (1896)

and its sequel *Tommy and Grizel* (1900) consolidated his reputation.

But all his successes as a novelist were destined to be eclipsed by his dramatic achievements. He had already written a farce, *Walker, London* (1892), produced successfully by J. L. Toole, a sentimental comedy *The Professor's Love Story* (1894) and a problem play *The Wedding Guest* (1909), which was a comparative failure but with *The Admirable Crichton* and *Little Mary* he at once created a unique place for himself as a master of whimsical humour. His *Peter Pan*, a play for children has been produced every Christmas season since its first production in 1904. Among his long series of brilliant successes are *Pantaloon Alice* set by the Fire, *Mary Rose*, *Dear Brutus*, *What Every Woman Knows*, and *Snail* & *Join the Laagers*. He wrote *The Two Shepherds*, produced 1936, specially for Elisabeth Bergner. Barrie was created a baronet in 1913 and appointed to the Order of Merit in 1922. He was elected rector of St Andrew's University in 1931.

Barrister Member of the upper, or advocacy, branch of the legal profession in England. Barristers have an exclusive right of audience in all the superior courts, including quarter sessions. There however if no barristers are in attendance solicitors may plead. They alone are eligible for all paid judicial offices.

In England the right to call persons to the bar is vested in the four Inns of Court, Middle Temple, Inner Temple, Lincoln's Inn and Gray's Inn which collectively form a kind of legal university. Those intending to become barristers must join one of these Inns, eat dinners there, pass certain examinations. Certain exemptions in these matters are given to university graduates. The fees amount to something over £100, part of this being the stamp duty. Each inn exercises discipline over its members, subject to a right of appeal to the judges. In recent times an elective body the bar council, has been set up to give rulings on professional etiquette, etc. A barrister may not appear in court save on the instructions of a solicitor. They are of two grades, juniors (stuff gowns) and king's counsel (silks). As a rule a silk may not appear in any cause without the assistance of a junior.

The term barrister is also used in Ireland, where admission to the profession is regulated by the King's Inn, Dublin. For Northern Ireland there is a bar in Belfast. The term is also used in Canada, Australia and other parts of the British Empire, but there the division between barrister and solicitor is less sharp than in England. In Scotland the equivalent is the advocate (*q.v.*).

Barrow (Anglo-Saxon *beorh*, a hillock). Ancient burial mound. Barrows are found in many parts of the world, and are especially numerous in the British Isles. They are generally, but by no means invariably, round and, broadly speaking the difference of shape corresponds to a difference of racial and cultural origin, the round barrows being the work of a brachycephalic people, while in the long barrows we usually find dolichocephalic skulls.

Barrow Sir John. English admiral, traitor. He was born in 1764 near Ulverston. At the age of 18 he went on a voyage to Greenland in a whaler, and later obtained an appointment as mathematical walker in a school at Greenwich, where, he was

Introduced to the notice of Lord Macartney. He served on Macartney's staff in China and South Africa, and was employed successfully on several important missions. In 1804 Henry Dundas (Lord Melville) appointed Barrow second secretary of the Admiralty. He was one of the founders of the Royal Geographical Society and took an active part in promoting the Borchan and Franklin Arctic expeditions. He died Nov. 23, 1848.

Barrow-in-Furness Borough and seaport of Lancashire. It stands on Morecambe Bay opposite Walney Island, 265 m from London by the L.M.S. Ry. (Vickerstown on Walney Island is part of the borough). A great industrial centre, wholly created in the 19th century when iron was discovered in the neighbourhood, it has iron and steel works, shipbuilding yards and many related industries. Steamers used to go regularly to the Isle of Man, Belfast and elsewhere but they have been discontinued. Pop. (1931) 66,366.

Barry Seaport and urban district of Glamorganshire. It is 7 m from Cardiff and 160 m from London, opposite the Island of Barry in the Bristol Channel. Barry Docks, opened in 1889, have accommodation for all but the very largest vessels. Another industry is flour milling. The town is served by the G.W. Ry. Pop. (1931) 38,916.

Another Barry is a village in the county of Angus. It is 8½ m north east of Dundee, and is chiefly known for its Territorial Force artillery camp.

Barry Sir Charles. English architect. He was born in London, May 13, 1795 and travelled in Italy, Greece and the Near East. He acquired a marked predilection for Italian architecture, which he showed in the various important commissions with which he was entrusted after starting in business in London. These included many public buildings in the provinces and the reconstruction of the Treasury buildings in Whitehall. On the destruction of the Houses of Parliament by fire, Barry was commissioned to design the new buildings, which are the greatest monument of his genius. He died, May 12, 1860, a few months before their completion. He was elected A.R.A. in 1840 and R.A. in 1841, and was knighted in 1852.

Two of Barry's sons became architects. One Edward Middleton Barry (1830-80) completed the Houses of Parliament. The eldest son was Alfred Barry (1826-1910) who held several high positions in the church including the Bishopric of Sydney, 1884-89. His fourth son was Sir John Wolfe-Barry, (1836-1918) the famous engineer.

Barter Primitive method of exchanging commodities, i.e., direct exchange without the intervention of any form of currency. True barter is found only in the very simplest communities. At an early stage a community begins to select some article of value as a standard, e.g., pelts or cattle. This gives their transactions the appearance of barter, though they are really primitive currency transactions.

Bartholdi Frédéric Auguste. French sculptor. Born in 1834 in Alsace he studied art and exhibited first in 1855. His best work is the statue of Liberty at the entrance to New York harbour. His "Lafayette" is in New York and his works include "The Lion of Belfort" and others of a patriotic nature. He died Oct. 4, 1904.

Bartholomew Saint, apostle and martyr. One of the twelve apostles first called by Jesus Christ, he was possibly the same as Nathanael "the Israelite without guile." He is said to have evangelised Armenia and India, but the tradition has no historic basis.

Bartholomew Fair Old London market, principally for cloth goods. It was founded early in the 12th century and continued to be held annually at Smithfield until 1840 and then at Islington. Of ecclesiastical origin, it was in its earlier days an occasion for the performance of miracle plays and mysteries, and after the Reformation shows of all sorts made it a great attraction to the London populace. The disorders of the rabble who resorted to it led to its abolition as a nuisance in 1855.

Barthou Jean Louis Firmin. French politician and writer. Born Aug. 25, 1862, he became a lawyer. In 1889 he entered the chamber of deputies and in 1894 was made Minister of Public Works. He was Prime Minister for nearly a year in 1913. During the Great War he was a member of Painlevé's cabinet and in 1918 Minister for War, later becoming president of the Reparations Commission. In 1922-24 and 1926-29 he was vice-president of the cabinet under Poincaré, then under Briand. His writings secured his election to the Academy in 1919. He was assassinated at Marseilles Oct., 1934.

Bartoli Taddeo. Italian artist. Born at Siena in 1363, he painted frescoes depicting the life of the Virgin in the Cathedral of Siena, at Perugia and Genoa and in the church of S. Francis at Pisa. Other frescoes are in the museum at Pisa, and the municipal palace at Siena. In the Louvre is one of his earliest works, "The Virgin among the Saints," painted in 1390. He died in 1422.

Bartolommeo Fra. Italian painter. A native of Florence, he became a Dominican monk, hence the epithet Fra. He was friendly with Savonarola and lived in the convent of S. Mark. Later he lived in Rome and worked with Raphael, but he was again in Florence when he died Oct. 31, 1517. His paintings include one of S. Mark in the Pitti Palace, Florence.

Bartolozzi Francesco. Italian engraver. The son of a Florentine goldsmith, he was born about 1727, and for some time worked under his father. He studied painting at Florence and engraving at Venice, and, after a short time in Rome, migrated to London in 1764. He lived in London for nearly 40 years, producing a very large number of engravings chiefly from Italian masters. In 1802 he was appointed director of the National Gallery at Lisbon where he remained until his death, March 7, 1815.

Barton Parish of the Isle of Wight. It is of interest to geologists because it gives its name to the formation called Barton Beds. These are noted for the fossils that are found therein, these being remains of plants and fishes which can only live in a climate warmer than the one now prevailing in England. The beds are about 300 ft thick and are also found at Alum Bay, Isle of Wight.

Barton Elizabeth. English fanatic, called the Maid of Kent. She was in domestic service at Aldington, Kent, and in her nineteenth year, while recovering from an

illness, went into trances and began to prophesy. She was admitted as a nun to the convent of S Sepulchre, Canterbury, where her utterances became still bolder and more remarkable. She denounced Henry VIII for divorcing Catherine of Aragon, and this led to her being interrogated before Cranmer, when she confessed that her trances were fraudulent. Along with several monks who had been associated with her, she was arrested and executed at Tyburn, April 20, 1534.

Barton Sir Edmund Australian politician. Born in Sydney, Jan 18, 1849, he had a brilliant career at the university of Sydney. He then practised at the New South Wales bar and in 1889 became a Q.C. In 1879 he entered the state legislature. He was Speaker of the Assembly from 1883 to 1887, and Attorney General in 1889 and in 1891. Always a keen advocate of federation, he was appointed chief of the delegation sent to London in 1900 to promote the establishment of the Australian Commonwealth. In the following year he became the first Prime Minister of the Commonwealth, but resigned to become a judge of the high court in 1903. He died Jan 7, 1920.

Barton-upon-Humber Urban district of Lincolnshire. It is on the Humber, 6 m from Hull, which is on the opposite side of the river, and 172 m from London, on the L.N.E.R. It is connected by steam ferry with Hull, but it is proposed to make a tunnel beneath the Humber here. Pop (1931) 6330.

Barton-upon-Irwell District of Lancashire. On the western outskirts of Manchester, it was here that Brindley constructed the aqueduct to carry the Bridgewater Canal over the Irwell.

Baruch Hebrew writer, mentioned in the book of Jeremiah as the prophet's secretary. The name appears in the title of two non-canonical books: (1) The Book of Baruch, a work by more than one hand, dating from early in the second century B.C. It is known only from the Septuagint and Vulgate, but probably was originally written in Hebrew. (2) The Apocalypse of Baruch discovered in the Milan library in 1866. The manuscript dates from the 6th century A.D., and is a Syriac translation from a Greek original. The Apocalypse of Baruch has close affinities with the 4th Esdras.

Baryta Sulphate of barium. It is usually found in lead ores and one of its uses is in the making of baryta paper used by photographers. This is paper coated with a mixture of sulphate of barium and gelatin.

Basalt Variety of marble. Of volcanic origin it is often found in layers, but sometimes in columns as in the Giant's Causeway, and at Staffa. In colour it is dark grey or black, and, being very hard and tough, it is suitable for road making.

Base Term used in chemistry. Bases are substances capable of combining with acids to form salts, usually, in inorganic chemistry, the oxides and hydroxides of metals, and especially of the alkali metals and the alkaline earths. They can be distinguished by their power of turning red litmus blue.

Baseball National game of the United States. Its origin is unknown, but it appears to have been first played systematically about 1840. The first code of rules

was drawn up by the Knickerbocker Baseball Club of New York in 1843 and thereafter the popularity of the game spread rapidly all over the country. It is now played by professional teams which are formed into leagues for the purpose of competing with one another.

The game is played by nine players a side on a lozenge shaped field, each point of the lozenge having a base. Near the middle of the field, opposite the home base, is the pitcher's place. The pitcher corresponds to the bowler in cricket. The catcher, corresponding to the wicket keeper, stands behind the batsman at the home base. There are fielders at each of the bases (in fielders), the others being known as outfielders. On hitting the ball the batsman must run for the first base and his object is to make a complete circuit without being put out, which constitutes a run. An innings ends when three batsmen have been put out, which can be done in several ways. The most usual is for the ball to reach a fielder at a base before the batsman arrives there. Players especially the catcher, are heavily protected and substitutes are allowed for injured players. Baseball is played regularly in London at Stamford Bridge.

Basel City of Switzerland, also called Bâle and Baslo. It is situated on the Rhine and is an important railway junction for lines to France, Germany and Italy. Its university was founded in 1460. The industries include the making of chemical and ribbons and there are large electricity works here. In 1929 the city was made the headquarters of the new bank for international settlements. Here a famous church council met from 1431 to 1449 and here Erasmus lived and was buried. Pop (1930) 148,063.

Bashan District of Palestine. East of the Sea of Galilee. It is mentioned in the Old Testament and was famed for its hills.

Bashi Bazouk Irregular mounted infantry of the Turkish army. They were maintained and armed by the Government, but received no pay and wore no uniform. Their name became notorious during the Bulgarian atrocities of 1876.

Bashkir Soviet republic. It is in the Ural region and covers 145,386 sq. m. A member of the union of Soviet Republics, its capital is Ufa. The name is that of the Bashkirs, a Finnish people. Pop 2,740,000.

Basil Name given to several aromatic herbs. One is sweet basil which is grown in Europe and is used in cooking as is the bush or lesser basil. The wood of holy basil, called tulsi by the Hindus, is used to make prayer beads.

Basil Name of two Roman emperors of the East. Basil I, founder of the Macedonian dynasty, was a favourite of Michael III, who made him his chamberlain. He murdered the emperor's colleague Bardas, and was raised to his place in A.D. 860. In 867 he murdered Michael and reigned alone. He proved a capable and energetic ruler, carried out important legal reforms and resisted the claims of the see of Rome to superiority over Constantinople. He died in 886.

Basil II, surnamed Bulgaroktonos, or slayer of the Bulgars, was a son of Romanus II, and a descendant of Basil I. The most notable event of Basil II's reign was the subjugation of Bulgaria, which, after some

years of sporadic war, was achieved in 1014. He died in Dec., 1025, having reigned since 976

Basil Saint and father of the Church surnamed the Great. A brother of Gregory of Nyasa, he was born in Cappadocia, 329. He studied at Constantinople and at Athens. He was ordained in 363, and was chosen Bishop of Caesarea seven years later. With his pen and in the pulpit he showed himself the most redoubtable champion of orthodoxy against the Arians, he also did much to improve the liturgy and to reform the monastic life of the Church in the East. His most famous work is *De Spiritu Sancto*. He died Jan. 1, 379, and his feast is Jan. 30.

Basildon Two villages of Berkshire called Upper and Lower. They are on the Thames, 8 m. from Reading.

Basilica Architectural term. It was applied by the Romans to any large building used as an exchange, law courts, etc. The conventional form was a rectangle at least twice as long as it was broad, the interior having a two storied colonnade running round it. There were several basilicas in and about the Roman Forum, the largest being the Basilica Julia. At a later date the term was extended to the larger Christian churches, which were similar in form to the civil basilicas. Examples of the later forms of Christian basilica are S. John Lateran and S. Maria Maggiore in Rome.

Basilisk Genus of lizard of the Iguanidae family. It is found in Mexico and South America and is distinguished by the presence in the male of erectile crests on the head, on the back and on the tail.

In the 17th century a large brass cannon was called a basilisk.

Originally the word referred to a kind of dragon, a fabulous monster of hideous appearance and great malignity, it was sometimes called a cockatrice.

Basingstoke Borough and market town of Hampshire. It is 48 m. from London and is reached by the S. and Gt. Western Rlys. It is also served by a canal. The town was at one time a centre of the wool trade, but is now chiefly known as a centre for agricultural produce. Agricultural implements are made. Pop. (1931), 15,320.

Near is the village of Old Basing. It contains the ruins of Basing House, which was held by the Marquess of Winchester for Charles I. during the Civil War. He called it "Loyalty House."

Basket Ball Outdoor game. It was invented in 1891 in Massachusetts. It is played by two teams on a space 60 ft. by 40 ft., and each team consists of five players. Both centres stand in a central ring and the referee tosses the ball over their heads. Keeping the ball in constant play and touched by the hands only, each team tries to propel it into the opposing goal which is a net 18 ins. wide hung from a metal ring hooked by a screen. The game is played by men and women, boys and girls, and there are slight variations in the rules when played by women and girls. The English variant of the game is called net ball (qv).

Basque Race of unascertained origin. It forms the bulk of the population of the provinces of Biscay, Alava, Guipuzcoa and Navarre in northern Spain and also in parts of the department of Basses

Pyrénées in France. A vigorous race, extremely independent and conservative, for long they were allowed by the Spanish crown to retain a large measure of autonomy, and every Basque freeholder was acknowledged to be noble. The Basque folk dances and sports are remarkably interesting.

Basra Town and seaport of Iraq. It is situated on the western bank of the Shatt-el-Arab, about 35 m. from the Persian Gulf, and 270 from Bagdad, and owing to the low-lying ground is subject to inundations. The climate is unhealthy. The town is intersected by small tidal canals. The principal exports are dates, for which the Basra vilayet is celebrated, wool, gum and attar of roses. Since the establishment of the kingdom of Iraq, its consequence has revived. The British captured it from the Turks in Nov., 1914, and used it as a base for the campaign in Mesopotamia. Works were erected for the shipping, etc., and its docks are now equipped in the most modern manner. Pop. 35,000.

Bass Fish of the perch genus. Known to the Romans as lupus, or wolf, from its voracious disposition, it is from 12 to 18 ins. in length and frequents the southern coast of England and the eastern shore of Ireland. A marine fish, some species thrive in fresh water and these acquire a more delicate flavour. On the Kentish coast this fish is known as the sea dace.

Bass Musical term. It denotes (1) The lower part of the musical system, approximately from middle C to the extreme low limit, (2) The lowest part of any piece of music, (3) The lowest male voice, (4) The lowest pitch of certain classes of instruments, e.g., bass viol, bass drum, etc.

Bass Family that gives its name to a famous beer. This is brewed at Burton-on-Trent by Messrs. Bass & Co., Ltd., and its excellence is said to be due to the qualities of the water there. The first Bass to brew ale at Burton was William Bass, who began business there in 1777. His grandson, Michael Thomas Bass, joined the business later, and under his control it became one of the largest in the world. He took two assistants into partnership and called it Bass, Ratcliffe & Gretton. He was M.P. for Derby from 1848 to 1883 and died at Rangemore, his seat in Staffordshire, April 29, 1884. His son, Michael Arthur Bass, was made a baronet, and in 1886 a peer, as Baron Burton. As he had no sons the title passed, when he died in 1909, to his daughter, the wife of J. E. Baillie, who became Baroness Burton.

Basset Horn Tenor clarinet. It is an ordinary clarinet a fuller of tone than an ordinary clarinet. A transposing instrument in F, its music is written a fifth higher than it is sounded when the treble clef is used, a fourth lower when the bass is used. It was used by Mozart and Mendelssohn.

Basset Hound Small dog. It has a long body and crooked legs, in colour it is black and white, with tan on the head. It is kept chiefly as a pet.

Bassoon Wind instrument. It is the bass of the oboe family and in orchestration forms the bass of wind instruments when used together. It is played with a double reed connected by a brass crook to a tube nine feet long doubled on itself.

(two sections) in the field artillery, with their complement of officers and men. The commanding officer of a battery ordinarily has the substantive rank of major.

Battery Group of machines or appliances. It is used in this sense in the electricity, mining, engineering and other industries. In electricity a battery is a collection of cells, primary or secondary, used for the production or storage of the power, in small lighting sets, wireless receivers, etc.

In 1932 it was announced that Dr J. J. Drumm, of University College, Dublin, had invented a storage battery that makes the storage of power for traction purposes a practical proposition. See ACCUMULATOR, CELL.

Battle Market town and urban district of Sussex. It is 7 m. from Hastings and 51 from London on the S. Ry. Its most famous building is Battle Abbey. The first abbey was founded by William the Conqueror after his victory at Senlac, and it was a rich religious house until the dissolution of the monasteries. The site is occupied by a modern residence in which some of the abbey ruins have been included. After the Great War it was sold and became a school for girls. In 1930 the building was burned down. The town has an agricultural trade. Pop. (1931) 3490.

The Battle Abbey Roll is a list of warriors supposed to have come over to England with William the Conqueror. Really it is of later date.

Battle Cruiser Large warship which is faster, but less heavily armed, than a battleship. Battle cruisers developed from the old armoured cruisers, and the first to be built for the British navy was the *Indomitable* launched in 1908. Others, including the *Lion* and *Tiger*, were built, and these did much fighting during the Great War, and suffered heavy losses at Jutland, including the *Queen Mary*, *Invincible* and *Indefatigable*. At present (1932) the British navy has only three battle cruisers: the *Repulse* and *Renown* of 26,500 tons and 6.15 in guns, and the *Hood*, the largest war ship afloat. Completed in 1921, the *Hood* displaces 41,000 tons and carries 3.15 in guns. The *Tiger* was broken up in 1932.

Battleship Ship used for purposes of warfare. In practice the word is confined to the largest ships in the fleet. These are the successors of the ships of the line which composed the striking force of fleets in the days of Nelson, and also of the trimarines of the Greeks and the galleys of the Romans. The modern battleship costing some £6,000,000, is a structure of remarkable strength, size and speed, perhaps the most wonderful piece of mechanism yet devised by science.

The first modern battleship dates from about 1862. In 1863 the British Government launched ironclads with turrets and from these the present ships have developed. They became larger, swifter and stronger, carrying more and heavier guns. The *Royal Sovereign*, launched in 1890, was one of a class that prepared the way for the Dreadnoughts. The innovation about these ships was that they were armed only with big guns, except for the small ones used to repel torpedo attacks. They displaced 17,900 tons and carried 12 in guns. The *Iron Duke* class, their successors, carried 18.5 in guns and displaced 23,600 tons, while

the *Queen Elizabeths* carried 15 in guns and displaced 27,000 tons. Such were the super dreadnoughts which formed the nucleus of the Grand Fleet in the Great War.

To-day (1935) there are four classes of battleships in the British navy. Three of these are the *Queen Elizabeths*, the new *Royal Sovereigns*, also with 8.15 in guns, and the *Iron Dukes* with 10.13.5 in guns. The latter two classes are slightly smaller than the *Queen Elizabeths*. The fourth class consists of the *Rodney* and the *Nelson*, completed in 1927. They displace 35,000 tons and carry 9.16 in guns.

Other navies have similar ships, but the Germans have constructed a pocket battleship of only 10,000 tons, which, it is claimed, is equal in power to a super dreadnought. In 1923, by the Treaty of Washington, a limit of 20 years was allowed for battleships.

Batum Seaport of Georgia, on the Black Sea, 600 m. from Baku. There is a harbour and facilities for exporting the oil that is brought by rail from Baku. It is also linked by rail with Tiflis. For long Batum was part of Turkey. In 1878 it was given to Russia, and in 1921 was handed over to the new republic of Georgia. Pop. 46,000.

Bauchi Mountainous province of Northern Nigeria. The area is about 21,000 sq. m., and the estimated population about 1,000,000. Hausa is the speech of the province, in which the chief industry is the mining of tin. See NIGERIA.

Baudelaire Charles Pierre French poet. He was born in Paris, April 9, 1821. His youth was unsettled and dissipated, and legal proceedings had to be taken by his relatives for the protection of his property. In 1857 he published his first and most famous volume of poems, *Les Fleurs du Mal*, which was highly praised by Victor Hugo and others, but, owing to his choice of subjects, its author was prosecuted for offending against public morality. Baudelaire had a good knowledge of English and made some remarkable translations into French of the works of Edgar Allan Poe, for which he had the greatest admiration. He died of general paralysis, Aug. 31, 1867. Apart from *Les Fleurs du Mal* and the Poe translations, his best known work is *Petits Poèmes en Prose*.

Bauxite Mineral. The chief ore from which aluminium is obtained. It is used for lining furnaces that are exposed to great heat. The name comes from Les Baux in France, in which country it is chiefly found. Supplies also come from the United States, Hungary and Guiana. See ALUMINIUM.

Bavaria Republic of Germany. In the south of the land, it has an area of 29,334 sq. m., and a population of 7,379,590. Munich is the capital and other large cities and towns are Nuremberg, Augsburg, Ludwigshafen, Würzburg, Regensburg and Furth. It consists of eight provinces and the free state of Coburg was united with it in 1919. It is governed by a premier and a cabinet, who are responsible to a diet, the Landtag, which is elected by the votes of all adults.

For many years Bavaria was ruled by dukes, one of whom was made an Elector in 1623. In 1806 the duke was made a king, and in 1871 the kingdom joined the new German Empire. This lasted until 1918 when a republic was set up. See GERMANY.

Baxter George English artist. Born in 1804, he was a son of John Baxter (1781-1858), a printer at Lewes. He became a printer, and is known as the inventor of a method of printing in oils. He died in 1867. Baxter prints are valued by collectors.

Baxter Richard English divine. He was born Nov. 12, 1615, in Shropshire. In 1638 he became a minister at Bridgnorth, and in 1640 at Kidderminster, but when the civil war began in 1642 he went to Coventry and then became a chaplain in the Parliamentary army. In 1649 he returned to Kidderminster where his preaching had an extraordinary influence in reforming the morals of the town. In 1660 Charles II made him one of his chaplains, but he refused a bishopric. In 1662 the Act of Uniformity drove him from the Church of England, and for the rest of his days he was a Nonconformist preacher in London and Acton. He died Dec. 8, 1691. Baxter's fame rests on his book *The Saint's Everlasting Rest*. He also wrote *The Reformed Pastor* and *A Call to the Unconverted*, and left an *Autobiography*.

Bay Evergreen tree. It has lance-shaped toothless leaves, growing alternately on the stems. It is the true laurel with which the ancients crowned their heroes. Attaining a height of 30 to 60 ft., it is shrub like in growth with numerous small stems. The insignificant yellow flowers are followed by green berries which ripen to a rich purple. The leaves are aromatic and used in cookery.

Bayard French knight called the Chevalier, whose name has become proverbial as the perfect type of soldier. Born in 1473 he belonged to a noble family of Dauphiné. He served under Charles VIII of France in Italy, and was knighted for gallantry at the battle of Fornova, and he continued to distinguish himself throughout the Italian wars, on one occasion defending a bridge single-handed against 200 Spaniards. At the battle of the Spurs (1513), by a display of chivalrous punctilio, he became a prisoner of the English, but his bearing so impressed Henry VIII that he was released at once on his parole not to bear arms for six weeks.

Francis I promoted Bayard to high command, which he signally justified by his defence of Mezières against the army of the Emperor Charles V. Though his own force consisted of no more than 1000 men, he compelled the imperial army, numbering 35,000 to raise the siege. In 1523 he again went to Italy, and was mortally wounded, April 30, 1524, while guarding the French rear in the retreat across the Sesia.

Bayeux Town of Normandy, on the R. Aure, about 5 m. from the coast. It is an episcopal see and has dyeing and lace making industries. The museum contains the celebrated Bayeux Tapestry, which gives in needlework 72 scenes illustrative of the Norman Conquest of England. According to ancient tradition the tapestry was the work of Matilda, wife of William the Conqueror, but it is now generally believed to have been executed to the order of William's brother, Odo, Bishop of Bayeux, for his cathedral. Pop. (1931), 7530.

Bayonet Short dagger-like weapon made to be fitted to the muzzle of a rifle, and thereby converting the rifle into a kind of pike or spear. The name is commonly said to be derived from the town of Bayonne,

where a short dagger called the *bayonette* was made towards the end of the 15th century.

Bayonne Town and port of France. It is situated at the confluence of the Adour and the Nive. It has a fine cathedral dating from the 13th century. Leather and chocolate are manufactured, but the main importance of Bayonne is derived from its commerce. Pop. (1931), 31,727.

Bayou Channel of dead water cut out by natural action from a main river and connecting the main river with another stream. Bayous are a feature of the Mississippi region, and Mississippi is known as the bayou state.

Bayswater District of London. In the metropolitan borough of Paddington, it lies to the west of the city. It is north of Kensington Gardens and the Bayswater Road is a main thoroughfare to and from London. It is served by the District Rv.

Bazaar (Persian *bazar*, a market) Permanent market or street of small shops or collection of streets or stalls under one roof. The term is in general use in India and is found in the Turkish and Arabic languages. A mercantile handbook of 1340 gives *bazarra* as Genoa for a market place and is the first recorded European use of the word.

Bazaine Achille François French soldier. Born Feb. 13, 1811, he served in Africa with the foreign legion as a private soldier, and rapidly rose to the rank of brigadier general. He commanded a brigade in the Crimea and was later promoted general of division. He served with great distinction in Lombardy (1859) and Mexico (1862), and in 1863 was appointed marshal and senator. On the outbreak of the Franco-Prussian War he was given the command of the third corps of the Rhine Army, and subsequently became acting commander-in-chief of all the French forces. After the disaster of Spicheren, he retreated on Metz, where his army was invested by the Germans. Macmahon's attempt to relieve Metz was defeated at Sedan, and Bazaine surrendered with 140,000 men. He was tried by court martial and sentenced to degradation and death, but the sentence was commuted to exile. He escaped to Italy in 1874, whence he went to Madrid. He died Sept. 23, 1883.

Bazalgette Sir Joseph William English engineer. Born March 28, 1819, he was appointed in 1849 engineer to the London drainage commissioners and continued to hold a similar position under their successors, the Metropolitan Board of Works. He designed the main drainage system of London, which after many delays was begun in 1858 and completed in 1865. At the same time he carried out the embanking of the Thames. The first section (Westminster to Vauxhall) was built between 1860 and 1869. A second section (Westminster to Blackfriars) was opened in 1870. The Chelsea Embankment was built 1871-74. The original conception of the Blackwall Tunnel and the Tower Bridge was also due to Bazalgette. Knighted in 1874, he died March 15, 1891.

Bdellium Gum resin that exudes from two varieties Indian and African, the Indian smells somewhat like cedar wood.

Beachcomber In the Pacific Islands a term for a loafer. Beachcombers are usually wastrels who spend

their time on the beaches ready to plop up anything they can find. It also refers to a settler there who gets a living by fishing for pearls.

Beachy Head Prominent headlands on the south coast of England. In Sussex just outside Eastbourne. It is a chalk cliff where the South Downs run out to meet the sea, and is 533 ft. high.

The battle of Beachy Head was fought June 30 1690 between the English fleet under Lord Torrington who had also some Dutch ships with him and the French fleet. The victory lay with the French who outnumbered Torrington's fleet.

Beacon Signal usually on a hill. Such signals often took the form of fires lit on hilltops and consequently some hills are now called beacons for instance, Dunkerry Beacon on Exmoor, and Inkpen Beacon in Berkshire. Beacons were used as warnings in very early times and there are references to them in the Bible and Homer. They were lit at the time of the Spanish Armada, but since then have been chiefly used at times of rejoicing such as the coronation of King George V in 1911. The development of aviation gave them a new life and they are used to light landing grounds.

Beaconsfield Market town and urban district of Buckinghamshire 21 m from London. A residential suburb for Londoners, its associations are chiefly with Burke, who lived here for some time and is buried here, and with Disraeli. Pop (1931) 4843.

Beaconsfield Town of South Africa. It is 3 m from Kimberley, and the main line from Capetown, 640 m away passes through it. Near are diamond mines. Like other places in the British Empire it is named after Lord Beaconsfield. Another Beaconsfield is in Tasmania. Since 1912 it has been part of the municipality of Kimberley.

Beaconsfield Earl of British statesman. Born in London, Dec. 21 1804. Benjamin Disraeli was the eldest son of Isaac Disraeli and the grandson of another Benjamin Disraeli who had settled in England in 1801 and became naturalised. In 1817 the family adopted the Christian faith. Benjamin was articled to a solicitor and in 1826 made a name with a novel, *Vivian Grey*. Between 1827 and 1831 he spent a good deal of time in travel. In 1832 he tried to enter Parliament as a Radical and in 1835 he stood as a Tory. In the interval he wrote a number of books, novels, satires and pamphlets now mainly forgotten. In 1837 he entered Parliament as M.P. for Maidstone, and in a few years he became the leader of a small group called the Young England Party whose ideas are described in his novels *Coningsby*, *Sybil* and *Tancred* which appeared between 1844 and 1847. He was then M.P. for Shrewsbury while from 1841-78 he represented Buckinghamshire.

In 1846 when Peel broke his party over the Corn Laws Disraeli became a serious politician. He led the Tory opposition to Peel and in 1852 became Chancellor of the Exchequer and Leader of the Commons under Lord Derby. He had another short spell of office in 1858 but his political reputation was made by the skill with which he attacked the Liberals when they were in power (1859-66). In 1867 he was

again Chancellor of the Exchequer and was responsible for the Reform Bill of 1867. From Feb. to Dec. 1868 he was Prime Minister. In 1870 he published *Lothair*.

Another period of opposition followed, and in 1874 Disraeli again became Premier. During the next six years he bought up shares in the Suez Canal made Queen Victoria Empress of India, and attended the Congress of Berlin. In 1878 he was made an earl and in 1880 he resigned office as the result of an unfavourable general election. He died April 19 1881, in London and was buried at Hughenden his Buckinghamshire home. Disraeli's wife was the widow of Wyndham Lewis, he married her in 1839. She was made a viscountess in 1868 and died Dec. 15 1872. Primrose Day (April 19) was inaugurated in honour of Beaconsfield. His *Life* has been written by W. F. Monypenny and G. E. Buckle. Another *Life* is by André Maurois. This has been translated from French into English.

Beadle In England a parish officer. He was usually appointed by the vestry and acted as messenger attendant, doorkeeper and when necessary in other capacities. He also performed duties more proper to the police. In Scotland beadle means church officer. At the universities the beadle has become a hodel or bedell.

Beagle Small hunting dog. It is used chiefly for the hunting of hares, and several packs are kept in England for this purpose, one being by Eton College. They are a miniature breed of foxhound, extremely intelligent and keen of scent. There are two varieties, smooth and rough but the only difference is the texture of the coat. Beagle packs are followed on foot.

Beak In birds and one or two animals, part of the head. The beak is a horny sheath covering the jaw and used for collecting food and sometimes for fighting. It varies in the different birds in each case being adapted to the particular need. The beak of the kingfisher is long and slender so that it can dig in the mud. In eagles and other birds of prey it is usually hooked and can deliver a very powerful blow. In some birds it has hairs on it, thus enabling insects to be caught. The turtle possesses a beak and the long sucking mouths of certain insects are called beaks.

Beam Piece of wood or metal used in building for purposes of support. Wooden beams are used to support the roofs and railings of houses but in modern commercial structures steel beams or girders take their place. The beam of a ship is her greatest breadth on the water line.

A beam of light or sound is a collection of parallel rays, and beams of electro-magnetic waves are used with success for long distance wireless transmission. In Great Britain beam services to Australia, S. Africa, Canada and India are worked by the Post Office.

Beamish Mining centre of Durham. It is 11 miles from Newcastle-on-Tyne on the L.N.E. Ry.

Bean Seed of certain leguminous plants. In Great Britain the chief kinds, all used as food are the broad bean, the French or kidney bean and the runner bean, called the scarlet runner. All will grow in British gardens and French beans are often forced by being grown under glass. In this way it is possible to secure a supply all the year round. Other

beans, e.g. the soya and carob are grown in warmer countries

The bean tree, which grows in Australia, has yellow flowers and seeds like chestnuts. The bean louse and bean weevil are among the bean pests and beans are also attacked by bean mildew

Bear A flesh eating mammal with long, sharp claws, small head and short tail. Bears feed on fruit and insects, as well as on flesh, and all except the heaviest can climb trees. They can stand upright and having seized an enemy in the fore paws can crush it to death. Although very clumsy in appearance they can move rapidly. They hibernate during the winter.

The commonest variety is the brown bear. This is found in Europe and America and is the one led about by showmen. Its flesh is eatable. The grizzly and black bears are found in the United States, though the former, which is the largest and strongest of the bears, is now almost confined to the national parks. The fur of the black bear is valuable. The polar bear is found in the Arctic regions and the spectacled bear in the Andes. In Asia there are the Syrian bear and the Malayan or honey bear, the former having a valuable fur.

Bear baiting is a sport, once popular in England. A bear was put in a pit or chained to a stake and was then attacked by dogs, bulldogs being usually employed. The sport was carried on in England in the 12th century, but its most flourishing period was the 16th and 17th centuries. It fell into disuse in the 18th, although it was not forbidden by law until 1835. Large cities had their bear gardens. In London there were gardens at Southwark, Westminster and Clerkenwell.

Beard Moss (*Usnea barbata*) Pendulous greyish green thread like lichen. It hangs from the branches of old trees and is found in Britain, and other countries in the temperate regions. An orange dye can be produced from it.

Beardsley Aubrey Vincent English artist. Born at Brighton, Aug. 21, 1872, he worked for some years as an architect's draughtsman. His bizarre talent attracted the attention of Sir Edward Burne-Jones, on whose advice he devoted himself to illustrative and decorative art, and from 1893 until his death he was one of the most widely discussed artists of the day. His work was admired for its exquisite decorative quality and disdain of conventional drawing and criticised for its morbidity and decadence. Much of it appeared in the celebrated *Yellow Book* (1894-1895). He illustrated an edition of *The Rape of the Lock* (1896), and his frontispiece to *Volpone* (1898) is regarded as his masterpiece. He died March 16, 1898.

Beard Tongue Name often used for the pentstemon (q.v.) the flower also called the pentstemon (q.v.)

Bearing In a machine the mechanical device at which the revolving parts make contact with the non-revolving parts. For plain bearings, used when large surfaces are in contact, alloys made to stand friction are used. They are usually in two halves.

The commonest kinds of bearings are ball and roller bearings, which offer much less friction than the plain ones. The balls or rollers are arranged so that they do not touch one another, they move round with the shaft and also revolve on their own centres.

Béarn District in the Pyrenees, once a province of France. Earlier it was part of Gascony and thence of Navarre, becoming part of France when Henry of Navarre (Henry IV) became king in 1589.

Beatification In the Roman Catholic Church a step towards canonisation. The person beatified is declared blessed, and can be venerated. The process usually takes a long time. It was about 30 years in the case of Joan of Arc.

Beatitudes Certain sayings of Jesus Christ that are recorded in Matt. v and Luke. vi. They form the opening passage of the Sermon on the Mount, and each of them begins with the word blessed. S. Matthew gives them more fully than does S. Luke. The word has been used for them since the 4th century.

Beaton David Scottish prelate. He was born in 1491, and was educated as a priest at St. Andrew's, Glasgow, and then in Paris. In 1537 he was made Bishop of Moreport. Next year he was made a cardinal and in 1539 he returned to Scotland to become Bishop of St. Andrews. He did much to prevent Henry VIII from uniting Scotland and England. Other actions made him disliked by the reformers and in May 29, 1546, the cardinal was murdered in his castle at St. Andrews.

Beatrice Beloved of Dante. She was the "glorious lady of his mind," the one who typifies the spirit of love. She is mentioned in *The Divine Comedy*, but little is known of her. She was a native of Florence and first met Dante when both were children. She was married to Simon di Bardi and was only 24 when she died in 1290.

Beatrice Princess of Great Britain. Beatrice Mary Victoria Feodora, the youngest child of Queen Victoria, was born in April 14, 1857, and married in 1885 Prince Henry of Battenberg, who died in 1896 while on active service with the British forces in Ashanti. Her eldest son was created Marquess of Carisbrooke and her daughter, Victoria Eugenie, was Queen of Spain until 1931. See BATTENBERG.

Beatty Earl English admiral. The son of an Irishman, Capt. D. L. Beatty of Borodale, Wexford, he was born in Cheshire, Jan. 17, 1871. In 1884 he entered the navy. In 1896 he was second in command of the naval brigade that went up the Nile and in 1898 he marched with Kitchener to Khartoum. The Boxer Rebellion in China offered him another chance. There he was severely wounded, but he had made a name for himself, and before he was 30 years old he was a captain and before 40 a rear admiral.

In 1912 Beatty became naval secretary to the First Lord of the Admiralty and in 1913 he went to sea in command of the battle cruiser squadron. He was holding this position when the World War began and he figured prominently in the fighting at sea. On Aug. 28th, 1914, he led his cruisers into the Heligoland Bight to support a raid by lighter vessels and on June 24, 1915, he fought the battle of the Dogger Bank. He was in command of the battle cruisers at Jutland and was in the thick of that engagement.

In Nov., 1916, Beatty succeeded Jellicoe as commander-in-chief of the Grand Fleet, and as such, in Nov., 1918, he received off Rosyth the surrender of the German warships. His reward was a grant of £100,000 and an earldom.

he was also made admiral of the fleet. In Oct., 1919, he became first sea lord, a position he retained until 1927.

In 1901 Beatty married Ethel, daughter of Marshall Field of Chicago. The elder of their two sons, who is known as Viscount Borodale, was elected Unionist M.P. for Peckham in 1931. Beatty's honours include the O.M. and membership of the privy council.

Beauchamp Earl, British title held by the family of Lygon since 1815. William Earl was made a baron in 1806, and an earl in 1865, taking the title of Beauchamp because of his descent from the Beauchamps who were earls of Warwick. William, the 7th earl, became a leading Liberal politician. From 1899 to 1901 he was governor of New South Wales and from 1907 to 1915 he was in the Liberal ministry as lord steward, first commissioner of works and lord president. Later he was Chancellor of London University and Warden of the Cinque Ports, but he resigned these positions in 1931. His seat is Madresfield Court, Worcester, and his eldest son is called Viscount Elmley. The Viscount is Liberal M.P. for East Norfolk.

Beauclerk Name given to Henry I of England (qv) because of his great learning.

Beaufort Duke of English title held by the family of Somerset. It dates from 1682 when Henry Somerset, 3rd Marquess of Worcester, was made a duke. He was a descendant of Henry Beaufort, 3rd Duke of Somerset, hence the names. Charles Somerset, an illegitimate son of the duke, was made Earl of Worcester in 1513, and his descendant was created marquess in 1642.

The dukes of Beaufort owned at one time enormous estates in Gloucestershire, Monmouthshire, Glamorganshire and elsewhere, where they lived almost as kings, but much of their land has been sold. Badminton is now the family seat. Earlier it was Raglan Castle. Henry, the 7th duke (1792-1853) and Henry, the 8th duke (1824-99) were noted sportsmen. The dukes' eldest son is called the Marquess of Worcester.

Beaufort Henry, English cardinal and statesman. One of the children of John of Gaunt by his second marriage, he was consequently a younger half brother of Henry IV. He was consecrated Bishop of Lincoln in 1398, and, soon after the accession of his half-brother to the throne in the following year, was appointed to the chancellorship of the kingdom which, however, he resigned in his translation to the see of Winchester as successor to William of Wykeham. In the quarrels between Henry IV and the Prince of Wales (afterwards Henry V) Beaufort sided with his nephew and fell into disgrace. On the accession of Henry V, however, he once more became chancellor and took a leading part in government business until 1417, when he resigned in order to be able to attend the Council of Constance.

After the death of Henry V Beaufort was the leading opponent of the schemes of Humphrey, Duke of Gloucester, he became chancellor for the third time in 1424, and for two years was virtual ruler of England. His position becoming untenable owing to Humphrey's enmity, he again resigned, accepted a cardinal's hat from Pope Martin V, and was appointed papal legate for Germany, Hungary and Bohemia. Later he was recalled to the council, but Humphrey of Gloucester's hostility was

renewed and an attempt was made to deprive him of his see. During his later years he took little part in public affairs. He died April 11 1447.

Beaufort Scale Arrangement for calculating the force of the wind at sea. It was invented in 1805 by Sir Francis Beaufort. The scale consists of the numbers 0 to 12 each of which represents a certain wind velocity. For instance, calm is 0, a gale with a velocity of miles per hour of 39-46 is 8, a strong gale with a velocity of 47-54 is 9, a storm with a velocity of 54-75 is 11 and a hurricane with a velocity of over 75 m per hour is 12.

Beauharnais French noble family. Belonging to the Orleans district several of its members became prominent in the late 18th and early 19th centuries. François, Marquis de Beauharnais, was a royalist and *émigré* during the French Revolution, but afterwards held high diplomatic office under Napoleon. His brother Alexandre, Vicomte de Beauharnais, was the first husband of Josephine, who afterwards became the wife of Napoleon. He commanded the republican army of the Rhine in 1793, and owing to his failure to relieve Metz was guillotined.

Eugene de Beauharnais, son of Alexandre de Beauharnais and Josephine, and stepson of Napoleon, served with his stepfather in Italy and Egypt, rendered signal services during the consulate, and on Napoleon becoming emperor was given the rank of prince. He was appointed viceroy of Italy, held various high military commands, and in 1810 was created grand duke of Frankfurt. After the fall of Napoleon he lived in Munich. He died Feb. 22, 1824.

Beaulieu Village of Hampshire. In the New Forest, it is famous for its ruined abbey, once a Cistercian house. It stands on the River Beaulieu, and near is the residence of Lord Montagu of Beaulieu. A pleasure resort on the Riviera in France, is also called Beaulieu, or the beautiful place.

Beaumarchais Pierre Augustin Caron De, French dramatist. He was born in Paris, Jan. 24/1732, and was brought up to his father's trade of watchmaker. He was appointed watchmaker to the king, became a popular figure at court, married the widow of a court official, and, obtaining a patent of nobility, assumed the name of de Beaumarchais. In addition to his own name of Caron. For some years he led an adventurous life as an agent in the king's secret service and he took an active part in securing the assistance of France for the American Colonies in the War of Independence. In 1775 he produced his comedy *The Barber of Seville*. A sequel, *The Marriage of Figaro*, was written in 1778. Both comedies have been made into operas—the *Barber* by Rossini and *Figaro* by Mozart. He died in Paris, May 19, 1799.

Beaumaris County town, borough, watering place and market town of Anglesey. It is situated on Beaumaris Bay, at the northern entrance to the Menai Strait, 7 m. from Bangor and 239 m. from London. Pop. (1931) 1708.

Beaumont Francis, English dramatist. The son of a Leicester shire gentleman, he went to Oxford and

became a lawyer in London. His time, however, was mainly passed in the society of Ben Jonson and others at the Mermaid Tavern, where doubtless he met John Fletcher about 1608. The two began to write plays together, sometimes obtaining assistance from others, and their names are inseparably linked. The plays include *The Woman Hater*, *The Maid's Tragedy* and *The Knight of the Burning Pestle*. Beaumont, died March 6, 1616. He was buried in Westminster Abbey, and has a memorial window in Southwark Cathedral.

Beaumontague Putty or cement used in making joints or filling cracks in joinery or iron work. For ironwork, sal ammoniac iron borings, grease and lamp-black are used, and for wood work the ingredients are litharge, white lead, and linseed oil.

Beaumont Hamel Village of France. On the Aisne about 6 m. from Albert, it was the scene of some hard fighting during the Great War. The British attacked it without success in July, 1916, but captured it during the battle of the Aisne in the following Nov. In March, 1918, the Germans attacked it, but the village was held by the British after a hard fight.

Beaune Town of France. It is 22 m. from Dijon on the railway from Paris to Lyons. An old place, it has remains of a castle. In the district of Burgundy, Beaune gives its name to a popular wine made from the grapes of the vineyards near. Pop 13,780.

Beauvais City of France. Capital of the department of Oise, it is about 50 m. from Paris. The cathedral, begun in the middle of the 13th century, is one of the most remarkable examples of Gothic architecture in existence, with stained glass windows that rival those of Chartres. The principal manufactures are textiles, toys and leather goods. Pop 18,738.

Beaver Rodent animal found in Europe, Asia and America. In Europe they are found in France and Norway at one time they were plentiful in Great Britain, especially Scotland. An average animal measures about 30 in. and weighs about 50 lb. Its body is covered with soft brown fur, and its tail is long and thick. It lives in and near water, and feeds chiefly on plants and bark. The fur is valuable, while the Indians eat their flesh. Scent is obtained from it. The beaver is famous for its skill in building. The animals are able to fell trees, and convey them along a stream to a suitable place for a dam. These dams in which mud is used to fill the gaps between the logs, serve to protect the beaver's home. They are very strong and often quite large.

The tall hats worn by men were called beavers because at one time they were covered with beaver fur.

Beaverbrook Lord English politician. William Maxwell Aitken, the son of a Presbyterian minister, was born at New Brunswick, May 25, 1879. Having entered business he was not long in making a fortune, and he was therefore able, in 1909, to settle in England where he had a good friend in Mr Bonar Law. In 1910 he became M.P. for Ashton-under-Lyne, and in 1911 he was made a knight. During the World War he was associated with the Canadian forces, and was behind the scenes in the

political negotiations that preceded the formation of a Coalition Government in 1916. In 1918 having since 1916 been Lord Beaverbrook, he became minister of information. After the war he turned his attention to newspapers, bought *The Daily Express* and later the control of *The Evening Standard* and founded *The Sunday Express*. In 1929 he handed over the control to his elder son, and devoted himself to the cause of advocating free trade within the empire. His books include *Politicians and the War*.

Bebington Urban district of Cheshire. It stands on the Mersey, 3 m. from Birkenhead, and consists of Higher Bebington and Lower Bebington. It is served by the L.M.S. and G.W. Rylys, and is practically a suburb of Birkenhead. With Bromborough it forms an urban district. Pop (1931) 26,742.

Bec Short name for the French village of Le Bec Hellouin. It is 26 m. from Evreux, and has remains of an abbey. This was a Benedictine house, founded about 1030 by Hellouin, who was succeeded as abbot by Lanfranco and then by Anselm. William I. endowed it with lands in England, including Tooting Bec, London.

Beccaria Cesare Italian economist and jurist. He was born in Milan, March 15th, 1735, and was educated by the Jesuits. He began writing on economic subjects in 1762, and two years later he published his celebrated treatise *On Crimes and Punishments*, which was an immediate success and was translated into several European languages. It may be regarded as the foundation of the movement for penal reform. He was appointed professor of law and economics at Milan in 1768, and was made a marquis. He died in Milan, Nov. 28, 1794.

Beccles Borough and market town of Suffolk. It stands on the Waveney, 8 m. from Lowestoft and 109 from London, on the L.N.E. Ry. There is a trade along the river, and the industries include printing and milling. Pop (1931) 6,544.

Bechuanaland Country of British South Africa. It is bounded on the south by the Orange river, and on the east and north-east by Matabeleland, the Transvaal and the Orange River Colony. The southern region, British Bechuanaland, forms part of Cape Colony. The northern region is styled the Bechuanaland Protectorate, and is virtually a crown colony. Mafeking, the chief town of British Bechuanaland, is also the capital of the Protectorate. The Bechnana, of whom the Basuto (q.v.) are a branch, belong to the great Bantu race. They are mainly an agricultural people, but also show considerable skill in metal work and pottery. The combined native population of British Bechuanaland and the protectorate is about 250,000.

Beck Adolph. Victim of a serious miscarriage of justice. A Norwegian residing in London, where he carried on a business as a financial agent, Beck was convicted at the Central Criminal Court, London, in 1896, of frauds on women. His sentence was seven years penal servitude, which he served. In 1904 he was again convicted, but before sentence was passed the real offender was found. Beck received £5000 as compensation.

he was also made admiral of the fleet. In Oct., 1919, he became first sea lord, a position he retained until 1927.

In 1901 Beatty married Ethel, daughter of Marshall Field of Chicago. The elder of their two sons, who is known as Viscount Borodale, was elected Unionist M.P. for Peckham in 1931. Beatty's honours include the O.M. and membership of the privy council.

Beauchamp Earl. British title held by the family of Lygon since 1815. William Lygon was made a baron in 1806, and an earl in 1865, taking the title of Beauchamp because of his descent from the Beauchamps who were earls of Warwick. William, the 7th earl, became a leading Liberal politician. From 1899 to 1901 he was governor of New South Wales and from 1907 to 1915 he was in the Liberal ministry as lord steward, first commissioner of works and lord president. Later he was Chancellor of London University and Warden of the Cinque Ports but he resigned these positions in 1931. His seat is Madresfield Court, Worcester, and his eldest son is called Viscount Elmley. The Viscount is Liberal M.P. for East Norfolk.

Beauclerk Name given to Henry I of England (qv) because of his great learning.

Beaufort Duke of English title held by the family of Somerset. It dates from 1682 when Henry Somerset, 3rd Marquess of Worcester was made a duke. He was a descendant of Henry Beaufort, 3rd Duke of Somerset, hence the names. Charles Somerset, an illegitimate son of the duke, was made Earl of Worcester in 1513, and his descendant was created marquess in 1642.

The dukes of Beaufort owned at one time enormous estates in Gloucestershire, Monmouthshire, Glamorganshire and elsewhere, where they lived almost as kings, but much of their land has been sold. Badminton is now the family seat. Earlier it was Raglan Castle. Henry, the 7th duke (1792-1853) and Henry, the 8th duke (1824-99) were noted sportsmen. The duke's eldest son is called the Marquess of Worcester.

Beaufort Henry. English cardinal and statesman. One of the children of John of Gaunt by his second marriage, he was consequently a younger half brother of Henry IV. He was consecrated Bishop of Lincoln in 1398, and, soon after the accession of his half-brother to the throne in the following year, was appointed to the chancellorship of the kingdom which however, he resigned in his translation to the see of Winchester as successor to William of Wykeham. In the quarrels between Henry IV and the Prince of Wales (afterwards Henry V) Beaufort sided with his nephew and fell into disgrace. On the accession of Henry V, however, he once more became chancellor and took a leading part in government business until 1417 when he resigned in order to be able to attend the Council of Constance.

After the death of Henry V Beaufort was the leading opponent of the schemes of Humphrey, Duke of Gloucester, he became chancellor for the third time in 1424, and for two years was virtual ruler of England. His position becoming untenable owing to Humphrey's enmity, he again resigned, accepted a cardinal's hat from Pope Martin V, and was appointed papal legate for Germany, Hungary and Bohemia. Later he was recalled to the council, but Humphrey of Gloucester's hostility was

renewed and an attempt was made to deprive him of his see. During his later years he took little part in public affairs. He died April 11, 1447.

Beaufort Scale Arrangement for calculating the force of the wind at sea. It was invented in 1805 by Sir Francis Beaufort. The scale consists of the numbers 0 to 12 each of which represents a certain wind velocity. For instance, calm is 0, a gale with a velocity of miles per hour of 39-46 is 8, a strong gale with a velocity of 47-54 is 9, a storm with a velocity of 54-75 is 11 and a hurricane with a velocity of over 75 m. per hour is 12.

Beauharnais French noble family. Belonging to the Orleans district several of its members became prominent in the late 18th and early 19th centuries. François, Marquis de Beauharnais-Ferté, was a royalist and emigré during the French Revolution, but afterwards held high diplomatic office under Napoleon. His brother Alexandre, Vicomte de Beauharnais, was the first husband of Josephine who afterwards became the wife of Napoleon. He commanded the republican army of the Rhine in 1793, and owing to his failure to relieve Metz was guillotined.

Eugene de Beauharnais, son of Alexandre de Beauharnais and Josephine, and stepson of Napoleon served with his stepfather in Italy and Egypt, rendered signal services during the consulate, and on Napoleon becoming emperor was given the rank of prince. He was appointed viceroy of Italy, held various high military commands, and in 1810 was created grand duke of Frankfurt. After the fall of Napoleon he lived in Munich. He died Feb. 22, 1824.

Beaulieu Village of Hampshire. In the New Forest, it is famous for its ruined abbey, once a Cistercian house. It stands on the River Beaulieu, and near is the residence of Lord Montagu of Beaulieu. A pleasure resort on the Riviera in France, is also called Beaulieu, or the beautiful place.

Beaumarchais Pierre Augustin Caron De. French dramatist. He was born in Paris, Jan. 24, 1732 and was brought up to his father's trade of watchmaker. He was appointed watchmaker to the king, became a popular figure at court, married the widow of a court official, and, obtaining a patent of nobility, assumed the name of de Beaumarchais. In addition to his own name of Caron. For some years he led an adventurous life as an agent in the king's secret service and he took an active part in securing the assistance of France for the American Colonies in the War of Independence. In 1775 he produced his comedy *The Barber of Seville*. A sequel, *The Marriage of Figaro*, was written in 1778. Both comedies have been made into operas—the *Barber* by Rossini and *Figaro* by Mozart. He died in Paris, May 19, 1799.

Beaumaris County town, borough, watering place and market town of Anglesey. It is situated on Beaumaris Bay, at the northern entrance to the Menai Strait, 7 m. from Bangor and 239 m. from London. Pop. (1931) 1708.

Beaumont Francis. English dramatist. The son of a Leicester shire gentleman, he went to Oxford and

became a lawyer in London. His time, however, was mainly passed in the society of Ben Jonson and others at the Mermaid Tavern, where doubtless he met John Fletcher about 1608. The two began to write plays together, sometimes obtaining assistance from others, and their names are inseparably linked. The plays include *The Woman Hater*, *The Maid's Tragedy* and *The Knight of the Burning Pestle*. Beaumont, died March 6, 1616. He was buried in Westminster Abbey, and has a memorial window in Southwark Cathedral.

Beaumontague Putty or cement used in making joints or filling cracks in joinery or iron work. For ironwork, sal ammoniac iron borings, grease and lamp-black are used and for wood work the ingredients are litharge, white lead, and linseed oil.

Beaumont Hamel Village of France on the Aisne about 6 m from Albert, it was the scene of some hard fighting during the Great War. The British attacked it without success in July, 1916, but captured it during the battle of the Aisne in the following Nov. In March, 1918, the Germans attacked it, but the village was held by the British after a hard fight.

Beaune Town of France. It is 22 m from Dijon on the railway from Paris to Lyons. An old place, it has remains of a castle. In the district of Burgundy, Beaune gives its name to a popular wine made from the grapes of the vineyards near. Pop 15,780.

Beauvais City of France. Capital of the department of Oise, it is about 50 m from Paris. The cathedral, begun in the middle of the 13th century, is one of the most remarkable examples of Gothic architecture in existence, with stained glass windows that rival those of Chartres. The principal manufactures are textiles, toys and leather goods. Pop 18,738.

Beaver Rodent animal found in Europe, Asia and America. In Europe they are found in France and Norway, at one time they were plentiful in Great Britain, especially Scotland. An average animal measures about 30 in and weighs about 50 lb. Its body is covered with soft brown fur, and its tail is long and thick. It lives in and near water, and feeds chiefly on plants and bark. The fur is valuable, while the Indians eat their flesh. Scent is obtained from it. The beaver is famous for its skill in building. The animals are able to fell trees, and convey them along a stream to a suitable place for a dam. These dams in which mud is used to fill the gaps between the logs, serve to protect the beaver's home. They are very strong and often quite large.

The tall hats worn by men were called **beavers** because at one time they were covered with beaver fur.

Beaverbrook Lord. English politician. William Maxwell Aitken, the son of a Presbyterian minister, was born at New Brunswick, May 25, 1879. Having entered business he was not long in making a fortune, and he was therefore able, in 1909, to settle in England where he had a good friend in Mr Bonar Law. In 1910 he became M.P. for Ashton-under-Lyne, and in 1911 he was made a knight. During the World War he was associated with the Canadian forces, and was behind the scenes in the

political negotiations that preceded the formation of a Coalition Government in 1916. In 1918, having since 1916 been Lord Beaverbrook, he became minister of information. After the war he turned his attention to newspapers, bought *The Daily Express* and later the control of *The Evening Standard* and founded *The Sunday Express*. In 1929 he handed over the control to his elder son, and devoted himself to the cause of advocating free trade within the empire. His books include *Politicians and the War*.

Bebington Urban district of Cheshire. It stands on the Mersey, 3 m from Birkenhead, and consists of Higher Bebington and Lower Bebington. It is served by the L.M.S. and G.W. Ryds, and is practically a suburb of Birkenhead. With Bromborough it forms an urban district. Pop (1931) 26,742.

Bec Short name for the French village of Le Bec Hellouin. It is 26 m from Evreux, and has remains of an abbey. This was a Benedictine house, founded about 1030 by Hellouin, who was succeeded as abbot by Lanfranc and then by Anselm. William I. endowed it with lands in England, including Tooting Bec, London.

Beccaria Cesare. Italian economist and jurist. He was born in Milan, March 15th, 1735, and was educated by the Jesuits. He began writing on economic subjects in 1762, and two years later he published his celebrated treatise *On Crimes and Punishments*, which was an immediate success and was translated into several European languages. It may be regarded as the foundation of the movement for penal reform. He was appointed professor of law and economics at Milan in 1768, and was made a marquis. He died in Milan, Nov 28, 1794.

Beccles Borough and market town of Suffolk. It stands on the Waveney, 8 m from Lowestoft and 109 from London, on the L.N.E. Ry. There is a trade along the river, and the industries include printing and milling. Pop (1931) 6,544.

Bechuanaland Country of British South Africa. It is bounded on the south by the Orange river, and on the east and north-east by Matabeleland, the Transvaal and the Orange River Colony. The southern region, British Bechuanaland, forms part of Cape Colony. The northern region is styled the Bechuanaland Protectorate, and is virtually a crown colony. Mafeking, the chief town of British Bechuanaland, is also the capital of the Protectorate. The Bechuana, of whom the Basuto (q.v.) are a branch, belong to the great Bantu race. They are mainly an agricultural people, but also show considerable skill in metal work and pottery. The combined native population of British Bechuanaland and the protectorate is about 250,000.

Beck Adolph. Victim of a serious miscarriage of justice. A Norwegian residing in London, where he carried on a business as a financial agent, Beck was convicted at the Central Criminal Court, London, in 1896, of frauds on women. His sentence was seven years penal servitude, which he served. In 1904 he was again convicted, but before sentence was passed the real offender was found. Beck received £5000 as compensation.

Beckenham Urban district of Kent, 9 m from London, on the S Rly. It is a residential area. At Monk's Orchard is the new Bethlehem Hospital, opened in 1930. Pop (1931), 43,834.

Becket Thomas English statesman and ecclesiastic. A Londoner by birth he was born Dec 21, 1118, and received a good education, studying for some time in Paris. In 1154 he was appointed archdeacon of Canterbury, and in the following year, on the advice of Theobald, Archbishop of Canterbury, Henry II made him chancellor. For seven years he showed himself a zealous and capable minister of the Crown, and on the death of Theobald, Henry rewarded him by nominating him to the see of Canterbury.

From that time Becket's attitude changed completely. He resigned the chancellorship, devoted himself to religion and became a determined opponent of Henry's anti-clericalism. In 1164 there was a definite rupture with the king over the Constitutions of Clarendon, and Becket was obliged to withdraw to France. Ultimately, by the intervention of the Pope, a reconciliation was patched up and Becket returned to England, but relations were still strained. A month later (Dec 29, 1170), Becket was brutally murdered at Canterbury by some members of the royal household, who, it is said, were prompted to the crime by some incautious words used by the king. Becket was canonised in 1172, and his shrine at Canterbury became a place of pilgrimage.

Beckford William English writer. Born at Fonthill, Wiltshire, Oct. 1, 1780, he inherited a large fortune and married Lady Margaret Gordon. He is famous as the author of the singular philosophical romance *The History of the Caliph Vathek* which he wrote in French in 1762. An English translation appeared in 1780. From 1784-93 he was M.P. for Wols, and from 1806-20 for Hindon. He spent his money freely in building a country house at Fonthill and in making collections of books and works of art. He also built the tower on Lansdowne Hill, Bath. Beckford died at Bath, May 2, 1844, leaving two daughters, one of whom became Duchess of Hamilton.

Beckford's father, William Beckford (1709-70), a London merchant, was M.P. for the city, and twice lord mayor. He is known as a supporter of Wilkes and the author of a short speech which is now on a monument in the London Guildhall. He died June 21, 1770.

Becontree District of Essex. It adjoins Dagenham which can be reached by the L.M.S., and is 11 m from London. It owes its existence to a huge housing estate designed to hold 80,000 people, laid out by the London County Council.

Bedale Market town of Yorkshire (N.R.) It is 7 m from Northallerton, on the L.N.E. Rly. Pop 1064.

Bedale is also the name of a district near the town, and gives its name to a pack of hounds that hunt this part of Yorkshire.

Beddgelert Village of Caernarvonshire. At the foot of Snowdon, it is 13 m from Caernarvon. According to local tradition it was the scene of the legend of Llewellyn and his hound Gelert—hence the name, which means Gelert's grave. Pop 1213.

Beddington District of Surrey. It is on the Wandle, 2 m.

from Croydon, on the S Rly. It is notable because of its association with the great family of Carew, who long lived at the hall, which is now an orphan asylum. Beddington Park is open to the public. With Wallington, Beddington forms an urban district. Pop (1931) 26,249.

Bede English saint and scholar called the Venerable. About 680, being still a child, he entered the monastery at Wearmouth, near his home. Afterwards he moved to the one at Jarrow of which he became prior. Bede is famous for his *Ecclesiastical History*, which, written in Latin, is very valuable for the information it gives about the early history of England. He wrote other works, and also translated the gospel of St John. He died at Jarrow, May 26, 735. Later he was canonised and his festival is kept on May 27.

Bedel Official at the older universities. The word is a variant of headle. At Oxford there are four bedels, one of whom carries the vice-chancellor's mace. They also carry out the vice-chancellor's orders. At Cambridge there are two. Called esquire bedels, both carry maces before the vice-chancellor.

Bedesman Person who offers bedes or prayers for another, also spelled beadsman. As those who did this were usually paid, the word came to mean a pensioner, or the inmate of a hospital or else, where. In Scotland the king's bedesmen were licensed beggars who, on the king's birthday, received a blue gown, a loaf, a bottle of ale and a penny for each year of the king's age. They were sometimes called bluegowns, and the last one was elected in 1833.

Bedford County town of Bedfordshire. It stands on the Ouse, 50 m from London by the L.M.S. Rly. It is a manufacturing town, with large engineering and other works, a market for agricultural produce and is noted for its schools especially the grammar school founded in 1661, which is one of the country's great public schools. Here is the Bunyan meet house. Pop (1931) 40,673.

Bedford Duke of. Title borne by the Russell family since 1694. John Russell was made Earl of Bedford in 1550. William, the 6th earl, was one of those who asked William of Orange to come over to England in 1688. He was rewarded in 1691 with a dukedom. The best known of his successors was perhaps, John, the 4th duke, a prominent politician in the 18th century. He was Lord Lieutenant of Ireland, 1753-61, and Lord President of the Council 1763-65, and was the leader of those Whigs who formed the Bloombury gang. In 1893 Herbert Arthur Russell became the 11th duke.

The family estates are in Bedfordshire and Devonshire, where are ducal seats Woburn Abbey and Endleigh near Tavistock. The valuable London property, including much of Bloomsbury and Covent Garden, has been sold. The duke's eldest son is called the Marquess of Tavistock.

Bedford John, Duke of. English prince. The third son of Henry IV, he was therefore a younger brother of Henry V. In 1414 he was made Duke of Bedford and in 1422 became Regent of France for his young nephew, Henry VI. He carried on the war with the French, at first success-

fully, but less so after the appearance of Joan of Arc. He died at Ronen, Sept 19, 1435.

Bedford College London College for women. It was founded in 1849 by Elizabeth J Reid. Its first home was in Bedford Square, later it was moved to York Place, and in 1913 to a building in York Gate, Regent's Park. This cost £130,000 to build, and accommodates 80 students. The college is a recognised training college for teachers and social workers, and in 1913 was recognised as a school for the training of health visitors.

Bedford Level District in the counties of Cambridge, Huntingdon, Northampton, Lincoln, Norfolk and Suffolk. It covers nearly 100,000 acres or about 150 sq m. At one time it was a vast swamp, but soon after 1600 it was drained by a Dutchman, Cornelius Vermuyden, at the expense of the Earl of Bedford and others. It consists of three parts—north, middle and south—and is now fertile and cultivated soil. The surplus water is carried off by the Ouse, Welland, Nen and other rivers and by artificial channels, especially the old and the new Bedford rivers. These go from the Isle of Ely to the Ouse, a distance of 21 m. The Level is managed by a board, consisting of governor, bailiffs and conservators.

Bedford Park Suburb of London. In the borough of Acton, it was laid out as a garden suburb before such suburbs had become general.

Bedfordshire Small inland county of England. It covers 473 sq m and is flat, except where the Chiltern Hills enter it in the south-west, and the soil is very fertile. Bedford is the county town, other places of importance are Luton, Dunstable and Biggleswade. The chief river is the Ouse, and the county is served by the LNE and LMS Rlys. Much of the land belongs to the Duke of Bedford, whose seat is Woburn Abbey. Pop (1931) 206,478.

The Bedfordshire Regiment, formerly the 16th of the line, was raised about 1855, and has seen a great deal of active service, including the S African War and the Great War.

Bedivere One of King Arthur's knights. According to Malory, he shared in many of the adventures of the band. He is specially famed, however, as being the one who stayed with the dying king to the end. It was he who threw the sword Excalibur into the lake, and carried Arthur to the barge. The story is told by Tennyson in *The Passing of Arthur*.

Bedlam Popular name for Bethlehem or Bethlehem Hospital. It was founded in London in 1247 as a religious house, and became a home for the insane, the first in the country, in 1403. In 1676 it was moved from Bishopsgate to Moorfields, and in 1815 to Lambeth. There it remained until 1930, when new buildings were erected at Monk's Orchard, Beckenham. The extensive grounds were bought by Viscount Rothenmere and opened as a public park.

Bedlington Urban district of Northumberland. It stands on the River Blyth, 4 m from Morpeth, on the LNE Rly, in a district of coal mines. Other industries include the making of chains. The district around is called Bedlingtonshire. Pop (1931) 27,315.

The Bedlington Terrier, called after the place, has a hard woolly coat, dark blue tan or sandy in colour. With narrow head and long tail, the animal is an excellent house dog, and has a reputation for killing rats.

Bedloe's Island of the United States. It is in New York Bay, about 1½ m from the island of Manhattan. On it is the Statue of Liberty, the work of Bartholdi presented to the States by France in 1886.

Bedouin Name given to those Arabs who claim to be descended from Ishmael. They are nomads, living in tribes, each under a sheik, keeping herds of camels, sheep and goats, and are excellent horsemen. They are found, not only in their native Arabia, but in Mesopotamia and other parts of Asia, in Egypt and other regions of northern and central Africa.

Bedstead Framework in which a bed is placed. The bedsteads of the Egyptians and other early peoples were not unlike our couches, and the Romans made something of the kind to rest on. In England and other countries for many years, the only bedstead for the bulk of the people was the floor, but soon the richer classes began to sleep upon wooden benches. These were sometimes placed in recesses or shut off by curtains from the main apartment.

As the country became richer, bedsteads of the modern type appeared. The rich Anglo-Saxons and Normans had bedsteads with posts and canopies. In the 13th century tester beds were seen, and in the 15th came the large square bedsteads that lasted until modern times. There are fine examples of them in the South Kensington Museum. In the 19th century brass and iron bedsteads were introduced and made on an enormous scale, but in the 20th there was a return to the wooden bedstead, but without posts or hangings. Trundle bedsteads were bedsteads made to go underneath larger ones.

Bedstraw (*Galium*) Genus of herbs of the order *rubiaceae*. Slender plants with leaves in whorls of four or more leaves, there are nearly a dozen members of the British species. Among these are goose grass, corn bedstraw and wall bedstraw which are annuals, while the other species are perennial. The perennials include the common hedge bedstraw which has long, weak stems without the hooks which distinguish goose grass.

Bedwelltyl Urban district of Monmouthshire. It is 7 m from Pontypool, on the GW Rly. In a colliery district mining is the chief occupation. Pop (1931) 31,089.

Bedworth Urban district of Warwickshire. It is 3 m from Nuncaton, and 100 from London, on the LMS Rly. In a coal mining district, it has also some manufacturing industries. Pop (1931) 12,058.

Bee Insect belonging to the family *hymenoptera*. They have four wings and possess stings. Some, such as the honey bee and the humble bee, live in communities, others are solitary and make their homes by burrowing in the ground.

There are three classes of bee in a hive, the queen bee, who is the one fertile female, the drones, who are the males, and the workers, who are sterile females. They have an elaborate organisation for collecting pollen from

BEECH

flowers and storing it in the hives. The workers build the combs of honey which, at the proper time may be taken from the hive, and they produce beeswax. The older workers do the outside work, leaving the care of the hive to the younger ones. At times, usually in the autumn, the drones are killed. The bee is hatched from an egg laid in the comb of the queen. This becomes a grub in a few days and is fed by the workers. The cell is then sealed up for the pupa. The whole process takes about three weeks. When a hive is too full, some of the bees having provided themselves with a new queen, swarm out. The swarm, in a single cluster, will usually hang on a tree until it is taken and put into a new hive when the workers begin to build combs for the eggs. Beekeeping has been practised for perhaps 4000 years and is now quite a thriving minor industry in Great Britain and other countries. The hives are usually made of wood and are so arranged that the honey can easily be taken out from time to time. There is a British Beekeepers' Association at 23 Bedford Street, Strand, London, W.C. and a paper is published in their interests. See

Beech

(*Fagus sylvatica*) Tree of the genus *fagus* of which there are many species. Next to the oak it is the finest of British forest trees. It is native to Britain and attains a height of from 60 to 100 ft. with a girth of from 12 to 20 ft. The bole is massive with smooth grey bark, and the leaves are oval and smooth, with a delicate silvery fringe on the edge which falls off as they mature. The foliage is dense and affords inviting shade. In autumn the leaves take gorgeous tints of orange, bronzo and amber, making the trees a blaze of colour. The three sided sharp-edged nuts, or masts, are used as pig food. The copper beech and the purple beech are varieties of this species.

Beecham

Sir Thomas English musician. Born April 20, 1879, he was a son of Sir Joseph Beecham who was made a baronet in 1914. His grandfather was Thomas Beecham, the founder of the Philharmonic Society at St. Helens. Educated at Rossall and Wadham College, Oxford, Beecham devoted his time to music becoming a conductor and composer. Especially did he work towards establishing a centre for grand opera in London and his concerts and operas were a feature of the London musical season.

Beecher

Henry Ward American preacher. Born June 24, 1813, he was a son of the Rev. Lyman Beecher (1775-1863), a minister at Litchfield, Connecticut, and then at Boston, afterwards being head of a theological college in Ohio. Harriet Beecher Stowe (q.v.) was his sister. Trained for the ministry under his father, Henry became a Presbyterian minister. In 1847 he was chosen minister of Plymouth Church, Brooklyn, where he remained until his death, March 8, 1863. Beecher was perhaps in his day the most popular preacher in the United States. He also won a reputation as a lecturer, and both preached and lectured in England.

Beechey

Sir William English painter. Born at Bedford Dec. 12, 1753, he was first a solicitor at York in London. His tastes, however, led him to study art and he soon made a reputation by his portraits, especially one of Queen Charlotte in 1783.

In 1798 he was knighted and elected R.A., and he died Jan. 28, 1839. The third, Frederick William Beechey (1796-1856) entered the navy and became an admiral. He went on three expeditions to the Arctic where Beechey Island is named after him.

BEEF

Bee Eater

(*Merops apacerster*) Migratory African bird. It belongs to the family *Meropidae* which contains over 30 species. About 11 in. in length, it has a long slender bill, the wings are long and pointed and the outer and middle toes are connected to the first joint. The plumage has tints of chestnut brown and yellow. Its greenish wings are greenish blue and black with feathers and a yellow throat bounded by a black line. It resembles the kingfisher in its habits breeding in holes on river banks where it lays from five to seven eggs which are pure white.

Beef

Meat obtained from the carcasses of food of the British people and for long British cattle have been bred for their beef producing qualities. The introduction of cold storage methods has made it possible to import beef and large quantities reach Britain from Australia, New Zealand, Argentina and elsewhere. In 1929 a system of marking and grading beef was introduced.

In 1932 the imports of beef into Great Britain amounted to 560,200 tons. Of this, over 400,000 tons came from Argentina. Beef was not made subject to an import duty, when tariffs were introduced in 1931-32. The strictness is usually regarded as the best joint.

Beefeater

Name for the Yeoman of the Guard. The body originated at the coronation of Henry VII. in 1485. They always attend at State functions. The Wardens of the Tower or Yeomen eaters and still wear their traditional Tudor uniform.

Beefsteak Club

The first Beefsteak Club was formed in 1709 where the fare was restricted to beef or wine and steaks and in 1735 the Beefsteak Society of Steaks was founded by John Rich and Lord Peterborough at Covent Garden Theatre. Many famous people gathered here. It dissolved in 1867. A Beefsteak Club was founded by Sheridan in Dublin in 1749 and the present one in London by A. Stuart Wortley in 1875.

Beefwood

Name of several tropical trees found in Australia, and of one found in the West Indies. The wood of the former red in appearance and exceptionally hard is used by cabinetmakers. The trees have drooping almost leafless branches.

Beelzebub

God of the Philistines. In the New Testament the word is used for Satan (Matt. x, Mark iii, Luke xi).

Beer

Beverage in which the chief ingredients are malt and hops. In fermentation processes, the lager beer and other light beers drunk in Europe are made by decoction and low fermentation processes. At one time much beer was brewed in private houses, but to day it is nearly all produced on a large scale in breweries.

An extract obtained from malted barley and another from malt and sugar are put together. The solution called wort is boiled with hops, and after cooling is fermented with yeast. The proportion of alcohol in beer is not high, never more than 7 per cent, and as low sometimes as 2½.

In Great Britain a large revenue is obtained from the excise duty on beer. In 1931 this was raised to over £5 for every 36 gallons, but it varies somewhat according to the gravity. In addition the retailers of beer, like those of other intoxicating liquors, pay heavy licence duties.

Beerbohm Max English writer and caricaturist. Born in London, April 24, 1872 he was educated at Charterhouse and Merton College, Oxford. He wrote for *The Yellow Book*, and published several volumes including *The Happy Hypocrite* and *Zuleika Dobson*, and was dramatic critic of *The Saturday Review*. Although a clever and witty writer Beerbohm is perhaps more famous as a caricaturist. His portraits of celebrities of all kinds are extraordinarily lifelike, while remaining caricatures, and in some cases the legends are the perfection of subtle irony.

Beersheba Town of Palestine. It was about 50 m from Jerusalem and was regarded as the most southerly point of the country which went from Dan to Beersheba. The modern Bir-es Saba occupies the site.

Beeston Urban district and market town of Nottinghamshire. It is on the Trent 3 m from Nottingham, on the L.M.S. Rly. It has lace and other factories, engineering works, etc. Pop. (1931) 16 016.

Another Beeston is a suburb of Leeds, on the L.N.E. Rly.

Beeston Castle is in Cheshire, 11 m from Crewe. It is a magnificent ruin, standing on a hill from which wonderful views are obtained. Built in 1220 it was dismantled in 1646.

Beeswax Yellow wax secreted by bees. With it they form the cells in which they deposit their honey. When the honey has been drained from the honeycomb the wax is melted in hot water, strained and left to solidify. It can be bleached by the use of nitric acid or chlorine, but the best results are obtained by exposing it in thin layers to sunshine, keeping it moist during the process. Dissolved in turpentine it is used for polished surfaces of furniture or floors. It is also used in candle making and in some ointments.

Beeswing Film of tartar deposited in port and other wines when they have been kept for a long time. It is a sign of age and resembles a bee's wing in appearance.

Beet Plant grown in Britain and elsewhere chiefly for its roots. Its home is in the southern parts of Europe and it was introduced into England in the 16th century, when it was grown as a food for cattle. Its main characteristic is the high proportion of sugar that it contains. For this reason one variety of it, the sugar beet, which contains 12 per cent and more of sugar, is grown in Germany and Austria in order to be made into sugar.

In the 20th century, aided by a state subsidy, steps were taken to grow beet in England. Factories were opened in Norfolk, Lincolnshire, Nottinghamshire and elsewhere. There the sugar is extracted by pressure and refined and

the refuse used as a cattle food. In 1929 there were 348,000 acres under beet and 3,060,000 tons of beet were produced. The state subsidy came to £1,233,000. The world's production of sugar from beet amounts in a year to about 8 750,000 tons. Chile beets are ornamental plants.

Beethoven Ludwig von German composer. He was born at Bonn Dec 16, 1770 the son of a professional singer, and as a child showed extraordinary genius. He was made organist to the Elector of Cologne but in 1792 he left Bonn for Vienna, where he studied under Mozart. There he lived for the rest of his life troubled much by deafness. He died March 26, 1827.

One of the world's greatest composers. Beethoven is responsible for a large and varied output. His compositions include nine symphonies, among them one choral symphony, concertos for pianoforte and orchestra and 32 solo pianoforte sonatas. He also wrote two masses, an oratorio *The Mount of Olives*, the opera *Fidelio* and a great deal of chamber music. His whole life was passed in composing and his work is usually divided into three periods, his greatest pieces being produced in the middle one, which lasted from 1802 to 1814.

Beetle Common insect of the order *coleoptera* of which about 150 000 species have been enumerated. The wings are covered with a pair of horny sheaths and the limbs protected by a thick cuticle. They have strong jaws and a single pair of antennae.

Beetles pass through the same life stages as other insects, their first stage being in a form of larva, then pupa and finally the adult. They vary in size. Ordinary beetles are about an inch long, but there are species which are 6 in long. Some live in water. They feed on plants and animal matter. Most of them are unpleasant visitors and can do damage, but a few species are useful in lawns and gardens. Damage to woodwork is done by the larvae of certain beetles which bore their way into it.

Beetle Machine or implement used in industry. One form of beetle is a kind of hammer with a wooden head and is employed for driving in posts or ramming down paving blocks. A smaller beetle was used in the household for beating out dust, etc. In cotton and linen mills the beetle is a machine which finishes off material by hammering it over rollers. The process is called beetling.

Begonia Popular plant in English gardens. The tuberous and fibrous rooted species have showy, brilliant coloured flowers while the ornamental leaved variety *B. rex* is grown for its beautifully shaped and coloured foliage. Tuberous begonias are not hardy and those planted in early summer must be lifted in the autumn and stored during the winter in dry soil protected from frost. The ornamental-leaved species do best in moderate heat and should be shaded from a strong sun.

Behaviourism Branch of psychology that is concerned with the objective study of the behaviour of animals and men. The work done by E. L. Thorndike and others has shown that there is much similarity between the behaviour of men and that of the lower animals, and various conclusions have been drawn therefrom. The science owes a good deal to the British psychologist, C. Lloyd Morgan.

Behemoth Animal mentioned in the Bible. There are references

to it in the book of Job and also in some of the books of the Apocrypha. It may have been a hippopotamus or an elephant, or, more probably, a gigantic animal now extinct.

Behn Aphra First English woman novelist and dramatist. Born at Wye in 1640, she was taken when young to S. America, and there in Oronoko the African slave prince, upon whose life she based her best known novel, *Oronoko*. She returned to England, and married a Dutch merchant. She was sent by Charles II to Flanders on secret service. Becoming widowed and poor, she earned her living by writing, mostly plays, of which *The Rover* is the best. She died in 1689.

Behring Strait See BERING

Beira Seaport of East Africa. A Portuguese possession, it stands at the mouth of two rivers, the Bussé and the Pungue, and is the capital of the extensive territories of the Mozambique Co. and the nearest seaport to much of Rhodesia, Salisbury being only 370 m. away. It is the terminus of the Beira Rly. which connects with the railways of Rhodesia and a considerable trade passes through it. There is a good harbour. Pop. 17,000.

Beirut Seaport and town of Syria, also called Beyrout. It is on the Mediterranean, 60 m. from Damascus with which it is connected by railway. The residence of the French high commissioner, it is also the capital of the republic of Lebanon. A very old place, Beirut figures in the history of the Crusades. Pop. 134,655.

Beisan Village of Palestine. It is on the Jordan, about 55 m. from Jericho, and stands on the site of the ancient city of Bethshan. In 1930 an expedition sent out by the university of Pennsylvania unearthed some very valuable relics of Hittite, Egyptian and Phœnician civilisations. The finds show that Bethshan was the centre in Palestine of a great serpent worship.

Beit Alfred Anglo Jewish merchant. Born in Hamburg, Feb. 15, 1853, he went to South Africa in 1876 and later started in business as a diamond merchant at Kimberley. In 1884 with Julius Wernher he began business in London and the firm became the great house of Wernher, Beit & Co. He was associated with Cecil Rhodes in the ownership of the rich De Beers mines and in the affairs of the chartered company. Beit endowed a professorship of Colonial History at Oxford and gave much money for other educational purposes. He died July 16, 1906. His brother, Otto John, (1865-1930) was made a baronet in 1924.

Beith Market town of Ayrshire. It is 18 m. from Glasgow, on the L.M.S. Rly. There are some manufactures. Pop. 6300.

Bel Babylonian god. It refers, like the Phœnician Baal, to the god who was lord of men. Another name for Bel was Marduk.

Belcher James English pugilist. Born in Bristol, April 17, 1781, he became a butcher. After local successes as a fighter he moved to London and became one of the leading fighters of the day, and for some years was champion of England. In his later years he was a publican in Soho, London, where he died July 30, 1811.

Belfast Capital of Northern Ireland and Co. Antrim. Formerly it was the capital of the province of Ulster. It is

113 m. from Dublin and stands just where the River Lagan falls into Belfast Lough. Belfast is mainly in Antrim, but some of its suburbs are in Down. Its chief buildings include the city hall, the Ulster hall, the cathedral, museum and art gallery. Queen's University is the chief educational centre. Royal Avenue is the main business thoroughfare and the new law courts are in Chichester St. Belfast has a broadcasting station. At Stormont are the buildings erected for the Government of Northern Ireland. There were disturbances in the city in 1933.

Belfast is a great seaport. Its docks can accommodate the largest vessels and it has steamer connection with England and other parts. It is served by three railways, the G.N. of Ireland, the Northern Counties and the Belfast and County Down, and is the terminus of each. Shipbuilding and the manufacture of linen are the main industries, others are distilling and bacon curing. There are tobacco factories. Pop. (1926) 415,150.

Belfort Town of France. It stands on the River Savoureuse, 35 m. from Basel and 275 m. from Paris. Pop. 42,511.

Between 1870 and 1918 Belfort was the chief town of the territory of Belfort. This was the part of the department of Haut Rhin which was left to France when the rest of Alsace was taken away in 1870. It covered 235 sq. m.

The Gap of Belfort, which the town commands, is a plain 18 m. across between the Jura and the Vosges. A canal crosses it.

Belfry Part of a church that contains the bells. Usually in English churches it is part of the tower or steeple, with a room for the bell ringers just beneath the bells. Some of the older belfries were buildings detached from the church, there being examples of such at Chichester, Evesham, East Bergholt and elsewhere. There are some remarkable belfries in Belgium, notably one at Bruges. In Italy the bellfries, called campaniles, are often detached buildings as at Florence and Venice.

Belga Currency unit of Belgium. It is equal to five francs and 35 belgas go to the pound sterling. It was introduced in 1926 when the Belgian currency was stabilised and its use is compulsory in foreign exchange transactions.

Belgian Congo See CONGO

Belgium Kingdom of Europe. Part of the region called the Netherlands, it has a coastline on the North Sea and on the land side it is bounded by the kingdom of the Netherlands, Germany and France. Its area is 11,752 sq. m. and it has a population of 8,159,135 (1931). This is 674 per sq. m. and makes it the most thickly populated country of Europe. It is divided into nine provinces, Antwerp, Brabant, Flanders W., Flanders E., Hainaut, Liège, Limbourg, Luxembourg and Namur. Since 1919 it has also included the cantons of Eupen and Malmedy. Brussels is the capital and the largest city. The towns next in size are Antwerp, Liège and Ghent. Other places full of historic interest include Bruges, Louvain, Courtrai, Namur and Mons. The chief rivers are the Scheldt and the Meuse, but neither is wholly Belgian.

The S.E. of the country, where there is a rich coalfield, is a prosperous manufacturing area. Iron and steel are produced and motor cars, artificial silk, glass and lace are manufactured. The rest of the country is mainly

an agricultural area, but a large part is still covered with forests, these being chiefly in the Ardennes. Wheat, barley and other cereals are grown, but much land is used for growing beet for sugar, flowers and vegetables mainly for export, and fruit.

Belgium is governed by a king and a council of ministers responsible to a parliament of two houses, the Senate and the Chamber of Representatives. Senators are elected, part of them by direct vote of the people, part by the provincial councils and part by the Senate itself. Representatives are chosen by proportional representation and, like the senators, sit for four years. Most of the people are Roman Catholics. They are divided into Walloons who speak French and Flemings who speak Flemish, and from time to time language differences have troubled the country.

Having been ruled by the Dukes of Burgundy and the Kings of Spain, Belgium, then called the Spanish Netherlands, passed to Austria in 1714. In 1814, having been under French rule since 1795, it was united with Holland to form the kingdom of the Netherlands, but by the revolution of 1830 the kingdom of the Belgians was founded, its first king being Leopold of Saxe-Coburg. He was succeeded by Leopold II and in 1909 by Albert. In 1914 the neutrality of Belgium was violated by Germany. War broke out and, until 1917, the greater part of the country was occupied by the Germans. It was recovered at the peace, and in the succeeding years Belgium has made great progress industrially. King Albert met his death while mountaineering, Feb. 9, 1934, and his son Leopold III succeeded. Leopold's queen, Astrid, was killed in a road accident, Aug. 1935.

Belgrade Capital of Yugoslavia, previously the capital of Serbia. It stands on the south bank of the Danube, where it is joined by the Sava. Near the river is the lower town, while the upper town with the citadel is on a hill. There is a university, National Library and a National Theatre. In 1931 an observatory was opened here. The city is the trading centre of the country and has many buildings built since the Great War on western models. For the shipping there are wharves along the river. It is also well served by railways. Pop (1931), 241,542.

In Dec., 1914, the Austrians entered Belgrade, but they were soon ejected. In Oct., 1915, it was taken by the Germans who kept it until the armistice.

Belgravia District of London lying S. of Knightsbridge, E. of Sloane Street and not far from Victoria Station. In it are Belgrave Square, from which it takes its name, and Eaton Square, while adjacent streets include Wilton St and Ebury St., all the property of the Duke of Westminster.

Belial Biblical word for the wicked. In this sense it is used in the books of Samuel and 1 Kings. S. Paul (2 Cor vi) uses it for Satan, and Milton, in *Paradise Lost*, for the spirit of lust.

Belize Capital of British Honduras. A seaport, it stands at the mouth of the Belize River where that stream falls into the Caribbean Sea. Its harbour is small, so large vessels anchor outside. Mahogany, sugar, etc., are exported. In 1931 the town was devastated by a tornado followed by a tidal wave. The name is a corruption of Wallace. Pop (1931), 16,687.

Bell Hollow implement made of metal and intended to give forth a ringing noise when struck. It usually possesses a clapper or tongue which, when agitated, serves to make the sound. Church bells are hung in a belfry or tower, usually a group together, and the ringing or chiming of them in order to produce a harmony is quite an art, being known as campanology. Several English bells weigh over 10 tons, while the great bell at Moscow weighed 200 tons. Somewhat similar to a peal of church bells is a carillon in which the bells are played by a keyboard as a piano.

Other bells are handbells, by which tunes are played, house or jingle bells, which are agitated by pulling a cord or wire, and bells placed on animals, in order to know their whereabouts, for instance, the bell wither harness bells were for warning purposes. See BELL METAL, CAMPANOLOGY.

Bell Alexander Graham. British inventor. Born in Edinburgh, March 3, 1847, he was educated there and became a doctor. His main concern, however, was phonetics, a subject in which his grandfather and his father had both taken a lively interest. He went to America to become a professor at Boston, his subject being the physiology of the voice. This led, naturally, to the study of sound transmission, and in 1876 he patented an invention which was the nucleus of the telephone. Bell died Aug. 22, 1922.

Bell Gertrude Margaret Lowthian. English traveller. A daughter of Sir Hugh Bell, Bart., she belonged to the family that has made the firm of Bell Bros. one of the largest concerns in the iron and steel industry of Middlesbrough. Educated at Oxford, she travelled a good deal in Arabia and gained an intimate knowledge of that country. During the Great War Miss Bell served in the Intelligence Department in Iraq, and from 1917 until her death on June 12, 1926, she was a political officer in Bagdad. Her *Letters*, edited by her stepmother, Lady Bell, were published in 1926.

Bell Henry. British inventor. Born in Litchgowshire, April 7, 1767, Bell became a millwright and then a shipwright. In 1791 he set up a business in Glasgow, his idea being to build a vessel that could be worked by steam. After some years of hard work he succeeded and his boat, the *Comet*, was able to travel from Glasgow to Greenock by steam, this event being a landmark in the development of the steamship. He died Nov. 14, 1830.

Bell Robert Anning. English artist. Born in London in 1863, he was educated at University College School. His work includes illustrating books and designing stained glass, as well as painting pictures. In 1918 he was made A.R.A. and in 1922 R.A. Bell's pictures are in several public collections and his mosaics in the Houses of Parliament and Westminster Cathedral.

Belladonna Alternative name for the plant called the deadly nightshade. It is used more particularly for the poison which is extracted from the plant and from which atropine is prepared. Belladonna is employed in medicine as a narcotic and mydriatic. It is useful in certain internal complaints, and is most commonly used for dilating the pupils in certain eye diseases.

Bellary City of India. In the province of Madras, it is 300 m. from that city by rail. It is an important railway junction and has some textile manufactures.

An enormous 16th century fort commands the city Bellary is the capital of a district. Pop 40,000

Belle Isle Strait and island in the Atlantic. The strait between Newfoundland and Labrador, is 85 m long and about 12 m wide and is on the nearest route between Canada and Europe though, owing to ice, it can only be used in the summer. The island, 21 m in circumference, stands at the entrance to the strait. Another island, about the same size and also named Belle Isle, is in Conception Bay, Newfoundland

The French Belle Isle is off the coast of Brittany. It covers about 33 sq m and has 10,000 inhabitants, mostly fishermen and their families. It is famous for its grottoes. Le Palais, a small seaport, is the capital. In 1759 the English fleet defeated the French fleet near this island, which was in English hands from 1761 to 1765

Bellerophon Greek hero. He was a son of the King of Corinth. The King of Argolis, wishing to have him killed, sent him to Iobates, King of Lycia, who was requested to bring about his end. Iobates, therefore, sent him to kill Chimaera, a fire breathing monster, but by catching and using Pegasus, the winged horse, Bellerophon slew the monster. Iobates made him his successor and married him to his daughter

A succession of British warships have been named Bellerophon. One was the vessel which received Napoleon when he gave himself up in 1815

Bellingham District of London. In the borough of Lewis ham, it is 9 m from the city, on the S Rly. Here are the Lewisham baths. Most of the houses have been built by the L.O.C. which bought the land for housing purposes. There is a village in Northumberland called Bellingham

Bellingshausen Fabian Gottlieb Von, Russian explorer. Born Sept. 9, 1778, he entered the navy. In 1819 he was the leader of an expedition that went to the Antarctic, where he discovered Alexander Land and Peter Land. Later he commanded the Russian fleet in the Baltic and was Governor of Kronstadt. Bellingshausen Sea in the Antarctic is named after him. He died Jan 13, 1852

Bellini Name of three Venetian painters. father and two sons. Giacomo or Jacopo Bellini (d 1498) painted portraits and frescoes. A few of his works survive, but he is better known as the father of Gentile and Giovanni Bellini

Gentile Bellini (1429-1507) painted "The Preaching of S Mark" in Milan and several other works, many of which are in Venice. He is well represented in the National Gallery, London, where are his portrait of Mohammed II and an "Adoration of the Magi". He died in Venice, Feb 28, 1507

Giovanni Bellini (d 1516) has left several very famous pictures, one being that of the doge Loredano in the National Gallery, London, where is also "The Agony in the Garden". Other works of his, including "The Madonna and Saints," are in Venice. He is also notable as being the master of Titian, Tintoretto and Giorgione. Some regard him as the greatest Italian painter of the 15th century. He died in Venice, Nov 23, 1516

Bell Metal Hard alloy or bronze used for making bells. It con-

sists of one part tin to three of copper. The same alloy with a small admixture of zinc or lead is sometimes used for certain parts of machinery in place of steel, owing to its non-corrosive qualities

Belloc Jean Pierre Hilaire English writer. Born July 27, 1870, his father was a Frenchman and his mother Irish. He was educated at the Oratory School, Edgbaston, and at Oxford, serving as a conscript in the French army between the two periods. On leaving Oxford, having taken English nationality, he entered upon a career as a man of letters, broken by four years (1906-10) spent in Parliament as Liberal M.P. for E. Salford

Belloc's literary output is enormous and varied, yet mostly of high quality. The charm of his writing is perhaps best seen in his travel books such as *The Path to Rome* and *The Four Men*. *The Bad Child's Book of Beasts* and its companion volumes are deservedly popular. In works such as *The Servile State*, he attacks the political life of the day. Among historical works are a *History of England*, *Richelieu*, and *Cromwell*. In 1931 he published *A Conversation with a Cat*, in 1934 a study of *Charles I*, in 1936 *Millon* and in 1938 *The Battle Ground*

Bellona Divinity in Roman mythology. The goddess of war, and wife or sister of Mars, she was worshipped at Rome in her temple on the Campus Martius, founded in B.C. 1296 outside the city gates

Bell Rock See INCHCAPE ROCK.

Bells Word used on ships to denote the time. The day is divided into six periods of four hours and each half hour represents one bell. There are thus eight bells in each period. A period begins at 12 o'clock, therefore 12 30 is one bell, 1 o'clock is two bells and so until 4 o'clock is reached, when the cycle begins again. The name is due to the fact that a bell is rung each half hour

Belmont Town of Cape Province, S Africa. It is 50 m from Kimberley and about 35 m from the Orange River. It came into notice in 1899 when a British force under Lord Methuen, advancing to relieve Kimberley, was opposed by the Boers entrenched in the hills. After a sharp fight, Nov. 23, 1899, they were driven away and the advance continued

There is a Belmont in Surrey. This is a residential district on the edge of Banstead Downs, 12 m from London on the S Rly.

Belomancy Divination by arrows, *below* being the Greek word for a dart. It is mentioned in the Bible (Ezekiel xxi.) and was practised by the Greeks. The Koran forbids it

Belper Market town and urban district of Derbyshire. It stands on the Derwent, 8 m from Derby, on the L.M.S. Rly. Textiles are manufactured and there are engineering works. Pop (1931) 13,023

The title of Baron Belper has been borne by the Strutt family since 1866 when it was granted to Edward Strutt (1801-80). He was a grandson of Jedediah Strutt, the inventor, who set up a cotton mill in Belper about 1776

Belshazzar Last king or ruler of Babylon. He was the king who gave the feast at which Daniel read the writing on the wall (Daniel v), and was killed when Babylon was entered by the Persians in 538 B.C.

Belt Two sea channels of Denmark, Great and Little. The Great Belt divides the island of Zealand from Fünen and the Little Belt divides Fünen from the mainland. The Great Belt is 40 m long and the Little Belt 30 m long. Both lead from the Kattegat to the Baltic, the Great Belt being the more direct route. Both, however, are difficult, even dangerous, to navigation.

Beltane Name of an old pagan festival once observed in many parts of Great Britain and Ireland. In ancient times it marked the festivals of fire which were held to celebrate the coming of summer. A cake, specially baked, was divided and the pieces used to cast lots. The inckless individual who drew a certain piece was shunned and avoided, and it is believed that in remote times the holder was sacrificed. The Beltane ceremonies were carried out with songs and dances and the kindling of bonfires through which cattle were driven and the young men leaped. Forms of this latter rite continued as late as the early part of the 19th century.

Beluga Cetacean of the dolphin family, also called the white whale. It is from 12 to 15 ft in length and almost pure white. It is found in the Arctic seas and the gulf of St. Lawrence and occasionally off the north coast of Britain. The great sturgeon, huso, is also known by this name.

Belvedere Part of a building from which a good view can be obtained, also a summer house in a garden. The idea and the name are both Italian and belvederes were usually built in the form of a turret with windows on all sides on the top of the main building. In the court of the Belvedere at the Vatican is the Apollo Belvedere.

Belvedere is the name of a district in Kent. It is on the Thames, near Erith, being 14 m from London by the S Rly.

Belvoir Castle Seat of the Duke of Rutland. It stands on a hill in Leicestershire, about 7 m from Grantham. There has been a castle here since about 1100, but the present one only dates from about 1808. It contains some valuable works of art and the gardens are very beautiful. Belvoir Hunt was founded in 1750 and is closely associated with the dukes. The kennels are at Belvoir and the country is in Leicestershire and Nottinghamshire.

Bembridge Village on the E. coast of the Isle of Wight. There was a seaplane station here during the Great War. Pop 1973.

Bembridge beds is a geological term for certain deposits found in the Isle of Wight and Hampshire. They are in three layers and in the top one is a band of limestone in which are very interesting remains of insects. They are seen at Colwall and other bays in the west of the island and on the north coast near Osborne.

Bemersyde Estate in Berwickshire. From the 12th century until modern times it was the residence of the Haig family. It stands on the Tweed about 2 m from St. Boswells. Earl Haig of Bemersyde took his title from here and in 1921 the estate was presented to him, the money having been raised by public subscription.

Ben Celtic word for a mountain, very common in Scotland. Many peaks in that country have the prefix ben, such including Ben Nevis (4406 ft.) the highest

mountain in the British Isles, Ben Maedhu, one of the Cairngorms (4296 ft.), Ben Lawers in Perthshire (3984 ft.), Ben Avon another of the Cairngorms (3843 ft.), Ben Cruachan in Argyllshire (3689 ft.), Ben Warris in Ross-shire (3429 ft.) and Ben Lomond in Stirlingshire (3192 ft.).

Benares City of India. It stands on the Ganges in the United Provinces, 400 m from Calcutta. A sacred city to the Hindus, it is visited every year by thousands of pilgrims who bathe here in the Ganges. There are many temples, notably the golden temple dedicated to Siva and the so-called monkey temple. It has a Hindu university opened in 1916 and does a trade in jewellery, silks and other products of India. The Ganges is crossed here by the Dufferin bridge, 3500 ft. long. Pop (1931), 205,315.

The state of Benares is ruled by a maharajah who has a salute of 13 guns. His capital is Ramnagar, near Benares. The state's area is 570 sq m. Pop (1931) 391,272.

Benbow John, English seaman. Born March 10, 1653, his father was a tanner at Shrewsbury. As a boy he went to sea and was in the navy when war broke out with France in 1689. He took part in the naval battles of the war and in 1696 was made a rear admiral. Later he commanded a fleet in the W. Indies and there in 1702 he met a French fleet stronger than his own. In a running fight of four days Benbow had a leg taken off by a shot. He returned to Jamaica and died at Port Royal Nov. 4, 1702.

Several British warships have been named Benbow. The last was a dreadnought completed in 1914. She carried ten 13.5 in. guns, displaced 25,000 tons and was fitted to serve as a flagship.

Bench In its main sense a long seat. Thus it is used for the seats in Parliament. In the House of Lords the cross benches are seats for independent members. It is also used as a general term for the judges, as opposed to the bar, as the barristers who appear before them are called. This is due to the fact that in early days the judges sat on a bench above the floor of the court while those appearing before them were on the floor itself.

Bench Barrister who has been chosen a member of the governing body of his inn. The four inns in London and also the King's Inn in Dublin have benchers, who have certain privileges as to rooms, meals, etc.

Bench Mark Mark used by surveyors. It is a fixed point that serves as a datum line from which other measurements can be made or checked. The bench mark of the Ordnance Survey takes the form of a broad arrow. Bench marks are also used in tidal observations.

Bendigo City of Victoria, Australia. It is 100 m from Melbourne, Victoria, and was first called Sandhurst. It stands in the centre of the gold mining district and has also an agricultural and general trade. Pop (1931) 33,690.

Bendigo English pugilist. Born in Nottingham Oct. 11, 1811, his name was William Thompson. One of three brothers he was nicknamed Abednego, which soon became Bendigo. From 1832 to 1850 he was a popular and successful figure in the prize ring, being champion of England, 1839-45. Later he was converted and was associated

with William Booth in his early evangelistic work. He died Aug 23, 1880

Benedicite Canticle of the Christian church. It is a song of praise with the refrain "Praise Him and magnify Him for ever". In the prayer book of the Church of England it appears as an alternative to the Te Deum at morning prayer. It is also sung in the Roman Catholic and Greek churches.

Benedict Saint and founder of the greatest of the monastic orders, the Benedictines. He came from Nursia, in Italy, and was educated at Rome. For a time he lived a hermit's life and then took charge of a monastery, where, apparently, he was very uncomfortable. After this Benedict began to collect a following, men who shared his ideas. He set up 12 monasteries and in 529 founded the one at Monte Cassino which became so famous. There the saint died in 543, after he had written his *Rule* on which monastic life in Western Europe is based.

Benedict Name of 15 popes. The first 13, with the possible exception of II and VII, were not very noteworthy. Benedict II was canonized and his festival is on May 7. Benedict VII, pope from 974 to 983, did a great deal to help monasticism to get a strong footing in Europe. Benedict XIV, an Italian, was Archbishop of Bologna before he became pope in 1740. He reigned until 1758.

Benedict XV was born at Genoa, Nov 21, 1854, his family name being Chiesa. A fine scholar, he was a secretary at the Vatican before being made Archbishop of Bologna in 1907. In 1914 he was created a cardinal and later in the year he was chosen pope. He died Jan 22, 1922, having been pope through the period of the Great War.

Benedictine Popular liqueur. Green in colour, it was invented by the monks of the Benedictine Monastery at Fécamp, hence its name. It is sometimes called Dom because of the inscription *Dom Deo optimo maximo*, on the label. It is made commercially to day at Fécamp.

Benedictines Monastic order founded by S. Benedict. It dates from 529 when Benedict established a monastery on Monte Cassino. In 580 the monastery was sacked and the monks went to Rome whence the order spread throughout Europe. The rule is not very strict. The order has always been interested in education and several universities and many schools owe their origin to the efforts of its members. The habit is black and the motto, *labore est orare*, "to labour is to pray". About A.D. 600 communities of nuns were established and these soon became very numerous. The Carthusians are a branch of the Benedictines who at one time had it is said, nearly 40,000 houses throughout the world.

In England the first Benedictine was S. Augustine who established a Benedictine house at Canterbury. There were 300 houses in England at the time of the Reformation. To day there are about 700 Benedictine houses in the world, either priories, abbeys or convents. In England there are 3 abbeys, Ampleforth, Downside and Buckfastleigh.

Benedictus Song used in the Christian church. It is taken from Luke I where Zacharias, the priest, thanks God for performing His promises. In the

Church of England it is sung after the second lesson at morning prayer. It begins "Blessed be the Lord God of Israel."

In the Roman Catholic church the Benedictus is the canticle taken from Math. xxi and beginning "Blessed is he that cometh in the name of the Lord."

Benefice In the Church of England a property that provides a living for a clergyman or other ecclesiastic. A rector and a vicar are both holders of benefices, but a curate is not. Bishops and deans are also beneficed clergy.

Beneficiary Person who receives the benefit or income from a property, although he or she is not the legal owner. For instance, "A" leaves £5000 in trust for a daughter. The legal owners of this sum are the trustees and it is invested in their names, but the daughter is the beneficiary.

Benefit of Clergy A privilege formerly enjoyed by clergymen of being tried for offences in the ecclesiastical courts, where their punishment was often negligible. As at one time any one who could read could secure this privilege it was greatly abused and was curtailed in the time of Henry II. It remained, however, except in cases of treason and other serious crimes, until 1827, when it was formally abolished.

Benes Eduard Czech statesman. Born May 28, 1884, he became in 1903 a lecturer on sociology and economics at Prague University. In 1915 he left his country and reached Paris, where, with his old teacher, T. G. Masaryk, he helped to organize the Czechoslovaks into a nation, conducting a newspaper on behalf of the cause. When, in 1910, Czechoslovakia came into existence, he was chosen its Foreign Minister, and in 1921-22 he was Premier. He was mainly responsible in 1921 for the Little Entente between his country, Rumania and Yugoslavia and was still Foreign Minister in 1932. *My War Memories*, an English translation of one of his books, appeared in 1928.

Benevento City of Italy. It is 31 m. old and remarkable buildings. These include a round church dating from the 8th century, the cathedral and the castle. The triumphal arch, one of Trajan's, is in an excellent state of preservation and there are remains of the walls. Pop. 36,962.

Benevolence Act of kindness or a gift of any kind made in the spirit of goodwill. Historically it has quite another meaning. A benevolence is a gift made by a subject to the king, and by pressure or compulsion Edward IV extorted money called benevolences from his subjects, as did his successors, Richard III and Henry VII, although in 1484 benevolences had been declared illegal. James I tried this way of raising money but in the time of Charles I parliament finally stopped it.

Benfleet Urban district and watering place of Essex. It is 29 m. from London, on the LMS Rly. It consists of North Benfleet and South Benfleet. Pop. (1931) 12,091.

Bengal Presidency of India. It covers 82,277 sq. m. and has a population of 47,592,500. Calcutta is the capital. Other large towns are Howrah and Dacca. Most of the people speak Bengali. Bengal has been a presidency since 1912, as it had been from 1699 to 1834. At its head is a governor who

is assisted by an executive and a legislative council. The latter consists of 140 members, of whom 114 are elected.

Bengal Bay of Part of the Indian Ocean, on the E side of India and Burma. The Ganges, Brahmaputra, Irrawaddy, Mahanadi and Godavari rivers flow into it. There are no good ports on the W, but on the E are Akrah, Moulmein and Rangoon. The chief groups of islands are Andaman, Nicobar and Mergui.

Benguela Seaport of Angola, W Africa. It is on Lohito Bay and belongs to Portugal. The terminus of a railway that crosses the Continent to Beira, it passes through the Belgian Congo and Rhodesia and is controlled by the Portuguese, Belgian and British authorities. The final link was opened in 1932.

Benin Former kingdom of Africa, now part of Nigeria. It takes its name from the Ben, a negro tribe. In 1897 the kingdom was invaded by British troops and taken under British protection.

Benin is also the name of a river in Nigeria and of a town that stands near it. The town was the capital of the kingdom. Pop 15 000.

The Bight of Benin is part of the Gulf of Guinea. It has a coastline of nearly 500 m.

Benjamin Jacob's youngest and favourite son. The word means "son of my right hand". His mother was Rachel. His father showed a special affection for him when he sent his ten sons to buy corn in Egypt (Gen xlii), but kept Benjamin at home. From him one of the twelve tribes was descended and named.

Ben Nevis Highest mountain in the British Isles. Situated in Inverness shire, Scotland, it rises to an altitude of 4406 ft above sea-level. Its lower rocks are mainly granite, and on its N E side is a precipice of 1500 ft. An observatory built here in 1881 was closed in 1905.

Benn William Wedgwood, British politician. Born May 10, 1877, he entered Parliament in 1906 as Liberal MP for the Tower Hamlets. From 1910-15 he was a Junior Lord of the Treasury. He served with the yeomanry and the naval air service in Egypt, Gallipoli and Italy, winning the DSO. From 1918-27 he was MP for Louth and in 1929 he was elected for N Aberdeen. He was then a member of the Labour party and in 1929 he was made Secretary for India. In 1931 he resigned office and lost his seat in Parliament.

Benn's father, Sir John Williams Benn (1850-1922), founded the firm of Benn Bros, publishers of trade papers. He was a leading member of the LCC, being its chairman 1904-05, and a Liberal MP, 1892-95 and 1904-10. In 1914 he was made a baronet.

His eldest son, Sir Ernest John W. Benn, became head of Benn Bros, which firm he greatly developed. His books include *Confessions of a Capitalist*, *Letters of an Individualist*, *Account Rendered*, 1930, and *This Soft Age*, 1933. In 1933 also he launched a new "anti-political" weekly, *The Independent*.

Bennett Enoch Arnold, English novelist and dramatist. He was born at Shelton, near Hanley, May 27, 1867, and became a law student there. Later he moved to London and became a journalist, working as such from 1893 to 1900, part of the time as editor of *Woman*. In 1908 he published his

first novel, *A Man from the North*, and in 1902 he made a name with *Anna of the Five Towns*. He followed this up with *A Great Man*, *The Old Wives' Tale*; and the trilogy *Hilda Lessways*, *Clayhanger* and *These Twain*. Other successes were *Helen of the High Hand*, *The Card*, *The Regent* and a volume of short stories called *The Matador of the Five Towns*. These books deal with life in the five towns of the Potteries, thinly disguised by the author, and stand as his best work. They portray the conditions there with a vivid fidelity that stamps him as a master of his art. London is mainly the scene of his later works, which, although books of considerable power, lack the vitality of the earlier ones. They include *The Pretty Lady*, *Elsie and the Child*, *Riceyman Steps*, *Lord Raino* and *The Grand Babylon Hotel*.

Bennett was also a keen student of the theatre. He wrote *The Great Adventure*, an adaptation of his novel *Buried Alive*, and other plays, and with E. Knoblock was responsible for *Milestones* and *Mr Prohack*. He wrote a good deal of dramatic criticism and in his later years articles on a variety of subjects for the press. He died March 27, 1931. Two stories, *Dream of Destiny* and *Venus Rising from the Sea*, were published posthumously in 1932.

Bennett James Gordon, American journalist. Born in Banffshire, Sept 1, 1795, he went to Canada in 1819. In 1835 he started *The New York Herald*, which became one of the foremost newspapers in the United States. He died June 1, 1872.

His son, also James Gordon Bennett, took control of the paper on his father's death and, in 1875, helped *The Daily Telegraph* to send Stanley out to find Livingstone. In 1887 he established a Paris edition of the *Herald*. Interested in sport and adventure, he presented the Gordon Bennett Cup for ballooning and sent out an expedition to the Arctic. He died May 14, 1918.

Bennett Richard Bedford, Canadian politician. Born July 3, 1870, in New Brunswick, he practised as a lawyer there. In 1897 he moved to Calgary and soon became a member of the legislature of Alberta. In 1911 he entered the Dominion House of Commons as a Conservative. In 1917 he was Director of National Service and in 1921 Minister of Justice in the Coalition Government. In 1926 he was Minister of Finance, and in 1927 he was chosen leader of the Conservative party. In July 1930, he became Prime Minister, attending the Imperial Conference in London in Oct., 1930. He held office till Oct., 1935, when he became Leader of the Opposition.

Bennett Sir William Sterndale, English musician. He was born in Sheffield, April 13, 1816, and in 1826 entered the Royal Academy of Music, London, which produced his first piano concerto in 1833. In 1836 he met Mendelssohn and Schumann in Leipzig. In 1849 he helped to establish the Bach Society, and in 1851 he became professor of music at Cambridge. He was conductor of the Philharmonic Society, and principal of the Royal College of Music from 1866 until his death. Knighted in 1871, he died Feb 1, 1875.

Ben Rhydding Inland watering place of Yorkshire (W.R.). It stands on the Wharfe, 9 m from Bradford. There is a hydro-pathic establishment here and the place can be reached by the L.M.S. and L.N.E. Rlys.

BENSON

Benson Arthur Christopher English scholar. The eldest son of E W Benson, afterwards archbishop, he was born April 24 1862, and educated at Eton and King's College, Cambridge. His life was divided between Eton, where he was an assistant master, 1885 1903, and Cambridge, where he was master of Magdalene College from 1903 until his death June 17, 1925. A graceful writer, Benson wrote the *Life* of his father, biographies of Rossetti Pater and others, and essays and poetry. His volumes of essays include *The Upton Letters* and *Through a College Window*. He was also one of the editors of *The Correspondence of Queen Victoria*.

Benson Edward Frederic. English novelist. A son of Rev E W Benson, he was born July 24 1867 and educated at Marlborough and King's College Cambridge. He worked as an archaeologist for a time and travelled a good deal, but his reputation is that of a writer. A long list of novels beginning with *Dodo*, 1893, stands to his credit. Of them *Vintage Manmon and Co*, *The Luck of the Vails*, *The Challoners*, *The House of Defence*, *The Osbornes*, *Dodo the Second*, *David Blaize*, *Miss Mapp and Pharoesees* and *Publicans* may be mentioned. He has also written the autobiographical *Our Family Affairs*, and in 1932 appeared a book on Charlotte Brontë.

Benson Edward White English prelate. Born in Birmingham, July 14 1829, he was educated there and at Trinity College, Cambridge, of which he became a fellow. He was ordained and having been assistant master at Rugby, he was appointed head of Wellington when that school was opened in 1859. He left in 1872 and after a few years at Lincoln was chosen first bishop of Truro in 1877. In 1883 he was appointed Archbishop of Canterbury and died suddenly at Hawarden, Oct 11 1896. A man of great ability and remarkable energy Benson was also known as the father of three brilliant sons. Two of these are noticed separately. The third, Robert Hugh Benson (1871 1914) was an Anglican clergyman before becoming a priest in the Church of Rome.

Benson Sir Francis Robert English actor. Born Nov 4 1858, a son of William Benson, J.P., he was educated at Winchester and New College Oxford where he was known as an athlete and an amateur actor. In 1882 he went on the stage and in 1888 founded a company of his own. Benson's chief work has been done in presenting Shakespearean plays and for over 25 years he organised the Shakespeare Festival at Stratford. He also set up a school of acting. Benson was knighted in 1916 and in 1930 issued his *Memoirs*.

Bent Grass (*Agrostis*) Large genus of a hundred species. Grasses containing nearly all land and meadows and flourish in damp poor soil. They are of little use for agricultural purposes. One species (*A. canina*) is used for lawns and it is given to cats and dogs for medicinal purposes.

Bentham Jeremy English author. Born at Westminster Feb 15, 1748, he was educated in 1770 he published *A Fragment on Government* in which he criticised Blackstone's theory of the constitution. He passed his whole life in writing and study, and left a number of

146

works of which the most important is his *Introduction to the Principles of Morals and Legislation*. He died June 6 1832 and his skeleton may be seen in University College, London where in 1932 the centenary of his death was celebrated. Bentham was a utilitarian, the aim of politics for him was the greatest good of the greatest number. His ideas have been most influential as on them most of the great reforms of the 19th century were based.

BENZON

Bentinck Lord George British politician. A son of the 4th Duke of Portland, he was born Feb 27, 1802. He served in the army and then became private secretary to his uncle, George Canning. He entered Parliament as M.P. for King's Lynn He died Sept 21, 1848. Bentinck was one of the leading sportsmen of his day, especially as a patron of the Turf, and a man of great popularity and influence.

Bentinck Lord William English administrator. A son of the 3rd Duke of Portland he was born Sept. 14, 1774 and entered the army. From 1803-07 he was Governor of Madras. Having served in the Peninsular War he was made Governor of Bengal in 1827. In 1833 he was appointed the first Governor-general of India. His rule there was very beneficent. He stopped the cruel practice of suttee and put down the thugs. He died in Paris June 17, 1839.

Bentley District of Yorkshire (W.R.) It is on the Don 2 m from coal mining and 158 from London, and is a serious floods here and a great deal of damage was done to the mines and the houses.

Bentley Richard. English scholar. Born York Jan 27, 1662, he went to St. John's College Cambridge and was ordained. He was made keeper of the royal libraries in 1694. In 1699 he wrote his *Dissertation on the Epistles of Phalaris*, a wonderful piece of scholarship, which proved the letters to be forgeries. In gave Bentley a European reputation. In 1700 he was chosen master of Trinity College, Cambridge where his overbearing attitude led to serious troubles with the fellows. He died July 14, 1742. Bentley's work included editions of Horace and Terence and work on *Paradisi Lost*.

Benue River of Africa. Rising almost in the centre of the continent, it enters Nigeria and, flowing west falls into the Niger at Lokola. It is navigable for small craft beyond Yola which with Garua is on its banks. The Niger's chief tributary it is 800 m long.

Benzene Colourless but inflammable gas manufacture liquid. It is a by product of coal of dyes and in gas for lighting purposes. It is also a powerful solvent of fats and resins. In chemistry it is important as being the type of a number of substances called aromatic compounds. It is sometimes called benzol.

Benzine Volatile inflammable liquid obtained from petroleum. The word is sometimes used for petroleum spirit generally. It is used for cleaning articles of clothing and as a solvent for resin. It should not be confused with benzene.

Benzoin Resin or gum obtained from the stem of a tree growing in Java.

and other islands of the E Indies It is pleasant to the taste and small and is used in making perfumes and incense It is also useful in medicine

Benzole acid is made from benzoin but on a much larger scale from toluene It is used in medicine and in the making of colours

Beowulf Hero of an Anglo Saxon poem Therein we are told how he killed the monster Grendel and another monster, Grendel's mother, and finally a dragon In the end he was himself killed The poem was written in the 7th and 8th century in Scandinavia and is invaluable because of the details it gives about the daily lives of our Teutonic ancestors The MSS is in the British Museum

Berber White race living in N Africa To this people belong many of the inhabitants of Morocco and Tripoli and they are also found in Algeria and Tunis The Kabyles and the Rifis of Morocco are Berbers, as are the Tuaregs who live in the Sahara They are related to the Egyptians Many of them have accepted Mohammedanism and their number about a million.

Berber Town of the Anglo-Egyptian Sudan It stands on the Nile, 20 m from its junction with the Atbara, and is a station on the railway from Wadi Halfa to Khartoum At one time it was a great centre for caravans and it still has a considerable trade Pop 10,000 Berber is also the name of a province in the Sudan

Beresford Baron British sailor and politician, long known as Lord Charles Beresford Born Nov 10, 1846, Charles William de la Poer Beresford, was the second son of the 4th Marquess of Waterford Whilst only a lieutenant he accompanied King Edward VII, when Prince of Wales, on his visit to India in 1875-76 Later he gained distinction at the bombardment of Alexandria, where he commanded the *Condor* In the Nile Expedition of 1884 he commanded the naval brigade During the years of peace he held a series of commands, including the Mediterranean Fleet, 1905-07 and the Channel Fleet, 1903-05, and 1907-09 He was made an admiral in 1906 Beresford was also a politician From 1874-80 he was M.P. for Waterford and from 1885-89 for E. Merivale From 1897-1900 he sat for York, from 1902-03 for E. Woolwich and from 1910-16 for Portsmouth In 1885-86 he was a Lord of the Admiralty and in and out of Parliament he was a leading and sometimes pugnacious speaker on naval matters In 1916 he was made a peer and he died Sept. 6, 1919

Beresford Viscount British soldier, Born at Waterford, Oct 21 1768, he entered the army in 1785, and took part in the recapture of Capetown in 1806 and in other campaigns, including the capture of Buenos Ayres in 1808 Later he served in the campaigns in Portugal, and in 1809 was given command of the Portuguese army He was made a Knight of the Bath for his services at Busaco in 1810, and defeated Soult in the following year He was created a baron in 1814, and a viscount in 1823 He died Jan 8, 1854, without issue, and the title became extinct

His estates passed to his stepson, Alexander James Beresford Hope (1820-87), who was prominent as a leader of the High Church Party For nearly 20 years he was M.P. for Cambridge University and he helped to found *The Saturday Review*

Bergamot Cultivated variety of citrus Its rind contains an essential oil which is extracted and used in perfumery The bergamot pear is a small brown skinned juicy pear, the flavour of which somewhat resembles bergamot.

Bergen City and seaport of Norway It stands on a bay, 190 m from Oslo With a large harbour, it does a considerable trade and is a fishing and tourist centre The city has some manufactures Pop (1930) 98,303

Bergerac Savinien Cyrano de French writer He was born in Périgord in 1619 and entered the army He wrote several plays including *Agrippine*, which brought him fame, but more remarkable is his *History of the States of the Moon and the Sun*, only published after his death in 1655 Cyrano had a very large nose which was the cause of many duels, and this characteristic was brought out in Rostand's play, *Cyrano de Bergerac*, which had a remarkable success when produced in Paris in 1897, and in London in 1919

Bergson Henri. French philosopher. Born in Paris, Oct 18, 1859, he came of a Jewish family In 1900 he became professor of philosophy in the Collège de France His philosophy, which has exercised a good deal of influence, is laid down in his books He believes in empiricism, that knowledge comes from experience, and that consciousness, or what is actually known, is the central problem of metaphysics

Beri-Beri Disease frequent in the hot countries of Asia, Africa and America It is very devastating and causes great weakness, leading often to paralysis It sometimes attacks sailors Scientists have devoted much attention to it and it is now believed that it is due to the eating of rice which has been polished, with resultant deficiency of vitamin B

Bering Sea Part of the N Pacific Ocean It is about 1000 m from N to S and 1500 m from E to W Both the sea and the strait of the same name were discovered in 1648 by Deshnev, a Russian, but were named in honour of Vitus Bering, a Danish navigator The sea is open only from June to November, ice floes causing obstruction during the rest of the year, and fogs are almost continual

Soon after 1867, when Alaska was sold to the United States, disputes arose between American and Canadian fishermen about the right to capture seals The Americans contended they could regulate the captures as they wished, the Canadians that they had a prescriptive right to share in it The matter was referred to arbitration and the court in Paris found for Canada and Great Britain The Canadian sealers were compensated and rules made for the future of the industry

Berkeley Market town of Gloucestershire It stands on a hill above the Severn 144 m from London, and has a station on the G.W. Rly Its castle is one of the most perfect remaining in England In it Edward II was murdered. Around the town is the vale of Berkeley, famous for its cheeses The town gives its name to a hunt. Pop 790

The title of Earl of Berkeley has been borne by the Berkeley family since 1679 and the barony since 1295 At one time the earl owned valuable property in London, including

BERKELEY

Berkeley Square, but this was sold to Sir Marcus Samuel in 1919. Another Berkeley is a city of California. It is 10 m from San Francisco and here is the University of California. Pop (1930) 82,109.

Berkeley George Irish philosopher born near Kilkenny, March 12, 1685, he went to Trinity College, Dublin, became a fellow and was ordained. He travelled about Europe for some years as tutor to noblemen, and in 1724 became Dean of Londonderry. From 1728 to 1731 he was in America, after which in 1734, he was made Bishop of Cloyne. He resigned in 1752 and died Jan 14, 1753. By his writings, notably *The Treatise on the Principles of Human Knowledge* and the *Vindication*, Berkeley greatly influenced philosophical thought.

Berkhamstead Name of two places in Hertfordshire. Great Berkhamstead is an urban district, 28 m from London on the L M S Rly. The little River Bulbourne and the Grand Union Canal pass by it. There is a public school here. Originally a grammar school dating from 1541, it was refounded in 1841 and is now a public school for 500 boys. There are a few ruins of the castle. Pop (1931) 8053.

Berkhamstead is the centre of a rural district. This word is sometimes spelt Berkhamsted.

Berkshire

Inland county of England. It is bounded on the north by the Thames and covers 724 sq m. Partly hilly, it has Inkpen Beacon on its Hampshire border and other downs elsewhere. The Vale of the White Horse is in the county as is Windser with its forest. The rivers are the Kennet and the Loddon. The Vale of the Aven Canal crosses the county, which is also served by the G W and L N E Rlys. Reading is the county town. Other towns are Wokingham, Abingdon, Maidenhead, Newbury, Wallingford and Wokingham. The county sends three members to Parliament. It is in the diocese of Oxford. Pop (1931) 214,181.

The title of Earl of Berkshire has been held by the family of Howard since 1626. It is now, as it has been since 1745, united with the earldom of Suffolk.

The Berkshire Regiment, known as Princess Charlotte of Wales's, consists of the old 49th and 66th. The depot is at Reading.

Berlin

Capital of Germany and the largest city of the republic. It stands on the Spree, 84 m from Stettin on the Baltic and 180 m from Hamburg on the North Sea. A great railway centre, on the water commerce with the rest of Germany and the sea. The manufacturing industries are many and various, but it is chiefly known as a commercial centre. Before 1871 when it was seat of government. A university town and made the capital of Prussia. It was the capital of Prussia. With suburbs it covers 341 sq m, and has over 4,024,286 inhabitants.

Unter den Linden is the best known thoroughfare and the Tiergarten the chief of several parks. In it are the Zoological Gardens and near by the buildings of the Reichstag. Around the palace, once the residence of the Kaiser, are other public buildings including those of the university. Berlin is a broadcasting centre and an aircraft station, the terminus being at Tempelhof.

The CONGRESS OF BERLIN was a meeting of representatives of the Great Powers held

148

in 1878 to discuss the affairs of Turkey, which had just been beaten by Russia. Rumania, Serbia, Montenegro, and to some extent Bulgaria, were made independent of the Sultan. Bosnia and Herzegovina were put under the rule of Austria and Cyprus under that of Great Britain.

The BERLIN DECREE was an order made by Napoleon in Nov 1806, forbidding all trade with Great Britain. He was then in Berlin, having just conquered Prussia at Jena.

Berlioz Hector French composer born Dec 11, 1803, he studied music at the Conservatoire in Paris and in 1830 won the Grand Prix du Rome. In 1842 he undertook a concert tour abroad and during the next few years his visits to London and other capitals made him very popular. He married an Irish actress Harriett Smithers, and died March 9, 1869. His symphonies and his setting for Faust are perhaps his best works, but his religious pieces and his opera, *Beatrice and Benedict*, are noteworthy.

Bermondsey Borough of London, county. It is on the south side of the river and in it are the south end of the river and Tooley St. The centre of the leather industry, here are tanneries and the technical college of the trade in Tenter Bridge Road. The borough, which includes Rotherhithe, contains docks and wharves which employ some of the inhabitants. There is a university settlement in Farncombe St. Pop (1931) 111,626.

Bermuda Grass Kind of grass found in most warm countries, including the southern part of Europe and the U.S.A. It is also found in India where it is called Deol. Other names are Sentil Grass and Devil Grass. It is a perennial with erect branches which flower.

Bermudas Group of islands in mid Atlantic. They are nearly 600 m from the coast of the U.S.A. and number about 360, but only about 20 are inhabited. Their area is about 194 sq m. The largest is Great Bermuda (13 sq m), St. George, Ireland, Somerset and St. David are others. Hamilton is the capital. St. George is the old capital. A crown colony, Bermuda is governed by a Governor and an Executive Council, with an elected House of Representatives of 36. The islands are beautiful and the soil fertile. The Americans are a popular holiday resort for naval base and are used by the British as a base and other accommodation for warships have been built. Pop (1931) 27,789.

Bernadotte Name of the royal family of Sweden. Jean Baptiste Bernadotte a French soldier became a marshal under Napoleon. In 1810 he was chosen crown prince of Sweden and in 1818 he succeeded to the throne as Charles XV. The present King is his descendant.

Bernard

French saint known as Bernard gundy about 1091, he belonged to a noble family. In 1113 he entered a Cistercian house and in 1115 became head of one at Clairvaux. There he remained until his death, Aug 20, 1153. Bernard wrote a great deal including some hymns, translations of which are in English hymnals. He had a great reputation as a theologian and was prominent in preaching.

BERNARD

in 1878 to discuss the affairs of Turkey, which had just been beaten by Russia. Rumania, Serbia, Montenegro, and to some extent Bulgaria, were made independent of the Sultan. Bosnia and Herzegovina were put under the rule of Austria and Cyprus under that of Great Britain.

the Second Crusade, in assisting the Knights Templars and in condemning the teaching of Abelard. He founded a reformed branch of the Cistercians, who are often called the Bernardines. In 1173 he was canonised.

Berne City of Switzerland, capital of the confederation and of the Canton of Berne. It stands on the Aar, which almost makes a circle round it, and which is here crossed by several bridges. There is a university, and two old towers, remains of the city's defences, still stand. The name means "bear," and in the Bear's Den bears are kept by the city authorities. Owing to its position several international conferences have met here. One was the conference at which in 1887, the Berne Convention, which settled the question of international copyright, was signed. Pop (1920) 111,783.

Bernese Oberland Part of the Alps which lie in the Canton of Berne, Switzerland, and are noted for their magnificent scenery. Some of the highest peaks include the Finsteraarhorn (14,026 ft.), the Aletschhorn (13,723 ft.), and the Wetterhorn (12,166 ft.). Grindelwald is one of the loveliest valleys and Meiringen is another tourist resort. One of the best known lakes is Interlaken, near the Jungfrau.

Bernhardi Friedrich Von German author. Born Nov. 22, 1849, the son of a diplomatist, he entered the army in 1869 and rose to be a general. He became known in 1912 by his book which was translated into English as *Germany and the Next War* and was much read just before the Great War. It was a statement of the gospel of force and the right of Germany to make war in order to secure her aims. In 1921 Bernhardi wrote a volume on Germany's struggle between 1914 and 1918. He died July 10, 1930.

Bernhardt Sarah French actress. Born in Paris, Oct. 24, 1844, her mother was German and her father French. After a course at the Conservatoire, she appeared on the stage in Paris in 1862, abandoning her baptismal name of Rosine for Sarah. About 1869 she began to make a reputation and for the next 30 years she was the greatest tragic actress in the world with a magnetic personality, a wonderful voice and other gifts she played with remarkable success the leading rôle in the great tragic dramas. In 1899 she opened her own theatre in Paris and she frequently acted in London, New York and elsewhere. In 1915 she lost a leg, but she continued to act almost until her death, March 26, 1923. A volume of *Memoirs* appeared in 1907.

Bersaglieri Name given to the "sharpshooters" of the Italian Army. The first units were raised in 1836, and commanded by La Marmora. They were specially trained in rapid marching, shooting and scouting. They wear a black slouch hat, with drooping cock's feathers. Since 1928 they have been composed entirely of cyclist regiments.

Bertha English queen. She was a Frankish princess who married Ethelbert, King of Kent, about 540 and was instrumental in converting him to Christianity with the result that religion spread widely among the Anglo Saxons. She was canonised and her day is kept on July 4.

Berthelot Pierre Eugene Marcellin French politician and scientist.

Born in Paris, Oct. 29, 1827, he became professor of chemistry at the College de France in 1861. In 1885-87, having been Inspector General of Higher Education since 1876, he was Minister of Education and in 1895-96 he was Foreign Minister. In 1900 he became a member of the Academy. He died March 18, 1907. He was one of the founders of the science of thermo-chemistry.

Berthollet Claud Louis, Comte de French scientist. Born Dec. 9, 1748, he became an authority on dyes and dyeing and was appointed to an important position in Paris in connection with that industry. His chemical discoveries, which were concerned with saltpetre, chlorine, ammonia and other substances, were of great value to industry. He was made a senator and count by Napoleon and he died Nov. 6, 1822. He wrote a standard book on dyes.

Bertillon Alphonse French criminologist. Born in Paris in 1853, he was the son of Louis Adolphe Bertillon (1821-1883), professor at the school of anthropology in Paris. Alphonse entered the police service and became head of the identification department in Paris. He was responsible for the system of identification which is named after him. This rests upon the theory that the bony parts of the human body do not change in size after adult life is reached. By accurate measurements of these, therefore, criminals can be identified. A witness in the Dreyfus case, Bertillon died Feb. 13, 1914.

Bervie Burgh, seaport and market town of Kincardineshire, sometimes called Inverhervie. It stands at the mouth of the River Bervie, 13 m. from Montrose and 88 m. from Edinburgh, on the L.N.E. Rly. There are flax mills and chemical works. The first machine in Scotland for spinning yarn was established here in 1788. Pop (1931) 1032.

Berwickshire County of Scotland. In the S.E. of the country it is divided from England by the Tweed. It is 457 sq. m. in area and includes much of the Lammermuir Hills, some points exceeding 1500 ft. in height. In the centre is the fertile region called the Merse, and there is about 20 m. of coastline. The Tweed with its tributaries and the Eye are the chief rivers. Duns is the county town, and other places are Coldstream, Eyemouth and Lander. The county unites with Haddingtonshire to send a member to Parliament. It contains much of historical interest, including Fast and other border castles. Pop (1931) 36,601.

Berwick -upon-Tweed Borough, seaport and market town of Northumberland. It is at the mouth of the Tweed, 67 m. from Newcastle, on the L.N.E. Rly. Spittal and Tweedmouth are part of the borough. The main industry is shipping. Three bridges cross the river here, one having been opened in 1928. Berwick owes its historic importance to its position between England and Scotland, and it was repeatedly taken by one and then the other. For a time it was a neutral town, but in 1885 it was definitely attached to Northumberland. It was made a county of itself in 1836. Pop (1931) 12,299.

Berwyn Mountains of Wales. This range of heights borders Merionethshire, Montgomeryshire and Denbighshire. The chief elevation is Moelsoch (2716 feet).

Beryl Silicate of aluminium and beryllium found in granite and other

BERYLLIUM

crystalline rocks. It is usually green but some times yellow, white or pink. The better varieties, transparent and beautiful, are emeralds or aquamarines. The ordinary beryl is of little value.

Beryllium Metal used, on account of its lightness, for certain parts of aeroplanes and internal combustion engines. It occurs chiefly in the form of the mineral beryl which is found in many parts of the world, and is prepared by an electrolytic process. In colour it is white and it can be forged and rolled into thin sheets. It is four times as elastic as aluminium and twenty five times as elastic as steel. Its melting point is 1280 deg C. It resists the action of the air and does not easily tarnish. Atomic wt 9.02

Besançon City of France. It stands on the Doubs, 76 m from Dijon. Besançon was long a free city and at one time was the capital of Franche Comté. It is now a centre of the watch-making industry and has other manufactures. Pop 58 500

Besant Annie English theosophist. Born Oct 1, 1847, she was a daughter of W. P. Wood. In 1867 she married Rev Frank Besant, a brother of Sir Walter Besant, but the two separated after a few years. About 1874 Mrs Besant became a secularist and worked with Charles Bradlaugh. She was also a member of the Fabian Society. In 1889 she accepted theosophy as taught by Madame Blavatsky, and for some years lived in India where she associated herself with the extreme nationalists. Her writings and speeches caused her arrest in 1917 and in 1918 she was president of the national congress. She died in September 1933.

Besant Sir Walter English author. Born at Portsmouth Aug 14, 1836, he was educated at King's College London, and was later a scholar of Christ's College, Cambridge. His earlier works were written in collaboration with James Rice, the two probably best known being *The Golden Butterfly* and *Ready Money Mortiboy*. After the death of Rice, in April 1882 he wrote alone. In his novel *The Chaplain of the Fleet*, he gives an interesting description of the old Fleet prison and the Fleet marriages, and in *The Children of Gibbon* he writes of the miseries of sweated labour. His novel, *All Sorts and Conditions of Men* dealing with the life of workers in the East End of London was instrumental in instituting the movement which resulted in the building of the People's Palace at Mile End. Besant's fiction his work included biographies and volumes of criticism, and his later years were devoted to a survey of London, which was unfinished at his death. In 1884 he founded the Society of Authors. He was knighted in 1895 and died June 9, 1901.

Bessarabia District of Rumania. In lies between the Dniester, the Pruth and the Black Sea, and is a fertile and in the main a level area. The chief town is Kishinov, others are Bender and Chikormani. Bessarabia was a Turkish possession from 1503, but much of it was taken by Russia in 1822 and in 1878 it was formally given to Russia. During the Great War there was much fighting on the borders. In 1917 when Russia was overthrown, Bessarabia became a republic, but was soon forced to ask help from Rumania. This ended in the union of the two countries which was recognised by the Supreme Council in 1920. It is

150

BETHLEHEM

now a province of Rumania, and has an area of 17,146 sq m. Pop 2,344,000

Bessborough Earl of Irish title held since 1739 by the family of Ponsonby. Bessborough is a small place in Co. Kilkenny, and in 1721 a landowner, then William Ponsonby, was made Baron Bessborough. In 1739 he was made an earl. The earl's eldest son is called Viscount Duncannon, and the 6th earl, when bearing this title was MP for Dover, 1813-20. Later he became chairman of several undertakings. In 1831 he was appointed Governor General of Canada.

Bessemer Sir Henry English inventor. Born Jan 19, 1813, a son of Anthony Bessemer, a Huguenot, he assisted his father in a small chain making business in Hertfordshire. Soon they moved to London where the son was able to exercise his genius for invention. He made bronze powder by a new method, dies that were proof against forgery, lead pencils from waste and other articles. When the Crimean War began he turned his attention to gun making, and when his ideas were ignored or rejected in England he went to France. The result of his experiments was the production of a superior kind of steel which made by his process was called Bessemer steel and was soon in general use for railways and other purposes where great strength and resisting power were essential. Knighted in 1879 he died March 15, 1898.

Betel Nut Seed or nut, contained in fruit of the pinang or betel palm (areca catechu). The fruit is as large as a hen's egg. The nut is sliced sprinkled with lime and then rolled in natives in India and the Malay Peninsula where it grows. It is a digestive stimulant, and the use of it gives a red stain to the teeth.

Bethany Village of Palestine. The name means the "house of dates". The village is on the southern slope of the Mount of Olives, about 2 m from Jerusalem.

Bethel Place in Palestine, also called Jerusalem. It is about 11 m from Jerusalem. The name means "house of God", the spot where Abraham set up his tent. It is now a heap of ruins.

Bethesda Urban district of Caernarvonshire. It is 5 m from Bangor and took its name from the Nonconformist chapel here. The principal source of employment is in the great slate quarries at Penrhyn. Pop (1931) 4476.

Bethesda Pool of Spot within the wall of Jerusalem near Stephen's gate. The name means house of impotent man and it was here that Christ healed the

Beth-Horon Two villages in Palestine. Both Horon the upper is now known as Beit ur-el Foka, and is 104 m NW of Jerusalem. It was one of the boundaries of the land given to the sons of Ephraim and was the scene of a great slaughter of the Amorites when pursued by Joshua.

Bethlehem Town of Palestine. Only 5 m from Jerusalem. It is famous as the birthplace of Jesus Christ and also of King David. Here is the grotto of the Nativity, the Church of the Nativity and other churches belonging to various Christian bodies. The word means the "house of bread". To-day the name of the place is Beit Lahm. Pop 6650.

The Knights of Bethlehem was a military order that existed in the 16th century to defend Lemnes against the Turks

Bethlehem Borough of Pennsylvania, U.S.A. It stands on the Lehigh River, 56 m. from Philadelphia and is a centre of the iron and steel industry. At South Bethlehem are the vast works of the Bethlehem Steel Corporation. It is also a great centre of the Moravians and has a university, Lehigh Pop (1930) 57,892

Bethlehemites Roman Catholic religious order Founded in 1660 in Guatemala, its members undertook to nurse the sick and teach the young. It spread among the peoples of South and Central America, also Mexico, and existed until suppressed in 1820. There was an order of the same name in England in the 14th century.

Bethlen Count Stephen Hungarian politician Born Oct. 8, 1874, he belonged to an old and rich family of Transylvania. In 1901 he was elected to the diet, or parliament, of Hungary and there for nearly 20 years he was one of the leaders of the opposition. After the Great War he assisted in driving Bela Kun from the country and in restoring order after the short Bolshevik régime. In 1921 he became Prime Minister, and for the next ten years he was responsible for the direction of affairs. He reformed the finances, the electoral system and the land laws, and foiled the attempts of the ex-Emperor Charles to recover the throne. In 1931 he resigned office.

Bethmann-Hollweg Theobald von German politician Born Sept. 29, 1856 the son of a professor, he entered the Civil Service in 1879. In 1901 he was made President of Brandenburg and in 1907 Vice President of the Ministry of Prussia. In 1909 he was chosen to succeed Bülow as Imperial Chancellor, a post he held in 1914. He conducted the negotiations that preceded the Great War, defending the action of his country as necessary to its existence. He held office until July, 1917, when he resigned. In 1919 he published his *Memoirs*, again trying to justify Germany, and on Jan. 2, 1921, he died.

Bethnal Green Borough of London, one of the 28 in the county. It is on the north side of the Thames, and to the east of the city. Among its industries is the manufacture of furniture. In Cambridge Road is a museum, a branch of the Victoria and Albert. Pop (1931) 108,178

Bethsaida Village of Palestine Situated on the western shore of the Sea of Galilee, it was the birthplace of Andrew, Peter and Philip. Now only a heap of ruins marks the spot. Another Bethsaida, at the other end of the Sea, is the place where the 5000 were fed by Christ.

Bethune Town of France. It is 24 m. from Arras in a coal mining region. There are some manufacturing industries. In the Great War Bethune was an important outpost for the allied armies and there was much fighting around it. Pop 16,000.

Betony Plant of the genus *betonica*. The purple or wood betony is found in England and elsewhere in Europe. It has purple flowers and leaves with deep, rounded teeth. It was formerly used in medicine.

Betterton Thomas English actor. The son of a servant of Charles I, he was born at Totthill St., Westminster, about 1635. He left the business of book-selling and went on the stage, winning great success, despite his ungainly figure, low voice and other handicaps. He was associated with Mrs. Bracegirdle in conducting a theatre in Lincoln's Inn Fields, and later in the Haymarket, London. He died on April 28, 1710, and was buried in Westminster Abbey.

Betting Risking money on a race or other event of which the issue is uncertain. In horse racing it is done chiefly by the agency of bookmakers who follow the odds on or against each particular horse as a stockbroker does the prices of shares. It is a very elaborate and highly organised business, and in great races such as the Derby, betting starts months beforehand and the odds vary from day to day until the race is run. Tattersalls in London is the recognised headquarters of betting.

Betting was long illegal in Great Britain. Nevertheless, it was very prevalent, as it is to-day, with bookmakers everywhere and starting prices and other odds given regularly in the newspapers. In 1926 it was legalised by the introduction of a tax on betting, and of a system of licences for bookmakers. In 1928 the tax was reduced and in 1929 it was abolished, but bookmakers still pay £10 a year for a licence. The extra charge for their telephones was abolished in 1930.

Since 1928 betting by means of a totalisator has also been legal in England, and to day much betting is done in this way. In 1933 the totalisators on greyhound racing courses were made illegal. See SWEETSTAKE.

Bettws-y-Coed Urban district and pleasure resort of Caernarvonshire. It stands where the Llwyny falls into the Conway, in the midst of some of the most beautiful scenery in Wales. Near are the famous Swallow Falls. It is 238 m. from London, on the L.M.S. Rly. Pop (1931) 912.

Betty William Henry West English actor Born at Shrewsbury, Sept. 13, 1791, he appeared on the stage in Belfast when only a boy. In 1804, having made a reputation in Ireland and Scotland, he went to London. There his success as a boy actor was instantaneous and remarkable. He was called the young Roscius and once, in 1805, the House of Commons adjourned to see him play *Hamlet*. In 1808 he left the stage and spent three years at Cambridge University. He then resumed his career as an actor, but his popularity did not return. He died Aug. 24, 1874.

Beverley Borough and market town in the East Riding of Yorkshire. It stands near the river Hull, 8 m. from the city of Hull and 29 from York, on the L.N.E. Rly. It has some manufactures and a trade in agricultural produce. Its minister dedicated to St. John, is one of the finest churches in England. Races are held near the town, which has an aerodrome. Pop (1931) 14,011.

Bewdley Borough of Worcestershire. It stands on the Severn 3 m. from Kidderminster and 137 from London, on the G.W. Rly. There are several industries including rope making. Pop (1931) 2368.

Bewick Thomas English engraver Born Aug. 12, 1753, at a village in Northumberland, he was apprenticed to an engraver. Later, after gaining experience in

London, he entered into partnership with his employer. By careful attention to detail he made a reputation and his woodcuts are to day much valued by collectors. Between 1784 and 1822 he prepared the illustrations for a number of books, including *A History of British Birds* and an edition of *Aesop's Fables*. Bowick's brother, John Bewick (1760-95), and his son, Robert Elliot Bewick (1788-1849), were also engravers.

Bexhill Borough and watering place of Sussex. It is 5 m from Hastings, but the two almost form one continuous frontage to the sea. The old town lies inland, on the coast is Bexhill-on-Sea, of modern growth. The former has an interesting Norman church, at the latter are the pavilion and other attractions for visitors. Bexhill is 71 m from London, on the S Ry. Pop. (1931) 21,229.

Bey Turkish dignity. The title is given to superior officers of the army, and to notable foreigners. The meaning is "lord," and the title comes between pasha and effendi.

Bezique Card game. It is played by two persons who use two packs of cards from which all the cards up to and including the sixes have been removed. Eight cards are dealt to each player, the seventeenth is turned up for a trump and the rest form the stock from which the two hands are replenished. The players then play for tricks, the object of each being to secure aces and tens, and certain combinations, e.g., king and queen which must be declared.

Bhang Indian drug. It is the native name for hashish, a narcotic which is smoked or taken internally. It produces in its victims voluptuous visions followed by very heavy sleep, but it invariably leads to mental disorder.

Bhel Indian fruit. When not quite ripe it has a pronounced astringent quality, and the root, bark and leaves of the tree have a similar property. Besides being useful in medicine, the tree furnishes yellow dye, perfume and a cement.

Bhopal State of India. In the centre of India, it covers 6900 sq. m. Its ruler, the nawab, is entitled to a salute of 19 guns, he is descended from the Afghan chief who founded the state in 1723. He succeeded his mother, the hegum, who abdicated in 1920, and died in May, 1930. Bhopal is also the name of an agency that includes the native state. Pop. 730,000.

The capital is the town of Bhopal. This has a fort, a palace and various government buildings. Pop. 66,000.

Bhutan Independent state of India. It is in the Himalayan region of the North of Bengal and is very mountainous. It covers 18,000 sq. m., and its rivers are tributaries of the Brahmaputra. The inhabitants, the Bhutans, speak a Tibetan dialect and belong nominally to the Buddhist faith. The ruler of the country is the maharajah and by a treaty made in 1910 the British Government is consulted on all foreign affairs. The people cultivate the soil for rice and other crops and there are large forests. Pop. 300,000.

Biafra Eight of Bay of Africa. Into this great curve of the west coast of Africa flow several rivers including the Niger, Benue and Old Calabar, Cameroon and Gaboon. The bay contains the island of Fernando Po.

Biarritz Town and watering place of France. It stands on the Bay of Biscay, 5 m from Bayonne, and is a favourite

resort for British visitors. The town has casinos and the sands and bathing are excellent. Pop. 22,955.

Bibi Eibat Name of a rich oil field in the Baku district. It lies to the south of the town, and the industry is controlled by a company subordinate to the Soviet Republic of Azerbaijan.

Bible The books of holy scripture. They comprise 39 Hebrew works in the Old Testament and 27 Greek works in the New Testament besides 14 books of the Apocrypha. The Old Testament contains the law, the prophets and others collectively entitled hagiographa. The New Testament contains four gospels, apostolic acts, 21 epistles, mostly Pauline, and the book of the Revelation. Hebrew MSS of the 9th century A.D. and Greek MSS of the 3rd-4th century are extant. The Septuagint is a Greek version of the Hebrew books prepared at Alexandria by Jewish scholars of the 3rd-2nd century B.C. The Vulgate is a Latin version of the Bible prepared by Jerome in the 4th century A.D.

The first complete English translation of the Vulgate was by John Wycliffe, about 1380, the first translation out of the original tongues of the New Testament and the Pentateuch was by William Tyndale, 1525-34. Miles Coverdale published the first complete English Bible in 1535.

The English translation or Authorised Version, which has been in general use for 300 years and is remarkable for the beauty and dignity of its language, was prepared in the time of James I and issued in 1611. This was revised towards the end of the 19th century, but the newer or revised version has by no means supplanted the authorised one. The Bible has also been translated into almost every other language of the world.

The Bible contains 1189 chapters in all, 929 in the Old Testament, and 260 in the New Testament. There are 23,214 verses in the Old Testament, and 7959 in the New Testament. The total number of words in the whole Bible is said to be 774,680.

During 1930 the number of volumes sold by the British and Foreign Bible Society was 12,175,292. Of these 1,096,013 were complete Bibles, 1,283,301 were New Testaments and the remainder were portions of the Scriptures. The Bible is printed by the society in 655 languages.

Bible Christians Religious denomination of Methodist origin. Founded in 1815 by William O'Bryan, a Cornish Methodist lay preacher whose followers were sometimes called Bryanites they preached a fervent evangelism throughout England and had adherents in Canada, Australasia and China. In 1907 their 32,500 members, 218 ministers and 652 chapels were merged in the United Methodist Church. These figures included 1400 converts in China. Incidentally 15,000 members, 159 ministers, and 600 chapels were merged in unions abroad.

Bible Society Association for disseminating a knowledge of holy scripture. The most influential is the British and Foreign Bible Society, founded in London in 1804. Fundamental rules under take to circulate without comment the English Bible authorised or revised omitting the Apocrypha and when translating to use neutral words for controversial topics. Of translations into 655 languages and dialects, it circulates many millions every year. Nearly

3000 auxiliaries and branches assist in collecting substantial funds

Bibliography Art or practice of writing about books. The bibliographer may concern himself with form or matter. In the one case he examines and collates books or MSS by way of recording variant editions, questions of authorship, and details of printing, type, binding, or size. In the other he furnishes the inquirer with reference to the available literature on any topic.

Bibury Village of Gloucestershire. It is on the Coln, 6 m from Cirencester, and is one of the most picturesque of the Cotswold villages. Arlington Row, some cottages here, is the property of the National Trust.

Bicarbonate Salt in which two equivalents of carbonic acid, H_2CO_3 , are combined with one equivalent of base. In popular practice the term denotes bicarbonate of soda or baking soda, NaHCO_3 , as distinct from carbonate of soda or washing soda, a hydrated form of Na_2CO_3 . In medicine it is an antacid and stomachic.

Biceps Two-headed muscle. In human anatomy one pair flexes the forearms upon the upper arms. Each, passing in front of an arm, is attached by two tendons to its shoulder blade and inserted into the radius of the forearm. A corresponding pair, passing behind the thighs, flexes the legs upon them.

Bicester Market town and urban district of Oxfordshire. It is 12 m from Oxford and 53 m from London, on the LMS and GW Rlys. There are some industries, and the town is a hunting centre, giving its name to the Bicester Hunt. Cattle fairs are held. There are remains of an abbey. Pop (1931) 3109.

Bickley Residential district of Kent. It is 12 m from London by the S Rly and 1½ m from Bromley.

Bicycle Machine with two wheels used for riding. It is supposed to have been invented by a German, and its early name was velocipede. The first bicycle appeared in England about 1866. It had one large and one small wheel, and was worked by pedals. Soon the safety bicycle, with two wheels of almost equal size was introduced. Bicycling became extremely popular and a great industry grew up at Coventry and elsewhere. The introduction of rubber tyres inflated with air added to the rider's comfort. In Great Britain all bicycles must carry a white light if ridden after certain hours in the evening. Since 1928 they have been compelled to carry also a red light or reflector at the rear at all times.

Bidding-Prayer An exhortation to prayer, which directly informs the congregation on the object for which the prayer is to be said, and ends with the Lord's Prayer. It is used in England in cathedrals, Inns of Court and at University Sermons.

Biddle John "Father" of English Unitarianism. Born at Wotton-under-Edge, Gloucestershire, in 1615, he published *Twelve Questions and Arguments* against the deity of the Holy Spirit, in 1645, and later *Confession of Faith touching the Holy Trinity*, for both of which he was imprisoned. He was banished to the Scilly Isles for three years, returned and taught and preached quietly, but came to London, after the Restoration, was arrested and fined heavily, and died in a debtors' prison in 1662.

Biddulph Urban district of Staffordshire. It is 4 m from Congleton, on the LMS Rly. It is a coal mining centre. Pop (1931) 8346.

Bideford Borough seaport and market town of Devonshire. It stands on the estuary of the Torridge, about 4 m from the sea, being 220 m from London, on the S Rly. The bridge across the Torridge that unites the two parts of the town is remarkable for its length, over 700 ft. It was restored in the 20th century. Pop (1931) 8782.

Biene Auguste Van Anglo-Dutch musician. He displayed his cello playing and acting to great effect in sentimental playlets very pleasing to the general public, a general favourite being a solo called "The Broken Melody". He died Jan 23, 1913.

Bienne Lake and town of Switzerland. The lake is about 20 m from Berno, adjoining the Jura Mts. It is nearly 10 m long and 3 wide. The rivers Thiele and Snza flow into it.

The town stands at the north end of the lake on the River Snza. Its industries include the making of watches. Pop 36,800.

Biennial (Lat *bis* twice, *annus* a year.) Plant which lives for two seasons only. Sown in the first season, it flowers and dies in the second. Canterbury bells, coreopsis and mulleins are examples of biennials. By using hothouse methods it is possible to make a biennial flower in the same season as it is grown. Cabbages and beet are biennials.

Bigamy Offence of marrying a second wife or a second husband when the other spouse is alive. In English law this is a crime, and the maximum sentence is imprisonment for seven years with hard labour. If, however, a man or woman marries again when for seven years nothing has been heard of the wife or husband, no punishment will follow unless it is proved that the person charged with the crime had reason to believe that he or she was alive at the time of the second marriage.

Biggleswade Market town and urban district of Bedfordshire, on the Great North Road. It stands on the Ivel, 11 m from Bedford and 41 m from London, on the LNE Rly, and is an agricultural centre. Pop (1931) 5844.

Bihar Town of India. One of the sacred cities of the Buddhists, it is in Bengal, 38 m from Patna. In olden times the capital of a kingdom, it was one of the first places to adopt Buddhism, and there are ruins of some of the faith's oldest buildings. Pop 36,700.

The Province of Bihar and Orissa was formed out of Bengal in 1912. It covers 83,161 sq m and consists of three divisions, Bihar, Orissa and Chota Nagpur. Patna is the capital. It is watered by the Ganges, and served by the E Indian Rly. The province is under a governor and a legislative council of 103 members. Attached to it are the feudatory states of Chota Nagpur and Orissa. Pop (1931) 37,590,356.

Bikaner State of India. It is in Rajputana and covers 23,315 sq m. Its ruler is a maharajah who is entitled to a salute of 19 guns. He served in the Great War and represented India at the Peace Conference of 1919. Sandy and unfertile, the country is noted for its camels, and its camel corps served against the Turks in Egypt in 1916. Pop 660,000.

Bilkaner, the capital, is a walled town containing some Jain monasteries. The chief building is the palace of the maharajah, and there are some manufactures. Pop 60,400

Bilbao Seaport of Spain. It stands near the mouth of the river Nervion, which flows into the Bay of Biscay 350 m from Madrid. The most important Spanish port on this coast, it exports iron ore from the mines in the vicinity. The river separates the old town from the new one. There is a spacious harbour with wet and dry docks and other accommodation for shipping. Pop (1931) 166,753

Bilbao gives its name to a kind of sword, as it was once famous for its sword blades. From this comes the word bilbaos or irona. These were used for offenders on board ship, the ankles being fastened together by them. They are mentioned in *Hamlet* and were used in the British Navy until about 1700.

Bilberry Species of shrub of the heath order (*vaccinium myrtillus*). It is a bush, with many angular branches. Its green tinged rosy flowers produce a dark blue edible berry, also called the whortleberry, and in Scotland the blaeberry. It grows throughout Britain and in N. Europe, Asia and America.

Bile Thick, bitter fluid secreted continuously by the liver. It is discharged intermittently into the small intestine, or temporarily stored in the gall bladder. It is a complex fluid—golden yellow in man, greenish in vegetable feeders—containing in solution salts, acids, pigments and a substance called cholesterol. The normal daily secretion exceeds one pint. Should obstruction prevent flow to the intestine bile is absorbed into the blood, the pigments are deposited in the tissues, and jaundice supervenes.

Bilge Term denoting the breadth of a ship's bottom viewed from inside. The inner skin over the bilge is the floor and the bilge ends more or less where the sides turn upward. The water which collects upon the ship's bottom, called bilge water, tends to become foul, and is removed by bilge pumps.

Bill In business an account of any kind. In addition to a simple bill given by a trader there are certain special kinds of bill. A bill of lading which must be stamped with a 6d stamp, is a statement of goods sent by ship. It constitutes the title to the goods named, and can be transferred from one person to another. A bill of sight is a statement about goods which are imported. In law a bill is a statement of the offence with which a person is charged. This is given to the grand jury and if they accept it the accused goes to trial. This is called a true bill. In Scotland the bill chamber is part of the court of session.

In Parliament a bill is any measure that is introduced. When it has passed through all its stages and becomes law it is called an Act. Bills are divided into public and private, the latter dealing with such matters as railways, canals, etc.

Billerica Town of Essex. It is 5 m from Brentwood and 24 from London, on the L.N.E. Ry. The old church of S. Mary Magdalene is notable and there is a grammar school.

Billet Log of firewood. From this primary meaning further uses of the word have developed. In metallurgy it denotes a gold ingot or a steel bar. It is the heraldic term designating a bearing formed of a

small oblong upright, allusive to the preceding when it occurs in the arms of the Ironmonger Company of London. In Romanesque and Norman architecture it denotes an ornament moulding simulating short logs regularly spaced in single or double rows along a sun moulding.

Billeting Method of lodging soldiers in public and private houses. It was practised in very early times, and was much abused in the time of James I. and Charles I. In 1628 the Petition of Right declared it illegal, but private individuals suffered from it until about 1681. From that time until the Great War billeting was confined to innkeepers who were paid for the accommodation given. During the Great War, under an Act passed in 1907 soldiers of the Territorial Force were billeted in private houses, but payment was made. In 1917 power was given by Parliament to the authorities to billet civilians, who were engaged in work of national importance, in private houses.

Billiards Indoor game. The ordinary game is played on a table that measures 12 ft. by 6 ft. 1½ in. The implement used are cues and three balls, two white and one red. It is usually played by two persons. Each has one white ball and his aim is to cannon, or hit the two other balls in succession or to go into one of the six pockets that surround the table after striking one of the other balls. He can also score by driving the red ball or his opponent's ball, into a pocket. It can also be played by four persons, two against two.

A player continues to play until he fails to score, his total being called a break. The score is three points for a pocket off the red, two points for a cannon or a pocket off the white, three points for pocketing the red and two for pocketing the white.

There are other games of billiards, one being pyramids at which a number can play, each having his own ball of a distinctive colour. The game is controlled by the Billiard Association, Cecil Chambers Strand, London W.C. and there are championships for both amateurs and professionals.

Billingham Urban district of Durham nearly opposite Middlesbrough and is on the L.N.E. Ry. During the Great War the government had large factories here. These are now part of the great works of Imperial Chemical Industries which makes chemicals of various kinds here. Shipbuilding is another industry. Pop (1931) 17,072.

Billingsgate London fish market. It is situated near the northern end of London Bridge and dates from 1699. The present building was opened in 1877. The market belongs to the Corporation of the City of London.

Billiton Island in the Dutch East Indies. Situated between Banks and Borneo it is oval in shape, is 55 m long, and contains 1872 sq. m. Its highest peak is 1670 ft. It has more than 80 tin mines and also supplies iron and coal. Basketry, copra, sago, timber and tortoiseshell are exported. Pop 73,409.

Bill of Exchange Document by which debts, especially debts to foreigners, are paid. When a man does not wish to pay for goods he has bought at once he accepts a bill, which he does by signing a document. By this he agrees to pay a certain amount of money at the end of a certain time, or on demand. The person who

receives the bill, if he wants the money, asks a bank or a financial house to discount the bill, i.e., to give him the money less a small amount for interest. If the bank or firm think the acceptor of the bill is sound they will do this. Bills of Exchange must be stamped. If payable on demand the stamp is only 2d. In other cases inland bills pay up to 1s for the first £100 and another 1s for each £100 or part of £100. On foreign bills the stamp is 6d for each £100.

Bill of Rights Act of Parliament passed in 1688. It was passed just after James II had left the country, and the throne was being offered to William and Mary. In it are stated the rights of the English people which James had violated. It states expressly that the sovereign cannot raise money without consent of Parliament, and that no Roman Catholic can succeed to the throne.

Bill of Sale Legal document by which personal property is transferred from one person to another. It is usually done in order to give security for money borrowed; the security being furniture or other personal possessions. A bill must be signed by witnesses and registered in the law courts within seven days. It must be for more than £30, and must be stamped on the same scale as other conveyances of property. It is no longer necessary, as it was at one time, to publish the particulars in *The London Gazette*.

Bilthorpe Village of Nottinghamshire, in Sherwood Forest. In 1929 a coal mine was opened here and 400 houses built for the miners.

Bilston Market town and urban district of Staffordshire. It is 3 m from Wolverhampton, on the G.W. Rly. In the Black Country, its chief industries are connected with the iron and steel industries. A coarse pottery is made here, as are grindstones. Pop. (1931) 31,248.

Bimetallicism Name given to a monetary system in which both gold and silver are used as standards of value. To day all countries have only one standard, usually gold. If bimetallicism were introduced both metals would be coined freely and there would be a definite ratio between them. Towards the end of the 19th century there was a strong agitation, chiefly in the United States, for bimetallicism, but later it died down. The idea was revived in a somewhat different form during the economic crisis of 1931-32. Its introduction would greatly increase the value of silver.

Bindweed Popular name for species of twining herbs, principally of the convolvulus order. The small bindweed, *convolvulus arvensis* with 1 in trumpet shaped flowers, is an agricultural pest. The greater, *C. calystegia sepium*, has flowers closing at night. Both are widely distributed in temperate regions. Black bindweed, *polygnum convolvulus*, is of another order.

Bingham Market town of Nottinghamshire. It is 8 m from Nottingham on the L.N.E. Rly. Pop. 1576.

Bingley Urban district of Yorkshire (W.R.). It is 5 m from Bradford, on the L.M.S. Rly. Its industries are those of the Bradford area, the making of woollens, etc. Pop. (1931) 20,553.

Binnacle Case mounted on shipboard on a breast high pedestal.

It is generally in front of the steering apparatus and steersman. It serves to display a nautical compass, and for reading the compass card at night a binnacle lamp is fitted beneath the hood. Warships usually carry a pair of steering binnacles in front of the steersman.

Binocular Instrument for assisting simultaneous vision with both eyes. In its simplest form a pair of spectacles, it may be a telescope, microscope or stereoscope.

Binyon Robert Laurence, English poet. Born at Lancaster, Aug. 10, 1869, a son of Rev. B. Binyon, he was educated at S. Paul's School, London, and at Trinity College, Oxford, where he won the Newdigate Prize for English verse. In 1893 he became an assistant in the British Museum and in 1909 he was made assistant keeper of the department of prints and drawings. In addition to several volumes of poems, including *War Poems*, 1919, Binyon has written some plays and edited catalogues of drawings in the British Museum. He is an authority on William Blake. In 1932 he was made a Companion of Honour.

Bio-Chemistry Study of the chemical aspects of animal and plant physiology. The term denotes those departments of science which were previously called physiological and agricultural chemistry. The more highly specialised researches of recent years have attacked such problems as the plant synthesis of the carbon compounds, the molecular constitution of chlorophyll and proteins, and the breaking-down of them and of fats by the catalytic action of enzymes, the oxidation of foodstuffs, the co-ordination of mechanisms by the chemical messengers called hormones, the significance of colloids, and the effect upon growth and nutrition of the accessory factors called vitamins.

Biography (Greek *bios*, life) Book that deals with a person's life. If written by himself or herself it is an autobiography. By common consent Boswell's *Life of Johnson* is the most famous biography ever written in spite of its lack of form. Other notable biographies are Southey's *Life of Nelson*, Morley's *Life of Gladstone* and Winston Churchill's *Life of Lord Randolph Churchill*. Lives of most of the celebrities of the 19th century have been written, but these are usually far too long and too laudatory. Lytton Strachey's *Life of Queen Victoria*, which set a new fashion in biography, is an exception being thoroughly critical.

The biographies of famous men by Plutarch are perhaps the most famous of their kind. Another collection is Walton's *Lives*. Collections of lives written by various writers mainly as works of reference exist. One of the best is *The Dictionary of National Biography* and its supplements. This is confined to British personalities, but there is in existence, although now out of date, a *Biographie Universelle*. An American *Dictionary of National Biography* was planned after the Great War, and by 1932 the second volume had appeared.

Biology Science of life and living things. Biology has a wide scope, covering not only the form and formations of animals and plants, but also the philosophical problems of the origin and relationship between different species. In so vast a subject, biology falls naturally

into two main divisions, botany dealing with plants and zoology the science of animal life. The study of the form and structure of an organism, whether plant or animal, is known as morphology, and this is done, not only by naked eye or microscopic examination but also by dissection (anatomy). Further, the study of the functions comes under the heading of physiology, the problems of reproduction under embryology, and the life of the past embodied in fossil remains under palaeontology. Many other phases of biology are so extensive in their scope that they are regarded as separate sciences, so that the student of biology is compelled sooner or later to specialise in one or other of these subjects.

Biplane Aeroplane with two pairs of wings. These are set one above the other. Other forms are the monoplane and the triplane. See AEROPLANE.

Birch Genus of trees or shrubs of the cupuliferous order (*Betula*). The British white birch, *B. alba*, grows to 40 or 50 ft. high, and forms immense forests in Russia. Its close grained wood is much used for furniture and bark for tanning. The Canadian black birch, *B. lenta*, grows to 60 or 70 ft. high. The Canadian paper birch, *B. papyracea*, furnishes material for bark canoes. The alpine birch, *B. nana*, is a bush.

Birchington Watering place of Kent. In the Isle of Thanet, it is 2 m. from Margate and has become a popular resort. It is 71 m. from London, on the S. Ry. Pop. 3500.

Bird Feathered vertebrate. The class Aves ranks in the animal kingdom between mammals and reptiles. They are warm-blooded, with four-chambered hearts, toothless, and hatch their young from eggs containing albumen and food yolk in calcareous shells. The fore limbs are modified as wings.

Among existing birds there are two divisions. Those with raft like breast bones, the *Ratitae*, which are terrestrial and flightless, comprise the ostrich, rheas, cassowary, emu, kiwi, and the recently extinct moa. The remainder, with keeled breast-bones, the *Carinatae*, have been assembled into four regions with 14 orders and 11,000 species. All have wings adapted for flight except the penguins, whose wings are transformed into rowing paddles. They culminate, in the great *passerine* order, with the true singing birds, which embrace nearly half the whole feathered kingdom. Characteristic of birds are the migratory instinct and that which dictates the protection of the young by the building of nests.

To day in Great Britain a great deal is done to protect bird life. Cruelty to captive or domestic birds is punishable by law. Cruelty to wild birds is also an offence and there is a Wild Birds Protection Act which forbids the shooting or snaring of certain birds during certain seasons.

Bird sanctuaries are places set apart for wild birds. There are many such in England, one being in Hyde Park, London and a committee looks after this and others in the royal parks. Other sanctuaries are at Blakeney Point and Cley on the Norfolk coast marshes. There is also a Society for the Protection of Birds at 82 Victoria St., London, S.W. 1.

Birdlime Adhesive substance used for smearing twigs and other suitable surfaces for entangling small birds in order to capture them alive. It is prepared from an exudation of the inner bark of the

holy tree, mistletoe, or distaff thistle. A artificial substitute is made with flour starch mixed with other adhesives.

Bird of Paradise Family of birds distinguished by gorgeous male plumage during the breeding season. Allied to the crows, their 50 species are almost confined to New Guinea and adjacent islands, three species inhabit Australia.

Birdoswald Site of the Roman British station of Ambledunna. Situated 4 m. E. of Greenhead, Cumberland, it is the largest fort on Hadrian's Wall with six graded ramparts enclosing 5½ acres. The chariot ruts on one threshold are still clear. An inscribed slab, referring to the Dacian cohort, portrays the Balkan scimitar.

Bird's Eye Name for various flowers with central spots or eyes. The mealy primula, with its yellow centred purple flowers, is bird's eye primrose, the germander speedwell, with bright blue flowers is called bird's eye, so is corn adonis, preferably called pheasant's eye. Herb robert is red bird's eye. It denotes also cut-tobacco containing sections of mottled stalks.

Birdwood Sir William Riddell British soldier. Born Sept. 13 1865, he was a member of a family closely associated with India. Educated at Clifton and Sandhurst, he entered the army in 1883 and with the Bengal Lancers served on the Indian frontier. He was in S. Africa, 1899-1902, and later was military secretary to Lord Kitchener in India. Between 1912 and the Great War he was Quartermaster General in India and military secretary to the Government. In 1915, at the head of the Australian corps, he went to Egypt and later he led his unit in Gallipoli and France in some of the hardest fighting of the war. For a short time in 1918 Birdwood commanded the 5th Army and from 1920-30 he was in India, first at the head of the northern army and from 1921 as commander-in-chief. In 1919 he was made a baronet and in 1925 a field marshal. In 1930, although not a Cambridge man he was appointed Master of Peterhouse.

Biretta Four cornered head-covering worn by Roman Catholic ecclesiastics. Since the 17th century it has had a cardboard frame covered with cloth or silk, three or four raised ridges, and sometimes a knob or tassel. It is white for the pope, red for cardinals, purple for bishops, and black for the general clergy.

Birkbeck George English philanthropist. Born at Settle, Jan. 10, 1778, he studied in Edinburgh and became a doctor. For three years (1801-04) he was professor at the Andersonian Institution, Glasgow, but most of his later life was passed in London where he practised as a doctor and pushed forward various philanthropic schemes. He died there Dec. 1, 1841.

Birkbeck was the founder of the movement that led to the establishment of the Mechanics Institution in Glasgow, and then in other large towns. He also helped to found the college named after him the Birkbeck. This is part of the University of London with buildings in Bream's Buildings, Chancery Lane.

The Birkbeck Building Society, also named after him, became one of the largest in the country. From it emerged the Birkbeck Bank,

which failed in 1911 Its liabilities were nearly £11,000,000, but 16s 9d in the £ was returned to the shareholders and depositors

Birkenhead Seaport, borough and market town of Cheshire It stands on the estuary of the Mersey opposite Liverpool, with which it is connected by a tunnel and ferry boats It is 194 m from London and can be reached by both the G W and L V S lines The chief industries are shipping and shipbuilding For the shipping there are large docks, covering nearly 200 acres and fitted with huge warehouses They belong to the Mersey Docks and Harbour Board Cammell, Laird & Co., and other large firms have shipbuilding yards here Birkenhead Park is one of the most famous rugby football clubs in England Pop (1931) 147,946

Birkenhead British troopship She was sent with about 500 soldiers to South Africa where a war with the Kaffirs was in progress When nearly there, she struck a rock Whilst the ship sank the soldiers stood in order on the deck, so as to give time for the women and children to be put into the boats Most of the troops were drowned The event took place off Cape Agulhas on Feb 25, 1852

Birkenhead Earl of British politician and lawyer Born at Birkenhead, July 12, 1872, Frederick Edwin Smith went to school there and to Wadham College, Oxford There he had a most successful career, becoming a fellow of Merton College and a lecturer He was called to the bar and, having established himself as an advocate, was made a KC in 1908 In 1906 Smith was elected Unionist MP for Liverpool division and soon made a reputation as a debater In 1915 he became solicitor general in the Coalition Government and in 1916 attorney-general From 1919 to 1922 he was lord chancellor and from 1924 to 1928 secretary for India under Mr Baldwin In 1928 he left politics to take up several directorships He was made a baron in 1919, and Earl of Birkenhead in 1924 He died, Sept 30, 1930, leaving a son, till then known as Viscount Furneaux, and two daughters The elder of these, Lady Eleanor Smith won repute by her novels, *Red Wagon*, *Flamenco* and others

Birkenhead was largely responsible for the important laws affecting real property passed in 1922 and 1925, while some of his judgments in the House of Lords are masterpieces of clear reasoning In 1922 he was chosen high steward of Oxford University

Birkett William Norman English lawyer Born at Ulverston, Sept 6, 1883, he passed a few years in business and then went to Cambridge, where he was president of the union In 1913 he became a barrister and in 1921 a KC In 1923 he entered Parliament as Liberal MP for East Nottingham Birkett was defeated at the election of 1924, but regained his seat in 1929, only to lose it in 1931

Birmingham City of, England, after London the largest in the country It is chiefly in Warwickshire, but extensions have taken it into parts of Worcestershire and it has now an area of 68 sq m It includes Aston Manor, once a separate borough, Edgbaston, Handsworth, Yardley, King's Norton, Moseley, Erdington and other areas It is 113 m from London and is served by the L M S and G W Ry's It is also the centre of a network of canals

The chief churches are the cathedral (S Philip's), the Roman Catholic cathedral, S Martin's and the Central Hall of the Weslevans Secular buildings include a group for public purposes in the centre of the city, city hall, council house, art gallery, museum and library A new civic centre is planned The hall of memory is the city's war memorial There are many open spaces, including Aston Park altogether nearly 3000 acres The university grew out of Mason College which in its turn was an outcome of Queen's College, founded in 1828 Most of the university buildings are at Edgbaston

The industries of Birmingham are mainly associated with metals Almost every kind of metal is worked here, the products including locomotives, motor vehicles, railway carriages, jewellery, guns, tools, hardware, glassware, plated and enamel goods and a great variety of other articles Pop (1931) 1,002,413

Birmingham George A Pseudonym of the Irish writer, Rev James Owen Hannay Born July 16, 1865, the son of a clergyman, he was educated at Hallowbury and Trinity College, Dublin He was ordained in 1888, and from 1892 to 1913 was rector of Westport, Co Mayo From 1922-24 he was chaplain in Budapest, and in 1924 he was made rector of Mells, Somerset Canon Hannay made a reputation with his novels of Irish life, with their humorous and almost impossible plots Such are, *Spanish Gold*, *The Simpkins Plot*, *The Lost Tribes*, *Lady Bountiful*, *Found Money*, *Goodly Pearls* and *Angel's Adventure* (1933) He has also written plays, notably, *General John Regan*

Birnam Village of Perthshire On the Tay, 15 m from Perth, it is reached by the L M S Ry It is visited by tourists, and is chiefly known for its supposed connection with Macbeth

Birrell Augustine British writer and politician The son of a Baptist minister, he was born in Liverpool, Jan 19, 1850 He became a fellow of Trinity Hall, Cambridge, a barrister and professor of law at University College, London In 1899-1900 he was Liberal MP for West Fife, and later sat for N Bristol, 1906-18 From 1905-07 he was president of the Board of Education, and from 1907-16 secretary for Ireland. As an essayist, however, Birrell was in the front rank In 1884, and again in 1887 he published his delightful *Obiter Dicta*, which were followed at intervals by other volumes These include lives of Charlotte Brontë and Andrew Marvell and in 1930 *Et Cetera*, a volume of reflections He died in Nov., 1933

Birstall Urban district and market town of Yorkshire (W R.), 7 m from Leeds, on the L M S Ry It is an industrial area with textile mills and coal mines Pop (1931), 7205

Birth Act of bringing forth young By English law a child is born alive even if it only breathes for a few seconds This is sometimes a matter of importance as it may affect the right to inherit property under a will or settlement Midwives must be registered before they can attend cases of childbirth

In Great Britain all births must be registered by the father or another relative and falling that by the doctor or nurse This is done at the offices of the registrar of births, marriages and deaths from whom a certificate can be

BIRTHRIGHT

obtained These certificates, which are often needed by adults for purposes of insurance can be obtained at any time from the registrar or at Somerset House, London A small fee is charged

Most civilised countries, from figures obtained by the registrars prepare a birth rate, i.e. a statement of the number of births for every 1000 people In Great Britain the figures show that over a period of 40 years the birth rate has fallen from nearly 33 per 1000 to about 17 In 1928 it was 17.2 for Great Britain and Northern Ireland In other countries, notably France there has been a serious fall and the tendency continues In Great Britain its effect on the number of the people has been counteracted by the great decrease in infant mortality but this cannot operate much longer The fall in the birth rate is due to late marriages but much more to prudential considerations which find expression in the teaching of birth control

BIRTH-CONTROL Individual control of birth by artificial means In recent years, the ideal of quality in population rather than quantity, has become general, and birth control usually by artificial contraceptive methods, has been a keenly discussed subject affecting as it does ethics, biology, medicine, psychology, religion and economics Dr Marie Stopes is its chief exponent A medical committee has recommended that no married person should be hindered from obtaining knowledge of contraceptive methods, while on the other hand the Roman Catholic Church denounces all such practices as definitely sinful

Birthright Benefit or privilege to which one is entitled by birth It may comprise the right of inheriting an estate or title or the right of inheriting under a free constitution Specifically it denotes the right of the firstborn primogeniture, the classic example of which is Esau (Gen xxxvii 1-4)

Birtley District of Durham It is 5 m from Gateshead on the LNE Ry, and is a mining centre During the Great War a huge factory for making ammunition was built here

Biscay Bay of European inlet of the Atlantic Ocean Between Ushant and Cape Ortegal, it curves regularly round the west coast of France and the north coast of Spain Off the French coast there is a broad, flat shelf 150 m broad diminishing to 50 m off Spain, with a maximum depth of 600 ft Beyond this a sharp declivity drops to the abyssal floor at 15,600 ft. Currents of wind and tide and Atlantic swell often occasion violent storms in the bay

Bishop High official in several Christian churches There are bishops in the Anglican Roman Catholic and Greek Church, in fact the presence of bishops is essential to an Episcopal Church In the Church of England there are diocesan bishops and suffragan bishops The former are the heads of the various dioceses into which the country is divided, the latter are their assistants A diocesan bishop takes his title from his cathedral city and uses its name, or its Latin equivalent, as his signature Of the diocesan bishops 24 sit in the House of Lords and rank between viscounts and barons A bishop is appointed by the king on the advice of the prime minister, his election by the cathedral chapter being

155

only a formality consecrated by the archbishop and other bishops Suffragan bishops have neither cathedrals nor seats in Parliament They take their names from a place in the diocese in which they serve Retired bishops are called Bishop before the surname

In the Roman Catholic Church bishops are also in charge of dioceses and many of them are assisted by coadjutors The appointment of all bishops must be approved by the Pope

In non-established episcopal churches in communion with the Church of England, such as those in Wales, Ireland, Canada, Australia etc. bishops are appointed by synods or other representative bodies There are also bishops who have charge of missionary dioceses, as in China and Africa In all episcopal churches bishops alone have the power of conducting confirmations ordinations and consecrations.

Bishop Isabella English traveller Born, clergyman, Oct 15, 1832, her father was a began to America, but her real adventures were went with her journeys in Asia In 1866 she Other journeys into unknown regions followed and the countries visited included Japan, Tibet and Morocco In 1881 she married a medical man John Bishop of Edinburgh where she died, Oct 7, 1904 Mrs Bishop wrote several books on her travels and was the first woman made a fellow of the Royal Geographical Society

Bishop Auckland Market town and Durham It is on the Wear, 11 m from Durham on the LNE Ry and is the centre of a mining district Here is Auckland Castle the residence of the Bishops of Durham It dates mainly from the 17th century and has a beautiful chapel and a fine gateway of earlier date Pop (1931) 12,269

Bishop's Castle Borough and Shropshire It is 22 m from Shrewsbury The Bishops of Hereford had a castle here Pop (1931) 1362

Bishop's Ring Name applied to a to 30° from the sun It is half extending 20° of solar light through minute dust particles in the air First observed at Honolulu on Sept 5, 1883 ten days after the eruption of Krakatoa It was observable in various localities three years afterward

Bishop Stortford Market town and urban district of Hertfordshire on the River Stort, 14 m from Hertford and 30 m from London on the LNE Ry There is an agricultural trade and malting is carried on Pop (1931) 9,509

Bishop's Waltham Village of Hampshire It is 9 m from Winchester on the S Ry The name is due to the fact that the Bishop of Winchester had here a castle, of which some ruins remain It was once a market town

Biskra Town and oasis in Algeria situated 150 m SW of Con stantine, on the Wndy Biskra, whose waters flow into the Chott Meghir lagoon the oasis of 3 sq m contains immense gardens with 200,000 date palms, olives apricots and pomegranates surrounding a few Saharan villages of mud built houses The town has a European quarter which attracts winter residents from France and

BISKRA

elsewhere There is a desert railway southward to Touggourt, and a short line westward to Tolga Pop 9000

Bisley Village of Surrey It is near Brookwood and is famous for its camp reached by the S Rly This belongs to the National Rifle Association, and here a meeting is held every year Prizes are offered for rifle, pistol and revolver shooting, the chief competition being for the King's Prize

Bismarck Prince German statesman Born April 1, 1815 Otto Eduard Leopold Bismarck was educated at Göttingen, entered the civil service of Prussia, and in 1852 was sent to Frankfurt to represent his country at the diet there He remained there until 1859, and then went on diplomatic work to St. Petersburg and Paris In 1862 he was selected as chief minister to the King of Prussia, William I Together the two were responsible for the policy that led, through the crushing of Austria in 1866 and of France in 1870, to the formation of the German Empire Of this Bismarck was the first chancellor and he held the position throughout the reigns of William and Frederick In 1890, soon after the accession of William II, he was replaced by another chancellor In 1871 Bismarck, till then a count, was made a prince, and in 1890 Duke of Lauenburg He died July 30, 1898

Bismarck was a great European figure, especially in 1878, when he presided over the Congress of Berlin Known as the man of blood and iron, he allowed neither sentiment nor scruple to stand in the way of his aims At home he was a determined reformer and Germany's industries benefited from his policy of protection Bismarck's *Reminiscences* appeared in 1919-20

Bismarck Archipelago Group of Pacific Islands N and N E of Papua (New Guinea) They were named after the Iron Chancellor when a German protectorate was declared in 1894, and included New Pomerania, New Mecklenburg, New Hanover, the Admiralty Islands, and some coastal islands The names of the first two have been changed to New Britain and New Ireland The islands were taken from Germany by the Australians in 1914 and are governed by Australia under mandate from the League of Nations They cover nearly 16,000 sq m and have about 143,000 inhabitants Rabaul is the capital

Bismuth Metallic element Its symbol is Bi atomic weight, 208 It is brittle, reddish-white, having a metallic lustre and almost cubical crystalline texture, melting at 268° C It is chiefly found native, in metalliferous veins associated with silver and cobalt ores, in Saxony and Czechoslovakia, besides Bolivia and Cornwall It forms alloys with lead and tin which, as in type metal and fusible metal, melt at low temperatures A typical solder contains bismuth 1, lead 5, tin 3

Bison Animal of the ox family There are two kinds, the European and the American Its characteristics include a large hump on the shoulders, an enormous mane and a heavy beard At one time there were enormous herds of bison in Europe and N America, but it is now nearly extinct except in Sweden and the United States where it is protected

Bissextile Term denoting a calendar year containing 366 days, commonly called leap year It is so called

because it contains a day intercalated every fourth year in February by the Julian calendar This was called bissext, because the sixth day before the March calends, that following Feb 24, was reckoned twice

Bissing Moritz Ferdinand von German soldier Born, Jan 30, 1844, he entered the army in 1865, and took part in the wars against Austria (1866) and France (1870-71) In Sept 1914, being then a general, he was appointed governor general of Belgium which the Germans had just overrun This post he retained until his death, April 18, 1917.

Bite Wound made by the teeth of a living creature It may be lacerated or punctured, and, as such teeth are often foul, suppuration may ensue If bacterial infection is present in wolf or dog bite hydrophobia may supervene The bite of some snakes is innocuous, but certain species, such as vipers and cobras, possess venom-secreting fangs which may cause death Some invertebrate animals puncture with mouth-parts, as spiders, mosquitoes and fleas

Treatment—Insect Bites and Bee and Wasp Stings are relieved by the application of dilute ammonia or a paste of bicarbonate of soda and sal volatile Mosquito Bites should be washed with weak lysol or iodine and water before applying the ammonia

Dog Bites should be washed with 1 in 20 solution of carbolic or other disinfectant, or be painted with tincture of iodine and a dressing applied If any serious swelling occurs, or if the dog is believed to be unhealthy, medical aid must be sought immediately

Snake Bite has been successfully treated by injection with antivenene

Bittern Wading bird of the heron family The common bittern of the Old World, *Botaurus stellaris*, formerly haunted the British fenlands where its guttural boom was heard It is about 2 ft long, with mottled plumage, The American bittern, *B. lentiginosus*, is a winter stranger to Britain The little bittern, *Ardetta minuta*, is rare The common bittern has been reintroduced into Norfolk and an order made for its protection This means that it is an offence to kill the bird, which by 1932 was well established.

Bittersweet (*Solanum dulcamara*) Perennial trailing shrub Common in British hedgerows Its upper leaves are spear shaped, the lower ones oval or heart shaped and dark green in colour Clusters of small purple flowers are succeeded by green egg shaped berries, which gradually ripen to a brilliant red The plant has various medicinal uses It is sometimes called woody nightshade

Bitumen Term denoting combustible mineral hydrocarbons They are members of the paraffin and olefin series, ranging from solid to gaseous forms, and include mineral pitch or asphaltum, mineral tar or maltha, petroleum, naphtha and natural gas The harder forms occur pre-eminently in pitch lakes in Trinidad and Venezuela Impregnated limestones in France and Switzerland also furnish road asphalt, besides bituminous bases for damp courses and roofing felts Elaterite, found in Derbyshire, is an elastic bitumen

Bivalve Term denoting a numerous class of sightless molluscs whose shells have two valves These, completely or partially enclosing the soft body, are joined by a toothed hinge and held together by an

elastic ligament. The calcified shells are secreted by the mantle surrounding the body, and within some of them pearls are developed. There are marine and freshwater bivalves, the former include many important for human food, such as oysters, scallops, cockles, mussels and clams.

Bizet Georges French musical composer. Born near Paris, Oct 25, 1838, he studied at the Paris Conservatoire and won the Grand Prix de Rome with his cantata, *Cloris et Clotilde*. His music to Daudet's *L'Arlésienne*, in 1872, was successful, and in 1875 he wrote his masterpiece, *Carmen*. He died June 3rd, 1875.

Bjornson Bjornstjerne Norwegian author. Born, Dec 8, 1832, his father was a Lutheran minister. He went to the university of Christiania (Oslo), and soon began a career as a journalist. Having managed a theatre at Bergen, he was director of the national theatre at Christiania 1865 to 1873. He then became lecturer and journalist, took part in politics, and, owing to his advanced opinions, found it advisable to live in Germany for two years. Having returned to Norway, he was active in securing the separation of his country from Sweden. He died, April 26, 1910, having in 1903 received a Nobel Prize for literature.

Bjornson was famous both as a dramatist and a novelist, his poetry is also notable. His fiction includes stories of peasant life, using the English titles, *A Happy Boy*, *The Fisher Maiden* and others, and the novels with a purpose, *Flags are Flying in Town and Port* and *In God's Way*. His dramas include *Sigurd the Bastard*, *The Editor*, *The Gauntlet*, *Beyond our Powers*, etc.

Black and Tan Name given to a force raised in 1920 by the British Government for service in Ireland. Recruited from men who had served in the Great War, they were sent to put down the disorders then prevalent, but their presence was signalled by increased violence which was answered by reprisals. They were withdrawn when peace was made in 1922. A branch of the Royal Irish Constabulary, the men wore khaki uniforms with a black hat and armband, hence the name black and tan.

Black Bass Genus of spiny finned fishes of the sea perch and bass family (*Micropterus*). They are dark, freshwater fish weighing up to 5 lbs, much esteemed in N. America, and introduced into French streams. They range from Canada and the great lakes southward, the large mouthed, *M. salmoides*, to Florida the small mouthed, *M. dolomieu*, to Arkansas and S. Carolina.

Black Beetle Popular misnomer for various species of orthopterous insects of the cockroach family. They have long, flat, ovate bodies, with four wings, sometimes rudimentary in females. The common kitchen cockroach came from Asia Minor, the larger American species is a seaport pest, the smaller German one came westward during the Crimean war.

Blackberry Species of prickly shrub of the rosaceous order (*Rubus fruticosus*). The leaves have leaflets, dark green above but paler beneath. There are scores of British sub species, some of which, such as dewberry *R. coccineus*, sometimes rank as species. The black or red-purple fruit is

not a berry, but a group of many succulent seeded drupelets on a conical receptacle.

Blackbird Species of thrush (*Merula vulgaris*). The male has uniformly black plumage and bright orange bill. The female has rusty-brown plumage and bill. The male has a rich mellow note, of smaller compass than the song thrush, but sometimes imitating other songsters. The five or six red spotted, pale-green eggs may be repeated two or three times each season. It ranges throughout Europe, and migrates southward to N. Africa.

Blackburn City and county borough of Lancashire. It is 211 m. from London and 24 from Manchester and is served by the L.M.S. Rly., also by the Leeds and Liverpool canal. One of the centres of the cotton manufacture, it has also engineering works. Pop. (1931), 122,695.

Blackburn Rovers Association football club. It was founded in 1874 and was one of the first to adopt professionalism, which it did about 1882. Since then it has been continually in the front rank. Six times, 1884, 1885, 1886, 1890, 1891 and 1928, it has won the Association Cup and twice, 1912 and 1914, the champion ship of the League.

Blackcap Species of warbler (*Sylvia atricapilla*). It has brown-grey plumage and black crown. The female crown is rusty red. The male is a frequent cage bird in France and Switzerland. Of the five stained white, end-clouded eggs there are normally two broods in a year. It ranges from Europe to N. Africa.

Blackcock Species of grouse (*Tetrao tetrix*). The russet-brown female is called the grey hen, and weighs about 2 lbs. The male is pugnacious and polygamous, and interbreeds with other game birds. They have glossy black plumage and weigh about 4 lbs. The eggs, 6 to 10, are yellowish white, and red spotted. The bird inhabits the N. European Highlands, including Scotland.

Black Country Name of a manufacturing district in Staffordshire, Warwickshire and Worcestershire. The presence of coal mines and iron works gives the landscape a black appearance, hence the name. Birmingham, Wolverhampton, West Bromwich, Dudley, Smethwick, and Walsall are the chief towns.

Black Death Name given to a plague which caused many deaths in the 14th century. It was called black because the rushing of blood under the skin caused it to appear black. The plague was very terrible, death often taking place in a few hours. It appeared in Europe in 1348 and soon invaded England. There is no exact information about the number of victims, but the total in England may have been up to 500,000. The plague was, it is thought, something like the bubonic plague, and the plague of 1665 was of the same kind.

Blackfeet N. American Indian tribe of the Algonkin linguistic stock. The name, native *Siksika*, probably denotes their black moccasins. There are now in reservations 2300 in Saskatchewan and Alberta, Canada and 2200 in Montana, U.S.A. The Blackfeet Sioux are a Dakota subtribe.

Black Forest Mountainous district of Germany. Situated in the states of Baden and Württemberg, it flanks the Rhine valley for about 100 m. Its area is 1844 sq. m., and it is mountainous and wooded, with much beautiful scenery. It is a favourite holiday resort—its inhabitants are skilled makers of toys and clocks.

Blackfriars Name given to the friars of the order of S. Dominic, because their habit is a black cloak and hood. The Dominicans had a priory in London, near where is now the western end of Queen Victoria St., and since then the district has been called Blackfriars. In it are Playhouse Yard where James Burbage built his theatre, and Printing House Square where *The Times* office.

Black Friday Name given to Friday, Dec. 6, 1745, and Friday, May 11, 1866. On the former day the Highlanders under Charles Edward were at Derby, and this being known in London caused a financial panic. The second panic was due to the failure of the great banking firm of Overend, Gurney & Co., which had liabilities of £11,200,000. There have been Black Fridays, due also to financial trouble, in the United States.

Blackheath District of London. Partly in the borough of Lewisham and partly in Greenwich, it is 5 m. from London, on the S. Ry. Its common, covering 270 acres, is famous, because, being on the main road from the Kentish coast to London, several historic events have taken place thereon. On it James I. played golf, thus introducing the game into England, and the Royal Blackheath Club, which now has its links at Eltham, is the oldest in England. Near the heath is Morden College, a home for decayed Turkey Merchants. It was built by Wren, and was given by Sir John Morden in 1695 for its present purpose. Blackheath has a conservatoire of music, and a school of the Girls' Public Day School Trust.

The Blackheath Football Club is one of the oldest Rugby football clubs in England. It was founded in 1860, and after playing on the Heath, acquired the Rectory Field at Charlton in 1883.

Black Hole Prison in Calcutta. Here on Jan. 20, 1756, after Fort William had surrendered, Suraj-ud-Dowlah, ruler of Bengal, threw 146 English captives into a small room only 14 ft. by 18 ft. with two small windows. A terrible night followed, and in the morning only 23 remained alive. A memorial now marks the spot.

Blackie John Stuart, Scottish scholar. Born, July 28, 1809, his father was a bank manager in Aberdeen. After a course at Edinburgh, he studied theology at Aberdeen, then, having given up the idea of becoming a minister, he went to Germany. On his return he became an advocate. Literature, however, attracted him and he published a translation of *Faust*. In 1841 he was appointed professor of humanity at Marischal College, Aberdeen, and from 1852 to 1882 was professor of Greek at Edinburgh. A great and stimulating teacher, he did much literary work, including a translation of the *Iliad*. Blackie, who died March 2, 1895, did a good deal to foster the study of the Gaelic language.

Blacklead Another name for plumbago. It contains no lead, being an amorphous form of graphite or pure carbon.

sometimes with 5 p.c. of iron oxide and other impurities. When burned it does not fuse but vanishes in smoke, the impurities becoming ash. It is used for making pencils, blacking stoves, and reducing machine friction.

Black Letter Name applied to the angular Gothic minuscule letter prevalent throughout northern Europe about A.D. 1350. A century later it furnished models for the earliest printed types, and is essentially the letter still surviving in German printing. It was used by Caxton, but in England the Roman letter quickly superseded the Old English black letter.

Blackmail Crime of obtaining, or attempting to obtain, money by threats. It takes the form of threatening to expose something, whether true or false, in business or domestic life that will be harmful to a person's reputation or happiness. It may also be a threat of violence. In English law it is a felony. The original blackmail was a tribute levied by raiders on the owners of cattle in the north of England. Those who paid were free from the attentions of the raiders.

The word meant originally rent paid in black money, i.e., copper as opposed to white money or silver.

Blackmore Richard Doddridge, English novelist. Born at Longworth, Berkshire, June 7, 1825, he went to Blundell's School, Tiverton, and then to Exeter College, Oxford. In 1864 he published a novel *Clara Vaughan*, and in 1869 made a reputation with *Lorna Doone*. His other books include *The Maid of Sker*, *Cripps the Carrier*, *Springhaven*, *Perlycross* and *Daniel*. He died Jan. 20, 1900.

Black Mountains Range of hills in S. Wales. They run through Brecknockshire into Herefordshire and form one of the loneliest parts of England and Wales. The highest point is 2600 ft. high.

Blackpool County borough and watering place of Lancashire. It is 223 m. from London and is served by the L.M.S. Ry. Tramways connect it with Lytham and St. Anne's, and there are motor coach services from all parts. With extensive sands and a bracing climate, it has become one of the most popular pleasure resorts in the country.

The attractions include the pleasure beach on the south shore, the palace, opera house, theatre, winter gardens and tower. There is a fine promenade and numerous hotels and boarding houses. Pop. (1931) 101,543.

Black Prince Name given to Edward, the eldest son of Edward III., doubtless from the colour of his armour. It was also the name of a British cruiser which was sunk by the Germans in the Battle of Jutland.

Blackrock Urban district and watering place of Co. Dublin, Irish Free State. It is 5 m. from the city of Dublin, on the G.S. Ry. Pop. 9000.

Black Rod Officer of the royal household and of the House of Lords. He is best known as the official who, when Parliament is opened or closed, or the royal assent given to bills, summons members of the House of Commons to the House of Lords. He is also responsible for keeping order in the House of Lords, and is the usher of the Order of the Garter.

sphalerite It is a brittle mineral crystallising in cubes, usually found dark brown, with a resinous lustre, commonly admixed with iron and associated with galena and copper pyrites. It is the chief source of zinc, and often reduces on the spot to zinc concentrates for economy of transport. It occurs in the United States, especially Missouri, as well as at Broken Hill, New South Wales, Canada, Poland, Belgium, Spain and Great Britain.

Blenheim Village of Bavaria, known also as Blindheim. Near the Danube, it is famous because of the battle fought here, Aug 13, 1704. The British and Austrians under Marlborough and Prince Eugene respectively, joined forces and hurried to meet the French and their Bavarian allies. The battle began soon after noon and was fiercely contested until, by a stroke of genius, Marlborough, with a rapid alteration of plan, drove the French before him, and by nightfall all was over. Rather more than 50,000 men were engaged on each side, a large proportion being cavalry. The losses of the British and Austrians were about 12,000, their foes lost 28,000 including prisoners.

Blenheim Residence of the Duke of Marlborough. It is near Woodstock in Oxfordshire and stands in a fine park covering nearly 4 sq. m. The house was presented by the nation to the 1st Duke of Marlborough after his victory at Blenheim (1704).

Blenny Extensive family of spiny finned fishes. They have elongated, cylindrical bodies having long dorsal and anal fins. Mostly marine, there are brackish water and freshwater forms. The nine British species include the scaleless shanny or smooth blenny, the gunnel, the wolf fish, and the viviparous blenny, whose female bears 300 living young.

Blériot Louis, French aviator and inventor. He was the first to fly across the English Channel, having crossed from Calais to Dover in 31 minutes on July 25, 1909. His monoplane landed on Northfall Meadow, near Dover Castle, and a monument now marks the historic spot. He has been actively concerned in the production of aircraft, among devices associated with his name being the steering pillar and the landing chassis.

Blériot Cup The International air speed trial for which a challenge trophy is annually awarded. It was instituted by M. Blériot, the French aeroplane constructor, when the Schneider Trophy was won outright by Britain in 1931. In 1933 the Blériot Cup was won by Captain Pietro Scapinelli (Italy), flying at a speed of 372 miles per hour.

Bletchley Village of Buckinghamshire. It is 47 m. from London, and is an important junction on the L.M.S. system.

Blickling Village of Norfolk. It is on the Bure near Aylesham, and is famous for its hall. The property of the Marquis of Lothian, this stands in a fine park. Earlier the estate belonged to the Boleyn family. In 1932 the fine library was sold in New York.

Blind Term used for persons who have lost their sight. The training of the blind, both children and adults, is an important branch of educational work. They are taught to read by means of the Braille system, and are instructed in certain trades, such as basket-making, weaving and knitting, which are suitable to them. At S. Dunstan's, Regent

Park, many blinded soldiers were taught typewriting, massage and other trades.

There are schools and institutions for the blind, the chief being the National Institute at 224 Gt. Portland St., London, W. The blind are trained to take part in sports and games and some of them have done almost everything that a person with sight can do. One or two fine musicians have been blind. Notable blind men have been Henry Fawcett and Sir C. Arthur Pearson. There is a library for the blind at 36 Gt. Smith St., Westminster, S.W.1. It has 150,000 volumes in Braille and Morse types.

Blind persons are entitled to old age pensions when they reach the age of 45, and can obtain, without fee, a licence for a wireless receiving set. See BRAILLE.

Blindness Lack of sight. It may be permanent or temporary, total or partial. Complete sightlessness may arise from atrophy of the optic nerve, or from inflammatory or degenerative changes in any part between it and the cornea. Early in the 20th century it was estimated that of all existing cases two fifths would certainly and two fifths probably have been preventable. Infantile purulent inflammation, the chief of these causes, is a gonococcal infection which almost always is certainly curable. A disease due to lack of cleanliness and more difficult to cure is trachoma, or granular lids, accompanied by a contagious discharge, which prevails in the East, and affected nearly all Napoleon's soldiers in Egypt. In advancing years blindness may be brought about by glaucoma, which distends the eyeball with fluid but this can be arrested by operation if detected early enough. The loss of one eye may induce total blindness by sympathetic ophthalmia.

Blind Spot Optic disc in the retina where the optic nerve enters the eye. It is a circle with raised margins insensible to light and colours. Its diameter about 1.8 mm., gives an angle of 6°, determining the apparent size of the blind spot, large enough to conceal a man 7 ft. away.

Blindworm Lizard simulating the shape of a snake because lacking external traces of limbs (*Anguis fragilis*). Found in Britain and Europe, it is an inoffensive, lethargic creature, sometimes called slow-worm. It is from 10 to 16 in. long, and its tiny teeth cannot penetrate the skin and lack poison fangs. The female produces a dozen living young.

Blister Vesicle on the skin filled with serous fluid. It may arise from injury such as a burn, the friction of rowing, disease, an insect or a vesicatory substance. Blisters are purposely produced as counter-irritants to draw towards the skin deep seated inflammation. Such vesicants include cantharides, acetic acid, chloroform and ammonia. **Treatment**—When possible leave a blister unbroken until the underlying surface has had time to heal. If broken, treat with boracic lotion or ointment.

Blockade In war the closing of the ports and coasts of a country by preventing ships from reaching or leaving it. It therefore affects neutral shipping, and the rules governing its exercise are the subject-matter of much international law. Ships attempting to avoid a blockade are liable to capture, in which case their fate is decided by a prize court.

At one time it was only necessary to declare

state of blockade, it was not necessary to enforce it by adequate force. To day, however, a blockade is not recognised unless it is effective, it must be supported by a force sufficient to make ingress or egress dangerous to blockade runners. In Feb., 1915, Germany declared the coasts of Britain to be in a state of blockade and tried to enforce this by the use of submarines. Great Britain replied in March with a blockade of Germany which, although not absolutely successful, contributed very much to end the war.

Blockship Vessel used to close a harbour by sinking it in the channel. Sometimes they are sunk to protect a country's own harbours, but their most noted use in recent times was to block the harbours of Zeebrugge and Ostend, then in possession of the Germans. Any vessel can be used provided it is filled with concrete or some other heavy material. In olden days a blockship was a storeship.

Bloemfontein Chief town of the Orange Free State. It stands on a tributary of the Modder, 750 m. from Capetown, with which it is connected by railway. There is a university college and near, owing to the clear air, the University of Harvard has an observatory. Bloemfontein was founded in 1846, and was entered by the British in March, 1900. It is the seat of the supreme court of the Union of S. Africa. Pop. 42,500, about 28,496 being whites.

Blois City of France. It stands on the Loire, 35 m. from Orleans. The chief building is the magnificent chateau, once a royal residence. The cathedral, dedicated to S. Louis, was rebuilt in the 17th century, and the Church of S. Nicholas, once an abbey church, dates from the 12th. Pop. 24,607.

Blomfield Sir Arthur William English architect. Born March 6, 1829, he was a younger son of Charles James Blomfield (1786-1857) who was Bishop of Chester, 1824-28, and Bishop of London, 1828-56. He was educated at Rugby and Trinity College, Cambridge, and became an architect. As an ecclesiastical architect he was in the first rank. His works include the restoration of Southwark Cathedral and the erection of many churches, including S. Barnabas, Oxford, and S. Mary's, Portsea. Knighted in 1897, he died Oct. 30, 1899.

Blomfield's nephew, Sir Reginald Theodore Blomfield, also became a noted architect. Born Dec. 20, 1856, he was educated at Hulsebury and Exeter College, Oxford. He became A.R.A. in 1905 and R.A. in 1914, and was President of the Royal Institute of British Architects, 1912-14. He has written several works on architecture, chiefly from the historical point of view, and became a specialist in garden design. In 1919 he was knighted.

Blondin Charles. Stage name of Jean François Gravelet, French acrobat. Born at St. Omer, Feb. 24, 1824, he early specialised in tight-rope walking, especially with spectacular incidents. His celebrity was established in 1859 by crossing Niagara Falls on a rope 160 ft. above the water. He performed at the Crystal Palace, 1861, and made occasional reappearances, once from mast to mast on a liner at sea. He died at Ealing, London, Feb. 19, 1897.

Blood Fluid flowing in animal arteries and veins. Its continuous circulation from the heart back again to the heart was demonstrated by Harvey in 1628. It com-

prises a serous plasma, nine-tenths water, in which foodstuffs—proteins, carbohydrates, and salts—together with waste substances, are dissolved. The serum harbours independent cellular bodies, the haemoglobin-containing red corpuscles, the bacteria-destroying white corpuscles, and the fibrin-making platelets, which in man may number per cubic mm. 5,000,000, 12,000 and 800,000 respectively. 1 lb. per 14 lb. of body weight is blood. In vertebrates it is red, in invertebrates other colours or none.

Blood Thomas Irish adventurer, known as Colonel Blood. Born about 1618, he served as a soldier in the parliamentary armies and received some land in Ireland. Deprived of this at the Restoration, he revenged himself by trying to seize Dublin Castle and the person of the lord lieutenant. In this he failed, but on May 9, 1671 he succeeded in his most notable feat, taking the crown jewels from the Tower of London. He was arrested, but Charles II. pardoned him and he received his Irish lands again. Blood died Aug. 24, 1680.

Bloodhound Breed of dog. It is essentially a large black-and-tan hound with long, smooth, drooping ears, wrinkled forehead, red haws to the eye-sockets, deep baying note, gentle disposition and highly developed power of scent. It is derived from the old Talbot breed, and is probably the ancestral stock of all English races of hounds. It is bred to track down game, and sometimes fugitive criminals.

Bloodless Surgery See ORTHOPAEDICS.

Bloodroot Name applied to several species of plants whose roots contain red pigment. The common British tormentil, *Potentilla tormentilla*, is a rosaceous herb whose rootstock, rich in tannin, is used also by Lapps to dye their clothing. A poppy-like herb, *Sanguinaria canadense*, in eastern N. America, supplies the Red Indians with paint.

Bloodstone Variety of dark-green chalcedony with red jasper-like splashes. It is a mixture of true quartz with hydrous or opal-quartz, not crystallized but minutely crystalline. It comes from India, being used for seals and signet rings, and also from the Hebridean Islands of Rum and from Iceland.

Blood Transfusion Transferring of the blood of one living animal to another. Blood transfusion was first performed in Florence, 1654. Despite experimentation it did not become a regular operation until the 20th century, but is now widely used in cases of anaemia, haemorrhage, etc. Human blood has been found to be classifiable into four clearly defined groups, and it is important that the blood of the donor should belong to the same group as that of the patient.

Bloody Assizes Name given to the Court of Inquiry, presided over by the notorious Judge Jeffreys, to try culprits after the Monmouth Rebellion, 1685. As a result, hundreds were put to death, or transported to the Colonies.

Bloomsbury District of London. It is bounded by Holborn and New Oxford Street on the S., Tottenham Court Rd. on the W., Euston Rd. on the N., and Southampton Row on the E. It is in the metropolitan boroughs of Holborn and St. Pancras. Many of the streets and squares are named after the Duke of Bedford, once owner of the land,

and his estates, 20, Bedford Sq Russell Sq
and Woburn Sq In the district are the British
Museum University College and other
branches of the University of London S
Giles Church and several hospitals It is also
a region of hotels and boarding houses
Blow John English
1648, 1649

Blow John English organist. Born in 1648 in Lincolnshire. He became a chorister in the Chapel Royal London in 1669. In 1669 he was made organist of Westminster Abbey, and in 1678 organist of Westminster Royal. He resigned organist at the Chapel employed connected with the Abbey in 1680 but until his death Oct 11 1708. Blow was also a composer his works including many anthems.

Blowpipe Tube of small bore through which a current of air is projected to direct and concentrate it and increase the temperature of air is used with mouthpieces and fine nozzles were used in early Egypt for glassmaking and for chemical analysis. Powerful blowpipes were used for creating hot gases oxy hydrogen for steel cutting and oxy acetylene for welding.

Bloxwich Town of Staffordshire It is 2 m from Walsall on the LMS Rly In the Black Country its chief industries are coal mining and iron working Pop 8949

Blubber Fat of whales and other marine mammals. It develops in dense layers between the skin and the muscles to retain bodily heat. The mass of tissue which holds it together can be removed in spiral strips which when boiled down in a tryworks, on the whaler or ashore yield train oil.

Blücher Marshal of German soldier was born Dec 16 1742 As a young man he served in the Swedish and Prussian armies, and then retired to look after his estate in Mecklenburg. He returned to the Prussian army in 1793, and his courage and ability soon attracted attention. He rose in rank and in 1813-14 as commander of an army fought in the great battles that led to Napoleon's fall. In 1815 he took command of the Prussian forces and although defeated at Ligny, shared in the final victory of Waterloo. He died Sept 12 1819. Blücher's impulsive energy won for him the name of Marshal Vorwärts.

Blue used for Oxford and Cambridge the name used for one who represents the university at certain sports and games against the other university. The first blues were those so called because their colours were light and dark blue respectively. Later those who played for the university at cricket and football both Rugby and Association, were also called blues. At each university there is a blues committee which decides the games for which blues are awarded. Those who take part in games considered as of secondary importance are given half blues. At athletics the first representative in each event is a blue and the second a half blue. For hockey, lawn tennis, racquets, swimming, boxing, etc. half blues are usual, but in one or two cases full blues are given.

Bluebeard Nickname of the Chevallor Rnoal, a character in an imaginary tale by Perrault 1697. It is the most famous of a cycle of folklore stories making the ogre murder successive wives who have entered a forbidden chamber. Franco some times identifies him with Gilles de Rais a

Bluebell (*Scilla nutans*) Bulbous plant
consists of a number of small bell shaped
flowers borne on one slender stem. In bud the
blossoms are erect but they droop as they open.
The true Scottish bluebell is the wild cam
panula or barebell

Bluebird Genus of N. American thrushes
Wilson's bluebird (*sialis*) The common or
ranges from S. Canada to the southern state
of the U.S.A. Canada to the southern state

Blue Book Term popularly denoting a document printed by order of the British Parliament, because usually bound in blue paper covers. In general usage reports of commissions and committees Foreign Office publications and committees reports are also so called. The official colour for France is yellow. Germany and Portugal white. Italy and USA green. Spain, red.

Bluebottle Insect related to the ordinary house fly but larger. It is known because of the buzzing noise made by it when in flight. It is an unwholesome visitor to the larder as it lays its eggs in meat.

Bluebottle *Centaurea cyanus* It is an annual or biennial composite order (Centaurea) from which cornflower blue derives its name. It extends from temperate Europe across to NW India and to N Africa.

Blue Coat School Name given to several schools but especially to Christ's Hospital West Ham, Essex. This was transferred thither in 1902 from buildings in Newgate Street London, appropriated by Edward VI in 1553 from the Grey Friars monastery. The traditional dress—blue gown, neckbands, knee breeches, and yellow stockings is still worn by the boys. Other blue-coat schools are in Westminster, Nottingham, Bristol and Chester. There is a blue-coat school for girls at Hertford on the same foundation as the boys' preparatory school at Christ's Hospital there.

Blue Cross Badge of an association for
outbreak of the Great War in 1914 by the
the cooperation of the French War Office
devoted in part to the French War Office
Blue Cross Society now has kennels at Shorter
Hill Woolwich London SE where dogs and
cats are kept during the absence of their owners
for other reasons

Blue Ensign flag composed of a union flag in the upper corner next to the It distinguishes the Royal Naval Reserve as well as the public consular service. It is authorised also for members of specified yacht clubs and certain merchant vessels under R R command.

Bluefish *Sparus* - finned fish of the mackerel family (*temnodon sal*) Of compressed spindle shape greenish-blue above and silvery below It inhabits warm

and temperate regions on both sides of the N Atlantic is very voracious, and catching it affords excellent sport.

Blue Peter Rectangular blue flag centred with a white square. It is flown by British seamen as a signal, both to the crew and to the general public, that the time for sailing has come. It also serves to recall boats to the ship, and is usually hoisted at the foremasthead.

Blue Stocking Term humorously denoting a literary woman. It was first applied to a literary coterie meeting about 1760 in the Mayfair house of Mrs Elizabeth Montagu. She apparently adopted blue stockings in imitation of similar reunions in 17th-century Paris, such stockings were worn by various members of the club, both men and women.

Bluethroat Genus of warblers (*cyane-cula*). It has cobalt-blue throat and upper breast. The red spotted bluethroat (*C. suecica*) breeds in temperate Europe and Asia, and winters in India, Abyssinia and N Africa. Its mature note distinguishes it as the Swedish nightingale. It visits on migration the east coast of Britain.

Blundellsands Watering place of Lancashire. It stands on the Mersey, 6 m from Liverpool, of which it is practically a suburb. It is reached by the LMS Ry.

Blundell's School Public school of Devonshire. Just outside Tiverton, it was founded in 1604 by Peter Blundell, a Tiverton tradesman. The present buildings, which hold about 350 boys, were built in 1882, the old building mentioned in *Lorna Doone* was in the town itself.

Blunderbuss Firearm of the pistol type, now obsolete. It had a flintlock and a trigger, and with a large bore held several balls. It was not capable of being fired with any precision.

Blyth Borough and seaport of Northumberland. It stands at the mouth of the little River Blyth, 11 m from Newcastle, on the LNE Ry. The chief industry is the export of coal and there is a large modern harbour. The borough includes Cowpen once a separate urban district. Pop (1931) 31,808.

Boa Genus of snakes. There are five species in tropical and sub-tropical America, and two in Madagascar. The most familiar, boa constrictor, ranging from Venezuela to the upper Argentine, may attain 12 ft. in length. It feeds normally on small mammals, sometimes on deer and dogs.

Boabdil Last Moorish king of Granada. Boabdil (Abu Abdallah), became king in 1482. Invading Castile in 1483, he was captured and became vassal to Spain. When he refused to surrender Granada in 1491, the Castilians besieged and took it, Boabdil fled, and subsequently was killed in Africa.

Boadicea British queen. More correctly Boudicca, she was the wife of Prasutagus, king of the tribe of the Iceni. Being under Roman rule, Prasutagus left his property jointly to his daughters and Nero. At his death the Romans seized it, scourged Boadicea and ravished the daughters. Boadicea then incited the Britons to rebellion, burned Camulodunum (Colchester) and defeated the Romans. Eventually overthrown by Suetonius Paulinus, Boadicea poisoned herself. A.D. 62. Thomas Thorneycroft's sculpture on the

Thames Embankment, London, commemorates Boadicea's rebellion.

Boanerges Descriptive surname given by Jesus to two prominent disciples, explained as meaning sons of thunder (Mt iii, xvii). These disciples James and John, the sons of Zebedee, display in the gospel narrative an impetuous and ambitious disposition, which may have suggested the title. In modern usage it sometimes describes vehement orators.

Boar Wild hog. Domestic breeds of pig are derived from the European wild boar (*sus scrofa*), which was hunted in Britain in the 16th century, is still found in France and other parts of Europe. The Indian wild boar (*S. cristatus*) furnishes the sport called pig sticking. In some localities domestic swine turned loose have become wild again.

Boar's Hill District near Oxford. Across the Thames in Berkshire, it is about 4 m from the city. It has become a favourite residential area. Owing to its beautiful situation, it was decided in 1929 to take steps to protect its amenities. Thore John Masfield lives, and has his private theatre.

Boat Conveyance for use on water. The earliest boats were of bark or wicker covered with skin, and since then they have developed in every possible way. The word is loosely used for any vessel, but strictly a boat is small and open, a larger vessel being a ship. Boats propelled by oars are still used, but motor boats are popular.

The Oxford and Cambridge Boat Race was first rowed in 1829 and became an annual event in 1856. It is rowed on a course of 4½ m from Putney to Mortlake. In 1933 Cambridge had won 44 races and Oxford 40. The record time for the course is Oxford's, 18 m 29 sec, in 1911.

Boatfly Name for two genera of aquatic bugs, also called water boatman. *Notonecta* swim on the back and use the fringed hind legs as oars extending them like sculls when at rest. Air is led through a tunnel of overlapping hairs from the tail to the thorax. *Corixa* swim back upmost.

Boatswain Subordinate ship's officer. In the days of sailing ships he was a petty officer in charge of boats, rigging and anchors, piping the crew to work with a silver whistle. In the merchant navy to-day he is the crew's foreman and sometimes the lowest mate.

Boaz Biblical character. In the book of Ruth he appears as a wealthy Bethlehemite who, by his marriage with Ruth, became the great-grandfather of David.

Bobolink American song bird related to the starling (*Dolichonyx oryzivorus*). The male is black and buff in the spring, the female is smaller and yellowish-brown. In their northward migration they fill the northern parts of the United States and Canada with melody. On their return they devastate the ricefields, and are then called reed birds or rice birds.

Boccaccio Giovanni. Italian writer. Born in Paris or Florence in 1313, lived a roving life, writing a good deal, and making love to the lady who, as Fiammetta became the heroine of some of his stories. She was probably a daughter of Robert, King of Naples. He became friendly with Petrarch, who influenced him greatly.

Boccaccio, who had already written many

poems and some romances, finished, in 1358, his *Decameron*, the work on which his fame rests. This consists of 100 stories, supposed to have been told by ten persons in the beautiful gardens of a country house during the plague in Florence in 1348. In style and matter this work is one of the world's greatest pieces of creative fiction, and many later writers in England and elsewhere are indebted to it. It has several times been translated into English. Boccaccio died Dec 21, 1375.

Bode Johann Elert German astronomer. Born at Hamburg in Jan, 1747. He became astronomer to the Berlin Academy of Science, and director of the observatory. He prepared star maps and did much to popularise astronomy. He died Nov 23, 1826.

Bode was the author of Bode's Law, an empirical formula for tabulating the distances of the planets from the sun. The number 3 is doubled and then redoubled thus 0 3 6, 12, 24, 48, 96, and so on, and 4 is added to each. The resulting numbers, 4 7, 10 16 etc show the proportionate distances of the planets from the sun.

Bodiam Village of Sussex. It is 6 miles from Battle on the River Rother. Its castle a perfect example of a medieval fortress, with round towers gateway and moat, was restored by the Marquess Curzon, who presented it by will to the nation in 1923.

Bodleian Name of the national library at Oxford. It was founded in 1602 by Sir Thomas Bodley. It stands between High Street and Broad Street. Though several times enlarged it is far too small for its purpose and in 1929 plans for a new library were considered and in May, 1932 the Rockefeller Foundation offered to contribute three fifths of the cost of extension. The library has the right to receive a copy of every book published in Great Britain and its collection of books and manuscripts is one of the most valuable in the world.

Bodmin Borough and market and county town of Cornwall. It stands on the Camel 30 m from Plymouth and 234 from London on the G W and Southern Rlys. The town is an agricultural trade and china clay works are near. The town has a beam wireless station. Pop (1931) 5526.

Bodmin Moor is a large and desolate tract of country outside the town. Brown Willy is its highest point.

Body Snatching Secret exhumation of dead bodies for sale as subjects for dissection. This gruesome industry arose in Britain in the 19th century for supplying subjects to medical students. In 1828 about 200 persons known as resurrection men, were engaged in it in London alone. The practice was stopped in 1832. Body snatching gave inspiration to the "Burke and Hare murders" in Edinburgh.

Boece Hector Scottish historian. Born in Dundee about 1465. He became professor of philosophy in the University of Paris where he was a contemporary of Erasmus. He died at Aberdeen in 1536. His chief work is a Latin *History of Scotland* in 17 books, published in 1527, and of which an English translation appeared in 1577.

Boehm Sir Joseph Edgar British sculptor. Born in Vienna, July 6 1834. He came to England for his education and in 1865 was naturalised. He soon made a reputation,

especially by his statue of Thomas Carlyle (1875) and was made A.R.A. in 1878 and R.A. in 1882. In 1889 he was created a baronet and he died Dec 12, 1890. Boehm's work includes the statue of Wellington at Hyde Park Corner London, that of Beconsfield in Westminster Abbey, and the designs for the coins issued in 1887.

Boehme Jakob German mystic. Called a peasant. In 1612 he published *Aurora*, a book showing the eternal and all pervading presence of God, a kind of pantheism. This was censured by the clergy and he was forbidden to write any more, but just before his death Nov 17 1624, *The Way to Christ* appeared. Boehme's writings have been translated into English and have influenced English thinkers.

Boer Word meaning a farmer or agriculturalist and given to the Dutch of S Africa. They settled there about 1650 and later founded the state of the Transvaal and Orange Free State. They still form the majority of the whites in those districts and are also found in Cape Colony and Natal.

Boer War The Boer War broke out in 1899 with the invasion of Natal by the Boers and ended with the Peace of Vereeniging 1902. Its causes were chiefly the Boers demand for independence, made possible by the removal of the Zulu menace after Lord Chelmsford's victory at Ulundi, and the Boers growing irritation at the British Government's indecisive policy. After the Jameson Raid, 1896, the Boers began to arm, and in Oct, 1899 laid siege to Ladysmith, Kimberley and Mafeking.

The war began disastrously for Britain, but reinforcements were sent out in 1900 and Lord Roberts defeated Cronje, French relieved Kimberley, Buller raised the siege of Ladysmith and a force from Rhodesia relieved Mafeking. President Kruger sued for peace, which Lord Salisbury, the British Premier, granted, on condition that the Orange Free State and the Transvaal came under British rule again.

General Smuts, Botha and De Wet, however continued hostilities, but Lord Kitchener prosecuted the war with such rigour that peace was made in 1902, when Britain promised to restore independent government to the Boers. The war's main result was to win unpopularity for Britain, to crush the 19th-century spirit of jingo imperialism and to encourage the other colonies to demand independence.

Boethius Roman statesman and philosopher. He was accused of treason and, although declared innocent, was imprisoned, his goods confiscated, and himself put to death. During his years captivity he wrote *Consolation of Philosophy* (*De Consolatione Philosophiae*), a renowned compendium of moral wisdom. Medieval schools used also his textbooks on geometry, music and arithmetic. Part of *De Consolatione* was translated into English by King Alfred.

Bog Spongy ground whose soil is composed of mainly of decaying and decayed vegetation. This usually comprises mosses intermingled with ligneous stems which when decomposing, form peat. Bogs occur chiefly in high latitudes. The estimated areas are: England, 1500 sq m, Scotland, 3000 sq m, Ireland, 4500 sq m, Europe, 212,700 sq m., Canada, 45,000 sq m., and the United

States, 31,250 sq m Destructive bog slides sometimes occur

Bog Asphodel (*Narthecium ossifragum*) Species of herb of the liliaceous order It has racemes of green-ribbed, golden-yellow flowers Called the Lancashire asphodel in England, it inhabits boglands throughout Britain, as well as the N temperate zone southward to the Alps and Pyrenees

Bog Bean (*Menyanthes trifoliata*) Species of bog plant of the gentian order Also called buck-bean and marsh trefoil It has a creeping rootstock, which is a useful food, with long stalked leaves in three leaflets, and spikes of pink or white flowers Found throughout the temperate regions of the north, it is used as a febrifuge

Bog Butter Term denoting a mineral resin A fatty carbohydrate having the appearance and consistency of spermaceti, it is found in massive lumps in bogland in Scotland and Ireland It is derived from the decay of vegetable matter

Bogey Term used by golfers, representing the fixed score for each hole of a golf course Bogey was jocularly described as a colonel

Bogie Platform or under-carriage attached to a railway locomotive or car It is mounted on one or two pairs of wheels and pivoted on the main frame by a vertical swivel to enable sudden curves to be traversed readily Bogie engines similarly facilitate the making up of trains in a siding

Bog Moss (*sphagnum*) Genus of cryptogamous plants forming an order of mosses Growing in greenish or reddish masses on moors or bogs, when submerged in pools it may reach several feet It is used for surgical dressings Distributed over the temperate and arctic zones, there are 12 British and 25 N American species

Bognor Regis Watering place and urban district of Sussex It is 10 miles from Chichester and 67 from London on the S Rly At Aldwick near here, in 1923-1929, King George V spent some months during his convalescence and after his departure added the word Regis to the town's name Pop (1931) 13,510

Bog Oak Trunks and branches of oak found embedded in bogs Their preservation is due to the antiseptic properties of the peaty matrix Of unknown age, they owe their colour, ranging from dark green to ebony, to being impregnated with iron Bog oak is turned in the lathe for brooches, bowls and ornamental articles

Bogota Capital of the Republic of Colombia It stands on a plateau, about 9000 ft above sea level, some 200 m from the coast The commercial centre of the republic, the town was founded in 1538 as Santa Fe de Bogota and became the capital in 1831 It has railway connection with other cities and with the coast at Buenaventura, also a regular air service Pop 235,421

Bohemia Province of the Republic of Czechoslovakia It covers 20,100 sq m and its population is (1930) 7,106,766, mainly Czechs Prague is the capital Pilsen (Plzen) and Budweis are other populous centres The chief rivers are the Elbe, the Moldau and the Eger There are large forest areas, but much of the land is cultivated

From about 900 to 1526 Bohemia was an independent kingdom In 1526 it came under the same ruler as Austria and Hungary and from then until 1918 it was part of the realm that became the Austro-Hungarian Empire In 1919 it was the centre round which the state of Czecho-Slovakia was formed See Czechoslovakia,

Bohemianism Phrase used for the unconventional way of living adopted by artists, literary men and students in Paris, London and elsewhere It comes from the fact that the gypsies who lived this kind of life were believed to have come from Bohemia Paris was the original home of Bohemianism, and it still flourishes there.

Bohn Henry George English publisher Son of a German bookbinder He was born in London, Jan 4, 1796 He started in business in 1831, issued a guinea catalogue of 23,000 books, and dealt in remainders He wrote on questions of copyright and the paper duty, compiled handbooks of quotations, games and pottery, and revised Lowndes's *Bibliographer's Manual*, 1857-64 He is best known for his editions of standard works and translations, embracing 750 volumes, the copyrights of which are now the property of J Bell & Sons He died Aug 22, 1884

Bohun Name of a famous Norman family Having settled in England, its members became rich and powerful landowners In 1199 Henry Bohun was made Earl of Hereford and was one of the barons associated with the signing of Magna Carta Another Bohun opposed Edward I The male line died out in 1373

Boil Small, painful swelling on the skin, with redness and suppuration It becomes a yellowish core of dead tissue, due to a micro-organism, generally a staphylococcus When this comes away the boil quickly heals Boils usually start in hair-roots on the back of the neck, or on the limbs, a mass of them becomes a carbuncle (qv)

The inflammation caused by a boil can be reduced by hot boric lint poultices The pus should be evacuated by surgical means and care taken not to spread the infection to the surrounding area Boils occur in "run-down" conditions, so attention must be paid to the general health as well as to the diet, which should be plain and nourishing and contain plenty of fruit and green vegetables Exposure to ultra-violet rays is beneficial, and when there is a tendency to recurrence a vaccine may be necessary (For Gum boil, see under ABSCESS)

Boiler Vessel for heating liquid to boiling point. The term includes such utensils as wash boilers, used for soiled linen, and the structures called steam-boilers, which generate steam for driving engines These may be simple vertical tanks, or horizontal cylinders containing internal furnace flues, one in the Cornish type and two in Lancashire boilers Galloway tubes expanding into heads, when fitted, increase the heating surface, further increased—in multitubular boilers—by introducing into the fire space tubular sections Steam producing efficiency is also increased by conducting the water-mass through systems of water tubes, as in modern types of locomotive, and in stationary and marine engines

Boiling Point Temperature at which, when liquid is converted into vapour, the tension of the latter equals the atmospheric pressure It varies

for each liquid, and for the same liquid is lower when the pressure lessens, as when ascending a mountain or in a balloon. Under normal pressure water boils at 212° F or 100° C at the summit of Mont Blanc it boils at 185° F. The boiling point of spirit of wine is 78° C, other 36° C, mercury 357° C.

Bois de Boulogne Park in Paris. To the west of the city, it covers some 2200 acres and is bordered by the Seine. In it are the race courses of Autoull and Longchamps, grounds for polo and other sports, zoological gardens, an aquarium and other attractions. It was on closed about 1800, and in 1853 was given to Paris by Napoleon III.

Bokhara Province of Asiatic Russia. Bordering on Afghanistan and occupying 85,000 sq m. It was formerly a protected emirate. In 1924 it became with Khiva the Independent Soviet Republic of Uzbekistan. The low W plains rise eastwardly through fertile plateau valleys to lofty glaciated mountains. Nomad Moslem Uzbeks breed horses and cattle, rice, wheat, cotton and fruit are raised.

The old town of Bokhara was once central Asia's chief mart. The new town is a Russian outgrowth. Pop 75,000.

Bolan District of British Baluchistan. Between the upper Sind plains and the Qattia highlands it is traversed for 60 m by the Bolan Pass with a narrow gorge between lofty cliffs at a point where the British army was plundered in 1839. Marauders long kept it unsafe until, after 1879, a railway was constructed.

Bole Clay-like mineral. It is a hydrous silicate of alumina with some red iron oxide. Although soft and unctuous, it is more like fuller's earth than a plastic clay, being chiefly used as an astringent and pigment. It supplied the red letters in old MSS, and comes from Italy, Sicily and Armenia.

Bolero Spanish dance. It is usually danced by two persons to the accompaniment of the castanets.

Boleyn Anne, Queen of Henry VIII of England. The daughter of Sir Thomas and Elizabeth Boleyn, and mother of Queen Elizabeth, she was born about 1507. Her reign was short, Henry, growing tired of her and her failure to produce a son, ordered her execution in 1536, on an unproven charge of incest.

Bolingbroke Viscount English statesman Henry St. John was born at Battersea in Oct. 1678 and educated at Eton. In 1701 he entered Parliament as a Tory and was Secretary for War from 1704 to 1708. In 1710 he became a Secretary of State and helped to make the peace of Utrecht. For his share in the Treaty of Utrecht he was impeached and attainted but he saved his life by fleeing to France. He went to the court of the Stuarts and was Secretary of State to James Edward. In 1723 Bolingbroke was pardoned and returned to England, where for many years he was one of Walpole's chief opponents, attacking that minister by speech and in *The Craftsman*. He died Dec 12 1751. Bolingbroke wrote *The Idea of a Patriotic King*, and *Letters on the Study and Use of History*.

Bolingbroke's father Sir Henry St. John was made Viscount St. John in 1716. This title passed to the statesman's younger son, Francis, whose son Frederick inherited both his father's and his uncle's titles and became

Viscount Bolingbroke and St. John. The titles are still held by a descendant.

Bolivar Standard monetary unit of Venezuela. Silver coins of 5, 2, 5, 2, 1 and 5 bolivar are current. It is composed of 100 centavos, and at par is worth about 9½d.

Bolivar Simon Spanish statesman, called the liberator owing to his work in S. America. Born at Caracas, Venezuela, July 24 1783, he was educated in Spain and inherited much wealth. Having returned to Venezuela, he became active among those who were working to free the continent from Spanish rule and he was a leader in a rising at Caracas in 1810. In 1813, after a victory over the Spaniards, he was proclaimed dictator of Venezuela, but was soon driven away and took refuge in the West Indies. He returned however, to the struggle and proclaimed a larger republic which he called Colombia. The independence of this was recognised in 1821 and of it Bolivar was the first president. He then turned to Peru, which also he freed from Spanish dominion, and when its southern provinces formed themselves into a separate state this was called Bolivia, and Bolivar was named perpetual protector. His authority in Peru was overthrown, but in Colombia after a brief retirement, he returned to power and remained president until his death Dec 17 1830.

Bolivia Republic of S. America. Entirely inland, it is surrounded by Brazil, Paraguay, Argentina, Chile and Peru. The boundaries are not all exactly defined. Area about 514,155 sq miles, much of it mountainous. The rivers include the Mamore and the Beni and in it is Lake Titicaca. Pop (1931) 1,014,069, over half of whom are Indian. There are two capitals, La Paz and Sucre. Only a small proportion of land is cultivated.

Much tin is produced and exported and antimony and rubber are other exports. The country is governed by a president elected for four years, and a cabinet which is responsible to a parliament of two houses. All males who can read and write have the vote. There are a few lines of railway, one going to Antofagasta on the Pacific coast in Chile. The standard of currency is the boliviano. Having been part of Spain, Bolivia became independent in 1824 and took its name from Simon Bolivar. There have been several boundary disputes, one with Paraguay over the Gran Chaco, boundary causing hostilities in 1932 and in 1933 war was declared. This continued with a brief armistice (1933) till agreement was finally reached in June, 1935. Bolivia belongs to the League of Nations.

Bollington Urban district and market town of Cheshire. It is 3 m from Macclesfield on the L.N.E.R. Ry. Silk is manufactured. Pop (1931) 5027.

Boll Worm Caterpillar which pierces the flower buds and pods or bolls of the cotton plant. It is the larva of the owl moth, *Heliothis armigera* and is a destructive American pest. In India cotton is attacked not by this but by the caterpillar of another genus *carias*, which also supplies the Egyptian boll worm.

Bologna City of Italy. It stands on two little rivers, Reno and Savena, 50 m by road from Milan, but 134 by rail. One of the oldest cities in Italy it is, in the older parts, full of churches and other buildings of interest. In the centre of the city are two

plazas with two palaces built in the Middle Ages for civic purposes. The city has two leaning towers and several palaces of historic value. It has many manufactures and printing works and is an important railway junction.

Bologna University is one of the oldest in Europe. Founded in the 11th century, it was then famous as a school of law. Later it was a European centre for medical teaching. The main building dates from the 16th century and there is a valuable library. Pop 246,280.

Bolometer Instrument for measuring radiant heat. Devised by the American physicist Langley in 1881, it absorbs the radiations on blackened metal strips and the change in temperature of these can be estimated from the change in electrical resistance to 10^{-5} °C.

Bolshevism Social and political movement that arose in Russia during the Great War. The word means great, and was given to those who formed the majority in the Communist Party. After 1917, under Lenin and Trotsky, its principles were carried out ruthlessly. They included nationalisation of the means of production, disestablishment of the church, and in general the abolition of the capitalist system. The organisation that replaced the old order proved extremely efficient, but economic laws were too strong for it in several directions.

The leaders set up an organisation for conducting propaganda in foreign countries, but, except for a short time in Hungary, the results were not very tangible. What is called the Five Year Plan was launched in 1928 with the object of rivaling the industrial and agricultural output of other nations. In 1929 a Bolshevik calendar was introduced. The system of parliamentary representation is now to be introduced into the Soviet autonomies within the framework of Bolshevism.

Bolsover Urban district of Derbyshire. It is 6 m from Chesterfield on the L.M.S. and L.N.E. Rlys. The chief industry is coal mining. Its castle ruins are of interest. Pop (1931) 11,811.

Bolt Head Cape of Devonshire. It is on the S coast, just west of the estuary of the Salcombe river. A fine natural feature over 400 ft high, it was acquired in 1928 by the National Trust.

Bolton County borough and market town of Lancashire. It stands on the L.M.S. Rly, 196 m from London and 11 from Manchester and is also served by motor omnibuses and canals. Bolton is a centre of the cotton industry, it has also chemical works and paper mills. Pop (1931) 177,253.

Bolton Abbey Village of Yorkshire (W.R.). It is 22 miles from Leeds on the River Wharfe, on the L.M.S. Rly. There are ruins of a priory the church of which is now the parish church. Here is a modern residence of the Duke of Devonshire.

Bolton-on-Dearne Urban district of Yorkshire (W.R.). It is a coal mining centre on the Dearne, 7 miles from Rotherham and stands on the L.M.S. Rly. Pop (1931) 14,242.

Bomb Hollow explosive vessel. That comprising a cast iron ball filled with bursting charge, fired from a mortar and exploded by fuse, is now called a shell. Bombs include explosive vessels actuated by trip-mechanism for clockwork and incendiary

grenades. Hand-throwing bombs, such as the Mills, are time grenades, and can be adapted for discharging from rifles. In 1918 bouncing bombs, by a supplementary charge in the head rebounded and burst in the air. Bombs dropped by aircraft are either high-explosive or those with light bursting charges filled with lethal, irritant or incendiary substances, discharged as gas, liquid drops or fine dust.

Bombay Presidency of India. It extends along the west coast from Baluchistan to Mysore and covers 123,621 sq m, in addition to 28,562 sq m occupied by native states. It includes the provinces of Bombay and Sind. The Gulf of Cutch and the Bay of Cambay are the chief openings. Bombay and Karachi are the chief ports and Bombay, Ahmedabad, Poona and Karachi are the largest towns. The bulk of the people live by agriculture, but the cotton industry is important and irrigation schemes, including the Lloyd barrage at Sukkur, have brought much land into cultivation. The presidency is governed by a governor and two executive councils. There is also a legislative council, mostly of elected members. Pop 21,000,000, of whom 4,000,000 are in the native states. The majority are Hindus.

Bombay City and seaport of India. It is at the south end of the island of Bombay and connected with the mainland by bridges and a causeway. It is the terminus of the Gt. Indian Peninsula Rly and is served by other lines. The harbour, which lies between the island and the mainland, is an excellent one and there are some miles of docks. Under the Port Trust great improvements have been made in recent years. Great quantities of cotton are shipped from here and there are steamer services to every part of the world.

The public buildings embrace a group for the use of the government round the old Fort and include the courts of justice. Nearby are the cathedral, the museum, and Elphinstone College. In the north is the native city, the Jama mosque and other features of interest. The city has a large and rich Parsee element, who have here their towers of silence where they expose their dead. Pop (1931), 1,161,383.

Bonaparte Surname of the family made famous by the great Napoleon. It was originally Italian and spelled Buonaparte, but in the 16th century Francesco Bonaparte settled in Corsica. His descendant, Carlo Bonaparte, a public official at Ajaccio, married a lady named Ramolino and had five sons. These were Napoleon, Joseph (1768-1841), for a short time king of Naples and then king of Spain, Lucien (1775-1840), Louis (1778-1846), king of Holland, and Jerome (1784-1860), king of Westphalia.

Napoleon's family became extinct when his only son died in 1832. Joseph left no sons. Lucien had a large family, and one of his sons, Louis Lucien lived until 1891. Some of its branches sank into obscurity, but possibly members of it are still alive. Louis was the father of Napoleon III and his male line became extinct when the Prince Imperial was killed in 1879. The male representatives of the Bonapartes are therefore the descendants of Jerome. In 1926, on the death of his elder brother, Jerome's grandson Louis Napoleon became the head of the family. The American Bonapartes are descended from Jerome's first marriage with Elizabeth Patterson of Baltimore.

Bonar Horatio Scottish minister. Born in Edinburgh, Dec. 19, 1808, he

BONCHURCH

was educated there and in 1837 became a minister of the Church of Scotland at Kelso. In 1843 he followed Chalmers and became one of the founders of the Free Church. He remained in Kelso until 1866 and from then until his death he was minister of the Memorial Church in Edinburgh. He was moderator of the assembly of the Chalmers July 31, 1889. He died.

Bonchurch Village of the Isle of Wight. It stands beneath S Bonifacio's Down and is a famous beauty spot. It has an interesting old church and farther up the hill is a new one with the tomb of A. O. Swinburne in the churchyard.

Bond Document by which a person agrees to pay a sum of money in a certain time. It must be signed and sealed, but it does not necessarily require valuable consideration. Public companies often raise money by means of mortgage bonds and Governments issue bonds as security for money borrowed. The British Government issued National War Bonds during the Great War. Gold bonds are bonds which must be repaid in gold or the value of gold. Some bonds are repaid by drawings, a certain number being paid off each year. In Great Britain bonds are liable to stamp duties.

Bondfield Margaret Grace English politician. Born Mar 17, 1873, in Somerset. She spent some years as a shop assistant. In 1898 she became assistant secretary to the shop assistants union and was soon a prominent trade unionist also. In 1923 she was elected M.P. for Northampton. She lost her seat in 1924 but in 1926 was returned for WallSEND. In 1924 she was secretary to the Ministry of Labour and in 1929 was made Minister for Labour and in Aug, 1931 she resigned office and in Oct. lost her seat in Parliament.

Bond Street London street, famous as a shopping centre. It runs from Piccadilly to Oxford St and is divided into Old Bond St at the Piccadilly end and New Bond St. It is named after Sir John Bond a member of the household of Queen Henrietta Maria.

Bone Hard substance forming the skeleton in nearly all vertebrate animals. It comprises one third of organic matter and two thirds of earthy salts mostly lime phosphate. There are more than 200 bones in the human body. Cavities in tubular bones hold yellow marrow, in spongy bones, such as ribs and vertebrae, marrow is red. All except the smaller contain a network of tiny canals, with blood vessels nerves and lymphatics.

BROKEN BONES Symptoms—Inability to move severe pain, swelling, in a compound fracture the bone is sticking through the skin. Treatment—An amateur must interfere as little as possible. Place the limb in a position as near the normal as can be protect the patient from exposure and shock (q.v.) and summon skilled assistance immediately.

Bone Implements appeared first in the Stone Age. Aids, eyed needles harpoons and engravings spear throwers were followed by combs, spoons and axe handles. They still abound among primitive peoples.

Bone Multhead British artist. Born in Glasgow in 1876, he studied art there and soon began to draw for the press. In 1901 he settled in London where his etchings

172

attracted attention. They were mainly scenes of commercial life and activity, but during the Great War he was equally successful in his etchings of the battlefields. He was an official artist on the western front and with the Fleet.

Bonheur Rosa. French artist. Born March 22 1822, at Bordeaux. Her baptismal name was Marie Rosalie. She studied art and soon won fame by her pictures of animals, which were especially popular in England. Perhaps the best known of them are "The Horse Fair" and "Returning to Pasture". She was the first woman officer of the Legion of Honour. She died May 26, 1899.

Bo'ness See BORROWSTOUNLESS. English saint called the apostle of the Germans. Born in Devon about 680. His name was Winfrith. He entered a monastery and became a priest in 710, after which he went to Germany as a missionary. There he did a great work in converting the heathen to Christianity. In 723 he was made a bishop and from 746-54 he was archbishop of Mainz. Boniface as he called himself was murdered June 5, 755. He was buried at Fulda, where he had founded an abbey. His festival is kept on June 5.

Boniface Name of nine popes. Boniface II reigned 530-32. Boniface I reigned 418-22. Boniface IV 608-15. Boniface V 686-88. Boniface VI 701-7. Boniface VII 900-1. Boniface VIII 1294-1303. Boniface IX 1303-1304. Boniface X 1304-1305. Boniface XI 1305-1306. Boniface XII 1306-1307. Boniface XIII 1307-1308. Boniface XIV 1308-1309. Boniface XV 1309-1310. Boniface XVI 1310-1311. Boniface XVII 1311-1312. Boniface XVIII 1312-1313. Boniface XIX 1313-1314. Boniface XX 1314-1315. Boniface XXI 1315-1316. Boniface XXII 1316-1317. Boniface XXIII 1317-1318. Boniface XXIV 1318-1319. A bonnet laird was a laird who wore one of the woollen bonnets. In revolutionary France the red bonnet, or bonnet rouge, was the emblem of the republicans. A bonnet piece is a coin issued in Scotland about 1530. It bears on it the king's head with a bonnet, not a crown.

Bonnie Dundee *See* DUNDEE, Viscount

Bonus Word used for an addition to wages or salaries, or a payment to shareholders given as an act of grace. During the Great War, bonuses were paid to most workers to meet the increased cost of living, and in the civil and municipal services these payments were continued after the war. In the Civil Service the bonus varies according to the official figures of the cost of living. Bonuses to shareholders in companies may take the form of a payment in addition to the dividend, but more usually it is in the form of shares, sometimes given, but more frequently paid for at a price less than their market value. Insurance companies give bonuses to holders of life policies.

Booby Name applied to several species of small gannets (*Sula*). Fearless in man's presence, they breed prolifically on many southern islands, notably Booby Island off N. Queensland and S. Paul's Rocks off Brazil. They make slight nests or hollows on the cliffs. The commonest are the white-bellied, the blue-eyed and the red-footed.

Book Name now commonly applied to any literary work larger than a pamphlet. It may denote an organic whole in one or more volumes, one of the volumes, or one of the author's divisions, even when not separately bound such as the nine books of the *History* of Herodotus. Some early printed books, such as the first printed Bible of 1455, were printed on folio sheets folded once, but quarto, folded twice, soon arrived, and octavo books of thrice-folded sheets were popularised in Venice by 1501. Wood-cut illustrations were introduced about 1461, and title-pages, headlines and pagination by 1470.

The invention of printing, and especially the improved machinery in recent years, coincident with the spread of education, made for an enormously increased output. The trades of publisher and bookseller, once united, became distinct, and each flourished. At the end of the 19th century mass production of books was introduced and cloth-bound books were sold in millions for 6d. and 7d. The British public prefers books in this form, but elsewhere in Europe, paper-backed books are preferred.

In Great Britain about 14,000 books are published every year, but many are reprints or translations. Collections of books are called libraries, and their contents are protected by the law of copyright.

Bookselling is now a large and flourishing business, with its own trade organisations, trade papers, benevolent funds, etc. The selling of books, usually in sets, direct to the public on the hire purchase system is a separate branch. An associated industry is that of bookbinding.

Book collecting is a popular hobby, and enormous prices have been paid for certain old books, e.g. first folios of Shakespeare. First editions of other writers, including some

modern ones, also fetch high prices. The world's chief saleroom for books is Sothby's in London. One of the finest collections outside the British Museum and other national libraries, is that possessed by J. Pierpont Morgan.

Book Keeping Making the entries which record the financial transactions of a business house. They differ according to the nature of the business, but usually include cash-book, day book and ledgers. They are kept on the principle known as double entry, by which each transaction is entered twice, once as a credit and once as a debit. Thus a sale of lamps will be credited to the lamp department and debited to the customer. When the account is paid, the money will be credited to the customer and debited to the cash account. In this way the books should always balance. They are regularly audited by accountants. There is an Institute of Book-keepers at 133 Moorgate, London, E.C. and instruction in the subject is given in all colleges where business methods are taught.

Bookmaker Name given to a man through whom betting is done. Bookmakers are found on racecourses, including greyhound racing tracks and also in their offices, where they call themselves turf accountants. By taking bets on the various horses in a race they make a hook on that race, hence the name.

Before 1926 in Great Britain betting was illegal and bookmakers were liable to prosecution. In that year a licensing scheme was introduced, the licence costing £10 a year. When in 1929 the betting tax was abolished, a charge of £40 a year for each telephone was made but this and the licence were abolished in 1930.

Book of the Dead *Ancient Egyptian work*. It is a collection of exorcisms, funerary texts and directions for the soul's journey through the underworld. Based upon a predynastic nucleus it grew by the Ptolemaic Age into a substantial work in at least 165 chapters. It was frequently inscribed on papyrus, sometimes with magnificent illustrations.

Book Plate Label placed inside a book cover to indicate ownership. Following on the practice of stamping armorial devices upon the outside cover, it appeared first in Germany, as a gift-plate to a monastery, about 1480, in France, which introduced the alternative name *ex-libris*, in 1529, and in England in 1574. Armorial emblems tended to pass into the pictorial.

Bookworm Term denoting the larval form of several species of small beetles (*anobium* and *pinus*) which injure old books. They gnaw the bindings and riddle the leaves. Other wingless insects resembling neuroptera (*atropos*), which infest old, damp books, are preferably called book lice.

Boom Spar for stretching the foot of a sail. If there be more than one, that for the mainsail is the main-boom, that for the foresail, projecting beyond the bowsprit, is the jib-boom, and beyond that the living-jib-boom. Should the mizzen or after-sail have one, it is a spanker boom.

Boomerang *Hardwood missile, chiefly of the Australian aborigines*. It is a hunting weapon, 2-3 ft. long,

slightly skewed in its own plane, making an aeroplane flight and returning to the thrower. The war boomerang is non returnable.

Booster Electrical device for supplying extra voltage when required to outgoing currents on long lines subject to variable loads. Reversible boosters enable the relative duty of dynamo and battery to be adjusted so as to give a constant load. Boosters are used also where continuous currents operate cars at great distances from the generating stations. Boosters are also used in broadcasting. Similar devices, attachable to a carrying axle, enable locomotive engines to start with running loads otherwise impossible, by utilising the adhesive weight on that axle.

Boot Instrument of torture. It was used to extort confessions from suspects or evidence from unwilling witnesses. In 17th-century Scotland it was a framework of iron, or wood and iron, strapped round the leg; wedges were driven by repeated mallet blows so as to crush the muscle and shin-bone. It was used under Charles II and James II on rebellious Covenanters. A milder form consisted in drawing a wet boot upon the leg and shrinking it by fire.

Booth William. Founder of the Salvation Army. Born in Nottingham, April 10, 1829, he became a local preacher, and was for a few years a Methodist minister. Soon, however, he became an evangelist preacher, and in 1865 began work in the east end of London. There he founded an organisation which spread over England. It was called the Christian Mission, but in 1878, after Booth had organised his followers on military lines it was named the Salvation Army. Booth became the first general, and remained its head until he died, Aug. 20, 1912. His success was due very largely to the help of his wife, Catherine Mumford (1829-90), whom he married in 1855.

Booth's eldest son, William Bramwell Booth, chief of staff from 1880, succeeded his father, but in 1923 was deposed. He died, June 10, 1929, the year in which he was made a Companion of Honour.

Boothia Peninsula of N Canada. Called after Sir Felix Booth, who financed the expedition which discovered it, 1829-33, it lies on the W of the Gulf of Boothia, adjoining Baffin Land. It has an area of 13,000 sq m.

Bootle County borough of Lancashire. It stands on the Mersey, close to Liverpool, which lies to the south, and is 204 m from London. It is served by the L.M.S. Rly. One of its chief industries is the smelting of tin and other metals, and there are engineering works. The docks, which are part of the system controlled by the Mersey Docks and Harbour Board, are very extensive. Pop. (1931) 76,799.

Bootlegger Man who sells intoxicating liquor in countries where the sale is prohibited. It came from the practice adopted by traders in remote districts of carrying bottles of liquor in the tops or legs of their boots. After the introduction of prohibition in 1919 bootlegging flourished in the United States on an enormous scale.

Boracic (Boric) Acid Hydrated sesquioxide of boron (H_2BO_3). It is a whitish, crystalline solid with sweetish alkaline taste. Occurring in hot springs and lagoons in

volcanic regions, such as the Lipari Islands, the Tuscan Maremma, and the Andean region of Atacama, it is largely made artificially from other boracic minerals. It is widely used as an antiseptic.

Borah William Edgar. American politician. Born June 29, 1865, he was sent to the Senate in 1906 as representative of Illinois. There he became prominent as the leading advocate of the policy of keeping clear of all European alliances, opposing any connection with the League of Nations and the World Court. He was equally insistent that the debts owing to the United States by European nations should be paid in full.

Borax Hydrated sodium baborate ($Na_2B_4O_{10} \cdot 10H_2O$). It is a whitish crystalline salt, formerly derived from Tibet in the crude form of tincal. Nowadays it comes chiefly from Californian borax lakes, Canada and Peru, or prepared from the boracic acid of Tuscan lagoons. It is used as a flux in soldering, in glass and enamel manufacture and as an antiseptic food preservative. For mouth irritation it is a useful gargle.

Bordeaux City and seaport of France. It is situated on the Garonne, 360 m from Paris, and owes its importance to its position. It is about 60 m from the sea (the Bay of Biscay), and the Canal du Midi connects it with the Mediterranean. The cathedral is a fine Gothic pile. Parts of the old fortifications still stand, and the towers in the principal square serve as lighthouses. There are a university and an observatory, also remains of an amphitheatre. Bordeaux possesses a fine natural harbour with modern equipment. Its chief industry is the export of wine, apart from this the port does a very large trade and the city has also some manufactures and shipbuilding yards. Pop. 262,990.

The name Bordeaux is given to wines grown near the city. They are both white and red, and include Sauterne and Graves.

Borden Village of Kent. It is 2 m from Sittingbourne. Here is a farm institute, opened in 1930, and controlled by the Kent County Council.

Borden Mary. Anglo-American novelist. Daughter of William Borden of Chicago, she was married in 1911 to Brig Gen. Edward Louis Spears. Her first book *Jane, Our Stranger*, gained immediate popularity, and her later work established her name as a writer. They include *The Romantic Woman*, *Four O'Clock*, *Jerich Sands*, *The Forbidden Zone*, *Flamingo*, *A Woman with White Eyes*, in 1933, *Mary d Nazareth*, and in 1934 *King of the Jews*.

Borden Sir Robert Laird. Canadian politician. Born in Nova Scotia, June 26, 1854, he became a lawyer at Halifax. In 1896 he entered the Dominion House of Commons as M.P. for Halifax, and in 1901 was chosen leader of the Conservative Party. In 1911 he became premier, and in 1917 formed a coalition ministry to carry on the war. Elected in 1914 he represented Canada at the peace conference in Paris in 1919 and of the Council of the League of Nations and was chairman of the Sixth Committee of the Assembly, 1930.

Borders Name given to any district between two countries but especially to that between England and Scotland. In England Northumberland, Cumberland and sometimes Durham were the border counties, in Scotland they were the

shires of Berwick, Dumfries and Roxburgh. For many years the borders were a scene of almost continuous warfare. On the English side they were divided into three marches each under a warden, for purposes of defence, and the Scots had a like organisation.

The literature of border warfare is virile and attractive. Much of it is in Scott's *Minstrelsy of the Scottish Border* and J. M. Wilson's *Tales of the Borders*. The Welsh borders were referred to usually as the marches.

The Border Regiment consists of the old 34th and 55th of the line. Its depot is at Carlisle.

Bordighera Pleasure resort on the Riviera. It is in Italy, 6 m. from San Remo with which it is connected by railway. The old town is on a hill and the newer town, which is attractively laid out is below. It is famous for its palaces. For over a century before the French Revolution, Bordighera was the capital of a tiny republic. Pop. 4230.

Bordon Military camp in Hampshire. It is 47 m. from London, on the S. Ry. In the Aldershot area, it is chiefly an artillery camp.

Bordone Paris. Italian painter. Born in 1500, he was a pupil of Titian. His great painting is "The Fisherman presenting the Ring of St. Mark to the Doge," in the Academy at Venice. There are two works of his in the National Gallery, London. He died in Venice in 1571.

Bore Cylindrical cavity in the barrel of a firearm. The weapon may be smooth-bore, choke-bore, when the cavity is slightly constricted near the muzzle, or rifled, when spiral grooves are formed internally with a revolving cutting tool. In small-arms the pitch may vary one turn in 17 in. to one in 7 ft., in ordnance it is greater. The term also denotes the internal diameter of a gun-barrel. Sporting guns are usually 12-bore, 16-bore or 20-bore. See CALIBRE.

Bore Tidal wave of great height and force which appears in certain rivers at the period of high, or spring tides. Rushing from the estuary along the gradually narrowing channel of the river, the impelling force resolves the water into a huge wall or wave which carries everything before it.

The bore, or aegre, appears in the Severn, the Trent and other English rivers, and is also periodically observed in the Solway Firth, the Bay of Fundy, the Amazon and many rivers in the East.

Boreas Name for the north wind. In Greek mythology he personified the north wind, the coldest wind in Greece. He was the brother of Hesperus, Notus and Zephyrus, and had his habitation with them in a cave on Mount Haemus in Thrace.

Borecole Open-leaved variety of cabbage, also called winter greens. Its lower leaves are stripped for use in Scotch broth. The leaves are wrinkled and curled, and may be tall or dwarf. Cottager's kale is a hybrid with brussels sprouts, nearly 4 ft. high. There are also purple and variegated borecoles.

Borghese Name of a famous Italian family. Its early members lived in Siena, but having become wealthy, some of them settled in Rome. One, Camillo, was chosen Pope as Paul V in 1605. A later Camillo married Pauline, a sister of Napoleon

Bonaparte. The family still exists and holds the title of prince given to it by Paul V.

The Borghese Palace, built between 1590 and 1607 is one of the most magnificent in Rome, and contains valuable works of art. The family's summer residence, the Villa Borghese, stands in beautiful grounds to the north of Rome. It, too, contains some wonderful treasures. Since 1902 it has been the property of the State.

Borgia Famous Italian family. Originally Spanish, the name was spelled Borja. Alonso de Borja, Bishop of Valencia was chosen pope as Calixtus III in 1455, and Rome became the headquarters of the family. The pope's sister was the mother of Rodrigo Borgia who became Pope Alexander VI. His son and daughter, Cesare and Lucrezia, were the most noted members of the family.

Borgia Cesare. Italian soldier. The son of Rodrigo Borgia, he was born in 1476. In 1492 his father was elected pope as Alexander VI., and Cesare was made an archbishop and a cardinal. He was allowed, however, to marry, and his life throughout was that of a layman. As captain general of the papal forces, he showed great ability in bringing the States of the Church into submission and ability of another kind in ruling them, but his refined cruelties and his utter lack of pity or principle have made his name a synonym for evil. Those who opposed him were murdered without remorse or scruple. He received many honours including at least two dukedoms, and collected together vast wealth. In 1503 his father died and Cesare passed the rest of his days in struggling against the many enemies the Borgias had made. At one time he was a prisoner, and for some years he was in Spain, where he was killed in battle, March 12, 1507.

His sister Lucrezia (1480-1519), who, after two previous marriages became Duchess of Ferrara, left behind a reputation for learning and beauty.

Borgia Francesco. General of the Jesuits. Born in Spain, Oct. 10, 1510, he was a son of the Duke of Gandia, whose title he inherited in 1543, and a member of the noted family of Borgia. For a time he lived at the Spanish Court, but after the death of his wife in 1546 he joined the Jesuits. He worked for the order in Spain and Portugal, and in 1565 was appointed general. He died Sept. 30, 1572, and was canonised in 1671. His feast is kept on Nov. 10.

Boris King of Bulgaria. A son of King Ferdinand, he was born at Sofia, Jan. 30, 1894. When his father abdicated in Oct. 1918, he succeeded to the throne, and after he came of age proved himself a good ruler. In Oct., 1930, he married Giovanna, a daughter of the King of Italy.

Borneo Second largest island in the Malay archipelago. Situated between Cochín China, and W. Australia, it is 850 m. long and 600 m. broad. The area is 290,000 sq. m., almost bisected by the equator. The main mountain system parallels the N.W. coast, with Kinabalu, 13,500 ft., in the northernmost corner. The population is chiefly Dyak, Malay, Negrito, Bugi and Chinese. It produces rubber, tobacco and jungle crops. Besides extensive oilfields it yields coal, diamonds and gold. Two-thirds of the island, 213,000 sq. m., are included in the Netherlands East Indies. The remainder

is British, comprising British North Borneo, Brunei and Sarawak. Pop., British, 890,000, Dutch, 1,700,000

Boron Non metallic element. Its symbol is B, atomic weight 15. It does not occur free in nature. When fused boracic acid is heated with sodium, boron appears as a chestnut coloured amorphous powder, slightly soluble in water. If this be heated with aluminium it separates out in hard, colourless, octahedral crystals, of specific gravity 2.68.

Borotra Jean French tennis player. Born in 1898, Borotra, a very versatile tennis player, noted for the speed of his game, first came into prominence in 1921. He has twice won the men's singles at Wimbledon, and has won many Hard and Covered Court championships.

Borough Originally a fortified place, but now a town. The Scottish form is burgh. In the Middle Ages a borough was a place that had received a charter from a king or lord, allowing its inhabitants certain privileges, one being the right or duty of sending members to Parliament. These privileges varied very much, and until 1835 there was little uniformity in the English boroughs. In 1835 an Act of Parliament reformed their government. Each has a mayor and elected council.

To day there are in England and Wales over 300 boroughs divided into several classes. A county borough, which must have at least 50,000 people, has the same privileges as a county, and is independent of the county in which it is situated. In future no place will be made a county borough unless it has at least 75,000 inhabitants. A non-county borough is for certain purposes part of a county. A metropolitan borough is one of the 28 boroughs in the County of London. A parliamentary borough is one that sends one or more members to Parliament.

Boroughbridge Market town of Yorkshire (W R). It is on the Ure, 17 m from York and 209 from London, on the L N E Ry. Near are the Devil's Arrows, three stones nearly 20 ft. high. Pop (1931), 807.

Borromeo Carlo Italian Saint. Born Oct. 2, 1538. He was a nephew of Pope Pius IV. In 1564 he was made Archbishop of Milan, where he died Nov. 3, 1584. He was canonised in 1610, and his feast day is Nov. 4. A great reformer, Borromeo was noted for his generosity to the poor. His cousin, Federico Borromeo (1564-1631), was also Archbishop of Milan and a cardinal.

The Borromean Islands in Lake Maggiore are so named because they were long the property of the Borromeo family, who had a beautiful residence on Isola Bella.

Borrow George Henry English writer. Born near East Dereham, Norfolk, July 5, 1803, son of Thomas Borrow, a soldier, his boyhood was passed in moving from place to place. For a time he was at school in Edinburgh but he is most closely associated with Norwich, where he was articled to a solicitor. In 1824 he went to London, and for some years interspersed hack work for publishers with travels through the country, during which he associated much with gypsies. In 1832 he became an agent for the Bible Society, and spent some years in Russia and Spain. Returning to England in 1840, he

passed the rest of his life at Oulton in Suffolk or in London. He died July 26, 1881.

Borrow's chief writings are *The Bible in Spain*, dealing with his adventures in that country, *Laengro* and *The Romany Rye*, also more or less autobiographical, and *Wild Wales*. He lives by the vividness of his descriptions and the charm of his unique personality.

Borrowstounness Burgh and sea port of Linlithgowshire, known usually as Bo'ness. It stands on the Firth of Forth, 24 m from Edinburgh, on the L N E Ry. It has a good harbour, and does a coasting trade. There are some manufactures, and coal mines are near. Pop (1931) 10,095.

Borstal Village of Kent. It is near Chatham, and gives its name to a system by which offenders, between the ages of 16 and 21, instead of being sent to prison, go to a Borstal Institution, where they are trained to earn an honest living. The system was introduced in 1902, and there is a Borstal Association to further it, but it only became possible in its present form after the passing of the Prevention of Crimes Act, 1908. Males are sent to Borstal and females to Aylesbury, where they are looked after by the Aylesbury Association.

Borzoï Russian wolfhound. It is used for hunting wolves. It ranks as a long haired greyhound, slower but more powerful than the English type, with longish jaws, narrow but deep chest, and silky, white coat.

Bosccastle Village of Cornwall. It is 6 m from Camelford, and has a small harbour. The magnificent scenery in the neighbourhood has made it a centre for holiday makers.

Boscawen Edward English sailor. A younger son of the first Viscount Falmouth he was born Aug. 19, 1711, and entered the navy in 1726. He won a reputation in several encounters with the French, including the one off Cape Finisterre in May, 1747, when he was wounded. In 1747 he was made commander of the fleet in the E. Indies and later of that in the Mediterranean. His crowning feat was the destruction of a French fleet in Lagos Bay on Aug. 18, 1759. When he died, Jan. 10, 1761, he was holding the post of general of marines. Boscawen was called "Old Dreadnought."

Boscobel Village of Shropshire. It is 0 m from Shifnal. In its manor house, the seat of the Penderels, which still stands, Charles II took refuge after his defeat at Worcester and here he found shelter in an oak tree.

Boscombe District of Bournemouth. To the east of the town, and on the S. Ry., it is noted for its beautiful chine and woods. See Bournemouth.

Bose Sir Jagadis Chandra Indian physicist. Born Nov. 30, 1858, he was educated at Calcutta and Cambridge and in 1885 became professor of physics in Calcutta. In 1896 he devised a coherer of the type since developed in wireless communication, together with delicate instruments for generating and studying electrical waves. After laborious researches with his oscograph, which multiplies the incidents of plant growth ten million times, he demonstrated the essential identity

of the vital mechanism of animals and plants Knighted in 1917, he became FRS 1920

Bosnia District of Europe, now part of Yugoslavia. The Save and the Drina form its northern and eastern boundaries, and it covers 16,200 sq m. Sarajevo is the capital. In 1463 it was conquered by the Turks, and it remained under Turkish rule until 1878 when, with Herzegovina, it was annexed by Austria-Hungary. In 1919 it was given to Yugoslavia.

Bosphorus Strait connecting the Black Sea with the Sea of Marmara, also spelled Bosporus, meaning ox ford. The channel is 18 m long, ranging from 800 yds to 2½ m broad. Treaties in 1841 and 1878 guaranteed to Turkey the guardianship of the strait, which is now controlled by a League of Nations commission.

Boss Projecting mass or block. In architecture it is used as an ornament, for instance at the intersection of the ribs in Gothic vaulting. It is also used as a projecting ornament on a shield or buckle. In mechanics there are several kinds of boss, but all with the same idea, something that stands out. The enlarged part of the shaft on which a wheel is keyed is called a boss.

Bossuet Jacques Bénigne French ecclesiastical and orator. Born at Dijon, the son of a lawyer, Sept. 27, 1627, he was ordained priest in 1652, and after spending some years at Metz went in 1660 to Paris, where he made a great reputation as a preacher, his funeral orations being especially famous. He was made tutor to the dauphin, son of Louis XIV, and was Bishop of Meaux from 1681 until his death, April 12, 1704. Bossuet ranks as one of the great preachers of the world. In addition to his published sermons there exist his *Discourse upon Universal History*, written for his royal pupil, and other writings.

Boston Borough, seaport and market town of Lincolnshire. Near the mouth of the Witham it is 107 m from London, on the LNER Rly. The chief buildings are the large church of St Botolph, with a high tower known as Boston stump, and the guildhall. In 1931-32 the tower was restored at the expense of American friends. In the 13th century Boston was a flourishing port, but gradually the river was barred by silt. In the 19th century a new channel to the Wash was cut and now docks were made. The port has now a coasting trade and engineering and other works. Pop (1931) 16,597.

Boston City and seaport of the United States, the capital of Massachusetts. It stands on an opening of Massachusetts Bay. There are docks and many miles of quays. Boston now covers nearly 45 sq m, and includes Dorchester, Charlestown and other districts, once independent areas. Many buildings are built on land reclaimed from the water. There is an underground electric railway.

A great educational centre, it has two universities, and in the city are some of the buildings of Harvard. The headquarters of several learned societies, it is also a musical and literary centre.

Boston is one of the largest ports in the country, and from it steamers go to nearly every part of the world. It is also one of the bases of the U.S.A. navy which has large docks, workshops, storerooms and repairing yards here. Pop (1930) 751,188.

Boswell James. Scottish writer. Born in Edinburgh, Oct. 29, 1740, he was the oldest son of Lord Auchinleck, a Scottish judge. He himself studied law and travelled a good deal. In 1763 he made the acquaintance of Samuel Johnson, and henceforward his main occupation was recording the sayings of that great man, whom he visited on his frequent journeys to London, and with whom he made a famous tour in Scotland. On his father's death he became Laird of Auchinleck in Ayrshire and he died, a drunkard, May 19, 1795. A man apparently of no great ability, but with an insatiable interest in men and things, Boswell wrote in his *Life of Samuel Johnson* a supreme biography. He also wrote *Journal of a Tour to the Hebrides* and *An Account of Corsica*.

Bosworth Short name for the market town of Leicestershire known as Market Bosworth. The Battle of Bosworth was fought near here on Aug. 22, 1485, between Richard III and Henry Earl of Richmond. Lord Stanley led his men to the support of Henry, and Richard was defeated and slain, Henry becoming king as Henry VII. Dr Johnson was usher at the grammar school.

Botanic Garden Garden in which plants are grown for purposes of study and research. One was opened at Oxford in 1621, and the Society of Apothecaries started one at Chelsea later in the century. Botanic gardens were established in Edinburgh and Dublin, and by the authorities of Cambridge and Trinity College, Dublin. They already existed in Paris and elsewhere.

The Royal Botanic Gardens at Kew, which began as the private garden of the royal family, are world famous for their collection of plants, till 1932 the Royal Botanic Society of London had a garden in Regent's Park, founded in 1839.

Botany Study of plant life and one of the two subdivisions of the science of biology. Plant morphology deals with plant structures, physiology with the functions and living activities, ecology or plant geography with a plant's relations to its environment, while the study of fossil plants forms a section of palaeontology.

Early botanical science was concerned chiefly with the classification of plants and the study of external morphology, but with the advent of the compound microscope the minute structure of cells and tissues became revealed, and the study of microscopic plant life was rendered possible. Gradually the physiology of plants grew in importance owing to the increasing elaboration of technique and the aid of the sister sciences, chemistry and physics. In the classification of plants (systematic botany) the earliest attempts were very artificial. Linnaeus then introduced a more natural scheme which in turn has become superseded by systems based upon more recent research. The past history of plants has emerged since about 1880 from a chaotic state into a defined science of palaeobotany, and the relation of plants to economic uses forms the important subject of economic botany.

Botany Bay Inlet on the coast of New South Wales. First sighted by James Cook in 1770. Arthur Phillip went there in 1788 to found a penal colony but proceeded 15 m. farther north to

he became a regular contributor to *Fraser's Magazine* under his initials A K H B, and in 1859 published the first of his three volumes of papers entitled *Recreations of a Country Parson*, which enjoyed wide popularity. Another series, *Graver Thoughts of a Country Parson*, appeared between 1862 and 1875. He was moderator of the General Assembly in 1890, and died March 1, 1899.

Boyle Robert English scientist. The seventh son of the 1st Earl of Cork, he was born Jan 25, 1627. He was educated at Eton and after some years of foreign travel lived first at Stalbridge, Dorset but later removed to Oxford. There he carried out the series of experiments on the properties of air which resulted in his improved air pump and his formulation of the celebrated law now known by his name. Boyle's law is that "the volume of a given mass of gas at a given temperature is inversely proportional to its pressure." He belonged to the group of natural philosophers who, in 1663, became known as the Royal Society. In 1680 he was chosen president, but he declined the honour. Boyle was the first to recognise the true nature of an element and to distinguish between a compound and a mixture. He died Dec 30, 1691.

The Boyle Lectures delivered in the church of St Martin-in-the-Fields, London, are a course of eight sermons delivered each year in defence of Christianity. The money for them was left by Boyle.

Boyne River of Ireland. It rises in Co. Kildare and enters the Irish Sea just below Drogheda. It is about 80 m long, and on its banks are Trim and Navan.

In a famous battle fought here on July 1, 1690, William III defeated James II and his French allies. The battle decided the struggle between the two kings and since that day has been kept as a holiday in the N. of Ireland. An obelisk marks the site of the battle, which took place about 2 m from Drogheda.

Boys' Brigade Organisation for training boys. It was founded in Glasgow in 1883 by Sir William Smith. A religious organisation, it consists of companies formed in connection with churches and other Christian societies. The boys are drilled, but the brigade is not a military organisation. The Boys' Life Brigade, founded in 1899, is now united with it. The strength is over 100,000. The junior organisation which has about 50,000 members is known as the Life Boys. The headquarters are at Abbey House, Westminster, London, SW.

Boy Scouts Organisation for boys. It was founded by Sir Robert (later Lord) Baden Powell in 1903. The boys wear a distinctive dress and their motto is *Be Prepared*. Scouts are graded in three classes—wolf cubs, aged 8 to 11, scouts, aged 11 and upwards, and rover scouts, aged 17 and upwards. Each boy belongs to a patrol and a number of patrols form a troop. Scout masters are in command of the boys. Badges are given for proficiency in various handicrafts and other useful activities. The movement has spread all over the world and there are over 3,000,000 scouts. In 1929 a world jamboree was held at Birkenhead. The headquarters are at 25 Buckingham Palace Road, London SW 1.

Boz Pen name adopted by Charles Dickens. Under it he wrote a series of literary sketches for the *Morning Chronicle* (London), published afterwards in book form, as *Sketches by Boz* in 1836. The *Piccolini Papers* first

appeared under this pseudonym, which is a corruption of Moses, a name jokingly given to the novelist's youngest brother.

Brabant Name of a province in Belgium and one in the Netherlands. Both were once part of a dnohy which existed from about 1200 to 1430, when it became part of Burgundy. Later it was Spanish and it was divided when the Netherlands revolted against Spain in the 16th century. The northern part then became part of the Dutch Republic, but the southern part remained Spanish. It later became Austrian, and in 1830 was included in the new kingdom of Belgium. It is the district around Brussels. The eldest son of the King of the Belgians is called the Duke of Brabant. See LEOPOLD III.

Bracegirdle Anne English actress. She was born about 1674 and introduced to London by the Bettertons. In 1688 she played Lucia in Shadwell's *Squire of Alsatia* and was later successful in Congreve's plays. Her Shakespearean favourites were Isabella, Cordelia and Portia. A rivalry between her and Mrs. Oldfield led to her leaving the stage in 1707. She died in Sept., 1748, and was buried in Westminster Abbey.

Brachiopoda Group of marine animals. They resemble the ordinary bivalve molluscs in having two shelly valves which are however, always unequal. From their resemblance to ancient lamps, they have been termed lamp shells. The lower valve is the larger and is provided with a beak and an opening through which passes a stalk for attachment. Apart from living brachiopods, a large number of extinct species are found as fossils.

Bracken Species of fern (*Pteris aquilina*). Common in Britain, it is characterised by a creeping rootstock from which arise two ranks of leaves bearing on their margins linear groups of spore cases. When dried bracken is used as bedding material for cattle, and as a packing for storage of potatoes and other root crops.

Bract Term used in botany. The name is given to a point on a plant at which a flower or floral axis is produced instead of an ordinary leaf bud or branch. It is used to describe the bract proper, leading to a single flower.

Bracton Henry de (or Bratton) English lawyer called 'the father of English jurisprudence'. He took orders was for many years a clerk in the royal service and from 1215 until his death was regularly employed as a judge. He held various benefices and was successively Archdeacon of Barnstaple and Chancellor of the Diocese of Exeter. His *Treatise on the Laws and Customs of England*, though never finished, is one of the most valuable sources for the history of English legal institutions. He died in 1268.

Bradbury Colloquial name for the treasury notes for £1 and 10s, first issued in 1914. They were so called because they were signed by Sir John Bradbury (afterwards Lord Bradbury), then permanent Secretary to the Treasury.

Braddon Mary Elizabeth English novelist. She was born in London in 1837 and published her first novel *The Trail of the Serpent* at the age of 24. A year later appeared her most famous work *Lady Audley's Secret*. Her next, *Arctura Flaps*, was hardly less successful. During the rest of

her life she continued to produce novels with remarkable facility and success, though none attained the popularity of *Lady Audley's Secret* and *Aurora Floyd*. She married in 1874 John Maxwell, a publisher, and their son, W. B. Maxwell, is a novelist. She died Feb. 4, 1915.

Bradfield Village of Berkshire. It is 8 m. from Reading and is known for its public school, which owes much to the inspired work of Dr. H. B. Gray, who was head master from 1880-1910. In the grounds is a theatre on the Greek model, in which Greek plays are given. Another Bradfield is a village 7 m. from Sheffield.

Bradford City and county borough of Yorkshire. It stands on the Aire 9 m. from Leeds and 191 from London, on the L.M.S. and L.N.E. Rlys. It is also served by canals. The Church of St. Peter was made the cathedral when, in 1919, the city became the seat of a bishop. Bradford is the great centre of the woollen and worsted industry and in its industrial suburbs, such as Manningham, are large mills, dyeworks and other centres of activity. It has also engineering works. Pop. (1931) 298,041.

Bradford William, Leader of the Pilgrim Fathers. Of Yorkshire birth, he was born in 1580. Embracing Puritan opinions, he migrated to Holland and carried on business as a weaver at Leyden for some years. When the emigration of the English refugees to America was projected, he became one of its most active promoters and was one of the party that sailed in the *Mayflower*. From 1621 until his death, with only a few short intervals, he served as Governor of Plymouth Colony. He wrote a valuable *History of Plymouth Colony*. Bradford died May 9, 1657.

Bradford-on-Avon Urban district of Wiltshire. It stands on the Avon, 9 m. from Bath and 97 from London, on the G.W. Rly. It is famous for its church, one of the oldest Saxon churches in England. Pop. (1931) 4735.

Brading Village of the Isle of Wight. It is 4 m. from Ryde on the S. Rly. A Roman villa has been unearthed here. The village stocks and bull ring can still be seen. Pop. 1696.

Bradlaugh Charles, English free-thinker and politician. The son of a London solicitor's clerk, he was born Sept. 26, 1833. While working as a clerk, he came under the influence of a free-thought group and, owing to his opinions, was dismissed from his situation. Later he founded a free-thought journal *The National Reformer* which involved him in several conflicts with the law on account of his outspoken opinions. In carrying on *The National Reformer* he was associated with Annie Besant. Their publication of an American pamphlet on birth control entitled *The Fruits of Philosophy* resulted in a prosecution, and they were sentenced to a heavy fine and imprisonment, but the conviction was quashed on technical grounds.

At the general election of 1880 Bradlaugh was elected as a radical M.P. for Northampton. Thereupon followed a long and violent parliamentary struggle over his capacity as a professed atheist to take the oath and his seat, this lasted until 1886 when Bradlaugh triumphed. He remained M.P. for Northampton until his death Jan. 30, 1891.

Bradley James, English astronomer. He was born at Sherborne, Glos.,

in March, 1693, and was educated at Balliol College, Oxford, where he specialised in astronomical and physical studies. He took orders and was for a short time vicar of Bristow, but resigned his living on being appointed Savilian Professor of Astronomy at Oxford in 1721. In 1742 he succeeded Halley as Astronomer Royal. His great contributions to science are his discoveries of the aberration of light. He died July 13, 1762.

Bradman Donald George, Australian cricketer. Born at Oortamundra, New South Wales, Aug. 27, 1908, he was educated there and became famous as a cricketer. Having played for the state, he was chosen to play for Australia in 1928 against the English team. His scoring powers placed him in the front rank of batsmen, and he more than maintained his high reputation when he visited England in 1930 as a member of the Australian team. In the test match at Leeds he scored 334 runs, a record for these matches, and he finished the tour with the remarkable average of 98.66.

Bradshaw George, English printer and publisher, and founder of *Bradshaw's Railway Guide*. He was born at Pendleton, Lancashire, July 29, 1801, of Quaker parentage, and carried on business in Manchester as an engraver and printer. The publication that has converted his name into a household word was first issued as *Bradshaw's Railway Time-Tables* in 1839. Next year the title was changed to *Bradshaw's Railway Companion*, and in 1840 it began to be issued at regular monthly intervals as *Bradshaw's Railway Guide*. The *Continental Bradshaw* was established in 1847. He died Sept. 6, 1853.

Bradshaw John, English lawyer. A native of Cheshire, he became a barrister in 1627. In 1647 he was appointed Chief Justice of Chester, and in 1649 was chosen to preside over the court that tried Charles I. His services were rewarded by his appointment as Attorney General of Chester and N. Wales, and Chancellor of the Duchy of Lancaster. He was President of the Council of State, 1649-52, but soon became estranged from Cromwell, whom he suspected of aiming at the crown. He was M.P. for Stafford in 1654, was again in Parliament in 1659, and died Oct. 31, 1659. In 1660, having been attainted, his body was hanged at Tyburn.

Braemar Village and pleasure resort of Aberdeenshire. It is 18 m. from Ballater, on the Dee. The district round the village is also called Braemar. It is famed for its scenery and is in a region of deer forests. Balmoral and Abergeldie castles, Mar Lodge and other residences are in the neighbourhood. A Highland gathering is held here every year.

Braganza Name of the family that, with short intervals, ruled in Portugal from 1640 to 1911 and in Brazil from 1822 to 1889. Braganza is a small city near the Spanish frontier, and in 1442 Alphonso, a natural son of John I., King of Portugal, was made its duke. In 1530 one of his descendants claimed the throne, and in 1640 another became king. Members of the family retained the crown which in 1831 passed to a woman, Maria. She married a German prince, Ferdinand of Saxe-Coburg, so the descendants of this union, who include Manuel, king until 1911, are only Braganzas in the female line. A member of the family, Pedro, was made Emperor of Brazil in 1822, but his successor was driven out in 1889.

Bragg Sir William Henry English scientist. Born at Wigton, Cumberland, July 2, 1862, he was educated at King William's College, Isle of Man, and Trinity College, Cambridge. Having been third wrangler, he was Professor of Physics at Adelaide, 1886-1898, at Leeds 1899-15, and in London 1915-23. In 1923 he was appointed Fullerian Professor of Chemistry at the Royal Institution, and Director of the Davy Faraday Research Laboratory. His work in physical chemistry has been concerned with the study of the minute structure of crystals, radio activity and X rays. In this he has been assisted by his son, William Lawrence Bragg, a Fellow of Trinity College, Cambridge, who in 1919 was appointed Professor of Physics at Manchester. Both have received many honours, including the F.R.S., and in 1915 jointly a Nobel prize. Sir W. H. Bragg was knighted in 1920, awarded the Order of Merit in 1931 and the Faraday Medal in 1936.

Brahe Tycho Danish astronomer. Born of good family, Dec. 14, 1546, he studied first at Copenhagen and then successively at Wittenberg, Rostock and Augsburg. After a period of astronomical observation in Denmark, he travelled abroad and intended to settle at Basel. At the invitation of Frederick II, however, he returned to Denmark to establish an observatory on the Island of Hven in the Sound, and the royal favour secured him an ample income. Frederick's successor, Christian IV, was less well disposed to Tycho and withdrew his pension.

A new patron was soon forthcoming in the Emperor Rudolf II, who, in 1599, induced him to migrate to Prague, where he had as colleague the celebrated Kepler. It was Kepler who edited Tycho's principal work, *Astronomiæ Instauratiæ Mechanica*, published posthumously in 1602. Tycho propounded a scheme of the solar system which was an attempt to compromise between the Ptolemaic and Copernican systems. His chief services to astronomy were his improvements in the art of observation and his compilation of a catalogue of fixed stars, later extended and corrected by Kepler. He died at Prague Oct. 24, 1601. In 1931 a museum to commemorate Brahe was opened on the Swedish island of Ven.

Brahma Showy fluffy domestic fowl. It was produced in America by crossing two Asiatic breeds and won popularity as a table bird, and a good layer, but over cultivation of its decorative appearance caused its deterioration for practical purposes.

Brahma Hindu deity. He is the supreme soul, all embracing divine essence, source and goal of existence, self created from his own thought. To make Brahma more comprehensible sages invented myths of his generation from a golden egg or a lotus. In art he is represented as four headed, and four armed, riding a goose or swan.

Brahmanism Hindu religion. It is a modification of Vedism which arose about 1000 B.C. Its scriptures comprise four sacred inspired books, viz. the *Rigveda*, *Sāmaveda*, *Yajurveda* and *Atharvaveda*. Each has attached to it prose writings called *Brāhmanas*, explaining ceremonial application of sacred texts. To these are appended discourses, called *Araṇyakas* and *Upanishads*, on the nature of Brahma and the Cosmos.

In the Upanishads Brahma is variously declared to be (1) An absolute impersonal being (2) A divine all pervading essence

(3) A personal God, creator of life. The un-inspired books contain the code of Manu, regulating the way of holiness for believers. Brahmanism, by its insistence on faultless ceremonial, exalted the priesthood almost to divinity, by its doctrine of re-birth and desire for progress it encouraged caste distinction. It aimed, in individuals, at the extinction of carnal desire, so that the soul might more swiftly be reabsorbed in the infinite spirit.

Brahmaputra River of India. Its main source is in a glacier in Tibet, 16,000 ft. high. It flows east for 1000 m. then, called the Dihong, traverses the Assam valley for 450 m. After passing through the Rangpur district, it flows south until it reaches the main Ganges stream at Goalanda and enters the sea through the Meghna estuary. It is partly navigable, but its chief value is for irrigating the plains where rice, jute and mustard grow. Its total length is 1800 m.

Brahms Johannes German composer. He was born in Hamburg, May 7, 1833, and in 1853, on tour as a pianist, impressed both Joachim and Schumann with his genius. Steady devotion to his gift was repaid in creative ability, which, combining philosophy with romanticism, produced masterpieces worthy to succeed those of Beethoven. Brahms never attempted opera, but excelled in all other forms of music. He died April 3, 1897, in Vienna.

Braila Town and river port of Rumania. It stands on the left bank of the Danube, just over 100 m. from its mouth in the Black Sea. With a good harbour and extensive docks, the port can be used by large vessels. It is also connected with Bucharest, 100 m. away, and other places by rail. The town has some manufactures, but its chief industry is shipping as much of the merchandise of Rumania including great quantities of grain, pass through it. The pop. of 68,310 includes many Greeks.

Braille System System of embossed characters for enabling the blind to read by touch. Something of the kind has been in use since the 16th century. The earlier types were for the most part simplified forms of roman capitals, but in 1824 Louis Braille, a professor at the Institution Nationale des Jeunes Aveugles in Paris, perfected the 'point' system which bears his name and is now the most generally used. The Braille system is based on six points arranged in an oblong containing two horizontal and three vertical lines thus. Each letter of the alphabet is represented by a combination of dots embossed on one or more of the points.

Brain Chief centre of the nervous system of the higher animals. It is contained within the skull or cranium. The brain substance, like the spinal cord, consists of grey and white matter, the grey matter forming a thin superficial layer or cortex the whole organ being covered by three membranes, an inner *pia mater*, a middle *arachnoid* layer and an outer tough *dura mater*. The brain of the mammals is divided into the cerebral hemispheres or cerebrum, in front, and on top the pons, cerebellum and *medulla oblongata*, the last being continuous with the spinal cord and from these arise twelve pairs of nerves to the head and body.

The weight of the brain of an average man is 49½ oz., that of a woman is 44 oz.

Braintree Market town and urban district of Essex, on the Blackwater, 45 m from London, on the L N E Rly. The chief industry is the making of artificial silk at the mills of Messrs Courtald. Brewing is carried on. Pop (1931) 8912

Brake Mechanism for slowing down or stopping a machine or vehicle. This is done by the action of a block, or shoe, held in close contact with the rim of a wheel by means of levers, or by the action of a flexible band upon a wheel or driving shaft. In some forms the band is pressed against the inner surface of a drum upon the shaft. Vacuum brakes are used for railway carriages, this type being continuous in action and under the control of the guard or engine driver. While a vacuum is maintained the brakes are free, but upon lowering the vacuum the brake shoes are brought into contact with the wheels.

Bramah Joseph. English inventor. He was born at Stainborough, Yorkshire, April 2, 1749. While a young man he went to London and worked as a cabinet maker, but soon showed a marked genius for mechanical invention. In 1784 he patented the famous Bramah Lock, and in 1795 invented the hydraulic press. Among his other inventions is the beer engine for drawing beer, and he appears to have been the first to suggest the idea of screw propulsion for steamships. He died in London, Dec 9, 1814.

Bramante Donato. Italian artist. Born in 1444 he lived for some years at Milan, where he studied the arts, especially architecture. About 1500 he went to Rome where his work brought him to the notice of Pope Alexander VI. He designed some buildings at the Vatican for Julius II and was commissioned to prepare the plan for St Peter's, on the rebuilding of which he was working when he died, March 11, 1514.

Bramble (*Rubus fruticosus*). Plant of the rose family of which there are many species. The stems are thick and fleshy and covered with thorns, prickles and hairy bristles. The bushes are of partially erect growth but the long stems frequently bend and re-root themselves in the soil, thus producing fresh plants. The commonest British variety is the blackberry (*q.v.*)

Brambling Small bird allied to the chaffinch. A native of Scandinavia, Lapland and Siberia, it is only a visitor to Great Britain in winter. It is sometimes called the mountain finch.

Bramley Frank. English artist. Born in Lincolnshire, May 6, 1857, he studied in Antwerp and Paris. In 1884 his first painting was accepted by the Academy. In 1894 he was elected A.R.A. and in 1911 R.A. He died Aug. 10, 1915. Bramley's most famous picture is "The Hopeless Dawn" in the Tate Gallery, London.

Brampton Baron. English judge. Born Sept 14, 1817, Henry Hawkins was the son of a solicitor at Hitchin. Educated at Bedford, and in 1843 called to the bar, he rapidly obtained a good junior practice and in 1859 took silk. He was a masterly advocate, excelling in the art of cross examination. Among the many *causes célèbres* in which he was employed was the Tichborne case. Made a judge in 1876 he gained the reputation of being a hanging judge of the old school, but his knowledge of the criminal law and the ability with which he administered it were

beyond question great. He retired in 1898 and was raised to the peerage as Baron Brampton. All his life Lord Brampton was a keen sportsman and was, for many years, standing counsel to the Jockey Club. He died Oct 6, 1907, when his title became extinct.

Bran By-product of grain. It is obtained from the outer husk of the corn when it is ground, and is used in making brown bread. It is also a valuable feeding stuff for cattle and poultry and, besides being used in medicine, is employed in some manufacturing processes for clearing liquids.

Brand Sir Jan Hendrik. President of the Orange Free State. The son of Sir H. C. Brand, Speaker of the Cape House of Assembly, he was born Dec 6, 1823. He studied law and practised at the Cape bar until 1863, when he was elected President of the Orange Free State, an office which he held until his death. Under his administration the Free State twice engaged in war with the Basutos. He was invited to become President of the Transvaal and thus unite the two Dutch republics, but declined to be a party to a manoeuvre which he regarded as hostile to Great Britain. He was knighted in 1882 and died July 14, 1888.

Brandenburg District of Germany. It is the region around Berlin and is in a sense the nucleus of the republic. It became a separate state about 1130 and in 1356 its ruler, then a margrave, was made an elector. In 1415 a member of the Hohenzollern family became elector, and under his descendants the land grew steadily in size and importance. In 1701 the elector was made King of Prussia and since then Brandenburg has been a Prussian province, covering about 15,072 sq m. See PRUSSIA.

The city of Brandenburg is on the Havel about 36 m from Berlin. It has some old buildings, including the cathedral and the town hall, and also some fine modern structures. The cathedral town, one of its three parts, is on an island in the Havel. Pop 50,297.

Brandes Georg Morris Cohen. Danish writer. Born Feb 4, 1842, he studied at the University of Copenhagen and in 1862 won the university gold medal for an essay on "The Nemesis Idea among the Ancients". His first important work was a volume of essays on the Danish poets entitled *Aesthetic Studies* (1868), and within the next few years he established his reputation as one of the leading critics of Europe. His greatest book is *Main Currents of Nineteenth Century Literature*. Later works include monographs on *Disraeli* (1878), *Ibsen* (1899), and his great *Study of Shakespeare* (1897-98), which was translated into English by William Archer. His later works, like others translated into English, include *The Life of Goethe* and *The Jesus Myth*. He died Feb 19, 1927.

Brandon Market town of Suffolk. It is on the Little Ouse, 7 m from Thetford, on the L N E Rly. It is the one place in England where the old industry of flint knapping is carried on. Pop 2462.

Near is Brandon Park, a seat of the Duchesses of Montrose and formerly of the Dukes of Hamilton. The title Duke of Brandon was given in 1711 to the 4th Duke of Hamilton and has since been held by his successors in the title.

Brandy Distilled wine, or distilled and fermented fresh grape juice.

Brandy, originally colourless, becomes brown and golden from caramel and storage in oak casks. The average alcoholic proportion is 53 per cent. Old brandy, containing less alcohol, is better as medicine. The best comes from Cognac, in Charente, France. Liqueur brandy is first-class brandy, old and well matured. In Great Britain there is a duty of £3 15s 4d per proof gallon on all brandy imported.

Brandywine Tributary of the Delaware River. It is celebrated as the scene of the victory of Sir William Howe over the American colonists under Washington on Sept. 11, 1777.

Brangwyn Frank English painter. Born May 12, 1867, his earliest artistic experience was gained in Bruges and in his father's establishment for making church embroideries and decoration. Work in England with William Morris stimulated his craftsmanship and a visit to the East imbued him with the love of rich colour which distinguishes his painting. He was elected A.R.A. in 1904 and R.A. in 1919. Examples of his work are in many of the museums of Europe, and his frescoes in the Royal Exchange, London.

Branksome District of Poole. On the S. Rly., it is famous for its oyster, said to be the finest on the south coast.

Brantford City of Ontario. It stands on the Grand River, about 55 m. from Toronto. It is on the main line of the C.N.R., and has important manufactures. A canal connects it with Lake Erie 30 m. distant. The city is named after Joseph Brant (1742-1807), the Mohawk chief. Pop. 30,107.

Brantôme Pierre de Bourdailles. French author. Born about 1540, a younger son of the Baron de Bourdailles, he was intended for the church and held several benefices but preferred a soldier's life and saw a good deal of active service. He was in the suite of Mary Stuart when she left France for Scotland. He also visited England, Spain, Portugal and Morocco. In 1580 he retired into private life and amused himself by composing his memoirs of *Hommes Illustres* and *Dames Galantes*. Brantôme's adventurous life and distinguished social connections render his work one of the most important sources for the secret history of the 16th century. He died July 15, 1614.

Brasenose College of Oxford University. Founded in 1500 by the Bishop of Lincoln and Sir Richard Sutton, it has a direct connection with Brasenose Hall, which existed prior to 1260. The name is said to derive from an old brass knocker, in the shape of a nose.

Brass Yellow alloy of copper and zinc in varying proportions with some times small quantities of lead, tin or iron added for special purposes. An excess of zinc renders the alloy less ductile and tenacious, while iron increases its hardness and tonicity. Brass is very malleable, fusible, ductile and readily cast and machined.

Muntz or yellow metal is a variety of brass containing 80 per cent. of copper. It is stronger than ordinary brass and can be worked and rolled while hot. As it resists corrosion well it has been employed for sheathing ships, but now is used largely for propellers, bows and trays. The hardest of the brass alloys is

Sterro metal, an alloy containing in addition to copper and zinc, both iron and tin.

Brass Memorial to the dead. Early in the 13th century engraved metal began to take the place of carved stone in sepulchral memorials and continued in general use for over 300 years. They were made of sheet brass (*latten*) let into the church pavement, and thus had the advantage of causing no obstruction. In addition to their high artistic merit, monumental brasses are of great value to the historian as family records and for the details of contemporary costume and armour.

Brassey Thomas English contractor. Born in Cheshire Nov. 7, 1805, he became a surveyor and was in business in Birkenhead. Soon he undertook a contract for railway work and in a few years was at the head of a great undertaking which carried out contracts in all parts of the world. He died Dec. 8, 1870.

Brassey's eldest son Thomas Brassey, was born Feb. 11, 1836, and educated at Oxford. He is known as the founder of *The Naval Annual*, and the owner of the yacht *Sunbeam*. He also wrote *Work and Wages* and other books. From 1865 to 1886 he was a Liberal M.P. and took a special interest in naval questions. He was Governor of Victoria, 1895-1900, and he died Feb. 23, 1918. In 1880 Brassey was made a knight, in 1886 a baron, and in 1911 an earl. In 1860 he married Anna Allnutt (d. 1887) author of *A Voyage in the Sunbeam*, and in 1890 Sybil de Vere daughter of Viscount Malden. His titles passed to his only son, Thomas Allnutt Brassey, but became extinct when he died Nov. 11, 1919.

Bratislava City and river port of Czechoslovakia. It was formerly in Hungary and was called Pressburg, the Magyars called it Pozsony. It stands on the Danube, about 50 m. from Vienna, and is the centre of a considerable trade by rail and river. There are also some manufactures. The cathedral is a Gothic edifice. The castle on the Schlossberg is in ruins. Pressburg was the capital of Hungary from 1541 to 1784. In 1919 it was given to Czechoslovakia. Here is a Slovak university founded in 1919, and the city has an important broadcasting station. Pop. (1930) 123,852.

Braxy Disease of sheep. The victims are usually about a year old and contract the ailment in the autumn. Very few recover. It is believed that the disease is caused by alteration from a poor to a very rich diet. Whilst cure is almost hopeless, braxy can be prevented by careful regulation of diet.

Bray Seaport and watering place in County Wicklow, Irish Free State. It is 12 m. S.E. of Dublin and has a few small industries, but depends mainly on its attractions as a holiday resort for the inhabitants of Dublin. Pop. (1926), 5,639.

Bray Town of Berkshire. On the right bank of the Thames, near Maidenhead, its name is celebrated owing to the ballad of *The Vicar of Bray*. The identity of the accommodating vicar is uncertain. The dates of the song indicate Francis Carswell vicar from 1687 to 1709, but there appears to have been an earlier incumbent, Simon Aley, vicar from 1540 to 1585, whose principles were equally elastic. Pop. 3,400.

Brazil Republic of S. America, the largest country of the continent.

Covering 3,275,510 sq. m. It is bounded on two sides by the Atlantic Ocean and elsewhere by other republics. On the whole it is a level and fertile area, but has vast forests and tracts as yet almost unknown. The Amazon is the chief river, others are the Madeira and the Parana. Rio de Janeiro is the capital and the largest place. Other cities are Sao Paulo, Sao Salvador (Bahia), Recife, Belom and Porto Alegre. The population is estimated at (1931), 41,477,827, mostly in the coastal provinces. There are about 100,000 Indians, and colonies of Italians, Portuguese and Spaniards.

The chief products are coffee and rubber. Maize, wheat and other foodstuffs are grown, as well as cotton, tobacco and other tropical products. There are some manufactures. The forests are an important source of wealth and the country is rich in minerals, especially manganese, gold and iron.

HISTORY—Since 1889 Brazil has been a republic. Previously it was an empire from 1822, and before that date a possession of Portugal, a Portuguese sailor having discovered it in 1500. It is a federal republic with a constitution not unlike that of the United States. There is a president elected for four years and a national congress of two houses. The chamber of deputies consists of 212 members elected for three years, the senate of 63 members, three for each of the 20 provinces and three for the Federal district. There is a federal court of justice at Rio. The country has an army recruited by compulsory service and a small navy. In 1926 the currency was reformed, a new unit, the cruzeiro, being introduced. The milreis, which had fallen heavily, was stabilised at nearly 60. The metric system of weights and measures is used. Until 1926 Brazil was a member of the League of Nations.

In 1930 there was serious trouble in the republic and a dictatorship was established. This lasted until 1932 when there was a return to normal forms of government. An economic crisis, caused by the poor prices paid for the coffee crop, followed and in 1931 the country suspended payment of the interest on its foreign loans.

Brazil Nut Seed of *Bernolleia excelsa*, a tree of the order *Lecythidaceae*. This flourishes in tropical America. Each fruit yields about 20 seeds, triangular in form and with a hard woody cover. Brazil nuts are not only edible in their natural state, but yield a fine cooking oil, which is also used by painters and watchmakers.

Brazil Wood Term applied to several woods of the order *Leguminosae*. The colouring matter extracted from it is called brazilin. It yields various tints of deep red. It is used to some extent in calico printing, but chiefly to form lakes for tinting papers.

Breach of Promise Failure to fulfil an engagement of marriage. By the common law of England an action in contract lies for the refusal or failure of either party to fulfil a promise of marriage. For obvious reasons it is usually the woman who is plaintiff, but cases of male plaintiffs are on record. It is the only action in contract where exemplary damages may be awarded, and then only when the breach of promise has been aggravated by seduction. A promise to marry given by a person who, to the knowledge of the other party, is married is void as against public policy, and no action will lie if, on becoming free to marry, the promiser refuses to fulfil it.

Bread One of man's chief foods. Any cereal ground to a flour, made into a paste or dough with water, and then baked, is in the broadest sense bread, but the term is particularly applied to a wheaton flour product of the kind which has been subject to fermentation by means of an enzyme, such as yeast. As bread is a basic food its manufacture and sale are strictly regulated by law. In Great Britain the Sale of Food and Drugs Acts prescribe the materials which may be lawfully employed in its manufacture and prohibit its sale otherwise than by avoirdupois weight. Formerly baked in almost every household, bread is now produced on a large scale by bakers, the processes, including paper packing, being carried out by machinery. See **BAKEHOUSE**.

Breadalbane District of Perthshire. It includes some of the Grampians, the lochs of Taw, Rannoch, and others, and part of the course of the Tay.

The title of Earl of Breadalbane was given to Sir John Campbell in 1677. In 1831 a later earl was made a marquess. This title became extinct in 1862, but the earldom passed to a kinsman, Gavin Campbell, who, in 1885, was made a marquess. He died in 1923. The earl's eldest son is called Lord Glenorchy.

Bread Fruit Tropical fruit used as an article of food in Polynesia. It is the product of *artocarpus incisa*, a tree allied to the fig. The fruit is of the size of a melon, and has a whitish pulp of the texture of new bread. It is roasted before being eaten.

Bread Tree Small evergreen tree, a native of Guiana. It is of the natural order *cinchonaceae*. Its flowers, which are cream coloured and tubular, grow out from the ends of its branches. It has opposite oblong leaves and bears edible fruits.

Breakspear, Nicholas See **ADRIAN**.

Breakwater Engineering device for creating an artificial harbour, or improving an imperfect natural harbour. It consists of a solid stone structure, sometimes called a mole, driven out from the land into the sea and shaped in such a manner as to protect the harbourage from the main beat of the waves during the worst storms to which the particular coast is exposed. Hence for the construction of an efficient breakwater prolonged and careful study of the tides and prevailing winds is an essential preliminary.

Bream Fresh water fish. It is found in slow running streams, canals and ponds. There are two British species, the common bream (*abramis brama*) and the white bream (*abramis blicca*). The former is often of considerable size, specimens of 12 lb. weight being not uncommon.

Breast In man and other animals the fore part of the body between the neck and the abdomen. Cuts of meat from this part of the sheep or the calf are called the breast. The breast bone, called the sternum, is in the front of the chest in man and other vertebrate animals. It is in three parts. If sometimes, owing to disease (usually rickets), it is unduly prominent, the person is said to be pigeon breasted.

In woman the mammary glands are called the breasts. Those, which secrete the milk, vary in size and shape, according to age and

Brandy, originally colourless, becomes brown and golden from caramel and storage in oak casks. The average alcoholic proportion is 59 per cent. Old brandy, containing less alcohol, is better as medicine. The best comes from Cognac, in Charente, France. Liqueur brandy is first class brandy, old and well matured. In Great Britain there is a duty of 53 15s 4d per proof gallon on all brandy imported.

Brandywine Tributary of the Delaware River. It is celebrated as the scene of the victory of Sir William Howe over the American colonists under Washington on Sept 11, 1777.

Brangwyn Frank English painter. Born May 12, 1867, his earliest artistic experience was gained in Bruges and in his father's establishment for making church embroideries and decoration. Work in England with William Morris stimulated his craftsmanship and a visit to the East imbued him with the love of rich colour which distinguishes his painting. He was elected A.R.A. in 1904 and R.A. in 1919. Examples of his work are in many of the museums of Europe, and his frescoes in the Royal Exchange London.

Branksome District of Poole. On the S. Ry., it is famous for its oysters, said to be the finest on the south coast.

Brantford City of Ontario. It stands on the Grand River, about 55 m from Toronto. It is on the main line of the C.N.R. and has important manufactures. A canal connects it with Lake Erie, 30 m distant. The city is named after Joseph Brant (1742-1807) the Mohawk chief. Pop 30,107.

Brantôme Pierre de Bourdailles French author. Born about 1540, a younger son of the Baron de Bourdailles, he was intended for the church and held several benefices, but preferred a soldier's life, and saw a good deal of active service. He was in the suite of Mary Stuart when she left France for Scotland. He also visited England, Spain, Portugal and Morocco. Breadalbane District of Perthshire. It includes some of the Gramplians, the lochs of Tay, Rannoch, and others, and part of the course of the Tay.

The title of Earl of Breadalbane was given to Sir John Campbell in 1677. In 1831 a later earl was made a marquess. This title became extinct in 1862, but the earldom passed to a kinsman, Gavin Campbell, who in 1885, was made a marquess. He died in 1923. The earl's eldest son is called Lord Glenorchy.

Bread Fruit Tropical fruit used as an article of food in Polynesia. It is the product of *Artocarpus incisa*, a tree allied to the fig. The fruit is of the size of a melon, and has a whitish pulp of the texture of now bread. It is roasted before being eaten.

Bread Tree Small evergreen tree, a native of Guiana. It is of the natural order *cinchonaceae*. Its flowers, which are cream coloured and tubular, grow out from the ends of its branches. It has opposite oblong leaves and bears edible fruits.

Breakspear, Nicholas See **ADRIAN**.

Breakwater Engineering device for creating an artificial harbour, or improving an imperfect natural harbour. It consists of a solid stone structure, sometimes called a mole, driven out from the land into the sea and shaped in such a manner as to protect the harbourage from the main beat of the waves during the worst storms to which the particular coast is exposed. Hence for the construction of an efficient breakwater prolonged and careful study of the tides and prevailing winds is an essential preliminary.

Bream Fresh water fish. It is found in slow-running streams, canals and ponds. There are two British species, the common bream (*abramis brama*) and the white bream (*abramis albea*). The former is often of considerable size, specimens of 12 lb. weight being not uncommon.

Breast In man and other animals the fore part of the body between the neck and the abdomen. Cuts of meat from this part of the sheep or the calf are called the breast. The breast bone, called the sternum, is in the front of the chest in man and other vertebrate animals. It is in three parts. If sometimes, owing to disease (usually rickets), it is unduly prominent, the person is said to be pigeon breasted.

In woman the mammary glands are called the breasts. These, which secrete the milk, vary in size and shape, according to age and

race, among civilised peoples the breast is very subject to cancer

Brechin Burgh and market town of Angus (Forfarshire) It is 9 m from Montrose, on the LMS Rly, and has some manufactures It has a cathedral and its bishop is the Primus of Scotland There is also a round tower Brechin Castle is a seat of the Earl of Dalhousie Pop (1931) 6838

Breckland District near Thetford, Norfolk After the Great War the land was bought by the state and trees were planted, thus making it into a large forest which is supervised by the Forestry Commission

Brecknockshire Inland county of South Wales It covers 732 sq m, and is a mountainous area with some beautiful scenery The highest point is Pen y Fawr (nearly 3000 ft) The chief rivers are the Wye and the Usk Brecon is the county town, others are Builth Wells and Crickhowell The LMS and GWR Rlys serve the county also the Brecon and Ahergavenny canal With Radnorshire it sends a member to Parliament The former Breconshire is sometimes used It is an agricultural area Pop (1931) 57,771

Brecon City and market town of Brecknockshire, also the county town Sometimes called Brecknock, it stands on the Usk, 35 m from Cardiff and 1621 m from London, on the GWR Rly The chief building is the church of St John now the cathedral of the diocese of Swansea and Brecon There is an old bridge over the Usk, also remains of the castle Christ's College, a public school for boys, dates from 1511, and has a 13th century chapel Pop (1931) 6334

Breda Town of the Netherlands In North Brabant, it is situated at the confluence of the Merk and the Aa and is 59 m from Flushing Breda is a railway junction and has some manufacturing industries The town figured prominently in the struggle of the Dutch against the domination of Spain It was here that Charles II resided during his exile and conducted the negotiations that led up to the Restoration

The statement of the terms on which Charles accepted the crown of England in 1660 is known as the Declaration of Breda In 1667 a peace treaty between Great Britain and the Netherlands was signed at Breda Pop (1932) 45,464

Breechloader Gun fired from the breech end Until well into the 19th century all firearms, both cannon and small arms, were loaded with powder and ball from the muzzle a process which made rapid fire impossible As early as the 17th century various attempts were made to devise a musket that could be loaded from the breech of the barrel but not until 1836 was a satisfactory breechloader invented by the French gunmaker Lefaucheur The problem of a breechloading piece of ordnance or big gun was more complicated, the difficulty being to devise a breech furniture, or shutter, strong enough to resist the explosion of the charge The first big gun on the breech loading principle was made in 1858

Breeding Rearing of cattle or livestock by crossing different varieties or strains so as to improve existing breeds or produce new varieties An instance of scientific breeding is seen in the crossing of various breeds of sheep to improve the quality of the

wool In Australia a number of varieties of the merino sheep have been produced, suited for different soils and climatic conditions, each variety having its own characteristic type of wool Further, by crossing the merino with various British breeds in New Zealand not only an improved fleece has been obtained, but also varieties suitable for producing mutton as well as wool Just attention is paid to the breeding of racehorses and sporting dogs The breeding of human beings is part of the science of eugenics (q v)

Bremen State of Germany It includes the city of Bremen, the port of Bremerhaven and some other districts, altogether covering 100 sq m It belongs to the German republic, and before 1918 was a state of the German Empire Its affairs are managed by a senate of 12 members, two of whom are burgomasters They are chosen by the house of burgesses, which has 120 members elected by all citizens Pop 338,850

Bremen City and seaport of Germany It stands on the Weser, about 41 m from its mouth and 80 m from Hamburg On the right bank of the river is the old town with buildings dating from the time when the city was one of Europe's greatest markets and ports The cathedral is the chief of several old churches and the town hall has some remarkable features Bremen has an extensive and varied trade and from here vessels go to all parts of the world As a port it is the largest in Germany, save only Hamburg There are three good harbours and the river has been deepened so that the largest vessels can traverse it Shipbuilding is a large industry and there are some manufactures Pop 295,000

Bremen Name of a German liner Launched in 1928 by the North German Lloyd Co, the vessel made in July, 1929 a record passage across the Atlantic, Europe to New York, which stood as a record until beaten by the Europa in 1930 The ship displaces 49,800 tons Another Bremen was a German cruiser that was sunk in the Baltic by a British submarine in Dec, 1915

Brendon Hills Range of limestone hills in Somerset They are about 6 m south of Watchet and attain a height of about 1490 ft.

Brentford County and market town of Middlesex Since 1927 part of the urban district of Brentford and Chiswick, it stands where the Brent flows into the Thames, 7 m from London on the GWR and SRlys A handsome stone bridge and a ferry connect it with Kew It is also served by the Grand Union Canal Brewing is a leading industry Brentford was once capital of the kingdom of the middle Saxons Pop (1931) 62,617

Brentford Viscount English politician William Hicks, a son of Henry Hicks was born in Kent June 23 1865 He became a solicitor and, having married the daughter of R H Joynton of Bowdon, took the name of Joynton Hicks After two unsuccessful efforts to enter Parliament as a Conservative he defeated Mr Winston Churchill at NW Manchester in 1908 lost his seat in 1910, was returned for Brentford in 1911 and represented Twickenham from 1918 till his elevation to the peerage

Joynton Hicks was Parliamentary Secretary to the Overseas Trade Dept. in the Lloyd

George administration (1918-20), and was created a baronet in 1919. In the first Baldwin administration (1922-23) he was successively Postmaster-General, Financial Secretary to the Treasury and Minister of Health. Throughout the second Baldwin ministry (1924-1929) he was Home Secretary, and on going out of office was raised to the peerage as Viscount Brentford of Newick. As a recognised lay leader of the evangelical party in the Church of England he was instrumental in procuring the rejection by Parliament of the revised Prayer Book. He died June 8, 1932.

Brent Goose (*Bernicla brenta*) Variety of barnacle goose (*q.v.*) Except that it feeds by day, it is practically indistinguishable from the ordinary barnacle goose (*B. leucopsis*).

Brentwood Urban district of Essex. It is 11 m. from Chelmsford and 18 m. from London, on the L.N.E.R. Its grammar school was founded in 1537. The county lunatic asylum is here. Pop. (1931) 7209.

Breslau City and river port of Germany, and capital of Silesia. It stands on the Oder, 224 m. from Berlin and is a great railway centre. It is also served by a network of canals, while there is much traffic along the Oder. The city stands on both sides of the river, the old town being on the left bank. The chief buildings are the cathedral, the town hall, both restored in the 19th century, and the modern palace, once a residence of the Kaiser. Notable churches are S. Mary Magdalene, the Holy Cross and the Minster. The city has a university and an observatory.

Breslau stands in a district of coal and ironstone mines and its manufactures are chiefly machinery, railway stock and other iron and steel goods. There is much trade in coal, iron, timber and other commodities, and the city is the commercial and intellectual centre of a populous area. Pop. 599,770.

Brest Seaport of France. It is on the coast of Brittany, 155 m. from Rennes, and is an important naval station. The harbour is formed by the river Penfeld. There are shipbuilding yards, barracks, workshops, store rooms and other buildings for naval work, and a naval school of the Ministry of Marine. There is a separate harbour for the mercantile shipping and fishing craft, and there are some manufactures. The chief building is the old castle. Pop. 69,841.

Brest Roads is a bay off the port. About 14 m. long, a channel called the Goult connects it with the Atlantic.

Brest-Litovsk City of Poland. Situated on the Bug at its confluence with the Muchavetz, it is an industrial centre, a railway junction and served by canals. The buildings include the cathedral. Pop. 29,100.

Brest-Litovsk was formerly an important fortress of Russian Poland and a key position in the Russo-German conflict of the World War. It was the objective of the third phase of Mackensen's great offensive in 1915, which, though partially successful, failed in its purpose of enveloping and destroying the Russian forces.

After the second (or Bolshevik) Russian Revolution of 1917, Brest-Litovsk was the scene of the protracted peace negotiations between the Central Powers, Soviet Russia and the Ukrainian Republic. A peace treaty with the latter was signed on Feb. 9, 1918.

The peace with Soviet Russia was signed on March 3, 1918, but its terms were not carried out owing to the defeat of Germany and Turkey at the end of the year.

Breton Language of Lower Brittany. A Celtic language, allied to Cornish and Welsh, it is one of the Indo-European group. Since its grammar and idiomatic structure are regular, it is not a patois. Breton literature is best exemplified in the old ballads of the story tellers, as, until comparatively recent times, French was the aristocratic and Breton the popular language. The recent growth of national feeling has, however, done much to arouse a literary interest in Breton.

Breve Longest note in modern music. It equals two semi breves, but is rarely found outside church music. The name is derived from Latin, *brevis*, short, the breve being only a short note in ancient notation.

Brevet Originally a papal indulgence. It is most generally known, however, as the commission by which an officer of the British Army is granted an honorary rank higher than his substantive rank. Thus a captain may be given the brevet rank of major, a major may become brevet lieutenant-colonel, and a lieutenant-colonel a brevet colonel.

Breviary Book containing the daily office of the Roman Catholic church. It includes lessons, psalms and hymns for every day of the year. The English Book of Common Prayer is based on the Roman breviary. The latter, however, does not include the eucharistic and other sacramental and special services.

Brewing Process by which various substances are fermented to produce an alcoholic liquor. The term is especially applied to the production of beer from an extract of malted barley and hops. The barley is prepared by allowing soaked grains to germinate under controlled conditions, the result being that the starch present is converted into sugar, the product is termed malt. An infusion of malt, known as wort, is boiled with hops and the mixture, when cool, is fermented with yeast. The resulting liquor, or beer, contains from 3 to 8 per cent of alcohol, also sugar, dextrose and nitrogenous substances. See BEER.

Brewster Sir David, Scottish scientist. He was born Dec. 11, 1781, at Jedburgh, where his father was rector of the high school. He graduated in arts and theology at the University of Edinburgh, and was licensed for the ministry of the Church of Scotland, but at the instance of Brongham, who was his fellow student, he began the researches in the diffraction of light upon which his fame chiefly rests. From 1801, when at the age of twenty he became editor of *The Edinburgh Magazine*, he was a prolific writer on scientific subjects. In 1807 he was appointed editor of *The Edinburgh Encyclopedia*. Later, with Robert Jameson, he conducted *The Edinburgh Philosophical Journal*, he also edited *The Edinburgh Journal of Science*. His chief literary work is his *Life of Sir Isaac Newton* (1855).

The most important of the practical applications of Brewster's discoveries was the dioptric apparatus for lighthouses, in which he anticipated Fresnel. He also invented the lenticular stereoscope. He was a founder of the British Association, and on the occasion of its first

meeting in 1831 he was knighted. In 1838 he was appointed Principal of the University of St Andrews and ten years later Principal of the University of Edinburgh, a position he held until his death, Feb 10, 1868

Brewster Sessions Special sessions of the justices. They are held annually in August and September for the granting of now licences for the sale of excisable liquor

Brialmont Henri Alexis Belgian military engineer. Born May 25, 1821, he passed out of the Brussels Military School into the Engineers in 1843 and became a staff officer in 1855. In 1874 he reached the rank of major general and was appointed inspector general of fortifications in this capacity he carried out the system of fortresses by which Belgium was defended at the outbreak of the World War. In 1883 he spent some time in Rumania advising on a scheme for fortifying Bucharest. He died July 21, 1903

Brian Boru King of Ireland. Born about 926, the son of a king, he became King of Thomond and then, in 978, of the larger area of Munster, with seats at Tara and Cashel. In 1002 he was recognised as the overlord of Ireland, and was henceforward engaged in fighting the Danes. Successful in many battles against them, he was killed in one at Clontarf, April, 23, 1014

Briand Aristide French statesman. Born at Nantes, March 28, 1862, he became a lawyer. He gained a livelihood as a journalist and was editor of the Socialist paper *La Lanterne*. In 1902 he was elected to the Chamber of Deputies and next year began his long public career as Minister of Education. The Socialists disowned him, but his advanced opinions remained. In 1908 he became Minister of Justice and in July, 1909, Premier. He was Premier again in 1913, and from 1915 to March, 1917, a most critical time.

After a spell of political inactivity, Briand became Premier in 1921 and for the next ten years he was, next to Poincaré, France's leading figure. Either as Premier or Foreign Secretary, he was in office during most of that time. The last of several spells as Premier began in 1929 when he took that office for the twelfth time. From 1926 to 1930, except for a short interval, he was Foreign Minister. He resigned the premiership on account of ill health early in 1932 and died March 7, 1932

Outstanding events in Briand's earlier career were his share in the separation of Church and State, and his action in fighting the great strike of 1910. After the Great War he signed the Treaty of Locarno and the Peace Pact of 1928, and took part in the European negotiations of those years. In 1930 he put forward the idea of a United States of Europe

Bribe Term originally implying anything in the way of alms given to a sturdy beggar. It has been extended to mean any gift made with the corrupt object of inducing the recipient to show favour to the donor

The political bribery and corruption rampant in 18th century England was stamped out by a series of severe enactments. In the United States, on the other hand, the wealth and ambition of the great business interests are still potent incentives to corruption or graft

Bribery at elections in Great Britain is forbidden under heavy penalties by the Corrupt Practices Act of 1883, and by an act passed

in 1900 the giving of secret commissions to induce business is illegal.

Brick Rectangular block of burned clay used for building purposes. The clay employed varies greatly, the commonest being a sandy or marly clay or "malm", a mixture of clay and chalk. A heavy hard blue brick is made in Staffordshire from clay containing about 10 per cent of iron, while firebricks for furnaces are made from Stour bridge fireclay containing a high percentage of alumina and iron oxide, but no free alkali thus giving a highly refractive character

In the manufacture of bricks the clay, after being freed from stones, is washed in a mill then ground in a pug mill and finally formed into the required shape of bricks in a moulding machine. After being dried in the air the "green bricks" are finally burnt in a special form of kiln or by the older method of forming the bricks themselves into a kind of kiln in which a fire is kept burning

Bride Irish saint also called Brigid or Bridget. Born about 452 at Faughart, near Dundalk she was the daughter of an Ulster prince. Her desire for seclusion led her to make her cell under an oak at the place afterwards called Kildare and there she was buried after her death in 523. Her feast day is February 1

Bridewell Area in the City of London between Fleet Street and the Thames and immediately west of the Fleet ditch. It derives its name from a holy well of St Bride (Bridget). Formerly the site of a royal palace, which Edward VI presented to the city to be used as a refuge for the homeless, it became a house of correction for vagrant women and idle apprentices. Bridewell consequently became a generic term for a reformatory. With the exception of the hall and some offices, Bridewell house of correction was demolished in 1864

Bridge Card game. It is played by four players with the full pack of cards. Each player has 13 cards and the aim of each pair is to make the highest possible number of tricks. Trumps are used as in whist but it is also possible to play a hand of no trumps

The dealer, having examined his hand, either declares the trump suit or no trumps himself or leaves it to his partner. The partner's hand is then laid on the table exposed, and the dealer plays both hands. There is an elaborate system of scoring both for tricks and honours. Tricks in no trumps have the highest value then follow in order hearts diamonds, clubs and spades. Tricks only count towards the game honours are scored above the line. From this simple form of bridge which was introduced into London in 1594 auction and contract bridge have evolved, and these have completely supplanted ordinary bridge. A national Bridge Association of Great Britain was formed in 1933. See AUCTION BRIDGE CONTRACT BRIDGE

Bridge Structure consisting of an arch, or series of arches or spans, to carry a roadway across a river or other roads. A bridge in its simpler form may consist of an arch, or several arches of stone, brickwork or ferro-concrete, the two end supports being known as abutments, while the intermediate supports are termed piers, the masonry being held together by the keystone of the arch. In modern bridges iron girders are generally used, the lattice girder being the usual type for

moderate spans, but for wider spaces the cantilever is more suitable. In this latter type two or more cantilevers meet in the centre of the span. The Forth Bridge with three double cantilevers is an example of this form of bridge. In a suspension bridge the roadway is supported by vertical rods attached to cables or chains connected with towers on each bank or on piers. Another kind of bridge is the "transporter". The longest bridge in the world is the San Francisco-Oakland Bay bridge in California. Others, however, exceed it in certain particulars. Among them are the Brooklyn Bridge, New York; the Quebec Bridge across the St. Lawrence; the bridge over Swaney Harbour opened in 1932; and the bridge over the Golden Gate also in California.

Bridge Sir John Frederick English organist. He was born at Oldbury, Dec. 5 1844, becoming a chorister at Rochester Cathedral when a boy. Study and success in two minor posts led to his appointment as organist of Manchester Cathedral in 1869. In 1875 he became deputy, and in 1882 chief organist at Westminster Abbey. He officiated at two coronations and retired in 1918. Knighted in 1897, Bridge was professor at the London University, the Royal College of Music, and Gresham College. He wrote cantatas, oratorios and other kinds of church music as well as a book, *A Westminster Pilgrim*. Bridge died March 18, 1924.

Bridgehead Fortifications at the head or end of a bridge. Owing to the strategic importance of these places they are usually carefully defended in time of war. The Armistice of 1918 arranged that the Allies should occupy for a time the bridgeheads of the Rhine.

Bridgeman Viscount English politician. Born Dec. 31, 1864, William Clive Bridgeman was a grandson of the Earl of Bradford. He had a brilliant career at Eton and Trinity College, Cambridge, was elected to the L.C.C. in 1904, and in 1906 became M.P. for the Oswestry division. In 1915 he was made a Lord of the Treasury, and he remained a member of the coalition ministry as Secretary to the Ministry of Labour and then to the Board of Trade. From 1920-22 he was Secretary for Mines, 1922-24 Home Secretary in the Unionist Cabinet, and from 1924-29 he was First Lord of the Admiralty. On his retirement he was made a viscount. He was made Chairman of the B.B.C. in 1935 and died in Aug. of the same year.

Bridgend Market town and urban district of Glamorganshire. It stands on the River Ogmere, 20 m from Cardiff on the G.W. Rly. Its industries are concerned with the coal mines near. Pop (1931) 10,033.

Bridge of Allan Burgh and watering place of Stirlingshire. It is 3 m. from Stirling on the L.M.S. Rly. There are some small industries, but it is chiefly known for its mineral springs, which have made it a spa and a pleasure resort. It stands on Allan Water, the banks of which are celebrated in the old song. Pop (1931) 2897.

Bridgeport City and seaport of Connecticut, U.S.A. It is 58 m from New York, and is on one of the branches of Long Island Sound at the mouth of the River Pequonnock. It is both a shipping and a manufacturing centre, and has a good harbour. The manufactures include sewing machines, gramophones, typewriters and motor cars. Pop (1930), 146,716.

Bridges Robert Seymour English poet. Born in Kent, Oct. 23, 1844, he was educated at Eton and Corpus Christi College, Oxford. He qualified as a doctor and practised for a time, but retired in 1882. In 1890 he published a volume of poems, and in 1891 an oratorio of his was performed. Gradually he became known as a poet, and in 1913 he was appointed Poet Laureate. Later he received the Order of Merit and he died at Boar's Hill, Oxford, where he had long made his home, April 21, 1930. His anthology, *The Spirit of Man*, was his contribution to the war years. *October and other Poems*, 1920, and *New Verses*, 1921 and 1925, reveal the purity of his thought and style, and his mastery of language. His masterpiece is *The Testament of Beauty*, 1929.

Bridgetown Capital and seaport of Barbadoes. It stands on Carlisle Bay, a fine roadstead, which serves as the harbour. There is railway connection with the interior of the island. The trading centre of the island, its exports include sugar and molasses. Pop 13,486.

Bridgewater Duke of English title borne by the family of Egerton from 1720 to 1803. In 1617 John Egerton, a son of the Lord Chancellor Thomas Egerton, Viscount Brackley was made Earl of Bridgewater. The 4th earl was made a duke in 1720. His younger son Francis (1726-1803), who became the 3rd duke on his brother's death in 1738, was responsible for the Bridgewater Canal which he built to convey the coal found on his property near Manchester. He died March 8 1803 and his property passed to the Earl of Ellesmere a nephew. He built Bridgewater House London, which also became the property of the earl. When the duke died, the dukedom became extinct but a nephew became Earl of Bridgewater. Francis Henry Egerton, the 8th and last earl (1756-1829), was a writer, and he left money to the Royal Society for the Bridgewater Treatises and left the Egerton MSS to the British Museum.

The Bridgewater Canal runs from Worsley to Mersey at Runcorn, passing by Manchester. Its length is 42 m. It was bought by the Manchester Ship Canal in 1887.

Bridgnorth Borough and market town of Shropshire. It stands on the Severn, 20½ m from Shrewsbury and 133½ from London, on the G.W. Rly. It is divided by the river into an upper and lower town. There are some half-timbered houses and on a hill the ruins of the castle. Pop (1931) 5151.

Bridgwater Borough, river port and market town of Somerset. It stands on the River Parret, 12 m from its mouth in the Bristol Channel 142½ m from London, and 33 m from Bristol. It is served by the G.W. Rly and by a canal to Taunton. The chief industries are the shipping along the river and the making of bathbrick. There are remains of a castle. Pop (1931) 17,139.

Bridlington Borough, watering place and market town of Yorkshire (E.R.). It is 33 m from Hull and 217 from London on the L.N.E. Rly. The old town lies a little inland where there is the stately old Priory Church. On the coast is Bridlington Quay with a good harbour. The sands are good and there are attractions for visitors. Pop (1931) 19,704.

Bridport Borough, seaport and market town of Dorset. It is on the

little River Brit, 18 m from Dorchester, and 149 from London, on the G W Rly. The old town is about a mile from the sea, but it has a suburb on the coast called West Bay which attracts visitors. There is a small harbour and the industries are connected mainly with the sea. Pop (1931) 5917

Bridport Viscount English admiral. The son of a clergyman, Alexander Hood was born in 1727, and entered the navy in 1741. He served with distinction under Hawke at Culheron and under Keppel at Ushant. He was promoted rear admiral of the white in 1780 and vice admiral in 1787, in which year he was also knighted. In 1793 he served as Howe's second in command on the "Glorious First of June," and for his services was created Baron Bridport in the peerage of Ireland. In 1795 he fought the action off Belle Isle, which, though indecisive, made him a popular hero. He was given a British peerage and appointed vice admiral of England. For some time he was practically supreme in the direction of the naval operations against France, and personally conducted the blockade of Brest from 1798 until 1800. On his retirement he was created viscount. He died May 2, 1814.

Brier or Briar Common name for the wild or dog rose. It is also used for other varieties including the sweet brier or any shrub with wooded stems bearing thorns or prickles. It is also the name for the white heath, a French shrub used in the manufacture of pipes. See BRIAR ROOT.

Brierley Hill Market town and urban district of Staffordshire. It stands on the Stour and the G W Rly in the Black Country. The industries are the making of various kinds of hardware. It is 124 m from London and canals pass through the district. Pop (1931) 14,344.

Brig Two masted sailing vessel, both masts being square rigged. A brigantine is a cross between a brig and a schooner, the foremast only being square rigged, and the mainmast being rigged fore and aft.

Brigade Military unit. It consists of four battalions of infantry, or two or more regiments of cavalry, with supply and other units. The commander of a brigade is a major general or a colonel with the acting rank of brigadier-general. An artillery brigade consists of two or three batteries under a lieutenant colonel.

Brigadier-General In the British army a temporary rank, the lowest for a general officer. As the name suggests he commands a brigade of infantry or cavalry. The rank was abolished in 1920, in favour of that of colonel commandant, but was revived in 1928. The equivalent rank in the navy is commodore.

Brighouse Borough and market town of Yorkshire (W R). It stands on the Calder, 6 m from Huddersfield, 188 m from London, on the L M S Rly. It is a centre of the woollen industry and has other manufactures. There are stone quarries in the neighbourhood. Pop (1931) 19,758.

Bright John English statesman and orator. The second son of Jacob Bright, a millowner of Rochdale, and a member of the Society of Friends, he was born Nov. 16, 1811. In 1836 he became acquainted with Richard Cobden, who induced him to take an active part in the agitation against the Corn

Laws, and thenceforth he and Cobden were the leading spirits in the Anti-Corn Law League. Their labours were crowned with success in 1845 when Sir Robert Peel decided in favour of the repeal of the Corn Laws. In 1843 he was elected to Parliament as M P for Durham, and in 1847 he was returned for Manchester. He opposed the Crimean War and in that connection delivered the most famous of his speeches in the House of Commons (Feb. 23, 1855). At the general election of 1857 he was defeated at Manchester, but shortly afterwards was returned unopposed for Birmingham.

In 1868, on the formation of the Gladstone administration, Bright accepted office as President of the Board of Trade, but in the following year he resigned owing to ill health. On the reconstruction of the ministry in 1873 he came back to office as Chancellor of the Duchy of Lancaster. On Mr Gladstone's return to power in 1880 he again was Chancellor of the Duchy, but, disagreeing with the Egyptian policy, which culminated in the bombardment of Alexandria, he resigned and never held office again. When Mr Gladstone announced his conversion to Home Rule, Bright aligned himself with the Liberal Unionists, and his defection undoubtedly contributed heavily to the defeat of the Home Rule Bill of 1886. He died at Rochdale on March 27, 1889.

Brightlingsea Urban district and watering place of Essex. It is on the estuary of the Colne, 8 m from Colchester, 61 m from London, on the L N E Rly. Boat building is carried on and there are oyster beds, but it is chiefly known for its yachting interests. Pop (1931) 4145.

Brighton County borough and watering place of Sussex. It is 61 m from London and is reached by the S Rly, there are also regular road services. It extends from Hove, a separate borough, past Kemp Town, included in Brighton, to Rottingdean, and has a fine parade along its extensive front. There are two piers, theatres and other places of amusement, several public parks, Preston and Hollingbury among them, and the council has bought Devil's Dyke and other land on the Downs. Brighton has railway shops and other industries, including some fishing. There is a racecourse at Kemp Town and several golf links. Pop (1931) 147,427.

Another Brighton, also a watering place, is in New South Wales. It is 8 m from Sydney.

Bright's Disease Term applied to various inflammatory conditions of the kidneys (nephritis acute and chronic) which were first described by Dr. Richard Bright (1789-1858). It is characterized by the presence of albumen in the urine, and the symptoms are pain in the back, sickness, a certain degree of fever, and dropsy. The acute condition is more amenable to treatment than the chronic.

Brill Village of Buckinghamshire. It is 50 m from London, on the L N E Rly. It is famous for its windmill, one of the few existing examples of a mill revolving on a central post. Pop 1019.

Brill Flat fish of the genus *rhombus*. It is closely allied to the turbot, but is smaller and smooth skinned. It is a popular table fish, but much inferior to the turbot in flavour. It is found around the coasts of Great Britain.

Brindisi City and seaport of Italy. Standing at the Mediterranean

end of the Adriatic Sea, its position makes it important. As Brundisium it was a Roman port and it had a considerable trade in the Middle Ages. After a period of decline, it recovered its prosperity owing to the opening of the Suez Canal, as goods and passengers for the East were put on ship here. There is a large and safe harbour and railway connection with the great European lines. Pop 48,400

Brindley James English engineer. Born in 1716 at Thornsett, Derbyshire, of humble parentage, he was apprenticed to a millwright. On setting up in business for himself at Leek, he soon became known for his skill in repairing machinery. In 1759 he was employed by the Duke of Bridgewater to direct the construction of the Bridgewater Canal between Worsley and Manchester. For the rest of his life Brindley was engaged mainly on inland navigation works, and in all laid out over 360 m of canal. He died Sept 30, 1772.

Brioni Small group of islands in the Adriatic, off the coast of Istria and north west of Pola. The largest of them, Brioni Maggiore, is a favourite holiday resort.

Brisbane City and river port of Australia, also the capital of Queensland. It stands on both sides of the Brisbane river, 45 m from the sea, and covers 385 sq miles. A commercial and banking centre, Brisbane has a large export and import trade, for which there are docks and wharves along the river, and there are also some manufacturing factories.

The city is laid on modern lines with wide streets and handsome squares. The buildings include two cathedrals, Anglican and Roman Catholic, parliament house, law courts, custom house, and the University of Queensland. The city was named after Sir Thomas Brisbane who founded it. Pop 313,251.

Bristol City and seaport of Gloucestershire. It stands on the Avon, 9 m from the Bristol Channel and 118 m from London, and can be reached by both L.M.S. and G.W.R.s. The city proper is in Gloucestershire, but some of its suburbs are in Somerset. There is a harbour on the Avon, with quays and warehouses, but for larger vessels the docks are at Avonmouth, the city's port, and Portishead. The industries, apart from shipping, include the manufacture of tobacco, chocolate, etc. The buildings of the city include the cathedral and the beautiful church of St Mary Redcliffe. A site on College Green has been selected for new municipal buildings. Clifton and Durdham Downs and Leigh Woods are some of the city's open spaces.

Bristol has a university opened in 1909. Connected with it is the old Merchant Venturers' College. Clifton College is a notable public school. The municipal aerodrome is at Whitchurch. Pop (1931) 396,913.

The title Earl of Bristol was borne by the family of Digby from 1622, when John Digby was made an earl, until 1693 when the 3rd earl died.

The title of Marquess of Bristol has been borne by the family of Hervey since 1826. In 1714 John Hervey was made an earl, and in 1826 the 5th earl was made a marquess. The title is still held by the family and their seat is Ickworth Park, Bury St Edmunds.

The *Bristol* is the nameship of a class of British cruisers. Launched in 1910, she displaced 4800 tons and took part in some fighting during the Great War. The name has been in the navy since 1666.

Bristol Channel Arm of the sea separating South Wales from Somerset and Devon, and forming an extension of the estuary of the Severn. It is about 80 m in length and receives in addition to the Severn the waters of the Towy, Taff, Usk, Wye, Avon, Parret, Tone, Taw and Torridge. Lundy Islands stands at the entrance to the Channel off Hartland Point. The Channel, being funnel-shaped, is remarkable for its high and rapid tides, which at the Severn estuary form the famous Severn bore.

Britain Name given to England and Scotland from the earliest times to the coming of the Angles and Saxons in the 5th century. It comes probably from the Brythons, a Celtic people, and in the form *Britannia* was given to the land by the Romans. The Britons fought against the invading Romans, but were subdued by them and lived under Roman rule for nearly 400 years, or until about 400. Caesar gives an account of Britain and the Britons. They had their own manners and customs and they knew a little about building and the use of metals. They grew corn and kept animals. They had kings and warriors with chariots, priests called Druids and a religion in which human sacrifices were made.

Britannia Roman name for Britain. It is used to-day for the female figure representing Britain that appears on some of the British coins, and is used in other ways as an emblem, for instance on medals. The figure of Britannia on the copper coins was introduced in the time of Charles II, the Duchess of Richmond serving as the artist's model.

Britannia Formerly a training ship for officers of the British Navy. The early naval cadets were trained on warships, one of which was the *Britannia*, which was put to this service in 1859. It was replaced by another vessel, also named *Britannia*, which was stationed at Portsmouth and then at Dartmouth. In 1903 the cadets were transferred to a college at Dartmouth.

Britannia Metal Name given to an alloy. To produce this metal tin, zinc, antimony, bismuth and copper are used in varying proportions. It is an exceedingly ductile material, and lends itself admirably to the manufacture of articles that have highly ornamented surfaces. It was first made in Sheffield about 1770.

British Association Society for the advancement of science. It was founded in 1831 and holds a meeting every year at which an address is given by the president, an eminent scientist, and sectional meetings are held for the discussion of matters of interest. The meetings are usually held in an English town or city, but at least three times the Association has gone over seas to Australia, Canada and S. Africa. The 1931 meeting, the centenary one, was held in London. The headquarters are at Burlington House, London, W.1.

British Broadcasting Corporation See BROADCASTING.

British Columbia One of the nine provinces of the dominion of Canada. In the west of the country it has a long coastline on the Pacific. It covers 372,630 sq m, and includes Vancouver and other islands. Victoria is the capital, but

Vancouver City is the largest place. The province produces fish and fruit, silver, copper, lead, coal and other minerals, lumber and furs. British Columbia is governed by a ministry responsible to a legislative assembly of 48 members, elected by all adults for five years. It sends six senators and 14 representatives to the Parliament of the Dominion. It joined the Dominion in 1871, on the condition that a railway should be built across the continent. Pop (1931) 694,263.

British East Africa Term used to denote all territories under British rule in East Central Africa. It covers Uganda, Kenya, Tanganyika, Zanzibar, Nyasaland and Northern Rhodesia. See EAST AFRICA.

British Empire Lands under the rule of the United Kingdom and sometimes called the British Commonwealth of Nations. The area of the Empire is 14,000,000 sq. m. and its pop is about 450,000,000. This is divided between the continents thus:

	Area (sq. m.)	Population
Europe	121,600	45,000,000
Asia	1,824,600	833,000,000
Africa	4,632,000	50,000,000
America	4,111,600	11,000,000
Australia and Oceania	3,309,000	8,000,000

The states of the Empire may be divided into six groups: (1) Great Britain and Northern Ireland, (2) The six Dominions, Canada, Australia, Newfoundland, South Africa, New Zealand and the Irish Free State, (3) India, (4) Colonies, (5) Protectorates, (6) Mandated territories.

The Dominions are autonomous communities within the Empire, equal in status with Great Britain and with one another. India as an Empire occupies an exceptional position, which is being gradually altered in the direction of dominion status. Colonies include Southern Rhodesia and other parts of the Empire which are self governing, as well as islands and districts such as Ceylon and Sierra Leone over which the British Government has legislative powers, more in some and less in others. Protectorates are chiefly states such as Uganda and Somaliland in which native rulers are left to manage their own internal affairs. Mandated territories are areas governed under mandate from the League of Nations. Such include Palestine, Tanganyika and Samoa.

To deal with the relations between Great Britain and the rest of the Empire, there are departments of state in London. The Dominions Office is responsible for the affairs of the Dominions and the Colonial Office for those of the colonies, protectorates and mandated territories. For India there is a separate office. The king is represented in each Dominion and colony by a governor general or governor. The Dominions and India have each a high commissioner in London and for the colonies there are agents general, or the crown agents.

Theoretically the Parliament at Westminster can legislate for the whole Empire but in practice it has nothing to do with the internal affairs of the Dominions and their independent position was fully recognised by the Statute of Westminster passed in 1932. Their legislation, however, requires the sanction of the king, but this is never refused. To discuss the affairs of the Empire an Imperial Conference meets in London every five years and ministers from the Dominions sometimes attend the meetings of the Committee of Imperial Defence.

The Judicial Committee of the Privy Council, on which are representatives from the Dominions, is the supreme court of appeal from the courts of the various parts of the Empire. In 1932 representatives from the whole Empire met at Ottawa for an economic conference.

British Empire Order of the British order founded in 1917. It is given for services rendered to the Empire and to men and women alike. There are two divisions, military and civil and five classes in each. These are knight grand cross (G.B.E.), knight commander (K.B.E.), commander (C.B.E.), officer (O.B.E.) and member (M.B.E.). Women use the same letters except D.B.E. instead of K.B.E. Those in the first two classes are entitled to call themselves dame. The motto is *For God and the Empire*.

British Isles Name sometimes given to Great Britain, Ireland, and the adjacent islands. Its divisions are, England, Wales, Scotland, Northern Ireland, Irish Free State, Isle of Man and the Channel Islands. They cover 120,489 sq. m., and have a pop. estimated at 48,000,000.

British Legion Association of men who served in the Great War. It was founded in 1921 and its objects are to help service men and their dependants. The legion has a factory at Petersham where the poppies sold on Armistice Day are made. In 1930 there was an enquiry into the working and finances of the legion. The offices are at 29 Eccleston Square, London, S.W.1. Earl Haig, the first president, was succeeded by Earl Jellicoe.

British Museum National museum of Great Britain. It owes its origin to Sir Hans Sloane who died in 1753 and by his will gave an option to Parliament to purchase for £20,000 his library, MSS., and collection of natural history specimens and other curiosities. The Act of Parliament by which the offer was accepted provided also for the purchase of the MSS. collected by Robert and Edward Harley, Earls of Oxford, and for the proper custody of the Cotton MSS., already the property of the nation. To these three collections George II. added the royal library begun by Henry VII., and continued by successive sovereigns down to the reign of Charles II.

To house the collections, Montagu House, Bloomsbury, was purchased and was opened in 1759 as the British Museum, and in 1881 the natural history collections were removed to a building in South Kensington.

The development of the library and public reading room of the Museum was the work of Anthony Panizzi, an Italian refugee, who was appointed keeper of printed books in 1837. The famous rotunda which now forms the reading room was built according to his plan and opened in 1857. Under the Copyright Act a copy of every book printed in the United Kingdom must be delivered to the British Museum Library within a month of publication. The library is the largest in the world, and is estimated to contain nearly 3,000,000 volumes. It has a building at Colindale near Hendon where newspapers are stored.

Briton Ferry Seaport of Glamorgan shire. It stands at the mouth of the River Neath, on the G.W. Rly., 2 m. from the town of Neath of which it is a

port There are large docks and other industries include coal mines and iron works

Brittany (Fr *Bretagne*) Former province of France It comprises the modern departments of Côtes-du-Nord, Ile-et-Vilaine, Loire-Inférieure, Morbihan and Finistère. It was anciently known as Armorica, but during the 5th and 6th centuries, owing to the pressure of the Anglo-Saxon invasion of England, it was colonised by British immigrants and came to be known as Britannia Minor

To this day Brittany maintains a character as distinct from the rest of France as Wales is from England The Bretons speak a variant of the ancient British tongue closely allied to Welsh, and in their physical and moral characteristics closely resemble the South Welsh, the Cornish, and the Highlanders of Scotland They are devoted to the Roman Catholic faith and have distinctive popular religious festivals known as pardons They excel as fishermen and sailors and provide the bulk of the seamen of the French Navy The soil of Brittany, except in Ile-et-Vilaine, is poor The chief towns are Rennes, Nantes and the naval ports Lorient and Brest Quimper is famous for its earthenware, and St Malo, Dinard and other places are favourite holiday resorts

Brixham Watering place and urban district of Devon It stands on Torbay, on the G W Rly, 32 m from Exeter There is a good harbour for the fishing and coasting trade Here William III landed in 1688 Pop (1931) 8147

Brixton District of London In the borough of Lambeth, it is 4 m to the south-west of the city Brixton prison is here Other buildings are the Lambeth town hall and the Tate library

Brno City of Czechoslovakia, also called Brunn It is 80 m from Vienna at the junction of two rivers, and is well served by railways On the Spielberg, a hill overlooking the city, is the citadel, long used as a prison There is a university founded in 1918 A thriving industrial city, Brno is the second largest place in Czechoslovakia. Before 1919 it was in Austria, being the capital of the province of Moravia Pop (1930) 263,646

Broadcasting Word meaning to send out news to all men everywhere, but to day used especially for the sending out by wireless of information, entertainment, etc., to persons who possess receiving sets This began in Great Britain in 1921, and the first transmission was made from a station at Chelmsford In 1921 the British Broadcasting Company was formed and in 1926 this became a Corporation under the control of the Government It has a monopoly of broadcasting in Great Britain and obtains an income from a certain proportion of the fees paid for receiving licences The headquarters are in Portland Place, London, W C, a building erected in 1930-31 and equipped specially for the purpose Before 1932 the headquarters were on Savoy Hill

The national programmes are sent out from London and Droitwich For regional programmes there are stations at Brookman's Park for the London area, Droitwich for the midland, Moorside Edge, near Huddersfield, for the northern, Westerglen, near Falkirk, for the Scottish, Washford Cross for the western and Lisburne for Northern Ireland Of these

the London, Northern, Scottish and West Regional are dual transmitting stations There is also an Empire transmitting station at Daventry which operates on a short wave Then for more limited areas there are stations at Bournemouth, Newcastle, Plymouth and Aberdeen, and there are relay stations at Liverpool, Bradford, Sheffield, Hull and Stoke-on-Trent Most large foreign cities have broadcasting stations

Broadcasting has extended to every civilised country, but the arrangements for controlling it vary to a considerable extent between one and another There is an international board at Geneva to discuss matters of common interest In 1932 arrangements were made for broadcasting programmes between the United States and Great Britain On June 30, 1935, there were in Great Britain and Northern Ireland 7,077,095 licences in force

Broadmoor Asylum for criminal lunatics It is in Berkshire, on the S Rly, and was opened in 1863

Broads The District of East Anglia, mainly in Norfolk but partly in Suffolk It is so called from its numerous broads, or large shallow lakes The district is intersected by the lower reaches of the Rivers Yare, Bure, Ant and Waveney which are connected with the broads by watercourses called dykes

The Broads are perhaps the most popular sporting holiday resort of England Fish and wild fowl are abundant and the lakes are navigable by small sailing craft The chief broads are, Oulton, Ormesby, Hickling, Wroxham, Rollesby, Horning and Salhouse

Broadsheet Single sheet of paper printed on one side only and also called a broadside The earliest use of broadsheets was for the publication of proclamations and other official notices, but from the 16th century onwards they appear as a method of circulating popular literature—ballads, dying speeches of criminals, political squibs, etc. Several important poems by Dryden and Butler were first published in broadsheet form

Broadside Simultaneous discharge of all the guns on one side of a war vessel In modern battleships the guns can be swung to fire on either side, thus adding to the power of a broadside The term, however, is not now much used, having been replaced by salvo, though technically there is a slight difference between a broadside and a salvo

Broadstairs Watering place of Kent It is on the Isle of Thanet, 2 m from Ramsgate and 73 from London, on the S Rly There is a fine parade and the attractions include golf links and sea fishing Broadstairs owes some of its popularity to Charles Dickens, who lived here from 1837 to 1851 With S Peters it forms an urban district Pop (1931) 12,748

Broadway Village of Worcestershire It is 5 m from Eresham and 107 from London, on the G W. Rly Beautifully situated, it is a good centre for visitors to the Cotswolds Pop 1800

Brobdingnag Imaginary land described in *Gulliver's Travels* In his first voyage Gulliver visits Lilliput, where he is a giant among pigmies In his second voyage he visits Brobdingnag, where he is a pigmy among giants

Broccoli Vegetable of the natural order *cruciferae*. It grows easily in Great Britain, and can be obtained nearly all the year round. The seeds can be sown in March and kept under glass until June when they should be planted out. The broccoli resembles the cauliflower and is a useful green vegetable for the table.

Brochure (Fr *brocher*, to strike) Small treatise or article. Originally printed on a few leaves stitched together, or enclosed in a paper cover, it is practically the same as a pamphlet.

Brock Sir Thomas. English sculptor. A native of Worcester, he was born in 1847, and settled in London in 1866. His work soon won for him a great reputation, and two magnificent pieces of statuary, *Eve* and *The Moment of Peril*, which he wrought, are in the Tate Gallery, London. He designed the memorial to Queen Victoria, near Buckingham Palace, and was responsible for the designs on the coinage first issued in 1893. In 1891 he was elected R.A., and he was knighted in 1911. He died on Aug. 22, 1922.

Brocken Highest mountain of the Harz. In Prussian Saxony, it figures prominently in German folklore as the scene of the witches' sabbath supposed to be held annually on Walpurgis Night (May 1). The legend is probably due to the fact that pagan rites lingered longer in the Harz than in any other part of Germany. The most famous literary reference is the Brocken scene in Goethe's *Faust*. On the night of June 17, 1832, certain of the rites of black magic were accurately reproduced on the Brocken, under the direction of the (British) National Pagan Research Council, without, however, producing the supposed results. The Spectre of the Brocken, so called from the phenomenon having been first observed on the Brocken, is the gigantic shadow of an observer cast upon a bank of cloud in mountain regions when the sun is low. The mountain is 3733 ft high.

Brocklesby Village of Lincolnshire. It is 9 m from Grimsby, on the L.N.E. Ry. Brocklesby Hall, the seat of the Earl of Yarborough, is a fine house standing in a large park. The village gives its name to the Brocklesby Hunt.

Brockville Town of Ontario. It stands on the St. Lawrence, 125 m from Montreal, on the C.P. and C.N. Ry. It is also a river port and has some manufactures. Brockville was named after Sir Isaac Brock, who was killed fighting against the Americans Oct. 13, 1812. Pop. 10,000.

Brodict Village of Arran. It stands on Brodict Bay and is a calling place for steamers and a centre for visitors to the island. Here is Brodict Castle, for many years a seat of the Duke of Hamilton. It is now a residence of the Duchess of Montrose, a daughter of the 12th Duke of Hamilton.

Brogue (Gaelic *brog*). Rough shoe of undressed cowhide or deer skin formerly worn by the Gaels of the Scottish Highlands and Ireland. It is now applied to a make of stout shoe worn with Highland sporting dress. As the brogue was regarded as the distinctive mark of the Gael, the term came to be applied to the dialectic and accentual peculiarities of English speaking Gaels, more particularly the Irish.

Broken Hill Town of New South Wales. Australia. It is

on the railway, 925 m from Sydney, and is famous for its silver mines. From these an enormous quantity of silver has been won, but they are less productive than formerly. Copper, tin and other minerals are found. Broken Hill is also the centre of an agricultural area. Pop. (1931) 22,850.

Another Broken Hill is in Northern Rhodesia. It is 655 m from Bulawayo on the main railway line. A mining centre, there are immense reserves of lead and zinc ores in the neighbourhood and these are mined on a large scale.

Broker Middleman or agent, one who acts as intermediary between buyer and seller. There are many kinds of brokers, stock brokers, bill brokers, metal brokers and others. Their relations with their clients are governed by the law of agency. Their fees, called brokerage, are generally on a percentage basis. Those of stock brokers are according to the scale fixed by the London Stock Exchange. Men who deal in second hand furniture are called brokers. Pawnbrokers (q.v.) trade under special conditions.

Bromborough District of Cheshire. It stands on the Mersey, 5 m from Birkenhead, and is served by the G.W. and L.M.S. Ry. There are extensive docks and some other industries. With Behington it forms an urban district. Pop. of urban district (1931) 26,742.

Brome Richard. English dramatist. He learned his art from Ben Jonson, whose servant he was. His first successful play was *The Northern Lass* (1632). He wrote in all 15 plays by himself and collaborated with Thomas Heywood in *The Late Lancashire Witches* (1634). He died in 1652.

Bromide Term given to salts of hydrobromic acid, the commonest examples being the bromides of potassium and silver. Potassium bromide, a white crystalline compound, is used largely in medicine as a nervous sedative in epilepsy and other diseases. Silver bromide, being sensitive to the action of light, is used in photographic printing in the form of a gelatine emulsion, which is applied to paper to form bromide paper. Prints made with this emulsion are in tones of sepia to black.

Bromine Non metallic element. Its atomic weight is 79.96, and its chemical symbol is Br. It exists as a heavy volatile liquid of a deep reddish brown colour and has a suffocating irritant odour. It occurs in mother liquors from sea water, but the chief source of bromine and its compounds is the mineral carnallite from Stassfurt in Saxony. Bromine resembles chlorine in many of its characters and its compounds are used in medicine, photography and in the manufacture of aniline dyes. Ethylene bromide enters into the preparation of lead tetraethyl for incorporation in petrol.

Bromley Borough and market town of Kent. It is 11 m from London on the S. Ry. The little River Ravensbourne flows through it. The palace occupies the site of the old palace of the Bishops of Rochester. Pop. (1931) 45,348.

Brompton District of London. To the south west it is mainly in the borough of Chelsea. The buildings include the Brompton Oratory, an edifice in the Italian Renaissance style opened in 1884, the hospital for consumptives, the Imperial Institute and S. Kensington Museums.

Bromsgrove Urban district and market town of Worcestershire. It is 12 m from Worcester, on the LMS Rly. Bromsgrove School, founded in 1553 is a public school, with accommodation for 330 boys. In the Birmingham area, Bromsgrove has manufactures of nails and other forms of hardware. Pop (1931) 9520

Bronchitis Catarrhal inflammation of the bronchial tubes, producing a feeling of tightness of the chest and a dry hard cough is usually caused by cold and damp or by irritating vapours, or is a complication of some other disease

Treatment—The patient should be kept in bed in a room of uniform temperature and put on a diet of milk foods until his temperature is normal. Linseed or mustard poultices, inhalations of Friar's balsam (2 teaspoonfuls to 1 pint of boiling water) and cough medicines to promote expectoration will give considerable relief

The patient should allow himself a thorough convalescence or Chronic Bronchitis may develop. The condition is specially serious in infancy and old age

Brondesbury District of London. It is 8 m from the city, on the Metropolitan and LMS Rlys. It forms part of the urban district of Willesden

Bronte Charlotte English novelist. A daughter of Rev Patrick Brontë, she was born at Thornton, Bradford, April 21, 1816. She was educated at Cowan Bridge, Kirkby Lonsdale, at home and at Roe Head, Mirfield, a school kept by Miss Wooler, where later she was a teacher. She was a governess in private houses and in 1842-44 spent some time in a pension in Brussels. In 1844 she returned home to Haworth where her father was perpetual curate, and there she lived for ten further years. In Jan., 1854, she married Rev A. B. Nicholls, and, on March 31, 1855, she died at Haworth

Charlotte Brontë is known as the writer of three vivid and powerful novels, *Jane Eyre* and *Villette*, both largely autobiographical, and *Shirley*. She also wrote *The Professor*, her earliest book, but only published after her death

The Brontës were a gifted family. The father was an Irishman who worked his way to Cambridge and lived at Haworth until his death in 1861. His only son, Patrick Branwell, passed a dissolute life until his untimely death, Sept 24, 1848. Of the five daughters two died young. Emily, born July 30, 1818, wrote an immortal novel, *Wuthering Heights*, and some poems. Anne, less gifted, wrote *Agnes Grey* and *The Tenant of Wildfell Hall*. Both died of consumption, Emily on Dec 19, 1848, and Anne on May 28, 1849. The three sisters' first efforts were *Poems by Currer, Ellis and Acton Bell*, these being the pseudonyms respectively of Charlotte, Emily and Anne

There is an immense literature on the Brontës, and in 1884 a Brontë Society was founded. In 1928 the parsonage at Haworth was opened as a Brontë Museum

Brontosaurus Extinct reptile. Belonging to the herbivorous lizard-footed type of dinosaurs, it is known from its fossil remains in the Upper Jurassic beds of Wyoming, U.S.A. It was about 60 ft. long and 10 ft. in height, and was characterised by having a small head at the end of a long tapering neck and a short body

ending in a very long tail. It is probable that the brontosaurus lived on the seashore, feeding upon sea weeds

Bronx Part of the city of New York. It is to the north of Manhattan from which it is separated by the Bronx River. Since 1897 it has been one of the boroughs which comprise New York City, and has grown enormously. Here are the buildings of the University of New York. Pop 800,000

Bronze General name for copper-tin alloys, which include gun metal, bell metal and speculum metal. The colour and properties vary according to the proportions of the constituents, but ordinary bronze is harder and stronger than brass and is easily worked when quickly cooled after heating to redness. Phosphor bronze containing a small percentage of phosphorus is very hard and tenacious, and is used therefore for machine bearings, etc. Silicon bronze is a good conductor of electricity. Manganese bronze resists corrosion well and is suitable for propeller blades, aluminium bronze, a gold coloured alloy, is used for making cheap jewellery

Bronze Age Name given to the period when primitive man used bronze for his tools and weapons, this superseding the use of stone. Its date differs in various areas. In the East it began probably about 5000 B.C., and in the West perhaps 2000 B.C., and continued until about 1000 B.C. It is sometimes divided into three periods, early, middle and late, and it was superseded by the iron age

Bronze Powder Powder composed of finely ground aluminium bronze, an alloy containing copper and tin with 2 to 12 per cent of aluminium. It is employed as a basis for gold and bronze paints. In the trade, however, the term bronze powder also includes aluminium powder used for making aluminium paint

Bronzing Process by which brass or other metals, also plaster casts and ceramic ware, are given a bronze colour to impart an artistic or antique appearance. For metals this is done by applying various chemical solutions such as platinum chloride to give a black colour, or a mixture of acetic acid, sal ammoniac, salt, cream of tartar and copper acetate, to produce a green or antique bronze

Brooke Rupert Chawner. English poet. Born April 3, 1888, he was the son of a master at Rugby where he was educated before going to King's College, Cambridge. In 1911 he published a volume of poems and after his death other volumes, prose and verse appeared. In 1914 Brooke joined the R.N.D. In 1915 when with the expeditionary force in the Mediterranean, he died at Smyrna, April 23, 1915. Brooke's personality made a great impression on all who met him, and his poetry contains passages of great beauty. A memorial to him has been erected at Scyros

Brooke Sir James Rajah of Sarawak. Born at Benares, April 29, 1803, he was educated in England and entered the army of the E. India Co. In 1826 he was wounded and sent home, but he was soon in the East again. In 1830 he went to Borneo and offered to help the Sultan of Sarawak in his wars, the result being that he was made rajah and governor of Sarawak by that potentate. He put down head hunting and piracy, and was equally successful in Labuan where

Nov 3, 1794 He studied law and was admitted to the Bar, but after a few years of practice without much success he abandoned law for literary work In 1829 he became editor and principal proprietor of *The New York Evening Post* a position in which he continued until his death *Thanatopsis*, his first published poem, and perhaps his greatest, was written in his eighteenth year His first volume of poems was issued in 1821 Other volumes followed from time to time and in 1876 a collected edition of his *Poetical Works* was published He also made translations of the *Iliad* and the *Odyssey* He died June 12, 1878

Bryce Viscount British statesman and politician Born in Belfast, May 10, 1838, James Bryce was educated at Oxford where he had an exceptionally brilliant career He was made Fellow of Oriel College and was regius professor of civil law, 1870-93 In 1880 he entered Parliament as Liberal MP for the Tower Hamlets, and from 1885 to 1907 he represented S Aberdeen In 1886 he was Under Secretary for Foreign Affairs, from 1892-95 Chancellor of the Duchy, and then President of the Board of Trade, and from 1905-1907 Secretary for Ireland From 1907 to 1914 he was British ambassador at Washington In 1914 he was made a viscount, and he died Jan 22, 1922 Of Bryce's many writings two are standard works *The Holy Roman Empire* and *The American Commonwealth* In 1907 he received the coveted Order of Merit

Brynmawr Urban district and market town of Brecknockshire It is 8 m from Abergavenny, on the G W Riv The chief industry is the ironworks, but owing to depression it was proposed, in 1930 to make the place into a pleasure resort, and improvements were carried out, largely by voluntary labour Pop (1931) 7247

At Bryn Mawr, Pennsylvania, there is a large college for women

Bryony Name of two British plants, quite unrelated to one another The white bryony (*bryonia cretica*), belonging to the cucumber family, is common in hedge rows, its bristly trailing stems bearing compound leaves clinging to the bushes by spiral tendrils The black bryony (*tamus communis*), a member of the yam family, has a twining stem and heart shaped leaves

Brython Variant of Briton Modern anthropologists have adopted the terms Brythonic and Goidelic in preference to British and Gaelic, to distinguish respectively the southern and northern branches of the Celtic race in the British Isles The term Brython includes the Welsh the Cornish and also the Bretons of France The Goidels include the Scottish and Irish Gaels and the Manx

Bubonic Plague Virulent infectious disease of bacterial origin It affects the lymphatic glands and causes swellings or buboes, accompanied by feverish conditions and disturbance of all the functions The Black Death in the 14th century was a form of this disease and various outbreaks of bubonic plague have occurred from time to time in many parts of the world In recent years India has suffered from this disease, and antitoxin treatment has been found to be successful

Buccaneer Maritime adventurer The early buccaneers were chiefly British, French and Dutch seamen who, tacitly encouraged by their respective govern-

ments, harassed and plundered the Spaniards in the 16th and 17th centuries

Buccleuch Village of Selkirkshire From here the family of Montagu-Douglas Scott take the title of earl and duke A member of the Scott family was made Earl of Buccleuch in 1619 His grand daughter married the Duke of Monmouth in 1603 and he was made Duke of Buccleuch

Buchanan George Scottish humanist and historian. He was born at Killearn, Dumbartonshire, in 1806, and graduated at the Universities of St. Andrews and Paris. Having published some caustic satires on the Scottish clergy, he was imprisoned in the castle of St. Andrews, but escaped and fled to France. From 1839 to 1842 he was Professor of Latin at Bordeaux, where he had Montaigne as one of his pupils, and from 1842 to 1847 professor at Paris. He was Moderator of the General Assembly in 1867. Buchanan was a prolific and versatile writer both in the vernacular and in Latin, and a vigorous pamphleteer. His Latin poems and plays have merit, but he is chiefly remembered by his *De Jure Regni apud Scotos* (1879) and his *Rerum Scotticarum Historia* (1882), a history of Scotland. He died in Edinburgh, Sept 28, 1882.

Buchanan James, American president. Born in Pennsylvania, April 23, 1781, he became a lawyer. In 1856 he was the Democratic candidate for the Presidency and was elected. Soon after the end of his term in 1861 the Civil War began. Buchanan died June 8, 1868.

Buchanan Robert Williams Scottish writer. Born in Staffordshire, Aug 18, 1841, he was educated in Glasgow. He wrote several volumes of poems and then a series of novels which were popular, especially *The Shadow of the Sword*, *A Child of Nature* and *God and the Man*. He also wrote some plays. Buchanan was known because of his attacks on what he called the fleshly school of poetry. He died June 10, 1901.

Bucharest City and capital of Rumania, also called Bukarest. It stands on the Dimbovitza, a tributary of the Danube, and is in the main a modern city. With some fine squares and parks, it is called the Paris of the East. Bucharest is an important railway centre and through it much of the country's trade passes. It was occupied by the Germans from Dec, 1916, to Nov, 1918. In 1861 it became the capital of Rumania, previously it had been the chief town of Wallachia. Pop (1930) 631,288.

Two important treaties have been signed at Bucharest. One of Aug 10, 1913, ended the second Balkan War. By it Bulgaria gave up to the victors Rumania, Serbia, Greece and Montenegro, territory taken during the two wars. The other signed May 7, 1918, gave to Bulgaria the territory which Rumania had acquired in 1913. It was annulled later in the year when the Allies had beaten Germany.

Bucket-shop Term used for the business of a sham stockbroker. The term, supposed to have been coined in Chicago, is applied to the offices of stockbrokers, unconnected with a recognised stock exchange, whose business does not consist of the buying and selling of securities, but in dishonest gambling with clients, speculating upon the rise and fall of share prices.

Buckfastleigh Urban district of Devonshire. 7 m from Totnes, on the G.W. Rly. Here was a famous Cistercian abbey, now in ruins, and a new abbey has been erected by the Benedictines. They settled here about 1890 and, except for a little expert assistance at the start, they did the entire work themselves. The buildings include a fine church. Pop (1931), 2406.

Buckhaven Burgh and seaport of Fifeshire. It stands on the north side of the Firth of Forth, 7 m from Kirkcaldy, on the L.N.E. Rly. There is a good harbour. It is a fishing centre and has some other industries. There are coal mines near. The burgh includes Methil. Pop (1931), 17,643.

Buckhound Breed of dog. It is a variety of staghound and was used for hunting the buck deer. For many years the English sovereigns maintained a pack of buckhounds and the master of the buckhounds was a court official until the office was abolished in 1901.

Buckhurst Hill Urban district of Essex. It is about 10 m from London, on the L.N.E. Rly. Near Epping Forest, it is a favourite residential area. Pop (1931) 5486.

Buckie Burgh and fishing port of Banffshire. It is 14 m from Keith, on the L.N.E. Rly. It is chiefly a fishing centre and has a harbour. There are also some industries. Pop (1931) 8688.

Buckingham Borough of Buckinghamshire. It stands on the Ouse, 61 m from London on the L.M.S. Rly. The Grand Union Canal also passes it. Once the county town and a centre of the wool trade, it is less prosperous than formerly. Near is Stowe, now a public school, once the residence of the Dukes of Buckingham. Pop (1931) 3082.

Buckingham Duke of English title. The first holder was Humphrey Stafford, a descendant of Edward III, who was killed at the Battle of Northampton in 1460. It became extinct when the 3rd duke was executed by Henry VIII in 1521. From 1623 to 1687 it was held by George Villiers and his son George. From 1703-35 John Sheffield and his son were Dukes of Buckinghamshire and Normanby.

In 1784 George Grenville, Earl Temple, was made Marquess of Buckingham, and in 1822 his son Richard was made a duke. He was called Buckingham and Chandos because he married the heiress of the last Duke of Chandos. Richard, the 2nd duke (1797-1861) was a politician and the author of some interesting *Memoirs*. His successor Richard, the 3rd duke (1823-99), was Colonial Secretary 1866-68. When he died in 1889 the dukedom became extinct. His titles of Earl Temple and Viscount Cobham passed to relatives, and his daughter became Baroness Kinloss. The family seat was Stowe, near Buckingham.

Buckingham George Villiers, 1st Duke of English politician. A son of Sir G. Villiers, he was born in Leicestershire, Aug 28, 1592. He went to the court of James I and was soon on very friendly terms with the king and his son Charles. In 1617 he was made an earl, and in 1623 a duke. In 1623 he became Lord High Admiral, and led fruitless expeditions to France and Spain. He was killed by John Felton at Portsmouth, Aug 23, 1628.

Buckingham George Villiers, 2nd Duke of English politician. A son of the 1st duke, he was born Jan 30, 1628, and was only a few months old when he became duke. He was educated with the children of Charles I. and at Cambridge took part in the Civil War and was with Charles II at Worcester. In 1657 he returned from exile and married a daughter of Lord Fairfax, who had received the estates taken from him in

1649 He engineered Clarendon's fall and for six years 1667 to 1673, was a leading member of the Cahal He then associated with the Whigs and with the opposition to the government generally, not disdaining Titus Oates He died April 16, 1687 A man of ability, as his plays, especially *The Rehearsal*, prove, Buckingham was licentious and unscrupulous beyond his fellows He is portrayed by Dryden as Zimri in *Absalom and Achitophel*

Buckingham Palace Royal residence in London It is so called after John Sheffield, 1st Duke of Buckinghamshire and Normanby, for whom, in 1703, it was built by a Dutch architect In 1761 George III bought it for £21,000 In 1825 its reconstruction, following designs by John Nash, was begun and in 1846 and 1856 respectively were added a new wing and the hall room 111 by 60 ft Sir Aston Webb in 1913 designed a new front.

Buckinghamshire County of England In the south of the country, it has the Thames as its southern boundary and covers 842 sq m Aylesbury is the county town, other places are Slough, High Wycombe, Wolverton, Buckingham, Chesham, Newport Pagnell and Amersham Here too are Eton and Ousey The Ouse, Colne and Thames are the chief rivers The Chiltern Hills are in the south and its heath woods are famous The district known as Chiltern Hundreds (*qv*) is in the county In the Vale of Aylesbury and elsewhere is some of the richest land in England, Aylesbury butter and Aylesbury ducks being noted The historic associations of the county, such as Hampden, Hughendon, Dropmore and Jordans are many and varied The southern part of Buckinghamshire has become almost part of Greater London, which is reached by the L M S, G W and Metropolitan Rlys. It sends three members to Parliament. Pop (1931) 271 565

Buckle Henry Thomas English historian He was born at Leo, Kent, Nov 24, 1821, and devoted himself to collecting materials for a history of civilisation The first volume was published in 1857 and a second in 1861 The work was never completed, for shortly after the publication of the second volume the author died at Damascus, May 29, 1862

Buckmaster Lord Stanley Owen Buckmaster was born 1861 Educated at Christ Church, Oxford, he read for the Bar, being called to the Inner Temple in 1884 He became Liberal M P for Cambridge in 1906, but lost his seat in 1910, he was re-elected for Keighley in 1911 He became Solicitor General and a Knight, 1913 Lord Chancellor and a Peer, 1915 After losing office in 1916, he acted in a judicial capacity in the Lords and is a zealous supporter of divorce law reform

Buckram Coarse linen or cotton fabric stiffened with gine or size It is used for making shapes for ladies hats, also for stiff coat linings and in book binding Once buckram signified fine linen, and in the 15th century material for church vestments

Buckskin Soft leather for gloves breeches, etc Once it was made from deerskin i.e., buck's skin but now chiefly from sheep skin A strong twilled woollen cloth is also called buckskin Buckskin breeches are frequently made from this

Buckthorn Tall British shrub (*rhamnus carthanicus*), with branches ending in sharp thorn like points The dense clusters of yellowish green flowers are followed by small shining black fruits, which, having purgative properties, have been used in medicine A foreign species yields the dyestuff Persian or yellow heries

Buckwheat Plant of the dock and knot-grass family, with red stems, pinkish flowers and heart shaped leaves The fruit resembles a heech nut It is a native of Asia will grow almost anywhere, and is a food for sheep and pheasants while the shelled fruit serves for cattle and pigs Buck wheat cakes are popular in the United States

Budapest City and capital of Hungary It stands on the Danube, Buda being to the west, and Pest to the east, 163 m from Vienna It is an important railway centre, and is also a river port With suburbs it covers nearly 80 sq m

The city has many manufactures and is also the commercial and banking centre of the kingdom, as well as being its literary and social capital Along the river there are extensive quays and across it are some fine bridges Until 1526 the kings of Hungary lived in Buda and in 1867 it again became a capital city Pest, now the business quarter, is of less historic interest The two were formally united in 1873 In 1919 Budapest was occupied by the Rumanians Pop (1930) 1 006,184

Buddha Name popularly applied to Sakyamuni, the founder of Buddhism Strictly speaking it is a generic title, for according to the Buddhist doctrine there have been many Buddhas, or enlightened ones of whom Gotama was the latest, but not necessarily the last.

Gotama was the son of the Chief of the Sakyas, an Aryan tribe settled about 100 m. north of Benares He was born in 568 B.C. At the age of 28 he experienced a profound religious change which caused him to leave his wife and child, and devote himself to poverty and wandering After several years of contemplation, he began to teach the doctrines he had elaborated, and soon gained disciples Most of his life was spent in the neighbourhood of Benares He died about 488 B.C.

Buddhism Religions system of Buddha. The two fundamentals of Buddhism are indicated by the words *Karma* and *Nirvana* *Karma* is commonly taken to mean transmigration of the soul continuing through repeated incarnations until the attainment of the supreme bliss of *Nirvana*, which again is erroneously supposed to mean annihilation

By the elevation of its morality, its rejection of caste and proclamation of the brotherhood of man, Buddhism made rapid progress and reached the height of its influence under the Emperor Asoka (272-232 B.C.) but later Hinduism regained its ascendancy, and Buddhism now hardly exists in the peninsula. It has retained its hold in Ceylon, Farther India and Japan, and also has numerous adherents in China In Tibet it has developed into the remarkable system of Lamaism, which is highly sacerdotal and ritualistic

Bude Watling place and seaport of Cornwall It is 228 m from London and 18 from Lanneston on the S Rly It is beautifully situated at the mouth of the River Bude At one time it did a considerable

trade, especially after 1819 when the Bude Canal was opened, connecting it with Launceston and the Tamar Pop 3140

Budget Statement made once a year usually in April and May by the Chancellor of the Exchequer about the nation's finances It is, in fact, the national balance sheet In other countries a similar statement is made by the Minister of Finance The budget consists of two parts One is a statement of the actual revenue and expenditure for the past year, the other is an estimate of the revenue and expenditure for the coming year This includes details of how the revenue is to be provided and whether there will be any increase or decrease in taxation

Budleigh Salterton Urban district and seaside resort of Devonshire It is 4 m from Exmouth at the mouth of the River Otter, and on the S Rly Pop (1931) 3162

Buenos Aires City, seaport and capital of Argentina It stands on the River Plate, 150 m from its mouth, being on the south side of the river which is here 30 m wide It is a railway and aviation centre and has two large modern harbours, with docks among the largest in the world The city covers an area of 70 sq m Pop (1931), 2,195,200

Buenos Aires is a modern city and a feature is the number of handsome squares, called plazas The chief streets are wide and straight and there are beautiful parks Many fine buildings serve the city's commercial interests, and there is a university The city has an enormous trade, especially in cattle, meat and grain, and has large abattoirs and markets Founded in 1535, it was only a small place until 1853 when it was made the capital of Argentina

Buffalo City of New York It stands just where the Niagara River leaves Lake Erie, at the eastern end of the lake, 420 m from New York Its position has made it a great industrial centre Served by many railway lines, it is also a lake port with a large harbour and miles of wharves, and a terminus of the Erie Canal In addition to an enormous distributing trade, the city has many manufactures Electric power is obtained from Niagara The original name of Buffalo was New Amsterdam Pop (1930), 573,076

Buffalo Large animal belonging to the *bovidae* or ox family It is distinguished by its somewhat three sided horns which arise close together from very flat bases low on the skull The Indian water buffalo is a heavy black-haired animal with long, curved horns set on a straight head bearing small ears The African species is not so heavy, and has a short neck, large ears and reddish hair It lives in swamps and is a fierce, untamable animal The American bison belonging to a different genus and distinguished by its humped body and small horns is often termed a buffalo See BISON

Buffer Shock absorbing object interposed between two bodies about to come into contact Station buffers are attached to solid masonry and consist of hydraulic cylinders and projecting rams against the buffer heads of which the train pushes Rolling stock is fitted with buffers consisting of alternating rubber springs and steel plates

Buffon Count, French scholar Born Sept. 17, 1707, Georges Louis Leclerc Buffon was educated by the Jesuits at

Dijon In 1739, having won a reputation for learning, he was appointed director of the royal garden and museum in Paris, and he remained there until his death, April 16, 1788 Buffon is remembered by the *Natural History* of which he was one of the authors. He was also a mathematician and the author of a *Discourse on Style*, which brought him much fame

Bug Noxious insect found in most parts of the world Bugs belong to the order *heteroptera* and there are about 3000 varieties that live on land, besides many that live in the water Some of them feed on plants and are therefore harmful to vegetation Bugs are very common in hot countries They have four wings and the mouth is so arranged that it can pierce the skin of the victim, and draw the blood or sap into a chamber in the insect's head

The bed bug, frequent in dirty houses, produces irritating bites Insecticides are used to kill it, but cleanliness is its most potent enemy

Buggy Light carriage, formerly much used in America They had four wheels and were drawn by two horses or sometimes by one Another type of buggy, less popular, had two wheels only

Bugle Wind instrument used for military purposes A kind of trumpet, it is usually of brass or copper and is employed for giving signals in barracks and camps The key bugle, which has side holes, is a development of the bugle A large bead, worn as an ornament on women's dress, is called a bugle

Bugloss Plant (*lycopsis arvensis*) belonging to the horage family It grows wild in fields to a height of about a foot, bearing clusters of blue flowers The whole of the plant except the corolla of the flower is covered with sharp bristles

Buhl Style of decoration for furniture, perfected by André Charles Boulé, a wood carver in Paris in the 17th century, who inlaid pieces of furniture with thin sheets of tortoiseshell and metals, silver among them In this way he formed thereon scrolls, cartouches, and other ornaments Buhl furniture is heavy, with curved lines and often decorated with ormolu (qv)

Building Society Association for enabling persons to buy or build houses Each society consists of members who purchase shares, sometimes by payments at monthly or other regular intervals These and other funds are used to enable them to buy houses The societies also receive money on deposit from persons who are not members Provided they are incorporated, they can own land and raise money very much as a limited company can

In Great Britain building societies are regulated by law, several measures having been framed for this purpose Their accounts are supervised by the registrar of friendly societies Some of the societies have become very large and prosperous indeed In 1931 there were in Great Britain 1013 societies with over 1,400,000 members and investors Their total funds were over £420,000,000 There is a national union of building societies, and in their interests a paper, *The Building Societies Gazette*, is published

Buildwas Village of Shropshire It is on the Severn, 11 m from Shrewsbury, and is famous for its ruined abbey This was a Cistercian house and its remains include much of the church and the chapter house A modern house near is called Buildwas Abbey

Bulth Wells Urban district, market place of Breconshire. There are baths for the waters which have curative properties. The town is beautifully situated where the River Irton falls into the Wye. Pop (1931) 1663.

Bukovina Mountainous district of Rumania. It is largely covered with forests and has rich salt mines. Czernowitz is the capital. Its area is 4000 sq. m. and pop about 800,000. There was a good deal of fighting in Bukovina in 1914-1916 between the Austrians and the Russians.

Bulawayo City of Rhodesia. It is 1360 m. by rail from Capetown and is connected by rail with other cities of S. Africa. The town was formerly the capital of the Matabele. Pop 31,000.

Bulb Term popularly used to include, not only the true bulbs, *e.g.*, tulip or onion, but also any form of underground stores of plant nutriment which develops roots, stems and leaves when placed in suitable conditions *e.g.*, orcus, dahlia, anemone. The oorm of the crocus consists of the swollen base of the stem whereas the true bulb is made up of overlapping membranous sheaths which are structurally leaves. The culture of garden bulbs has been carried to perfection in Holland.

Bulford Village of Wiltshire. It is on Salisbury Plain, 81 m. from London, on the S. Rly. There is a large military camp.

Bulgaria Country of Europe. On the east it is bounded by the Black Sea and elsewhere by Rumania, Yugoslavia and Greece. Its area is 39,814 sq. m. Sofia is the capital and the largest town. Other centres of population are Philippopolis (Plovdiv) and Ruschuk. The chief ports are Varna and Burgas. Bulgaria is mountainous, but possesses a good deal of fertile land. The chief rivers are the Struma and the Maritza. The prevailing religion is the Greek Church. The people are mainly engaged in agricultural occupations. The chief crops are wheat, maize, barley and rye. A good deal of fruit is grown and some wine is produced.

The country is ruled by a king and a cabinet which is responsible to a national assembly or Sobranie of 227 members, who are elected by all adult males. The chief coin is the lev, equal to the franc, which is also in circulation, as is paper money issued by the national bank. The metric system is used. The country has an army, but no navy.

Bulgaria was made a principality in 1878, till then having been part of Turkey. In 1885 Eastern Rumania was added to it. In 1908 Prince Ferdinand declared himself king and reigned until 1918, when he abdicated and was succeeded by his son Boris.

Bulkhead Name given to the partitions in a ship which divide it into watertight compartments. They are found especially in battleships, when they are numbered. The word is also used for similar partitions in tunnelling operations.

Bull Male animal of the ox family. It is used for breeding beef or dairy cattle and for fattening. In the breeding of cattle a bull is selected according to the end in view. For dairy purposes the bull should be bred from a cow which is a good milker, but for beef cattle the animal is chosen for its own particular merits. The bull was worshipped in Egypt which had a sacred bull Bnchls. Armanat was the centre of this worship.

Bull Baiting is a sport formerly popular in England. A bull was tied to a stake, and then attacked by dogs, usually bulldogs or mastiffs. Many towns had bull rings for this purpose, and the name is retained in Birmingham and elsewhere. Bull Running consisted in irritating a bull by blowing pepper into its eyes and nostrils, turning it loose, and then hunting it through the streets. Both were forbidden by a law passed in 1835.

Bull Term used for a pronouncement made by a Pope. Famous bulls are the one of Pope Alexander VI which divided the New World between Spain and Portugal in 1493, and the one of 1870 which asserted the infallibility of the Pope. Formerly the word was used for pronouncements made by emperors and kings, such as the Golden Bull of the emperor, Charles IV (1356). The name is due to the fact that the documents were stamped with a seal (Lat. *bulia*).

Bulldog Breed of dog formerly used for bull baiting. Since about 1880 the breed again has come into favour owing to the formation of several bulldog clubs. The bulldog is characterised by its massive body and short legs, short muscular neck, broad, square head with large wide nostrils, small ears and square jaws, the lower jaw projecting beyond the upper. Two other varieties are the miniature bulldog and the French bulldog.

Bull-frog Name of a large N. American frog (*Rana calesiana*), from 7.8 in. in length, which bellows like a bull, hence the name, which has been incorrectly applied to other large species.

Buller Sir Redvers Henry, English soldier. Born in Devonshire Dec. 7, 1839, he was educated at Eton and entered the army. He saw a good deal of active service, being in China, Canada, Ashanti and the Sudan, as well as in the Zulu War, where he won the V.C. He rose to be a general and commander at Aldershot and in 1899 went out as commander of the forces sent against the Boers. Although he relieved Ladysmith his recall in 1900 was necessary and Lord Roberts took his place. He returned to Aldershot, but, in 1901, after a speech he was superseded. He died June 2, 1908.

Bullet Small missile. The earliest bullets were made of lead, cast into balls, but with the inception of rifled barrels a change took place in design. Modern bullets are almost all cylindrical in shape, with a pointed or rounded nose and those used in war are generally coated with nickel. Hollow headed bullets are used for shooting big game, such as elephants but their use is forbidden in war.

Bull Fighting National sport of Spain. The fights are held in large rings and are attended by thousands, Sunday being the usual day for them. The typical fight is divided into three parts. The first is a ceremonial, ending with the loosing of the bull which is goaded by the short spears of the picadores. In the second the banderilleros further irritate the animal by plunging it with darts. In the third the matador stabs the bull to death. Red and other bright colours are worn, and various devices employed to enrage the bull.

Bullfinch European bird. It is small black and bluish-grey, red or chocolate breasted according to sex and a native of woods. Its wild song is negligible, but in captivity it can be taught in the moulting

season to memorise and whistle tunes heard on a whistle. It nests in May, laying five eggs.

Bullion Refined precious metal not yet made into money. The word once meant melting house or mint, and its first recorded mention is in 1451. Stores of bullion, both gold and silver, are kept at the Bank of England and the Mint.

Bull Terrier Breed of dog formerly bred for fighting and rat killing. The hull terrier has a long wedge-shaped head with strong level jaws, small dark eyes and semi-erect ears. Its short body is of a white colour, and it has a broad chest, legs of medium length, and weighs from 15 to 50 lb. A small variety, the toy hull terrier, weighs under 15 lb. The hull terrier is courageous, seldom bad-tempered and is not quarrelsome.

Bully Beef Preserved meat, usually canned in America. It is issued as rations to soldiers on active service.

Bülow Prince von German statesman. Bernhard Heinrich Martin Karl Bülow was born in Holstein, May 3, 1840. He became a soldier and served in the Franco-German War, but soon afterwards (1873) he entered the diplomatic service. As a junior member of the service he gained experience in various capitals, and in 1893 was made Minister at Bucharest. From 1893-97 he was Ambassador in Rome, and from 1897-1900 was Foreign Secretary. In Oct., 1900, he was made Imperial Chancellor, a post he held until 1909. In Dec., 1914, he left his retirement to become Ambassador in Rome. Made a prince in 1905, Bülow wrote a book, translated into English as *Imperial Germany*, in which he tried to justify his country's policy. He died Oct. 28, 1929.

Bulwark Rampart of protection. This word is applied to walls and similar structures raised for defence, and is specially applied to the plating of a ship above the upper deck. It is figuratively used to denote anything that wards off danger.

The *Bulwark* was the name of a battleship of 15,000 tons completed in 1902. On Nov. 26, 1914, she was blown up when at anchor in the Medway, only 12 men being saved out of a crew of nearly 800. An earlier *Bulwark* is now used as a training ship.

Bumboat Broad, clumsy boat used for conveying provisions, fruit, and other wares to vessels lying in port or off shore. A scavenger's boat used to convey refuse from ships is sometimes called a bumboat.

Bunbury Borough, seaport and watering place of Western Australia. It stands on Koomannah Bay, 112 m. from Perth. There is a good harbour, from which coal and other produce of the state is exported. Pop. 5,570.

Buncombe County in N. Carolina, U.S.A. In 1880, during a debate in Congress, the member for the constituency in which Buncombe was situated admitted that his long speech was made simply to please his constituents. Buncombe, or Bunkum, thus came to mean insincerity or humbug.

Bundaberg Town and river port of Queensland. It is on the River Burnett, about 10 m. from the sea, and exports timber and sugar, which is grown in the neighbourhood. Distilling, brewing, and brick-making are carried on. It is connected by railway with Brisbane, which is about 200 m. to the south. Pop. (1931) 11,250.

Bungalow House with one story, surrounded by a veranda. It originated in India and other hot countries, and in the 19th century became popular in the country and seaside parts of England.

Bungay Market town and urban district of Suffolk. It is on the Waveney, 7 m. from Beccles and 114 from London, on the L.N.E. Ry. The industries include large printing works and flour mills, and there is a trade along the river. Pop. (1931) 3,098.

Bunhill Fields Cemetery and public garden in Finsbury, London. It is in City Road, opposite Wesley's Chapel, and covers about six acres. It was used as a burial ground in the 17th century, especially for Nonconformists, and here are the graves of John Bunyan, Daniel Defoe, Isaac Watts and others. It was made a public garden in 1869.

Bunion Inflamed swelling of the liquid-containing sac over the metatarsal joint of the big toe. It is caused by pressure of badly fitting shoes and can be relieved by the removal of its cause, and by hot fomentations. Seriously inflamed bunions require a surgical operation.

Bunker Hill Height outside Boston, Mass. On a neighbouring hill, Breed's Hill, a battle was fought during the American War of Independence, on June 17, 1775. The Americans fortified the hill which was attacked by the British. Twice they were driven back, but the third assault was successful. The British lost 1,000 men.

Bunsen Robert Wilhelm von German chemist. Born at Göttingen, March 31, 1811, he became Professor of Chemistry at Cassel, in 1837, and later (1852) at Heidelberg. He made many important discoveries, among which were the isolation of the metal barium, the discovery of caesium and rubidium, and the first accurate study of the absorption of gases. He devised the Bunsen burner in which an odourless, colourless flame with great heat is obtained by burning a mixture of air and gas, the air being admitted at the base of the gas burner. From this type of burner have been evolved the burners used in cooking and heating stoves, and with gas mantles. Bunsen died Aug. 16, 1899.

Bunt Fungoid pest which attacks maize, barley and wheat rendering them foul and black. Its innumerable microscopic spores cause widespread infection. Bunt may be prevented by picking the seed corn.

Bunter Beds Name given to the long series of the Triassic systems of rocks in Britain. These beds consist of fine-grained, mottled sandstones and pebbly conglomerates attaining a thickness of about 1,500 feet in the midland counties of England in which area they serve as the chief source of the water supply for the large towns.

Bunting Name of a group of small birds comprising the genus *emberiza*. It includes the common or corn hunting, the yellow-hammer and the ortolan-hunting.

Buntingford Market town of Hertfordshire. It stands on the little River Rible, 17 m. from Hertford and 34 from London. Pop. 4,926.

Bunyan John. English writer. Born in Flitow, he became, like his father, a tinker. In 1645 he took part, on the side of the parliament, in the Civil War, and in 1648 he married. Soon,

having read some books of a religious nature, he became a converted man. He began to preach, and continued to do so until put in gaol for so doing in 1660. He remained there, writing a good deal, until 1672 when he was released. The rest of his days were spent in Bedford in preaching and writing, he also preached in London. He died Aug. 31, 1688, and was buried in Bunhill Fields, London. There are several memorials to him in Bedford. Bunyan wrote many books, but one, *The Pilgrim's Progress*, stands out. A masterpiece of English prose, it was begun in prison and finished in 1678. Others are *The Holy War*, *Grace Abounding*, his earliest effort, and *The Life and Death of Mr. Badman*.

Buoy Floating body anchored at sea, in coastal waters, rivers and estuaries for the guidance of navigators. Buoys have been used in the Thames since 1540. In 1822 a system was evolved whereby the shapes and colouring of buoys should indicate fair ways, hidden dangers, navigable limits, etc. In Great Britain the control of buoys is under taken by Trinity House.

Burbage Richard English actor. Born in 1567 he became an actor when a boy and was a member of several companies. He had made a reputation when owing to his father's death in 1597, he inherited a share in the Blackfriars Theatre, London. With his brother, Cuthbert, he built the Globe Theatre, but his great claim to fame is his association with Shakespeare. He played some of the greatest of Shakespeare's characters, Hamlet, Othello, Lear and others, and also tragic parts in plays by Ben Jonson and Webster. He died March 13, 1619, and was buried in Shoreditch. His father James Burbage, who was a joiner before he became an actor, built theatres at Shoreditch and Blackfriars.

Burdett-Coutts Baroness English philanthropist. Angela Georgina Burdett was born April 21, 1814. She inherited money from her parents and also a large fortune from the actress Harriet Mellon, her father's second wife. She devoted large sums to charities of all kinds and became the leading philanthropist of her time. She was also a prominent figure in the social life of London. In 1871 she was made a peeress and she died Dec. 23, 1906.

Burdock Common plant (*arctium lappa*) of the order *compositae*. Found wild in waste places, it grows to about four feet in height, and, on account of its large wavy leaves, is often introduced by artists into the foreground of a picture. The purple flower heads are succeeded by burrs covered with hooked scales.

Bureaucracy Form of government in which paid officials exercise the controlling influence. It is generally used as a term of reproach, the idea being that such officials pay excessive attention to detail and routine work to the neglect of the general good.

The word bureau is very generally used for an office, e.g., a *bureau de change* or an inquiry office. It is also a piece of furniture usually a combination of a chest of drawers and a writing desk.

Burford Market town of Oxfordshire. It stands on the Windrush 13 m. from Oxford. The town is chiefly visited for its picturesque houses. Pop. 1050.

Burford Bridge is a hamlet on the Mole, near Box Hill, in Surrey.

Burgee Small pennant used by yachts and pointed or swallow tailed, according to the owner's status. Club flags are always pointed, those of a commodore or vice-commodore are swallow tailed. Only the Royal Yacht Squadron may fly the white ensign, but other royal clubs may bear a crown on the burgee.

Burgess Form of burghor, one who lives in a borough. It is sometimes used for the men sent to Parliament by the boroughs and universities, although its early meaning was for the voters. In some of the American colonies, e.g., Virginia, the elected representatives were known as the House of Burgesses, and the term is still in use.

Burgess Hill Urban district of Sussex. It is 9 m. from Brighton and 41 from London, on the S. Ry. There are some industries, but it is mainly a residential area. Pop. (1931) 5975.

Burgh Scottish word for a chartered town or borough. Each has its council presided over by a provost or lord provost, and consisting of councillors and bailies. Burghs are of several kinds. The older ones are the royal burghs that obtained their charters from a king, and burghs of barony that obtained them from a lord or bishop. In addition there are parliamentary burghs and police burghs, the former are separately represented in Parliament. Police burghs are places which have been made burghs in modern times, they look after their own lighting, drainage, etc. Each year representatives of the burghs meet in a convention in Edinburgh.

Burgh Hubert de English statesman. Born about 1175 he was chamberlain and then justiciar under King John. When Henry III. became king he continued as justiciar but his position was really that of regent. In 1217 he won a naval battle with the French and he kept himself in power until 1232. He died May 12, 1243.

Burghley Baron English statesman. William Cecil was born at Bourne Sept. 13, 1520, the son of Robert Cecil of Burghley. He went to Cambridge, St. John's College, and in 1547 entered the House of Commons becoming a secretary of state in 1550. During Mary's reign (1553-58) he was not very prominent but he won the confidence of the Princess Elizabeth who made him her secretary when she became queen in 1558. From then until his death he was her chief advisor and with her was responsible for England's foreign policy. He was made a baron in 1571 and died April 4, 1598. His son Thomas was made Earl of Exeter and another son Robert, Earl of Salisbury.

Burghley House Residence of the Marquess of Exeter. It stands in a large park just outside Stamford. The house was built towards 1600 by the great Lord Burghley. It contains some beautiful decorations and valuable works of art.

The eldest son of the Marquess of Exeter bears the title of Viscount Burghley. The present holder of that title is a famous athlete. Born in 1905 he has performed some remarkable feats as a hurdler at which he has represented Cambridge and England at the Olympic Games. In 1931 he was elected M.P. for the Peterborough division.

Burgomaster In Germany the mayor or chief official of a town.

city or town. It is also used in the same sense in Belgium and the Netherlands. Burgomasters are usually paid.

Burgos City of Spain, 220 m from Madrid with which it is connected by railway. It has some industries, but is chiefly known for its cathedral, one of the finest and largest in Spain. A Gothic building, it was 300 years in building and is remarkable for its altars and statues. The citadel is much older and of almost equal interest. At one time Burgos was the capital of Castile. In the Peninsular War it was besieged and finally taken by the British. Pop (1931) 40,161.

Burgundy Name of a district chiefly in France, but partly in Switzerland. It lies around the rivers Rhône and Saône, its chief towns being Dijon, Arles, Besançon and Vienne. There was a kingdom of Burgundy in the Middle Ages, from about 900 to 1032, when it became part of Germany. Its capital was Arles. Franche Comté was another Burgundy, as it was really the free county of Burgundy. Its capital was Besançon and it became part of France in 1679.

The most important Burgundy was the duchy which lasted from 1032 to 1482. It was really part of France, but its dukes, being also rulers of Flanders, became so strong that they acted as independent sovereigns. This was especially true of Charles the Bold, but after he was killed in 1477 the King of France found it possible to annex most of Burgundy and from then until 1789 it was a province of France. A grandson of Louis XIV was called Duke of Burgundy.

The wines grown in the district are called Burgundy. There are both red and white and are among the most popular of those drunk in Britain. Beaune and Chablis are among them.

Burke Edmund, Irish writer and statesman. Born Jan. 12, 1729, was educated at a private school at Ballitore and Trinity College, Dublin. Going to London he earned a livelihood by writing for *The Annual Register* and in other ways. In 1765 he became private secretary to Lord Rockingham and entered the House of Commons as M.P. for Wexford. From 1774 to 1780 he sat for Bristol and from 1781-94 for Malton. He acted for years with the Whigs and was paymaster general in 1782-83, but never held higher office. He had a strong political attachment to Fox, but in later life he broke this friendship and the excesses of the French Revolution made him bitterly opposed to all ideas of change. Outside Parliament he was a member of the circle that gathered round Johnson. He died July 8, 1797.

Burke was a constant speaker in Parliament and some of his writings were originally speeches. These reveal him as a political philosopher of the first rank, but he was more than that. A wealth of learning was stored in a mind of unusual strength and fertility, wide reading and natural gifts enabled him to express himself in a rich and stately prose. His works began with a *Reflection on the Revolution in France*, but more important are his *Thoughts on the Present Discontents*. In a group of speeches he examined with his usual power the relations between the American colonists and the mother country and in him the former found their most powerful champion. With these may be placed the immortal *Letter to the Sheriffs of Bristol*, another fine statement of fundamental principles.

A further group of writings deals with India

He was largely responsible for Fox's India Bill and he was one of those who impeached Warren Hastings, his speech on that occasion being one of his greatest efforts. The last writings from his pen dealt with the French Revolution which he denounced bitterly. They include the *Appeal from the New to the Old Whigs* and *Letter on a Regicide Peace*.

Burke Robert O'Hara, Australian explorer, born in Galway in 1820. After some years first in the Austrian army and then in the Royal Irish Constabulary, he emigrated to Australia in 1853 and became an inspector of police at Melbourne. In 1860 he was appointed leader of an expedition that was to cross the Australian continent from south to north. Very early in the expedition discussions broke out and several members left. Burke and the rest went on to Cooper's Creek, Queensland, where they waited for fresh supplies. The relief party being delayed, Burke and three companions pushed on. After great privations they succeeded in reaching the estuary of the Flinders river on the Gulf of Carpentaria, but on the return journey three of the four, including Burke, died of starvation. The survivor was saved by natives. The date of Burke's death was June 28, 1861.

Burke Sir John Bernard, British scholar. Born in London, Jan. 5, 1814, his father, John Burke (1787-1848) was the founder of the *Peerage and Baronage* and the *Landed Gentry* which still bears the family name. The son took over the work of editing these volumes in 1847 and did other work of a similar kind. In 1853 he was made Ulster king-at-arms and in 1854 he was knighted. He died Dec. 12, 1892.

Burley -in-Wharfedale, Urban district of Yorkshire (W.R.). It is on the Wharfe, 3 m from Ilkley, and is served by the L.M.S. and the L.N.E.R. The chief industry is the manufacture of woollen goods. Pop (1931) 3960.

Another Burley is in Rutland, 2 m from Oakham. Here is Burley Hall, a beautiful house in a large park, once the seat of the Earl of Winchelsea.

Burlington House Public building in Piccadilly, London. It is the headquarters of several learned societies and here each year the Royal Academy holds its annual exhibition of pictures. It consists of Old Burlington House, built by the Earl of Burlington and bought by the state in 1854 and New Burlington House built after that date. The societies here include the Royal Society, the British Academy, the British Association, the Chemical Society and others.

The title of Earl of Burlington is borne by the Duke of Devonshire. It was given to a member of the Cavendish family in 1831 and in 1858 William, the 2nd earl, succeeded his cousin as 7th Duke of Devonshire.

Burma Province of British India. On the east side of the Bay of Bengal, it extends from Manipur in the north to Siam in the south, and is bounded on the east by China, Annam and Siam. The total area is about 233,492 sq miles and the population (1931) 14,667,146.

The province is divided into Upper and Lower Burma. The latter passed into the possession of the British crown in 1852 as the result of the second Burmese war. The former remained an independent kingdom for over 30 years longer, but in 1885 the misrule and

barbarity of King Theebaw led to British intervention. Theebaw was deposed and his country was annexed to British India in Jan., 1886, and in the same year the Shan states were added to the province. For administrative purposes the division into Upper and Lower Burma has been retained, the capital of the former being Mandalay and of the latter Rangoon, which is also the chief seaport. The principal rivers are the Irrawaddy and the Salween. The Burmese are an Indo-Chinese race, closely akin to the Tibetans, highly intelligent and amiable, but not conspicuously industrious. They are Buddhists. There are large and growing communities of Hindu and Chinese immigrants, the latter forming the bulk of the shopkeeping and business classes. The principal industry is agriculture, but the mineral wealth of the country is considerable, including petroleum. Rice is one of the principal exports. The Burmese are famous for their silk weaving and dyeing.

BURMESE WARS. There have been three wars between the British and the Burmese. The first lasted from 1824 to 1826 and ended in the cession of some territory to Burma. The second in 1852 resulted, after the capture of Rangoon, in the annexation of Lower Burma by the British. The third war was against King Theebaw in 1885. He and his capital, Mandalay, were seized and Upper Burma was annexed.

The royal commission on the government of India that sat in 1928-30 advised the separation of Burma from India if such a course was approved by the people. In 1932, therefore, it was decided to submit the matter to the vote and arrangements were made for providing the country with a new constitution in 1934 if the voters decided for separation.

Burnaby Frederick Gustavus English traveller. Born at Bedford March 3, 1842, he was educated at Harrow and entered the army. In 1875 he rode across Central Asia in the winter and his account of this, *A Ride to Khiva*, made him famous. *On Horseback through Asia Minor* describes other adventures, and he crossed the Channel in a balloon in 1882. On Jan. 17, 1886, he was killed in the fight at Ahn Klea.

Burnand Sir Francis Cowley English journalist. Born in London, Nov. 29, 1836, he was educated at Eton and Trinity College, Cambridge. Having given up the idea of taking orders, he became a barrister. In 1863 he joined the staff of *Punch* of which he became editor in 1880. He resigned in 1906 and died April 21, 1917.

Burnand wrote many plays, chiefly comedies and burlesques, of which *Black Eyed Susan* and *The Colonel* were among his best. His series of *Happy Thoughts*, first published in *Punch*, were issued afterwards in book form, and a number of other books of light or burlesque character came from his pen.

Burne-Jones Sir Edward Coley English artist, born in Birmingham, Aug. 28, 1833, and educated there and at Exeter College, Oxford, where he became associated with William Morris and Rossetti in their aesthetic movement. His best works are cartoons for stained glass, but he also painted in oil and water colours. Burne-Jones' picture of "King Cophetua and the Beggar Maid" was purchased for the Tate Gallery in 1910 and other of his paintings are "The Golden Stairs," "Merlin and Vivien," "The Merciful Knight" and "The Wheel of

Fortune." Burne-Jones was one of the founders of the Pre-Raphaelite brotherhood. He was made a baronet in 1894 and died June 17, 1898.

Burne-Jones's son and successor, Philip (1861-1926), was also an artist. When he died the baronetcy became extinct.

Burnes Sir Alexander Scottish traveller. A kinsman of Robert Burns, the poet, he was born at Montrose, May 16, 1805. He entered the Indian army in 1821, and, owing to his aptitude for Indian languages, was soon employed in political work in the north-west, which gave him the opportunity of making important journeys of exploration. Between 1831 and 1833 he travelled through Afghanistan to Bokhara and Persia, and on his return to England in 1834 published an account of his journey. In 1836 he was sent on a mission to Dost Mohammed at Kabul. As a result he advised the Indian Government to support Dost Mohammed against Shah Shuja, but his advice was rejected with disastrous results. In 1839 he was appointed as resident political agent at Kabul, where he was murdered by the mob during an insurrection Nov. 2, 1841.

Burnet Gilbert English prelate and historian. He was born in Edinburgh, Sept. 18, 1643, studied at Marischal College, Aberdeen, and entered the Presbyterian ministry, but afterwards took episcopal orders. In 1664 he became Rector of Saloun, East Lothian, and in 1669, Professor of Divinity in the University of Glasgow.

In 1674 Burnet went to London, and was appointed chaplain of the Rolls Chapel. In 1677 he published his continuation of Spottiswoode's *History*, his first important work. His strong anti-Roman opinions having alienated him from the court on the accession of James II, he retired to the Continent and settled at the Hague where he obtained the favour of William of Orange. At the Revolution he returned to England with William and Mary, and was rewarded for his services with the bishopric of Salisbury. He remained bishop there and an influential figure at court until his death, March 7, 1715. His remarkable *History of His Own Time*, published in 1724, is of great value to historians.

Burnett Frances Eliza Hodgson English authoress. Born in Manchester, Nov. 24, 1819, she passed her early days in the United States. In 1877 she made a reputation with *That Lass o' Lowrie's*, and this was greatly enhanced when *Little Lord Fauntleroy* appeared in 1886. She wrote other novels, including *A Fair Barbarian*, and several plays including *His Grace of Ormonde* and *Esmeralda*. Miss Hodgson married first L. M. Burnett of New York and secondly Stephen Townesend. She died Oct. 29, 1924.

Burney Frances English writer called usually Madame d'Arbly or Fanny Burney. Born at King's Lynn, June 13, 1752, she was a daughter of Charles Burney (1726-1814), author of a *History of Music*. In 1760 the Burneys moved to London and their home became a social centre. Johnson and Garrick being among its many visitors. In 1778 Fanny published anonymously a novel called *Evelina*. This was a distinct success and soon its authorship became generally known. It was followed by *Cecilia* 1782. In 1786 Miss Burney became second keeper of the robes to Queen Charlotte and in 1793 she married an exiled French general, Alexandre d'Arbly. After this event she published

Camilla, 1796, and *The Wanderer*, 1814. Her *Diary and Letters* appeared in seven volumes in 1842-46. She died in London, Jan 6, 1840.

Burney Sir Charles Dennistoun. English sailor. Born, Dec 28, 1888, he was a son of Sir Cecil Burney (1858-1929) who was second in command of the Grand Fleet at the battle of Jutland and who, having been made a baronet, died, Jan 5, 1929.

Charles Burney entered the navy in 1905 and served through the Great War. He is known as the inventor of the paravane and a builder of airships, being the head of the firm that built the R100 at Howden. From 1922-29 he was Unionist M.P. for the Exbridge division.

Burnham Baron. English journalist. Edward Levy Lawson was born in London, Dec 28, 1833, a son of J. M. Levy, one of the founders of *The Daily Telegraph*. In 1855 he became the principal owner of that paper and under his direction it became a very valuable property. Having taken the name of Lawson, he was made a baronet in 1892 and Baron Burnham in 1903. He died Jan 9, 1916.

Burnham's elder son, Harry Lawson Webster Lawson, who became the 2nd baron, was born Dec 18, 1862. He was educated at Balliol College, Oxford, and was the head of *The Daily Telegraph* from his father's retirement in 1904 until he sold it in 1927. He was a Unionist M.P., 1885-92, 1893-95, 1905-06 and 1910-16. In 1919 he was made a viscount. He served on a number of commissions, including the one that, in 1928-30, reported on the future status of India, and was chairman of the committee that fixed the Burnham scale of salaries for teachers. Died 1933.

Burnham Beeches Beauty spot in Buckinghamshire. It is 425 acres in extent, and is the remaining part of an ancient forest. It was purchased by the corporation of the City of London in 1879 for the use of the people. It is reached by omnibuses from Slough.

Burnham-on-Crouch Urban district and seaport of Essex. It stands on the north side of the Crouch estuary, 43 m. from London on the L.N.E. Ry. It is known for its oyster beds, but perhaps more as a yachting centre, one of the most popular in England. A yachting week is held every September. Pop. (1931) 3395.

There are several other Burnhams in England. Burnham in Somerset is a small watering place on the Bristol Channel. It is 146 m. from London and is served by both the G.W. and the S. Ry's. Burnham Thorpe in Norfolk the birthplace of Nelson, has an interesting old church. Burnham market, also in Norfolk, was once a market town.

Burnham Scale Scale of salaries for teachers in England and Wales. The scale was drawn up in 1919 by a committee over which Viscount Burnham presided and came into force in 1920. It dealt separately with teachers in elementary schools, secondary schools and technical schools. For each of these maximum and minimum salaries were laid down with the amount of the annual increment in each case. There were separate scales for head teachers, and assistant teachers, men teachers and women teachers.

The scales were accepted by most of the education authorities and remained in force for five years as arranged. At the end of that period (1925) it was found impossible for the

education authorities and the teachers to agree upon a new scale, and the matter was again referred to a committee presided over by Lord Burnham. The result was another set of scales in which, on the whole, the salaries were somewhat lower than those of the 1920 scales.

Burnley Borough and market town of Lancashire. It stands on the little river Brun, just where it joins the Calder, 27 miles from Manchester and 212 from London, on the L.M.S. Ry. Burnley is a centre of the cotton trade and has also machinery works. In the neighbourhood are coal mines.

The town has a famous Association football club. This was founded in 1881 and won the Association Cup in 1914, and the championship of the League in 1921. Pop. (1931) 98,239.

Burnous Arab garment. It is a kind of high crowned cape, or cloak and hood, woven in one piece and worn by Arabs and Moors of both sexes.

Burns John. English politician. Born in London, Oct 20, 1858, he worked in a candle factory at Battersea and then as an engineer. Soon he became known as a forceful speaker at socialist and trade union meetings and in 1885, as a social democrat, he stood for Parliament (W. Nottingham). In 1886 he was sent to prison for his share in a riot of the London unemployed. In 1889, the year in which he took a prominent part in the strike of the dock labourers, he was elected to the L.C.C. In 1892 he entered Parliament as M.P. for Battersea. Gradually his opinions became less extreme and in 1905, as president of the Local Government Board, he entered the Liberal Cabinet. In 1914 he was transferred to the Board of Trade, but on the outbreak of the Great War he resigned. He kept his seat in Parliament until 1918.

Burns Robert. Scottish poet. Born at Alloway, Ayrshire, Jan 25, 1759, he was the son of a man who farmed a little land, but was also something of a student. He received a fair education. He worked on the farm for some years, then carried on an unsuccessful business at Irvine and in 1784, his father being dead, settled on a farm at Mossgiel, Mauchline. In 1786 he went to Edinburgh and in 1788 he took a farm in Dumfriesshire. In 1789 he became an excise-man. Like his other occupations this work was un congenial, but his unhappiness was due partly to his own imprudences. He died at Dumfries, July 21, 1796, being 37 years old only.

Burns had many love affairs, notably with Jean Armour, whom he married in 1786, and Mary Campbell. He is recognised as the national poet of Scotland and his birthday is celebrated with increasing fervour by Scotsmen all over the world.

The poetry of Burns is notable for its simplicity, which appealed strongly to an age in which verse of a very different kind was prevalent. Some of his shorter poems and his songs are amazingly musical, others are masterpieces of satire, e.g. *Holy Willie's Prayer*. The best known is *The Cotter's Saturday Night*. The publication of a volume of these at Kilmarnock in 1786 was a literary event of the first importance. Burns is the subject of an immense literature.

Burns Treatment of slight burns are relieved by applying horradie or eucalyptus ointment, or, failing these, olive oil. If more serious, the air must be excluded by

covering the part with clean linen or lint soaked in a weak solution of picric acid (or bicarbonate of soda if this is not available), on top of which a pad of cotton wool is placed, then a piece of oiled silk and lastly a bandage.

In serious cases, and especially with children, shock (*qv*) must be guarded against, as this may prove fatal when the injury would not

Burntisland Burgh and seaport of Fifeshire. It is on the Firth of Forth, 20 m from Edinburgh, on the L N E Rly. There are some industries, chiefly connected with shipping for which there is a good harbour. Pop (1931) 5389.

Burr Botanical name for the prickly covering of some fruits, such as the horse chestnut. The heads of the burdock and the rough minute fruits of the goose grass are other examples.

In Geology, burr stone is a siliceous rock used for millstones. The rough edge left on metal after cutting with a tool is termed a burr, and it is also the name of a small circular saw.

Burr Aaron. American statesman. He was born at Newark, New Jersey, Feb. 6, 1756, served with distinction in the War of Independence and afterwards practised law in New York. He was attorney general for New York State from 1789 to 1790 and a senator from 1791 to 1797. In 1801 he stood for president and in the electoral college tied with Jefferson, but on a vote of the House of Representatives Jefferson was elected and Burr had to be content with the vice presidency. Throughout his career he was bitterly opposed by Alexander Hamilton, who, in 1804, succeeded in bringing about his defeat for the governorship of New York. The personal animosity of the two men resulted in a duel in which Hamilton was killed. Burr was indicted for murder but acquitted. He later attempted a filibustering expedition to Texas, was tried for treason, but acquitted, and never recovered his place in public life. He spent some years in Europe trying to gain support for new filibustering schemes, but without success. He died Sept. 14, 1836.

Burry Port Urban district and seaport of Carmarthenshire. It stands on Burry Inlet, four miles from Llanelli, on the G W Rly. The chief industry is the export of coal. Pop (1931) 5752.

Burry Inlet is the estuary of the river Longhor. It is 12 m long and about 4 wide.

Bursar Term used at the colleges of Oxford and Cambridge for an official who looks after the college accounts. It is also used in the same sense in the public schools, and in 1932 an association of these officials was founded. His office is called the bursary. The word hursary is used in Scotland for a grant of money made to a student, which in England is called a scholarship or exhibition.

Burslem District of Staffordshire part of the county borough of Stoke on Trent. It is 20 m from Stafford on the L M S Rly. The chief industry is the manufacture of pottery which was begun here in 1644. In 1878 Burslem was made a borough and in 1908 it became part of Stoke-on-Trent (*qv*).

Burton Robert. English writer. He was born Feb. 8, 1677 at Lindley, Leicestershire, and educated at Oxford. He became vicar of St Thomas's, Oxford, and rector of Segrave, Leicestershire, but lived

most of his life at Christ Church, Oxford. He was a keen student of many branches of learning, and at his death in 1640, many of the books of his fine library were bequeathed to the Bodleian Library. His fame rests upon his *Anatomy of Melancholy*, a work of singular charm. He died Jan. 25, 1640.

Burton Sir Richard Francis. British explorer and orientalist. Of mixed Anglo-Irish and Scottish descent, the son of an officer, he was born March 19, 1821. In 1842 he went to India as a subaltern in the Bombay native infantry, and for several years worked on the Sind survey, often disguising himself as a native and obtaining an intimate knowledge of Oriental life and manners. On his return to England he published several books on India, and in 1853 set out on his famous journey to Mecca and Medina, disguised as a Pathan Moslem. His account of his exploit, *The Pilgrimage to Al Medinah and Meccah* created a great sensation when it appeared in 1855.

In 1854 he undertook an even more remarkable and far more dangerous expedition into Somaliland which he accomplished successfully, though his life was in constant peril. Two years later he was sent by the British Government to search for the sources of the Nile and, accompanied by Speke, discovered Lake Tanganyika and the Victoria Nyanza. In 1861 he entered the permanent service of the Foreign Office and was consul successively at Fernando Po (1861), Santos (1865), Damascus (1869) and Trieste from 1871 until his death, Oct. 20, 1890. It was at Trieste that he made his celebrated translation of *The Arabian Nights* in 16 volumes.

Burton-upon-Trent County borough of Staffordshire. It stands on the Trent, 127 miles from London, and is served by the L M S Railway system, and the Trent and Mersey Canal. The chief industry is brewing and here are breweries belonging to the great firms of Bass, Allsopp, Worthington and others. The industry has been carried on here over 300 years, chiefly because the water is peculiarly suitable. There are other industries, including engineering works. The river is remarkable for a fine bridge which leads into Derbyshire. Pop (1931) 49,485.

Bury County borough of Lancashire. It is on the Irwell, 196 miles from London and 9 miles from Manchester, by the L M S Railway. Bury is one of the centres of the cotton industry, other manufactures are paper and machinery.

Bury Foothill Club won the Association Cup in 1900 and 1903. Pop (1931), 56,086.

Bury John Bagnell. British historian. Born Oct. 10, 1861, at Clogher, the son of a clergyman, he was educated at Trinity College, Dublin, where in 1893 he was elected professor of modern history. In 1898 he became also professor of Greek. In 1902 he was appointed regius professor of modern history at Cambridge, and there he remained until his death, June 1, 1927. Bury's special field of study was the later Roman Empire, and his best works are his *History of the Later Roman Empire*, 1889, and his edition of Gibbon's *Decline and Fall*. He also wrote a *History of Greece* and a *History of Freedom of Thought*.

Bury St Edmunds City and market town of Suffolk. It is on the Lark, 85 m from

London, and is served by the L N E Rly. The church of S James is the cathedral of the diocese of S Edmundsbury and Ipswich. Of the great abbey that once stood here only the tower and gateway remain. Part of the grounds form a park. Bury is an agricultural centre and is the capital of West Suffolk. Pop (1931) 16,708.

Bushey Urban district of Hertfordshire. It adjoins Watford, and is 16 m. from London, on the L.M.S. Rly. Pop (1931) 11,243.

Bushey Park Park in Middlesex. It is at Teddington, 14 m. from London, near the Thames and adjacent to Hampton Court. The park, which covers 1100 acres is crown property. In it is the National Physical Laboratory, and it is famous for its avenue of limes and horse chestnuts.

Bushire Seaport of Persia. It is on the northern shore of the Persian Gulf, and does a considerable trade with Arabia, India, and Java. The principal exports are opium, gum, carpets, hides and skins, horses, tobacco, etc., and the principal imports cotton and woollen goods, tea, coffee, spices and metal. The climate is unhealthy. There is a good harbour. Pop about 18,000.

Bushman Remnants of the aboriginal race of South Africa. Confined virtually to the Kalahari Desert they are yellow-skinned and of low stature. They are nomads, without social or religious institutions, but they are not unintelligent, and in their rock pictures show considerable artistic skill.

Bushranger Australian bandit. They infested the remotest settlements until late in the 19th century. They operated in large gangs, of which the most celebrated was that of the Kelly brothers, who terrorised districts of New South Wales and Victoria as late as 1880.

Business Word meaning much the same as trade or commerce. In English law certain statutes make it illegal to carry on certain businesses, such as pawnbroking and moneylending, without licence or registration.

By law it is necessary for all persons who trade in names that are not their own to register such names at Somerset House, London. These names must be shown on the firm's note-paper.

Business day is a term used in the Bills of Exchange Act, 1882. Every day is a business day except Sunday, Christmas day, Good Fridays and days set apart as public holidays under the Bank Holidays Act, 1878, and days appointed by royal proclamation as days of fast or thanksgiving.

BUSINESS AS A CAREER The first necessity for success in business is what is known as a "business sense." This implies acumen, initiative, balance, firmness and self-reliance, and, added to these, experience and knowledge of the world.

In the industrial world there are many important and remunerative positions such as that of Company Secretary, and those aiming at any such responsible post in commerce should be equipped with a definite professional qualification such as Fellowship of the Incorporated Secretaries Association or the Chartered Institute of Secretaries.

Particulars of the examinations may be obtained from the office of the Association,

Secretaries House, 21 Bedford Square, London, W C 1, in the first case, and from the Institute, 59a London Wall, London, E C in the second. The salary of the secretary of a company ranges between £500 and £2000 or more, according to the size of the company and the executive responsibility required.

A Cost Accountant's position is comparatively a recent development, and the demand for qualified and experienced men is great. Professional status is obtained through the Examinations of the Institute of Cost and Works Accountants, 6 Duke Street, London, S W 1.

Industrial Management is a profession which has been created by the divorce of ownership and management. Many of the larger concerns to-day are owned by a limited liability company with many shareholders instead of by an individual, and the need for a "professional" manager is therefore created. To obtain this post technical knowledge of the details of manufacture of the particular product are essential, while a university training is helpful in certain cases. Most firms undertake the training of their own candidates for managership, and advancement lies through various assistant positions covering a large range of salaries. The highest salaries attainable depend upon the size of the concern and the responsibilities attached, and frequently reach as much as £10,000 a year.

In the commercial world Merchants and Brokers hold an important position. They supply the manufacturer with his raw material and then buy his finished product. A Merchant firm usually pays a junior £50 per annum on beginning. The maximum salary it is possible to earn is very high.

See also SALESMANSHIP, COMMERCIAL, AND ACCOUNTANCY.

Buskin Kind of boot. Greek and other early tragic actors wore a peculiar sort of half-boots, laced to the leg, which were known as buskins. Sometimes thick soles were added, so that the actor's height might seem to be greater.

Bustard Large game bird found in Europe, Asia and Australia. It is of the same family as the crane and the plover. The chief species is the great bustard which may measure as much as 8 ft. from tip to tip of the wings and weigh over 30 lb. This is the largest land bird in Europe. Other species are the little bustard and the Australian bustard, sometimes called the turkey. Bustards feed on corn, vegetables and small animals. The great bustard was common in England until the early part of the 19th century.

Butane Term applied to two organic substances belonging to the paraffin series of hydrocarbons. Normal butane is present in petroleum, but can be prepared by the action of sodium amalgam upon ethyl iodide. Isobutane or trimethylmethane is prepared from butyl iodide by the action of nascent hydrogen.

Butcher Bird Name given to the shrike. This is a family of strong-beaked birds which have the curious habit of impaling their prey, which consists of small birds, insects or animals, upon the thorns of bushes. Several species occur in Europe, the largest being the great grey shrike (*Lanius excubitor*), which is about the size of a thrush.

Bute Island of Scotland. Part of the County of Buteshire, it is off the coast of Argyllshire and covers 47 sq m. The soil is fairly fertile and the climate exceptionally mild. The scenery is varied by lochs, but the highest point is under 1000 ft. Rothesay is the chief place.

Bute Earl of Title borne since 1703 by the family of Stuart. Its most famous holder was the 3rd earl. Born May 25 1713, he became earl in 1723. He was secretary of state in 1761 and prime minister in 1762 but became unpopular and was forced to resign in 1763. He died March 10, 1762.

Buteshire County of Scotland. It consists of the islands of Bute and Arran and several smaller ones—Great and Little Cumbrae, Inchmarnoch and Pladda. Its area is 218 sq m. Pop. (1931) 18,822.

Butler Joseph English philosopher and bishop. Born at Wantage Berkshire, May 18, 1692, he went to Orisl College, Oxford, where he graduated and took orders in 1718. He was appointed preacher at the Rolls Chapel, London, prebendary of Salisbury and rector of Stanhope, Durham, and he became successively clerk of the closet to Queen Caroline (1733), Bishop of Bristol (1738), Dean of St Paul's (1740) and clerk of the closet to George II (1746). In 1748 he declined the Archbishopric of Canterbury, but three years later he accepted See of Durham which he held until his death, June 16, 1752.

By virtue of his great work *The Analogy of Religion, Natural and Revealed to the Course and Constitution of Nature* Butler ranks high both as philosopher and divine.

Butler Josephine Elizabeth English social reformer. Born on April 12, 1828, she was a zealous promoter of the higher education of women and of the Married Women's Property Act of 1882. Her name is chiefly associated with her leadership of the agitation for the repeal of the Contagious Diseases Acts, and her courageous attack on the evils of prostitution. She died Dec 30, 1906.

Butler Lady English painter. A daughter of J. T. Thompson she was born in Switzerland in 1850, and studied art in Rome. In 1874 she made a reputation with a battle picture "The Roll Call." This was the first of several military scenes, including "Boreas at Etona" and "The Dawn of Waterloo." Engravings of these and others of her pictures became very popular.

In 1877 Miss Thompson married an Irish soldier, who afterwards became Sir W. F. Butler (1828-1910). She died in 1933.

Butler Samuel English author. He was born at Strensham, Worcestershire, in 1612 his father being a farmer there. After some years as clerk to a justice of the peace, he entered the service, first of the Countess of Kent and then of Sir Samuel Luke, a colonel in the Parliamentary army. At the Restoration he became secretary to the Lord President of Wales, and for a short time steward of Ludlow Castle. In 1663 he published the first part of *Hudibras*, which, chiming with the anti-puritan sentiment of the moment, obtained wide popularity. Part II (1664), was even more successful. A third part was published in 1678. Sept. 25, 1680, is given as the date of his death.

Butler Samuel English author. A grandson of Rev Thomas Butler and headmaster of Shrewsbury School and Bishop of Lichfield, he was born Dec 4, 1835. He went to Shrewsbury and Cambridge with the intention of taking orders, but developed opinions which made that impossible. Instead he settled in New Zealand where he was so successful as a sheep farmer that he was able to retire and return to England. In 1872 he published his first book *Erewhon* in which he satirised alike conventional religion and the Darwinian theory. He renewed the attack on Darwinism in *Life and Habit* (1877), *Evolution Old and New* (1879), *Unconscious Memory* (1880) and *Luck or Cunning* (1886). He was also a fine, if erratic Homeric scholar, and in 1897 published *The Authorship of the Odyssey*. His later works include *Erewhon Revisited* (1901) and *The Way of all Flesh*. He died June 18, 1902.

Butt Dame Clara English vocalist. Born in Sussex Feb 1, 1873 she studied at the Royal College of Music, London. She first appeared on the concert platform in 1892, and from that time was one of the leading singers in the country. In 1920 she was made a Dame of the Order of the British Empire. In private life she was the wife of Kennerley Rumford, whom she married in 1900. She died in Jan 1938.

Butter Article of food made from the fat of milk by churning. Butter contains from 82 to 87 per cent of milk fat, about 13 per cent of water and small proportions of casein, milk sugar and mineral matter. The fat consists of stearine and other compounds of the fatty acids and the presence of butyric and caproic acids give the peculiar taste and smell. In the ripening process of butter pure cultures of lactic acid forming bacteria are used. The colour of butter is affected by the feed of the cow yielding the milk, but often annatto or other colouring matter is added.

In Great Britain the inspectors of food must see that the butter offered for sale is unadulterated and persons selling butter which is not up to the standard can be fined. The importation of butter into Great Britain was not affected by the tariffs introduced in 1931-32.

Butterfield William English architect born in London Sept. 7, 1824. He made bold use of red and other coloured brick, and his buildings are quite distinctive. They include, among London churches, All Saints Margaret St. and St. Alban's, Holborn, Keble College, part of Merton College and other buildings at Oxford and school buildings at Rugby and Oxenham. He died Feb 23, 1900.

Butterfly One of two great divisions of *lepidoptera* the other being moths. They are distinguished from moths chiefly by the shape of the posterior wings and the characteristic club shaped antennae whence they derive their scientific name, *rhopalocera* or club horns.

There are six families *nymphalidae*, *cryptinae*, *lycaenidae*, *pieridae*, *papilionidae* and *hesperiidae*. Of these *nymphalidae* are most numerous, comprising over 4000 species including such well known British butterflies as the red admiral, the peacock, the tortoise shell, the purple emperor and the fritillaries. To *pieridae* belong the common cabbage butterflies or garden whites. The *papilionidae*, or swallow tails include the

most beautiful forms The *hesperidae* or skippers, so called from their peculiar jerky flight, differ considerably from other families, both in structure and habit

Buttermere Lako of Cumberland. In the south of the Lake District, it is about 1½ miles long. There is a village of this name, 9 m from Keswick.

Buttermilk Dairy product. After cream has been churned into butter there remains a rich, slightly acid, liquor which is called buttermilk. It is used as a medicine because of its nourishing qualities and easy digestibility.

Butterwort (*inguicula vulgaris*) One of the few insectivorous plants found in the British Isles. It belongs to the order *lentibulariaceae*, grows on wet ground and is stemless. It consists of a number of fleshy leaves which exude a sticky surface that serves to capture small insects, while from the centre rises a tall stalk bearing a fine flower.

Buttress In architecture a support. Various kinds of buttresses are employed in building to give strength to walls. Each kind of architecture has its own style and this serves in great measure to identify the period of the building. Flying Buttresses are graceful half arches thrown against the upper part of a vaulted structure to withstand the pressure of the roof arches.

Butyric Acid (CH₃CH₂CH₂COOH) Fatty acid occurring in butter fat and various vegetable fats and oils. It is an oily liquid with a disagreeable smell and is readily soluble in water. It is usually prepared by the fermentation of sugar or starch by means of putrefying cheese.

Buxton Watering place, borough and market town of Derbyshire. It stands on high ground, 22 m from Manchester and 164 from London, on the LMS Rly. It is chiefly known for its waters, which are very suitable for rheumatism and kindred complaints. The town has beautiful gardens, a pump room and baths. Pop (1931) 15,353.

Buxton Earl English politician. Sydney Charles Buxton was born Oct 25, 1853, and educated at Clifton and Trinity Colleges Cambridge. In 1886, having been M.P. for Peterborough, 1883-85, he was elected M.P. for Poplar, and for 30 years was an active Liberal politician. From 1892-95 he was under-secretary for the colonies, from 1906-10, postmaster general, and from 1910-11, president of the Board of Trade. In 1914 he was made Governor-general of S. Africa and a viscount. On his retirement in 1920 he was made an earl. His books include *A Life of Louis Botha*.

Buxton Sir Thomas Fowell English politician. Born April 1, 1786, he went to Trinity College, Dublin, and then joined the firm of brewers which became Truman, Hambury, Buxton & Co. From 1818 to 1837 he was in Parliament as M.P. for Weymouth. There and outside his main interests were in schemes for improving the condition of the people at home and abroad, including the abolition of the slave trade. He died Feb 19, 1845.

Buzzard Bird of prey, somewhat resembling an eagle, but smaller and weaker. There are about 20 species and they are found in most parts of the world, excluding Australasia, and Oceania. The

common buzzard is seen in Great Britain and frequently in other parts of Europe. It is black or brown in colour, measures about 4 ft., feeds chiefly on mice and small snakes and lives in mountainous and woody districts. Other varieties of buzzard are found in Africa, Asia and America. In America the turkey buzzard, or turkey vulture, is called a buzzard.

Byfleet Town of Surrey. It stands near the Weir, 8 m from Guildford and 21 from London, on the S. Rly. Its manor house was once a royal residence. Pop 4200.

Byland Abbey in Yorkshire (N.R.). It was founded in 1177 by Baron Mowbray for the Cistercians and existed until the Reformation. In 1920 the ruins became the property of the nation, and restoration work was undertaken. Byland is 18 m to the north of York.

By-law Rule or law made by a corporation, council or company. County, city and district councils have power under various Acts of Parliament, to make by-laws on matters affecting the areas for which they are responsible. Railway companies and some other bodies possess the same power. If a by-law is contrary to the law of the land it is invalid.

Byng Viscount. English soldier. Julian Hedworth George Byng, a younger son of the Earl of Strafford, was born Sept. 11, 1862, and entered the army in 1883. A cavalry officer, he served under Kitchener in the Sudan and S. Africa where he commanded the S. African Light Horse. Promotion came quickly, and in 1912 he was sent to Egypt as commander-in-chief. In Oct. 1914, he went at the head of the 3rd cavalry division to Belgium, and early in 1915 was put in command of the cavalry corps. Later he commanded the 9th corps in Gallipoli, the Canadian Corps on the western front and finally the Third Army. He increased his reputation as a capable soldier by his generalship in the Battle of Cambrai in Nov., 1917, and took an active part in the final movements on the western front. In 1915 Byng was knighted, and at the end of the war, being a full general, he was made a peer. From 1921-26 he was Governor General of Canada, being made a viscount on his retirement. In 1928, at a critical time, he was appointed head of the metropolitan police, and retired in Sept., 1931. He died June, 1935.

By-product Something produced incidentally to the production of something else. The commercial value of so-called waste products was not recognised until comparatively late in industrial history. It may be said to date from the discovery of aniline dyes by W. H. Perkin in 1856, which was the first intimation of the extraordinary richness of coal tar. Since then the utilisation of the waste of a principal product for the manufacture of by-products has progressed to a remarkable degree.

Though aniline dyes were the discovery of an English chemist, it was German industrial chemists who perfected them and discovered that coal tar also yielded sweetening agents like saccharine and valuable therapeutic agents like antipyrin, phenacetin, salvarsan, etc. Gas works and blast furnaces, in addition to producing coal tar, give ammonia as a by-product. Copper is extracted from burnt pyrites that are waste in the manufacture of sulphuric acid, glycoline is a by-product of

soap, and candle works and wool scouring yields the wool grease that is used for the manufacture of lanoline and certain lubricants

Byrd Richard Evelyn American explorer Born at Winchester, Virginia, Oct. 24, 1888, he entered the navy in 1912. During the Great War he was head of the American flying station at Halifax. In 1925 he went with an expedition to Greenland, doing a great deal of flying, and in May, 1926, in a Fokker monoplane, he flew over the pole, doing the flight from Amsterdam Island and back, 1600 m. in 15½ hours. In 1927 Byrd flew from New York to France. In 1928 he led an expedition to the Antarctic, and in 1929 he flew over the south pole. In 1933 he set out from Boston on yet another Antarctic expedition.

Byrd William English composer Born in London about 1542, he studied music under Thomas Tallis. In 1563 he became organist of Lincoln Cathedral, and in 1569 a member of the choir of the Chapel Royal. He died July 4, 1623. Byrd is chiefly remembered by his madrigals, but he also wrote choral music which is used to day.

Byron Lord English poet Born in London, Jan. 12, 1788, George Gordon Byron was a son of John Byron, a sailor who was a grandson of the 4th Lord Byron. He died young (1791), and left a daughter, Augusta, by his first wife and the future poet by his second, a Gordon. Byron's childhood was unhappy, partly owing to his mother's temper, partly to his lameness, and partly to the conditions under which the two lived. After schooling in Aberdeen and Dulwich, he went to Harrow and Trinity College, Cambridge. In spite of his infirmity he was something of an athlete, and to the end was a superb swimmer. In 1808 he succeeded his uncle in the title becoming the 6th baron, and with his mother passed some time at Newstead the ancestral home.

In 1807, after alteration and consideration, Byron published *Hours of Idleness*. Then followed in 1809 the satires, *English Bards and Scotch Reviewers*. He made an extensive tour in Europe, and in 1812 published the first part of *Childe Harold's Pilgrimage*, much of it his own adventures. This made him famous, and in less than a year seven editions appeared. In 1813 came *The Bride of Abydos* and in 1814 *The Corsair*, while for a time the poet was a figure in London society. He continued to write and travel, *Childe Harold* was finished. *Manfred* and later *Cain* and *Sardanapalus* appeared. His last work, and perhaps his greatest, was the unfinished *Don Juan*. *The Prisoner of Chillon* and the fine *Hebrew Melodies* are among his minor pieces, and he also wrote eight plays.

The poet's last years were spent abroad, chiefly in Switzerland, Italy and Greece, and he saw much of Shelley. In 1823 he set out to help the Greeks in their fight for independence, and on April 19, 1824, he died of fever at Missolonghi. He was buried at Hucknall Torkard near Newstead.

In Jan., 1815, Byron married Anne Milbanke, who bore him a daughter, later the wife of the Earl of Lovelace. The pair soon separated, leaving Byron to a succession of mistresses, of whom the most notable was the Italian countess, Teresa Gamba.

Byron left a large body of poetry, all strongly marked with his own strange individuality, but it is a little difficult to find in it the justification for regarding him as the greatest poet of his age, as many of his contemporaries certainly did. No other English poet, however, has ever been so lauded in foreign lands.

Byron Lord English title The family of Byron had a long association with Nottinghamshire where Sir John Byron, on the dissolution of the monasteries, obtained the abbey of Newstead. A later Sir John Byron, and several other Byrons, fought for Charles I. in the civil war, and was made a baron in 1643. William, the 5th baron, was succeeded by his nephew, the poet, and from him the title passed to a cousin, George. It is still held by the Byrons, but Newstead has been sold. The family seat is Thrumpton Hall, near Derby.

Byzantium Ancient city on the Bosphorus which formed the nucleus of Constantine's new capital of the Roman Empire. On the death of Theodosius the Great in A.D. 395, the Roman Empire was divided between his sons, Arcadius and Honorius. Arcadius took the eastern portion Asia Minor, Egypt, Thrace, Moesia, Macedonia and Greece. His capital was naturally Byzantium, hence the term Byzantine, by which the East Roman Empire is generally known.

The Byzantine Empire lasted over a thousand years and after a long decline the last remnant of it vanished with the capture of Constantinople by the Turks in 1453. The more memorable names in the long list of Byzantine emperors are Justinian (527-565), the famous legislator, Maurice (582-602), Heraclius (610-641), Leo, the Isaurian (716-741), Basil, the Macedonian (867-886), Isaac Comnenus, the founder of a dynasty which ruled from 1057 to 1185, and Michael Palaeologus whose family retained the sceptre from 1261 until the end.

The interval between Comneni and the Palaeologi dynasties witnessed the remarkable usurpation of the Byzantine throne by Baldwin, Count of Flanders, an adventurer of the fourth crusade, who was succeeded by his nephew of the same name. Baldwin and his nephew and successor of the same name, are known as the Latin emperors of the East. Baldwin II was expelled by Michael Palaeologus. The last emperor of the East, Constantine Palaeologus, after an heroic defence of the capital, perished during the victorious assault of the Turks on the city in 1453.

The Byzantine Empire made rich contributions to art, especially in architecture and letters. Its art, which is a blend of oriental with classic, reached its highest development in the reign of Justinian to which the celebrated church of S. Sophia belongs, but between the 10th and the 12th centuries there was another efflorescence hardly inferior. Byzantine literature is more remarkable for scholarship than originality. It has the merit of being the medium through which classical Greek literature has been preserved to modern times. The capture of Constantinople by the Turks, and the consequent flight of Byzantine scholars, was the cause of the Renaissance or revival of learning, which changed the whole course of culture in Europe.

CAB (Fr *cabriolet*) Vehicle for public hire. Originally a two wheeled gig with a hood, drawn by a horse it carried two persons. It was introduced into Great Britain from Paris early in the 19th century. The two-wheeled hansom cab was designed and patented in 1834 by Hansom, a Birmingham architect. With the advent of the motor car early in the 20th century, the taxicab came into being, and only a small number of horse-drawn cabs are now in use. All cabs must be licensed, and in London all fares are regulated by a scale authorised by the Home Secretary.

Cabal Name given to a body of men who work secretly and mainly for their own ends. It comes from the Hebrew word *cabbala* or *kabbala*, and was used in England because the chief ministers of Charles II (Clifford, Arlington, Buckingham, Ashley and Lauderdale) made this word with the first letter of their five names.

Cabbage Cultivated vegetable of the cruciferous order. It is a native of Britain and other parts of Europe. In S.W. England and Wales it grows wild, with leaves up to 2 ft. high. Cultivated since the 13th century for its anti-scorbutic properties, its varieties comprise borecole, Brussels sprouts, drumhead cabbage and savoy, cauliflower, sprouting broccoli, the turnip-rooted kohlrabi, and red cabbage, grown for pickling.

Cabbala System of medieval Jewish theosophy which influenced contemporary Christian thought. Obviously affected by Gnosticism, it postulated a world of emanations from an inscrutable first cause, and used numbers to extract recondite meanings from the Scriptures.

Cabinet Council of ministers responsible for the government of a country. The first English cabinet came into existence in the time of Charles II, but cabinets in the modern sense did not appear until about 1720. Usually the members belong to one political party—except when, as in 1915-22, and in 1931, a coalition of parties is formed—and that party must be able to rely on a majority of the House of Commons. If this support ceases the Cabinet must resign. The members are the heads of the departments of state, and each must be a member of one of the Houses of Parliament. The Prime Minister selects them, with the approval of the King, and presides over their meetings, at which all important matters of state are discussed and decided. The Cabinet, therefore, corresponds to a board of directors. In theory it is a committee of the privy council.

Cabinet government is also the rule in other parts of the British Empire, in France and other countries.

Cable Substantial linear appliance used for holding objects or transmitting signals, light or power. For mooring ships, cables comprise twisted strands of hemp, coir or jute, wire hawsers, or iron chains of consecutive links, 12 or 15 fathoms long, fastened together by joining shackles. Towing and elevator cables are of hemp or wire. Cables are made at Greenwich, Woolwich and other parts of riverside London.

Electric cables, used in submarine telegraphy since 1851, comprise cores of one or more copper wires embedded in insulating materials. They serve also for the land transmission of electric light and power.

As a measure the cable is 600 ft. long and 10 cables make a nautical mile.

Cabot John Italian explorer. Born in Genoa, he became a Venetian citizen. In 1486 he settled in England and was sent out by Henry VII on a voyage of discovery. He made two voyages from Bristol across the Atlantic, and on the second landed on Greenland and learned something about the lands, then unknown, of N. America. He died in 1498.

Cabot's son, Sebastian, went with his father on one or both of his voyages, afterwards serving the King of Spain. In 1547 he returned to England and became the head of the Merchant Venturers who sent out expeditions from Bristol, where he probably died in 1557. Cabot Strait, between Newfoundland and Cape Breton Isle, is named after him. Cabot Tower, on Brandon Hill, Bristol, commemorates him and his sons.

Ca' Canny Or "Go Canny," is a Scottish phrase meaning to go warily, cautiously, or slow. It is now a term used in industrial disputes, when to "ca' canny" is to work slowly in order to call attention to the grievances of the workshop employees. It was first used in a Glasgow dock strike in 1889.

Cachalot Toothed whale (*Physeter macrocephalus*), also called the sperm whale. It eats mostly squids and cuttle fish. Sometimes as much as 50 ft. long, one-fourth comprises the massive head, with a cavity filled with spermaceti. The sperm oil from the blubber is the finest whale oil. Ambergris, an intestinal secretion, usually appears afloat or cast ashore.

Cactus Group of succulent, fleshy-stemmed, prickly, and mostly leafless plants. Almost all the thousand species are natives of tropical America. The prickly pear, the most important economically, has become widespread in the Canary Islands, the Mediterranean basin and Palestine. They grow in grotesque shapes and resemble Turk's caps, globes, hedgehogs and columns sometimes 50 ft. high. Many contain reserves of moisture which are utilised in deserts by man and beast.

Cacus Mythical character. He was a giant, son of Vulcan and lived on the Aventine Hill at Rome. When Hercules carried off cattle from Geryon, in Spain, Cacus stole some of them and drove them to his cave. The howling of the animals betrayed him and he was slain by Hercules.

Cadbury Name of an English family of chocolate manufacturers. The business dates from 1794, when it was started in Birmingham by a Somerset man, Richard Tapper Cadbury. Under his grandsons, Richard (1835-99) and George (1839-1922), the business grew enormously, and a garden city called Bourneville was built for the works and workers. In 1901 George Cadbury became chief proprietor of the *Daily News*, which was later amalgamated with the *Daily Chronicle* as the *News Chronicle*.

Caddis Fly Hairy winged insect belonging to the *trichoptera*. It lays its eggs in a jelly like mass on water weeds or ponds. The larva (*gruh*) lives in silk lined tubes made of wood, leaves, shell or other substance, which are open at the ends. When the chrysalis stage approaches, the grub closes these ends with silk or stones, and rests. Later the pupa emerges and walks in the water, on arrival at the surface it becomes a perfect insect. The larvae are used by anglers.

Cade Jack English rebel. An Irishman by birth and a soldier and adventurer by choice, Cade was a man of position in Kent in 1450 when the country was suffering from the bad government of Henry VI and his friends. Calling himself Mortimer and Captain of Kent, he collected together the rebels and marched into London. He was declared a traitor and killed near Heathfield, Sussex, while trying to escape, July 13, 1450.

Cader Idris Mountain in Wales. It is 4 m south west of Dolgelly in Merionethshire and above Lake Tal y Llyn. The summit, Pen y gader, is 2914 ft. high.

Cadet Person who is training for a position in the navy, army or air force. Originally it meant a younger son. Cadets for the British navy are trained at Dartmouth and Greenwich, for the army at Woolwich and Sandhurst, and for the air force at Cranwell. Cadets for the U.S.A. army are trained at West Point.

Most of the public schools have a cadet corps which trains the older boys on military lines. Religious organisations such as the Boys' Brigade and Church Lads' Brigade, are also recognised as cadet corps. In 1930 the British Government stopped the grant hitherto made to these corps, but under certain conditions cadet units may be affiliated to local Territorial units for instruction and training.

Cadi Arabic title for a judge. Cadis still officiate in Mohammedan countries. A cadi is required to be of exemplary character and intelligence to be disinterested, accessible, learned in the Koran and in local custom and tradition.

Cadiz City and seaport of Spain. It stands on a narrow tongue of land on the Bay of Cadiz, 95 m from Seville. It has a fine harbour and is still a seaport and naval station. There are two cathedrals, an observatory, a watch tower, museum, art gallery, etc., as well as public gardens and promenades, a botanical garden and a bull ring.

One of the oldest seaports in the world, Cadiz was founded by the Phoenicians and was rich and flourishing under the Romans who called it Gades. It declined until the discovery of America gave it a new lease of life, but later its prosperity waned owing to the loss of Spanish power in America. Its wealth and position as Spain's chief naval base attracted the attention of English seamen. In 1587 Drake burned some warships in its harbour. In 1596 it was taken and plundered by an English force, in 1625 it was again attacked, but with less success. Pop (1931) 75,675.

Cadmium Metallic element. Bluish-white, malleable and ductile. It enables fusible alloys of bismuth, tin and lead, such as Rose's metal, to fuse at still lower temperatures, such a cadmium alloy is Wood's metal. Not found native, it constantly accompanies zinc blende, and is also derived from greenockite. A cadmium sulphide is

prepared artificially as the artist's pigment cadmium yellow, and is used also for colouring soap and porcelain. The iodide is employed in photography. The symbol is Cd, and the atomic weight 112.4. Its specific gravity is 8.6. It melts at 322° C, and boils at 778° C.

Cadmus Greek hero. A son of Agenor, King of Phoenicia. Cadmus went to find his sister Europa who had been carried away by Zeus. He consulted the Delphic oracle which told him to follow a cow and build a city where the cow lay down. There he killed a monster and sowed its teeth in the ground. From the teeth armed men sprang up and, after most of them had been killed, Cadmus was able to build the city of Thebes.

Cadogan Earl. English title borne by the family of Cadogan. William Cadogan (1675-1726), an Irishman, served under Marlborough and William III. He was an M.P., 1705-16, and helped to crush the Jacobite rising in 1715. In 1716 he was made a baron and in 1718 an earl. His brother Charles Cadogan (1691-1776), became the 2nd baron, but did not inherit the earldom. He married the daughter of Sir Hans Sloane and thus the Cadogans inherited the Chelsea property which includes Sloane Street, Cadogan Square and the neighbourhood. The 3rd baron was made an earl in 1800. George Henry Cadogan, the 5th earl (1840-1915), was a Conservative politician, being Lord Privy Seal, 1886-88 and Lord Lieutenant of Ireland, 1895-1902.

Cadorna Luigi, Count. Italian soldier. Born Sept 4, 1850, he entered the army in 1868. He saw service in 1870, when, under his father's leadership, the Italian forces entered the papal states. He subsequently became Chief of the General Staff (1914). In 1915 he was made Commander in Chief, and directed the Italian operations against Austria. In 1917, after Caporetto (*q.v.*), he was superseded. He represented Italy on the Versailles council in 1918, and died Dec 21, 1928.

Cadoxton Town of Glamorganshire. It is 7 m from Cardiff, on the G.W. Rly., and the junction of a branch line from Barry to Pontypridd. It is a coal mining area. Pop 7000.

Cadre Military term meaning the nucleus or skeleton of a regiment or other unit. A cadre keeps the regiment in existence so that when need arises it can be raised to the required strength without new organisation.

Caduceus Magic wand. Twined with snakes and surmounted by wings. It was given by Apollo to Mercury, whose emblem as the messenger of the gods it became. It could confer wealth and happiness and had power over sleeping and waking.

Caedmon Anglo-Saxon poet. Apparently he was a herdsman employed by Hilda, Abbess of Whitby. One day when looking after sheep or cattle he had a vision in which he was told to sing of the Creation. He became a monk, devoting his time to the compilation of verses on Biblical subjects. He died about 675 at Whitby. The actual poems written by Caedmon are lost. The paraphrase said to be his work, which has been translated into English, was written by another hand.

Caen City of France. In Normandy, it is on the River Orne, 9 m from the English Channel. Ships can reach it by river and canal. It is famous for its connection with William the Conqueror, who founded an abbey

here, another being founded by his wife, Matilda. Some fine churches still stand, including St Etienne, where William was buried.

The city has a university founded by Henry VI, when it was an English possession, while the town hall and law courts are noteworthy. It is famous for the building stone found in the neighbourhood. Pop (1931) 57,528

Caerlaverock Village of Dumfriesshire. It is 6 m from Dumfries and is famous for its castle. Near the mouth of the Kidd and overlooking the Solway, this was long a seat of the Maxwells. Edward I took it in 1300, and it is now a ruin. Pop 300

Caerleon Urban district of Monmouthshire. It is on the U.K. 2 m from Newport, on the G.W. Ry. It was an important Roman city, and many Roman remains have been discovered. Many of these are in the museum, which is a branch of the National Museum of Wales. It is connected in legend with King Arthur. Pop (1931) 2326

Caernarvon Borough and market town of Caernarvonshire, also the county town. It stands on the Menai Strait 69 m from Chester and 247 m from London, on the L.M.S. Ry. The chief building is the magnificent castle built in the 13th century. The parish church is a fine old building. There are the remains of the town walls and some relics of a Roman settlement. The town has a small harbour. Pop (1931) 5469

Caernarvon Bay is part of the Irish Sea, between the counties of Anglesea and Caernarvon. It is 30 m across.

Caernarvonshire County of Wales. In the north of the country, it is almost surrounded by the sea, except where it joins Denbighshire. The Menai Strait separates it from Anglesea. In it are the highest mountains—the Snowdon Range—and some of the grandest scenery in Wales. In the south is the peninsula of Llyn where the climate is extraordinarily mild. The county covers 572 sq m.

The chief town is Caernarvon; others are Bangor, Llandudno, Bethesda, Conwy and Pwllheli. The L.M.S. and G.W. Rlys serve the county. The rivers include the Conwy and the Ogwen. Caernarvonshire is famous for its slate quarries. In 1930 the official spelling of the name of the county was altered from Carnarvonshire to the present form. Pop (1931) 120,810

Caerphilly Market town and urban district of Glamorgan, Wales, seven m from Cardiff on the G.W. Ry., formerly the Rhymney Railway. Near are extensive collieries and ironworks. Its chief interest lies in the ruins of the great castle supposed once to have been the finest in Wales. Pop (1931) 35,760

Caesar Famous Roman family. It traced its origin to Iulus son of Aeneas, and its most famous member was Julius Caesar. Later it became a title used by the Roman emperors. From it come the words *kaiser* and *tsar*, or *czar*, both meaning emperor.

Caesar Gaius Julius Roman statesman, soldier and writer. He was born July 12, 102 B.C., of influential parents, and became a soldier. He served with the army in the East after which he became prominent in Rome. He filled several public offices and was consul in 59 B.C. when with Pompey and Crassus he formed the first triumvirate. Made governor of Gaul, he remained 10 years and

won his great military successes, conquering most of Gaul and twice invading Britain.

Caesar's successes created enemies, one being Pompey, and, an attempt at pacification having failed, Caesar left Gaul and crossed the Rubicon into Italy. This meant civil war. Again elected consul, he followed Pompey into Greece and crushed his army (48 B.C.) at Pharsalus. During this expedition he was in Egypt, where he was the lover of Cleopatra. Returning to Rome in triumph, Caesar was made dictator for 10 years and then for life. As the result of a conspiracy, he was assassinated in the senate house at Rome on the ides (15th) of March, 44 B.C.

Like Napoleon, Caesar was not only a great soldier, but a great administrator. He carried out many reforms, including the revision of the calendar, and prepared the way for the great empire of his nephew, Augustus. He was three times married, but left no lawful children. Of his writings only the *Commentaries* remain.

Caesarea Two ancient cities of Palestine. (1) Caesarea Sebaste 31 m N. of Joppa, was a seaport built by Herod the Great in honour of Augustus. About 13 B.C. Peter and Paul went there (Acts x. xxvi, xxxiii). The modern village is called Kaysariyah.

(2) Caesarea Philippi is 95 m. N. of Jerusalem. It was built by Herod's son, Philip, in honour of Tiberias and himself, and visited by Christ (Mt. xvi). The modern village is called Banias.

Caesium Metallic element. Its symbol is Cs, and atomic weight 132.8. Silver white, it bursts into flame when heated, melts at 80° F. and is interesting as the first metal discovered by spectrum analysis, although it long defied separation from its salts. It appears in mineral springs near Redruth, Cornwall, and in Central Europe, and is procurable from such a widespread mineral as lepidolite, associated with rubidium. The most electropositive of metals, its power of displacing others in salt solutions is supreme.

Caffeine Vegetable alkaloid (C₈H₁₀N₄O₂ · H₂O). It is the active principle of coffee and tea, and is found in cocoa and kola nut. Coffee contains from 1 to 2½ per cent. and tea 3½ per cent. It stimulates heart action without subsequent depression.

Cagliari Capital of Sardinia. Situated on the S. coast, it crowns a hill 290 ft. high. The chief buildings are the cathedral and two towers. There is a rock-cut Roman amphitheatre. The city has a harbour, and is the commercial centre of the island. Pop (1931) 101,375

Cagliostro Alessandro di Italian impostor. Born at Palermo June 8, 1743, his real name was Giuseppe Balsamo, but later he took his other name and with it the title of count. Educated in a monastery, he learned a little chemistry and travelled over a good part of Europe. He posed as a physician and sold great quantities of his elixir of youth. The founding of lodges of Egyptian freemasons was another of his many impostures. He was imprisoned for a share in the affair of the Diamond Necklace in 1787. Soon after his release he was arrested at Rome. The sentence of death was not carried out, but he died in prison Aug. 23, 1795.

Cahir Market town of Tipperary, Irish Free State. It stands on the Suir, 11 m from Clonmel, on the G.S. Ry., and has a castle. Pop 1700

Caiaphas Joseph Jewish high priest under Tiberius, appointed by the procurator, Valerius Gratus. He took a leading part in the trial and condemnation of Jesus, and advised the Sanhedrin concerning His arrest.

Caicos Group of coral and sand islands in the British West Indies, called in full Caicos and Turks Islands. Geographically the S E prolongation of the Bahamas, they lie 100 m N of Haiti and 420 m N E of Jamaica, by which they are administered. Of about 30 small cays aggregating 165½ sq m, eight are inhabited. Grand Caicos 25 m long, is the largest and Grand Turk, 10 sq m, the seat of government. Sponge curing is the chief industry, salt, fish, turtle and sisal hemp are exported. Pop (1931) 5,300.

Caillaux Joseph Pierre Marie French politician. Born at Le Mans March 30, 1863, he entered the public service and was for some years an inspector of finances. In 1898 he was elected to the Chamber of Deputies. He was Finance Minister, 1899-1902, 1906-08 and 1911. In 1911-12 he was Prime Minister, and in 1912-14 again Finance Minister. Early in 1914 Caillaux was attacked in *Le Figaro* by G. Calmette, the result being the murder of the journalist by Madame Caillaux. Soon after war broke out Caillaux was made Paymaster to the army, and in 1918 he was arrested and was kept in prison until 1920 when he was charged before the Senate with treason. He was acquitted on the major charge, but sentenced to three years' imprisonment for dealing with the enemy. In 1925-26 he was again Finance Minister.

Cain Eldest son of Adam and Eve. He killed his brother Abel, and became a wanderer with a curse on him. He is said to have founded the first city and to have called it after his son Enoch.

Caine Sir Thomas Henry Hall British novelist. Born at Runcorn, May 14, 1853, he was of Manx parentage and went to the island for his education. He became an architect and then a journalist in Liverpool. Moving to London he was secretary to D. G. Rossetti. In 1887 Caine's novel, *The Decemster* brought him fame. This was followed by other books in which Manx life was portrayed. *The Bondman*, 1890, *The Scapgoat*, 1891 and *The Manxman*, 1894. Later came *The Christian*, 1897, *The Eternal City*, 1901, *The Prodigal Son*, 1904, *The White Prophet*, 1900, and *The Master of Man*, 1921. Knighted in 1918, he published his *Recollections of Rossetti* in 1928, and died Aug. 31, 1931. His son, Gordon R. Hall Caine, was elected M.P. for E. Dorset in 1922 and 1931. Another son, Derwent Hall Caine, was Labour M.P. for the Everton division of Liverpool in 1929-31.

Cairngorm Group of mountains in Scotland, part of the Grampian range. They are on the border of the counties of Inverness and Banff. Cairngorm itself is 4084 ft high and Cairntoul is 4241 ft. In 1929 it was suggested that the Cairngorms should be made into a national park.

The mountains produce the stones called cairngorms, which are also found in Arran as well as in the United States and Switzerland. Their value depends on their colour.

Cairns Town and seaport of Queensland. It stands on Trinity Bay, about 890 m from Brisbane. It has a good harbour with appliances for dealing with the sugar and timber that are shipped thence. There is also

a cold storage plant. A railway goes to the mining district of Chillagoe. Pop (1931) 10,500.

Cairns Earl British lawyer. Hugh McCalmont Cairns was born in Ireland in Dec. 1819, and educated at Trinity College, Dublin. He became an English barrister in 1844 and M.P. for Belfast in 1852. He was Solicitor General (1858) and Attorney General (1860) in Conservative ministries before holding made a peer in 1867. In 1868, and again from 1874-80, Cairns was Lord Chancellor. In 1878 he was made an earl, and he died April 21, 1885.

Cairn Terrier Small dog of the terrier breed. It is a good house dog and also useful in sport. In colour it varies from grey to black or sandy or brindled. The hair is wiry and the tail and legs short.

Cairo Capital of Egypt. It stands on the right or east bank of the Nile 128 m from Alexandria, and 148 by rail from Port Said. It is a tourist and commercial centre, the administrative and military headquarters of the country, and a railway and air station. The city proper is divided into two parts: the modern quarter, Ismailia and, nearer the river, the native quarter. Bulak to the north is the river harbour, to the south is Old Cairo.

Cairo is the largest city in Africa and has a considerable European population. Of the old buildings the citadel built by Saladin and the cathedral of S. Mark may be mentioned. The chief sights are the mosques, some of them remarkable specimens of Oriental architecture. They include El Hakim, Amru, Hasan, El Maayyad and Al Sunkur.

Of modern buildings there are the museum of Egyptian antiquities with a priceless collection, the British consulate, the exchange, and the central railway station. The palace of Ismail, now a hotel, stands on the Gezireh, or island. Some fine buildings have been erected for government purposes. The university is in the rebuilt mosque of El Azhar. The Nile bridge and the Eskeila gardens are notable. The city has a service of electric trams, a good water supply and a racecourse. There are some native industries but Cairo is chiefly a commercial centre. Pop 1,064,500.

Caisson Chamber of sheet iron, timber or concrete, with watertight walls. It is used for laying foundations under water or in water bearing strata. It is sometimes bottomless, with cutting edges penetrating the soil, from which water is pumped out and the ground excavated by workmen under compressed air. These men are liable to be affected by caisson disease. This is best circumvented by preparing for the immersion gradually, and leaving gradually.

Caister Village of Norfolk. It is 3 m from Yarmouth, on the L.M.S. and L.N.E. Joint Rly. There are ruins of a castle that once belonged to Sir John Falstaff and then to the Pastons.

It must be distinguished from Caistor, a village 3 m from Norwich which was once a Roman camp. Extensive Roman remains were unearthed here in 1930-31. Another Caistor, which also was a Roman station, is in Lincolnshire, 8 m from Brigg.

Caithness County of Scotland. In the extreme north-east of the country, it is three parts surrounded by the sea. The land is fairly level except on the Sutherlandshire border where there are hills.

of over 2000 ft., but owing to the bleak climate the soil is not very fertile. The fisheries are important. Wick is the county town, other places are Lybster and Thurso. The Thurso is the chief river. In the county are John o' Groats and Duncansby Head. It covers 690 sq. m. and is served by the LMS Rly. Pop. 1931) 25,656.

The Earldom of Caithness has been held since 1355 by the family of Sinclair. The 14th earl was made a baron of the U.K. in 1866. The 18th earl took the surname of Buchan.

Caius John English physician. Born at Norwich, Oct. 6, 1510, he was educated at Gonville Hall, Cambridge, which in 1557 he refounded, making it Gonville and Caius College. He left his property to the college when he died, July 29, 1573. Caius is pronounced *Keys*.

Cajeput (*Melaleuca leucadendron*) Evergreen myrtle-like shrub. A native of Celebes and other parts of the E. Indies, it bears spikes of odourless flowers and aromatic, lance-shaped leaves, from which distills a pungent volatile green oil smelling like camphor, a closely allied hydrocarbon. This is used for rubbing painful joints, the spirit is prescribed for severe colic.

Calabar Town of Nigeria. Situated on the Calabar River, 5 m. above its estuary in the Gulf of Biafra, it is the capital of the Calabar province. Its harbour has repairing shops, and exports palm kernels, oil, rubber and ivory. New Calabar is a modern port 100 m. to the westward.

Calabash (*Crescentia cujete*) Evergreen tree of the order *Bignoniaceae*. It is found in W. Africa, the W. Indies, and tropical America. The globular gourdlike fruit has a hard rind, or shell, which is made into water bottles, cups, bowls, tobacco pipes, etc.

Calabria Southernmost province of Italy. Separated from Sicily by the Strait of Messina, it occupies 5819 sq. m. The coastal strips produce olives, wheat, rice, cotton, tobacco and fruits. Marble, graphite and metallo-ores are quarried. Settled by early Greek colonists, Calabria became Roman in the 3rd century B.C.

Calais Seaport of France. It stands on the Strait of Dover, 26 m. from that town and 185 from Paris, and is the chief port for traffic between England and France. In addition to the shipping, the town is a fishing centre and famous for its lace manufacture. The old town is on an island. The chief buildings are the old hotel de ville, the church of Notre Dame and the new hotel de ville in S. Pierre de Calais, a suburb. Calais belonged to England 1317-1558. Pop. (1931) 70,213.

Calamander (*Diospyros hirsuta*) Timber of an ebouaceous tree, native to Ceylon. The colour is a beautiful brown, shaded with black and soft fawn. It is used in fine cabinet making.

Calamine Name denoting, in Britain, the important mineral called zinc spar. This zinc carbonate comes from the Mendips and Pennines, the Vieille Montagne mines in Belgium, from Spain and Missouri. In America the name denotes hemimorphite, a mineral of similar appearance, which is actually a hydrated zinc silicate.

Calceolaria Genus of herbs and shrubs of the snapdragon order.

They are native on the Pacific coast of S. America. Several species have been developed in Britain. Some present by hybridisation showy blooms with enormous pouted lips. Bedding sorts are propagated by cuttings.

Calchas Greek soothsayer and high priest. He professed to have powers of divination given by Apollo. Accompanying the Greeks to the Trojan war, he foretold the war's length, and declared that only the sacrifice of Iphigenia in Aulis and the restoration of Chryseis to her father could enable the Greek fleet to sail and the plague to cease in the army. He died of grief on finding Mopsus his superior in divination.

Calcination Expulsion from a substance of its volatile constituents by burning. Thus limestone or chalk is reduced to lime by calcination, the combined carbonic acid being expelled. Calcining furnaces are used for roasting zinc blende, copper pyrites, tin ore and some Swedish iron ores. The term nowadays applies also to the burning of waste matters to incrustible ash.

Calcite Native carbonate of lime. It is a white or colourless vitreous mineral which can be scratched with a knife, and crystallises in many diverse forms, notably the double refracting prisms of Iceland spar used in polariscopes.

Calcium Metallic element. Its symbol is Ca, and its atomic weight 40. Yellowish-white, lustrous and ductile, it is easily cut. Although not found native, it is more abundant in the earth's crust than any metal except aluminium, entering into the composition of all limestones, marbles, corals and molluscon shells. Its sulphate forms gypsum, its phosphate is the main earthy constituent of animal bones and phosphate manures. Combined with carbon it yields the carbide which generates acetylene, with nitrogen it forms artificial fertilisers.

Calculus Inorganic concretion round a central core formed in any part of the body. Such formations, when made by the urine, cause stone in the kidneys or bladder, when in the gall-bladder they are gall stones. Under gouty conditions they are found at the joints.

Calcutta City and seaport of India, capital of Bengal and once capital of the country. It stands on the left bank of the Hoogli, 90 m. from the sea, and covers 42 sq. m. On the right bank is Howrah, an industrial area. There are a residential quarter for Europeans and a native city. Garden Beach is a suburb to the south.

The centre of the city is the Maidan, a large open space, where are the chief public buildings including Government House, the town hall, St. Paul's Cathedral and the law courts. On one side is the fort, rebuilt in 1773, with its six gates. Other buildings include the Roman Catholic cathedral, the Imperial and economic museums, the Victoria memorial hall and the mint. There are many temples and mosques, including the magnificent Jain temple called Badri Das. The city has a university and several colleges. There are zoological and botanical gardens.

Calcutta is a manufacturing centre with jute, rice and cotton mills, as well as native workers in brass and pottery. It is a commercial centre with banks and markets, and through it a great amount of India's trade passes. It is served by several lines of railway and has

spacious docks, the finest of these is the King George dock, opened in 1929. The city was founded as an E India Co settlement in 1690, and was first called Fort William. Pop., including Howrah 1,485,582 (1931).

The Calcutta Sweepstake is so called because it is arranged by the Turf Club of Calcutta. The Calcutta Cup is a trophy given to the victor in the annual Rugby football match between England and Scotland.

Calder River of England. It rises near Burnley and flows into York where to join the Aire near Castleford. Its length is 45 m., and with the Aire it forms the important Aire and Calder navigation system.

Calder Sir Robert. British sailor. Born at Elgin, July 2, 1745. He entered the navy in 1759. He won his reputation at the battle of St. Vincent (1797) being then knighted. In 1804 he blockaded the Spanish port of Ferrol and watched for the return of the Franco-Spanish fleet, which he met and damaged off Cape Finistere. He was court-martialled for not following up his success, and retired, dying Aug. 31, 1818.

Calderon Pedro. Spanish poet, in full Calderon de la Barca. Born in Madrid Jan. 17 1600, he was educated at Salamanca. After ten years' soldiering in the Netherlands, he was made superintendent of amusements to King Philip IV. In 1650 he joined the Franciscan order and became a priest, but he remained at court until his death, March 25, 1681. Beginning in 1636, Calderon wrote about 120 plays and 70 religious pieces (*cantos sacramentales*).

Calderon Philip. Hermogenes. British artist. Born at Potters May 3, 1833. His parents were Spanish but he passed most of his life in England and became a British subject. In 1864 he was elected A.R.A., and in 1867 R.A. He was keeper of the Academy from 1887 until his death, April 30, 1898. Among his most important works are 'The Gaiety's Daughter', 'Broken Vows', 'Her Most High, Noble and Pious Grace', 'After the Battle', and 'The Renunciation', now in the Tate Gallery, London.

Caldey Island off the coast of Pembroke. It is 3 m. from Tenby and is about 1 sq. m. in extent. On it is a modern abbey, now a Cistercian house. It was founded by Benedictines, who left the island in 1928. Then the Cistercians took their place. The island has a lighthouse.

Caleb Biblical character. A son of Jephthah, he was sent by Moses as Joshua's companion to spy on the land of Canaan. Hebron was given to him (Num. xiii. 18, Dent i., Josh. xiv.).

Caledon Town of Cape Province, S. Africa. It stands on the Zwartberg, 87 m. from Capetown by railway. It has mineral springs and is a trading centre. Pop. 3750.

Caledonia Roman name for north Britain. First used for the district north of the Forth and Clyde. It is now used for Scotland as a whole.

The Caledonian Canal is the greatest waterway in Scotland. It extends from the Moray Firth on the east to Loch Linnhe on the west. It is 60 m. long. Lochs Ness, Olch, Lochy, and Dochfour were used for its course. The canal can be used by steamers up to 600 tons. It was made between 1803 and 1822.

Caledonian Market

London market. Situated in Caledonian Road, Islington, it is primarily a cattle market and is owned by the corporation of the City of London. The buildings and yards cover about 50 acres. The market was opened in 1855. The L.N.S. and L.N.F. Rlys. serve it and there are abattoirs and accommodation for a vast number of cattle. Monday and Thursday are market days, on Tuesday and Friday a market for household and miscellaneous articles is held.

Calendar Systematic division of the year into months and days. Assuming a 365½ day year, Julius Caesar introduced the Julian calendar in 46 B.C., distributing 366 days as at present, and inserting an additional day every fourth year. The solar year is actually short of this by 11½ minutes, in 1582, therefore, the Old Style was ten days out. Gregory XIII then suppressed the surplus days and ordained that no closing year of a century should be his sextile unless divisible by 400. Thus 1900 was not a leap year. This Gregorian or New Style was adopted by Great Britain in 1752.

Other calendars are the one introduced during the French Revolution and one introduced in 1929 into Russia. The former divided the year into 12 months of 30 days each with five days for holidays. Each month was divided into three weeks of ten days each. In Russia the week consists of five days and the month of six weeks, also giving five days as holidays.

Calender Machine comprising cylinders operating like the domestic mangle. It is used for expressing moisture and imparting a smooth finish to paper or textile fabrics, sometimes utilizing heat inside the cylinders. Some cotton goods demand a superficial glaze the more effect of watered silk, or a silken sheen. Sheet rubber also is calendared.

Calends, or Kalends In the Roman calendar the first day of the month. It coincided with the new moon and was announced by the Pontifex Maximus. In the Greek calendar there were no calends, so the term "Greek calends" was used in the sense of never.

Calgary City of Alberta, Canada. It stands at the union of the Rivers Bow and Elbow, and is an important station on both the C.P.R. and C.N.R. Rlys. being 840 m. from Winnipeg in one direction, and 760 from Vancouver in the other. It is a centre for the agricultural produce of a vast district and for the mining area of the neighbouring Rocky Mts. The industries include railway shops. Pop. (1931) 85,761.

Calibre Diameter of a firearm barrel. English speaking practice expresses small arms calibres in decimal parts of an inch, thus the British military rifle barrel calibre since 1888 has been .303 in. In metric using countries the calibre is expressed in millimetres.

Calico Plain white cotton cloth. It is so named after Calicut. In 1640 calico was listed with linen and described as calico lawn. In 1773 it was made with linen warp and there was a dispute between tax collectors and payers as to whether calico was linen or cotton.

Calicut Seaport on the Malabar coast, British India. Situated 6 m. N. of Beypur, it was greatly enlarged by the

7th century Arabian immigration of the Meplas. It was the first spot in India visited by Europeans, being discovered by Pedro de Covilhao in 1487, and Vasco da Gama in 1498. Destroyed by Tippu in 1789, it was recaptured and ceded to Britain in 1792. There are coffee pressing, coffee cleaning and timber cutting industries. Pop 82,000.

California Western state of the United States. It has a coast line of about 1000 m on the Pacific Ocean, and covers 158,300 sq. m. It is famous for its climate, scenery and products. Here are the highest mountains in the country rising in Mt. Whitney to 14,500 ft., the Yosemite valley and other beautiful regions. Fruit is grown on an enormous scale, wheat, barley and maize are also raised. Gold, silver and other minerals are mined and the production of petroleum is vast. The fisheries are another source of wealth. Sacramento is the capital, but Los Angeles, San Francisco and Oakland are much larger.

California was part of Mexico until 1846, when it was taken by the U.S.A. It became a state in 1850, and sends 2 senators and 30 representatives to Congress. Pop (1930) 5,677,251.

Lower California is a province of Mexico. It covers about 5800 sq. m. and La Paz is the capital. It is separated from the mainland of Mexico by the Gulf of California.

Californian Poppy (*Eschscholzia californica*) Perennial herb of the poppy order from the Californian coast. Cultivated in Great Britain as an annual, this delicate plant has finely cut leaves and bright yellow, saffron-eyed four-petalled blooms.

Caligula Gaius Caesar Roman emperor. Born at Antium, his parents being Germanicus and the elder Agrippina, he spent his boyhood in his father's camp, wearing the army boots (*caligae*), which gave him his nickname. Adopted by Tiberius as co-heir with his grandson, he succeeded to the throne in A.D. 37. After an illness he developed a megalomania which led to an orgy of cruelty and debauchery. He was killed by a tribune in A.D. 41.

Calipers Metal instrument for measuring diameters. Usually resembling compasses with legs bent inward for external or outward for internal measurement, it may have screw and spring adjustments, quadrants with pointers for self-registration, and micrometer or vernier fittings.

Caliph Title applied first to Mahomet's successor Abu Bekr, as head of the Islamic state and defender of the faith, A.D. 632. After him came four Medina caliphs, 13 Omniads at Damascus, 661-750, and 37 Abbassids at Bagdad, 750-1258. Meanwhile, Omniad rulers in Spain, 755-1031, and Fatimide rulers in Egypt 909-1171, called themselves caliphs. The title passed to Turkey in 1362 if not before, and was retained by its sultans until 1922. In 1924 it was abolished by the national assembly at Angora (Ankara).

Calisthenics Physical exercises designed and practised to give grace and strength to the body. The term is usually employed to describe systems of physical culture for girls and women.

Calixtines Name of a religious sect in Bohemia. They were followers of John Hus who demanded that the laity should receive the cup as well as the

bread of the Holy Communion. The Calixtines died out in the 17th century.

Calixtus Name of three popes. Calixtus I. was a slave who was condemned to work in the mines of Sardinia, later he was released and was given charge of a Christian cemetery in Rome. In 218 he became pope and in 223 was martyred. He was canonised and his festival is kept on Oct. 14.

Calixtus II., pope from 1119 to 1124, gained a victory over the Emperor Henry V., and by the concordat of Worms ended the investiture controversy.

Calixtus III., a member of the Borgia family, was pope from 1455 to 1458. Another Calixtus III was an anti-pope elected in 1168 to oppose Alexander III.

Callander Burgh and market town of Perthshire. On the river Teith, it is 16 m. from Stirling, on the L.M.S. Rly. Near the Trossachs it is in the midst of beautiful scenery. Pop (1931) 1572.

Callao Seaport of Peru. It is 6 m. from Lima and has good facilities for shipping. The buildings include churches and the custom house. The old city was destroyed by an earthquake in 1746. A new one was built on a site near. Through the port, nitrate, guano, silver and other products pass. Pop (1931) 70,111.

Callernish District in Lewis, Outer Hebrides, Scotland. Here, about 13 m. W. of Stornoway, is a neolithic stone circle. A central 17-ft. pillar is surrounded by twelve unhewn monoliths in a circle 42 ft. across. A stone avenue extends N., and single rows E., S. and W., the whole delineating a cross 381 ft. by 123 ft.

Callimachus Greek poet and orator. Born at Cyrene, he opened a school at Alexandria. Ptolemy Philadelphus entrusted the Alexandrian library to him, his catalogue, in 120 volumes, was prefatory to all Greek literary criticism. Six hymns, 64 epigrams and some fragments are extant. He died 240 B.C.

Calliope Muse of epic poetry. Calliope was the mother of Orpheus by Apollo. In art she is represented with wax tablets and a stylus.

Calne Borough and market town of Wiltshire. It is 6 m. from Chippenham and 87½ from London, on the G.W. Rly. The little River Marston flows through it. The chief buildings are St. Mary's church, the town hall and the grammar school. Bacon is cured here. Pop (1931) 3463.

Calomel Subchloride of mercury (Hg₂Cl₂). It is the whitish-grey mineral born quicksilver and forms four sided crystals. It is found native in Spain, Bavaria and Czechoslovakia, and is usually prepared artificially as a white, odourless powder insoluble in water. The most widely used of mercurial preparations, it should be carefully distinguished from the perchloride or corrosive sublimate. Calomel is prescribed as a purgative in 2.5 gr. doses, or for absorption into the skin by vaporisation under a blanket covering.

Calorescence Luminous phenomenon involving the conversion of heat rays into light rays. The non-luminous rays from the electric arc comprising nine tenths of the whole, are brought to a focus by means of a lens or mirror. The light rays are absorbed by an iodine solution, and the concentrated heat rays display themselves to

the eye by making ebercoal incandescent and burning black paper into flame

Calorie Metric unit of heat The large calorie is the heat required to raise the temperature of a kilogram of water through 1°C The small calorie measures on a gram, 1000 small calories equal one large calorie A large calorie equals four (3.968) British thermal units

Calorimeter Apparatus for determining in thermal units the heat liberated or absorbed by physical or chemical processes Since Black's 18th century ice calorimeter many complex instruments have appeared, including Favre and Silbermann's mercury Dewar's hydrogen and Berthelot's heat-of-combustion bomb Respiration calorimeters for measuring the heat evolved by living beings and throttling calorimeters for ascertaining steam moisture have also been invented

Calpurnia Wife of Julius Caesar Daughter of Lucius Calpurnius Piso she married Caesar whose first wife was Cinnas daughter Cornelia, in 59 B.C.

Calshot District of Hampshire It is on the coast just where Southampton Water joins the Solent Here are the ruins of a castle built by Henry VIII Since 1912 it has been a seaplane station

Calton Hill Hill of Edinburgh It is 350 ft. high and overlooks the city from the east. On it are some memorials including one of the Great War an observatory and a prison

Calumet Pipe of peace The North American Indians had tobacco pipes about two feet long, which they handed to strangers A refusal to puff it was regarded as an act of war

Calvary Place where Christ was crucified It is traditionally identified with a spot beneath the Calvary chapel in the 5th century church of the Holy Sepulchre Representations of the Passion erected in Roman Catholic countries on wayside prominences or in churchyards are called calvaries

Calverley Charles Stuart English poet A son of Rev H. Blayds he was born Dec 22 1831, and took the name of Calverley He went to Harrow and then to Oxford and Cambridge At Cambridge he proved himself a fine scholar, a fact evidenced by his translation of Theocritus Calverley is chiefly known for his unrivalled parodies Full of exquisite humour and wit are his *Perses* and *Translations*, 1862, and *Fly Leaves*, 1872 He died at Folkestone, Feb 17, 1884

Calvin John French theologian Born at Noyon July 10 1509, he was educated for the priesthood in Paris and then for the law at Orleans There about 1532 he became a Protestant and lived for a time in Paris and Basel In 1536 he settled in Geneva, where he became very active as a moral reformer, and in 1538 was banished He went to Strasbourg but in 1541 was recalled to Geneva where he died May 27, 1564

For thirteen years Calvin was the autocrat of Geneva. He aimed at making it a place where righteousness was paramount and those who transgressed, either in creed or conduct, were punished, one Servetus, a Unitarian being burned. On the other hand Calvin improved the city in many ways Trade was fostered and education encouraged

Calvin gave the Protestants a creed which,

if harsh was logical and which has exercised an enormous influence in Europe and America. His great work is the *Institute of the Christian Religion* written in Latin in 1536, and translated into English

Calvinism Religious belief expounded by John Calvin in the 16th century Its central idea is the doctrine of predestination which comes from the belief that everything that happens is due to the will of God It accepts the idea of eternal salvation for some and eternal damnation for others

Calvinism was very strong among the Protestants until the 19th century and is set forth in the confessions of the various reformed churches and in part in the 39 articles of the Church of England The Huguenots accepted it and it obtained a firm footing in Scotland and the Netherlands The Puritans, both in England and America, were Calvinists

Calydon Ancient Greek city in Actolia Situated on a hill overlooking the River Enneus 7 m from the Calydonian Gulf it was the marshland region in which Byron met his death from fever Here occurred Melcager's fabled hunt for the Calydonian boar which had been sent by Artemis to ravage the fields Ruined ramparts about 2 m in circuit and a temple to Artemis remain

Calypso In Greek mythology a nymph She was a daughter of Atlas and inhabited the island of Ogygia When Odysseus was shipwrecked on her shores she promised him eternal youth if he would remain After seven years of dalliance he longed for home and Zeus bade her release him On his departure she died of grief

Calyx Botanically, the external set of floral leaves, or sepals These may be free, as in the buttercup the calyx being then polysepalous If more or less united into a tube, as in the primrose, the calyx is gamosepalous the tube having its margin entire, toothed cleft or lobed The calyx leaves, usually green are sometimes coloured or petaloid as in the anemone, which has no petals

Cam River of Cambridgeshire It flows through the country for 40 m until it falls into the Ouse just below Ely and it is navigable as far as Cambridge the chief town on its banks Its old name is the Granta

Cam Device for converting the whole or part of a machine's regular rotation into irregular, intermittent or reciprocating motion Eccentric cams necessarily have the centre of rotation outside the centre of the figure Such wheels, lobe shaped or otherwise impart motion to others by geared or rolling contact Sometimes cams contrive slow thrusts and quick returns as in some machine tools Heart cams may impart regular up and down motion, as in cotton spindles Cams are essential for the complex operations of sewing machines and printing presses

Camalodunum Roman town in England It stood where Colchester now stands and was one of the largest Roman settlements in the country Before the Romans took it in 48 it was the chief town of the Trinobantes Boadicea captured it in A.D. 62 Remains of many Roman buildings have been unearthed

Camberley Village of Surrey It is 7 m from Ascot and 35 from London on the S. Ry The chief building is the military staff college built in 1868

Camberwell Borough of London It is on the south side of the river and includes Dulwich and Peckham It has several stations on the Southern Rly Camberwell Green is a great road junction Pop (1931) 251,373

Cambodia French protectorate in Indo-China With 200 m of coast line, it is bounded N W by Siam, and elsewhere by other French colonies and protectorates It is centrally a flat plain traversed by the Mekong, an inland lake, Tonle Sap, 770 sq m in extent, supports a large fishing population The native king resides at the capital, Pnom-Penh Of the population three-fifths are Khmers, the remainder Annamese, Chinese, Cambians and Malays Rice, cotton, cattle timber and gums are produced Its area is 67,550 sq m Pop (1931) 2,501,000

Cambon Pierre Paul French statesman Born, Jan 20, 1843, he became a lawyer and entered the public service He was in succession minister in Tunis, 1882-86, ambassador at Madrid, 1886-90, and ambassador at Constantinople, 1890-98 In 1898 he became French ambassador in London and here he remained for 22 years. He retired in 1920 and died May 29, 1924

Cambon's brother, Jules Martin Cambon, born April 5, 1845, had also a long career in the public service From 1901-07 he was governor general of Algeria, from 1897-1902 ambassador at Washington, from 1902-07 ambassador at Madrid From 1907 to 1914 he was French Ambassador in Berlin He died in 1935

Camborne Market town and urban district of Cornwall It is 3 m from Rodruith and 2674 from London on the G W Rly It is the centre of the Cornish mining industry and has a school of mines Pop (1931) 14,157

Cambrai City of France It stands on the Scheldt 37 m from Lille, is an important railway junction and is served by a canal The chief buildings are the hôtel de ville on the Place d'Armes, the modern cathedral, the citadel and the belfry One of the old gates still stands The buildings were much damaged during the Great War Textiles are made and the place gives its name to cambrie

Cambrai has a notable history, especially before 1678 when it became part of France Its bishop was one of the most powerful in the Netherlands Here in 1508 the pope and many European princes made a league to humiliate Venice Pop 28,542

During the Great War two battles were called after Cambrai On Nov 20, 1917, the British army under Sir Julian Byng, helped by a strong force of tanks, broke through the German lines near Cambrai and took many prisoners and guns The advance lasted until the 27th, when the battle ended

The second battle of Cambrai, fought between Sept 27 and Oct 5, 1918, was an assault on the Hindenburg line and part of the great offensive that ended the war

Cambria Latin name for Wales The mountain system which runs from the Black Mountains in Brecknockshire to Snowdon and the adjoining area is called the Cambrian A system of rocks found in Wales and in other parts of Great Britain and of Europe is known as the Cambrian System The Cambrian Rly, which served the greater part of Wales, is now part of the G W line

Cambridge Borough and market town of Cambridgeshire, also the county town and a university centre. It stands on the Cam 36 m from London, on the L N E Rly Apart from the university it is an agricultural centre The buildings, in addition to the colleges and those belonging to the university as a whole, include several churches, notably Great St Mary's, the university church S Benet's, the round church of the Holy Sepulchre and the shire hall The chief schools are the Leys and the Perse grammar school Pop (1931) 66,803

Cambridge City of Massachusetts, USA It is on the Charles River, adjacent to Boston Cambridge is chiefly known as the seat of Harvard University which has its buildings here, including an observatory and a botanic garden Here are the Massachusetts Institute of Technology and several colleges and schools The city has some industries and is a printing and publishing centre Pop (1930) 113,643

Cambridge University. One of the great English universities It consists of 17 colleges and two halls The colleges are Christ's, Clare, Corpus Christi, Downing, Emmanuel, Gonville and Caius, Jesus, King's, Magdalene, Pembroke, Queens', S. Catherine's, S. John's, S. Peter's or Peterhouse, Sidney Sussex, Trinity and Trinity Hall Peterhouse founded in 1284 is the oldest The halls are Fitzwilliam and Selwyn Girton and Newnham colleges for women, though not part of the university, work in association with it There are also theological colleges not connected officially with the university The colleges are self-governing

Other buildings belong to the university as a whole, these including the library, one of the finest in the world, the senate house and the Fitzwilliam museum enlarged in 1930-31 The university has also many laboratories and schools for science teaching, an observatory and a botanic garden

The university has some 5000 undergraduates and a large staff of professors and lecturers Its head is the chancellor, its acting head the vice-chancellor Its income apart from that of the colleges is over £200,000 a year It gives degrees in all subjects of ordinary study, especially classics and mathematics Many eminent men have been educated at Cambridge, they include Burghley, Cromwell, Pitt, Bacon, Newton, Darwin, Milton, Wordsworth and Tennison The university is a famous sporting centre and many of the greatest English athletes have passed through it The Cambridge University Press, sometimes called the Pitt Press is associated with the university It has printing works in Cambridge and an office in Fetter Lane, London, E C The university sends two members to Parliament

Cambridge Duke of English title borne by members of the royal family In 1706 George, afterwards George II was made an English peer as Duke of Cambridge In 1801 Adolphus Frederick (1774-1830), a son of George III, was made duke From 1815 to 1837 he was viceroy of Hanover His son George William Frederick, the 2nd duke, born in Hanover, March 26, 1819, entered the British army and served in the Crimean War From 1856 until 1895 he was commander-in-chief, and he died March 19, 1904 The duke marriedmorganatically and consequently his title became extinct His three sons took the name of FitzGeorge.

Cambridge

Marquess of British title In 1917, when the name of the royal family was changed, the Duke of Teck was given the title of Marquess of Cambridge. Born Aug 13, 1868, he was the eldest son of the Duke and Duchess of Teck and brother of Queen Mary. He married a daughter of the 1st Duke of Westminster, and died Oct. 24, 1927. His son George (b 1895) became the 2nd marquess.

Cambridgeshire

Inland county of England In the east of the country, it covers 864 sq m., and is largely in the fen area. In the south and south east, however, are slight elevations called the Gogmagog Hills. The chief river is the Ouse, others are the Nen, the Cam and the Lark. Cambridge is the county town, others are Wisbech, Ely, March and Newmarket. The county is a famous agricultural area. For some purposes Cambridgeshire is two counties, each with its county council, Cambridge proper and the Isle of Ely. Pop (1931) 217,709.

The Cambridgeshire is a race run at Newmarket in October.

Cambuskenneth

Village of Scotland It stands on the Forth just outside Stirling. Its abbey, of which only ruins remain, was founded by David I in 1147, and here James III and his wife were buried.

Cambuslang

Town of Lanarkshire It is on the S W bank of the Clyde, 6 m from Glasgow, on the L M S Rly. The chief industry is steel making. A great religious revival here in 1742 was known as the Cambuslang work. Pop 20,130.

Camden

City and river port of New Jersey It is on the Delaware opposite Philadelphia and a busy industrial centre with manufactures of various kinds, also shipbuilding yards. Pop (1930) 118,700.

Another Camden is a town in S Carolina. Here during the war of independence, on Aug 16 1780 the Americans attacked the British under Lord Cornwallis. The engagement ended in a British victory.

Camden

Marquess English title Charles Pratt was born in 1714. He was made attorney general in 1759 and chief justice of the common pleas in 1762. From 1766 to 1770 he was lord chancellor and later president of the council. He was made Baron Camden in 1765, and an earl in 1786 and died April 18 1794. His son John was made a marquess in 1812 and the title is still held by his descendant. The family seat is Bayham Abbey and the estates are in Kent and Sussex. The earl has property in Camden Town and his eldest son is called the Earl of Brecknock.

Camden

William English antiquary The son of a painter, he was born in London May 2, 1561, and educated at London schools and at Oxford. In 1575 he was appointed a master at Westminster School, and from 1593 to 1597 he was headmaster. Camden is famous for his *Britannia*, a survey of the British Isles written in Latin. Its value even in our own time is extremely great. He collected the epitaphs in Westminster Abbey and wrote two or three historical works. He died at Chislehurst, Nov 9, 1623.

Camden Town

District of London It is in the boroughs of St Pancras and Islington to the N W of the city and is served by the tube railways and

by omnibuses. It has many factories and warehouses.

Camel

Genus of hump backed ruminant mammals The feet are splayed for desert travel. Water oells in the stomach lining store a three-days' supply. The one-humped camel, *C dromedarius*, no longer known wild, comprises the swift racing breed called dromedaries as well as baggage camels. Originally Arabian, they now live in N Africa, the Canaries, W Asia and N W India, and have been introduced into Australia. The two humped Bactrian camel, *C bactriana*, inhabits the central Asian steppes feeding on saline herbage. The hair of the camel is used for making brushes and clothes.

Camelford

Market town of Cornwall on the Little River Camel, 12 m from Bodmin and 241 from London, on the S Rly. Near the town are large slate quarries. Pop 1400.

Camellia

Genus of overgreen trees native in tropical and eastern Asia One subgenus, with pendulous flowers and persistent sepals, is represented by the tea plant. The other, with erect flowers and deciduous sepals, contains about eight species, of which *C japonica*, brought from Japan to England in 1739 a tree 20 ft high, has laurel-like leaves and odourless red flowers, now presenting many pink and white varieties. A smaller species *C reticulata*, from Hong Kong, has larger bright rose, semi-double blooms.

Camelot

Name given to King Arthur's capital Its locality is uncertain, but it has been identified with Caerleon.

Camel's Thorn

Genus of small leguminous shrubs ranging from Egypt to central Asia (*Alhagi*) Its rigid, spiny stems and ligneous seed pods are often covered with a light brown sweetish exudation of which camels are very fond.

Cameo

Engraving in relief on hard material and the object so engraved Such carved gems are found in the earliest civilisations, supreme examples represent gem-cutting at its best. Surfaces with variegated colouring, as agate and onyx, were preferred, and were simulated in glass as in that incomparable cameo engraving the Portland vase. The Italian Renaissance introduced cameos carved out of molluscous shells, and Josiah Wedgwood imitated the effect in ceramic jasperware. Cameos have been used for brooches and signet rings.

Camera

Apparatus for throwing an image of an object through a lens upon a screen, for purposes of drawing, instruction or photographic record For the first named purposes it was called the camera obscura, having its modern outcome in the periscope. Utilised for photography by Thomas Wedgwood before 1802, the photographic camera is essentially a rectangular box holding lens and sensitised glass plates or films. Cameras take pictures by instantaneous or time exposure, and variants enable pictures to be taken stereoscopically, in natural colours, or recorded consecutively on cinematograph films. In 1933 an invention made possible the recording of moving pictures in relief.

Cameron

Richard Scottish Covenanter and founder of the Reformed Presbyterians, or Cameronians A school master at Falkland, he became a preacher and a leader among those who disliked episcopacy. He joined the Sanquhar Declaration

(June 22, 1680) disowning allegiance to Charles II, and was outlawed. He was killed in a skirmish at Airds Moss, Ayrshire, July 20, 1680.

Cameron Sir David Young Scottish artist. Born in Glasgow in 1805, he studied art in Edinburgh. In 1911 he was made A.R.A., in 1920 R.A., and in 1924 he was knighted. He shows great richness of tone in his treatment of architecture, while his later productions are marked by a more personal style in his dry points of mountain and moorland scenery. He has published *Paris Etchings* and *Etchings in Belgium*.

Cameron Sir Ewen. Highland chieftain. The eldest son of John Cameron, he became head of his clan and was known as Lochiel. A romantic figure and a great fighter, he served Charles II, who made him a knight. He is said to have killed the last wolf in Scotland. He died in Foh, 1719.

Cameron Verney Lovett. English explorer and writer. He was born at Weymouth, July 1, 1844, and became a sailor. In 1872 the Royal Geographical Society sent him to Africa as leader of an expedition to help Livingstone. Next year he heard of Livingstone's death, but went on to Lake Tanganyika, and was the first explorer to cross Africa from east to west. In 1882 he accompanied Sir Richard Burton to the west coast of Africa. He was killed while hunting, March 27, 1894. He wrote *Across Africa* and some stories for boys.

Cameronians Followers of Richard Cameron (q.v.). They refused to take the oath of allegiance to William III after the religious settlement of 1689-90. In 1743 they formed a church which spread to N. Ireland and the United States. In 1876 most of them united with the Free Church of Scotland and soon ceased to have a separate existence.

The Cameronians, or Scottish Rifles, is a regiment of the British Army. It was raised among the Covenanters to fight for William III against James II. Its record includes service under Marlborough, in Egypt and Spain, in the Crimea and the Indian Mutiny, in S. Africa and in the Great War.

Cameroons District of West Africa. With a coastline on the Atlantic, it lies between Nigeria and French Equatorial Africa and is partly French and partly British. French Cameroons covers 164,489 sq. m. Yaoundé is the capital and Douala the chief port. It is under a commissioner. Pop. 1,880,000. British Cameroons adjoins Nigeria and covers 34,236 sq. m. It is divided into two parts, both being governed from Nigeria. Buea is the capital and Victoria the chief port. Pop. 774,585.

Camilla In Roman legend, a virgin warrior, queen of the Volscians. Virgil's *Aeneid* describes her as the daughter of King Metabus of Privernum, and as having been brought up as Diana's fleet-footed companion. She went to the aid of Turnus against Aeneas, one of whose knights, Aruns, slew her treacherously in battle.

Camillus Marcus Furius. Roman general and statesman. He was five times dictator, and had four triumphs. He was censor in 403 B.C., and as dictator completed the siege of Veii in 396. He went into voluntary exile, but returned to prevent Brennus and his Gauls from seizing Rome in

390. He helped to pass the Licinian laws in 367.

Camisards Name given to French Protestants in the 17th century. They were persecuted after the edict of Nantes, 1685, especially in Languedoc. In 1702 some of them under Jean Cavalier rose in revolt. They were called Camisards because they wore a *camise*, or shirt, over their armour so that their friends could recognise them in the dark. For two years a savage civil war was waged, but in the end the few remaining Camisards were forced to submit.

Camoens Luis Vaz de. Portuguese poet. Banished in 1546 he fought against the Moors and went to the East Indies in 1553. Then he was in prison at Goa, as he was later at Mozambique, and did not return to Lisbon until 1570. He died in 1580.

While in the East Camoens wrote his great poem, *Os Lusíadas* (The Lusitanians), 1572. This tells the story of the deeds of the Portuguese in stateliest and noblest verse, and is their national epic. Camoens also wrote much other verse and some comedies. A chair of Portuguese language and literature has been established in his memory at King's College, London.

Camomile Genus of strongly scented composite herbs. They grow in Europe, W. Asia and N. Africa. The solitary heads of yellow tubular florets are usually surrounded by a single white ray. The common camomile *Anthemis nobilis*, tends to produce double heads, with the yellow centre white and ligulate. Its bitter principle and aromatic oil are utilised as a stomachic and tonic, or in fomentations; in large doses it is a purgative.

Camorra Secret society. It arose probably in the prisons of Naples about 1820 and attained enormous strength. Candidates for membership were subjected to severe tests and a council of twelve directed their movements with secrecy and skill. Large sums of money were obtained by blackmail between 1820-1860, when the society was at the height of its power. It had members in all classes, and, especially after 1860, had great political influence. The trial of 37 Camorristas at Viterbo in 1911 was a great blow to the organisation. The word came from the Spanish *chamarra*, a cloak.

Camouflage Device for deceiving or misleading. During the Great War the word denoted new methods of military deception necessitated by the activity of enemy aircraft and submarines. On land aerial observation was confused by extending mats or fishing nets painted to simulate vegetation over gun positions or roads. At sea, a dazzle department, under artistic supervision established by the British Admiralty, directed the painting in confusing patterns of merchant vessels and naval craft.

Campagna Flat, marshy plain surrounding Rome. Extending from the Sabine, Alban and Lavinian hills to the coast between Civitavecchia and Terracina, it embraces the ancient Latin territory, and before Rome became supreme possessed many important cities. The soil yields pasture for horses, cattle, sheep and goats. Its unhealthiness, noted in classical times, increased with the development of malarial conditions. These are gradually yielding to public sanitary campaigns, greatly expedited by Signor Mussolini, and in 1932 the new commune Littoria was founded.

Campanile Italian name for a heltry tower detached from the main body of a church, such as that at Wilton near Salisbury or the one in the Piazza of S Mark at Venice

Campanology Science or art of bell-ringing. It comes from the Latin word *campana*, and is in practice confined to church bells. It usually takes the form of change ringing which is ringing a peal of bells in different orders so as to obtain variety of sound. Thus, on a peal of eight bells 40,320 changes can be rung, hut on a peal of four only 24. The bells can, however, be rung in rounds not changes. The bells are numbered and sometimes named, as are the peals, the chief of which are bob and grand sire. The finest bells are in the English cathedrals, notably York. Change-ringing was founded, so it is believed, by Fabian Stedman who was born at Cambridge in 1631. He wrote on the subject two books, *Tintinnologia* and *Campanologia*. In 1921 his work was commemorated at Cambridge. The earliest societies of hell ringers date from the 10th century, and to day there are several associations and a central council of hell ringers. They hold festivals from time to time, one such being held at Croydon in 1932. See BELL.

Campanula (Bellflower) Genus of the order *campanulaceae*, which includes annuals, biennials and perennials. The ordinary border campanulas are hardy perennials varying in height from 18 inches to 3 or 4 ft, and bearing spikes of blue or white bells.

Campbell Scottish clan. One of the heads of the clan named Callum was given the surname of More (the great) from his numerous exploits and his successors in the chieftainship called themselves Mac Callum More, the sons of Callum the great. Among the Gaelic clans of Scotland the Campbells occupied a distinguished place, their chief became Duke of Argyll. Their original home was in Argyllshire and the islands of the west coast of Scotland. Other titles borne by the Campbells are those of Earl of Breadalbane and Earl Cawdor.

Campbell Beatrice Stella. English actress, known as Mrs Patrick Campbell. She was born in Kensington, Feb. 9, 1865. She was educated in England and Paris and married in 1884 Patrick Campbell, who was killed in S Africa in 1900. In 1914 she married Major G. F. M. Cornwallis West. After appearing in amateur theatricals, she toured with several dramatic companies including the Ben Greet Company. From 1891 to 1893 she played at the Adelphi Theatre, London, and in May 1893 scored a notable success as Paula in *The Second Mrs Tanqueray* at the St James's Theatre. Other successes were Juliet (1895), Magda (1896), Opabella (1897), Lady Macbeth and Lady Teazle (1898), and George Sand at the Duke of York's Theatre in 1920. She published *My Life and Some Letters* in 1922.

Campbell Lord British lawyer John Campbell was born at Cupar, Sept. 15 1779, and studied at St Andrews for the ministry, but became a barrister in London. In 1830 he entered the House of Commons as Liberal M.P. for Stafford, and in 1833 was solicitor general. In 1834, 1835-39 and 1840-41 he was attorney general, and in 1841 he was made lord chancellor for Ireland and a peer. In 1846 he was appointed chan-

cellor of the duchy and in 1850 lord chief justice. From 1859 to his death, June 22, 1861, he was lord chancellor. Campbell is chiefly remembered for the measure of 1843 dealing with lhb, called Lord Campbell's Act, and for his *Lives of the Lord Chancellor, and Lives of the Chief Justices*.

Campbell Reginald John English preacher. Born in London in 1807, he was educated at Christ Church, Oxford. In 1895 he became the minister of a Congregational Church at Brighton, where his preaching attracted much attention. In 1903 he was chosen minister of the City Temple, London. In 1915 he joined the Church of England and was ordained. He was vicar of Christ Church, Westminster, 1917-21 and of Holy Trinity, Brighton, 1924-29. Resigning, he devoted himself to mission work in the diocese of Chichester and in 1930 was made a canon residentiary of the cathedral.

Campbell Sir Malcolm British motorist. Born in March, 1884, he entered Lloyds in 1903 and became an under writer there in 1909. In 1909 he became a racing motorist. After the war won many trophies at Brooklands and elsewhere. In 1924 he made a world's record by driving his car 146.4 m. in the hour. In 1927 the first of his Blue Bird cars appeared and in 1928 he created a record, 212 m. per hour for the five m. On Feb. 5, 1931, at Daytona, he beat Segrave's record with a speed of 245.7 m. per hour, and on his return to England he was knighted. In 1935 he made a new record with a speed of 301.12 m. per hour. In 1931 he published *My Greatest Adventure*, an account of his expedition in 1926 in search of treasure believed to be hidden in Cocos Island.

Campbell Thomas Scottish poet. He was born July 27, 1777, and educated in Glasgow. In 1799 he published *The Pleasures of Hope*. Later came *Gertrude of Wyoming* and the martial songs by which he is best known such as *Ye Mariners of England* and *The Battle of the Baltic*. *Lord of Ilk's Daughter*, *Lochiel* and *Hohenlinden* are others of his poems. He died at Boulogne June 15, 1844.

Campbell-Bannerman Sir Henry politician. Born in Glasgow, Sept. 7, 1836, he was a son of James Campbell a business man there. In 1872 he took the additional name of Bannerman, that of his mother. He was educated at Glasgow and Trinity College, Cambridge and adopted a political career. In 1868 he was elected Liberal M.P. for the Stirling Burghs and in 1871-74 and 1880-82 he was Financial Secretary to the War Office. From 1882-84 he was Secretary to the Admiralty and in 1884-85 Chief Secretary for Ireland. From 1892-95 he was Secretary for War, being knighted when he left office. In 1899 he was chosen leader of the Liberal Party, which he led through some very difficult years. In Nov. 1905 he became Prime Minister. He died childless April 22, 1908. Sir Henry was a moderate Liberal, best remembered because his ministry gave self government to S Africa.

Campbeltown Burgh and seaport of Argyllshire. It is 85 m. from Glasgow, 37 from Tarbert, and has a good harbor. The chief industries are fishing and distilleries. Steamers ply between here and Glasgow. Pop. (1931) 6309.

Campeggio Lorenzo Italian cardinal. Born at Bologna in 1472.

he studied there and at Padua. In 1512 he was made a bishop and in 1517 a cardinal. He visited England in 1519 and was made Bishop of Salisbury, but was soon in Italy again. In 1523 he was sent to try the case for a divorce between Henry VIII and Catherine of Aragon. Acting on instructions he refused to pronounce sentence, and adjourned the case. Soon afterwards he lost the bishopric of Salisbury, but he had already received that of Bologna. He died in Rome, July 25, 1539.

Camperdown English name for the Dutch village called Camperduin. It is on the coast of the Netherlands, 27 m from Amsterdam, near the scene of the battle fought on Oct. 11, 1797, between the British and Dutch fleets. The Dutch fleet came out of the Texel, where it had been blockaded, and the English ships, under Adam Duncan, crossed from Yarmouth to meet it. After a hard fight the Dutch vessels were either sunk or seriously damaged.

Camperdown Town of Victoria. It is 123 m from Melbourne, with which it is connected by railway, and is in a pastoral district. Pop. 3900.

Camphor Species of tree (*cinnamomum camphora*). It grows in Formosa, Japan, and E. China. From its timber is distilled the hydrocarbon known as camphor ($C_{10}H_{16}O$). This whitish, translucent, volatile substance, with a penetrating odour, is an essential constituent of celluloid, and is used in medicine as a nervous stimulant and antispasmodic. Borneo or Sumatra camphor, with two additional hydrogen molecules, is found in solid, crystalline masses in the wood of a gigantic forest tree.

Campion Popular name for several plants of the pink-carnation order. They are common in Britain and in N. Europe and Asia. Red campion is *lychnis diurna*, the night-flowering white campion is *L. viscaria*. Meadow campion, or ragged robin (*L. floscuculi*), has dissected petals. Another garden favourite, rose campion (*L. coronaria*), is cultivated in double forms. Moss campion (*silene acaulis*) forms green cushions of close-set, hair-like leaves, bladder campion (*S. cucullatus*), with inflated calyx, is allied to sea campion (*S. maritima*). Spanish campion (*S. olivacea*) has greenish-yellow flowers.

Campion Edmund, English Jesuit. Born in London, Jan. 25, 1540, he was educated at Christ's Hospital and Oxford, and was ordained. Afterwards he took a degree at Douai, went to Rome and joined the Jesuits. He was sent to England in 1581 with Robert Persons to strengthen the wavering Catholics at a time when Roman priests were forbidden to enter. After about a year he was captured in Berkshire, tried for treason and sentenced to death. On Dec. 1, 1581, he was hanged at Tyburn. In 1886 he was beatified.

Campion Thomas, English poet. Born in London, Feb. 13, 1567, he was educated at Cambridge. He studied law, but soon turned to medicine and practised in London. He is best known as a writer of lyrics, some of which he set to music. He died in London, March 1, 1620.

Campsie District of Shropshire. Here are the Campsie Fells, a range of hills which rise to 1500 ft. Campsie Glen is a beauty spot.

Camwood Red-wood obtained from a W. African leguminous tree

(*baphia*). Allied to harwood, it reaches 30 ft. in height and bears lustrous leaves and white flowers. The timber, roughly pulverised, yields the mock Turkey red of cotton dyers, and an indigo base for wool dyeing.

Caná Village of Palestine. It was the home of Nathaniel and the scene of the marriage feast at which Christ wrought his "beginning of miracles" (John ii. 4). Its site is traditionally attributed to Kefer Kenna, a Galilean village between Nazareth and Capernaum.

Canaan Name of one of Noah's grandsons (Gen. ix). He gave his name to the land later called Palestine. Its inhabitants the Canaanites, were crushed by the invading Israelites.

Canada Dominion of the British Empire. It occupies the northern part of the Continent of N. America and stretches from the Atlantic to the Pacific. From the United States it is separated by an artificial boundary drawn (east to west) along the 49th parallel of latitude through the Great Lakes and then in an irregular fashion to the sea. In the north the Dominion extends into the Arctic Labrador, on the east coast, belongs to Newfoundland. The land area is 3,510,000 sq. m. and the population (1931) 10,374,196.

Much of Canada is a great plain, but in the west are vast mountain ranges. The Rocky Mts. are partly in Canada and in among them are many peaks over 10,000 ft. high. The highest points in the Dominion are Mt. Logan (19,850 ft.) and Mt. St. Elias a little lower. The main river is the St. Lawrence. This is navigable by large vessels in the summer months as far as Montreal. Other great rivers are the Mackenzie, Peace, Saskatchewan, Nelson, Churchill and Yukon. Four of the Great Lakes are partly Canadian, others are Great Bear, Great Slave, Winnipeg, Lake of the Woods and Athabasca.

Canada is a federation of nine provinces and two territories. Four of the provinces, Quebec and Ontario, the original Canada, Nova Scotia and New Brunswick, formed the federation of 1867. Prince Edward Island and British Columbia were soon admitted. Manitoba, Alberta and Saskatchewan were formed out of the vast territories to the north-west. These nine provinces have their own ministries and legislatures for internal administration, but for other matters there is a ministry and parliament at Ottawa, the Dominion capital.

Wheat and other cereals are grown in great abundance in the prairie provinces. Other branches of agriculture that flourish are cattle raising, dairy farming and fruit growing. The fisheries are important. There are vast reserves of coal, and a good deal of gold, silver, nickel, cobalt and copper is produced. The enormous forests provide pulp for paper making which, like lumbering, is another source of wealth. Manufacturing industries, protected by tariffs, have been established. Of these Montreal is the largest, others are Toronto, Winnipeg, Vancouver, Hamilton, Ottawa and Quebec.

The country is well supplied with railways. These are linked into two great systems, one, the Canadian National, is owned by the State, the other is the Canadian Pacific. There are a militia, a small navy and an air force, the militia having been the nucleus of the armies that Canada sent to the Great War.

The country has its own banking system. Its coinage is based on the American system, being

in dollars and cents Canada is a member of the League of Nations

HISTORY—The first settlers in Canada were the French who founded both Montreal and Quebec on land visited by Cartier and Champlain. New France, as they called it, in fact the older part of the province of Quebec and Nova Scotia, known as Quebec War between England and France resulted in the surrender of Nova Scotia, and 50 years later, in 1763, of Quebec to Great Britain. Unlike Quebec, Ontario or Upper Canada was colonised by the British many of its early inhabitants being loyalists from the United States who made their homes there after 1783.

Quebec and Ontario, or Lower and Upper Canada, were made separate provinces, each with its own legislature in 1791, but in 1841 they were united after there had been risings in both districts. In 1867 the Dominion of Canada was formed this being a federation of four provinces, the two named and New Brunswick and Nova Scotia. Manitoba, Prince Edward Island and British Columbia joined it a little later, and it was completed when Alberta and Saskatchewan were carved out of the vast district that had once belonged to the Hudson's Bay Co.

The first premier of Canada was Sir J. A. Macdonald who was responsible for a national policy of protection. His party (the Conservatives) remained in power, except during the years 1874-78 until 1896, when the Liberals under Sir W. Laurier had a long spell of office. This was terminated in 1911 as the people disliked the proposed reciprocity treaty with the United States. Soon afterwards came the Great War, which Canada entered at once. The Conservative minority under Sir Robert Borden became in 1917 a coalition, and a fierce fight was waged over conscription which was specially disliked by the French in Quebec. Canada sent some 400,000 men to the seat of war and over 50,000 names were on her roll of honour. The coalition broke up in 1920 and the Liberals under W. L. Mackenzie King except for a short time in 1925-26 formed the government until 1930. In that year a general election resulted in a Conservative victory. The premier, R. B. Bennett, called the Empire Conference which met at Ottawa in July, 1932. The general election of 1935 gave an overwhelming majority to the Liberals, and Mackenzie King again became premier.

Canadian Mounted Police

Royal Police maintained by the Dominion of Canada, for service in the Arctic the N.W. and Yukon territories, and also in the Indian reservations and the national parks. The force is controlled from Ottawa and until 1919 was called the N.W. Mounted Police. It is organised in thirteen divisions and its strength in 1930 was 2300 officers and men.

Canal Artificial waterway used for transport. In a few canals the water is on the same level throughout, but in most of them locks are used for raising and lowering boats. Canals were made by the Chinese and the Persians in the days before Christ. In Great Britain they were constructed for commercial purposes in the 18th century. In the 19th the competition of the railways adversely affected their prosperity but the introduction of motor traction revived their use.

The world's ship canals include the Suez, Panama, Welland, Sault Ste. Marie, Kiel, Corinth and Manchester. The Panama is the

largest, and the Suez the longest. Projected ship canals include the Georgian Bay in Canada and one between Forth and Clyde.

In England the chief canal is the Grand Union, an amalgamation of several waterways that serve the area between London and Birmingham. The Birmingham area is also connected by canal with the Manchester area, and with the Aire and Calder navigation system in Yorkshire. The Caledonian and Crinan are the chief of several canals in Scotland. In all there are 4673 m. of canals and canalised rivers in Great Britain and Ireland.

In 1900 a Royal Commission favoured the development of the canal system. The rates charged for carriage by canal are controlled by the Railway and Canal Commission.

In Great Britain many families make their homes on canal barges. A floating school for these children has been opened at W. Drayton, Middlesex. There is a Canal Boatmen's Institute at Paddington.

Canaletto Antonio, Italian painter. Born in Venice, Oct. 18, 1607. His real name was Canale. He lived chiefly in Venice, although he studied in Rome, in later life he twice visited England. His pictures are chiefly scenes of Venetian life. Examples are in the Wallace Collection and the National Gallery, London. He died in Venice, Aug. 20, 1768.

Canary Popular song bird. It belongs to the finch family and is a native of the Canary and Azores Islands, where it is still found wild. There it is greenish in colour with brown streaks, not yellow as in captivity. In the 16th century it was domesticated and since then has been bred in captivity. The birds lay four or five blue eggs and raise three or four broods in a season.

Of the many varieties the best singer is the Roller, which is bred in the Harz Mts., Germany. The birds feed on canary seed or millet, with some chickweed or groundsel.

Canary Grass Annual grass. A native of the Canary Islands and Madeira, it is cultivated in the S. of England. In Morocco, Italy and elsewhere it is grown under the name of alpest for bird seed and as a breadstuff. It grows to a height of about 3 ft. with compact, oval panicles.

Canary Islands Archipelago of volcanic origin in the N. Atlantic. Situated 60 m. W. of the African coast, there are seven islands and six uninhabited islets, covering 2807 sq. m. The chief are Tenerife with Santa Cruz as its chief town, and Grand Canary with its chief town Las Palmas. The fertile soil produced Canary wine. It is now used for the growing of fruit, especially bananas, tobacco and vegetables. The equable climate attracts many visitors. On Tenerife is the peak of that name, 12,200 ft. high. Pop. (1931) 564,873.

Canary Wood Mahogany like timber. It is produced from evergreen tree laurels, especially *Persea indica*. Sometimes sold as Madeira mahogany, it polishes dark and derives its name from having come first from the Canary Islands. The trees grow in Madeira and the Azores.

Canberra Capital of the Commonwealth of Australia. It stands in federal territory, 196 m. from Sydney with which it is connected by railway. The site was selected for the federal capital soon after 1900, and since then the city has been planned and many buildings erected. These include the

Parliament House, opened in 1927. Canberra has an Anglican cathedral, and on a hill near is an observatory. The principal streets radiate from the capital circle. A university has been founded here.

The federal territory is also called Canberra. This covers 912 sq. m. around the city and a further 28 sq. m. at Jervis Bay on the coast. The Murrumbidgee flows through it and a tributary through the city itself.

Cancer The name of a small constellation between Gemini and Leo. The northern of the two tropics is called the Tropic of Cancer. It is a line of latitude $23\frac{1}{2}$ degrees north of the Equator.

Cancer Malignant tumour, technically called carcinoma. Observable in most if not all vertebrates, it comprises a framework of connective tissue enclosing cells of epithelial type, which may invade other organs and occasion secondary tumours. Early extirpation may effect a permanent cure. Cancer is non-infectious, but is apparently influenced by long-continued irritation. Its cause, still uncertain, is increasingly attributed to a filter-passing virus acting in conjunction with another specific factor. It is essentially a disease of middle and advanced life, in England and Wales deaths from it increased from 39,000 in 1913 to 63,263 in 1934. Radium treatment is being studied with a view to checking the disease. It is so called because of its resemblance to a crab with its tentacles. (Lat. *cancer*).

Various societies exist to combat cancer. There is a Cancer Research Fund at 8 Queen Square, Bloomsbury, London, W.C., and a British Empire Cancer Campaign at 19 Berkeley Street, London, S.W. The Cancer Hospital is in Fulham Road, London, S.W. 3, and there is a National Society for the Relief of Cancer at 15 Ranelagh Road, London, S.W. 1.

Candia City of Crete. It is on the north coast and has a small harbour. The chief buildings are the cathedral, a modern edifice, and the arsenal erected by the Venetians. Pop. 33,400.

Candle Solid fat or wax rod, with fibrous wick, burned for artificial light. The earliest domestic forms were tallow dips, with cotton, flax or rush wicks, beeswax being reserved for church use. Later, by the use of chemically impregnated plaited wicks, snuffing was avoided. The extraction of glycerine from stearine and palmitin released fatty acids which, mixed with some paraffin, constitute stearic candles. Paraffin candles are derived from solid hydrocarbons in certain mineral oils, and sperm candles from the spermaceti of sperm whales.

Candlemas Ecclesiastical festival. This feast, in honour of the purification of the Virgin Mary, is held on Feb. 2, and commemorates the offering of the Infant Jesus in the Temple. In the Middle Ages it was general in the Christian Church, and candles were blessed and carried in procession to signify the entry of Jesus Christ as the light of the world. Candlemas is a quarter day in Scotland.

Candlenut Fruit of a Moluccan and Hawaiian tree (*Aleurites triloba*). Widely cultivated, it grows to a height of 30 or 40 ft. Its fruits contain several seeds which yield two-thirds of their weight in quick-drying oil. In Hawaii the dried berries are used as torches. The oil is used by artists and dyers, and for making soap and candles.

Candle Tree Central American tree of the bignoniac order (*Parmentiera cerifera*). It forms natural forests in the Chagres Valley of Panama. The trifoliate leaves have incurving spines. The large greenish flowers have sheath-like calyces from which grow fleshy, spindle-shaped fruits, nearly $\frac{1}{2}$ ft. long. They are used for cattle food.

Candolle Augustin Pyrame de Suisse, botanist. Born in Geneva Feb. 4, 1778; he died there Sept. 9, 1841. De Candolle's writings include part of a large work on the vegetable kingdom. He is also known as the author, or developer, of a system of classifying plants. His son, Alphonse de Candolle, helped in this work and also made a name as a botanist.

Candytuft (*Iberis*) Hardy plant of perennial varieties. The annual candytuft is about 12 in. high with clusters of flowers in many shades of rose, purple, crimson and mauve. The perennial variety (*Iberis sempervirens*) is an evergreen shrubby plant of low growth, with masses of white blossom.

Cane Stem of certain grasses and palms. They have well-marked rings where the leaves arise. They are used for basket work, chairs, matting, ropes, etc. Malacca cane and rattans are used for walking sticks. Sugar-cane is the source of cane sugar and the bamboo finds many special uses where it grows.

Canea Capital and seaport of Crete. It stands on the north side of the island and has a harbour suitable for small vessels. A modern quarter has arisen on a hill above the old town. Canea has some manufactures and around it are the walls built by the Venetians after they took the city in the 13th century. In 1646 it was taken by the Turks, and in 1841 it was made the capital in place of Candia. Pop. 26,000.

Cang, or Cangué Instrument of torture. Used by the Chinese; it consists of a large wooden collar fitting closely round the neck which prevents the wearer from resting.

Canker Plant disease due to the attacks of a fungus, usually *nectria ditissima*. The growing tissues are destroyed and malformation of the cortical tissues ensues, a gaping wound being formed. Beech, ash and apple trees are frequently attacked.

Medically, canker is the name for an ulcerative gangrenous affection of the cheek and mouth, principally affecting young children. It may attack a child debilitated by previous illness or living amid insanitary surroundings. Canker is also a chronic disease of the ear, affecting dogs and cats.

Cannae Ancient town of Apulia, Italy. It is memorable for the crushing defeat of the Romans by the Carthaginians in 216 B.C.

Cannel Coal Variety of coal. It has a high percentage of volatile matter, 80 to 84 per cent. of carbon, and leaves but little ash. It shows no trace of its vegetable origin and is hard, dull in lustre and brownish or black in colour. It burns readily with a bright candle-like flame, and is used in gas making.

Cannes Watering place of France. It is situated on the south coast, 120 m. from Marseilles. A casino is among

the attractions, and tennis tournaments, regattas and other meetings are held regularly. There is a fine promenade along the front. In the old town are the church of Notre Dame and the ruins of a castle, and on a hill near is an observatory. Pop 47,259

Canning Earl English statesman Charles John Canning, the 3rd son of George Canning, was born in London, Dec 14, 1812. Educated at Eton and Christ Church, Oxford, he entered the House of Commons in 1836, and in 1837 was made a viscount. Postmaster General, 1853-55, in 1855 he became Governor General of India, and he was there during the Mutiny and also when the government was taken over from the E India Co by the Crown. In 1859 he was made an earl. He retired just before his death, June 17, 1862. The title is extinct.

Canning George British statesman Born in London, April 11, 1770, he was educated at Eton and entered Parliament as MP for Newport in 1794. He held positions under Pitt before 1801, and made a name by his writings in the *Anti Jacobin* and as a speaker. In 1804-06 he served, again under Pitt, as Secretary of the Navy.

In 1807 he became Foreign Minister, and held that post until 1809, resigning owing to his quarrel with Castlereagh, which led to a duel between them. From 1810-21 he was President of the Board of Control and in 1822 he succeeded Castlereagh as Foreign Secretary. He remained in that office until April, 1827, when he succeeded Liverpool as Premier but in a few weeks he died Aug 8, 1827. He was buried in Westminster Abbey.

Canning was a great administrator and a great orator, a man of vision and determination.

Canning Town District of London. In the borough of West Ham, it lies along the north of the Thames on the L.N.E. Ry. It is a busy industrial area and includes the Victoria and Royal Albert Docks.

Cannock Urban district and market town of Staffordshire. It is 128 m from London, on the L.M.S. Ry. It is chiefly the centre for the coal mines in the district called Cannock Chase but has some manufactures. Pop (1931) 34,588.

Cannon Piece of artillery, now usually called gun. Cannon were used at Crécy (1346) or perhaps earlier.

Cannon Name of a family of English jockeys. Tom Cannon, born at Eton in 1846, won many of the leading races between 1866 and 1884. He then became a trainer at Stockbridge, where he died, July 13, 1917. Three of his sons, Tom Cannon, Jun, Mornington Cannon and Kempton Cannon, were prominent and successful jockeys between about 1890 and 1920.

Cannon Ball Tree of tropical America. It is of the natural order *Myrtaceae*, and has large flowers, rosy or whitish in hue, and alternate leaves which grow out from the branches and the trunk. Its fruit is large and globose, hence its name.

Canon Originally a rule or law ordered by ecclesiastical authority. From this the word came to describe certain persons in holy orders. The rules were collected and became the Canon Law which was very important in Europe in the Middle Ages and the influence of which may be traced in the laws of to-day. It was administered in the

church courts, had its own practitioners and was a favourite subject at medieval universities.

The Apostolic Canons are a collection of ecclesiastical laws put together in the 8th century. The Bible Canon is the list of books which have been declared canonical, i.e. included in the Old and New Testaments.

The word canon, at one time used for all clergy, came to be used in the Church of England for cathedral clergy only, and this is its use to-day. They are divided into residential canons who with the dean form the chapter or governing body of a cathedral, minor canons, also regular workers in a cathedral, but not members of the chapter, and honorary canons a much larger number.

In the Roman Catholic Church there are canons regular, men who live under a rule as they did in the Middle Ages. The chief of these are the Augustinians, or Black Canons, and the Praemonstratensians, or White Canons. Canonesses are women living in communities.

Canonbury District of London. In the metropolitan borough of Islington, it lies to the north of the city, on the L.M.S. and Metropolitan Rlys. Here is Canonbury Tower, the successor of the old manor house of the estate belonging to the Priory of St Bartholomew, Smithfield. It is now a club.

Canonisation Act of making a person a saint. It is practised in the Roman Catholic Church, where, since 1634, only the Pope has had authority to canonise. The process occupies many years and takes the form of a trial or elaborate inquiry. A recent case of canonisation was that of Joan of Arc in 1920.

Canopus Seaport of ancient Egypt. Situated near the western mouth of the Nile, 12 m. E. of Alexandria, it had a considerable trade, but its inhabitants were notorious for their luxury and profligacy. Here was a great temple of the Egyptian god Serapis. After the introduction of Christianity the city fell into decay. Its ruins are near the modern Abukir.

Canopus was also the name of a British battleship, the first of a class built between 1890 and 1902, and designed to pass through the Suez Canal. They were 420 ft long, displaced 12,950 tons and carried four 12 in. and twelve 6 in. guns.

Canossa Village of Italy. It is 12 m. from Reggio and has the remains of a famous castle. Here in 1077 the Emperor Henry IV appeared before Pope Gregory VII, and asked for pardon. The ruins of the castle are national property.

Canova Antonio Italian sculptor. Born Nov. 1, 1757, he passed most of his life in Rome engaged in practising his art, but made several journeys abroad, including one to England. He died Oct. 13, 1822.

Some of his pieces bear comparison with those of Michael Angelo. "Theseus Vanguishing the Minotaur," "Perseus with the Head of Medusa," "Hercules and Lichas," "Dancing Nymphs," and "The Awakened Nymph" are notable. He also made a bust of Napoleon and executed some splendid memorials in Rome.

Cantaloup Variety of musk melon. It is small and round with a rough hard rind and reddish orange flesh. More choice than the ordinary water melon, it is very popular in the United States.

Cantata Word meaning originally "sung" (Lat. *canto*, sing). Anciently a

story declaimed in verso by a single person, accompanied by a single instrument, it developed by the introduction of an air repeated at certain stages of the narrative into the concert aria. Handel, Bach and Mendelssohn called their extended sacred compositions cantatas.

The modern cantata is a choral work, too short to be classed as oratorio or opera, and performed as a concert piece without actions.

Canteen Word meaning originally a water hottle from this it came to mean the place at which liquor was sold in barracks, on warships and in other places where soldiers and sailors live. These canteens soon began to sell food and drink generally, also tobacco and other requirements. Dry canteens, where no intoxicating liquor are sold, were also established.

Canterbury City of Kent and ecclesiastical capital of England. It stands on both sides of the River Stour, 54½ m from London, with three stations on the S. Ry. Its chief building is the cathedral, one of the largest and most magnificent in the land. It was built chiefly in the 12th and 13th centuries.

The city has other interesting churches, among them the Holy Cross, S. Martin's, S. Dunstan's and S. Peter's. Secular buildings include the fine west gate with a museum, the guildhall, and the exchange. There are ruins of the castle keep, the third largest in England. In 1931 it was bought by the city. Its main industry is a trade in cattle, corn and other forms of agricultural produce. Its butter market is famous.

Canterbury was a Roman city and Roman remains still exist. It was made a bishopric by S. Augustine in 597. Soon afterwards he became the head of the English Church, and in 1535 was styled Primate and Metropolitan of All England. The archbishop has charge of the Diocese of Canterbury and is the unofficial head of the Anglican Church throughout the world. Pop. (1931) 24,450.

A district of South Island, New Zealand, is called Canterbury. Here are Canterbury Plains, covering about 4000 sq. m. which rear an enormous number of sheep. The district covers 14,000 sq. m. Christchurch is the capital.

Canterbury Bell (*Campanula medium*) Genus of the order Campanellaceae. It is a biennial plant 2 to 3 ft. in height, bearing beautiful bell-like flowers in shades of purple, blue, rose and white. Easily grown from seed sown out of doors in May and June, the seedlings should be planted out in the autumn.

Cantharides Blistering agent used in medicine. It consists of the dried bodies of a beetle of the genus *Cantharis vesicatoria*, commonly called the Spanish blister fly. They contain the active irritant principle cantharidin, criminally used as an aphrodisiac.

Cantilever Term used in engineering for a beam or girder which projects from a wall or other structure, and is supported only at one end. It is the essential feature in certain types of bridge where two or more cantilevers are used, and in modern concrete architecture where solid overhanging and projecting slabs are used.

Canton Name of a territorial division in France and Switzerland. In France each *arrondissement* is divided into cantons, each of which has its own magistrate.

In Switzerland there are 22 cantons, each with rights of self-government.

Canton City and seaport of China, called by the Chinese Shong Cheng or Kwang Chow Fu. It stands on the Chu-Kiang River, 80 m from its mouth, and is one of the great seaports of S. China. It consists of a walled town, the original city, modern suburbs including Honan, on an island, and a European quarter. The chief buildings are the many temples, some of them magnificent. The port does a large trade. Vessels land their cargoes at Whampoa, 10 m down the river, where there is a state dockyard. Canton is the capital of the province of Kwang-Tung. The population in 1931 was about 861,024. Many of the people live in boats on the river.

Canute Name of several Danish kings, often spelt Cnut or Knut. Canute I, called the Great, became King of Denmark in 1014 and claimed the throne of England, which had been won by his father, Sweyn. After a struggle with Edmund Ironside he became king and ruled the two countries until his death at Shaftesbury, Nov. 12, 1035. He married Emma, the widow of the English King Ethelred. Canute IV, who was King of Denmark from about 1080 until 1086, tried to spread Christianity and was canonised. His day is Jan. 10.

Canvas Stout fabric made of jute or cotton. It is much used for tents, the sails of boats, packing and other purposes in which great strength is necessary. Finer varieties are used by artists and as a backing for embroidery. In N. America a certain wild duck is called the Canvas Back Duck.

Canvassing Solicitation of business or votes. The term is sometimes applied to the method of selling goods by sending agents to visit private houses, but more usually to the system of asking persons to vote at election times for a particular person.

Canvey Island off the coast of Essex. It is 30 m from London and is reached from Benfleet by means of a causeway at low tide. It covers about 7 sq. m. In 1931 the erection of a bridge from the mainland was finished. Canvey is an urban district. In the 17th century it was recovered from the sea by Dutch engineers. Pop. 6000.

Canyon Ravine or deep gorge between steep rocks. Ravines are usually made by rivers cutting their way through the rocks. The most famous in the world are in the western part of the United States. In Arizona is the Grand Canyon of the Colorado River with walls 6000 ft. high.

Capablanca José Raúl Cuhan chess master. He was born in Havana, Nov. 19, 1888. In 1909, he defeated the United States champion, F. J. Marshall. Five years later he was beaten by E. Lasker, the world champion, but in 1921 he retrieved his defeat and for six years was champion of the world, until beaten by the Russian, Alexander Alekhine, in 1927.

Capacity In electricity, the quantity of electricity which will charge a body or condenser to a stated potential. The unit of capacity is termed a farad, defined as that capacity which a coulomb of electricity will charge to the potential of one volt, but for practical purposes a micro farad equal to one-millionth of a farad is used generally.

The capacity of an accumulator is indicated

by the number of ampere hours given by a fully charged cell and this is dependent upon the discharge rate

Capacity Power of receiving or containing the oilful content or volume The capacity of an airship is the size of its envelope The capacity of a ship is the amount of its accommodation for passengers and goods Capacity is usually given in cubic feet or yards In law, capacity is the power to act as a full citizen A minor is not of full capacity nor is a lunatic

Cape Breton Island of Canada Lying to the S of Nova Scotia from which it is separated by the Gut of Canso, it covers 3975 sq m and is part of the province of Nova Scotia It is divided into two parts by the Bras d'Or Lake and St Peter's Canal The largest town is Sydney, around which are valuable coalfields Agriculture, fishing and lumbering are carried on

In 1632 the island became French and on it the French built the strong fortress of Louisbourg In 1763 it was ceded to Great Britain and in 1820 was united with Nova Scotia (q v)

Cape Coast Port of W Africa In the Gold Coast Colony, it is about 80 m. from Accra Founded in 1610 by Portuguese settlers, it was captured in 1659 by the Dutch In 1664 it became British It was superseded as the capital by Accra in 1876 It has no harbour, but passengers and cargo are landed by means of surf boats Oil, ivory and gold are exported The town was formerly known as Cape Coast Castle Pop 17,635

Cape Cod Part of Massachusetts, USA It is a peninsula over 60 m long between Cape Cod Bay and Nantucket Sound On it are several harbours and pleasure resorts A canal shortens the sea passage between Long Island Sound and Boston On the bay is Plymouth, where the Pilgrim Fathers landed

Cape Colony See CAPE PROVINCE

Cape Gooseberry Shrub growing in S Africa and other warm countries It is called by botanists *Physalis peruviana* and was first found in S America whence it was taken to Africa It bears whitish flowers and purple berries which are acid to the taste

Cape Horn See HORN CAPE

Cape of Good Hope Cape of S Africa, often called simply the Cape It is in the S W of the continent, of which it is the southernmost point It was discovered in 1486 It gives its name to the district and to one of the provinces of the Union of S Africa

Cape Province Province of the Union of S Africa, in full the Province of the Cape of Good Hope The most southerly part of the continent, it has a coast line of 1300 m and includes Bechuanaland and Namaqualand In 1814 it became a British colony, in 1850 it was given responsible government and in 1910 it joined the Union The province covers 260,185 sq m In addition it has four native territories East Griqualand, Tembuland, Transkei and Pondoland, making another 16,351 sq m The pop is over 2,800,000, of whom 748,455 are Europeans Capetown is the capital the only other places of any size are Port Elizabeth East London and Kimberley It sends 58

members to the House of Assembly and for local affairs has an Administrator and a Provincial Council

Caper (*Capparis spinosa*) Deciduous shrub found in the Mediterranean lands The flower buds are gathered and preserved with salt and vinegar for use in sauces and salad dressings The berries of the African caper are sometimes used for the same purpose

Capercaillie *Tetrao urogallus* Wood grouse or cock of the wood This game bird of N Europe was once indigenous in the British Isles The male is brownish black with a glossy, greenish black breast and black tail feathers It is equal in size to a small turkey and weighs from eight to twelve pounds The hen bird is smaller, with markings of red and black and an orange red tinge on the breast She nests on the ground and the eggs number 6 to 12 Once extinct in Great Britain it has been re introduced to the Scottish Highlands

Capernaum Ancient city of Palestine It was situated W of the Sea of Galilee Sometimes distinguished by the name of 'His own city,' it was the scene of many events in the life of Christ There was a Roman garrison here and it was also a town where taxes were levied

Capet A royal family of France The first was Hugh Capet, who began to reign in 987 The Valois kings and the Bourbon kings were both descended from Hugh, as were the Dukes of Burgundy and Anjou and other noble families Louis XVI was called at his trial Louis Capet

Capetown City and seaport of S Africa, the capital of Cape Province It stands near the Cape of Good Hope, between Table Mountain and the sea There is a good harbour suitable for the largest liners and equipped for a large export and import trade The buildings include those of the Union legislature, city hall, new Anglican cathedral and the old town bazaar The castle dates from the 17th century The university is at Groote Schuur in Rondebosch, one of the suburbs In 1913 the city was enlarged and it now covers 60 sq m.

Capetown is the terminus of the main railway lines that go into the heart of Africa Founded by the Dutch in 1652, it is the oldest European settlement in Africa Pop 213,000, of whom 149,236 (1931) are Europeans

Cape Verde Cape of Africa also a group of islands in the Atlantic Ocean The Cape is the most westerly point of Africa and the islands are 350 m from it The largest island is Sao Thiago others are San Antao, Santa Luzia, Sao Vincente Fogo and Boa Vista They cover 1511 sq m and have 153,700 inhabitants Praia, on Sao Thiago, is the capital The islands are mountainous, the highest point being nearly 10,000 ft high They were discovered and named by the Portuguese about 1450 and have since belonged to Portugal

Capillarity Cohesive force which acts at an insensible distance, producing a tension upon a film of water in a tube of small bore, in fissures, or between two applied plates Capillarity exerts an upward pull causing a distinct rise of the liquid in the tube Examples of this phenomenon are seen in the rise of oil in a wick or candle and in the rise of water in a sponge

Capital In economics accumulated wealth, especially that used for

industrial purposes. It is the result of saving or abstinence from spending, and is necessary to material progress.

Capital is sometimes divided into fixed, such as a factory, and floating, such as a balance at the bank, or into productive, such as a loom, and unproductive, such as a picture. It is distinguished from labour, the other main element in production, and its reward takes the form of profits, whereas labour receives wages.

The modern system of industry is called the capitalist system, because large supplies of capital are necessary to its existence. The objection of Socialists is not to capital as such, but to the concentration of large blocks of capital in a few hands.

CAPITAL DUTY is the term used for the duty payable when a corporation or public company raises money. The rate is one per cent. on share capital and $\frac{1}{2}$ per cent. on money raised as loan.

CAPITAL LEVY A tax on the capital of living persons. In Great Britain, after the Great War, a special tax on capital accumulated during the war was suggested and a committee reported that it was feasible, but the Government declined to carry it out. In 1921 a levy on capital was enforced in Italy.

Capital In architecture the uppermost part of a column between the shaft and the superstructure. In the simplest forms, as in some primitive Egyptian columns, the capital consisted of a thin square block on the top of the shaft, but more ornate and elaborate capitals are seen in Greek and Roman columns.

Capital Punishment Infliction of death as a punishment for crime. In most lands death was long the recognised penalty for murder and much less serious crimes. In Great Britain it could be inflicted for stealing. In the 19th century laws were passed by which the death penalty was reserved for murder, treason and piracy. In other European countries there has been also a tendency to limit it to serious offences and some, the Netherlands for instance, have abolished it.

Capitol Name meaning head, and derived from the Capitoline Hill at Rome. Thereon stood Rome's chief temple, dedicated to Jupiter, and regarded as the most important part of the city. The site is occupied by the Campidoglio, a building designed by Michael Angelo and including the Capitoline and other museums.

In the U.S.A. the word capitol is used for the buildings where the legislatures meet, and in the chief cities of the various states as at Washington.

Cap Martin Pleasure resort of France. It is on the Riviera and is best reached from Mentone. The name is that of a cape, which is nearly 250 ft high. It is a popular winter resort.

Caporetto Village of Italy. It is on the Isonzo and gives its name to a battle fought here in Oct and Nov., 1917, during the Great War. On Oct. 23, the Austrians, reinforced by some Germans, attacked the Italians along a wide front, and drove them back on the Tagliamento and then on the Piave. Gorizia and a large part of northern Italy were occupied by the Austrians and the Italians lost about 200,000 men.

Cappadocia In ancient geography, a district of Asia Minor. It had different boundaries at different times

and was an independent kingdom before the opening of the Christian era. During the reign of Tiberius (A.D. 17) it became a Roman province. Its chief city then was Mazaca, called by the Romans Caesarea.

Capri Island of Italy. Situated in the Bay of Naples, 21 m. from that city and 5 $\frac{1}{2}$ sq. m. in area, it is noted for its mild climate and beautiful scenery. There are some famous grottoes or caverns, especially the Blue Grotto. The industries are fishing and vine growing. The Roman emperors, Augustus and Tiberius, resided here, and there are remains of their villas. Pop. 4000.

Capricorn Tropic of Southern Limit of the Torrid Zone, latitude about 23 $\frac{1}{2}$ ° S. It is named from the zodiacal constellation thought to resemble goat's horns.

Captain Term used to describe a leader in the fighting services. A captain holds a definite rank. In the navy a captain ranks with a rear-admiral and commands one of the large ships. He wears on his sleeve four stripes of gold braid with a loop.

In the army a captain ranks below a major and above a lieutenant. In the infantry he commands a company or is the second in command. In the artillery and cavalry he commands a battery or a squadron. His rank is shown by three stars on the shoulder. In the air force a group captain ranks with a captain in the navy and a colonel in the army.

Every merchant ship has a captain who is by law the master of that ship and has special responsibilities and duties towards the passengers and the crew. He has power to take any measures necessary to maintain discipline.

Capua Ancient city of Campania, Italy. Situated 17 m. north of Naples, it became the wealthiest city in S. Italy. After the Battle of Cannae it revolted from Rome and joined Hannibal, but was retaken and severely punished. Sacked by Genseric, King of the Vandals, in 455, it was destroyed by the Saracens in 840. The modern village contains remains of a Roman amphitheatre.

Capuchin Mendicant order of Franciscan monks. Founded by Matteo di Bassi in Italy in 1528 they take their name from the *capuce* or *capuchin*, a pointed hood or cowl. They sought to restore the old severity of the institutes of S. Francis, which had been relaxed by Pope Innocent IV. They must live by begging, and must not use gold or silver to decorate their altars, their chalices being made of pewter. The order has houses in Great Britain and Ireland.

A type of monkey is called the *Capuchin* monkey. Several species are found in the hot parts of America and they will live in captivity in Britain. The males are usually bearded and both sexes vary much in colour.

Carabinier Originally a soldier armed with a carbine or short musket. Carabiniers were cavalry and first appeared in the British Army in the 17th century. The 6th Dragoon Guards, founded in 1692, were called the Carabiniers or Carabineers. After the World War this regiment was amalgamated with the 3rd, which now bears the title of Carabiniers.

Caracal (*Felis caracal*) Species of lynx found in many parts of Africa and S. Asia. It is a small, fierce, carnivorous animal, about 2 ft. long and averaging 10 in. high with a reddish-brown body, lighter on the lower parts, two white spots near each eye, and tapering black ears.

Caracalla Roman emperor Born at Lyons in 188, his name was Bassianus, but he called himself Marcus Aurelius Antoninus His nickname comes from the Gallic cloak, or caracalla, which he wore. In 211 Caracalla and his brother, Gaeta, were proclaimed joint emperors, but in 212 Caracalla murdered Gaeta and a great number of his friends and adherents, and in 217 he was himself murdered at Edessa In 212 he declared all freeborn inhabitants of the empire to be Roman citizens

Caracas Capital of Venezuela It is 7 m. from the coast, its port being La Guaira on the Caribbean Sea Between the two is a railway line The buildings include the capitol and law courts, also a cathedral and many churches, a university, an opera house and a pantheon Independence Park is the largest of the public parks and gardens It is the commercial centre of the republic. Pop 135,300

Caractacus King of the Silures, a British tribe After defeating the Romans for about nine years, he was defeated in a battle near the Wrekin about A.D. 50 He took refuge with Cartimundua, Queen of the Brigantes, but she handed him over to the Romans He was taken to Rome and Tacitus tells how nobly he bore himself in captivity The Emperor Claudius pardoned him and he disappeared from history

Caramel Brown colouring matter often known as *burnt sugar* It is produced from glucose or sugar by heating A small quantity can be made by heating sugar and stirring continuously until the requisite colour is obtained, when it can be diluted with hot water For commercial purposes glucose is used in the manufacture with a certain quantity of ammonium chloride and ammonium carbonate It is subjected to a slow boiling process and diluted with water to liquid form. It is largely used in colouring confectionery, food and spirits The name is also given to a popular form of sweetmeat.

Carat Name given to the standard of weight for precious stones and to the standard of fineness of gold The carat weight is equal to 3 17 grains Troy, or four diamond or carat grains As a standard of purity and fineness of gold, the pure metal is said to be 24 carat, but standard gold for coinage, wedding rings, and so on contains a small percentage of base metal and is termed 22 carat Other grades of purity are 18, 15, 12 and 9 carat

Caravaggio Michelangelo Amerighi Da Italian painter Born at Caravaggio, in Lombardy, in 1569, he worked in Venice and Rome, and at Naples, where he founded a school of painters who were greatly influenced by the natural as opposed to the ideal, way in which he treated his subjects Having killed a man in a quarrel, he was forced to leave Rome and was only pardoned just before his death in 1609 His "Christ and the Disciples at Emmaus" is in the National Gallery, London. "The Entombment" and "St Sebastian" are in Rome

Caravan Group of persons travelling together on a long journey The word is Persian and caravans originated in the east For thousands of years journeys across the deserts of Asia and Africa were made by caravan, as to some extent they are to day Many of the travellers were pilgrims, others were traders, and camels were a prominent

feature of the caravan The caravans took certain known routes and on these were places at which they could rest, called caravanserais They were unfurnished, but were able to give shelter to a large number of men and beasts

In England a caravan is a vehicle in which people live while moving from place to place The gypsies live in caravans, and caravan holidays are popular These caravans are mainly horse drawn, but motor caravans are increasing

Caravel Kind of ship A Spanish word, it was used in the days of sailing ships for one with broad bows and a high narrow poop It had three or four masts and lateen sails on the after masts The word was also employed for a small boat used by French fishermen

Caraway (*Carum carui*) Biennial herbaceous plant of the order *Umbelliferae* It is native in north and central Europe and Asia, and is found wild in waste places in England The minute fruits are the caraway seeds used in cooking and confectionery, and in the manufacture of the liqueur called kummel Distilled caraway oil is used medicinally as a stomachic and a carminative

Carbide Compound formed by the union of carbon with certain metallo elements It is made either directly or indirectly by fusing metallic oxides with an excess of carbon at a high temperature The best known of these compounds, calcium carbide, used for making acetylene, is prepared by heating a mixture of lime and coke in an electric furnace Iron carbide, formed by the fusion of iron with carbon, is present in steel and contributes to the hardness of the metal

Carbohydrates Term used for a group of organic substances containing carbon with hydrogen and oxygen in the same proportions as in water These compounds form valuable heat and energy forming foodstuffs and are of vegetable origin, the most important being the sugars and starch There are three classes of carbohydrates the monosaccharoses, such as dextrose, the disaccharoses, such as cane sugar, lactose and maltose and the polysaccharoses, as starch and cellulose

Carbolic Acid Organic compound also known as phenol It is obtained from coal tar by distillation The distillate is freed from naphthalene and other hydrocarbons and the impure acid thus obtained is further distilled and purified to form a mass of colourless crystals which readily absorb water from the air, producing a pinkish solution Carbolic acid is a strong antiseptic and disinfectant, and is used in the manufacture of picric and salicylic acids, synthetic resins and plastic substances

Carbon Element having the atomic weight 12, and denoted by the symbol C It is abundant in nature as a carbonate, in air as carbon dioxide, and forms the basis of animal and vegetable life It occurs in crystalline form as the diamond, also as graphite, and in amorphous form as charcoal, which, however, is impure Carbon is insoluble in all solvents and infusible except at very high temperatures Our chief sources of power light and heat are from forms or compounds of carbon, such as coal, petroleum and alcohol Charcoal and other amorphous forms have great absorbent power, and are powerful reducing agents in metallurgical operations

Carbon dioxide, or carbonic acid gas (CO₂),

is found in the atmosphere and is produced by respiration. Where allowed to accumulate, as in coal pits, where it is called choko damp, or in caves or disused cellars, it will cause death, as human beings cannot inhale more than 15 or 20 per cent. of it and live. A smaller amount will cause discomfort, hence the necessity for fresh air to disperse it, especially from crowded rooms. In solid form carbon dioxide resembles snow in appearance and is used as a caustic in surgical work and for refrigeration in industry, e.g., in the ice-cream industry.

Carbon monoxide, or carbonic oxide (CO), is also poisonous. It is created by burning charcoal, and if this is done in a closed room death will take place. It is also given off by geysers and the engines of motor cars.

Carbon bisulphide (CS₂) is a liquid. It is used by chemists for recovering sulphide from ore and employed to kill noxious insects and germs and as a poison for vermin.

Carbonate Salt resulting from the action of carbonic acid upon various bases. Many carbonates occur in nature, the chief being carbonate of calcium represented by chalk, limestone and marble, and the carbonate of magnesium and calcium in the form of dolomite. Carbonates of sodium occur as natural deposits or in brines, and form one of the sources of soda. Potassium carbonate, or potash, is another compound of importance, and various carbonates of metals are used as ores.

Carboniferous System

Name given to the series of strata lying above the Devonian and below the Permian systems of rocks. It consists of three divisions at the base, the carboniferous limestone, a series of limestones and shales of deepwater origin, next the millstone grit consisting of grits, sandstones and shales, and then the overlying coal measures composed of sandstone, fireclays, ironstones and coal seams. These upper and middle beds are of shallow water origin.

Carbonising Term applied to the process by which organic matter is reduced to a state of carbon. In the manufacture of briquettes a carbonising process has been adopted for obtaining a smokeless fuel from finely powdered coal. High temperature carbonisation is carried out in the production of coke and important by-products. By low temperature carbonising, coalite and other free-burning and smokeless fuels are obtained as a substitute for ordinary coal, in addition to valuable by-products.

Carborundum Abrasive of extreme hardness. It is composed of silicon carbide and is prepared by heating at a high temperature in an electric furnace a mixture of sand, coke and sawdust, with salt as a flux. It is infusible, unaffected by acids, and in hardness comes between the diamond and corundum. The toughness and angularity of its grains render carborundum a valuable abrasive for many purposes, either in the form of powders in varying grades, discs, or hones. In addition it is used as a refractory lining for furnaces.

Carbuncle Local inflammation of the tissues of, and beneath the skin. More severe than boils (q.v.), carbuncles come on the back of the neck and the lower part of the body. The swelling is hard and usually very painful, while with elderly people it is

often fatal. A similar complaint in animals is called anthrax. Surgical treatment and hot antiseptic poultices are required. A wick of sterile gauze inserted into the cavity after incision will ensure free drainage. Carbuncles often occur in cases of diabetes.

The stone called the carbuncle is a garnet cut in a round or oval form. At one time it meant the ruby or some other red stone.

Carburetter Apparatus used in motor cars and gas engines for converting petrol or other hydrocarbons into a gaseous or finely divided state to form with the air an explosive mixture. There are many kinds in use, but practically all are of the spray type with a float feed. A fine jet of petrol is sprayed into the mixing chamber, the supply being governed by a needle valve attached to a float in the feed chamber. Air is admitted to the mixing chamber, and the mixture of air and petrol vapour passes to the engine cylinder by way of a pipe furnished with a throttle valve.

Carcassonne City of France. It stands on the Aude, 57 m from Toulouse and is a port on the Canal du Midi. The old town is on a hill or the right bank of the river, the new town is on the left. The city has two cathedrals, a citadel and a museum. St Vincent is an interesting church. There is a trade in wine and other produce and some manufactures. Carcassonne is famous for its fortifications, which give a perfect idea of a fortified town of the Middle Ages. Along the ramparts are 54 towers and two gates. Pop 30,000.

Carchemish Ancient capital of the Hittites. Its site is now identified with the ruins of Jerablus (a corruption of Hierapolis) on the Euphrates in Syria. Carchemish, the fortress of Camos, occupied an important strategic and commercial position. Treasures found in the ruins are in the British Museum.

Cardiff City and seaport of Wales, and county town of Glamorganshire. It stands on the Bristol Channel at the mouth of the rivers Taff, Ely and Rhymney, 145 m from London, on the G W Rly. The chief industry is shipping, especially the shipping of coal, for which there are extensive docks. There are also flour milling, steel, copper, zinc, lead, paper and chemical works.

In Cathays Park are the National Museum of Wales, the city hall and the law courts. Near are the University College of S Wales and the headquarters of the University of Wales. Llandaff with its cathedral is within the city boundaries. There is also a Roman Catholic cathedral and an archbishop.

Cardiff is a broadcasting station. It has a famous Association football club that won the Association Cup in 1927 and its Rugby football club is noted. Races are held here. Pop (1931) 223,648.

Cardigan Borough and market town of Cardiganshire, also the county town. It stands on the Telf, 116 m from Cardiff, on the G W Rly. Pop (1931) 3309.

Cardigan English title borne by the eldest son of the Marquess of Ailesbury. In 1661 it was given to a royalist, Sir Thomas Brudenell, and it remained an independent title until 1868. James Thomas, the 7th earl (1797-1868), led the Light Brigade at Balaclava. His widow, who survived until 1915, published some rather

startling *Recollections* in 1909. In 1868 the title passed to the Marquess of Ailesbury and has since been borne by his eldest son.

Cardigan Bay Large bay formed by the coast of Wales. It is 55 m from N to S and receives the Rivers Teifi, Aeron, Ystwyth, Dovey and Mawddach. Aberystwyth is the chief place.

Cardiganshire County of Wales. In the centre of the country, it has a coastline of 50 m on Cardigan Bay and covers 692 sq m. Cardigan is the county town, but Aberystwyth is the largest, others are Lampeter, Newquay and Aherayron. The rivers are the Dovey, Teifi, Ystwyth and Rheidol. It is almost wholly an agricultural area. In the north are mountains and some magnificent scenery, notable spots being Plynlimmon and the Devil's Bridge. Pop (1931) 55,164.

Cardinal Highest dignitary, save only the Pope, of the Roman Catholic Church. Cardinals are chosen by the Pope and together they form the college that elects a new Pope. They number about 60, 70 being the full complement of the college, and are taken from nearly all nationalities, but Italians are usually in the majority. A cardinal is addressed as "Your Eminence." A red hat and a scarlet biretta are the signs of his rank.

The Cardinal numbers are 1, 2, 3, etc., as opposed to the ordinal numbers, first, second, etc.

The Cardinal virtues are generally considered to be justice, prudence, temperance and fortitude. They were declared such by the Greek and other early philosophers and later were distinguished from the Christian virtues of faith, hope and charity.

Cardinal American song bird of the finch family. The male has a bright red plumage, black feet and pointed crest. The female is less bright in colour. The cardinal is a popular cage bird.

Carding Process by which cotton fibres are freed from impurities and broken parts and arranged in a more or less parallel manner, preparatory to the spinning of cotton yarn. This was done formerly by using teazel heads but these were superseded by the use of flat cards set with brush-like teeth. Various forms of carding machines are used, one type having a series of rollers covered with fine metal teeth.

Cardington Village of Bedfordshire. It is 3 m from Bedford, on the L.M.S. Ry. At the aircraft works here the R 101 was built. Pop 400.

Cardiograph Instrument used in medical practice for recording the character and movements of the heart. It usually consists of a cup-shaped appliance containing a spring, which when pressed over the heart conveys the movements of the organ to a diaphragm from which a lever passes to a revolving drum upon which a tracing is made.

Cardross Industrial district of Dumfrieshire, on the Clyde, 4 m. from Dumfries, on the L.N.E. Ry. There was once a castle here in which Robert Bruce died in 1329. The title of Lord Cardross is borne by the eldest son of the Earl of Buchan.

Cardwell Town and seaport of Queensland, Australia. In the north

of the state, it stands on Rockingham Bay, 90 m from Townsville and 800 m. from Brisbane. It has a good harbour and fishing is the main industry. Pop 3500.

Cardwell Viscount. English politician. Edward Cardwell was born at Liverpool, July 24, 1813, and had a distinguished career at Oxford. In 1842 he was elected an M.P. as a follower of Sir R. Peel. As Secretary for War 1868-74 he introduced the principle of the linked battalions and short service and abolished the purchase of commissions. In 1874 he was made a viscount and he died Feb. 13, 1886.

Carew Thomas. English poet. Born about 1598, he went to Oxford and then studied law in London. He travelled and was much at the court of Charles I. He died in 1645, leaving many short poems marked by beauty and tenderness.

Carey William. English missionary. Born in Northamptonshire, Aug. 17, 1761, he was apprenticed to a shoemaker, but later became a minister, helped to found the Baptist Missionary Society and in 1793 went to India. He obtained a wide knowledge of Indian languages, translated much of the Bible and compiled a number of grammars and dictionaries. For nearly 30 years Carey was Professor of Oriental languages at Fort William College, Calcutta. He died in India, June 9, 1834.

Carham Village of Northumberland. It is on the Tweed, 19 m from Berwick, on the L.N.E. Ry. Here in 1018 the Scots, under Malcolm II, defeated the English.

Caribbean Sea Part of the Atlantic Ocean. It is almost enclosed by the coasts of S. America, C. America, Cuba and the West Indian Islands. The Strait of Yucatan connects it with the Gulf of Mexico and the Panama Canal leads from it into the Pacific Ocean. Its extreme length is 1500 m. The name is derived from the Caribbee Islands which include Guadeloupe, St. Lucia and Dominica.

Caribou Variety of reindeer. It is found in Canada and Greenland and is sometimes known as the American reindeer. Of the two species, the woodland is found in Canada proper and the barren ground in the Arctic regions. Unlike the reindeer, the caribou has not been domesticated.

Caricature Drawing or description of a person which is deliberately exaggerated or distorted so as to produce a ridiculous effect.

Pictorial caricatures were very common in the 18th century and many were very coarse. James Gillray and Thomas Rowlandson were noted caricaturists of that time. In the 19th and 20th centuries caricatures became more refined and great cleverness was shown in drawing them. Max Beerhohn was the prince of English caricaturists. The caricatures of H. K. Brown (Phiz) and Leslie Ward (Spy) are famous. Many clever caricatures have appeared in *Punch*, notably from the pencils of John Leech, Harry Furness, Du Maurier and others. Caran d'Ache is perhaps the most famous of the French caricaturists and Louis Raemaekers of the Belgian school. Germany has produced some clever workers.

Caries Inflammatory disease of bone. It corresponds to necrosis of the softer tissues and results in the death of the part affected. Its commonest form is dental caries, in which case the decay of the tooth is

caused by acids arising from decomposed food-stuffs destroying the enamel and dentine, followed by bacterial action upon the pulp

Carillon Set of bells upon which tunes can be played. This is done by the agency of a keyboard mechanism set in motion by hand or electric power. A carillon differs from chimes as the bells are fixed instead of swinging and are struck on the outside by hammers

There are some famous carillons in the Netherlands, notably at Bruges. In England there is one at Loughborough, a war memorial. One made for Wollington, New Zealand, was for a time in Hyde Park, London, in 1930

Carisbrooke Town of the Isle of Wight. It is a mile from Newport, on the S Rly. It is famous for its castle, long the residence of the Governor. In 1647-48 Charles I and his children were in prison here

Alexander, a son of Princess Beatrice, took the title of Marquess of Carisbrooke when made a peer in 1917. He married Lady Irene Denison, a daughter of the Earl of Londesborough. Pop 4767

Carline Thistle (*Carlina vulgaris*) Biennial plant of the order *Compositae*. In Great Britain it is common on dry fields and sandy uplands. The flowers are purple with spiny bracts, and a centre of yellow bristles.

Carlingford Market town and watering place of Louth, Irish Free State. It stands on the south side of Carlingford Lough, 10 m. from Dundalk, on the G.N. Rly. The industries are fishing and catering for visitors. Carlingford Lough, an opening of the Irish Sea, is 10 m. long and 2 m. wide, between Down and Louth.

The title of Lord Carlingford was borne by Clchester Samuel Parkinson-Fortescue (1823-98), from 1874 to 1898. He was M.P. for Louth, 1847-74, and filled the offices of Chief Secretary for Ireland, 1865-66 and 1868-70, President of the Board of Trade, 1871-74, Lord Privy Seal, 1881-85, and Lord President, 1883-85. He died Jan. 30, 1898, when his title became extinct.

Carlisle City, borough and county town of Cumberland. It is 299 m. from London and stands at the union of the little Rivers Eden, Caldow and Petteril. It is on the L.N.E. and L.M.S. Rlys. In addition to railway works the industries include the making of biscuits and woollens. The chief buildings are the cathedral, which, although small, has some beautiful features, and the castle with its keep, one of the finest in England. During the World War, the experiment was tried of putting the licensed houses under the control of the state. This control still continues. Pop (1931) 57,107

Carlisle Earl of. English title borne by the family of Howard. In 1632 James Hay, a courtier, was made Earl of Carlisle by Charles I. The title became extinct in 1660

In 1661 Charles Howard was made Earl of Carlisle and the title is still held by his descendants. Frederick, the 5th earl (1748-1825), was Lord-Lieutenant of Ireland (1780-82). George, the 7th earl (1802-61), was Chief Secretary for Ireland, 1835-41, and Lord Lieutenant, 1855-58 and 1859-61. The earl's seats are Naworth Castle, Carlisle, and Castle Howard, Yorkshire, and his eldest son is called Viscount Morpeth

Carlists Name given to those who fought to make Don Carlos, and then his son and grandson, King of Spain. In 1833, Ferdinand VII died, leaving an only daughter, Isabella. By the Salic law his brother Carlos claimed the throne, but Isabella had a strong following and was crowned. The Carlists started a civil war which lasted until 1839, but Isabella retained the crown. In 1860, and again in 1868-70 and 1872-76 they were in arms, but met with no success. Since then the party has been quiet, although the claim of the descendants of Don Carlos is still in being

Carlos Name of several Spanish princes. Don Carlos (1545-68) was a son of Philip II, King of Spain. He was eccentric and perhaps insane, and his death on July 24, 1568, has been attributed to foul play. Schiller and others have written dramas on him.

A later Don Carlos (1783-1855) was a brother of Ferdinand VII, King of Spain, and from him the Carlists took their name. He claimed the Spanish throne and the claim was carried on by his son, Don Juan, then by his grandson, another Don Carlos, who died July 18, 1909, then by the latter's son, Don Jaime

Carlos I. King of Portugal. Born Sept. 28, 1863, he succeeded his father, Louis, as king in 1889. In 1907 he suspended the constitution and on Feb. 1, 1908, he was murdered in Lisbon. His elder son, Louis, was killed with him, his younger son, Manuel (q.v.) was deposed in 1910

Carlow County of the Irish Free State. In the S.E. of Ireland, it is mainly flat, but there are hills in the south. Its area is 346 sq. m., making it the second smallest county of Ireland. The Barrow and the Slaney are the principal rivers, the railway system is the G.S., and Carlow is the county town. Pop (1926) 34,176

Carlow Market town and urban district of the Irish Free State, also the county town of Co. Carlow. It is 56 m. from Dublin by the G.S. Rly., and stands on the Barrow. Here are a Roman Catholic cathedral and St. Patrick's College. Pop 7163

Carlton Urban district of Nottinghamshire. It is 3 m. from Nottingham, on the L.M.S. Rly. It has railway works and other industries. Pop (1931) 22,336

Carlton House Formerly a London residence. Built by Lord Carleton, it faced St. James's Park and, about 1730, was bought by Frederick, Prince of Wales, the father of George III. Later it was the residence of another Prince of Wales, afterwards George IV. It was pulled down in 1827. The name is perpetuated by the Carlton Club, Carlton Gardens and Carlton House Terrace on the site of the house and grounds.

The Carlton Club, the chief club of the Unionist party, is at 91 Pall Mall. It was founded in 1832. There is also a Junior Carlton Club at 30 Pall Mall

Carlisle Town of Lanarkshire. It is 20 m. from Glasgow, on the L.M.S. Rly. Around are coal and ironstone mines, and the town has engineering and other industries. Pop 10,200

Carlyle Thomas. Scottish historian. Born at Ecclefechan, Dumfriesshire, the son of a mason, Dec. 4, 1795, he was educated at Annan and at Edinburgh University. He became a schoolmaster, but found time to study German and in 1823 began to

write articles in *The London Magazine* and biographies for an encyclopaedia, he published also translations of some of Goethe's writings. In 1834 he settled in London. There he passed the rest of his days. He had already published *Sartor Resartus* and *The French Revolution*, but he had yet to make his name.

In 1837 Carlyle began a series of lectures in London on German literature, followed by other subjects, and these drew attention to his powers. In easier circumstances, he wrote *Heroes and Hero Worship*, 1841, *Past and Present*, 1843. *Latter Day Pamphlets*, 1850, and *The Life of John Sterling*, 1851. In 1845 he issued *Oliver Cromwell's Letters and Speeches*, and between 1858 and 1865 appeared the massive volumes of his *History of Frederick the Great*. He died Feb. 4, 1881.

In 1826 Carlyle married Jane Baillie Welsh (1801-66). The relations between the two have been the subject of much discussion, but the truth seems to be that, both being geniuses, neither was easy to live with.

Carlyle was a great and powerful thinker and rightly exercised an enormous influence. Too prejudiced to be the perfect historian, he yet had an extraordinary care for detail, combined with a magnificent power of expression, that made some of his descriptions, especially in *The French Revolution*, immortal.

Carlyle's residence, 24 Cheyne Row, Chelsea, London, is now a museum open to the public.

Carman William Bliss Canadian poet. Born at Fredericton, New Brunswick, April 15, 1861, he settled in the United States and was for some time editor of *The New York Independent*. His works include *Songs from Vagabondage*, *Songs of the Sea Children*, *By the Aurelian Well*, *The Rough Riders*, *A Painted Holiday*, *Earth Delights*, *Ballads and Lyrics*, *Daughters of Dawn*, *April Airs*, and *Sappho*, a translation of the fragments. He died June 8, 1929.

Carmarthen Borough and county town of Carmarthenshire. It stands on the Towy, 8 m. from the sea, and is served by the G.W. Rly. The buildings include St. David's church and the grammar school. The town has some manufactures and is an agricultural centre, fairs being held. Pop. (1931) 10,310.

Carmarthen Bay is an opening of the Bristol Channel. It extends from St. Govans Head to Worms Head.

Carmarthenshire County of Wales. In the south of the county between Pembrokeshire and Glamorganshire, it has a coastline on Carmarthen Bay and covers 919 sq. m. Carmarthen is the county town, others are Llanelli, Llandovery, Kidwelly, Llandilo and Burry Port. The county is mainly agricultural, but around Llanelli in the S.E. are coal mines. The Towy is the chief river. Pop. (1931) 179,063.

Carmel Mountain ridge in Palestine. Terminating in a steep promontory in the Mediterranean, its highest point is 1800 ft. and it extends for about 14 m. It is famous as the scene of Elijah's encounter with the prophets of Baal (1 Kings xviii.). Its native name is Jebel Mar Elyas, or the Mount of Elijah.

Carmelites Order of mendicant friars. They wear a small brown woollen habit (scapulary) over their shoulders, and are also called White Friars from the white cloak which formed part of their dress. The

order was founded by one, Berthold, a Calabrian, who, in the middle of the 12th century, migrated to Mount Carmel, where he built a cottage and a chapel. Carmelites practise total abstinence, strict fasting, silence and poverty.

The Carmelites had a priory in London and the name is preserved in Carmelite Street, Blackfriars. The order has many houses throughout the world for both men and women.

Carminative Name given to a drug which, by stimulation of the stomach and intestines, assists the expulsion of gases. Aromatic substances, camphor and volatile oils, and valerian are carminatives.

Carmine Crimson pigment. Obtained from the cochineal insect, it is used to tint fine fabrics, feathers, icing sugar, etc.

Carnac Town in the department of Morbihan, France. Near is the largest group of megalithic monuments known. It consists of menhirs or prehistoric upright stones, dolmens and tumuli. The stones are set in the ground at their smaller ends, some of them being as high as 16 ft. In the most considerable tumulus excavations have revealed the presence of a subterranean dolmen, with bones, axes and necklaces.

Carnarvon Town of Cape Province, S. Africa. It is 505 m. from Capetown, on the railway line to Calvinia. It is the centre of a sheep raising and corn growing district. Pop. 2150.

Carnarvon Earl of. English title borne since 1793 by the family of Herbert. Previously it had been held by the families of Dormer (1628-1709), and Bridges (1714-89). In 1793 Henry Herbert, a grandson of the 8th Earl of Pembroke, was made Earl of Carnarvon. His descendant, Henry Howard, the 4th earl, was Colonial Secretary, 1866-67 and 1874-78. In 1885-86 he was Lord Lieutenant of Ireland. His son George, the 5th earl (1866-1923), was connected with Howard Carter in opening the tomb of Tutankhamen. The earl's eldest son is called Viscount Porchester and his seat is Highclere Castle, Newbury.

Carnatic Former name of a country on the east coast of India. It is now included in the Government of Madras, having been conquered at the end of the 18th century. It has, perhaps, the hottest climate in India. There are many indications of the wealth and high stage of civilisation reached by the former inhabitants.

Carnation (*Dianthus caryophyllus*) Perennial herbaceous plant of which there are many varieties.

Plants can be obtained from seed sown in April and May, and seedlings planted out to bloom the following year. Shoots of established plants can be layered in July or cuttings struck in autumn after flowering is over. Perpetual or tree carnations for winter blooming in a green house can be propagated by cuttings in Feb. or in the autumn. They should be struck in silver sand and potted up when rooted.

Carnedd Dafydd Mountain of Caernarvonshire. This height and Carnedd Llewellyn, quite near it, are nearly as high as Snowdon. Dafydd being 3426 ft. and Llewellyn 3484 ft. high.

Carnegie Andrew Scottish philanthropist. Born at Dunfermline, Nov. 25, 1835, he was taken by his father to the

USA in 1848 They settled in Pennsylvania and at once the boy began to earn his living In a short time he became a telegraph clerk with the Pennsylvania Rly Co., then a sectional superintendent He was engaged in railway work during the Civil War Presently he opened iron works at Pittsburg, and was soon at the head of a flourishing concern A man of great determination and energy, in a few years he was the head of an enormous combine In 1901 he retired, and the Carnegie companies became the nucleus of the U.S. Steel Corporation He made his residence at Skibo Castle in Scotland, where he lived until his death, Aug 11, 1919 Carnegie wrote several books, including *Triumphant Democracy*, 1886, and *The Gospel of Wealth*, 1900

He gave away during his lifetime nearly the whole of a fortune estimated at £100,000,000 Peace and libraries were two of his favourite causes Many libraries in Britain and the U.S.A. were founded with his money He founded the Carnegie endowment for international peace, and built the Palace of Peace at the Hague, established hero funds in several countries and endowed his birthplace, Dunfermline, with substantial sums for civic improvements He established a fund for aiding university students in Scotland, and founded pension funds and Carnegie Institutes at Washington and Pittsburg In both Great Britain and the United States he established trusts which devote the interest on their capital to various philanthropic schemes The headquarters of the Carnegie United Kingdom Trust are at Dunfermline, and one of its benefactions is a large sum to provide playing fields

Carnelian Coloured variety of quartz Typically bright orange red, it varies from yellow to brown. Used as a semi-precious stone largely for signet rings It is found in India, Brazil and Siberia

Carnivora Order of mammals comprising those having special teeth adapted for a flesh diet Most are terrestrial in habit, but a few families are adapted to a marine life The terrestrial carnivora form three natural groups the dog family, the bear, racoon and marten family, and the cats, civets and hyenas The marine carnivores, or plinnipeds, comprise the seals, sea lions and walruses

Carnot Lazare Nicolas Marguerite French soldier Born May 13, 1753, he entered the engineering branch of the army In 1791 he was elected to the National Assembly, and was responsible for reorganising the army From 1795-97 he was one of the five directors, and after an exile in Germany he became Minister of War in 1799 In 1801 he retired, but appeared again in public life in 1814 when, as governor, he defended Antwerp for Napoleon He was Minister of the Interior in 1815, but on the return of the Bourbons he went again into exile He died at Magdeburg, Aug 2, 1823

Carnot Marie François Sadi French statesman Born at Limoges, Aug 11, 1837, he became a military engineer and served in the war of 1870-71 In 1876 he was elected to the Chamber of Deputies and in 1885-86 was Minister of Finance In 1887 he was elected President, and held that position until he was killed at Lyons by an Italian anarchist, June 24, 1894

Carnoustie Burgh and seaside resort of Angus, Scotland It is 10 m from Dundee on the L.N.E. Rly The town stands near the shore, the higher part

being built in terraces commanding magnificent sea views The sands are extensive and there are fine golf links The Bell Rock and Light-house lie off the coast Pop (1931) 4806

Carnwath Mining village of Lanarkshire It is 6 m from Lanark in a coal mining area Pop 6547

The title of Earl of Carnwath has been borne by the family of Dalzell since 1639 The 1st earl was in attendance on Charles I at Naseby

Carob (*Ceratonia siliqua*) Name for the algaroba or locust tree Found in Mediterranean countries, its long fleshy pods, sweet in flavour with hard bean-like seeds, are used as cattle food They are supposed to be the locusts on which S John the Baptist fed in the wilderness

Carolina North One of the southern states of the U.S.A. The capital is Raleigh and the chief city Wilmington Its boundaries are Virginia (N), the Atlantic Ocean (E and S.E.), South Carolina and Georgia (S), and Tennessee (W) It covers 52,426 sq m, and its population contains a high proportion of negroes The chief agricultural products are Indian corn, cotton, tobacco and rice It was one of the 13 original states and seceded from the Union in 1861, but was readmitted in 1868 Pop (1930) 3,170,276

Carolina South One of the southern states of the U.S.A. The capital is Columbia and the chief city Charleston Its boundaries are N Carolina (N and N.E.), the Atlantic Ocean (S.E.), and Georgia (W and S.W.) It produces rice and cotton The chief rivers are the Santee and the Savannah Most of the inhabitants are negroes One of the 13 original states, it was the first to secede and so bring about the Civil War Its area is 30,989 sq m Pop (1930) 1,738,765

Caroline Name of two English queens Caroline, daughter of the Margrave of Brandenburg-Ansbach, was married in 1705 to George, Electoral Prince of Hanover, later George II of Great Britain An able and educated woman, she exercised great influence, and her steady support of Sir R Walpole was very useful to him She died Nov 20, 1737, 22 years before her husband

Caroline, who married her cousin, George IV, when he was Prince of Wales in 1795, was a daughter of the Duke of Brunswick They had one child, Charlotte, and after her birth they separated In 1820 Caroline returned from Italy to England to assert her rights as queen A bill was introduced into Parliament to dissolve her marriage, but was withdrawn The queen tried to enter Westminster Abbey for the coronation, but was kept out by force She died Aug 7, 1821

Caroline Islands Archipelago in the Pacific Ocean There are about 549 small islands, chiefly coral, the most important being Yap and Ponapi. The principal export is copra The name is generally used to include the Pellow Islands In 1899 they were sold by Spain to Germany and were occupied by an Australian force on Sept 12, 1914 Since 1919 they have been administered by Japan under mandate from the League of Nations They cover 390 sq m Pop 56,000

Carolingians Name given to those rulers of the Franks who belonged to the family of Charles Martel, the ancestor of Charlemagne They suc-

ceeded the Merovingians in the 8th century, and ruled the West Franks (France) until 987, and the East Franks (Germany), till 911

Carp *Fish (carpio) of the family Cyprinidae* It is sometimes eaten. It can live to a great age and feeds on vegetable matter. Some specimens have been known to weigh 40 lb. In the 15th century it was brought to Europe from Asia, and in the 17th introduced into the U.S.A.

The British fish is the common carp, but the leather carp and the smooth carp have been produced by breeders.

Carpaccio *Vittore Italian painter* Born in Venice about 1465, he ranks as one of the great Venetian painters. In the Academy of that city are "The Presentation in the Temple," a series illustrating the life of S. Ursula. His "Virgin and Child" is in the National Gallery, London. He died in 1520.

Carpathians *Mountain range of Europe* It stretches in a great semicircle from Rumania to Czechoslovakia, nearly touching the Danube at both ends, parts of the range being in Hungary and Poland. The length is about 900 m., and the extreme breadth 200. It includes the Transylvanian Alps in the south and the Tatra Mts in the centre. The Little Carpathians connect with the Alps and a further group is the Beskid Mts. The highest point is Gerladorfer in the Tatra (8740 ft.). There are many passes, several carrying railway lines. The mountains have great mineral wealth and some magnificent scenery.

In 1914-16 there was much fighting in the passes. First the Russians came through them to invade Hungary, and later the Austrians and Germans advanced into Poland.

Carpeaux *Jean Baptiste French sculptor* Born, May 11, 1827, he studied in Valenciennes and Paris, won the Prix de Rome with "Hector and Astyanax," and a further honour with "Ugolino and His Children." He died Oct. 12, 1876.

Carpentaria *Gulf of Opening off the N coast of Australia* It lies between Capes York and Arnhem and is about 350 m. across. The Mitchell, Flinder and other rivers flow into it, and there are many islands. It was named after Pieter Carpentier, who was governor of the Dutch E. Indies when Tasman discovered the gulf.

Carpenter *Alfred Francis Blakeney British sailor* Born, Sept. 17, 1851, he entered the navy in 1866 and saw active service in Cuba and China. He won a medal for saving life at sea, and recognition for inventions in navigation. He led the *Vin d'Inde* in the attack on Zeebrugge and was awarded the V.O. From 1921-23 he commanded the *Carysfort* and from 1924-26 was captain of the dockyard at Chatham.

Carpentier *Georges French boxer* Born at Lens Jan. 12, 1894. In 1913 he defeated the English heavyweight champion Billy Wells, at Lens and then at the National Sporting Club London in one round. He served in the air service in the Great War and in 1919 won the heavyweight championship of Europe by beating Joe Beckett also in one round. He met Jack Dempsey at Jersey City in 1921, and was easily beaten.

Carpet *Floor covering made of woven or felted woollen, worsted or*

mixed fabrics. The use of carpets began in eastern countries. France was the first European country to manufacture them, and the craft was brought to England early in the 18th century. These early carpets were made by hand, but in the 19th century a power loom for weaving them was invented. To day, all except the most expensive carpets are woven on machines. The best are made in Turkey, Persia, India.

Most of the carpets seen in the houses of the western world to day are the inventions of French workers, and may be divided into two classes, one with a pile and the other without. Pile carpets are known as Wilton, Brussels and Axminster, according to the style and there are varieties of each. Carpets without a pile are called Kidderminster carpets and are usually reversible. All these are made in Kidderminster the chief English centre Yorkshire and Scotland. They are no longer made at Wilton where French workers were settled by the Earl of Pembroke about 1740 or at Axminster.

Carpet-Bagger *Political slang term* applied to a candidate for election in a locality in which he is a stranger especially if he is sent by a central party organisation. The term was first used in America, of speculative bankers, who started business with nothing more than they could carry in a carpet bag.

Carra *Lake of Co. Mayo, Irish Free State* It is 7 m. long and amidst some of the finest scenery in Connemara.

Carrageen *(Chondrus crispus) Purple* *fish cartilaginous seaweed*, known also as Irish moss. It is found on the coasts of Europe and N. America. Commercially it is washed, bleached and dried, and prepared with milk or water as a jelly for invalid use, it is also utilised in the manufacture of size. It derives its name from Carrageen, on the S coast of Ireland, where it is abundant.

Carrantuohill *Highest mountain of Ireland* One of the range of Macgillivuddy's Reeks, it is in Co. Kerry about 10 m. from Killarney, and is 3414 ft. in height.

Carrara *Town of Italy* It stands near the W coast, 3 m. from Avenza, its port. It is famous for its marble, perhaps the finest in the world and much used by sculptors. This is mainly white, but black and yellow are also found in the quarries here.

Carriage *Horse drawn travelling vehicle* The older carriages were called coaches, carriages coming into use in the 18th century. There are many kinds of carriage, landau, brongham, victoria, wagonette, phaeton and others, some having four wheels and others two. For these the carriage horse was bred. Owing to the advent of the motor car, carriages have nearly disappeared. The owner must pay a licence of £2 2s a year for a four-wheeled vehicle if drawn by two horses and £1 1s if drawn by one horse. For a two-wheeled vehicle the licence costs 15s a year.

Carrick *Division of Ayrshire* In the south of the county, the river Doon divides it from the north. The title Earl of Carrick was borne by Robert Bruce. It is now one of the titles of the Prince of Wales. There is also an Irish earldom of Carrick, held since 1748 by the family of Butler.

Carrickfergus *Market town sea port and urban dis*

trict of Antrim, N Ireland It stands on Belfast Lough, 9 m from Belfast, on the N Counties of Ireland, LMS Rly There are two harbours, and linen is made Pop 4610

Carrick-on-Suir Market town and urban district of Tipperary, Irish Free State It stands on the Suir, 14 m from Clonmel on the GS Rly Across the river is Carrickbeg Pop 5500

Carrier In medicine, a term applied to an organism which carries the germs of a disease One species of mosquito is the carrier of malaria, another species is responsible for yellow fever the tsetse fly carries the germ of sleeping sickness and the rat flea the bubonic plague Persons who, without suffering from it, carry the germs of an infectious disease, which can be caught from them, are also called carriers

Carroll Lewis Pen name of Charles Lutwidge Dodgson, English writer and mathematician Born at Daresbury, Cheshire, Jan 27, 1832, he was educated at Rugby and Christ Church, Oxford, where he was mathematical lecturer from 1854 to 1881 He was ordained deacon in the Church of England in 1885, but did not take priest's orders. Of a reserved and retiring disposition, he delighted in the society of children, and *Alice in Wonderland* was written for Alice Liddell and her two sisters, the little daughters of H G Liddell, dean of Christ Church It was published in 1865, and *Alice Through the Looking Glass* in 1871 Both were illustrated by Sir J Tenniel, and have been translated into many languages and dramatised Other books for children are *Sylvie and Bruno*, *Sylvie and Bruno Concluded* and *The Hunting of the Snark* He also published various mathematical works, and *Principles of Parliamentary Representation* He died unmarried, Jan 11, 1898, at Guildford In 1932 the centenary of his birth was celebrated

Carron Village and river of Stirlingshire The village is near Falkirk and is noted for its ironworks, opened in 1760 Carron gave its name to a naval gun, the carronade, invented by Robert Melville and made here Lighter than the ordinary gun then in use the carronade could fire a heavier ball, but its range was short

Carron Oil is a mixture of linseed oil and lime water, and is used for burns It is named from Carron, where it was first used

Carrot Root crop Extensively cultivated for its strongly flavoured root, it is used both for human food and for feeding cattle The plant was brought to Britain from Holland in the 16th century and its cultivation quickly spread The roasted and ground root is used as a substitute for coffee in some countries, and carrots are also used for distilling a strong spirit Wireworm and carrot fly are enemies of the plant.

Carshalton Urban district of Surrey It is 11 m from London on the S Rly There are an old church, some old fine houses and a public park There are some industries, but it is chiefly a residential district for Londoners The Wandse flows through it Pop (1931) 28,760

Carso Limestone district. The formations are found in France and the Balkans, and subterranean rivers are a feature The best-known carso is in Yugoslavia and

gives its name to the battles fought between the Austrians and the Italians in the Great War It lies to the N and E of the Adriatic Sea and before 1919 was part of Austria

The fighting in the Carso began in Sept. 1916 when the Italians attacked the Austrians. At the end of the year the advantage was with the Italians In May, 1917, they attacked again and took ground and prisoners, but before the end of the year lost part of their gains

Carson Baron Irish politician Born Feb 9, 1854, Edward Henry Carson went to school at Portlirlington and then to Trinity College, Dublin He became a barrister, first in Dublin and then in London, and soon made a reputation as an advocate. In 1892 he was elected MP for his university, which he represented until 1918, when he was elected for a division of Belfast In 1892 he was Solicitor-General for Ireland, from 1900-05 he was Solicitor-General for England

The leader of the Ulster Unionists in their resistance to Home Rule, Carson was closely identified with the events of 1914 In 1915 he joined the Coalition ministry as Attorney-General and in 1917-18 he was First Lord of the Admiralty and then a member of the War Cabinet In 1921 he was made a life peer and a Lord of Appeal, a post he resigned in 1929. A biography appeared in 1932 He died Oct. 23 1935

Carstairs Village and railway junction in Lanarkshire, on the Clyde, where the main LMS line forks, one branch going to Edinburgh and the other to Glasgow. Pop 1830

Cartagena City and seaport of Spain Situated on the Mediterranean, 325 m from Madrid, it has a cathedral and the ruins of a citadel There is a fine harbour and from it is exported the produce of the neighbouring mines Cartagena is also a station of the Spanish navy It was founded by the Carthaginians, hence its name Pop. 97,000

Another Cartagena is a city and seaport of Colombia, on the Caribbean Sea It, too, has a fine harbour and from it much of the produce of the republic is exported It has a cathedral and a university Pop 96,981

Cartel Meaning little card, this word was used for a challenge It then came to be used for an agreement made during a war between the combatants about such matters as the treatment of the wounded and of prisoners of war A cartel ship was a ship that sailed under such an agreement.

To day a cartel, or karteil, is a list of prices agreed to by the firms in a big industrial combine It also refers to the combine or trust itself

Carteret Baron English politician Born April 22, 1690, John Carteret was educated at Westminster and Christ Church, Oxford, and took his seat in the House of Lords among the Whigs in 1711 In 1719 he went as ambassador to Sweden, and on his return was made a secretary of state He was Lord Lieutenant of Ireland, 1724-30 In 1742, on Walpole's fall, he became again a secretary of state, but resigned in 1744 In 1751 he was appointed Lord President of the Council He died Jan 22, 1763

In 1744, on his mother's death, he became Earl Granville, a title which became extinct when his son, Robert, died in 1776 but was revived in 1833 in favour of George Le Gower a younger son of the 1st Mar-
Stafford.

Carthage Ancient city of Africa, the capital of a powerful state. It stood on the coast, near where Tunis now stands, and according to legend was founded by Phoenicians from Tyre, led by their queen, Dido. The Phoenician settlement soon became a prosperous city, with two excellent harbours and some fine buildings and a population of nearly 1,000,000. About 300 B.C. Carthage was the centre of a great empire, including the Mediterranean coast of Africa, and the coast lands of Spain, Corsica and Sardinia. Its commerce extended all over the known world.

Carthage was Rome's great rival. The three Punic wars between them began over the possession of Sicily. The first lasted from 264 B.C. to 241 B.C., the second from 218 B.C. to 201 B.C. and the third from 149 B.C. to 146 B.C. Carthage was defeated in the first war, and also in the second, but only after the genius of Hannibal had tried Rome's resources to the uttermost. In the third war, after a siege lasting three years, the city was taken by Scipio and razed to the ground in 146 B.C.

In the reign of Augustus, the refounded Carthage became the third largest city in the Roman Empire. In 439 it was taken by the Vandals, but, though retaken by Belisarius, its glory was over, and about 700 it was destroyed by the Saracens.

Carthusians Religious order. It was founded by S. Bruno in 1086 at Chartreux in Dauphiné, France, hence its name. The members may not eat together nor speak to one another except on certain days. The habit is white.

The order was introduced in England by Henry II. and still has houses in the country, one at Parkminster in Sussex. They are called charterhouses, and the most notable was that in London, the buildings of which still stand. Members of the school which had its origin in the London Charterhouse are called Carthusians. At the Grand Chartreuse, near Grenoble, the monks made the liqueur called chartreuse, now made at Tarragona in Spain.

Cartier Jacques. French explorer. He was born at St. Malo, Dec. 31, 1494, and became a sailor. With two others he set out to explore the territory of N. America, discovered the Magdalen Islands, and, on a second voyage, completed his exploration of the river and Gulf of St. Lawrence, and sailed up to Montreal. A third voyage, to colonise Canada met with little success. Cartier died at St. Malo, Sept. 1, 1557.

Cartilage Elastic tissue forming part of the skeletal structure of an animal. Cartilage cells are rounded and scattered through the matrix and the whole structure is covered by a fibrous membrane. Cartilage forms elastic pads between the various bones.

Cartoon Design or drawing of full size, made preparatory to the finished picture. Cartoons are usually drawn on strong paper and give the artist a chance to see how his ideas look. Sometimes the designs are transferred to tapestries, which are also called cartoons. Examples are the wonderful cartoons by Raphael, now in the Victoria and Albert Museum, South Kensington.

A picture, usually topical and political, in a daily or weekly paper is called a cartoon. Those in *Punch* are the most finished of their kind, but those in the London daily papers by Sir F. C. Gould, and later by Tom Webster,

Low and Struhs, are also celebrated. Cartoons of this kind are humorous or satirical.

Cartouche Old word for cartridge, used to describe a wooden receptacle in which musket balls were carried. In some fireworks it is the case which holds the inflammable material.

In heraldry a cartouche is a shield sometimes used by ecclesiastics of noble birth to show their bearings. In architecture it is an oval or oblong tablet or moulding, usually containing an emblem or an inscription.

Cartridge Case containing a charge of powder and shot or bullet for use in firearms. The case may be entirely of metal or of cardboard with a metal cap, and the charge may consist of gunpowder or some smokeless powder such as cordite. In a shot cartridge the pellets are of lead, but in rifle cartridges the bullet is either of lead or has a copper nickel casing over a core of lead. The cartridge is exploded by means of a percussion cap containing a fulminate compound.

Cartwright Edmund. English inventor. Born, April 24, 1743, in a Nottinghamshire village, he went to Oxford and became a clergyman. He was given a living at Goadby Marwood in Leicestershire in 1779 and while there invented a loom, since developed into the modern power loom. He also invented a machine for combing wool. Leaving his living, Cartwright started a factory at Doncaster and then one in Manchester, but neither prospered. In 1809 Parliament voted £10,000 for him and he bought a farm near Sevenoaks. He died Oct. 30, 1823. Cartwright's elder brother, John Cartwright (1740-1824), was a soldier and a political reformer, whose ideas were much in advance of his time.

Caruso Enrico. Italian singer. Born in Naples, Feb. 25, 1873, he studied singing and first made his name known in 1896. In 1898 he took the part of *Ridolfo* in *La Bohème* and for the next 23 years was the world's leading tenor. He died Aug. 2, 1921.

Carver John. English puritan and leader of the Pilgrim Fathers. In 1608 he withdrew to the Netherlands because of his support of Brownism and became Deacon of the English Congregational Church at Leyden. In 1620 he sailed in the *Mayflower*, and was the first governor of Plymouth Colony. In the following year he made a treaty with the Indians. He died of sunstroke in 1621.

Carving Process of cutting and shaping objects in wood and ivory. Wood carving is of ancient date and at various periods has exercised great influence on sculpture. The art reached a high level in Europe from the 12th to 16th centuries, especially in decorating interiors of churches. In England, fine examples are seen in the work of Grinling Gibbons (1648-1720) and in the decoration of St. Paul's Cathedral, London.

Caryatides Name given in architecture to the figures of females used as columns to hold up entablatures. It is supposed that the name commemorates the overthrow of the inhabitants of Caryae by the Greeks who carried off the women as captives. Notable caryatides were on the Erechtheum at Athens.

Casabianca Louis de. French naval officer. Born at Bastia, Corsica, he entered the French Navy, and helped to convey French troops to the British American colonies then in revolt. He was

appointed to the ship *Orient*, and at the Battle of the Nile off Aboukir, when defeated, safeguarded the crew and perished with the ship, with his ten-year-old son, Giacomo Jocante, Aug 1, 1798. Their heroism is commemorated in Mrs Hemans' poem

Casablanca Seaport of Morocco. On the Atlantic coast, 60 m S of Rabat, it is the outlet for the produce of Central Morocco, including grain, hides, wool and mineral phosphates. Air services connect it with Toulouse daily, with Oran bi weekly and with Dakar weekly. There is a British consul. Pop (1931) 161,113

Casals Pablo Spanish musician. Born in 1878, he studied music in the Conservatoire at Barcelona and soon made his name as a performer on the violoncello. He played in London and other European capitals, and in 1912 won the medal of the Royal Philharmonic Society.

Casanova Giovanni Jacopo Italian adventurer. Born at Venice in 1725, he was educated in London. When quite young he embarked on a career of intrigue and hazard. This led, after various European wanderings, to imprisonment at Venice, whence he escaped and was appointed to manage state lotteries in Paris. More European wanderings, embracing England, Poland and Spain, followed. He returned to Venice as a state spy, and then retired to Bohemia. He died, June 4, 1798. Casanova's *Memoirs*, in twelve volumes, are a genial account of Europe as he saw it.

Casaubon Isaac French scholar. Born in Geneva, Feb 18, 1559, he studied in that city and in 1581 he was made professor of Greek at Geneva. From 1586 to 1600 he was professor at Montpellier. In 1600 he went to Paris, where Henry IV gave him a position and a pension and in 1604 made him a royal librarian. In 1610 he visited England, and here, received with great honour by James I, he passed the rest of his days. He died July 1, 1614, and was buried in Westminster Abbey. He edited several of the classical authors.

Casca Publius Servilius Roman politician. A stolid, unimaginative man, he was tribune of the Plebs in 44 B.C., the year in which Julius Caesar was assassinated, and struck the first blow. He afterwards sided with the triumvirate in Macedonia, and shared the fate of his fellow conspirator, Cassius, being killed at Philippi, 42 B.C.

Cascade In electricity, a method of charging Leyden jars by connecting the outer coating of one to the inner coating of the next and so through the series.

In gas liquefaction it is a method of causing a compressed and cooled refrigerant, such as carbonic acid, to flow continuously round the gas to be liquefied.

Cascara Bark of the Californian buckthorn *Rhamnus purshiana*. From it are prepared solid and liquid extracts of cascara sagrada (sacred bark), one of the most useful tonic aperients. The bitter taste is lessened by aromatic aids, or by admixture with glycerine.

Casain Main constituent of cheese. An albumin, it is precipitated from skimmed or separated milk by the enzyme in rennet, a mineral acid, or by self curdling with lactic acid. It yields a white, tasteless, amorphous, finely divided lime salt. Formalin converts it into a hard, insoluble, non-in-

flammable substance, used as a coating on cotton fabrics, paper and photographic films.

Casemate Protected vault or chamber. It may be a bombproof shelter for troops, hospital cases and stores or when facing lower ground, such as ditches, be loopholed for firing heavy ordnance. In armoured warships it is the bulkhead protecting the main guns, and is defended by embrasures or loopholes for firing and withdrawing them.

Casement Roger David Irish conspirator. Born in Dublin, Sept 1, 1864, he entered the consular service and served in equatorial Africa and Brazil. He was knighted in 1911. Becoming hostile to England, he was in Berlin in Nov., 1914, urging Irish war prisoners to form a brigade for service against the Allies. In April, 1916, he landed at Tralee from a German ship and was arrested. Tried for treason, he was found guilty and hanged Aug 3, 1916.

Cashel Market town and urban district of Tipperary, Irish Free State. It is 96 miles from Dublin, on the G.S. Rlys., and is the see of a Roman Catholic archbishop and a Protestant bishop. It is famous for its rock, 300 feet high, on which are the ruins of a cathedral and a round tower, dating from the time when it was an important place in the kingdom of Munster. Pop 2950.

Cashew Nut Hard shelled fruit of a tropical gum tree, *anacardium occidentale*. Its kernel is roasted for food, or used in confectionery. It grows in the West Indies.

Cashmere Fine, soft woollen fabric. It differs from merino in being twilled on one side only. It assumes the name of a material originally woven in the Kashmir valley, from the undercoat of wool growing amid the long hair of the Tibetan goat. Flocks of this domesticated breed are kept both there and in Bokhara. Shawls made from their wool once fetched high prices.

Cash on Delivery System by which goods are supplied by sellers through an agent to customers at a distance, payment being made on delivery. The Post Office, frequently operating in conjunction with the railway companies, is the agent usually employed. The Swiss Post Office started the system in 1849, and in 1885 regulations for the service were laid down by the Postal Congress at Lisbon.

After the Great War, a C.O.D. system was introduced into Great Britain. The Post Office will collect any sum up to £10 when delivering a parcel. A small fee is charged. In 1929 the number of parcels dealt with under this system was 2,290,000. On July 1, 1930, the system was extended to include perishable goods. There is a C.O.D. service between Great Britain and other parts of the Empire and with certain foreign countries.

Cash Register Machine invented by James Ritty in 1879 for retail traders. A common modern type has keys representing particular sums, which when depressed, record the amount of the purchase, register the total amount passed through the machine, and by raising an indicator show the customer how much he has to pay. The drawers containing the cash cannot be opened without a record being made in the machine.

Casino Public building in a pleasure resort. It comes from the

Italian *casa*, a house, and was given to buildings at French and Belgian watering places where gambling was carried on. Other attractions, such as dancing, were soon added, and the casino became the centre of social life. Noted casinos are at Monte Carlo, Nice, Ostend, Dlopps and Boulogne. The German equivalent is *Kursaal*.

Casket Letters Collection of documents attributed to Mary Queen of Scots, which, if genuine, prove her complicity in the murder of her husband, Darnley. The Earl of Morton professed to have found them in June, 1567, three months after their alleged date, in a silver casket. There were eight letters and some sonnets in French. They disappeared after the execution of the Earl of Gowrie in 1584. On examination Mary denied that the letters were genuine.

Caspian Sea Inland sea on the boundary between Europe and Asia. The S coast is Persian, the remainder Russian. The world's largest inland sea, it is 760 m long, and from 100 to 270 m broad, and covers 169,000 sq m. It is 86 ft below sea level, shallow in the N, where it freezes in winter, but deepening southward to 3000 ft. It receives its waters chiefly from a vast area drained by the Volga. Its fauna intermingles marine and freshwater types, such as sturgeon, salmon, herring and common seal. Astrakhan and Baku are the chief ports.

Casquets Group of rocks in the English Channel, 8 m W of Alderney. Their constant menace to navigation is attested by the foundering here of the *White Ship* in 1120, the *Fictory* in 1744, and the *Stella* in 1899. A lighthouse was erected on the largest rock in 1877.

Cassandra In Greek mythology, daughter of Priam, King of Troy, and Hecuba. She received the prophetic gift from Apollo who, enraged by her rejection of him, ordained her predictions to be discredited. After Troy fell she was killed by Clytemnestra, Agamemnon's wife.

Cassava Name of several species of tropical enophorblaceous plants. Bitter cassava yields from its fleshy root a starchy food, Brazilian arrowroot, which when dried on hot plates becomes tapioca.

Cassel Gustav Swedish economist. Born at Stockholm Oct. 20, 1866, he was there educated. In 1904 he was made Professor of Economics at Stockholm. In pamphlets and reports he showed a remarkable grasp of the currency problems created by the Great War and more than one European government asked his advice. As an expert he attended the International Conference at Geneva in 1922.

Cassia Genus of leguminous plants of temperate and tropical regions outside Europe. *Cassia fistula* pods provide a mild laxative. Senna leaves come from the acute leaved Alexandrian and the narrow-leaved Indian cassia shrub.

Cinnamomum cassia, a species of aromatic laurel of tropical Asia, furnishes *cassia lignea*, a spice preferred to cinnamon in S Europe.

Cassiopeia Constellation in the northern hemisphere. In it are a group of stars known as Cassiopeia's Chair.

Cassiterite Mineral. Tin oxide, SnO₂, is the commonest ore of tin. It occurs massive or crystalline and is

hard and heavy. Worked in Cornwall for ages, it occurs in many other countries.

Cassius Longinus Galus Roman general and politician. Gaining distinction in the Parthian War, 53-51 B.C., he held a fleet command in the Mediterranean in support of Pompey, on whose death in 48 B.C. he sided with Julius Caesar. He led the conspiracy against Caesar and was present at his assassination, 44 B.C. Proceeding to Syria, he joined forces with Brutus. Defeated by Antony at Philippi, he compelled his servant to slay him, 42 B.C.

Cassivelaunus British prince. As ruler of the Catuvellauni, a British tribe living along the Thames valley, he opposed the march of Julius Caesar during his second British campaign. He was defeated at a ford over the Thames and gave hostages to Caesar.

Cassowary Ostrich-like bird, *Cassuarius*. At least ten species inhabit N Australia, New Guinea and neighbouring islands. They are three-toed with rudimentary wings, horny crest and black plumage. The dark green eggs are incubated by the male bird. Cassowaries are forest dwellers and their running speed rivals that of the horse.

Caste Exclusive social group. The system prevails in India where the Hindu population is divided into a number of groups or castes. No member of one of these groups may marry outside it, while its rules may also regulate his occupation and even his diet. A caste is, therefore, a grouping of families bearing a common name, usually associated with a particular occupation, and living socially quite apart from other castes.

Castelnau Marie Joseph Edouard de Curlières de French soldier. Born Dec. 24, 1851, he entered the army in 1870, saw service in the Franco-Prussian War and rose in rank until he became a general and a member of the Supreme Council of War. In Aug., 1914, he was given command of the army that defended Nancy and in 1915 he became Chief of the Staff to Joffre. In 1917 he commanded the forces at Verdun and in 1918 an army in Lorraine. In 1919 he was elected a deputy.

Castiglione Baldassare Italian writer. Born near Mantua, in 1478, he became attached to the court of the Duke of Urbino, who sent him to England on a mission to Henry VII in 1506. He afterwards carried out delicate negotiations in Rome and Madrid, where he became Bishop of Avila. He died in 1529 at Toledo. His famous book, *The Courtier*, 1514, is a portrait of the ideal gentleman.

Castile District of Spain. It began as a county and was long ruled by counts. About 1030 one of these called himself a king and ruled over Leon as well as Castile. By wars against the Moors the kingdoms were gradually enlarged and strengthened and the name Castile was used for the two. In 1469 Isabella, already heiress of Castile, married Ferdinand, the heir to Aragon. Isabella succeeded in 1474 and Ferdinand in 1479, thus uniting the two kingdoms which developed into the Kingdom of Spain. Madrid and Burgos are the chief towns.

Casting Term used in metal working. It denotes the operation of pouring molten materials into moulds and

also the cooled and hardened result. In early times sand moulds fortified with clay were used for bronze and afterwards for iron. Nowadays iron moulds are successfully employed. Metals are cast into ingots, and this raw material is afterwards used either for hammering (forging) or casting (founding). The foundry products embrace all descriptions of metal work.

Castle Fortress erected for defence. The Romans had castles on their camps and there are the remains of them along the Roman Wall in Northumberland.

In feudal times strong buildings called castles sprang up in W. Europe. They were usually built on an eminence. Notable examples were those erected by barons on the hills above the Rhine whence they could watch the trading vessels and take toll of them. Towns sprang up where people built their huts around a castle for protection. Castle Gaillard, built by Richard I in France, was regarded as the strongest of mediæval fortresses.

In Britain many castles were built by the Normans, consisting typically of an outer and an inner fort. The outer fort was protected by walls round which was a moat, or ditch, and within the walls were the buildings for the inmates, both man and beast. The inner fort, called the keep, was much stronger and served as a refuge. So many of this type were built in the reigns of William I and Stephen that when Henry II came to the throne he ordered their destruction in hundreds. Many ruins remain. Some, like Alnwick and Arundel, have been rebuilt on the old plan. Others, such as Bodiam in Sussex and Tattershall in Lincolnshire have been restored. The ruins of Berkely, Durham and Rochester give a good idea of what the mediæval castle was like.

Castle Ashby Residence of the Marquess of Northampton. About 6 m. from Northampton, on the LMS Rly., it was built in the 16th century, but the present house was designed by Inigo Jones.

Castlebar County town, urban district and market town of Co. Mayo, Irish Free State. It is 150 m. from Dublin on the Gt. S. Rlys. It is a market for agricultural produce. The river Castlebar flows through the town. Pop. 4260.

Castlecary Village of Somerset. It is 116 m. from London, on the GW Rly. It stands amid picturesque scenery. Pop. 1646.

Another Castlecary is a village of Stirlingshire. This is 6 m. from Falkirk and is famous for its fort built by the Romans as a defence on the line of Antonine's Wall.

Castle Donington Town of Leicestershire. It is 11 m. from Nottingham, on the LMS Rly. There are remains of a castle and some industrial establishments. Donington Hall, once a seat of the Marquess of Hastings, is near, and during the Great War was used for the internment of German officers. Pop. 2736.

Castle Douglas Burgh and market town of Kirkcubrightshire. It is 19 m. from Dumfries on the LMS Rly. An agricultural centre, it is noted for its sheep and cattle market. Near is Thrieve Castle, the old seat of the Douglas family. Pop. (1931) 3008.

Castleford Market town and urban district of Yorkshire (W. R.). It stands on the Aire, 10 m. from Leeds, and is served by the LNE Rly. and the Aire and

Calder Navigation System. Bottles are manufactured and around are collieries. Pop. (1931) 21,781.

Castlemaine Town of Victoria. A railway junction and health resort. It is 78 m. from Melbourne by railway in a fruit-growing district. Pop. 7170.

Another Castlemaine is a village in Co. Kerry, Irish Free State.

Castlereagh Viscount. Title borne by the eldest son of the Marquess of Londonderry. Its most famous holder was Robert Stewart. Born June 18, 1769, he entered the Irish Parliament in 1790. From 1794 to 1798 he sat also in the parliament at Westminster. In 1796 he was given a confidential position in Ireland and was instrumental in suppressing the rebellion of 1798 and bringing about the union of 1800. He resigned office with Pitt in 1801, but in 1802 became President of the Board of Control. In 1805 he was made Secretary for War. The failure of the Walcheren expedition was followed by his famous duel with his colleague Canning (q.v.) and by the resignation of both ministers in 1809. In 1812 Castlereagh returned to office as Foreign Secretary under Lord Liverpool and he was responsible for the negotiations with France in 1814 and 1815, and perhaps the most influential member of the House of Commons. In 1821 he became a marquess, but in 1822 his mind gave way and he committed suicide on Aug. 12.

Castle Rising Village of Norfolk. It is 4 m. from King's Lynn, and 1½ m. from North Wootton, on the LNE Rly. It is noted for its castle, its old church and the almshouse called Trinity Hospital. It was a seaport until the sea receded.

Castleton Village of Derbyshire. It is 17 m. from Sheffield, on the LMS Rly. A tourist centre, it is regarded as the capital of the Peak District and stands high amid magnificent scenery. It is renowned for its caverns and the Blin John Mine, from which the fluorspar called Blin John is obtained. There are remains of the castle mentioned in Scott's *Peril of the Peak*. Pop. 650.

Castletown Town of the Isle of Man, capital of the island until 1862. It stands on Castletown Bay, 10 m. from Douglas, with which it is connected by railway. Here is Castle Rushen, once the residence of the lords of Man, and near it the old meeting place of the House of Keys. Castle Rushen was given by King George V to the island in 1928.

Castor One of two brothers in Greek mythology, the other being Pollux. They are supposed to have been the sons of Zeus and Leda. Their exploits include the expedition of the Argonauts, the hunting of the Calydonian boar and the assistance given to the Romans at the Battle of Lake Regillus when they appeared on their horses at the crisis of the fight. Castor was a tamer of horses and Pollux a boxer. The Dioscuri, as they were called, were worshipped by the Romans and many temples were built in their honour. Two stars in the constellation of Gemini are called Castor and Pollux.

Castor Abbreviation for castoreum, a reddish-brown substance from two elongated posterior glands of the beaver, bitter-tasting and of enduring odour, it contains a specific principle, castorin, which is used in perfumery.

Castor Oil Oil from seeds of the euphorbiaceous castor oil plant *Ricinus communis*. Native in Africa, it is grown commercially in India, California, Italy and elsewhere, with a world production of 300,000 tons. The seeds are bruised between rollers, poured into hempen bags and pressed. A mild purgative, it is also a valuable lubricant, notably for aircraft engines.

Casualties Term used for mishaps or accidents of any kind. The word is most usually applied to wartime losses in battle and by sickness.

Various attempts at a final estimate of the casualties in the Great War have been given from time to time. An authoritative statement was made in the House of Commons in May, 1921, as follows:

BRITISH EMPIRE.

	Dead	Wounded
Great Britain	743,702	1,693,263
Canada	56,625	140,732
Australia	69,830	152,171
New Zealand	19,136	40,729
India	61,368	70,850
Elsewhere	8,892	15,753
	946,023	2,121,906

ALLIED COUNTRIES.

No figures were given for Rumania.

Casualty Term used in Scots law. It refers to a payment made by a tenant to a landlord upon the happening of a contingency or uncertain event. Cases are rare, but there was one in 1929 when the Duchess of Norfolk, under an Act of 1914, demanded casualties from her tenants in Maxwelltown.

Casual Ward Poor law institution at which the casual poor are sheltered. Vagrants and tramps are searched on admittance and deprived of money or tobacco, which are restored on leaving. Cocoa and bread and a compulsory bath are provided. Before discharge some work must usually be done, such as wood chopping or stone breaking, but oakum picking, formerly a common task, has been abolished.

Casuistry Application of moral principles to specific acts. The tendency to stereotype applied morality, under biblical or ecclesiastical authority, instead of trusting to the individual conscience, is observable in Talmudic, Christian and Moslem literature. From the 17th century onwards the Penitential Books allotted public penances to particular sins, and the medieval church developed the practice at confession. The term has acquired a sinister meaning when used for the sophistical arguing away of ambiguous acts by hair splitting subtleties.

Cat Name usually denoting domesticated breeds derived from several small species of the feline genus of carnivorous mammals. The ancient Egyptian domesticated

breed penetrated to S Europe, crossing occasionally with European wild cats westward and Asiatic forms eastward. It reached Britain during the Roman occupation. According to breeders' classifications long haired cats include tabby, blotched, tortoiseshell—with sandy male—and slate blue Charteuse, together with blue or silver Persian, with its derivative chinchilla, smoke and Angora. Beside British short haired types are the half tailed Siamese, the tailless Manx, the Maltese, blue Russian and Abyssinian. Cat shows, inaugurated in 1871, are held annually in London and other cities of Great Britain.

Cat Tackle used for hoisting an anchor from the water's edge or the hawse-hole to the cat-head. It comprises an iron beam projecting from either bow, with pulley and sheaves in the outer end, fastened to the ship's side by the cat tail frame. Overhanging beams stepped like boat-davits are called cat-davits.

Catacomb Subterranean gallery excavated for use as a burial place. Originating in the volcanic layers beneath Rome, they were utilised by the Christian community down to Alario's onslaught on Rome, A.D. 410. Rediscovered in 1578, they are a mine of archaeological interest. The galleries, 4-5 ft. wide, form a labyrinth several hundred miles long, where interments exceeded 6,000,000. The berth like recesses, or *loculi*, were carefully sealed with inscribed slabs. Circular rooms served for families or distinguished martyrs. They were utilised for refuge and worship during periods of persecution. Similar galleries exist in Naples, Syracuse and Alexandria.

Catalepsy Nervous affection involving sudden suspension of will power and sensation. The muscular rigidity may simulate death, or the patient may utter vehement exclamations unconsciously. It may end in a few minutes, or endure for several days. It arises from fright or prolonged depression, and sometimes attends the hysteria induced, especially in women, by mental or religious excitement, which sometimes assumes an epidemic form. It is producible artificially by hypnotic means.

Catalonia Former province of Spain. Bounded N by the Pyrenees, S by Valencia, E by the Mediterranean, and W by Aragon, it was divided in 1833 into the provinces of Tarragona, Barcelona, Gerona and Lérida, with an area of 12,500 sq. m. It has modern textile factories and great metalliferous and cereal wealth.

There has always been among the Catalans a tendency to independence and in 1910 they sent a request to the Peace Conference in Paris asking to be made into a separate state. It was not during the dictatorship of Primo de Rivera with a policy of repression, but after the fall of the dictator, in 1929, a more liberal policy was pursued. In 1931, when Spain became a republic, a large measure of home rule was given to Catalonia.

Catalpa Genus of large leaved ornamental trees of the bignonia family. They are natives of N America and E Asia. There are ten species, some of them 40 to 50 ft. high, with panicles of showy flowers and winged pods. *C. bignonioides*, occurring in British parks and gardens, furnishes light, durable timber. *C. longissima*, or French oak, is rich in tannin.

Catalysis Acceleration or retardation of chemical reactions effected by

the presence of a substance not itself permanently changed. Catalysts may react by mere contact, or by entering momentarily into reactions which liberate them again immediately. Some are of industrial importance such as platinum in the contact-process of sulphuric acid manufacture, or nickel in hydrogenating liquid oils for conversion into hardened edible fats. Catalysis is due to atomic rather than molecular excitement.

Catamaran Surf boat used on the Coremandel coast, particularly at Madras. Comprising three or more logs lashed together, 20-25 ft long, the middle trunk, on which the two paddlers squat, is elongated for turning up as a prow. Larger sailing rafts of similar construction are used in the Caribbean and on S American coasts.

Catania City and seaport of Sicily. On the E coast at the foot of Mt Etna, it controls the trade of the fertile Catania Plain, the granary of Sicily. It is 59 m from Messina. Catania was founded by the Greeks and was very rich under the Romans. There are remains of a Roman amphitheatre. It has been destroyed more than once by earthquake and volcanic eruptions. Pop (1931) 227,765.

Catapult Ancient military engine for projecting stones, arrows and similar missiles. In Medieval Europe it was a huge, pedestalled crossbow operated by a twisted cord. The distinct high-trajectory *ballista* discharged heavier stones from the end of rotating arms.

Cataract Eye disease rendering the liquid contents of the crystalline lens opaque. It occasions blindness by obstructing the passage of light. The commonest form is senile cataract in ageing persons.

Catarrh In chronic catarrh, or inflammation of the mucous membrane of the nose, throat and bronchial tubes with troublesome discharge, make frequent use of a nasal spray with eucalyptus, menthol, or other compounds in paraffin base. Garlic, night and morning with glycothymoline, listerine, or a mixture of equal parts common salt, borax, and chlorate of potash (1 teaspoonful to 1 pint of warm water). Plenty of fresh air and avoidance of dust are necessary, and surgical treatment may be indicated. Catarrhal inflammations may also occur in the stomach, intestines, bladder, urethra, and womb.

Catbird Genus of N American mocking birds of the thrush family, *Galeoscoptes*. The only species, with black-pollated slate grey plumage, is a voluble songster which also utters a mewing cry. Another catbird is a genus of Australian weaver birds of the paradise bird family *Acluradus*. One with bright green plumage and one with spotted, utter catcalls at evening.

Catch Term in English music denoting a jocund round. Written for three or more unaccompanied voices in glee form, it enables each singer in turn to catch up his predecessor's words. Catches were favourite folksong compositions in Tudor and Stuart times.

Catchment Area Defined space of land made by its rainfall into a self-contained drainage basin. The catchment area of the Amazon is 2,722,000 sq m, of the Thames 5924 sq m. In hydraulic engineering it is the area available for furnishing water at a specific point for a public water supply.

In 1931, in connection with a scheme of land draining, Catchment Boards were set up in various parts of the country. There were 47 of these boards, one for each of the principal rivers, and their object is to take measures to prevent floods and generally to look after the flow of the river's water.

Catechism Term meaning instruction by question and answer, or a book containing such instruction, particularly in religious doctrine. Outstanding examples are Luther's, 1520, Calvin's, 1536, the Heidelberg, used in the Dutch Reformed Church, 1563, the Methodist, 1852, since revised, and the Evangelical Free Church, 1898. The Roman Catholic (Tridentine) 1566, is in Great Britain replaced by The Penny Catechism. The catechism of the Church of England is in the Book of Common Prayer. The Presbyterians have two catechisms—the Shorter and the Longer, dating from 1648.

Catechu (or Cutch) Tanning and dyeing extract. It is obtained from the heart-wood of two Indian species of acacia, and is used for dyeing fishing nets and tanned canvas. It also comes from the leaves of two Malayan species of cinchonaceous climbers. These yield the astringent pale catechu of pharmacy, which is the gambir of industry.

Caterham Urban district of Surrey. It is 20 m from London and 7 from Croydon on the S Rly. It is a beautiful residential area, and has barracks where recruits for the Foot Guards are trained. The urban district includes Worlingham. Pop (1931) 19,503.

Caterpillar Popular name for the larva of a butterfly, moth or sand fly. Its head bears strong biting mandibles for nipping leaves or gnawing timber, with three simple eyes, three thoracic segments each with a pair of true jointed legs, and ten abdominal segments variably endowed with tubular hooked prolegs, the last two being claspers. Their mission is to store food for the pupal or resting stage, and they moult 8 or 10 times. Their voracity frequently causes enormous destruction to agriculture.

Catesby Robert English conspirator. Born in 1573, he was the son of Sir William Catesby and was brought up a Roman Catholic. He was one of the promoters of the Gunpowder Plot. When it was discovered he left London and was shot by his pursuers near Dudley, Nov 8, 1605.

Catfish Numerous family of naked or bony-skinned scaleless fishes (*Siluridae*) with barbels or feelers round the mouth. Almost all of them inhabit temperate and tropical freshwater, and include the largest European freshwater fish, found only E of the Rhine. Several species inhabit American rivers and lakes, some travelling overland in dry seasons. There are about 1000 species.

Catford Suburb of London. In the metropolitan borough of Lewisham, 8 m from London, with stations Catford and Catford Bridge on the S Rly. It is a busy centre. Here is St. Dunstan's College for boys.

Catgut Cord made from the intestines of sheep and lambs, less often from those of horses and asses. It serves as strings for harps, violins, bows, clockweights, sutures for wounds and lathe belts. The intestines are clarified, scraped, steeped in lye, made

aseptic, dyed, if necessary, and made up into cords of twisted strands

Cathay Name for China in the Middle Ages. It was given by Marco Polo and comes from Khitan, Mongolian tribes who ruled over the N part until about 1100

Cathcart Name of a parish in Scotland, new part of Glasgow. It stands on the White Cart, and gives its name to a famous Scottish family. The barony dates from 1460 and the 9th baron, William Schaw Cathcart (1755-1843) was in 1814 made an earl

Cathedral Church in which a bishop has his seat. In the Church of England most of the cathedrals are controlled by a dean and a number of canons who are known as the dean and chapter

The finest English cathedrals were built in the Middle Ages, Canterbury, York, Lincoln, Salisbury, Lichfield and Winchester for instance. St Paul's, London, is of later date. Westminster Abbey is not a cathedral as there is no bishop. The only cathedral built by the Church of England since the Reformation is at Liverpool, but cathedrals at Sheffield, Guildford and Monmouth are planned. In other cases where bishoprics were created, as in Birmingham and Manchester, existing churches were converted into cathedrals. At Truro the parish church was enlarged and made into a cathedral. The Roman Catholics have a fine modern cathedral at Westminster and another is planned for Liverpool

Outside England the finest cathedrals in the world are St Ambrose, Milan, St Mark's, Venice, and the Duomo, Florence. In Spain, Seville, one of the largest in the world, ranks first. In France, Notre Dame, Paris, Chartres, Amiens and Rheims may be mentioned. In Germany, Cologne, Mainz and Treves are notable. A fine modern cathedral is St. John the Divine, New York

Catherine Italian saint called Catherine of Siena. Born in 1347 at Siena, she joined the Dominican tertiary in 1365. She announced the impression on her body of the stigmata in 1376, and induced Gregory XI to leave Avignon for Rome in 1376. She practised works of mercy, and wrote mystical letters and prayers. Commemorated on April 30, the day of her death in 1380, she was canonised in 1461

Catherine Saint and martyr called Catherine of Alexandria. She lived in the 4th century and tried to convert the Emperor Maximinus to Christianity. She was scourged, imprisoned and then tortured on a wheel. She is the patron saint of the wheelwrights, the Paris university and religious sisterhoods. She is commemorated on Nov 25

Catherine Queen of Henry II of France. A daughter of Lorenzo de Medici, she was born April 13, 1510 and in 1533 was married to Henry, heir to the throne of France. He became king in 1544 and reigned for 15 years, after which three of the four sons Catherine bore him were kings in turn. The eldest Francis II, only reigned for a year, but during the reigns of the other two, Charles IX and Henry III, Catherine, as regent, was the dominant person in France. She first favoured the Huguenots against the extreme Roman Catholics led by the Guises, but later turned round and assented to the massacre of St Bartholomew. She died Jan. 5, 1588

Catherine I Empress of Russia. Born in Lithuania she passed her youth in Marienburg and married a Swedish soldier. Taken prisoner by the Russians in 1702 she became the mistress of Peter the Great, and in 1711 his wife. Her abilities were considerable, and Peter named her as his successor. From 1725 until her death, May 17, 1727, she was Empress

Catherine II Empress of Russia. Born at Stettin May 2, 1729, a daughter of a German prince, in 1745 she married Peter, Duke of Holstein, who had been chosen as heir to the Russian throne. In 1761 Peter became czar, but in 1762 he was murdered and his widow took his place. Catherine reigned until 1796 and greatly increased the area and power of Russia. An enlightened despot, she carried out many reforms. She died Nov 17, 1796, her successor being her son Paul II

Catherine of Aragon. Wife of Henry VIII. A daughter of Ferdinand and Isabella of Spain, she was born in Dec., 1485, and in 1501 was married in London to Arthur, Prince of Wales. In April, 1502, he died, and the princess was betrothed to his brother Henry. He became king in 1509, and the two were married in June of that year. When Henry fell in love with Anne Boleyn he put forward the theory that the union with Catherine had been illegal on the ground of relationship. The Pope would not consent to a divorce and the result was the overthrow of the Papal authority in England. Cranmer then pronounced the marriage invalid. Called the princess dowager, Catherine was practically a prisoner until her death at Kimbolton, Jan 7, 1536

Catherine of Braganza. Wife of Charles II. Born Nov 25, 1638, she was a daughter of John, King of Portugal. She married Charles in May, 1662, her dowry being Tangiers, Bombay, and a large sum of money. She remained in England until 1692, when she went back to Portugal and was regent of that country for her brother. She died Dec. 31, 1705

Cathetometer Instrument for measuring accurately small differences in vertical heights as in the case of the different levels of the mercury in the tube and stem of a barometer. It consists essentially of a horizontal telescope which slides up and down on a vertical stand provided with a finely divided scale

Cathode (or Kathode) Electrode point from which the current leaves, or negative plate of a voltaic cell or electrolyte, or positive terminal of the external circuit. In a vacuum tube or thermionic valve the electrons leave the cathode and flow to the anode (anode). Metal is deposited at this pole when objects are electrolysed

Catholic Apostolic Church Religious communion due to the preaching of Edward Irving, hence its alternative name of Irvingite. Founded in 1832, it uses symbolic ceremonial based on primitive practice, under the direction of twelve apostles who claim supernatural powers. Subordinate to them are prophets and evangelists. Each congregation having its angel. There is a fine Gothic church in Gordon Square, London, built in 1851, and upwards of 80 churches with adherents in Great Britain, Europe and the United States

Catholic Emancipation

Term used for the removal of political and other disabilities under which Roman Catholics suffered. These dated in Great Britain from the time of the Reformation. In 1778 a few of the disabilities were removed, but full emancipation dates from 1829 when the oath of supremacy was altered. Roman Catholics can now sit in Parliament and hold civil and military offices of all kinds. They can also enter the professions.

Catiline Lucius Sergius Roman politician and conspirator. Of impoverished family, he served under Sulla, displaying much cruelty during the proscription. He governed Roman Africa in 67 B.C., and on his return conspired to seize the consulship. The conspiracy was defeated by Cicero, who was then consul. Cicero's orations against Catiline are among his greatest efforts.

Catkin Crowded spike, usually pendulous, hearing small, unisexual flowers protected by scale like bracts instead of petals and sepals. Botanists call it an amentum. During flowering time they are seen on some British forest trees, including the birch, alder, oak, beech, hazel, hornbeam, poplar and willow.

Catmint Flowering plant seen in British gardens. Known botanically as *nepeta cataria*, it bears white flowers which grow in dense whorls. The plant is aromatic and attracts cats, hence its name. Other kinds of catmint grow in warmer countries and bear coloured flowers.

Cato Marcus Porcius Roman statesman, general and writer. Born at Tusculum, he became in turn quaestor, aedile, praetor and, in 195 B.C., consul with Flaccus. He served in Africa during the second Punic war, and held commands in Sardinia and Spain. In 184 he was chosen censor, and in that office he tried to restore the simple manners and purer morals of an earlier age. Known also for his enmity to Carthage, he coined the famous phrase *Delenda est Carthago* (Carthage must be destroyed). He died in 149 B.C. at 85. Cato wrote a famous book on agriculture, *De Re Rustica*.

Cato's great grandson, also Marcus Porcius Cato, was a famous Roman statesman and soldier. He was among the enemies of Julius Caesar and during the civil war joined the party of Pompey. He committed suicide at Utica in 46 B.C.

Cato Street Conspiracy

Plot to murder British ministers in 1820. Arthur Thistlewood, a revolutionary concerned in other projects during the reign of George III, conceived a plan for assassinating Lord Castlereagh and his ministerial colleagues at a dinner in Grosvenor Square, London, on Feb. 23. Arms were collected in a hired rendezvous in the neighbouring Cato Street. Thistlewood and his colleagues were arrested beforehand, and he and four others were executed.

Cat's Ear Popular name for a genus of composite plants (*Hypochaeris*). Inhabiting Europe, W. Asia and N. Africa are 30 species. Some of them, such as the common cat's ear (*H. radicata*) which is found throughout Britain, have yellow heads.

Cat's Eye Gem stone which when cut convexly shows yellowish opalescence resembling that reflected in a cat's eye. The chrysoberyl, or true cat's eye, has a white gleam. Occidental cat's eye, also found in Ceylon, is softer, a variety of quartz con-

taining asbestos fibres. S. African cat's eye is a bluish stone with crocidolite fibres.

Catskill Mountain range in New York State, U.S.A. Situated west of the Hudson, it belongs to the Alleghany Plateau and has well timbered uplands rising to 4200 ft. in Slide Mt. It is the scene of Rip van Winkle's reputed adventures.

Catskill is a small town on the Hudson, 30 m. from Albany. The Catskill aqueduct is a wonderful piece of engineering. It carries water from the Ashokan Reservoir to New York.

Cat's Tail Popular name for the club rush or reed mace (*Typha*). Growing throughout Britain, the broad-leaved has brown spikes from 6 to 12 in. long, the narrow-leaved being smaller.

Cat's-tail or timothy grass (*phleum*), is a useful fodder plant, with dense cylindrical spikes. The name also denotes cirrus cloud when curling into brush-like filaments.

Cattaro Seaport and city of Yugo Slavia, also called Kotor. It is on the Gulf of Cattaro, an arm of the Adriatic. During the Great War the Austrians used the port as a naval base. Cattaro belonged to Venice before becoming Austrian in 1814. In 1919 it was given to Yugo Slavia. Pop. 6000.

Cattegat Arm of the sea, between Sweden and Denmark. Northwards it connects through Skagerrak with the North Sea and southwards through the Sound the Great and Little Belts with the Baltic. About 150 m. long its greatest width is 88 m.

Catterick Village of Yorkshire. The Roman Cataractonium, it stands on the Swale, about 5 m. from Richmond. Near it the War Office has a large camp, made during the Great War, and there is a racecourse.

Cattle Cows and oxen used agriculturally for supplying beef, milk or labour. Most European strains descend from the extinct aurochs, the first domesticated breed in Britain being the Celtic shorthorn. Among English breeds shorthorns have provided high-priced pedigree stock the world over. Herefords are now the chief beef yielders on N. American ranches. Famous milkers are Devons, Ayrshires, Jerseys and Guernseys. Other Scotch, Welsh and Irish strains are appreciated. Great continental milkers are Dutch Swiss, Simmenthal, Norman, Breton and Danish.

Cattwater Opening of Plymouth Sound. Covering about 200 acres, it is to the east of Plymouth, forms the estuary of the Plym, and can accommodate large vessels.

Catullus Gaius Valerius Roman poet. Born at Verona, he usually resided quietly in his villas on Lake Garda or at Tivoli. His 116 poems, of varying metre, cover the closing eight years of his life. Many were inspired by P. Clodius Puleher's sister Clodia, whom he entitled Lesbia, others concern men of the time, as Caesar and Cicero. He died in 54 B.C.

Caucasia District between the Black and Caspian Seas. Northern Caucasus comprises autonomous republics, provinces and areas in Soviet Russia, including Daghestan. In Transcaucasia are the Soviet Republics of Azerbaijan, Armenia, and Georgia, with Abkhazia, Adjara and S. Ossetia. This southern region covers 74,105 sq. m., with nearly 6,000,000 people.

Caucasus Mountain range between Europe and Asia. It

stretches almost from the Sea of Azov along the northern shore of the Black Sea to the Caspian Sea, nearly 1000 m. Its breadth varies from 30 to 140 m and the highest point is Mt Elburz (18,465 ft), but there are other heights over 12,000 ft. and several over 15,000. The district is rich in minerals.

Caucus American term for a meeting of party managers to select candidates for election. Lord Beaconsfield used it satirically of the Liberal 600 organised by Joseph Chamberlain at Birmingham in 1878.

Caul Woman's close fitting, network cap worn in Europe in the 16th-17th centuries, hence a piece of the foetal membrane or amnion which sometimes encompasses a child's head at birth. Byron was so born. A caul was deemed an infallible and transferable safeguard against drowning.

Cauliflower Variety of cabbage and a popular vegetable for the table. Its flowers have been mostly condensed while young into a cluster forming a succulent white head. Its flower stem is shorter, fleshier, whiter, more compact and more delicately flavoured than in broccoli. It was apparently developed in the Mediterranean basin, where it still grows luxuriantly, and came thence, traditionally from Cyprus, to England in the 16th century.

Causerie Familiar talk. The word was used by Sainte Beuve for the weekly articles he contributed to Paris news papers for twenty years from 1849, as *Causeries du lundi*, *Nouveaux lundis*, etc.

Causeway Road or path raised above ground level across marshy or low-lying land. It may be formed by rammed earth, stones, timber, brushwood or the like, and be used for crossing a ford or traversing an embankment.

The term describes also the paved military roads of Roman Britain. The Glani's Causeway in Northern Ireland is famous.

Caustic Substance having the power of destroying animal tissues by chemical action. Such substances are used in surgery in local applications for germ-infected bites, as well as for cancerous and gangrenous conditions. Lunar caustic (silver nitrate), caustic soda, potash and lime, and carbolic acid are examples.

Cautery Instrument for burning bodily tissues. The red-hot poker of primitive surgery, used for arresting arterial bleeding after amputation, has become refined into Paquelin's thermocautery for removing growths, like warts, Corrigan's hutton for applying counter-irritation, and the galvanocautery. The instrument has a steel or platinum head, and the heat is usually produced by electricity.

Cavalry Body of soldiers who fight on horseback. Cavalry were used in warfare in very early times. The horsemen of the Bible were cavalry and cavalry were also used by Persians, Carthaginians and Romans.

The first great age of cavalry in warfare, however, was in mediaeval times. Knights, with their heavy armour, could only move on horseback. By forming themselves into a compact mass they could crush down hostile infantry, and as they could only be checked by other horsemen similarly armed, the battles of the age of chivalry were between bodies of knights, with infantry playing a secondary part. The supremacy of cavalry was challenged by the

English archers, notably at Crécy, while the final blow was given by the invention of firearms.

Cavalry, however, had still a great part to play. Freed from the weight of their armour horsemen were used with great effect to ride together against slightly demoralised troops. In the S. African War mounted infantry took their place, and against trained European troops there was little use for them in the Great War.

In the British Army the cavalry are a distinct branch, and there is a school for them at Netheravon. They are divided into regiments each about 500 strong, called Hussars, Lancers, Dragoons or Dragoon Guards. In addition there are the Household Cavalry, composed of Life Guards, and Royal Horse Guards. The yeomanry form a cavalry reserve.

Cavan County of the Irish Free State. An inland county of Ulster, it covers 730 sq. m., with hills in the north. Cavan is the county town. The chief rivers are the Erne and the Blackwater. Pop. (1926) 82,452.

Cavan Market town and urban district of Co. Cavan, Irish Free State, also the county town. It is 85 m. from Dublin on the Gt. Southern Rly. Pop. 3000.

Cavan Earl of Irish title held by the family of Lambart. In 1617 Sir Oliver Lambart, Governor of Connaught, was made a baron, and in 1647 an earl. His descendant, Frederick Rudolph Lambart, who became the 10th earl in 1900, was born Oct. 16, 1865. Educated at Eton, he entered the Grenadier Guards and served in S. Africa. In the Great War he commanded the Guard Brigade and the Guards Division on the Western Front, and later the 14th Corps there and in Italy. From 1920-22 Cavan was commander-in-chief at Aldershot, and from 1922-24 chief of the Imperial General Staff. In 1929 he became captain of the Gentlemen at Arms.

Cave Hollow place in the earth. Usually of natural origin, it may occur in limestone regions where percolating rain water has dissolved the carbonate of lime, in sandstone cliffs once exposed on a seashore, or in volcanic regions where the upper crust of a flowing lava has solidified. The mammoth caves of Kentucky are the largest known. When occurring in hillsides with natural outlets they have from the earliest times been utilised for human occupation. The fossil bones and implements unearthed in them have enabled students to reconstruct the manner of life and cultural development of the men, called cave men, who lived in them.

Cave Viscount. English politician. George Cave was born in London, Feb. 23, 1850, and educated at the Merchant Taylors' School and St. John's College, Oxford. He became a barrister, entered Parliament as Unionist M.P. for the Kingston division in 1906, and in 1915 he was made Solicitor General. From 1916-18 he was Home Secretary. In 1918 he became a Lord of Appeal and a Viscount, and he was Lord Chancellor 1922-28, except for the few months of the first Labour ministry. He died March 29, 1929.

Caveat Latin word meaning "let him beware". It is used in the law courts for an order forbidding a thing to be done without notice given. Thus a person who has good reason for preventing someone else from proving a will can obtain a caveat, which orders the person to take no further steps in the matter without giving notice.

Cavell Edith Louisa British nurse Born in Norfolk, Dec 4, 1865, she was trained at the London Hospital became matron of a medical institute in Brussels, and during the German occupation harboured wounded and refugee soldiers, and aided their escape into Holland. Denounced by a renegade, she was tried by court martial Oct. 7, 1915, and, despite neutral mediation, was shot five days afterwards. Her remains now repose in Norwich Cathedral, a memorial statue stands in St Martin's Lane London

Cavendish Name of the English family whose head is the Duke of Devonshire. It comes from Cavendish in Suffolk where the early Cavendishes lived. Sir John Cavendish, a judge, was beheaded by the peasants in 1381. His descendant, Sir William Cavendish (died 1557), obtained large grants of land when the monasteries were dissolved, and married the rich Countess of Shrewsbury called Bess of Hardwick. This brought the Derbyshire estates, including Chatsworth and Hardwick, into the family. Their son, William Cavendish, was made Earl of Devonshire in 1618, and the 4th earl was made Marquess of Hartington and Duke of Devonshire in 1694. The duke also bears the title of Earl of Burlington. Another branch of the Cavendish family bears the title of Baron Chesham.

Cavendish Henry English chemist and physicist Born at Nice, Oct 10, 1731, a nephew of the 3rd Duke of Devonshire, he studied at Cambridge, and became an F.R.S. in 1760. He devoted himself to researches in electricity, heat and the composition of gases. He discovered hydrogen 1766, determined the constituents of water and atmospheric air, and experimentally combined oxygen and hydrogen into water, before 1784. He calculated experimentally the density of the earth, 1798. He died at Clapham, March 10, 1810.

Caversham Suburb of Reading, on the Oxfordshire side of the Thames, opposite Reading proper with which it is connected by a bridge rebuilt in 1926. The chief building is the church, much restored. Here are the Oratory School, which was removed from Birmingham in 1922, and Queen Anne's school for girls, founded in 1698. Caversham was included in Reading in 1911.

Caviare Sturgeon roe prepared for table. The Russian name is ikra. The eggs are sifted out of the ovaries and lightly salted. Caviare is served as a hors d'oeuvre or savour, spread on toast. The choicest is that from the sturgeon, freshly prepared. Coarser varieties come from Scandinavian and N. American fishing grounds.

Cavitation Formation of partial vacuums or air-cavities within a liquid when undergoing rapid agitation. The term denotes specifically the phenomenon observable when the propellers of ships are driven in water at excessive speeds. The effect is to churn the water into masses with independent movement, the partial vacuum causing reduced thrust and loss of efficiency.

Cavour Camillo Benso Count Italian politician Born in Turin, Aug 10, 1810, of noble family, he began to take part in political life in 1847. In 1848 he was elected to the Parliament of Sardinia, and in 1850 was made Minister of Agriculture. He became Premier in 1852, and was responsible for sending Sardinian troops to the Crimea,

by which he earned the goodwill of Britain and France. In 1859 war broke out between Sardinia and Austria, and with French help the Sardinians were victorious. The treaty of peace did a good deal to prepare the way for a united Italy. Cavour, who had opposed the republican zeal of Mazzini and the military ardour of Garibaldi as likely to hinder rather than aid the desired union, died June 6, 1861.

Cavy Genus of small S. American rodents (*Cavia*). Several species honeycomb the continent with their burrows. They include the restless cavy of Brazil and Uruguay, and the rock cavy. The Cutler's cavy of Peru, domesticated by the Incas was brought to 16th century Europe by the Dutch, and is now familiar as the guinea pig.

Cawdor Village of Nairnshire. It is 5 m. from Nairn. In its castle, Macbeth, the Thane of Cawdor, is supposed to have lived. The present castle, the property of the Campbells, dates from the 16th century.

Cawdor Earl. Title held since 1827 by the family of Campbell. Sir John Campbell, a son of the 2nd Earl of Argyll, married about 1510 the heiress of Cawdor Castle and estate, and here he and his descendants lived for some three centuries. In 1796 John Campbell was made Baron Cawdor, and in 1827 his son was made an earl. Frederick, the 3rd earl, was M.P. for Caermarthenshire, 1874-85, and First Lord of the Admiralty in 1905. He was (1895-1905) chairman of the G.W. Ry., and died Feb 5, 1911. The earl's eldest son is called Viscount Emlyn. The family estates are chiefly in Pembrokeshire and Caermarthenshire.

Cawnpore City of India. The capital of the Cawnpore district of the United Provinces, it is situated on the Ganges 40 m. S.-W. of Lucknow. It is a busy railway junction, a military station with large factories for army equipment, and a centre of the grain trade. A church and memorial mark the massacre by Nana Sahib of surrendered Europeans during the Indian Mutiny, 1857. In 1931 there were riots here. Pop. (1931) 243,755.

Caxton William. English printer. Born in Kent, he was apprenticed in 1439 to a London mercer. In 1441 he went to Bruges, then to Cologne where he learned printing, and in 1474 he was responsible for *The Recuyell of the Histories of Troye*, the first book printed in the English language. The second was *The Game and Playe of the Chess*, also printed by him at Bruges. In 1476 Caxton returned to London and set up a printing press at Westminster, the first in England. Here he printed 96 books, including *The Canterbury Tales*, *Morte d'Arthur*, and *The Myrrour of the World*, the first to be illustrated. He died in 1491 and his business was continued by his assistant, Wynkyn de Worde.

CAXTON HALL, in Caxton Street, Westminster, was built in 1882 for a town hall. It is now used for public meetings and offices.

Cayenne Capital and only seaport of French Guiana, S. America. Situated on the island of the same name, it has convenient administrative buildings overlooking a fortified harbour. It exports gold derived from placer mining, besides phosphates, balata, rosewood and other forest products. It is the official headquarters of the French penal settlement at the Ile du Diable, 30 m. to the N.W. Pop. (1951) 10,744.

Cayenne Pepper Condiment prepared

dried and pounded pods of several species of *Capsicum*, a native of Central and S America. Some species were brought to Europe in the 16th century. The unpounded pods of the common annual kind, and of another, called goat pepper, grown in the East Indies, are the chillies used for vinegar and pickles. The pungency arises from an active principle, capsaicin, which is utilised in pharmacy as a counter irritant.

Cayman Gonnus of Central and S America can reptiles of the crocodile family (*Caiman*). The five species are distinguishable from the Mississippi and Chinese alligators in having no bony septum to the nose. The great Amazonian cayman reaches a length of 20 ft.

Cayman Islands Island group of the W Indies, a British possession. Three in number, the islands are governed from Jamaica, which is some 200 m to the S E. The inhabitants engage in turtle fishing and coconut planting, and cattle, ponies and hides are exported. George town is the capital. Pop 5650.

Cecil Name of a famous English family. It originated at Stamford with a certain David Cecil who was an MP in the time of Henry VIII. His grandson was Lord Burghley, who left two sons. The older was made Earl of Exeter and the younger Earl of Salisbury, and from them descended the two branches of the family represented by the Marquess of Exeter and the Marquess of Salisbury.

Cecil Lord Hugh English politician. Hugh Richard Heathcote Gascoyne Cecil, youngest son of the Marquess of Salisbury, was born Oct 14, 1869, and educated at Eton and University College, Oxford. In 1890 he was elected MP for Greenwich, a seat he retained until 1906. In 1910 he was chosen MP for the University of Oxford, and was re-elected at succeeding elections including 1935. He was made a privy councillor in 1918. Although never in office, Lord Hugh Cecil has dominated the House of Commons as an orator.

Cecil Viscount English politician. Edgar Algernon Robert Gascoyne Cecil was born Sept 14, 1864, being the 3rd son of the 3rd Marquess of Salisbury. He went to Eton and University College, Oxford, and became a barrister. In 1900 he was made a KC and in 1906 he entered Parliament as Unionist MP for East Marylebone. In 1912 he was elected for the Hitchin division and he retained the seat until 1923. In 1916 Lord Robert Cecil as he was known became Under-Secretary for Foreign Affairs in the coalition, and from 1916-18 he was Minister of Blockade, resigning rather than consent to the disestablishment of the Church in Wales. In 1923-24 he was Lord Privy Seal, and in 1924-27 Chancellor of the Duchy in the Unionist ministry. In 1924 he was made a peer, as Viscount Cecil of Chelwood. Lord Cecil was perhaps the leading English advocate of the League of Nations and this led to his retirement from office in 1927.

Cecilia Italian saint and martyr. It is said that Marous Aurelius ordained her death, about A.D. 176. Another legend says she was martyred under Alexander Severus, about 230. The patron saint of music and the blind she has inspired many masterpieces in painting and music, including Handel's setting of Dryden's "Ode for St Cecilia's Day".

Cedar Name of various evergreen, coniferous trees, pre-eminently of the

genus *Cedrus*. The stately cedar of Lebanon, *C libani*, acclimatised in England rises sometimes to 80 ft with wide spreading horizontal branches. The silver cedar, *C atlantica*, grows in the Atlas, a third species, *C deodara*, is the Himalayan deodar. Spanish cedars, and those used for cedar pencils, are *Juniperus*, that used for organ boxes is a *Cedrela*.

Cedron Pear shaped fruit of a tropical American tree (*Simaba cedron*). A native of Colombia and closely allied to the Jamaican bitter ash which supplies quassia, this fleshy, lemon sized fruit contains a bitter, almond shaped nut which is a remedy for snake bite, intermittent fever and hydrophobia.

Ceiling Interior overhead surface of an apartment. Some ceilings are boarded, others utilise the roof beams and joists to emphasise panelled patterns. The concealment of the roof timbers by horizontal or coved surfaces found expression in the painted ceilings of the Italian Renaissance, introduced into France and into England by Verrio and others. This principle, facilitated by the use of plaster, was especially utilised in the 18th-century low relief classical mouldings of the Adam brothers. Painted ceilings reappear with marked effect in some modern architectural work. Plaster mouldings notably in reinforced construction, have been replaced by fire resisting sheet steel stampings.

Celandine Name of two perennial yellow flowered herbs. The greater (*chelandium majus*) of the poppy order, with much divided leaves, bears umbels of four petalled flowers. The lesser (*ranunculus ficaria*) of the buttercup order, is a short, decumbent plant with heart shaped scalloped leaves and stalks bearing single flowers with from eight to twelve petals.

Celebes Island of the E Indies. Separated from Borneo by the Macassar Strait, it presents a conformation of four long peninsulas covering 73,160 sq m. The interior is mountainous, some volcanic peaks exceed 10,000 ft. Besides mineral wealth it yields timber, rattans, nutmegs, spices, copra, hides, fish and tortoiseshell. The inhabitants are Malayo Polynesians. Except in the Manado residency, the island government is centred in Macassar. It was discovered in 1512 by the Portuguese, but was taken in 1800 by the Dutch. In 1033 pottery dating to 2500 B.C. was discovered on the island. Pop (1930) 3,087,335.

The Celebes Sea is a division of the Pacific Ocean, between Celebes, Borneo and the Philippine Islands.

Celeriac Turnip rooted celery. This form of the vegetable, preferred to celery in France and Spain is treated as a biennial and raised untrenched and unblanched. The root and stems are sliced for salads or cooked as a substitute for the turnip.

Celery Biennial umbelliferous herb (*Apium graveolens*). A native of Europe, W Asia and N Africa it grows wild in British marshlands near the sea, having an acid poisonous flavour. It has long been cultivated as a table vegetable, being raised from seed annually and finally planted out in trenches. By earthing up the heart and stems are blanched and are eaten uncooked. Celery is also stewed and used in soups. There are white and red varieties.

Celestine Name of five Popes. The most important are Celestine I (422-432), the first Pope who took a direct

interest in the British and Irish Churches, and Celestine V who resigned in Dec., 1294, after a reign of a few months, and died May 19, 1296. Before becoming Pope, he founded an order called the Celestines, now extinct

Celibacy State of being unmarried. Adopted by Buddhist monks and Palestinian Essenes, it was continued by 3rd-century Christian hermits, in monastic communities the celibate vow was essential

The Eastern Church permits marriage to ordinands, but not to ordained clergy. In the Roman Catholic Church clerical celibacy was ordered from time to time. The present rule prohibiting marriage among the clergy dates from the Council of Trent, 1563. In the Church of England the marriage of the clergy was permitted at the Reformation

Cell In biology, the structural unit of all living organisms. Formed of a substance, protoplasm—nowadays called cytoplasm—it is usually separated from its neighbours by a membranous wall, usually better defined in plants than in animals. The cytoplasm normally contains a nucleus, charged when active with a definite number of rodlets called chromosomes bathed in a complex nuclear sap. The most elementary organisms, conveniently called unicellular, are not necessarily comparable with the separate cells of more highly organised, multicellular beings. In these the physiological functions of life and reproduction are fulfilled by modified cells discharging specialised duties

Cell In electricity, single jar or unit used for interchanging chemical and electrical energy. Simple voltaic cells produce continuous electric currents from differential electrodes, e.g., copper and zinc held in electrolytes or decomposable solutions. Such cells joined in series become primary batteries, on the Leclanché type are based dry cells. Conversely, electrolytic cells serve for decomposing solutions when their constituents are required industrially, as in electroplating.

Cellini Benvenuto Italian artist. Born in Florence, Nov. 3, 1500, he devoted himself especially to the goldsmith's art. Reaching Rome in 1519 he practised his craft there for 20 years. In Paris in 1540, he produced the superb silver salt cellar now in Vienna, and a bronzo high-relief, the Nymph of Fontainebleau, now in the Louvre. Returning to Florence, he produced the bronzo casting of Perseus, with the head of Medusa, still there. Much of his work is lost. His *Autobiography* is a marvellous record of an untameable and self-applauding temperament. He died in Florence, Feb. 13, 1571.

Celluloid Artificial, solid and highly inflammable substance made by mixing nitrated cellulose with camphor or a substitute. First produced in 1856 under the name xylonite, it was developed in New Jersey. Unaffected by the atmosphere, water or dilute acids, it becomes plastic at 75 deg. C., and can then be moulded. At ordinary temperatures it is turned sawn cut or drilled, being used for cutlery handles, pianoforte keys, combs, accumulator cases and photographic films. When coloured it simulates tortoiseshell, coral, amber and malachite.

Cellulose Essential constituent of the wall membrane of all vegetable cells, and therefore the structural basis of the plant world. A white, opaque carbohydrate insoluble in water, isomeric with starch, it

is nearly pure in the fibre of cotton linen and hemp. Boiling with dilute sulphuric acid changes it into dextrose. Nitric acid converts it into nitrocellulose, the base of celluloid, collodion and gun-cotton. With caustic soda and carbon disulphide it becomes the viscose which yields artificial silk.

Celt Generic name used variously to designate a racial type and a language group. To classical writers the Celts were tall, blue-eyed, fair-haired tribes N. of the Alps, who passed southward during the Bronze Age into Gaul, and fanned out into Spain, Italy, Greece and Asia Minor. Their Indo-European speech developed two types, which were acquired by peoples of other racial origins who preserve them to this day as the Q-Celtic (Gaelic-Erse-Manx), and P-Celtic (Breton-Welsh) languages respectively. The dark-complexioned, so-called black Celts in Ireland have no racial connection with the Celtic type. To-day the word Celts is used for the peoples, not English, who inhabit Scotland, Ireland and Wales, and have their own languages.

Celt Prehistoric and primitive axe-head with cutting edge at the broader end. This implement, developed in neolithic times, was limited in the early Metal Age in cast copper or bronze.

Cement Composition which is plastic at one level of temperature or moisture and then sets or hardens. Stucco is calcined gypsum in such forms as Keene's, Parian and plaster of Paris cement. The term predominantly denotes hydraulic compositions used in modern engineering. In the 18th century septarian nodules containing clay and carbonate of lime were calcined and ground into cement. In 1824 Joseph Aspdin of Leeds calcined an artificial mixture of clay and limestone, ground the linker, and called it Portland cement, because when set it resembled Portland stone. The process is now highly standardised under a British standard specification. The mixture is burned in huge rotary cylinders, ground extremely fine, and used in making concrete for structural foundations, bridges, tanks, buildings and even ships. Reinforced steel enormously enhances its utility. Aluminous cement is used for quick setting.

Cementation Metallurgical process effecting change in one of two substances heated together. Iron bars heated in powdered charcoal gradually change into steel. Cast iron decarbonised in powdered red-oxide becomes malleable cast iron. Gold was formerly separated from silver by cementation with salt and brick dust, which converted the latter into silver chloridic.

Cemetery Piece of ground, not attached to a church, set apart for the burial of the dead. Among famous cemeteries are Abney Park, London, Père Lachaise, Paris, and Glasnevin, Dublin.

It is usual in cemeteries to consecrate part of the ground for Anglicans, others for Non-conformists, Roman Catholics and Jews.

Cenci Beatrice Roman lady. The daughter of Francesco Cenci, who is the central figure of Shelley's tragedy *The Cenci*. With her stepmother and her brother she murdered her father, and for this crime the three were beheaded, Sept. 10, 1599. Shelley's representation of her as the victim of her father's incestuous passion has been disproved.

Cenis Mountain of the Alps between France and Italy. Across it is a

pass, nearly 7000 ft high, which has been one of the chief routes to Italy for over 2000 years. A carriage road over it was made by order of Napoleon. Beneath is a tunnel, 7½ m long, opened in 1871. This is on the line from Lyons to Turin.

Cenotaph Name given to an empty tomb used as a memorial to the dead. The Greeks erected cenotaphs, and a number were built after the Great War. The chief is that in Whitehall, London. It was designed by Sir E. Lutyens and unveiled by the King on Armistice Day (Nov 11, 1920). It bears the inscription "The glorious dead."

Censor In Rome a magistrate who took the census or record of the people and their property. There were two censors, and they were first appointed in 443 B.C. Gradually other powers were given to them. They began to look after the finances, to care for the temples and to forbid practices regarded as harmful to the State.

Far long the Church had a censorship of books, and to day the Roman Catholic Church has censors who place books they regard as harmful on the Index. In Great Britain there is no censorship of literature or of the Press, but persons can be punished for publishing indecent or libellous matter. There is a censorship of the theatre and no play can be publicly produced unless it has been passed by the examiner of plays. There is a film censorship by an unofficial body appointed by the trade.

In 1928 the Irish Free State set up a board of censors with power to forbid the publication of anything considered immoral. In time of war censors are invariably appointed and all written and printed matter must be submitted to them before being published. Letters from the seat of war are also censored.

Census Official estimate of the number of people in a country and other particulars about them. Censuses of the Jews, Romans and other peoples were taken in ancient times but there are no reliable figures for the modern world before about 1800. To-day a census is taken in most civilised countries every five or ten years. In Great Britain one has been taken every decade since 1801, usually in April. In 1921, for special reasons, it was taken in June. The particulars asked for were the name, age, sex, occupation, birthplace, marital condition and nationality. The results are published in blue books. In Ireland the census was taken in 1926. In Great Britain and Northern Ireland a census was taken on April 26, 1931.

A census of production is an estimate of the amount and value of a country's output of wealth. First taken in the United States and was taken in Great Britain in 1907 and another in 1924. For 1924 the output of goods was valued at £3,833,000,000 against £1,693,000,000 in 1907, an increase due largely to higher prices. Another census was taken in 1930.

Cental Measure of weight used in the United States and to some extent in Canada and Great Britain. It equals 100 lb.

Centaury (*Erythraea Centaurium*) An annual herb. It is about 12 in. in height, with along leaves joined at the base growing in pairs. The rose coloured flowers are funnel shaped and borne in a terminal cluster on an erect stem. The centaury flowers from early summer to September.

Centavo Monetary unit used in Portugal, Mexico and most of the countries

of Central and S. America. It is minted in silver coins of 5, 10, 20, 25, 40 and 50 centavos. In Portugal 100 centavos go to the escudo, in Mexico 100 to the dollar, in Argentina 100 to the peso.

Centenarian A person who reaches the age of 100. In 1911 there were 466 centenarians in the British Isles, 292 being women. In 1921 there were only 145, but the figures for Ireland were not then included.

Centigrade Type of thermometer invented by Anders Celsius, a Swede, in 1742. In it the scale is divided into 100 degrees. The lower point 0 deg. C is the melting point of ice and the higher point 100 deg. C the temperature of steam given off by boiling water.

Centipede Animal belonging to the Myriapoda. They resemble insects save that they are without wings, and are remarkable for the number of their legs, some having over 100. The body is divided into segments, and in all these, except the last two, are two legs. They possess claws which contain poison and with these the tropical species can give a dangerous, perhaps fatal, wound. The bite of the British species is not dangerous.

Central America Stretch of land connecting N. and S. America or Mexico and Colombia. It contains six little republics, Guatemala, Costa Rica, Nicaragua, Honduras, Salvador and Panama, and is pierced by the Panama Canal. British Honduras is in the N.E. corner. The isthmus is about 1000 m. long and varies in breadth.

From its discovery in 1502 until 1821 Central America was a Spanish possession. After 1821 it became independent, and was for a short time the United States of Central America. This union was soon broken and separate republics formed, the last being Panama, created in 1903. Other efforts to form a single state also failed, and there were constant wars between one and another of the republics. In 1923 the republics signed a general treaty of peace. See COSTA RICA, HONDURAS, SALVADOR, etc.

Central Australia Name of a territory of Australia. It dates from 1927 when Northern Australia was divided. Alice Springs is the capital and the territory covers 236,400 sq. m.

Central Criminal Court London court of law. It is in the Old Bailey on the site of old Newgate Prison, and was set up in 1834. Here serious criminal cases from the London and surrounding districts are heard. It thus corresponds to the assizes held outside the London area. The judges are the Lord Mayor, recorder, common serjeant, city aldermen and judges of the city court, but usually a judge of the high court presides. The present building was completed in 1906 at a cost of £250,000.

Central Powers Name given during the Great War to Germany and Austria, and their allies.

Central Provinces Name of one of the provinces of India, in full the Central Provinces and Berar. The British districts cover 82,149 sq. m., Berar 17,789 sq. m., and the feudatory states 33,112 sq. m. Nagpur is the capital and Jabalpur the next largest city. Before 1853 much of the province consisted of the Kingdom of Nagpur. It was formed in 1861 and Berar

was added in 1902. It is under a governor and a legislative council.

Centre Name of a political party. It was first used in this sense at the time of the French Revolution. When the National Assembly met the groups were classified as left, right and centre according to where they sat. In the German Reichstag the centre has been the moderate party.

Centre Term having a number of special applications in various sciences. In physics an example is the centre of oscillation of a pendulum, the point at which, if the weight of the body were concentrated, the pendulum would continue to vibrate in the same intervals of time.

In optics, the centre of a lens, if a thin one, is the point at which the axis passes through the lens. In engineering, the term occurs in centre chucks and centro plates.

Centre Board Board or iron plate used instead of a fixed keel in small sailing boats. When the use of a keel is required to give stability, the centre board can be lowered through the bottom of the vessel. It is also called a drop keel.

Centre of Gravity Point fixed relative to a body at which the whole weight of the body may be supposed to act. If the body were suspended therefrom it would be balanced in all positions. The term "relative to" is used, as the centre of gravity is not necessarily within the body, but may lie outside it. In the case of a circular ring or hoop, the point lies at the centre of the circle and therefore not in the substance of the ring, but fixed relative to it. In a parallelogram the point is at the intersection of the diagonals, and in a uniform rod at the middle.

Centrifugal Force Term given to the force which, when a body is moving in a curved path, is equal but opposite in direction to the centripetal force keeping the body in its curved path. Centrifugal force is employed in separators for butter making, drying machines and concentrators in mining.

Centurion Officer in the ancient Roman army in command of a hundred men, known as a centuria, the sixtieth part of a legion.

Cephalic Index Term used to denote the size and class of human skulls. It is anthropometric ratio of breadth to length of head. Retzius devised it, about 1842, by multiplying by 100 the number representing the greatest breadth above the ear level, ascertained by callipers, and dividing this by the greatest length from the glabella, or point above root of nose, to the back of the occiput. The cranial index of the skull is one or two units less than the cephalic index of the living head. Persons from 75 to 80 are medium-headed, below long-headed, and above broad-headed.

Cephalonia Largest of the Ionian islands. Situated off the mouth of the Gulf of Corinth, it forms with Ithaca a monarchy of Greece. It produces currants, olives, figs and oranges. It is 31 m. long, covers 348 sq. m., and Argostoli is the capital. Mt. Ainos, 5315 ft., is the highest point.

Cephalopoda Class of marine, free-swimming molluscs with muscular tentacles and two or four plumo-

like gills. The two-gilled order, having no external shell—the paper shell of the female argonaut is abnormal—has two sub-orders. These are the eight-armed otopoda, like the common octopus, and the ten-armed decapoda, with internal shells—squids with horny pens, cuttle fishes with calcareous bone, and spirulids with coiled tubes. Of the four-gilled order, with external shells, only the pearly nautilus survives, they were multitudinous geologically, notably the ammonites.

Ceram Island of the Molucca Archipelago. Also called Sirang. Situated 100 m. W. of New Guinea, it is 200 m. long and 50 m. broad. With a soil of crystalline and eruptive rocks its densely forested interior attracts game hunters. The interior is peopled by head hunting Papuan stocks. Sago, tobacco, rice, coconut and sugar are grown by the Malay coast populations. It belongs to the Netherlands and is administered from Amboyna. Its area is 6600 sq. m. Pop. 105,000.

Ceramics Technical term denoting the study of the whole potter's art in every age and in every form, whether it be porcelain, stoneware, terra cotta or earthenware.

Cerastes Genus of vipers ranging from Algeria to Arabia and Syria. The horned viper, *C. cornuta*, about 2 ft. long, has in the male—sometimes in the female—small horn-like processes above the eyes. Its unprovoked attack may cause death within 30 minutes. The hornless *C. vipera* is the reputed asp of Cleopatra.

Cerberus In Greek mythology, the dog which guards the portal of the underworld. He was represented with two, three or many heads, and with a snake encircling him. Hercules' twelfth labour was to fetch him to earth, and take him back again. One visitant, according to Virgil, sought to pacify him with a sop, and so comes the phrase "a sop to Cerberus."

Cerdic Saxon invader and king. According to the *Anglo-Saxon Chronicle* he landed in England in 495 with his brother Cymric and a band of warriors. They defeated the Britons at Charford in Hampshire and made themselves kings of the district.

Cereal Grass cultivated for edible grains. As the chief source of breadstuffs cereals are of primary importance for human sustenance. They contain predominantly starch, besides proteins and vitamins. The outstanding cereals of temperate regions are wheat, barley, oats and rye, with an annual world harvest of 1425 million quarters. Among tropical cereals rice and millet are staple foods of hundreds of millions. Breakfast cereals are grains in puffed, shredded, flaked, granulated and other prepared forms.

Cerebration Action of the brain. Physiologists hold that molecular changes in the brain substance attend all mental processes in consciousness. In 1853 Dr. W. B. Carpenter, believing that these changes also continue automatically, called "unconscious cerebration" what Sir W. Hamilton had previously called "latent thought." It accounts, for example, for the sudden recollection of forgotten facts.

Cerebro-Spinal Fever Inflammation of the meninges or membranes investing the brain and spinal cord. It may occur sporadically, incited by tubercular or typhoidal microbes. The more malignant epidemic type,

going by such names as spotted fever, arises from a specific micro organism called meningococcus, capable of entering the body through the nose. The direct injection into the membranes of a serum introduced by Flexner and Jochmann has resulted in great saving of life.

Ceres Largest and first discovered of the minor planets. It was observed by Piazzi at Palermo in 1801, in connection with an organised search for a planet that, according to Bode's Law should intervene between Mars and Jupiter. Its diameter is 485 m and it is invisible to the naked eye.

Ceres Roman goddess, regarded as identical with the Greek Demeter (*q v*).

Cerium Metallic element, its symbol is Ce and its atomic weight 140. Iron grey, malleable, ductile, tarnishing in the air, it is not found native, but is derived from its ores the so called rare earth minerals. Of these the most important is monazite containing 35 per cent of cerium oxide and 8 per cent of thorium oxide both being used in incandescent gas mantles. The sparking substance of cigar lighters and shell flight tracers, is ferrocerium, an iron alloy with cerium, 70 per cent. Cerium is used sparingly in pharmacy.

Cernavoda Village in Rumania. Situated on the Danube's right bank, almost directly between Bukarest and the Black Sea port of Constantza, it was chosen for the site of the Carol Bridge, built in 1896 for the railway connecting the capital and the port. This double bridge was strategically important because it was the only bridge across the Danube between Belgrade and the Black Sea. It was seized by Germano-Bulgarian forces in Oct, 1916.

Certificate Document for attesting or certifying facts. Any signed attestation of facts is a certificate, but the word is now almost invariably applied to official or semi official documents, e.g., medical certificates, examination certificates and certificates by auditors of accounts.

Other certificates are those issued by registrars to prove births, marriages and deaths. Copies of these can be obtained from Somerset House, London, or the General Register Office, Edinburgh.

Still another kind is the Savings Certificate (*q v*) first issued during the Great War.

Cervantes Miguel de Spanish writer. Born at Alcalá in Oct 1547, the son of an apothecary, he lived for a time in Madrid and then went to Italy. In 1570 he became a soldier, was taken prisoner in 1576 by the Barbary pirates. Returning to Madrid in 1580, he next obtained employment as a collector of tithes. He died in Madrid April 23, 1616.

A scholarly man, Cervantes wrote a great deal of verse, a number of dramas, and the *Exemplary Novels*, which give a good idea of the life of the time. He lives, however, by his immortal novel, *Don Quixote*, published in two parts in 1605 and 1615. In 1612 and again in 1620 it was translated into English by Thomas Shelton and it has since been translated into nearly every other language of the world. It tells of the extraordinary adventures of the Spanish knight, or hidalgo, Don Quixote de la Mancha.

Cesarevitch Name used in Russia before 1917 for the eldest son of the tsar. It is also the name of a race run at Newmarket in Oct. This was started

in 1839 and was named after Alexander II, the Cesarevitch who was then in England.

Cession Word originally meaning to yield under physical or moral persuasion. It is now applied to the vacation of, or retirement from, an office, the giving up of property or rights and the handing over of possessions by one country to another.

Cessnock Town of New South Wales, Australia, railway terminus, about 25 m from Newcastle near an important coal field. Pop (1931), 13,860.

Cestodes Scientific name for tapeworm family. Parasitic in intestinal canals of vertebrates they usually pass their larval and adult life in different hosts. The mature worm throws out egg bearing segments that pass out, and if swallowed by a specific animal the larval stage proceeds. The consumption of this contaminated food restores the worm to its specific host. Cestodes infesting man include those derived from beef, mearly pork and freshwater fish. One species matures in dogs, after having lived its larval life in man.

Cetacea Order of aquatic mammals. Unrelated to fishes, they are lung-breathers, simulating fishes in having the forelimbs converted into flippers, no external hind limbs, fin like horizontal flukes instead of vertical tails and dorsal fins of skin without internal bones. They possess layers of oily fat, blubber, and consume invertebrate sea food. The whalebone sub-order with palates of horny plates, includes the right, Greenland and humpback whales. The toothed sub order includes cachalot, bottlenose, grampus, dolphins, narwhal and porpoises.

Ceteosaurus Extinct dinosaurian reptile. Its fossil remains found in the Jurassic oolites persist into the Wealden beds of the cretaceous period. Examples found at Peterborough and elsewhere show it as a gigantic small headed, long-necked reptile, sometimes nearly 70 ft. long and 10 ft. high.

Cetewayo King of the Zulus. He became ruler in 1856 and king in 1872. Differences arose between him and the British authorities in Natal which increased after 1877 when the Transvaal was annexed. The result was a war in which the Zulus were beaten and their king taken prisoner. After a visit to London in 1882, Cetewayo was restored to part of his kingdom. Almost at once, however, his enemies attacked him, and he was a fugitive on British soil when he died, Feb 8, 1884. Dinizulu was his son.

Cettinje Town of Yugoslavia, capital of the former Kingdom of Montenegro. It is connected with its port, Cattaro, by a remarkable zig zag road traversing the northern slopes of Mt. Lovtchen over a 3000 ft pass. Little more than a walled village it has a palace, a parliament house, museum and monastery. Pop 5500.

Ceuta Seaport of Morocco. Opposite the classical Ahlyla, one of the pillars of Hercules. Originally a Carthaginian outpost, it passed to Rome, then to Portugal and in 1580 to Spain. It is now in the administrative province of Cadiz. The chief building is the cathedral in the old town. There is a railway line to Totuan and steamboats connect with Algeciras. Pop 24,000.

Cévennes Range of mountains in Central France, in the de-

partments of Lovère and Gard, and runs across the land for about 330 m. The name is also used sometimes to include neighbouring ranges. The highest point is Mont do Lozère (5650 ft.). Coal and other minerals are found and in the south, where are the Cévennes proper, are large forest areas.

Ceylon Island in the Indian Ocean. It has been a British crown colony since 1796, before which it was Dutch and still earlier Portuguese. It is 270 m long and covers 25,500 sq m. Colombo is the capital. Other places are Kandy, the old capital, and the seaports of Jaffna, Trincomalee and Galle.

Ceylon is mainly flat, but in the south there are mountains, the highest peak being 8326 ft high. The island produces tea, cinnamon, rubber, copra and coconuts, as well as plumbago and precious stones. The British system of weights and measures is used and the unit of currency is the rupee. The island has a governor and an executive council. There is also a legislative council, partly elected. The demand for self-government led to the appointment in 1928 of a committee under the Earl of Donoughmore. The recommendations of this committee led to the establishment of a State council elected by adults, and a ministry responsible to it. Pop (1931) 5,312,548, about half being Buddhists. The inhabitants are called Sinhalese.

Cézanne Paul French painter. Born Jan 19, 1839, his earlier work was influenced by Poussin and El Greco. Swayed by the contemporary tendencies represented by Manet and Pissarro, he sought to portray nature in the presence of subtle manifestations of light. Some of his choicest work is now in the Louvre. He died Oct. 23 1906.

Chablis Town of France. Situated on the Serein, 11 m. E of Auxerre, it is the centre of a district producing vintage wines of excellent quality. The name is used in Britain for French still white wines. Pop 3090.

Chaco District of S America, usually called the Gran Chaco. Covering about 200,000 sq m, it is partly in Argentina, partly in Bolivia and partly in Paraguay. A flat region, a good deal of it is desert, but there are forests and lakes.

Chad English saint. He became Bishop of York about 664, Bishop of the Mercians about 668 and died in 672. St Chad made Lichfield into his bishopric where the cathedral is dedicated to him. His feast is kept on March 2.

Chad or Tchad. Lake of Africa. On the border of Nigeria, it covers 10,000 sq m in the dry season and perhaps double that area in the rainy one. The Chari River flows into it and it contains islands inhabited by tribesmen. Hippopotami, alligators, as well as fish of various kinds live in the lake. It is partly British and partly French. Chad Territory is a French colony covering 398,905 sq m.

Chaffinch British songbird, a species of finch (*Fringilla caelebs*). The ashy-brown female, usually migrating southward without the male, breeds throughout Britain and N Europe. The male, 6 in long, with reddish breast, olive-yellow wings and white, forked tail-feathers, has sharp or sweet call notes. There are two broods of five blotched purple-grey eggs laid in compact, symmetrical nests.

Chagford Village of Devonshire. It stands on the east side of

Dartmoor and is a good centre for holiday makers. It is reached from Moreton Hampstead, 3 m away, on the G W Rly. Pop 1460.

Chagos Group of coral atolls S of the Maldives in the Indian Ocean. On the direct route from the Red Sea to Australia, the group is administered from Mauritius. Total area 76 sq m. Pop about 1000.

Chaillu Paul Belloni Du. French explorer. Born July 31, 1835, he led an expedition into Central Africa, where he spent four years. His book, translated into English as *Explorations and Adventures in Equatorial Africa*, 1861, was regarded by some as fiction owing to its accounts of the strange men and animals encountered, but later it was admitted as true. After another expedition he wrote *A Journey to Ashango Land*, 1867. Chaillu then turned his attention to Russia and a series of journals there produced several books, including *The Filling Age*, 1889. He died in St Petersburg, April 29, 1903.

Chain Name given to a series of loops or rings of metal linked together. There are several kinds adapted for special purposes, among these is the open link chain, the individual link being a ring of varying shape welded in large chains or brazed or soldered in others. The stud link chain has the link strengthened by a middle bar or stud, while the pin and bar type has the link formed of two short bars joined at either end by pins.

One of the greatest chains in the world is that used to strengthen the dome of St Paul's Cathedral, London. It was put in position during the repairs of 1925-30 and weighs 30 tons.

In surveying the term is used for a measuring chain of 100 iron or steel wire links, and is 22 yards in length.

Chair Seat that developed from the stool by the addition of a back and sometimes of sides. In the Middle Ages chairs were comparatively rare, being only found in the homes of the rich.

In England, London is the centre of the chair-making industry, but a large number are made at High Wycombe. Famous historical chairs are the Coronation Chair in Westminster Abbey and the Byzantine Chair in St. Peter's at Rome.

Chairman Person who presides over a meeting. Every limited company must have a chairman. In each House of Parliament there is a Chairman of Committees who presides when the House sits on a committee. County and district councils have a chairman or president. The mayor acts as chairman of a city or town council.

A chairman calls upon the speakers, keeps them as far as possible to the business in hand, and, if necessary, prevents anything like disorder. If there is voting he is responsible for seeing that it is conducted properly and usually he has a casting vote. He can declare the meeting at an end or adjourn it.

Chaise Light travelling vehicle drawn by one or more horses. After the introduction of railways the vehicle became a pony chaise for elderly and invalid persons.

Chalcedon Greek city in Asia Minor. It stands at the outlet of the Bosphorus, opposite Istanbul. It was founded about 685 B.C. by colonists from Megara, but later became a Roman city. It was taken by the Persians and then by the Turks, who carried off the decorations of its

fine buildings to adorn Istanbul. A modern town called Kadikou stands on the site. Pop 30,000.

The fourth general council, held here in 451, declared against the heresy of the Mono-physites and made Constantinople next to Rome in ecclesiastical importance.

Chalcedony Semi-precious stone. A variety of native quartz mixed with opaline silica, not crystallised but minutely crystalline and sometimes stactolite. It is found in transparent or translucent masses in veins and rings or as seashore pebbles. This commonest of gem stones occurs in various forms, as agate, bloodstone, carnelian, chrysoprase and onyx.

Chaldea Biblical place name. It denoted land S.E. of Babylonia, with headquarters at Bit Yakin. Its Prince Merodach-baladan II captured and became king of Babylon, 721 B.C. (Isaiah xxxix, 1). Later a Chaldean or neo-Babylonian dynasty was established by Nabopolassar about 625, and throughout this period, which included Nebuchadnezzar's reign, Chaldea denoted all Babylonia.

Chalfont Name of two villages in Buckinghamshire, Chalfont St Giles and Chalfont St Peter. The former 3 m. from Amersham contains the cottage where Milton finished *Paradise Lost*. It is now national property.

Chalgrove Village of Oxfordshire. It is 6 m. from Wallingford and is famous for the Civil War skirmish here on June 18, 1643, in which John Hampden was mortally wounded.

Chaliapin Feodor Ivanovitch. Russian bass singer. Born at Kazan in 1873. He was a shoemaker who, through the cathedral choir, reached operatic singing in 1890, meanwhile working on the railway. A Tiflis engagement in 1892 took him to St. Petersburg (Leningrad) in 1894 and to Moscow in 1896. He achieved brilliant successes in London in 1913-4 which were repeated in New York. He was in London, in 1926-7, and again in 1931.

Chalice Sacred drinking vessel used in the Christian sacrament of the communion or eucharist. The early chalices were made of horn, wood and glass, but as wealth increased of gold and silver.

Chalk Earthy variety of limestone. Soft and white, it contains from 94 to 98 per cent. of calcium carbonate, readily soiling the fingers when crumbled. It comprises mostly minute foraminiferous shells laid down in shallow waters across Europe during the Cretaceous period. Presenting extensive formations in England, up to 1200 ft. thick. Its annual output for industrial purposes is about 6,870,000 tons. It is burned for lime used in making Portland cement and, when levigated, whiting. In addition it is used in the mineral water and oilcloth manufacture. The Downs and other hills in the south of England are of chalk.

Chalk Farm District of London. In the metropolitan borough of St. Pancras, it has stations on the tube railway and the L.M.S., which has extensive yards here. The name is a corruption of Chalcoot Farm and the place was once a favourite duelling ground.

Chalmers James. Scottish missionary. Born in Argyllshire in 1841, he joined the staff of the Glasgow City Mission. In 1865, after studying at Cheshunt College,

he became a Congregational minister and in 1866 went out as a missionary to Raratonga, on the Hervey Islands. He worked there for ten years, and was then sent to New Guinea. On April 7, 1901, he and some followers were murdered by cannibals.

Chalmers Thomas. Scottish divine. Born at Anstruther, March 17, 1790, he was educated at St. Andrews and became minister of Kilmory, Fifeshire, in 1803. In 1815 he removed to Glasgow, where he wrote his *Problems of Poverty*. In 1823 he went back to St. Andrews as Professor of Moral Philosophy and in 1828 became Professor of Theology at Edinburgh University. A leader of the Disruption in 1843 he became the first moderator of the new Free Church and was chosen principal of its college in Edinburgh. He died May 30, 1847.

Châlons Town of France. Châlons-sur-Marne the capital of the Marne department, stands on the Marne, 107 m. E. of Paris. It is the centre of the trade in champagne, which is stored in galleries cut in limestone hills, and has breweries and hooft factories. The chief buildings are the cathedral, several old churches and the town hall. Pop. (1931) 32,307.

Near Châlons, in A.D. 451 was fought the great battle in which the Huns, under Attila, were defeated by the Romans and the Visigoths. It took place on the Catalaunian Fields and was one of the decisive battles of the world.

Chalybeate Waters Natural mineral waters containing minute quantities of iron salts. They are stimulant and tonic and, when sulphated, are astringent and useful for skin disease. When gaseous carbonic acid is present in them they are used by "heart" patients for bathing purposes. The waters at Harrogate and Leamington are chalybeate.

Chamberlain Originally the officer in charge of domestic affairs in royal households or monasteries. In Great Britain one such official became the Lord Chamberlain, a court official who regulates the etiquette of the palace and acts as the official censor of plays.

Corporations sometimes appoint a chamberlain, as in London, where he is treasurer of the corporation, admits persons to the freedom of the city and, in his court, determines disputes between masters and apprentices.

Chamberlain Arthur Neville. Born in Birmingham, March 18, 1869, he was the younger son of Joseph Chamberlain and half brother of Sir Austen Chamberlain. Educated at Rugby, he was in business in the West Indies, afterwards taking part in the public life of Birmingham. In 1915 he was Lord Mayor of the city. In 1916 he was appointed Director of National Service and in 1918 he entered Parliament as M.P. for a Birmingham division. He was Postmaster General, Minister of Health and then Chancellor of the Exchequer in the Unionist Ministry of 1922-24 and throughout the Ministry of 1924-29 was a most energetic and successful Minister of Health. He was Chairman of the Conservative party organisation, 1930-31 and later 1935, and Chancellor again from 1931, retaining that post after the general election of 1935.

Chamberlain Joseph. English statesman. Born at Camberwell, London, June 8, 1836, son of a boot-

manufacturer, he was educated at University College School, and, after a short period in business in London, went to Birmingham to join a screw-making firm owned by his relatives, the Nettlefolds. He became a partner and, under his direction, the business prospered until in 1874 he retired to devote himself to public life. He was already a member of the town council and the school board and an active and combative advocate of radical ideas. From 1873-76 he was Mayor of Birmingham.

In 1876, as a Radical, Chamberlain was elected M.P. for Birmingham and he retained his seat for W. Birmingham from 1885 until his death. In 1880 he was made President of the Board of Trade under Gladstone. While in office he advocated substantial reforms, not always acceptable to his colleagues. He resigned office with them in 1885, but joined Gladstone's next ministry in Jan. 1886. Refusing, however, to accept Home Rule he resigned in March and became one of the leaders of the Liberal Unionists. His incisive speeches had much to do with the defeat of the Home Rule project.

Chamberlain remained out of office until 1895 when he became Colonial Secretary under Lord Salisbury. He put new life into the administration of the Empire, but his policy just before the S. African War was much criticised. He went to Africa in 1902 and on his return started a campaign in favour of tariff reform. This broke the Unionist party and in 1904 Chamberlain resigned office to be free to preach his ideas. He did this until his health gave way in 1906 and he was an invalid till his death at Highbury, Moor Green, his Birmingham residence, July 20, 1914. He was three times married and left two sons, Joseph Austen and Arthur Neville.

Chamberlain was a remarkably forceful speaker and an unusually powerful debater. His extraordinary energy showed itself in everything he touched. Although he could be, and often was, a bitter opponent, he was a remarkably staunch friend. In Birmingham are several memorials of him, the greatest of which is the university, of which he was the first chancellor.

Chamberlain Sir Joseph Austen British politician. The elder son of Joseph Chamberlain, he was born Oct. 16, 1863, and educated at Rugby and Trinity College, Cambridge. In 1892 he entered Parliament as M.P. for E. Worcestershire, which seat he retained until he succeeded his father as M.P. for W. Birmingham in 1914. His long official life began in 1895 when he was made Civil Lord of the Admiralty. In 1900 he became Financial Secretary to the Treasury, in 1902 Postmaster-General, and in 1903 Chancellor of the Exchequer. He was out of office between 1905 and 1915.

From 1915-17 Chamberlain was Secretary for India in the Coalition ministry, resigning when the Indian Government was censured for its share in the conduct of the expedition to Mesopotamia. In April, 1918, however, he rejoined the ministry and in Jan., 1919, succeeded Bonar Law as Chancellor of the Exchequer and head of the Unionist wing of the coalition. He remained outside the Unionist ministry of 1922-23, but from 1924-1929 was Foreign Secretary under Baldwin. In 1925 he was made a K.G., after the signing of the Locarno Pact.

Chambers Term used for rooms in which barristers do their work before appearing in court. In London,

the buildings in the Temple, Lincoln's Inn and Gray's Inn are given up to chambers.

Another kind of chambers are those in the courts of law in London. In these questions preliminary to trials are decided, and applications of all kinds in connection with forthcoming trials are made. Questions of costs are often settled in chambers. In the chancery division the cases in chambers are heard by masters. In the King's Bench division, one of the judges sits in chambers.

Chambers William Scottish publisher. Born in Peebles, April 16, 1800, he was apprenticed to a bookseller in Edinburgh. Soon he set up in business for himself and with his brother, Robert (1802-71), founded the business of W. & R. Chambers. The brothers collaborated in a *Gazetteer of Scotland* and started *Chambers's Edinburgh Journal* which still exists as *Chambers's Journal*. The firm's other ventures were many and included *Chambers's Encyclopaedia*, *Chambers's Biographical Dictionary* and *Chambers's Cyclopaedia of English Literature*, all useful works of reference. William Chambers was twice lord provost of Edinburgh, and gave money to restore St. Giles Cathedral. He died May 20, 1883. The firm of W. & R. Chambers still flourishes in High St., Edinburgh.

Chambord Town of France. It stands on the Cosson, tributary of the Loire, 8 m. from Blois. Its chateau is one of the finest in France. Built by Francis I. It was a royal residence till the Revolution. It was bought by Henry, a grandson of Charles X., who took from here the title of count.

Chambord Comte de French prince. Born in Paris, Sept., 29, 1820, he was a posthumous son of the Duke of Berri and a grandson of Charles X. He fled with his grandfather to England in 1830, when Louis Philippe accepted the French throne. Later he established himself at Graz, where his tutor instilled into him those clerical and legitimist ideas which prevented him from succeeding as Henry V. after the Revolution in 1848. He had two more chances of becoming ruler, in 1871 after the conclusion of the Franco-Prussian War, and in 1873 after the downfall of Thiers, but he refused them both, because he would not recognise the tricolour. When he died, Aug. 24, 1883, the senior branch of the Bourbons became extinct.

Chameleon Genus of reptiles. They differ from true lizards in their telescopic tongues with viscid tips for insect capture, eyeballs moving independently beneath circular lids, opposable toes and prehensile tails. They are famed for their power of changing colour according to their environment, but this power is limited. The common species, 12 in all, ranges the African and Asiatic Mediterranean coasts. There are three S. Asian species, and fifty others, equally divided between Africa and Madagascar.

The constellation Chameleon lies between the Centaur's Foot and the S. ecliptic pole.

Chamois Animal found in the Alps and other mountain areas of Europe and Asia Minor. It is a kind of antelope and is remarkable for its jumping powers and sure-footedness. Its average height is about 2 ft. and it has a brown fur and short curved horns. The skin is used for gloves and other purposes.

Chamonix Mountain valley on the N.W. side of the Mt. Blanc range. The valley, 12 m. long, watered by the

Arve, contains a village, 55 m. from Geneva, 3425 ft. high, favoured by tourists because it is contiguous to the Mer de Glace and six other glaciers. Horo De Saussure first ascended Mt. Blanc, 1786. Pop 2550.

Champagne Before the Revolution a province of France. In the east of the country, it is the district of the Marne and the Seine, and is famous for its sparkling wines. Its chief towns are, Reims, Troyes and Soissons.

There was a good deal of fighting in Champagne during the Great War, especially in 1914 and 1915. In Sept and Oct., 1915, the French conducted a great offensive in this region, but it produced little but losses.

Champ-de-Mars Open square in Paris. Situated near the Jena Bridge over the Seine, it is 1100 yds., by 550 yds., and was used July 14, 1790, for the first anniversary of the taking of the Bastille. It was the scene of international exhibitions in 1867, 1878, 1889 and 1900. The Eiffel Tower was built at one end. The square commemorates annual assemblies held by the Frankish kings in March, the month of Mars.

Champion One who fights the cause of another. The laws of the Lombards allowed champions to fight for those who could not defend themselves owing to age, illness, youth or sex.

The English kings have their champion. His duty was at the coronation of a new sovereign to ride into Westminster Hall throw down a gauntlet and challenge anyone who denied the right of the king or queen to succeed. This ceremony took place for the last time when George IV was crowned in 1821. The office still remains and is held by the family of Dymoke or the holders of the Manor of Scrivelshy in Lincolnshire.

The Seven Champions of Christendom are St. George (England), St. Andrew (Scotland), St. Patrick (Ireland), St. David (Wales), St. Donys (France), St. James (Spain), St. Anthony (Italy). To day, winners of games of all kinds are called champions.

Champlain Lake in the United States and Canada. Situated between Vermont and New York States, it is 110 m. long and covers 488 sq. m. It penetrates Quebec for 6 m. and the Richelieu River carries its waters to the St. Lawrence. It was discovered by Samuel de Champlain in 1609. Large vessels can navigate the lake in which there are 50 islands.

Champlain Samuel de French explorer. Born in Saintonge he became a soldier and then a sailor. In 1603 he sailed along the St. Lawrence past where Montreal now stands and in 1608 he made a settlement at Quebec and annexed the country for France. In 1629 the English took him a prisoner to England but he returned to Canada and died at Quebec, Dec. 25 1635.

Chanak Town of Turkey. It stands at the narrowest part of the Dardanelles on the Asiatic side. Fortified during the Great War it was unsuccessfully bombarded by British and French warships in March, 1915.

Chancel The eastern part of a church, separated usually from the nave by a screen or railing. It is also known as the choir, and is used by the clergy and their assistants in the services.

Chancellor Name of several high officials. In the Roman law courts there were clerks called *cancellarii* because they sat behind screens or cancelli. Later the Frankish kings used this name for a royal official. In England it took the form *chancellor*.

The chancellor became important about the time of Edward I., when he took the place of the justiciar as the chief minister. He kept the great seal and when his duties were confined to legal matters he became Lord High Chancellor.

The exchequer had a chancellor, at first a subsidiary official under the Lord High Treasurer and then the first Lord of the Treasury. In time he became responsible for the country's finances. The change took place early in the 19th century and to day the Chancellor of the Exchequer is one of the most important members of the cabinet. Other chancellors are those of the Duchies of Lancaster and Cornwall.

There are in Britain chancellors of other kinds. Each university has a chancellor, usually a man of distinction in public life, while its vice chancellor, the acting head, is one of the resident members. These chancellors are elected for life. Each bishop has a chancellor who is a lawyer and presides over the courts of the diocese. Cathedrals have chancellors, one of the resident clergy. In Germany, the Prime Minister is called the Chancellor.

Chancellor Richard English navigator. In the *Bonaventure* he accompanied Sir Hugh Willoughby's expedition in 1553 in search of a N.E. passage to India. Separated from his companions by a storm off the Lofoden Islands he found his way to Moscow and there negotiated the first English trading treaty with Russia. Returning from a second visit to Moscow he lost his life in the wreck of the *Bonaventure* off Aberdeen-shire, Nov. 10, 1556.

Chancellorsville Village of Virginia. It is 70 m. from Richmond and was the scene of a great battle in the American Civil War, May 1-5, 1863. The Federal Army, under Hooker, was attacked by the Confederates under Stonewall Jackson and forced to retreat across the Rappahannock, with a loss of 16,000 men, and many guns and rifles. Jackson was fatally wounded when returning from a reconnaissance.

Chancery Court of the Lord Chancellor. Its origin dates back to the time of Edward the Confessor, during whose reign royal petitions became so numerous that they were referred to the chancellor. In 1873 the court was made one of the three divisions of the supreme court of justice. The Judicature Act, 1925, gives it jurisdiction over actions in which redress cannot be obtained at common law. The court consists of the Lord Chancellor and six judges divided into groups of three. The acting head is the master of the rolls.

Chancre Term formerly used to designate any sore or ulcer, but now applied almost exclusively to the primary lesion of syphilis, which used to be called a hard or Hunterian chancre. It appears as a small, hard, translucent swelling at the infected spot.

Chanctonbury Hill on the S. Downs in Sussex. It is about 3 m. from Steyning and just over 800 ft. high. The trees on the summit make it

a conspicuous landmark There are vestiges of a prehistoric earthwork (Chanctonbury Ring) and of a Roman camp

Chandos Duke of English title borne from 1719 to 1789 by the family of Bridges Sir John Bridges was made Baron Chandos of Sudeley in 1554 and his descendant, James, the 9th baron, was made a duke in 1719 He built a magnificent house at Canons Middlesex He died in 1744

Sir John Chandos was a noted soldier in the time of Edward III and one of the first of the Knights of the Garter

Changeling Child substituted for another, usually at birth There was formerly a belief that babies, before christening, were in danger of being stolen by fairies and that any weakly or peevish child was a changeling

Chang Tso Lin Chinese politician Born in Manchuria, he became Governor of Fengtien and later of other provinces and was, when civil war began, the most powerful man in the northern part of the country In 1925 he entered Peking and remained supreme there until 1928, when he was driven out by the Nationalist force from Nanking He was fatally wounded by a bomb on June 21, when returning to Manchuria

Channel Ferry Service of barges across the English Channel It was established by the Royal Engineers during the Great War with a depot at Richborough in Kent A day and night service was continued from 1914 until the armistice A train ferry service was also established in 1918

Channel Islands Group of islands in the English Channel, near the coast of France It consists of Jersey, Guernsey, Alderney and Sark, and many small islands, including Herm, Brechou and Jethou Their area is 73 sq m The islands belong to England, but have their own laws and methods of government Most of the people speak French Vegetables, fruit and flowers are grown for the English market and cattle rearing and fisheries are carried on The islands are a favourite holiday resort and can be reached by steamer from Southampton and Weymouth, while there is a regular air service with Southampton and London Pop 90,000 See ALDERNEY, GUERNSEY, JERSEY, ETC

Channel Tunnel Proposed tunnel between England and France The tunnel, about 31 m long, is to contain twin tubes, through which electric trains would run from a point between Dover and Folkestone to Wissant, near Calais, shortening the journey from London to France by about 14 hours The cost has been estimated at about £25,000,000 In 1876 a company was formed to carry out a similar idea, but the work was stopped in 1882

In 1930 a committee reported in favour of the project, but suggested that it should be done by private enterprise The Government, however, decided against it, presumably on the advice of the Committee of National Defence

Channing William Ellery American author Born at Newport, Rhode Island, April 7, 1780, he was educated at Harvard and was minister of a Congregational church at Boston from 1803 till his death on Oct 2, 1842 Channing was a Unitarian and his sermons and writings exercised great influence in both America and England.

Chant Form of sacred song sung on a few notes In the Church of England the psalms are usually chanted In some Nonconformist churches certain passages of scripture are chanted or sung Chanting is also part of the service in the Roman Catholic Church The earliest form was called the Ambrosian because introduced by S Ambrose of Milan It was superseded by the Gregorian

Chantilly Town of France It stands on the little River Nonette, 25 m from Paris Well known for its racecourse, on which the French Derby is run It gives its name to a kind of lace Pop 5100

Chantilly is famous for its châteaux, one, a beautiful building called the Chatelet, dating from the 16th century, the other the magnificent Grand Chateau, built in the 19th century by Henry, Duke of Aumale, a son of Louis Philippe, on the site of a historic structure destroyed at the Revolution It is built in the Renaissance style round a courtyard and, with its art and other treasures, was bequeathed by the Duke to the Institut de France Near by is the Chateau d'Enghien, which dates from 1770

Chantrey Sir Francis English sculptor Born in Derbyshire, April 7, 1781, he began life as a portrait painter in Sheffield Soon, however, he moved to London, where he became known for his sculptures In 1818 he was elected R A and he died Nov 25, 1841

Chantrey's most famous work is perhaps "The Sleeping Children" in the cathedral at Lichfield His chief statues are "William Pitt" (Hanover Square, London), "Canning and Roscoe" (Liverpool Town Hall), "Dear Jackson" (Christ Church, Oxford), "Viscount Melville" (Old Parliament House, Edinburgh), "Sir Joseph Banks" (British Museum) and "James Watt" and "Sir John Malcolm" (Westminster Abbey) He also wrought some notable equestrian statues

Chantrey left £150,000 which eventually came into the hands of the Royal Academy to be used for the purchase of works of art It is known as the Chantrey Bequest In 1904 a select committee of the House of Lords issued its report on the Bequest and made certain recommendations as to its administration The pictures bought with this money, nearly 200 in number, are in the Tate Gallery

Chantry Chapel in a cathedral or church In the Middle Ages it was not uncommon to build a chantry, which often contained the tomb of the dead man in which masses are regularly sung or chanted for his soul There are fine chantries in Winchester Cathedral and in Westminster Abbey

Chanty Song sung by sailors when at work The leader or chanty man, sings one or two lines and the rest of the crew join in the chorus, their physical actions emphasising certain words of the song Some of these sea chanties have become famous, an example being "What shall we do with the drunken sailor" Also spelled "shanty"

Chapbook Little, stitched tract. It consisted usually of a vulgarised version of a popular story or religious treatise and was sold by chapmen or itinerant booksellers Chapbooks were first printed in France for the populace after the invention of the printing press and were introduced into England early in the 16th century

Chapel Place devoted to Christian worship In cathedrals and large

churches a chapel is a part of the building railed off from the main part and provided with an altar. Such are the lady chapels and other chapels in the English and other cathedrals and churches. Some of these were built by a particular family as burial places. An example is the Bathurst chapel at Gloucester. The places of worship in colleges and schools are also called chapels, such as the chapel at King's College, Cambridge, and the one at Eton. At one time Nonconformists used the word chapel for their places of worship, but most of them now prefer the word church.

In printing offices the workmen call their trade union groups and meetings chapels. The head of the group is called the father of the chapel.

Chapel-en-le-Frith Market town of Derbyshire. It is 20 m from Manchester, on the L.M.S. Rly. The industries include paper making, and near are limestone quarries and coal mines. Pop 5283.

Chapel Royal Place of worship attached to the royal court. The chief chapel royal is in St James's Palace, London. The chapels royal have a dean, sub dean, priests in ordinary and gentlemen and children of the choir. The Savoy chapel, London, is still called a chapel royal. There is a chapel royal at Holyrood. St George's chapel, Windsor is a chapel royal.

Chaplain Priest or minister officially discharging specific non-parochial duties. He may be attached to the sovereign, his representatives and defensive forces or to public or private institutions. There are 36 chaplains to the king at the English court who form the college of chaplains, and he has chaplains in Scotland. Other important personages such as lord mayors and mayors, have chaplains. There are chaplains at schools and colleges, at embassies and prisons. The House of Commons has a chaplain. There are Anglican Roman Catholic and Free Church chaplains in the British Army, Navy and Air Force. In the army they are under the Chaplain General, in the navy under the Chaplain of the Fleet and in the air force under the Chaplain in Chief of the Air Force. All are ranked as commissioned officers.

Chaplin Charles Spencer American film artist. Born in Camberwell, London, in 1889, he was a son of Charles Chaplin a variety comedian. He started work early in life in the variety business and eventually played leading parts in Fred Karno's companies in many of the music halls and variety theatres of England. From 1910 till the end of 1913 he interpreted comic sketches in the United States. For the next four years he appeared in moving pictures of the Keystone Comedy Co., made at Los Angeles, California. Early in 1918 he formed his own company for producing such pictures and erected large studios at Hollywood. Among the most successful films which he has released are *Shoulder Arms*, *The Kid*, *The Gold Rush*, *The Circus* and *City Lights* (1931). In 1936 he appeared in a new serious film, *Modern Times*.

Chaplin Viscount. English politician and sportsman. Born Dec 22, 1841, the son of a clergyman, Henry Chaplin went to Harrow and Christ Church, Oxford. He inherited Blankney Hall and estates in Lincolnshire and became known on the turf, especially after 1867, when his horse Hermit

won a memorable Derby. In 1876 he married Lady Florence Leveson Gower, a daughter of the 3rd Duke of Sutherland (d 1881).

In 1866 Chaplin entered Parliament as M.P. for Mid-Lincolnshire, from 1885 1906 he represented the Sleaford division and from 1907 16 the Wimbledon division. In 1885 he took office in the Unionist ministry as Chancellor of the Duchy of Lancaster, from 1886 92 he was President of the Board of Agriculture, and from 1900 5 of the Local Government Board. In 1916 he was made a viscount, a title which passed on his death, May 29, 1923, to his son, Eric. Lord Chaplin was regarded as a protagonist of the agricultural interests and a protectionist of the old school.

Chapman Arthur Percy Francis English cricketer. Born Dec 3, 1900, he was educated at Uppingham and Pembroke College, Cambridge. He represented both school and university at cricket and in 1920 played for the Gentlemen against the Players in county cricket he played for Buckinghamshire and then for Kent. In 1922 and 1924 Chapman went to Australia with cricket teams. In 1926 he was chosen captain of England for the last of the five test matches and he was again captain for four of the test matches of 1930. In the interval he had captained the team that, in 1928 29, won four out of five of the test matches in Australia. In 1931 he became captain of Kent. He is a fine batsman and a wonderful fielder.

Chapman George English poet. Born in Hertfordshire in 1559, he went to Trinity College, Oxford. He wrote both comedies and tragedies. The former are not remarkable, the latter, *Bussy d'Ambois*, *The Admiral of France*, etc., dramatisations of contemporary French politics, have recently been interpreted as *dramas à clef* designed to satirise English politicians. His best work is his translations of Homer's *Iliad* and *Odyssey*. He died May 12 1634.

Chapter Permanent body of canons and prebendaries of a cathedral or collegiate church. It is usually presided over by the dean. In the Church of England the chapter, with the dean, forms the governing body of the cathedral and in theory elects the bishop. The Roman Catholic Church has chapters for its cathedrals.

The place where the chapter meets is called the Chapter House. This is often connected with the cathedral by the cloisters. Notable examples are at Salisbury, Lincoln, Canterbury, York, Worcester, Hereford and Westminster Abbey.

Char Fish of the salmon type. It varies in weight from a few ounces to two pounds and frequents English lakes, particularly Windermere, Coniston and others in the North Country. It is also found in the lakes of Scotland and Ireland. It is valued as a table fish.

Charade Kind of riddle, which has developed into an indoor game. It is presented as a dramatic sketch, the answer to which is a single word. Each of the scenes of the sketch represents one syllable or more of the word. Often an additional scene suggests the whole word.

Charcoal Carbonaceous residue obtained by the smothered combustion of vegetable, animal or combustible mineral substances. Wood charcoal an impure, amorphous form of carbon containing at least 92 per cent, is a porous solid which, when

burned as fuel is flameless and smokeless. It is an ingredient in gunpowder, and serves also as a filter, a gas absorbent, and non-conductor packing for refrigerators. Used dry it is prescribed for flatulence in cachets in 20-60 gr doses or in charcoaled biscuits. It produces a form of iron called charcoaled iron which yields the best or charcoaled tinplates. Animal charcoal, or bone black, destroys vegetable dyes and alkaloid poisons.

Charcot Jean Martin. French physician. He was born in Paris, Nov 29, 1825 and took his medical degree in 1853. In 1860 he was appointed Professor of Pathological Anatomy to the Medical Faculty, and two years later became attached to the Salpêtrière, where he established a neurological clinic. His work in nervous and mental diseases became famous, and he was a pioneer in the use of hypnotic methods of treatment. His medical research work also included work on muscular atrophy, and certain affections of the joints in locomotor ataxy have been named Charcot's disease. He died Aug 16, 1893.

Charcot Land District of the Antarctic Ocean. It lies to the S of Graham Land and is named after the French explorer Jean Baptiste Etienne Auguste Charcot, who did valuable surveying work in this region in 1903, 1909 and 1910.

Chard Borough and market town of Somerset. It is 15 m from Taunton and 143 m from London, on the S and G.W. Rlys. The manufactures include lace. There is a school dating from 1671 which was refounded in 1928. Pop (1931) 4053.

Charge Word meaning load or burden. It is applied to the ammunition in a firearm, to the electricity in a battery and to the explosives in blasting operations.

Legally, a charge is a mortgage, i.e., an equitable transfer of a title to goods or property as security for a loan. The word is also used to denote responsibility and, in military and sporting matters, a violent advance.

Charge In heraldry a device upon a coat of arms. It represents either those things which keep their own names (proper), or bear technical names such as chevron, etc (common).

Chargé d'Affaires Member of the fourth class in the diplomatic service. Those above them are ambassadors, envoys and ministers. Sometimes a chargé d'affaires is the head of a legation, e.g. the British legation in Cuba is under a chargé d'affaires.

Charing Cross District of London. At the west end of the Strand it is the official centre for the measurement of taximeter distances and other purposes. Northumberland Avenue and Whitehall radiate from here and Trafalgar Square is on the north side. Here is Le Sueur's fine equestrian statue of Charles I. The chief building is the station of the Southern Rly. Charing Cross Hospital is in King William St.

The name is that of the village of Charing, or Chering. Here Edward I erected a cross in memory of his wife, Eleanor. This was pulled down in 1647 and 200 years later a modern one was built. A scheme for removing the station to the other side of the river and making a fine new bridge over the Thames was recommended by a royal commission and accepted by those concerned. In 1930, however,

Parliament declined to agree to it, but the idea, was again under consideration in 1931.

Chariot Two-wheeled, horse-drawn vehicle, used in ancient times for war, the chase, and processions. The Greeks and Romans gave up their use at an early date except for racing, but in other countries they were used for war, particularly by the Persians and Britons.

Charity Commission Body set up in Great Britain in 1853. Its function is to supervise and, if necessary, remodel existing charitable organisations, and it has power in certain cases to apply charitable monies to purposes different from those indicated in a will, where the provisions of the will are obscure. The headquarters are at Ryder Street, St. James's, London, S.W. 1.

Charivari Uproar made by the clanging of pans and kettles and by hissing and groaning directed against some unpopular man or woman. The name *Charivari* has been given to various satirical journals and is the sub-title of *Punch*.

Charlecote Village of Warwickshire. It is about 5 m. from Warwick and is famous for its park. The house, which stands in a 250 acre deer park, was built by Sir Thomas Lucy, the supposed original of Shakespeare's Justice Shallow.

Charlemagne Frankish king and Roman emperor. The elder son of the Frankish King Pepin, he was born about 742. In 768 he and his brother, Carloman, inherited their father's kingdom. In 771 by Carloman's death Charles became King of all the Franks.

Charles was a great soldier. He conquered the Saxons and the Lombards; he fought in Spain against the Saracens and in Germany against the Magyars. He was crowned emperor in Rome in 800. His capital was Aix-la-Chapelle, where, Jan 28, 814, he died.

Charlemagne was fond of the society of learned men and did a good deal to set up schools. He loved music, was interested in theology, and was a builder of churches and palaces. He was strong in body and mind, with great ambitions, a powerful and determined will, and interests far in advance of his age. His only legitimate son was his successor Louis. His life was written by his secretary and friend Einhard.

Charleroi Town of Belgium. It is situated on the Sambre, 22 m E of Mons and 9 m S.W. of Namur. On a great coalfield, its extensive iron, chemical and glass industries are facilitated by canalised connections with Brussels and N France.

Charleroi's strategic importance was emphasised in Aug 1914, when Germany's invading armies fanned out towards Mons, Charleroi and Namur, hoping to envelop the Allied forces. While the British were fighting at Mons, the French were attacked near Charleroi on Aug 21. The Germans forced their way over the Sambre, entered Charleroi and compelled the army under Lanrezac to retreat in some disorder. The engagement lasted until the 24th. Pop (1931) 28,612.

Charles I. King of Great Britain and Ireland. Born at Dunfermline, Nov 19, 1600, the son of James VI King of Scotland, later James I of Great Britain, he became Prince of Wales in 1616, after the death of his elder brother, Henry

In 1625 he became king and married Henrietta Maria, a French princess, whose steady adherence to Roman Catholicism led her husband into trouble. Other troubles came through his friendship with the unpopular Duke of Buckingham and still more through his own extravagance and obstinacy.

Having quarrelled with his Parliament, Charles governed without one for 11 years (1629-40), his chief advisers being Wentworth (Earl of Strafford) and Land. He raised money in various illegal ways and forced a liturgy upon the Scots. In Nov., 1640, the Long Parliament met and Land and Wentworth were put to death. Two years later the civil war began. At first the king was successful, but after Naseby in 1645 his fortunes quickly declined. He gave himself up to the Scots at Newark in 1646. They handed him over to the English, who kept him a prisoner while negotiations and fighting went on alternately, or sometimes concurrently. Charles was tried before a court set up by Parliament, found guilty and, on Jan. 30, 1649, beheaded at Whitehall. He left three sons, Charles II, James II and Henry, Duke of Gloucester, and three daughters.

Charles II. King of Great Britain and Ireland. Born in London, May 29, 1630, he was the second son of Charles I. His eldest brother having died in infancy he was made Prince of Wales. In 1648, his father's cause being lost, he took refuge in the Scilly Islands and then in Jersey. In 1647 he joined his mother in Paris, but was in Holland when Charles I was executed and he became nominally king. In 1650 he accepted the throne of Scotland and went to that country. His army invaded England, but was beaten at Worcester and Charles managed, with great difficulty, to get back to France. For nine years, surrounded by a court of exiles, he lived in France and the Netherlands, generally in needy circumstances.

In 1660, having issued his declaration of Breda, Charles returned to England and was hailed as king. He reigned for 25 years, showing a great deal of wisdom, although by no means without difficulties and humiliations. He kept on good terms with France and by unscrupulous methods maintained a fair amount of personal control at home. In the end he became a Roman Catholic and he died, without legitimate issue, Feb. 6, 1685. His wife was Catherine, a Portuguese princess. His numerous mistresses included the ladies who became Duchesses of Portsmouth and Cleveland as well as Nell Gwynn and Lucy Walters, the mother of the Duke of Monmouth. Charles is remembered for his amours and his wit, his good temper and his interest in art and science are equally worthy of mention.

Charles Name of seven rulers of the Holy Roman Empire. The first was Charles the Great or Charlemagne (q.v.). The second was his grandson, Charles the Bald. He got the western part of the Frankish realm in 843 but was not crowned emperor until two years before his death, Oct. 6, 877. Charles III, called the Fat, was emperor from 882 until deposed in 887. He died Jan. 18, 888.

Charles IV became King of Bohemia in 1346 when his father, John, was killed at Crécy. He was also recognised as king in Germany and in 1355 was crowned emperor. He promulgated the Golden Bull of 1346. He died Nov. 29, 1378, leaving two sons, Wenceslaus and Sigismund. Charles V was the great emperor who is noticed below.

Charles VI, a son of the Emperor Leopold I was born Oct. 1, 1685. His early days were spent in trying to make himself King of Spain. In 1711 he succeeded his brother Joseph as emperor and he died Oct. 20, 1740, leaving an only child, a daughter, Maria Theresa. Charles VII became elector of Bavaria in 1726 when his father died. In 1742 he was chosen emperor as a rival to Francis I, the husband of Maria Theresa, but he never really ruled. He died Jan. 20, 1745.

Charles V Holy Roman Emperor and King of Spain. Born at Ghent, Feb. 24, 1520, he was the elder son of Philip, son of the Emperor Maximilian, and Joanna, daughter of Ferdinand and Isabella of Spain. In 1506 when his father died, Charles inherited the Netherlands, the lands received by Philip from his mother, the heiress of the great Burgundian duke, Charles the Bold. In 1516 he became King of Spain by right of his mother, whose reason had gone, and with that crown secured possessions in Italy. In 1519 he inherited the Austrian duchies from his grandfather, Maximilian. In 1520, lord of this immense realm, he was chosen emperor.

For nearly 40 years Charles, an active and conscientious ruler, was the most powerful man in Europe. Although not a great soldier he carried on several wars, on the whole successfully. He crushed Francis I of France, his great rival, and at one time the Pope was a prisoner in his hands. In Germany, however, he could not compose the bitter differences that the Reformation engendered. Again and again he tried to reconcile the warring parties and give some kind of unity to the country. It was only when these efforts failed that he took to arms. At Muhlberg, in 1547, he broke the power of the Protestant princes, but in a few years the defection of Maurice of Saxony forced him to fly for his life. In 1556 he resigned the crown of Spain to his only son, Philip II, and then the Austrian lands to his brother Ferdinand. He retired to Yuste, in Spain, where he died Sept. 21, 1558. Charles married a cousin, Isabella of Portugal. Don John, the hero of Lepanto, was an illegitimate son.

Charles Last emperor of Austria Hungary. Born Aug. 17, 1887, he was a son of the Archduke Otto. The murder of the Archduke Francis Ferdinand in June, 1914, made him heir to the throne and, on the death of Francis Joseph in Nov., 1916, he succeeded. He reigned until the end of the war, when he abdicated both in Austria and in Hungary. He died in Madeira, April 1, 1922, having made two futile attempts to recover his Hungarian kingdom. Charles married Zita, a Bourbon princess, and had eight children, the eldest, Francis Joseph Otto, inheriting his claims.

Charles Name of ten kings of France. The Emperor Charlemagne (q.v.) was the first and the Emperor Charles the Fat the second. In their day France was part of the Frankish Empire. Charles III, called the Simple, was King of France from 893 to 922, but lived until 929. Charles IV reigned from 1322 to 1328. Charles V, a son of John II, was king from 1364 to 1380. Charles VI, a son of Charles V, reigned from 1380 to 1422. He became insane, and in his reign Henry V of England conquered France and succeeded Charles as king.

Charles VII, a son of Charles VI, spent much of his life in reconquering France. In this he was aided by Joan of Arc, and in 1439 was

crowned king He reigned until his death, July 22, 1461. **Charles VIII.**, a son of Louis XI., became king in 1483. He spent his best years in trying to get possession of Naples and other parts of Italy. He died April 7, 1498. **Charles IX.** was a son of Henry II. and Catherine de Medici. He became king in 1560 and reigned, with his mother directing affairs, until his death, May 30, 1574.

Charles X. was a son of Louis XV. and a brother of the unfortunate Louis XVI. Called the Count of Artois, he left France in 1789 and lived chiefly in Scotland until 1814. He returned when another brother became King of France in that year, and in 1824 himself succeeded to the throne. He was not, however, equal to the task of ruling, and in 1830 he abdicated. He died in Italy, Aug. 2, 1836. His heir was his grandson, the Count of Chambord.

Charles First King of Rumania. Born April 20, 1839, he was a member of the Hohenzollern family. In 1866 he appeared as a candidate for the throne of Rumania that country having practically separated itself from Turkey. Elected as prince, he governed the country successfully in spite of various obstacles. In 1881 he took the title of king and was recognised as such by the European powers. **Charles**, or **Carol**, as he was called, died Oct. 10, 1914. He married the princess known as **Carmen Sylva**, but having no son, was succeeded by his nephew **Ferdinand**.

Charles II., or **Carol II.**, was a son of **Ferdinand**. Born Oct. 15, 1893, he was married in 1921 to **Helen**, a princess of Greece. Later he left this lady and contracted another union, at the same time renouncing the succession. In 1927, therefore, his young son **Michael** succeeded to the throne, but in June, 1930, **Charles** returned to Rumania and was accepted as king.

Charles Names of four kings of Spain. The first was the Emperor **Charles V.** who was King of Spain from 1518 to 1556 (*q.v.*). **Charles II.**, a son of **Philip IV.**, was king from 1666 to 1700. On his death without heirs a European war broke out for the possession of his vast empire. **Charles III.**, a son of **Philip V.**, was king from 1759 to 1788. He was the third of the Bourbon kings of Spain. **Charles IV.** a son of **Charles III.**, was king from 1788 to 1808 when he abdicated in favour of **Joseph Bonaparte**.

Charles Name of fifteen kings of Sweden. The first of any importance was **Charles IX.** He was the youngest son of **Gustavus Vasa** and became king in 1604. He reigned until 1611. **Charles X.**, who was his grandson, became king when **Queen Christina** abdicated in 1654 and reigned until 1663. He was successful in war against the Poles and the Danes. His son **Charles XI.** had become king on his father's death but only began to rule in 1692. He was the father of **Charles XII.** (*q.v.*), the greatest of Swedish kings, who succeeded to the throne on his death, April 15, 1697.

The next king of this name was **Charles XIII.**, in whose reign Norway was united to Sweden. He died Feb. 5, 1818, having recognised the French Marshal **Bernadotte** as his heir. **Bernadotte** became king as **Charles XIV.** (*q.v.*), and his grandson **Charles XV.** reigned from 1859 to 1872.

Charles XII. King of Sweden. Born June 17, 1682, the only son of **Charles XI.**, he became king in 1697. Before he was 21 years old he had proved himself a capable soldier. He defeated the Danes and then the Russians, after

which he made himself master of both Poland and Saxony. In 1708 he invaded Russia and in July, 1709, his army was utterly routed at **Poltava**. The king fled to Turkey and did not return to his own country until 1714. On Dec. 18, 1718, attacking a fortress in Norway, he was killed. It is said that the fatal bullet was fired by one of his own men. His *Life* was written by **Voltaire**.

Charles XIV. King of Sweden. **Jean Baptiste Jules Bernadotte** was born Jan. 26, 1763, and entered the French Army. He attracted the notice of **Napoleon** and married a relative of the **Bonapartes**. He was at one time Minister of War, but held also high commands in the field, and was made a marshal. In 1810 **Bernadotte** was selected as heir to the throne of Sweden and became king in 1818. Meanwhile, Norway had been added to Sweden, and he ruled the two countries until his death March 4, 1844. The present royal family of Sweden is descended from this French soldier.

Charles Austrian prince and soldier, usually called the Archduke **Charles**. A younger son of the Emperor **Leopold II.**, he was born Sept. 5, 1771. In 1790 he was made Governor of the Austrian Netherlands, but soon after the outbreak of war in 1792, he took command of an army and became the most successful of the Austrian leaders of that time. He won several victories over the French armies between 1796 and 1799, but was defeated when, in June 1799, he invaded Switzerland. In 1805 after a period of retirement, he took command in Italy and in 1809 he defeated **Napoleon** himself at **Aspern**. **Napoleon** however, was successful at **Wagram**, after which **Charles** retired. He lived until April 30, 1847. One of his sons, the Archduke **Albert** (1817-95), was also a famous soldier.

Charles Duke of Burgundy, called the Bold. Born at **Dijon**, Nov. 10, 1433, he was the son of **Philip the Good**, Duke of Burgundy. As Count of **Charolais**, he waged war against the French king and continued this policy after he became duke in 1467. His aim was to add **Alsace**, **Lorraine** and **Switzerland** to his possessions and to make himself a king. By a trick **Louis XI.** of France took him prisoner, but released him. **Charles** then attacked the Swiss who defeated his troops at **Granson** and **Morat**. He then attacked **Nancy**, where he was killed June 5, 1477.

Charles is admirably depicted by **Scott** in *Quentin Durward* and *Anne of Geierstein*. He had no sons, so left his land to his daughter **Mary** who married **Prince** (afterwards Emperor) **Maximilian**. They were the grandparents of **Charles V.**

Charles Edward Stewart prince, known as the Young Pretender, and to the Jacobites as **Charles III.** Born in Rome, Dec. 31, 1720, the elder son of **James Edward**, the Old Pretender, he was educated at the court of the exiled **Stewarts** in Rome.

The Jacobites decided to attempt a recovery of the throne, and in July, 1745, the young prince landed in Scotland with a few companions. He was soon at the head of an army which followed him to the south. He took possession of **Edinburgh**, routed the English army at **Prestonpans** and on Dec. 5 reached **Derby**. There, however, his advance stopped. He led a retreat to Scotland, and on **Culloden Moor** was caught by the pursuing English. His army was shattered; he himself owed his life

to the loyalty of his followers, by whose aid he made his way to France.

The rest of his career was uneventful. He lived in France and elsewhere in Europe for some years until his death Jan 31, 1788. His remains are in St Peter's, Rome.

Charles Martel Frankish prince. A son of a certain Pepin, he was born about 690 and became a soldier and mayor of the palace. The Frankish kings at that time were feeble folk, and Charles was the real ruler of their kingdom, which he enlarged by conquest. In 732 he defeated a great army of Saracens at Tours, and so won his title of Martel, or hammer. He died Oct 22, 741. Charles was the grandfather of Charlemagne (q.v.).

Charleston Name of several cities in the United States. The largest is a seaport of S Carolina. It stands at the union of two rivers, the Ashley and the Cooper, and has a good harbour, 7 m from the sea. The chief industry is the export of cotton and the government has a navy yard here. Charleston was founded in the time of Charles II and one or two of its old buildings still stand. Here the Civil War began by the bombardment of Fort Sumter by the Northerners in 1861. It was the state capital in 1773-80. Pop (1930) 62,265.

The Charleston is a dance which became very popular in the United States in 1925 and was soon taken up in Great Britain. It was originally a negro dance.

Charlock (Wild mustard, *brassica sinistrum*) Cruciferous plant belonging to the cabbage family. It is found in corn fields and on rough ploughed land. It is an annual, about 2 ft. high with bright yellow four-petalled flowers and rough leaves with toothed edges. The pods are angular and beaked and each contains a row of dark brown seeds.

Charlotte English princess. She was born in London Jan 7 1796, the only child of George IV and his wife Caroline of Brunswick. She was betrothed to the Prince of Orange, but in May, 1816, was married to Leopold of Saxe-Coburg, who became King of the Belgians. She died in childbirth Nov 7, 1817.

Charlottenburg Industrial district of Berlin, on the Spree, immediately west of the capital. It derives its name and existence from the castle built here between 1695 and 1707 for Charlotte, the wife of Frederick, first King of Prussia. Its chief industries are chemical products, iron foundries, porcelain, pottery, breweries, candles and soap and it contains also a famous technical high school and the Berlin waterworks. It was a separate municipality until 1920 when it was included in Berlin.

Charlottetown City and seaport of Canada, the capital of Prince Edward Island. It does an import and export trade. The town was named after the wife of George III. Pop 12,357.

Charlton District of London. In the boroughs of Greenwich and Woolwich, it is 8 m from London, on the S. Rly. It stands near the river and has become an industrial centre with engineering works etc. Here is Charlton House, a mansion built from designs by Inigo Jones. Charlton Athletic is a professional association football club.

Charmouth Seaside village of Dorset. It is situated on the mouth

of the Char, 2 m from Lyme Regis and 6 m from Bridport, on the G.W. Rly. Charmouth was once a Roman station and the surrounding district contains remains of ancient earthworks.

Charnwood Forest District in Leicestershire. It is near Loughborough and covers about 20 sq m. A hilly region, its highest point is Bardon Hill (912 ft.). The Clisterians have a monastery in the forest, erected in 1845 and called Mt St Bernard. Good building stone is obtained in the forest.

Charolais Former division of France. Its capital was Charolles, 39 m WNW of Macon. The countship of Charolais passed to Philip of Burgundy, who conferred it upon his son, afterwards Charles the Bold. It was united to the French crown in 1771. The district is traversed by the Mountains of Charolais, which rear the renowned Charolais breed of oxen.

Charrington Frederick Nicholas, English philanthropist. Born Feb 4, 1850, he was educated at Brighton College and worked among the poor in the East End of London. He founded the Tower Hamlets Mission and at the Great Assembly Hall, which he built in the Mile End Road, he organised and carried on a great religious and philanthropic work. He stood out as an advocate of temperance. He was elected to the Borough Council of Stepney and from 1889-95 was a member of the London County Council. He died on Jan 2, 1936.

Chart Map used in navigation. British charts are all prepared by the Hydrographic Department of the Admiralty, and before being sold are officially corrected to date. They show the land as visible to those afloat, including lights and guiding marks, and indicate the depth in fathoms and nature of the sea floor, together with all dangers and helps to navigation. They include ocean general, and coast charts, harbour plans, and physical, or wind and current, charts.

Charter Written document granting privileges or rights. It is usually granted by the sovereign. The most famous is the Great Charter or Magna Carta (q.v.), but many others were granted by the early kings. A number were granted to towns which obtained many privileges in this way. To-day boroughs obtain incorporation by the issue of a charter and the first mayor is called the charter mayor. Any large place can apply for a charter of incorporation, as Walthamstow and other places did after the Great War. A chartered accountant is a member of a society that has been incorporated by Royal Charter.

Charterhouse English form of the French chartreuse. The houses established in England by the Cistercian Order were called Charterhouses. The most famous is the one in London. It was dissolved at the Reformation, and on its site in 1611 Thomas Sutton founded a hospital. Connected with it was a school at which Thackeray and other great men were educated. The present buildings include a chapel and a hospital or almshouse where a number of old men live.

Charterhouse School, long in Charterhouse Square, and one of the famous English public schools, was removed in 1872 to Godalming. There it has large and handsome buildings, including a beautiful chapel, and has accommodation for about 700 boys.

Charter Party Agreement by which a shipowner lets the whole or part of a ship to a person called the charterer, for the conveyance of goods on a particular voyage or for a specified period.

It sets out the liabilities of each party to the agreement and must bear a sixpenny stamp.

Chartism Political movement of the 19th century. In 1838 an organisation of reformers in London put forward a charter which contained six suggested reforms. These were the abolition of the property qualification for members of Parliament, payment of members, vote by ballot, manhood suffrage, annual parliaments and equal electoral districts.

Called Chartists, the advocates of these ideas soon became a powerful body. In 1840 they presented a petition to the House of Commons signed by over a million persons. There were riots in 1841 and 1842, after which less was heard of them until 1848. In that year under Fergus O'Connor and Ernest Jones the Chartists were very active. On April 10, 1848, they assembled on Kennington Common to march to Westminster, and the authorities, thoroughly alarmed, enrolled 200,000 special constables under the Duke of Wellington. The meeting, however, was a failure and no procession to Westminster was attempted, though a petition with 2,000,000 signatures, many being fictitious, was taken to Parliament. After this little was heard of Chartism but during the next 60 years, four of its six demands were granted.

Chartley Village of Staffordshire. It is 8 m from Stafford, on the L.N.E. Riv. Chartley Hall, once the seat of Earl Ferrers, is a modern house. In its park there was until 1005 a herd of white cattle, said to be the only one of its kind in England.

Chartres City of France. The capital of Eure-et-Loir Department, it is 55 m from Paris. The ancient Autricum, it grew up round its cathedral which, rebuilt in the 13th century, is one of the most beautiful in the world. The majestic statuary of the triple lateral portals, the south tower, the incomparable stained glass representing 5000 figures, and the crypt are supplemented by the Renaissance sculpture of the choir screen and the 16th-century octagonal spire of the north tower. Pop (1931) 25,357.

The title Duke of Chartres was borne by Robert, a grandson of Louis Philippe. He died Dec. 5, 1910.

Chartreuse Name given to a choice liqueur. It is made by a secret process from sweetened spirit mixed with cordials or alcoholic extracts of various kinds of herbs. It was prepared originally at the Grand Chartreuse Monastery near Grenoble, but is made now by Carthusian monks in Spain. There are two well-known kinds, viz., the yellow and the green.

The Grand Chartreuse, the oldest and perhaps the most famous house of the Carthusian Order, is in the mountains, 12 m from Grenoble in France. The buildings now belong to the State.

Charybdis To the ancients a whirlpool in the Strait of Messina. It was supposed to be caused by a sea monster who lived on a rock there. Opposite was another monster called Scylla who devoured those who escaped from the whirlpool, hence the phrase "Between Scylla and Charybdis".

Chasing Term applied to the art of embossing and engraving in

relief in various metals. For this purpose special forms of punches, tracers and other tools are used, although much of the fine native Indian work is done with the simplest of appliances. Benares work in brass is an example of decorative design in flat chasing. The term chasing is used also for the process of cutting screws with a special tool upon a lathe.

Chasseur Light infantry or cavalry man in the French Army. Regiments of these were first formed in 1743 and they did good service in the Great War. They are known as *chasseurs à pied* and *chasseurs à cheval*, and there are also *chasseurs Alpins* and *chasseurs d'Afrique*. The word comes from *chasser*, to hunt.

Chassis Originally meaning a window frame, the word is now widely used for that portion of a motor vehicle which consists of the wheels, frame and machinery, but excludes the body. The chassis and the body are frequently manufactured by different makers, being provinces of the engineer and coachbuilder respectively.

Chastelard Pierre de Boscotel de- French poet. He accompanied Mary, Queen of Scots from France to Scotland in 1561. Falling madly in love with her he twice hid himself in her private apartments. For the second offence he was hanged at St Andrews in 1563.

Chat Name used for several birds of the thrush family. The whinchat and the stonechat are general in Europe, others in Australia and N America. The yellow-breasted chat has the power of mimicking the songs of other birds.

Chatalja Village near Istanbul. In 1912 the Turks built fortifications through it called Chatalja lines, to protect their capital against the Bulgarians in the first Balkan War. They were attacked in force from Nov. 17 to Nov. 19, when the Bulgarians, unable to make any progress, withdrew.

Château French word for a residence. At first it described a castle, but later came into use for a manor house. The châteaux of France, especially Chambord and others in the Loire district, are famous.

Chateaubriand Francois René, Vicomte de French writer. Born at S. Malo, Sept. 4, 1768, he went to the United States in 1791. In England, he published his *Essai sur les Révolutions* (1797). His most famous book, *Le Génie du Christianisme* (1802), is an apology for the Christian religion from the literary and humanistic point of view. In 1809 he published *Les Martyrs*, which demonstrates the superiority of Christian theology over pagan mythology. Among his later works are *René*, *Le Dernier des Abencérages* and the autobiographical *Mémoires d'Outre tombe*. From 1822-24 he was French ambassador in London. He died in Paris, July 4, 1848, and was buried on Grand-Bey, one of the islets off S. Malo.

Château Gaillard Fortress of France, once regarded as the strongest of its kind. It was on the Seine, near Les Andelys, and was built by Richard I when Duke of Normandy. Taken by King Philip in 1204, it fell into decay and only ruins remain.

Château-Thierry Town of France on the Marne, 60 m from Paris, it has an interesting old church and the ruins of a castle. Hero, from

May 31 to July 21, 1918, there was fierce fighting between Germans and Americans in the final Allied offensive

Châtellerault Town of France On the Vienne, 19 m. from Poitiers, its chief features are the 16th century towers which guard the stone bridge connecting the town with its suburb of Châteauneuf The Duke of Hamilton bears the title of Duke of Châtellerault, given to an ancestor in 1548 Pop (1931) 17,704

Chatham City and port of Ontario On the Thames, it is 65 m from London, by the O P R and the C N R. Pop (1931) 14,569

Another Chatham is a city and port of New Brunswick. This is on the Miramichi River with a station on the C N R. Pop 3500

The Chatham Islands are a group in the Pacific Ocean. They cover 375 sq m and belong to New Zealand, 536 m away The chief island is Chatham, covering 321 sq m, and Waitangi is the chief settlement. Pop 550

Chatham Seaport, market town and borough of Kent. It stands on the Medway, 34 m from London, on the S Rly An important naval depot, most of its industries centre in the dockyard which covers more than 500 acres and has works for building and repairing warships, as well as barracks, arsenals, etc The forts are obsolete, but Fort Pitt is used as a school Upnor Castle dates from the 16th century There are some fine war memorials Although a separate municipality Chatham forms one town with Rochester and Gillingham Pop (1931) 42,996

Chatham Earl of English statesman William Pitt, a son of Robert Pitt, was born in Westminster, Nov 15, 1708, and went to Eton and Trinity College, Oxford. He entered Parliament in 1735 as M P for Old Sarum, and there made a reputation by his attacks on the Premier, Sir Robert Walpole. From 1746-57 he was Paymaster General

In 1756 Pitt formed, with the Duke of Newcastle, the ministry which carried on the Seven Years' War, and was thus largely responsible for the British victories in Canada, India and on the seas In 1761 he left office because his colleagues would not declare war on Spain, but in 1766 returned to form a ministry with the Duke of Grafton He was created a peer as Earl of Chatham, but by now his health was seriously impaired, and in 1768 he resigned

The last 10 years of his life, passed mainly at Hayes Place, Kent, were marked by his fitful appearances in the House of Lords to speak against the policy of coercing the American colonists A seizure after one of these speeches ended in his death at Hayes, May 11, 1778 He is buried in Westminster Abbey

Chatham ranks as one of Britain's greatest statesmen. He was a magnificent orator and a commanding personality, with a range of vision far greater than that of his contemporaries, and his lofty patriotism is unquestioned. See HAYES.

Chat Moss District of Lancashire It is 7 m from Manchester, and consists of land drained and made valuable George Stephenson won fame by building a railway line across it It covers about 12 sq m., and on it Manchester has an aerodrome

Chatsworth Residence of the Duke of Devonshire In Derbyshire, it is 3 m from Bakewell and stands in an enormous park through which the Derwent

flows. It contains some valuable pictures and sculptures In the Ionic style it was built between 1687 and 1708, but the N wing was added later The great palm house was pulled down in 1920

Chattanooga City of Tennessee, U.S.A It stands on the Tennessee River 150 m from Nashville, and has considerable trade Pop 61,900

The city gives its name to one of the great battles of the civil war fought Nov 23-25 1863 Here Grant defeated the Confederates, or Southerners, under Braxton Bragg The battlefield has been made into a national park

Chatterton Thomas English poet. He was born at Bristol Nov 20, 1752, and educated at Colston's bluecoat school. He wrote some poems which he attributed to a 15th century writer whom he called Rowley, and submitted them to Horace Walpole in 1769 Walpole, having shown the documents to Gray and Mason, who pronounced them forgeries, returned them. Chatterton committed suicide in London, Aug 24, 1770

Chaucer Geoffrey English poet. The son of John Chaucer a London vintner, he was appointed in 1357 a page to Elizabeth de Burgh, wife of Lionel, third son of Edward III Two years later he served under the king in his French campaign and was taken prisoner For the next 20 years, during the first half of which he was frequently employed as the king's agent abroad, his affairs were prosperous, but shortly after he sat as knight of the shire for Kent in the Parliament of 1386 he was deprived of his offices, and it was not until 1394 that he was granted an annual pension of £20 He died in London, Oct. 25, 1400, and was buried in Westminster Abbey

Chaucer's first considerable poem, the translation of *The Romaunt of the Rose*, was written about 1369 Between 1370 and 1386 he produced *The House of Fame*, *The Legend of Good Women* and *Troilus and Criseyde* He completed his great work, *The Canterbury Tales*, between 1386 and 1399 The first collected edition of his works was printed in 1532

Chauvinism Excessive patriotism, the French equivalent to jingoism The word came from a patriotic character in *Le cocarde tricolore*, 1831, and another in Scribe's *Le soldat labourer* By name Nicolas Chauvin, he was one of Napoleon's veterans who spoke of his master and his deeds in the most adulatory way

Cheadle Market town of Cheshire It is 8 m from Manchester and 3 from Stockport, with stations, Cheadle and Cheadle Hulme, on the L M S Rly It formerly consisted of three separate villages, Cheadle Hulme, Cheadle Mosely and Cheadle Bulkeley Cotton printing and bleaching are the main industries Pop (1931) 18,460

Cheadle Market town of Staffordshire It is on the L M S Rly, 13 m from Stafford In a coal mining district it has silk factories and metal works Pop 6200

Cheam District of Surrey It is 12 m from London on the S Rly Near is Nonsuch Park, where Henry VIII began his great palace

Cheapside Street in London. It runs from St Paul's churchyard almost to the Bank of England Before the Great Fire it was the scene of markets, pageants and tournaments It contained a pillory two crosses and probably the Mermalion tavern.

Cheddar Village of Somerset. It is 2 m from Axbridge and 129½ from London, on the G W Rly. It is famed for its caves and its cliffs through which a road has been cut, and for a variety of hard cheese.

Cheese Nutritious article of food prepared from milk. With or without a lactic ferment starter, the milk curd, or casein, is coagulated by rennet or an acid, separated from the serum or whey, and pressed into solid masses.

Hard cheeses include the chief English varieties, Gloucester, Stilton, Cheddar, Cheshire and Wensleydale, and also the Dutch, Canadian and French Gruyère cheeses. Of soft or cream cheeses the best known is Camembert. Roquefort is made from the milk of ewes, some Swiss and French cheeses are made of goat's milk.

Cheetah Animal of the cat-like carnivorous family of Felidae. It has longer limbs than the leopard, tiger, or lion, with non-retractile, blunt claws, and catches its prey in chase. It is found in Africa, Western Asia, and India, and is easily tamed and domesticated.

Chefoo Treaty port of N China. It stands at the end of the Shantung peninsula, at the entrance to the Gulf of Chih-li and about 100 m from Wei-hai-wei. The harbour is protected by a breakwater. The port has a considerable foreign settlement and trades in silk, etc. Pop (1931) 131,659.

Cheirromancy Art of telling fortunes by examining certain lines and marks on the palms of the hands. It is also known as palmistry.

Cheka Secret police in Soviet Russia. It made its appearance in 1918 to put down opposition to the government.

Cheke Sir John. English scholar. Born in Cambridge, June 16, 1514, he was educated at St John's College. In 1540 he was elected the first regius professor of Greek in the university, and in 1544 was made tutor to Prince Edward, afterwards Edward VI. Appointed Secretary of State during the brief reign of Lady Jane Grey, he was pardoned by Queen Mary, who, after imprisoning him in the Tower, gave him leave to go abroad in the autumn of 1554. In the spring of 1556, however, he was treacherously abducted between Brussels and Antwerp by emissaries of Philip II of Spain, and conveyed back to England, where, to avoid being sent to the stake, he abjured his Protestantism and was released. He died in London, Sept 13, 1557.

Chekov Anton Pavlovich. Russian author. He was born at Taganrog on the Sea of Azov, the son of a small shopkeeper and the grandson of a serf. He took his medical degree at Moscow University in 1884, but practised little save during the cholera epidemic of 1892-03. He wrote short stories, and in 1886 the collection of them won him a popular success. In 1887 appeared his first play, *Ivanov*, followed in 1896 by *The Seagull*, which achieved a great success in 1898 at the Moscow art theatre. His three later plays, *Uncle Fanya* (1899), *The Three Sisters* (1901) and *The Cherry Orchard* (1904) were all produced there. In 1901 he married the actress, Olga Knipper. He died of consumption, July 2, 1904, at Badenweiler.

Chelmer River of Essex. It rises on the Hertfordshire border and flows across the county for 45 m until it falls into

the Blackwater at Maldon. It has been canalised between Chelmsford and its mouth.

Chelmsford City and borough of Essex, also the county town. It is 20 m from London, on the L N E Rly. It is an agricultural centre, with a cattle market, corn mills, breweries, etc. It is also an engineering centre actively connected with the wireless industry. Pop (1931) 26,537.

Chelmsford Baron. English title borne by the family of Thesiger. Frederick Thesiger, born April 15, 1794, served in the navy, but afterwards became a barrister. From 1840 to 1858 he was a Conservative M.P., and he was Solicitor-General and then Attorney-General, 1844-46, and Attorney-General, 1852-53. In 1858 he was made a peer and Lord Chancellor, and he was Lord Chancellor again, 1866-68. He died Oct 5, 1868.

His son, Frederic Augustus Thesiger (1827-1905), the 2nd baron, was a soldier. He commanded the British forces against the Zulus in 1878-79 until superseded by Sir Garnet Wolseley. Frederic John Napier Thesiger became the 3rd baron on his father's death in 1905. He was Governor of Queensland, 1905-09, and of New South Wales, 1909-13, and Viceroy of India, 1916-21, being made a viscount on his retirement. In 1924 he was First Lord of the Admiralty. From 1926 to 1928 he acted as Agent-General (temporary) for New South Wales.

Chelsea Borough of the county of London. On the N side of the Thames, between Westminster and Fulham, with stations on the district and West London Extension Rlys, it is a popular residential district, especially for artists. The chief buildings are the old church with its interesting tombs and memorials, and the Royal Hospital for disabled soldiers with its great hall, built by Wren. The Physic garden of the Apothecaries' Society is notable.

Chelsea has associations with Henry VIII, Sir Thomas More, Carlyle and other famous men. Crosby Hall has been rebuilt on the site of Sir Thomas More's garden. There is a More chapel in the old church. Carlyle's house in Cheyne Row is a Carlyle museum. There is an important welfare centre built by Lord Melchett in Manor St. Chelsea China was produced in the 18th century. Pop (1931) 59,026.

Cheltenham Borough, market town and watering place of Gloucestershire. It is 9¼ m from London, on the G W Rly, in a beautiful position near the Cotswold Hills, and its mineral springs attract sufferers from gout and liver complaints. Races are held in the town, which is also a hunting centre. Cheltenham College, opened in 1840, is one of the great public schools. Cheltenham Ladies' College, founded in 1854, has an equally high reputation. The name comes from the little River Chelt. Pop (1931) 49,385.

Chemin des Dames French road in the Aisne department. Constructed to facilitate coach travelling in the 18th century by ladies (dames) of the royal family, it extends along the Craonne ridge. After their defeat on the Marne Sept., 1914, the Germans withdrew to the Aisne, securing Craonne heights. Haig's first corps attacked them but, when transferred to the Ypres sector, relinquished the road to the care of the French. Nivelle's offensive in Apr-Oct., 1917, cleared the centre and by

Nov 2, the whole road. The Germans drove back the Allied troops and crossed the Aisne, May 27, 1918, but after their defeat in July, a counter offensive, lasting until Oct. 12, finally secured the road.

Chemist One who prepares and sells medicines and drugs. In Great Britain, since 1868, every person practising as a chemist must pass certain examinations and have his or her name on the register of the Pharmaceutical Society.

A consulting or analytical chemist analyses food and other substances, and experiments in the hope of producing fresh compounds. Many are employed by large industrial firms.

The government chemist is a public official whose duty it is to analyse specimens of food and drink submitted to him. His offices are 13 Clement's Inn Passage, London, W C 2, and the Custom House, E C 3.

Chemistry Science dealing with the composition of matter, the laws of chemical change, and the relation between the properties and composition of substances. The chemical changes which occur permanently affect the character and properties of substances, and are distinguished from those effects brought about temporarily by physical forces such as heat, electricity and magnetism.

Chemistry had its origin in the cult of alchemy, which was concerned with the search for the philosopher's stone, the elixir of life and the transmutation of metals. The experimental work of the alchemists led to many discoveries, and, in comparatively recent times, the pure science of chemistry emerged. The names of Stahl, Lavoisier, Boyle and Priestley in the 18th century and Dalton in the 19th are associated with the foundations of the modern science.

Inorganic chemistry treats of the origin, properties and changes of all elements except carbon; mineralogical chemistry deals with the composition of minerals and rocks, while agricultural chemistry is concerned with the problems of soils, etc.

The second great division, organic chemistry, treats of the innumerable compounds of carbon.

Biochemistry is a highly specialised section concerned with the chemical problems of living things.

Physical chemistry is the third great division, dealing with the physical properties of substances in relation to chemical changes, thus linking chemistry to physics.

Chemistry now forms part of the curriculum at the universities. It is fostered by the Chemical Research Board, with a laboratory at Teddington, and the Chemical Society, Burlington House, London, W. The Institute of Chemistry, at 30 Russell Square, London, W C consists of fellows (F I C) and associates (A I C) admitted after examination. There is also a society of chemical industry in London.

INDUSTRIAL CHEMISTRY AS A CAREER
Chemists are now employed constantly in almost every productive industry. Those who intend to adopt this profession must receive systematic training in chemistry and allied subjects. The best posts are obtained by those who have obtained degrees or diplomas as a result of full time training at a university or college. Juniors who have matriculated may obtain posts as assistants with commencing salaries of from £50-£100 per annum; they may then receive the necessary training by evening classes.

Newly qualified chemists are being offered

salaries of about £250 per annum or more in the cases of those who have shown a special aptitude for research.

As in other professions, the prospects are good for those with keen interest in science and good personality.

The official organisation for the profession is The Institute of Chemistry of Great Britain and Ireland, 30 Russell Square, London, W C 1. Fuller particulars as to training, prospects, etc may be obtained from the Registrar.

Chemnitz City of Saxony, Germany. It is 56 m from Leipzig and specially famous for its textile factories and engineering works. It stands in a coal mining district and its school of mines is celebrated. The fortifications have become promenades and the abbey grounds a pleasure garden. Pop 335,982.

Cheops King of Egypt. He was the second monarch of the fourth dynasty. The Chebmis (or Chemmis) of Diodorus, he built the Great Pyramid as a sepulchre. His date is given as 3793-3666 B C.

Chepstow Urban district and river port of Monmouthshire. It stands near the mouth of the Wyre, 15 m from Monmouth and 132 from London, on the G W Rly. Part of its fine old castle remains. The church of St Mary is partly Norman. In 1916 Chepstow was made a national shipyard and extensive works were erected. Pop (1931) 4303.

Cheque Negotiable instrument in common use for making payments. It is defined by the Bills of Exchange Act, 1882, as "a bill of exchange drawn on a banker payable on demand." It must bear a twopenny stamp. If crossed, i.e., with two parallel lines drawn across the face either with or without the words "and Co," it must be paid into an account.

Cheques are endorsed on the back by the payee. They can be for any amount, but the banker need not meet one unless he has funds with which to do so. It is his business to see that the signature of the customer is genuine and he may be held liable for negligence in this matter. Before 1918 the stamp on a cheque was a penny.

There are various devices to prevent the forgery of cheques, one being a machine which, using two colours of indelible ink, forces the words into the paper, making any alteration practically impossible. A fireproof paper has also been invented for cheques.

Chequers Official residence of the Prime Minister of Great Britain. It is 3 m from Prince's Risborough. The house stands in a park of 1500 acres and contains some relics of Cromwell. A Tudor building, it was inherited by Sir Arthur Lee, later Viscount Lee of Fareham, who, in 1917, presented it to the nation.

Cherbourg Seaport and naval station of France. It is 239 m by railway from Paris, at the end of the Cotentin peninsula. It has two harbours, one naval and the other commercial. There are large docks and works for the building and repairing of warships, as well as barracks, storerooms, hospitals, etc. An immense breakwater forms a roadstead for transatlantic and other large liners. Cherbourg was strongly fortified in the 19th century. Pop 37,461.

Cherokee Race of American Indians. Originally in Virginia, they were, about 1780, driven S to the Carolinas and Georgia. The whole nation all of whom

are Christians, were removed in 1838 to Indian territory. They number about 40,000.

Cherry Tree of the rose order. A native of Europe and Asia, there are wild and cultivated varieties. They grow well in Kent. There are several varieties, the best for eating purposes being the white hearts. Cherries are imported from France and Belgium. The morello cherry is used for making cherry brandy. The wood of the cherry tree is used for walking sticks.

CHERRY BRANDY Liqueur made by steeping morello cherries for six months or more in brandy. The cherries must be dry and clean, and each one pricked with a needle. Allow a dozen blanched bitter almonds and 3 oz of sugar to every pound of fruit. Half fill each bottle with fruit before adding the brandy, cork well and store in a cool dry place till the liqueur is ready for use.

Chertsey Market town and urban district of Surrey. It is on the Thames, 19½ m from London, on the S. Rly. It has a trade in agricultural produce. In the Middle Ages Chertsey had a large Benedictine abbey of which a few remains exist. Pop (1931) 17,130.

Cherubim The second of the nine orders of angels, of which seraphim are the highest. They are described in Ezekiel 1:5-13 and their representation in the Ark of the Lord (Exodus xxv) and in Solomon's Temple (1 Kings vi) was seemingly a permissible infraction of the second commandment. The word is the Hebrew plural of cherub, and means "fulness of knowledge."

Chervil Biennial plant with small white flowers. It has long been used as a potherb for flavouring, as it has large leaves with an agreeable smell resembling parsley. A bulbous variety produces a fleshy root similar to the parsnip. It grows in the E. of Europe and the W. of Asia.

Chervonetz Russian monetary unit. Instituted under the U.S.S.R., in 1922 as part of the New Economic Policy. The chervonetz equalled 10 pre-war roubles, or £1 is 1½d, and notes were issued, interchangeable 25 per cent. in money, and 75 per cent. in goods or securities.

Cherwell River of England. It rises at Charwelton in Northamptonshire. At Oxford it is called the Cher and joins the Thames. It is 30 m long.

Chesapeake Bay Opening of the Atlantic Ocean. It penetrates north for about 200 m, and washes the shores of Maryland and Virginia. About 12 m wide at the entrance, it widens to about 40, and receives many rivers, including the Potomac, Rappahannock, James, Susquehanna and York. Baltimore, Newport News, Portsmouth and Norfolk are on its shores.

On Sept. 5, 1781, there was an indecisive naval battle in the bay between the English and the French.

The *Chesapeake* was the name of the U.S. frigate captured after a fight with the British frigate *Shannon* off Boston June 1, 1813.

Chesham Urban district and town of Buckinghamshire. It stands on the little River Chess, 26 m from London, on the L.N.E. Rly. The industries are concerned with the making of wooden articles, and there are flour mills. Pop (1931) 8809.

Cheshire County of England. It lies between Derbyshire and Wales with the Mersey separating it in part from Lancashire. In the N. it is almost a suburb of Manchester and Liverpool, in the centre and S. an agricultural district, and in the E. a moorland area. In the centre are salt mines and meres are numerous in the south. The district between the Dee and the Mersey is called the Wirral. The county covers 1025 sq m.

Cheshire is the county town. Industrial centres are Birkenhead, Crewe, Stookport, Stalybridge and Hyde. Wallasey is chiefly a residential town. Macclesfield, Knutsford, Runcorn and Congleton are smaller places. Middleswich and Northwich are the salt towns. Apart from the Dee and the Mersey the chief rivers are the Weaver and the Bollin. Cheshire was long a palatine county and owed much to its situation on the borders of Wales. The Prince of Wales bears the title Earl of Chester. The Cheshire Regiment, which has its depot at Chester, is the old 22nd of the line. Pop (1931) 675,190.

Cheshunt Urban district of Hertfordshire. It stands on the Lea, 14 m from London on the L.N.E. Rly. It is a market gardening centre. The chief buildings are the great house where Wolsey lived and the college used by the Countess of Huntingdon's connection for training ministers until it was sold to the Church of England in 1805. The connection built a new college at Cambridge, giving to this the name of Cheshunt College. Pop (1931) 14,651.

Chesil Bank Shingle bank in Dorsetshire. Joining Portland to the mainland, 16 m long, it is 20-40 ft high and 170-200 yards wide. Of considerable size at Portland, the shingle diminishes towards the land, where the bank is fine gravel and sand.

Chess Game played upon a checkered board divided into 64 squares, with 32 chessmen equally apportioned between two opposing players. Each player is equipped, in contrasting colours, light and dark, with king, queen, two bishops, two knights, two rooks or castles and eight pawns. Each piece can be moved in a way peculiar to itself, the queen having the widest range of movement. The contest simulates military strategy and tactics. Any exposed piece is liable to capture and removal from the board, except the king, which cannot be removed. The purpose of each player is to bring the opposing king into an exposed position from which he cannot retire; this checkmate ends the game.

Devised in India and passed to Persia, chess was brought by the Arabs through Spain to Europe. Certain medieval changes revolutionised the game which has since produced a succession of brilliant masters. In 1935 Dr. Max. Enge (Dutch) defeated Dr. Alekhine, world chess champion since 1927.

Chest Upper compartment of the body, called by biologists the thorax. Separated from the lower or abdominal compartment by a concave membrane or diaphragm, it is a closed, conical box (the backbone and breastbone being united at the sides by the ribs) containing the heart, lungs, gullet, windpipe, bronchial tubes, important nerves, blood-vessels, thoracic glands, muscles and fat, all enclosed by the skin. The normal chest measurement of adult man is from 33 to 40 in. Malformations of the chest cause it to be long, flat, barrel shaped, triangular or pigeon breasted,

rickety or hallowed. The Royal Chest Hospital is in City Rd., London, E C 1

Chester City and river port of Cheshire, also the county town. It stands on the Dee, 179 m. from London and 16 from Liverpool, and is served by the G.W., L.M.S. and Cheshire Lines Ry's, and by canals. The cathedral is a magnificent building embodying various styles of architecture. The 14th century walls, the most perfect in England, completely encircle the city. Another notable feature is the shopping centre known as the Rows, where the shops are reached by stairways from the street. Many old houses still stand. The finest, Stanley Palace, was, in 1928, given to the city by the Earl of Derby. Another is God's Providence House.

The town hall is modern, as are the school of art, and the Grosvenor Museum. The King's School is an old foundation with new buildings. There are a city cross and remains of the castle, part of the site of which is occupied by the assize court and the barracks. Races are held on the Rodae, where the Chester Cup is a notable event. The city has some manufacturing industries. Pop. (1931) 41,438.

The *Chester* was the name of a light cruiser that took part in the Battle of Jutland.

Chesterfield Borough and market town of Derbyshire. It is 12 m. from Sheffield, on the L.M.S. Ry. It has a Gothic church (All Saints) with a twisted spire. In the Stephenson memorial is a museum of engineering. There are engineering works, textile factories, coal mines, and canal communication with the Trent. The River Rother flows through the town. Pop. (1931) 64,146.

Chesterfield Earl of English title borne by the family of Stanhope since 1628. The first earl was Sir Philip Stanhope, a Nottinghamshire landowner, and the title passed in 1833 to Henry Soudamere Stanhope, who belonged to a younger branch of the family, and became the 9th earl. His son, the 10th earl was lord steward, 1910-15. Most of the estates have been sold.

Chesterfield House in South Andley St., London, was built by the famous 4th earl in 1750. Bought from Lady Burton in 1919 by Viscount Lascelles, later Earl of Harewood. It was again for sale in May, 1932.

Chesterfield 4th Earl of English statesman and author. Philip Dormer Stanhope was born Sept. 22, 1694, and educated at Cambridge. In 1716 he became M.P. for St. Germans and acted with the Whigs. In 1726 he succeeded his father, and in 1728 was sent to the Netherlands as ambassador. In 1733 Walpole deprived him of his office of Lord High Steward, and he was henceforward one of that statesman's bitterest opponents. In 1745-46 he was Lord Lieutenant of Ireland, and from 1748 to 1748 a Secretary of State. He retired in 1748 and lived a secluded life until his death, March 24, 1773.

Chesterfield won a high reputation as an orator and writer, but little of his work is now remembered except the *Letters to his Son* and the *Letters to his Godson*. The son was his natural son, Philip Stanhope, who died in his father's lifetime. The Earl is the subject of a scathing letter from Dr. Johnson, who dedicated to him the plan of his *Dictionary* and received in return but scant acknowledgment.

Chester-le-Street Urban district of Durham. It stands near the River Wear, 6 m. from Durham

on the L.N.E. Ry. The chief industry is coal mining and the chief building the old church with memorials of the Lumleys. Near are Lumley and Lambton castles. Pop. (1931) 16,639.

Chesters Estate in Northumberland on the line of Hadrian's Wall. It contains ruins of Cilurnum, the second largest Roman stationary fort in the country. The museum in the park has a fine collection of Roman remains. In 1930 the estate was sold.

Chesterton Gilbert Keith, English author. Born in Kensington in 1874, he was educated at St. Paul's School, London, and studied art at the Slade School. He began his literary career in 1900 with a volume of poems, and during the next 30 years produced books and articles in great numbers marked by a delightful vein of paradox.

A student of literature, he wrote *The Victorian Age in English Literature*, and monographs on Browning, Dickens, Shaw, and Chaucer. His novels include *The Napoleon of Notting Hill*, *The Flying Inn*, *Manalive*, *The Poet and the Lunatics* and the series of detective stories associated with the name of Father Brown. He is a fine poet, and in *Magpie* he proved himself a dramatist. He was, too, a constant contributor to the daily and weekly press, notably in *The Illustrated London News*, *The New Witness*, and his own *G.K.'s Weekly*. His versatility is shown by his *Short History of England*, his articles in defence of Christian faith and morals, such as *The Superstition of Divorce*, and the illustrations of some of his books. In 1922 he became a Roman Catholic.

Chestnut Fruit tree allied to the beech. The sweet or Spanish chestnut is extensively cultivated and the trees reach to 100 ft. The nuts will ripen in England, but they are largely imported, and are eaten raw, roasted, hulled or as *marrons glacés*. The chestnut which grows freely in England is the horse chestnut. The fruit of this is not edible.

Chetwode Sir Philip Walhouse, English soldier. Born Sept. 21, 1869, he was educated at Eton and joined the 10th Hussars in 1889. He served in S. Africa 1899-1902, and in 1914, having in 1905 succeeded to the family baronetcy, was appointed to command a cavalry brigade on the western front. The command of a division followed, and in 1916 he went to Egypt, where he led a mounted force. In 1917-18 he commanded an army corps under Allenby, and he had a large share in the conquest of Palestine. From 1919-20 Chetwode was Military Secretary at the War Office. 1920-22 Deputy Chief of the General Staff, 1922-23 Adjutant General, and 1923-27 Commander at Aldershot. He was made Chief of the General Staff in India in 1928 and Commander in Chief there in 1929.

Chevalier Albert, English comedian. A son of the French master at Kensington Grammar School, he was born March 21, 1861, and had French-Italian and Welsh blood in his veins. For some years he was an actor on the legitimate stage, associated with the Kendals, the Bancrofts, John Clayton and John Hare. In 1891 he started as a coster comedian at the Pavilion music hall, and played also at the Oxford, the Tirol and the Canterbury. Later, becoming author and composer, he toured with his own entertainment in England and America and gave over 1000 recitals at the small Queen's Hall,

London His last appearance (1922) was made in a play called *My Old Dutch*, based by himself and Arthur Shrlley on his own famous song He died July 10, 1923

Chevalier Maurice French actor He started as a boy with small engagements on the muslo hall stage in Paris In 1913 he appeared at the Folies Bergères, but military service soon interrupted his career In the Great War he was made prisoner by the Germans, but he escaped to reappear in Paris and to make his London debut with Elsie Janis He then became a cinema actor Recent films are *The Merry Widow*, *The Man from the Folies Bergères* and *The Beloved Vagabond*

Chevening Village of Kent It is 3 m from Sevenoaks and 22 from London, on the S Rly. Chevening Park is the seat of Earl Stanhope Pop 1000

Cheviot Hills Range of hills in Northumberland and Roxburghshire They extend for about 38 m along the borders of England and Scotland The highest point is Cheviot, 6 m from Wooler, which reaches 2876 ft. The Tyne, Till and other rivers rise in the Cheviots The hills are suitable for sheep rearing, and a special breed found there are famous for their wool, which is called cheviot, and is used to make tweed cloth

Chevron Mark in the shape of the letter V, worn by sailors soldiers, airmen and policemen on the sleeve of the coat to indicate rank or good conduct A sergeant in the British army wears three chevrons, a corporal two, and a lance corporal one above the elbow Chevrons given for good conduct or long service are worn below the elbow The chevron is also one of the ordinaries in heraldry The Chevron Club exists for non commissioned officers in the army and similar ranks in the navy, marines and air force Its house is at 74 St George's Square, London, S W

Chevy Chase English ballad of the 15th century It gives an account of the battle of Otterburn between the English and the Scots in the Cheviot Hills

Chewing Gum Masticatory preparation much used in the U.S.A. It is insoluble, its chief purpose being to cleanse the mouth and keep it moist. Consisting usually of a natural gum or resin called chicle, obtained from the bully tree, it is flavoured, often with mint, and sweetened The supply is obtained mainly from Guatemala.

Chiang Kai-Shek Chinese politician A soldier, he became a follower of Sun Yat Sen, and was made head of the military school In 1925 he was chosen Commander-in-Chief of the forces directed from Nanking, and he led these to the capture of Peking and to other victories over the northerners In 1928 he was chosen President of the Republic, and in 1930 conducted, simultaneously, campaigns against the Communists in the south and the northerners who still refused to accept his rule. The latter in 1932 set up the independent state of Manchukuo (formerly Manchuria) under the protection of Japan, and in 1935 Japan still further increased her power in No China In 1936, however, there were signs of an improved relationship between the two countries

Chianti Name of a popular Italian wine Made from grapes grown in Central Italy, particularly in Tuscany, it is similar in type to claret or Beaujolais, and contains usually about 11 per cent. of alcohol.

The name comes from the hills on which the vine is grown

Chiaroscuro Italian word meaning the appropriate distribution of light and shade in a work of pictorial art Rembrandt, alike in his paintings and in his etchings, may be regarded as the great master of chiaroscuro

Chiaistolite Variety of the mineral, andalusite It forms a constituent of the Skiddaw slates and some metamorphic rocks It is a silicate of alumina, and is distinguished by the curious cruciform design, seen when a crystal is cut across, and due to wedge shaped patches of carbonaceous matter included in the crystal.

Chicago City of Illinois, United States, the second largest in the country. It stands on the S side of Lake Michigan and is one of the greatest distributing centres, especially of foodstuffs, in the world, and a great railway centre Electric lines serve the city and suburbs The Michigan River runs through it The city, which covers a vast area, is surrounded by a belt of forest land

The chief thoroughfare is Michigan Avenue with buildings that rival those of New York. These include the Wrigley Building, the Masonic Temple and two offices of the *Chicago Tribune* The Field Museum is one of the richest in America In 1930 the Temple of Commerce was opened. In Lincoln Park is the Academy of Sciences Both the University of Chicago and the North Western University have fine buildings Soldiers' Field is a memorial of the Great War

Chicago's printing works are important, but the preparation of food is the chief industry Immense numbers of cattle and pigs are handled in the stockyards It is a great wheat market, with considerable shipping Land is continually being reclaimed from the lake In 1931 the city's finances were in a bankrupt condition and thousands of teachers and municipal employees were unpaid. A World's Fair was held in 1933 to celebrate the city's centennial anniversary, and to illustrate the progress of science and culture throughout the world It was called "The Century of Progress Celebration" The city grew up round Fort Dearborn, built by settlers, in 1804 Pop. (1930) 3,376,438

Chichester City and borough of Sussex It is 70 m from London on the S Rly, and 2 m from the sea. A canal runs to Chichester harbour The cathedral has a notable spire and detached belfry. The cattle markets are important, and it has a brewing industry Pop (1931) 13,911

The title of Earl of Chichester has been borne since 1801 by the family of Pelham The Earl's seat is Stanmer Park, Lewes, and his eldest son is called Lord Pelham

Chickenpox Acute infectious disease of childhood It is most common between the ages of two and six Doctors call it varicella Usually epidemic and believed to be due to a very minute micro-organism, it is characterised, after little preliminary feverishness, by a skin eruption chiefly on the trunk The vesicles, sometimes oval, reach their full growth in a day They are filled with a clear fluid that after three or four days dries up, leaving a scaly crust which falls away, seldom ulcerating It is always mild

Treatment—If the temperature is raised, keep the patient in bed, and in any case he must be isolated. Apply calamine lotion or

boracic powder to relieve itching, and above all, prevent scratching of the face. Even if the child does not seem ill, a doctor should be called in at the first sign of a rash to diagnose the trouble. Incubation period is 14 to 16 days.

Chickpea Annual leguminous plant (*cicer arietinum*). Cultivated in India, Egypt and the Mediterranean basin for food, it is also called gram. It is bushy and bears two-seeded pods. It exudes viscid drops containing oxalic acid crystals which are used in domestic medicine. The peas are ground into bread flour, paroled, boiled, or given to cattle.

Chickweed Name given to several weeds, mostly species of *arnaria*. It is given as a food to canaries and other cage birds. The name is also given to the herb called stitchwort.

Chicory Plant cultivated in Britain and other European countries. It has a long fleshy root which, when dried, roasted and ground, is used to impart additional bitterness colour and body to coffee.

Chicoutimi Town of Quebec, Canada. It stands on the Saguenay River, 227 m from Quebec. There are timber mills and the neighbourhood is visited for fishing and hunting. Pop 11,877.

Chiffchaff (*Phylloscopus collybita*) Small song bird allied to the wood wren. It is a common summer visitor to England, especially in the SW of the country. Olive green in colour shading to yellowish white on the under parts, it frequents woods and the margin of pools and brooks where it feeds on insects and larvae. It derives its name from its song, which is a repetition of two notes.

Chignecto Bay of Canada. An area of the Bay of Fundy, it runs between Nova Scotia and New Brunswick and forms Shepody Bay and Cumberland Basin. It is 30 m. long and about 8 wide. The piece of land uniting Nova Scotia and New Brunswick and separating two areas of the Atlantic is called the Isthmus of Chignecto. It is about 24 m across and along it a railway line (C.N.R.) runs. A proposal has been made to cut a canal across the Isthmus.

Chigwell Village of Essex. It stands on the edge of Epping Forest, with stations Chigwell and Chigwell Lane, on the L.N.E.R. The old King's Head Inn is mentioned as the Maypole in Dickens's *Barnaby Rudge*. Pop 2950.

Chigwell School, founded in 1629, is now a public school. It has modern buildings, playing fields and accommodation for 200 boys.

Chilanga Since 1929 the capital of Northern Rhodesia. It is a station on the railway line to Broken Hill.

Chilblains An irritating inflammation most commonly occurring on the toes and fingers. Feeble circulation, caused either directly by tight gloves and shoes, or indirectly by lack of exercise, low vitality, or some definite disease, is the cause.

Treatment—Paint the chilblains with colloidal Panchik's paint, or an ointment consisting of chlorate of calcium 3 drachms pure vaseline 3 oz. Lactate of calcium in the form of an elixir may be taken three times daily in teaspoon doses. Avoid alcohol and excess of salt in the diet. Low vitality can be treated by ultra violet rays.

Child The age at which a boy or girl ceases to be a child varies in different countries. In Great Britain the Children Act of 1908 fixed it at 14, although for some purposes 16 is the dividing line.

Since the early 19th century special laws have been passed for the protection of children. Their hours of labour have been limited by Factory Acts, while Education Acts have made it compulsory for them to attend school. Other laws have made cruelty to children an offence and a society for the prevention of cruelty to children has come into existence.

The Children Act of 1908 increased the responsibilities of parents and guardians. It established special courts to try cases where juvenile offenders are concerned and provided that those sent for punishment should be kept apart from criminals. Children are not allowed to buy cigarettes, nor to enter public houses. A further measure for the protection of children was passed in 1932.

It is possible, under a law passed in 1928, for a child to be legally adopted. Before this a child could be adopted, but legally it was not the child of the adopter. The Home Office has a children's branch with inspectors to see that the laws about them are observed. Allowances are given to payers of income tax in respect of children.

Especially in Britain and America much attention is given to studying problems connected with the welfare and education of children. There is a Child Study Society at 90 Buckingham Palace Road, London, SW.

Chile Republic of South America. It consists of a strip of land on the Pacific coast line some 2600 m long, but not more than 100 wide. It stretches from Peru in the N to Tierra del Fuego, part of the republic, in the S. To the N is a tropical desert, the central part fertile and productive, and the S barren and unfertile. As the Andes run through the land much of it is mountainous. Herein is Aconcagua, the highest peak in S America. The total area is 285,133 sq m. Santiago is the capital. Valparaiso, Concepcion and Antofagasta are other large towns. Pop (1930) 4,287,445.

The chief product is nitrate but copper and other minerals are mined. Many of the inhabitants are engaged in agricultural pursuits. There are railways between the chief towns and a line crosses the Andes. The monetary unit is the gold peso worth 6d. There is a central bank created in 1925.

After being for three centuries a Spanish possession, Chile declared its independence in 1810 and obtained it in 1818. It is governed by a President elected for six years and a ministry who form the executive. The legislature consists of a senate of 45 members and a chamber of deputies of 132 both elected by all adults who can read and write. The senators are elected in groups of five for eight years; the deputies for four. The Roman Catholic Church was disestablished in 1925.

In 1929 the long dispute between Chile and Peru was settled. This went back to the war between the two countries in 1879-83, at the end of which the Chileans, who were victorious, obtained from Peru the provinces of Tacna and Arica. The arrangement was, that in ten years the people therein should decide their own fate but this was not done. In 1929, after long negotiations, Tacna was given to Peru and Arica to Chile. In June, 1932, there was serious trouble in Chile and a Communist

government was established. This only lasted a few days, but there were further risings.

Chile Pine Evergreen coniferous tree native to mountainous regions in S. Chile (*araucaria imbricata*). Popularly called monkey puzzle. It yields durable timber, the oval cones are roasted for food. It sometimes grows to a height of 150 ft. It was introduced into Britain in 1796.

Chilham Village of Kent. It is 5 m. from Canterbury and 65 from London, on the S. Ry. It has a fine old church and a castle built in Norman times. Pop. 1232.

Chili Fruit ped. of a S. American herb the capsicum. It is used to make red, or cayenne, pepper, chili vinegar, and chili paste.

Chillingham Village of Northumberland. It stands on the Tull, 4 m. from Wooler. Chillingham Castle, the seat of the Earl of Tankerville, was built in the 14th century, but in its present form dates from the 17th. In the park a herd of wild cattle is still maintained, though the castle has been closed.

Chillon Castle in Switzerland. It stands on a little island at the E. end of the Lake of Geneva and was once used as a prison by the Dukes of Savoy. Here Francis de Bonivard was imprisoned. Byron's poem, *The Prisoner of Chillon*, has made the castle known to millions.

Chiltern Hills Range of hills in Oxfordshire and Buckinghamshire. They extend in a N.E. direction for about 45 m. touching Hertfordshire. Wendover Hill and Ivinghoe Beacon, both just over 900 ft., are the highest points. There is some lovely scenery in the district which includes Ashridge, Hampden, Chequers and other places of interest.

Chiltern Hundreds Three hundreds in Buckinghamshire, Desborough, Burnham and Stoke. They owe their importance to their connection with parliamentary procedure. In the olden days stewards of the Chiltern Hundreds were appointed to keep the district free from robbers. A small salary was paid to them, but in course of time the office became a sinecure. It is still retained, however, and a member of Parliament who wishes to resign does so by accepting the office of Steward of the Chiltern Hundreds. Legally a member cannot resign his seat. If, however, he accepts a position of profit under the crown he vacates it.

Chimaera Fish nearly related to the ray. It is found in European seas and off the Pacific coast of North America. Remarkable for a skin often almost devoid of scales, it is usually about 4 ft. in length, and is a great menace to the herring industry.

Chimaera In Greek mythology a female hybrid monster. She resembles in the forepart a lion, in the middle a goat, and in the rear a dragon. She was killed by Bellerophon after devastating Caria and Lycia. The name is now most frequently used to denote a fantastic idea, and in botany to denote graft-hybrids.

Chimborazo Mountain of Ecuador, S. America. An extinct volcano. It is in the W. branch of the Andes Range and is 20,498 ft. high.

Chimney Part of a building through which smoke is conveyed from a fireplace to the outside air. Before the 12th century braziers were used for domestic

purposes and the smoke was let out through a hole in the roof. The grouping of chimneys into one mass of masonry began in the 15th century.

The chimneypiece or framework around the fireplace is often highly decorative, in wood or marble. Some Jacobean chimney-pieces are notable for their craftsmanship, and later the brothers Adam designed some very fine ones.

The business of sweeping chimneys is carried on by persons trained to it. At one time chimneys were cleaned by small boys, called climbing boys, a practice made illegal in 1842.

Chimpanzee Popular name of the smaller of the two African anthropoid apes, which, more than any other animal, resembles man. Often attaining a height of 4 ft., it dwells in forests, eating fruits and vegetables, and building large nests in the trees. Its superior intelligence over other animals has been proved by scientific experiments. In 1930 a black female chimpanzee, something of a rarity, was obtained for the Zoological Gardens, London.

China Republic of Asia, one of the largest countries in the world. It covers 1,532,815 sq. m., and is divided into 18 provinces. In addition there are dependencies covering a further 2,381,140 sq. m., making a total of 4,278,352 sq. m. These include Tibet, which is practically independent, and Mongolia, which is only a little less so. The population is about 450,000,000, of whom at least 430,000,000 live in China proper. This total includes 200,000 Japanese and 100,000 of other nations.

China has three great rivers, along which her trade has flowed for many centuries. The Yang-tse-Kiang is 3200 m. long and divides the country into two parts. The Hoang ho, or Yellow River is to the N. and the Si Kiang to the S. The land is a vast plain, with great mountain masses. One separates China from Mongolia, another divides the basin of the Yang-tse-Kiang from that of the Hoang ho.

The capital is Nanking. Peking, the old capital, now Peiping, is much larger, as are the great ports of Shanghai, Tientsin and Canton. A number of ports are open by treaty to foreign trade, in these treaty ports Great Britain and other nations have concessions, or areas under their own rule, but since 1927 some of these have been returned to China, and proposals made for returning the others.

China produces a vast quantity of rice and other foodstuffs, chiefly for home consumption. The chief export is silk. The railways are unsatisfactory, but many good motor roads have been made. The customs duties are collected by an independent body, the Chinese Maritime Customs, under an Englishman. The currency is on a silver basis, the value of each of which varies, as do the weights and measures.

A very old country, China has been ruled by emperors of many different dynasties. The last of these, the Manchus, ceased to rule in 1902, since when China has been a republic. For some years the government was conducted from Peking, but in 1927 a group of nationalists from the south transferred the capital to Nanking and set up a new government, consisting of five councils, executive, legislative, judicial, examination and control. Chiang Kai Shok was chosen president in 1928.

The northerners did not accept this new authority and the civil war, which had been going on for some years, continued. The government at Nanking gained some successes, but could not make its power effective in many of the provinces, in some of which there were strong communist onthreaks, and in nearly all of which there was a certain amount of disorder. Lin Shen became president in 1932. In the same year the north-eastern provinces (Manchuria) and Jehol proclaimed themselves an independent state (Manchukuo) under the protection of Japan. In 1935 Japan's authority in No China was further strengthened, but 1936 showed signs of improvement in Sino Japanese relations.

Meanwhile the Chinese government asked a revision of the treaties which gave foreigners a privileged position. Several countries revised these treaties and Great Britain expressed a willingness to abandon her exceptional position as soon as law and order had been firmly established. Meanwhile, as evidence of good faith, Britain returned Wei hai wei to China. Great damage was done by an earthquake in 1933. See MANCHURIA.

China Clay Essential ingredient in the manufacture of china. It was first sent to Europe from China in the 18th century by a French missionary. It gives plasticity to the paste from which porcelain is made and is used also in the arts as a filler for paper and for dressing fabrics.

The English pottery industry obtains the greater part of its supply from large deposits in Devonshire and Cornwall. It is also found in Saxony. Its other name is kaolin.

Chinaware Name originally applied to fine pottery produced in China, and later to any vitreous, translucent ware classed as porcelain. It excludes such fabrics as Wedgwood and all other stonewares, majolica, Delft and all other earthenwares.

As invented in China it comprises a hard paste body of china stone and kaolin or china clay, besides china stone and lime glaze, both fired at one operation, breaking with a conchoidal fracture and unscratchable by steel. It was reproduced at Meissen in 1713, and at Plymouth in 1768. Meissen methods were imitated in Vienna in 1718, and Copenhagen in 1772.

The best French and English chinaware is an artificial porcelain which is scratchable by steel. It is made of a soft paste of frit and white clay, and is seen in the porcelain of Sevres and St. Cloud, as well as in the English china from Chelsea, Bow, Derby, and Worcester. Bone porcelain, which contains bone ash, was introduced by Spode in 1880, and all later English china is of this kind, Minton and Copeland being notable.

Chinchilla South American rodent. It is about 10 ins long and is found in the Alpine zones of the Andes from Peru to Chile. It has large ears, a lovely tail, and very soft grey fur, for which it is trapped.

Chinese White Artist's pigment. It is prepared by holling metallic zinc and condensing the oxidised vapour into powder. It is excellent for water colour painting, but lacks toughness with oils. It has better colour, finer texture and greater covering power than zinc white, which is prepared from zinc ore and coal.

Chingford Urban district of Essex, near Epping Forest, 10 m from London. The Metropolitan Water Board

has a large reservoir here. Pop (1931) 22,061.

Chinkiang Treaty port of China. It is on the Yangtze-Kiang, where that river is joined by the Grand Canal. Railways and good roads connect it with Shanghai, about 30 m away. There were disturbances here in 1927, when damage was done to the British concession. The Chinese Government paid compensation and the concession was handed back to China. Pop (1931) 199,776.

Chinon Town and river port of France. It is picturesquely situated on the Loire, 31 m from Tours. Its castle, of which there are some remains, was a royal residence.

Chioggia Island, city and seaport of Italy. It is 15 m from Venice and is connected with the mainland by a bridge, 100 ft long. The chief industry is fishing. In 1379 the Genoese Fleet was defeated here by the Venetians. Pop 36,100.

Chios Island of Greece. In the Aegean Sea, 8 m from the coast of Asia Minor, it is 32 m long and covers 320 sq m. The scenery is beautiful and the soil very fertile, grapes, oranges and other fruits growing in profusion. Pop 75,680.

Chios, the capital, is on the E coast. It has a harbour, a cathedral and the ruins of a citadel. Chios claimed to be the birthplace of Homer. Pop 22,000.

Chipmunk Name given in America to the ground squirrels belonging to the genus *tamias*. The chipmunks possess internal cheek pouches, and the fur on their backs is marked by alternate light and dark bands.

Chippendale Thomas English furniture maker. A Worcestershire man by birth, Chippendale set up for himself as a cabinetmaker about 1760 and soon made a high reputation. He borrowed ideas from France, but gradually developed his own distinctive style, lightness and grace of line. Later cabinetmakers have all produced chairs and cabinets modelled on those of Chippendale. He died in Nov., 1779.

Chippenharn Borough and market town of Wiltshire. It stands on the Avon 13 m from Bath, on the G.W. Rly. An agricultural centre, it has cattle and cheese markets. Other industries are bacon curing and flour milling, and engineering. Pop (1931) 8,493.

Chipping Campden Market town of Gloucestershire. It is 9 m from Evesham and the station is Campden on the G.W. line, a mile away. The church of St. James is a beautiful perpendicular building with a fine tower. Pop 1700.

Chipping Norton Borough and market town of Oxfordshire. It is 13 m from Banbury, on the G.W. Rly. Pop (1931) 3,489.

Chirk Village of Denbighshire. It is 9 m from Wrexham, on the G.W. Rly. The little River Ceirlog and the Ellesmere Canal pass by it. Near by are collieries and slate quarries. Its castle, the seat of Lord Howard de Walden, was long the home of the Myddelton family. The first castle was built in the 11th century, the present one in the 14th and restored in the 17th century. Pop 2576.

Chislehurst Urban district of Kent. It is 12 m from London, on the S. Rly., and is a residential area. Its common is large and beautiful, adjoining is Pett's Wood, acquired as a memorial to William

Willett, the pioneer of daylight saving. Beneath it are immense caves open to the public. Camden Place was the home of Napoleon III, who died there. Pop (1931) 9876

Chiswick Urban district of Middlesex. It stands on the Thames between Hammersmith and Brontford, 5 m. from London, on the S and District Rlys. The chief church is S Nicholas, with an old tower and a graveyard in which Hogarth is buried, the chief thoroughfare is the Mall with historic associations. Chiswick House, the property of the Duke of Devonshire, where both Fox and Canning died, was bought in 1929 by the district council and the grounds are now a public park. Hogarth House is a museum. It forms part of the urban district of Brentford and Chiswick. See BRENTFORD

Chitral State on the Indian frontier. Under British protection, in the Malakand agency, it covers 4500 sq. m., and is ruled by the Mehtar. Chitral is the capital. In 1895 a small British garrison was attacked in a fort here. Travelling by different routes, two relieving forces set out, and on April 20, after a siege of nearly seven weeks, the garrison was relieved.

Chlorates Salts formed by the action of chloric acid upon bases, distinguished by their great solubility in water, and the evolution of oxygen when heated, leaving a residue of a chloride. Potassium chlorate is used in medicine as a refrigerant and stimulant in throat complaints, also in the manufacture of fireworks, matches and detonators. Sodium chlorate is used in the production of aniline black.

Chlorimetry Term used in chemistry for the process by which the available amount of chlorine is estimated in a bleaching agent such as chloride of lime. By the volumetric method, a standard solution of thiosulphate of sodium is titrated with a known acid solution of bleaching powder and potassium iodide.

Chlorine Element having its atomic weight 35.5 and denoted by the symbol Cl. It is a greenish-yellow heavy gas with an irritating suffocating odour. It combines directly with most metals forming chlorides, and to its strong affinity with hydrogen is due its bleaching properties. Chlorine is used as a disinfectant, and as a bleaching agent for cotton and linen.

Chlorite Name given to a group of silicates of alumina and magnesia occurring as dark olive-green rock-forming minerals. The varieties of chlorite occur in granular masses, or as soft platy scales in other minerals such as quartz. Chlorite schist is so named from the plentiful occurrence of this mineral in the rock.

Chloroform Heavy colourless liquid with an agreeable ethereal odour and sweet taste, also known as trichloromethane. It is prepared by the action of bleaching powder upon alcohol or acetone, with subsequent purification of the crude product with sulphuric acid. Chloroform is soluble in alcohol, ether and oils, and slightly so in water. It is a solvent of most resins, many alkaloids, rubber, etc. It is much used as an anæsthetic.

Chlorophyll Green colouring matter of plants. It can be extracted by ether or alcohol, but is never obtained absolutely pure. It contains green

and yellow pigments and chemically is related to the colouring matter of the blood.

Choate Joseph Hodges American statesman. Born at Salem, Mass. Jan. 24, 1832, he was educated at Harvard and became a lawyer. For more than 30 years he was engaged in important cases in the New York courts and in the Supreme Court at Washington. A Republican in politics, he was ambassador to London, 1899-1903, and represented his country at the peace conference at The Hague in 1907. He died in New York, May 15, 1917, leaving a reputation for wit and oratory.

Chobham Village of Surrey. It is 5 m. from Woking and is famous for its common and its ridges, a range of low hills about 4 m. from the village, and the Gordon Memorial home for boys.

Chocolate Preparation from the cacao bean and sugar. It is used as a food, or, mixed with milk and water, as a drink. First sold in London in 1657, its high price confined its use to the rich.

Chocolate for eating began to be made when the import duties on the cacao bean were reduced in 1853. In the 20th century it became enormously popular and firms at Bristol, York and Birmingham became very large concerns. Chocolate is also imported from France and Switzerland.

Choir Body of singers in a cathedral or church. In the Church of England and Roman Catholic churches the choir consists of men and boys, as in the monastic houses of the Middle Ages.

In Nonconformist churches the choirs are composed of men and women.

The word choir is also used for the part of the church in which the clergy and the choir sit.

Choking Choking from swallowing of food may usually be relieved by vigorous thumping between the shoulder blades. If this fails gag the mouth open with a piece of wood and pass the fingers down the back of the throat to hook up the foreign body or to push it onward towards the stomach.

In the case of a child, hold it upside down and shake it if slapping on the back is not efficacious. If a large or sharp object has been swallowed, give the patient bread and milk or porridge, and summon a doctor.

If hot liquids or stinging insects have been swallowed causing swelling in the throat, apply hot flannels to the front of the neck and take sips of cold water and of olive oil.

Cholera Malignant infectious disease due to toxins formed intestinally by bacterial vibrios. It is endemic throughout Asia and virulent epidemics develop from time to time. These are governed by the degree of atmospheric humidity, and often reach other countries through their ports. Cholera is combated with increasing success by destroying the vibrio bacilli with permanganates and fortifying the blood, dehydrated by the frequent evacuation of watery "rice-stools," with saline solutions. Opium is unnecessary. Non-malignant European or British summer cholera occurs as choleraic diarrhoea and infantile cholera.

Chopin Frédéric François Polish composer and pianist. He was born near Warsaw, Feb. 22, 1810, and first appeared in public at the age of nine. In 1831 he settled at Paris, where he knew most of the literary and artistic celebrities of the time, and was

one of the many lovers of George Sand, the novelist. As a pianist, in which branch of his art Liszt alone approached him, he was among the first to use the thumb freely on black keys. As a composer for his instrument he was unique, employing largely dance forms and rhythm, particularly the mazurka. He died in Paris Oct 14, 1849.

Chord Simultaneous occurrence of a number of musical sounds. Musicians divide groups into consonant and dissonant groups. A common chord is the combination of any sound with its third and perfect fifth.

Mathematically a chord is the shortest distance between the front and rear edges of a plane. It is the straight line joining the extremities of an arc. Hence in aeronautics, it is the line traced from the leading edge to the trailing edge of a wing.

Chorea Nervous disease usually occurring before puberty, oftener with girls than boys. It may arise in association with hereditary predisposition, fright, ill usage, malnutrition or educational strain. It is believed to be a cerebral or brain form of rheumatism. The symptoms may develop insidiously. They take the form of convulsive muscular movements in face or limbs, which may be local or general. It is also called St Vitus' dance.

Chorley Borough and market town of Lancashire. It is 9 m. from Preston on the L.M.S. Rly. The little River Chor passes through it and there is a canal. Astley Hall an Elizabethan house, is now public property. The principal industries are cotton weaving, calico printing and the making of machinery. Near is Duxbury Hall, the old seat of the Standish family. Pop (1931) 30,795.

Chorley Wood Urban district of Hertfordshire. It is 20 m. from London on the Metropolitan Rly. It is beautifully situated amid the Chiltern Hills, and has a fine common. Pop (1931) 3296.

Chorus Originally in Greek drama an enclosed space for dancing. Later the persons singing the praises of Dionysus were styled the chorus. The introduction of a separate actor performing dialogue with the chorus led in time to definite tragedy and comedy with consequent subordination of the chorus. In Elizabethan drama the person styled chorus recited prologue and epilogue and explained the play.

Musically a chorus is (a) a composition sung by a number of people either in parts or unison, (b) a collection of persons employed to sing choruses, (c) the refrain of a song in which the community may join.

Chosen Name given by the Japanese to Korea, (*q.v.*)

Chouans Name given in 1792-95 to the royalists of Brittany. Mainly peasants, who maintained a revolt against the first French Republic until they were crushed by La Roche in 1795, they are described by Balzac in his novel *Les Chouans*.

Chough Bird of the crow family. It has red legs and glossy black plumage and is found in many parts of the Old World. The Cornish chough with its red beak, is now rare in England, but still lives in the mountainous areas of Europe and N. Africa. A smaller variety is the Alpine chough.

Chow Chow Domestic dog. A native of China, it was at one time very popular in England. It has a heavy

coat with a ruff round the neck and may be black or white, blue or red in colour.

Chrism Sacred ointment used for the rites of baptism, confirmation and ordination, the consecration and blessing of churches, altars, chalices and baptismal water. In the Roman Catholic Church it comprises olive oil and balm, in the Eastern Church wine and spices are added.

Christ Name meaning "the anointed." It comes from the Greek and was given to Jesus because He was the anointed, the expected one sent by God to save the people. The Hebrew equivalent is Messiah. See JESUS CHRIST.

Christadelphians Name meaning brotherhood of Christ and applied to a religious community founded in 1848 by John Thomas, who, after studying medicine in London, went to Brooklyn. He gained many adherents in America and England and the sect spread to several English speaking countries.

Christchurch Borough of Hampshire. At the junction of the Avon and the Stour, it is 104 m. from London, on the S. Rly. It is famous for its church, which has been restored. It was once the church of the priory. Pop (1931) 9183.

Christ Church City of New Zealand. A railway junction in South Island, 8 m. from its port, Port Lyttelton, it is the capital of the Canterbury district, and a centre for the wool, mutton and other produce of the region around. The city was founded in 1850. Pop (1931) 127,300.

Christ Church College of Oxford University, founded by Cardinal Wolsey and called Cardinal's College, but in 1546 refounded by Henry VIII. The finest buildings are the hall and the quadrangle on S. Aldate's. The cathedral church serves as the college chapel. The dean of the college is also dean of the cathedral. The Fellows are called students and the college is called the house.

Christian Name of ten kings of Denmark. Christian II (1481-1559) was King of Sweden, Norway and Denmark, but his people revolted and he was an exile in the Netherlands and then a prisoner until his death on the island of Alsen. Christian IV (1577-1648), who was King of Denmark and Norway, founded Christiania and took part in the Thirty Years' War.

Christian IX, a son of the Duke of Schleswig-Holstein, was born, April 8, 1818, and chosen King of Denmark in 1852, the Royal House being then in danger of extinction. He succeeded to the throne in 1863 and reigned until his death Jan. 29, 1904. Schleswig-Holstein was taken from Denmark at the beginning of his reign. Christian was the father of Queen Alexandra. His other children were Frederick VIII who succeeded him; George, who became King of Greece; Dagmar, who married the Tsar Alexander III and another daughter who married the Duke of Cumberland.

Christian X, King of Denmark. Born Sept. 26, 1870, the eldest son of Frederick VIII, he became king May 12, 1912. In 1898 he married a princess of Mecklenburg and they have two sons.

Christian Danish prince. A son of the Duke of Schleswig-Holstein, he was born, Jan. 22, 1831, and became a

soldier In 1866, Schleswig-Holstein was seized by Prussia and he settled in England and married Helena, a daughter of Queen Victoria Known as Prince and Princess Christian, they lived in England until their death The prince died, Oct. 28, 1917 and his widow, Jan. 9, 1923 Their elder son, Prince Christian Victor, died on active service in S Africa, Oct. 29, 1900

Christiania Former name of Oslo, (q v), capital of Norway

Christianity Universal religion, originating in the life and teachings of Jesus of Nazareth He was a village carpenter, brought up in an atmosphere of Jewish ethical monotheism, and was crucified as a political malefactor The Galilean disciples became the apostles of a movement which a philosophical Gentile convert, Paul of Tarsus, interpreted to the Greco-Roman world, emphasising its universality and the central mystery of the Resurrection

The story of Jesus and the apostolic age enshrined in the New Testament, with the Hebrew Old Testament, formed the potent scriptures of the new religion, which became associated under the early fathers with formal creeds and sacraments The foundation of the empire at Constantinople by Constantine in the 4th century coincided with the beginning of State recognition, which was followed by the division of the Western from the Eastern Churches and the medieval struggle for supremacy between Church and State In the 16th century the growing demands for intellectual freedom introduced the Protestant Reformation, subsequently marked by diverse communions.

Something like a third of the inhabitants of the world own a nominal adherence to Christianity Its largest branch, the Roman Catholic Church, numbers about 331,500,000 the Greek, or Eastern Church, 144,000,000, and the various Protestant communions 207,000,000

Christian Science The religion, or interpretation of the Christian religion, discovered and founded by Mary Baker Eddy in 1866 Christian scientists regard it as the restoration and divinely promised fulfilment of the religion taught and practised by Christ Jesus It is defined by Mrs Eddy as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (*Rudimentary Divine Science*, p 1)

One of the leading points of Christian Science is that God is the Life, Mind and Soul of Man, yet that man, as the reflection of God, possesses perfect identity and individuality Christian Science defines man as the image, likeness or reflection of God Acknowledging God as the origin of all that really is, Christian Science does not find an origin for aught else, but consistently denies that anything which is not of God can have an origin or real existence

The prevention and cure of disease is within the mission of Christian Science for the same reason that it was within the mission of original Christianity Christian and scientific treatment of disease depends on the distinction between absolute or real being and the human or mortal concept of man Freedom from disease follows the absolute knowing of the truth concerning God and man

The original, standard, and only text-book on Christian Science Mind-healing is *Science and Health, with Key to the Scriptures*, by Mary Baker Eddy, first published in 1875

Christmas Annual festival celebrating the birth of Jesus Christ It has been kept throughout Christendom on Dec. 25, since about the year 400 Dec 25, or Christmas Day, and also the day following called Boxing Day, are bank holidays Christmas Day is also a quarter day in England and Ireland Christmas is traditionally a time for feasting, giving presents, and general goodwill The puritans in the 17th century objected to the keeping of Christmas, but this objection has now disappeared, although in Scotland it is observed far less than in England, the holiday taking place at the New Year instead There are special postal arrangements for Christmas Day in England and Wales

Christmas Name of two islands One is in the Indian Ocean, about 190 m from Java It was annexed by Britain in 1888, and is governed as part of the Straits Settlements It is about 12 m long and covers 62 sq m It has rich deposits of phosphates

The other, also a British possession, is a large atoll in the Pacific Ocean. It was discovered by James Cook in 1777 and annexed by Britain in 1888 Over 100 m in circumference, it contains vast quantities of coconuts It became part of the Gilbert and Ellice Islands Colony in 1919

Christmas Rose (*helleborus niger*) Hardy perennial of the order *ranunculaceae* It blooms out of doors in mid-winter, has handsome foliage and white blossoms about 2 ins in diameter Varieties of *helleborus orientalis*, known as Lenten roses, bloom later and have flowers of white, crimson and shades of rose colour

Christopher Saint and martyr He lived in the 3rd century According to one legend he was sentenced to death by a Roman official but the arrows, when aimed at him rebounded and wounded the Roman The saint thereupon allowed himself to be beheaded so that his blood might heal his persecutor

Christopher is the patron saint of ferrymen and travellers The Roman Catholic Church keeps St Christopher's day on July 25

Christ's Hospital English public school It was originally one of three royal hospitals founded in London in 1553 by Edward VI and was devoted to orphans, for 400 of whom it provided a home and education The popular name of Bluecoat School is derived from the dress, which for boys is a blue gown knee breeches and yellow stockings

For long the school, at which Lamb and Coleridge were pupils, was in Newgate St., London In 1778 the girls were removed to Hertford, but the boys remained in London until 1902 They then went to new buildings at West Herts, with accommodation for 800 boys

Chromatic Musical scale comprising a succession of notes outside the diatonic scale It is usually written with sharps ascending and flats descending, but more correctly only with accidentals involving no change of key

Chromite Black or brownish-black mineral. It is composed of the chromates of iron, alumina and magnesia, and used as the chief ore of the metal chromium. It is associated with serpentine rock in which it occurs in large masses, or as concretions and veins In New Caledonia, from the decomposed

serpentine, the chromite is washed out to form a black sand on the seashore. Southern Rhodesia is one of the chief sources of the supply of chromite

Chromium Metallic element, whose atomic weight is 52.1 and symbol Cr. It is a hard steel-grey metal, very infusible, non-magnetic and very resistant to corrosion by ordinary atmospheric agents. Chromium readily alloys with other metals and its addition to steel gives great hardness, toughness and resistance to corrosion, hence its use in stainless steel. Electroplating with chromium has many advantages over nickel plating. Many of the chromium compounds are of great economic importance.

Chromosphere Rose-coloured gas envelope outside the photosphere or incandescent surface of the sun. It is itself enveloped by the silvery aureole called the corona. Owing to the intense glare of the photosphere its enveloping layers are imperceptible to the naked eye except during total eclipses, but are observable spectroscopically at all times. The chromosphere, a gaseous cloak at least 5000 m. thick, with irregular prominences, contains more than 25 metallic and non-metallic elements, notably helium, hydrogen and calcium.

Chronicles Books of Two books of the Old Testament. Originally one, they formed with Ezra-Nehemiah a continuous history, emanating from a post-exilic compiler in the 3rd century, B.C. They review all Old Testament history from Adam to the Cyrus decree terminating the Jewish captivity in 538 B.C. Condensing into tribal and priestly genealogies the period preceding Saul's death, they treat sacerdotally the histories of David, Solomon and the Judean kings and recapitulate, sometimes textually, the books of Samuel and the Kings.

Chronograph Instrument which records the passing of time. One type is the stop watch used in timing races. In this a button is pressed at the start and again at the finish to ascertain the duration of the race.

Chronology Time scale or system of reckoning time in the mass. The calendar is a prominent example.

The basic principle is the observation of recurring natural phenomena. Different systems exist in the various sciences. Astronomers use a clock which records light years, based upon the velocity of light. In history an inch on a 12 in. scale may be taken to represent 1000 years, while in archaeology the same measurement may indicate the passing of 25,000 years. In history a list of dates is a chronology. Our knowledge of ancient chronology owes much to the work of the younger Scaliger.

Chronometer Timekeeping instrument used on ships for ascertaining longitude. The first satisfactory chronometer was invented by John Harrison between 1729 and 1760. The modern chronometer is like a large watch poised to remain horizontal in spite of the ship's movements, and is capable of remarkably accurate time keeping in all ordinary variations of temperature. Admiralty chronometers are periodically tested at Greenwich Observatory, where Harrison's chronometer may be seen.

Chrysalis Common name for the pupa or larval deposit of *lepidoptera* (butterflies and moths). It is a small

mass of matter which contains the eggs of the insect and increases in size, becoming furry in appearance, and is finally transformed into a caterpillar which, in turn, becomes either a moth or a butterfly.

Chrysanthemum Ornamental flower of the natural order *compositae*. A hardy plant with both perennial and annual species. It came to Europe from China. Early flowering chrysanthemums bloom from July to October, late kinds in the open in September and October and indoor varieties in November and December.

Annual chrysanthemums with light feathery foliage and flowers of white, yellow, orange, etc., with coloured markings, can be easily grown from seeds planted outdoors in April or May where they are to bloom.

Chrysolite Name given to the yellow or green transparent forms of the mineral olivine. This is a silicate of magnesia and iron, and is found in tabular crystals or occasionally in rounded masses in igneous rocks. Chrysolite is imported for jewellery from the East.

Chrysostom John, Christian saint and preacher. He was born at Antioch, the son of a Roman soldier, and, by the influence of his mother, became a Christian. He lived as a hermit, but in 386, being then about 30, he was ordained. In 398 he was made archbishop, or patriarch, of Constantinople, when his eloquence won for him the name of Chrysostom, or golden mouthed. His attacks on wickedness in high places led to his banishment in 403. He was soon recalled, but was again in disgrace when he died, Sept. 14, 407. He wrote the prayer in the Anglican Prayer Book said just before the end of both morning and evening prayer.

Chub Fish of the same genus as roach and dace. Common in England and other European countries, it often attains a length of 2 ft. and a weight of from 5 to 7 lbs. It is readily caught with a fly, but having little flavour and many bones is not popular for eating.

Chubb Charles, English locksmith. About 1800 he set up in business in Winchester, moved to Portsmouth, and then settled in London and began to make safes, for which both he and his brother Jeremiah took out many patents. With his sons he founded the firm of Chubb & Sons, large works were opened in Wolverhampton and in 1882 the firm became a limited company.

When Charles Chubb died in 1845 his son, John (1816-72), succeeded as its head and then came George Hayter Chubb. A leading Wesleyan he was made a knight in 1885, a baronet in 1900, and a baron, as Lord Haytor in 1927.

Church Urban district of Lancashire. It is just outside Accrington, on the L.M.S. Rly., and is served by a canal. There are chemical works and coal mines. Pop. (1731) 6185.

Church Richard, William, English divine. Born at Lisbon, April 15, 1815, he was in 1871 appointed Dean of St. Paul's, and, declining the archbishopric of Canterbury, remained in London until his death at Dover, Dec. 9, 1890. A strong high churchman and a fine preacher, Church is also known as a writer of unusual charm. He wrote for *The Guardian*, and was the author of *Bacon and Spenser* in the "English Men of Letters" series. His *Life of St. Anselm* is a classic, and he also wrote a history of the Oxford Movement.

Church Word used by Christians for a body of believers and for the building in which they meet. In its widest sense the Church is made up of all who accept the authority and teaching of the New Testament. A few Nonconformist bodies do not use the word, probably owing to its sacerdotal associations, e.g., the Society of Friends and the Plymouth Brethren.

THE CHURCH AS A CAREER The Church needs men. For many years the number of men offering themselves as candidates for holy orders has been steadily declining. For those who feel that their vocation lies in the Ministry, the call of the Church is an urgent one.

Women are not permitted to enter the ministry of the Church of England or the Established Church of Scotland. They may become ministers of the Free Churches. They may also become Deaconesses of the Church of England.

The Church of England The training for the ministry usually takes the form of three years at a university and a period of one and a half to two years at a Theological College. Alternatively the candidate may proceed direct to a non-graduate theological college for a post-matriculation three years' course. The fees of a Theological College vary from £100 to £140 for the college year. Candidates for holy orders will find many funds from which they can gain help towards their training.

The rank and file of the clergy receive stipends of anything from £200 to £400 per annum, which will increase with preferment.

Information and advice may also be sought from the Central Advisory Council of Training for the Ministry, The Church Assembly, 8 Dean's Yard, Westminster, London, W 1.

The Free Churches There is a wide field of labour to be found in the service of the Free Churches—the Baptist Church, the Congregational Church, the various branches of the Methodist Church, and the Presbyterian Church of England.

Most of these have their own theological colleges which require a good standard of education for admission. The Church of Scotland prefers that training should be carried out in one of the Scottish Colleges. Information may be sought from the National Council of the Evangelical Free Churches, Memorial Hall, London, E C 4.

The Catholic Church An aspirant to the priesthood will naturally seek the counsel of his spiritual adviser, who will, in turn, bring the aspirant to the notice of the Bishop of the Diocese in which he resides, or, alternatively, to the Superior of the Religious Order towards which he feels particularly called. He will be submitted to various tests as to fitness: spiritual first of all, mental, and then physical.

Chosen candidates are sent for training usually to a diocesan seminary, or (occasionally) to a Catholic University abroad. Two years are spent in philosophical studies before the theological course begins.

Secular priests, while they do not take the vow of poverty taken by members of the Religious Orders, are many of them more or less bound to observe it. Priests in charge of parishes depend for their support upon the freewill offerings of their parishioners, assistant priests as a rule, live in the same house with the parish priest and are provided with their board and lodging.

A priest must work for some years as assistant before being appointed to the sole charge of a

parish. He must be willing to work wherever his ecclesiastical superior may send him.

Church Army Religious and philanthropic organisation. It was founded in 1882 by the Rev. Wilson Carille to spread the teaching of the Church of England among the outcasts of Westminster. The officers and sisters are paid small salaries. The institution's activities now include the establishment and conduct of employment bureaux, emigration schemes and the distribution of food and clothing. The headquarters are at 55 Bryanston St., London, W 1.

Churches of Christ Christian denomination. In the British Isles it has 186 churches and 16,000 members, also 19,000 scholars in Sunday Schools. The headquarters are in Manchester and it exists in Australia and other parts of the British Empire.

Churchill Seaport of Canada, on the W side of Hudson Bay, at the mouth of the River Churchill. It is a river terminus, and the Canadian Government has built a harbour for the export of grain, with elevators and other accessories. The port was first open for trade in 1931. It occupies the site of Fort Churchill built as a trading station by the Hudson Bay Co.

Churchill Lord Randolph. English politician. Born Feb. 13, 1849, Randolph Henry Spencer Churchill was a son of the 7th Duke of Marlborough. From Eton he went to Merton College, Oxford, and in 1874 was elected Conservative M.P. for Woodstock. In the Commons he was a leading figure in the Fourth Party and a caustic and ready speaker. Outside, his aggressive style of oratory made him a popular idol. In some ways his views were more democratic than those of his leaders. In 1885 he took office as Secretary for India, and in 1886 became Chancellor of the Exchequer. In less than a year, however, he resigned. He died Jan. 24, 1895.

Churchill married an American lady, Miss Jerome, who, as Lady Randolph Churchill and then Mrs. Cornwallis-West, was a prominent figure in society. They had two sons, Winston, who wrote his father's *Life*, and John.

Churchill Winston. American novelist. Born in St. Louis, Nov. 10, 1871, he was trained for the navy and given work on *The Army and Navy Journal*. Having edited *The Cosmopolitan Magazine*, he made a name in 1899 with a novel, *Richard Carrel*, which was followed by *The Crisis*, 1901; *The Crossing*, 1903; *Coniston*, 1906; *The Inside of the Cup*, and *The Dwelling Place of Light*.

Churchill Winston Leonard Spencer. English politician. Born Nov. 30, 1874, elder son of Lord Randolph Churchill, he went to Harrow and Sandhurst and entered the army in 1895. In the same year he went as a war correspondent to Cuba and saw active service on the Indian frontier and in the Sudan. He was in S. Africa (1899-1900) as correspondent for *The Morning Post*.

Having left the army, Churchill entered Parliament in 1900 as Unionist M.P. for Oldham. He changed his party sooner than accept tariff reform, and in 1906 was returned as a Liberal for N.W. Manchester. He entered the ministry as Under Secretary for the Colonies in 1905, but was soon (1908) in the Cabinet as President of the Board of Trade. In 1910 he became Home Secretary, and in 1911 First Lord of the Admiralty, a post he held when the

Great War broke out. By this time, having been defeated in Manchester in 1908, he was M P for Dundee. In 1915 he left the Admiralty and went to command a battalion in France, but in 1917 he returned to politics as Minister of Munitions. In 1919 he became Secretary for War, and in 1921 Secretary for the Colonies. He left office with Lloyd George in 1922 and was out of Parliament until 1924, when he returned to the Unionist Party, and was elected M P for Epping. From 1924 to 1929 he was Chancellor of the Exchequer. In 1930 Churchill, as his views on India differed from those of the other Unionist leaders, took up an independent position in Parliament.

Churchill's abilities include the gift of writing vivid and interesting prose, seen in *The River War*, 1899, and *The Life of Lord Randolph Churchill*, 1906 but perhaps most of all in the four volumes of *The World Crisis*, 1923-28, his account of the events of the Great War and the peace. A one volume edition was published in 1931. In 1930 he issued *My Early Life*, and in 1933 appeared the first volume of *Marlborough His Life and Times*.

Churching of Women Rite of the Christian Church. It takes the form of a thanksgiving by women after childbirth, as set forth in the Prayer Book of the Church of England. In the Roman Catholic Church and the Greek Orthodox Church the service is also observed.

Church Lads' Brigade Organization for the training of boys, associated with the Church of England. There are about 1300 companies and 60,000 members. The headquarters are Aldwych House, Catharine St., London, W C 2.

Church Rate Rate levied in former days for the upkeep of the Church of England. It was voted by the parish meeting and became compulsory. In the 19th century, as Nonconformity grew stronger, objections were raised to it, and in 1868 it was abolished.

Church Stretton Market town and pleasure resort of Shropshire. It is 163 m from London and 13 m from Shrewsbury, and is beautifully situated on the slopes of Longmynd. Pop 1670.

Chutney Pickle or relish introduced into England from the East. It is prepared from sweet fruits, such as mangoes and raisins, to which certain acidulous flavours from lemons and sour herbs, hot seasoning, peppers and spices are added.

Chuvash One of the Russian union of Soviet republics. Founded in 1925, it covers about 7200 sq m and lies about 500 m. E of Moscow. Chokhsara is the capital. Pop 900 000.

Cibber Colley. English actor and author. Born in London, Nov 6, 1671, the son of a sculptor he became an actor and a popular dramatist, although his plays were adaptations rather than original pieces. One was *Love's Last Shift* and another *The Non Juror*, based on Molière's *Tartuffe*. Cibber was Poet Laureate from 1730 until his death, Dec 11, 1757. He left an *Autobiography*. Pope derided him in the *Dunciad*.

Cicada Large winged insect. It is found in greatest numbers in the tropics and noted for its long life, one American species is said to live for 17 years. It is also famous for the loud shrill call of the males.

Cicatrix Latin word meaning "a scar". It is the pathological name for the mark or scar left by a wound or sore. In botany the scar left on a tree or plant by the fall of a leaf is called a cicatrix.

Cicely Perennial umbelliferous plant (*myrrhis odorata*). The sweet cicely is a native of Britain, growing to a height of 2 or 3 ft in mountain pastures, and sometimes used as a pot herb. The stem bears large thrice pinnate leaves and white flowers clustered in downy umbels. The whole plant is characterised by its sweet aromatic flavour.

Cicero Marcus Tullius. Roman orator, statesman and writer. Born at Arpinum, Jan 3 106 B.C., he studied oratory in Greece and in 77 entered public life in Rome. For some years he made a high reputation in the law courts. In 63 he was one of the consuls and during his term of office crushed the conspiracy of Catiline. In 58 he was banished on the ground that he had executed the conspirators without a trial. He went to Tusculum, but in 16 months was recalled.

During the civil war Cicero decided to support Pompey, but after the battle of Pharsalus he abandoned politics. After Caesar's murder in 44, Cicero denounced Antony and was proscribed. He refused to leave the country, and Antony had him killed on Dec 7, 43.

Cicero left a mass of writings and founded the prose style which has been used by all great writers of the West for 2000 years.

Cid Campeador Spanish hero. Ruy Diaz born at Bivar, near Burgos, was historically a valiant Castilian warrior whom Christian and Moor were struggling for the mastery in Spain. His names, Arabic and Spanish, mean "lord conqueror". He fought for Christian and Moor indifferently, captured Valencia and there reigned until his death in 1099. Spanish poetry is filled with romances about his exploits.

Cider Fermented juice of apples. After fermentation in open casks it is filtered and freed from impurities. Cider may contain from 4 to 7 per cent of alcohol and a varying percentage of sugar. Special apples are cultivated for cider making, classified as sweet, bittersweet and sour, and these are blended according to requirements.

In England cider is made in Devon, Somerset and Herefordshire, and in Kent. It is also made in Normandy and Brittany. Cider cannot be sold without a licence.

Cimabue Giovanni. Italian artist. He was born in Florence about 1240 and died in 1302. Founder of the Florentine school, his pictures express a sense of life, and his desire for the natural and beautiful gave a decided impulse to his pupils, among whom was the celebrated Giotto.

Cimiez Pleasure resort of France. It stands on a hill behind Nice, and has the remains of an amphitheatre and an old monastery.

Cinchona Genus of rubaceous over green trees, valuable for the medicinal qualities of the bark. The red cinchona bark contains quinine and other valuable alkaloids. The name comes from the Countess Cinchon, the wife of a Viceroy of Peru in the 17th century, who was cured of a fever by the use of the bark.

Cincinnati City of Ohio, on the N. side of the river, it is a manufacturing town with rly and canal.

communications. The city is laid out with wide, straight streets crossing each other at right angles, with many sky-scrapers. The business quarter of the city lies on the low ground near the river, the residential quarters are on the adjacent hills. Bridges connect it with towns on the Kentucky side of the Ohio. Pop. (1930) 451,160.

Cincinnatus Roman hero. In 460 B.C. he was consul, but returned to his farm when his period of office was over. In 458, when Rome was invaded, he was called from the plough to become dictator. He defeated the enemy and returned once more to his farm. In 439, at the age of 80, he was again made dictator, but he died in the same year.

Cinematography Term applied to the art of photographing a moving object and projecting upon a screen a series of pictures in rapid sequence, giving an appearance of movement of the object. The effect is due to persistence of vision. Much experimental work in cinematography was carried out in the latter part of the 19th century, culminating in the researches of Edison, who, in 1889, demonstrated the working of his kinesiograph, which had been made possible by the use of a newly introduced photographic film.

From this instrument, which was more of the nature of a peepshow, gradually evolved the modern cinematograph apparatus with its special camera and projector, and the power to produce the pictures upon a large screen. The ordinary motion picture has been supplemented by colour photographs, and in 1928 the use of photo-electric apparatus made possible the reproduction of sound in the talking film, an innovation which is revolutionising the cinema industry.

A method of taking moving pictures in relief was discovered in 1933, though owing to technical difficulties it was not immediately practicable.

The widespread use of motion pictures has brought about special technique in production with an environment quite different from that of the theatre. Apart from its use for recreation, the film has an important educational and scientific value.

The preparation of cinema films is now one of the world's great industries. It probably ranks fourth among British trades. The world's centre for film making is Hollywood, a suburb of Los Angeles in California. In England the chief centre is at Elstree and Boreham Wood, but there are also large studios at Shepherd's Bush, Ealing and elsewhere.

The opening of cinema houses in Great Britain on Sunday has caused much controversy. Some local authorities, the London County Council, for example, permitted them to open, but others did not. When they were open the proceeds were given to charity. In 1930 a judicial decision at Brighton laid it down that Sunday opening was illegal because admission fees were charged. An act of parliament, therefore, legalised Sunday opening for a year where it existed, and a new measure was introduced in 1932. This, too, allowed Sunday opening in the 96 areas where it existed. In other areas the local authorities can apply to Parliament for permission to open. At the same time it was suggested that part of the money received should go to the maintenance of a National Film Institute.

THE CINEMA AS A CAREER What is true of the stage is more emphatically the case

with regard to acting for the cinema. Romantic stories of fabulous salaries and meteoric rises to fame are heard on every hand, and young people are too prone to believe that that way greatness lies. The aspirants are consequently far more numerous than prospective or even possible vacancies. The strictest inquiry should be made before any contract or binding agreement is entered into.

Cineraria Flowering plant. Varieties of 2 species of *Senecio* are cultivated, *S. cineraria* in the garden and *S. cruentata* in the greenhouse. The latter has tall (the stellate varieties) and dwarf forms.

Cinna Lucius Cornelius. Roman statesman. Elected consul in 87 B.C. at the time when Sulla and Marius were disturbing the city with their strife, he endeavoured to get Marius recalled, but was deprived of his consulship by the senate and forced to leave Rome. Afterwards, with the aid of Marius, he got together a large army, marched upon Rome, captured the city and massacred Sulla's friends. He was slain by his own soldiers.

Cinnabar Sulphide of mercury (HgS). Found sometimes finely crystallised, with adamantine lustre, but often massive with dull lustre, it is the main source of quicksilver. It is mined at Almaden in Spain, and also in Italy, Hungary, California, Mexico, China and Peru.

Cinnamon Inner bark of an evergreen tree. It is used as a spice in cooking and, medicinally, in treating colds. The best cinnamon grows in Ceylon, where the bark is thin and smooth and of a light yellowish-brown colour.

Cinquefoil Word meaning five leaves, applied to a perennial herb of the *Rosaceae* order. Clover is a familiar example. In architecture and heraldry an ornamental design is based on its leaf.

Cinque Ports Group of seaports on the coast of Kent and Sussex, originally Dover, Sandwich, Hastings, Romney and Hythe. Later Winchelsea and Rye were added. Deal, Ramsgate, Faversham, Folkestone, Margate and Tenterden were associated with them. They were given certain privileges retained until 1835, in return for supplying the king with ships in time of war. There is still a warden of the Cinque Ports at Walmer Castle, Deal. In May, 1931, the courts of brotherhood and guestling met at Romney.

Cintra Town of Portugal. It is 15 m. from Lisbon and is picturesque, situated on a rock. The palace dates from the 14th and 15th centuries. The convent is cut in the rock and the cells are lined with cork. Near is Monserrate, long the residence of Sir Frederick Cook. Pop. 6000.

Cipher Symbol 0, nought or zero. The word has been applied to all forms of secret writing, also known as cryptography. Cipher writing was in use among the Romans. Caesar's system, the simplest and commonest form, consisted merely of writing for each letter the letter which came three places after it in the alphabet, thus D for A.

Other systems include the writing of words backwards, the use of key words, and arbitrary symbols. Of the latter, Bright's *Characterie* (1588) was the first example, and modern shorthand systems are the latest development.

Circe In Greek mythology an enchantress and the daughter of Hefestus. She

transformed the companions of Odysseus into swine when they were shipwrecked on her island, but Odysseus, rendered immune by the root *moly*, drank her potion unharmed

Circle Plane figure whose circumference is everywhere at a constant distance from its fixed central point, or the perpendicular line of such a figure. The constant distance is the radius, a line drawn from the circumference through the centre to the opposite point is the diameter. The linear relation of circumference to diameter is denoted by the symbol π , this is a ratio represented in practice by 3.1416, approximately $3\frac{1}{4}$. The area of a circle equals the diameter squared multiplied by 0.7854

Circuit Division of the country for legal purposes. It comes from the Latin *circum* around, and *ire* to go, and originated with the journeys of the judges round the country. To day England and Wales, outside the London area, are divided into eight circuits. Midland, Western, Oxford, South Eastern, Northern, North Eastern, North Wales and Chester, and South Wales. In each are circuit or assize towns in which a judge of the high court sits twice or thrice a year to hear cases of importance, both civil and criminal. Scotland is divided into two circuits and the Irish Free State into eight.

Circuit In electricity, a term applied to the closed path traversed by an electric current. Its strength of flow is governed by Ohm's law, which states that the current is directly proportional to the electromotive force in the circuit and inversely proportional to the resistance of the circuit.

Circular Note Cheque, drawn in foreign currency, which may be obtained from a banker in exchange for an equivalent sum in English money. Circular notes are used by travellers when abroad, being handed with an explanatory letter from the banker to the banker's foreign agent who supplies the cash required. They are issued by banks and tourist agencies.

Circumcision Religious rite. The word comes from the Latin and means to cut round. It is performed on boys, usually in infancy, the foreskin being cut. It is practised by the Jews, Mohammedans and certain savage people, as an aid to health and cleanliness and may have originated as a purification rite. It may require to be performed as a surgical operation if the foreskin is too tight or long.

The Feast of the Circumcision is kept on Jan. 1, because Jesus Christ was circumcised on the eighth day after birth.

Circus Roman place of amusement, circular in shape and at first used for chariot races. The largest was the famous Circus Maximus at Rome, which was nearly 2000 ft. long. There are remains of the Circus Maximus on the Apian Way.

In the 18th century, in England, its chief attractions were feats of horsemanship, but gradually acrobats were introduced, and the clown became indispensable. Of such circuses Astley's, which later became Sanger's, Hengler's and Barnum's were notable. Some, such as Astley's, were held in a fixed place, others travelled about the country.

A notable circus is that arranged by Capt. Bertram Mills every year at Olympia, London.

Cirencester Market town and urban district of Gloucestershire.

shire, 21 m. from Cheltenham, on the G.W. Ry., and the Thames and Severn canal. A Roman town, it was named *Corinium*, and the museum of antiquities is called the *Corinium Museum*. The town has an agricultural trade and brewing and bacon curing industries. It is also a hunting centre. Near is Cirencester Park, covering about 3000 acres, the seat of Earl Bathurst, the Royal Agricultural College and Redcomb College, a public school. Pop. (1931), 7200.

Cirrhosis Replacement of tissue cells by fibrous tissue typically seen in the case of the liver. There it leads to chronic inflammation and enlargement followed by hardening of the organ. The most common cause is the abuse of alcoholic liquors. Jaundice gradually sets in, in severe cases, fatal. It is obnoxious in its early stages by suitable treatment and abstinence from alcohol, arrest of the disease may be effected.

Cissbury Ancient British camp. It is 3 m. from Worthing and covers 60 acres on a hill 600 ft. high. About 50 pits have been unearthed, dug by flint miners in the neolithic age and about 40 ft. deep. Horn picks and flint implements have been found.

Cist Prehistoric coffin formed of four or more unheaved slabs with one or more capstones. Originating in the neolithic age, when it was placed at the bottom of a pit, or on the level covered by a tumulus, it developed into the dolmen, the rock-cut chamber and, under Egyptian influence, the sarcophagus.

Cistercian Monastic order of the Roman Catholic Church. Founded at Cîteaux in France in 1098 by some Benedictines who were dissatisfied with the laxity that had crept into their order, they adopted the rule and dress of S. Benedict. The order was suppressed in the 18th century, but revived in the 19th. The habit is white with a black cowl and hood.

The Cistercians were very strong in England before the Dissolution. They were noted especially as sheep farmers and architects. In their northern houses, especially in Yorkshire, they kept large flocks of sheep. The abbey which they built are unsurpassed for beauty anywhere, as the ruins at Fountains, Melrose, Furness and Tintern prove.

Citric Acid Constituent of many fruit juices ($C_6H_8O_7$). It occurs in currants, gooseberries, raspberries, and especially lemons, 20 gallons of lemon juice should yield 10 lb. of citric acid crystals. These are readily soluble in water, with an agreeable, sour taste, and are used in preparing effervescent draughts, also in the form of limo juice and as an antidote for scurvy.

Citron Fruit of the citron tree, *Citrus medica*. The smooth stemmed tree, with oval leathery leaves, is cultivated in the Mediterranean basin, the West Indies and elsewhere. It may grow to a height of 15 ft., and yields a large fruit without boss, whose thick, fragrant rind is esteemed for candying. The lemon is probably a sub species.

Citrus Genus of aromatic, evergreen trees and shrubs of the rue order. There are about 30 species, all of Asiatic origin, and include the orange, lemon, citron, limo, lime, shaddock, pumelo and cumquat. Important areas in California and S. Africa are devoted to citrus culture.

City Name given to a municipality of a certain type. It comes from the

Latin *civitas*, and meant at first a community of citizens. In France and England the custom grew up of calling places cities which had a bishop, and this use persists, with exceptions, to day. Most cities are the seats of bishops, but a certain number, e.g., Leeds and Nottingham, which have been made cities by the king, are not. In the United States and Canada a place automatically becomes a city when it reaches a certain population.

The word *City* is also used for the original London which has its own corporation and police force. Its livery companies are the city companies. The older part of Paris is the *cité*. The word is also used in France for a suburb.

Ciudad Rodrigo City of Spain. It is 56 m. from Salamanca. Pop 8,400.

Standing near the frontier of Portugal. It was strongly fortified in the 18th century. The French captured it in 1810 and its recapture by the British and Portuguese in 1812 was one of Wellington's outstanding successes.

Civet Fatty musky substance from the posterior glands of a genus of carnivorous mammals called civet cats (*viverra*). Employed in aromatic pastilles and Oriental incenses. Its use in European perfumery tends to decline. The cat from which it chiefly comes is the African species, which is about 2 ft. long. The other five species are Asiatic. All have slenderer bodies, longer tails, shorter legs and sharper muzzles than the true cats.

Civil Engineer Term used in contradistinction to that of military engineer, the nature of the work being concerned with all branches of civil construction. This includes the designing and building of bridges, tunnels, dams and reservoirs and foundations, the construction of roads, docks, harbours and canals, also the problems of irrigation and reclamation of land.

Civil engineering is taught at most of the universities and colleges, and some give degrees in the subject. The directing body of the profession is the Institution of Civil Engineers at Great George St., London, S.W. 1.

Civilisation Term designating a stage of human society. At first serving to distinguish generally the higher states from those of savagery and barbarism, the intensive study of human origins introduced new lines of demarcation. The starting point of civilisation is nowadays usually associated with one or other primary invention, such as writing, metallurgy, pottery or the domestication of animals and plants. But prehistoric periods are recognised as having had their social stages also, and one may therefore speak of stone age, bronze age or early iron age civilisation. The form of culture associated with a nation is called its civilisation.

Civil Law Term applied in most countries to that branch of law which governs the relations of the citizens one to another. It is thus distinguished from the canon law, which deals with ecclesiastical matters, the criminal law, and specialised branches such as commercial and international law. The phrase originated in Roman times.

Civil List Name given to the annual payments made to the king and other members of the royal family. It is settled at the beginning of each reign. George V and his Queen received a civil list of £170,000 a year, the Duke of York £25,000, the Duke of Gloucester and Prince George £10,000 each, and

Princess Mary £6000. The Duke of Connaught receives £25,000 a year. The death of King George V (July 20, 1936) and the accession of King Edward VIII necessitate a new civil list.

In 1931 King George surrendered £50,000 a year as his contribution to national economy, and other members of the royal family made proportional sacrifices.

Civil list pensions are pensions granted to persons distinguished in science, art and literature, or their dependents in needy circumstances. A sum of £1200 is given each year.

Civil Service Service given by those employed by the state to carry on its work other than members of the army, navy and air force. Each civilised country has its civil service, and the conditions of entry, pay, etc., vary considerably.

In Great Britain the civil service numbers something like 300,000 men and women including those employed in the post office.

THE CIVIL SERVICE AS A CAREER Those who secure posts in the departments of state have a position for life, good hours, good holidays, and according to their service and ability, good pay, but it should be remembered that entry is not easy and that a high standard of work is required.

The Civil Service offers many fine opportunities to both men and women, whether in the Post Office, the Ministry of Labour, the Ministry of Health, the Board of Education, or the Home Office. Positions in one of these departments are to be had in every town throughout the country as well as in London.

The Colonial and Indian Civil Service and the Consular and Diplomatic Services remain closed to women in this country.

The normal method of entry to the civil service is by open competitive examinations held under the direction of the Civil Service Commissioners. Definite age limits are set according to the department.

Full particulars of these examinations, including the subjects and age limits prescribed for the several classes of appointment, can be obtained on application by letter addressed to the Secretary, Civil Service Commission, Burlington Gardens, London, W. 1.

Civil War Any war between parties in the same country. The Romans had their civil wars, as later had France and other countries that arose out of the empire. In England the Barons' War and the Wars of the Roses were civil wars, but the term Civil War, or Great Civil War, is usually reserved for the struggle between Charles I and the Parliamentarians that began in 1642 and lasted until 1649. The greatest of all civil wars was that between North and South in the United States, called the American Civil War, it lasted from 1861 to 1865.

Clachan Gaelic plural word meaning "stones," the singular being *clach*. It was applied to a small village or cluster of houses, and still survives as part of the name of certain villages in Ireland and Scotland. An example is Clachandysart.

Clackmannan County of Scotland. The smallest in the country, it lies between the Firth of Forth and Perthshire, and covers only 55 sq. m. Its chief rivers are the Devon and the Black Devon, and in the north are the Ochil Hills. Clackmannan is the county town. Other places are Dollar, Alva, Alloa and Tillicoultry. Pop (1931) 31,947.

Clacton Urban district and watering place of Essex. It is 70 m from London, on the L N E Rly, and can be reached by a frequent service of steamers and motor coaches. Pop (1931) 15,851.

Clairvaux Village of France. It stands on the Aube, 35 m from Troyes, and the word means clear valley (*claris valis*). In 1115 S Bernard founded here a Cistercian abbey, which flourished until the French Revolution.

Clairvoyance Term used to denote all forms of super natural perception of events, other than telepathy, where the knowledge is acquired from another mind. The term is used particularly in connection with spiritualism to indicate the supernormal acquisition of knowledge concerning persons on another plane of existence, usually through a clairvoyant, or medium.

Clam Bivalve mollusc, the shell of which closes like a vice. They are found in the Atlantic Ocean off both the American and European shores. The clam is used for food, especially in the United States, also as a bait for fishing.

Clan Social group recognising a common ancestry. It was most developed in Scotland, where, for centuries, especially in the north, the country was divided among the various clans, Campbells, Macgregors, Gordons and others. Each was ruled by a chief who had the power of life and death over the clansmen, who usually served him with remarkable loyalty. The land was held by him as being the common property of the clan.

The feuds between the clans were a feature of Scottish life. The clan spirit was much in evidence during the Jacobite risings of 1715 and 1745, but after that it decayed rapidly, one reason being that in 1748 the chieftains were deprived of their powers. Each clan had its tartan and badge, which are worn ceremoniously to day. About 60 clans retain their historic continuity. The clan system also prevailed in Ireland and other parts of the world.

Clan-na-Gael Irish secret society. It was founded in Philadelphia in 1881 by Fenians who wished to make Ireland independent. After a period of great activity it died away. The term means "clan of the Gaels".

Clanricarde Earl of Irish title long borne by the family of de Burgh, or Burke, and now by the Marquess of Sligo. In 1543 Ulick de Burgh, a great land owner in Connaught, was made Earl of Clanricarde. Two succeeding earls were made marquesses, but in both cases the newer title died out and the older one passed to another branch of the family.

John, the 14th earl (1802-74), was a Conservative politician and ambassador in St Petersburg. He married a daughter of George Canning and was made a marquess in 1826. His son, Hubert George de Burgh, the 2nd marquess (1832-1916), was known for his resistance to the policy of land purchase. He died April 12, 1916, leaving his great wealth to his nephew, Viscount Lascelles, later Earl of Harwood. His marquessate lapsed, but the earldom passed to the Marquess of Sligo.

Clapham Southern suburb of London. It is 5 m from London, in the borough of Wandsworth, on the Southern and tube railways. The common is a large open space. The district is famous as the home of the Clapham sect, a group of rich and

influential evangelical churchmen who included Wilberforce, and the father of Lord Macaulay. The populous district of Clapham Junction, with its important railway junction, is in the borough of Battersea. Clapham Park is a residential district.

Clapperton Island in the Pacific Ocean. About 600 m from Mexico, it is uninhabited, but is valuable for its guano. Claimed by France, the United States and Mexico, its ownership was submitted to arbitration. In 1930 the arbitrator, the King of Italy, decided in favour of France.

Clapton District of London. To the north-east of the city, it is in the borough of Hackney on the L N E Rly. Here is a track for greyhound racing. Clapton Orient is a popular Association football club.

Claque Organised body of professional applauders in the French theatre, hired to receive a play with approbation. The name is derived from the French *claque*, to clap the hands. Members of the claque could be hired, not only to clap, but also to laugh or cry, as the occasion demanded.

Clare Italian saint. She was born at Assisi, July 16, 1194, and was soon influenced by the preaching of S Francis. In 1212 she took the vows of poverty, chastity and obedience and became the first woman member of the Franciscan order. Her life was passed as the head of a house for nuns opened near Assisi, its members being called after her, the Poor Clares. She died Aug 11, 1253, and was canonised in 1255.

Clare County of the Irish Free State. In the province of Munster, it covers 1330 sq m, and has a long coast line on the Atlantic. Off the coast are the Aran and other islands. The chief river is the Fergus, and there are several ranges of hills. Sheep and cattle are reared, and there are some fisheries. Ennis is the county town. Pop (1926) 95,064.

Clare Town of Suffolk. It stands on the Stour, 25 m from Bury St Edmunds, and 62 from London, on the L N E Rly. A castle, of which some ruins remain, was built here in Norman times and was the seat of the powerful earls of Clare. The town has an agricultural trade. Pop 1340.

Clare Earl of English title. The last peer of the earlier creation was killed at Bannockburn in 1314. In 1564 John Holles was made Earl of Clare and his descendants held the title until 1711. From 1711 to 1768 it was held by Thomas Polham, Duke of Newcastle, the Prime Minister who was related to the Holles family.

In 1795 John Fitzgibbon was made Earl of Clare. He was a harrister and a member of the Irish Parliament. Having been Attorney-General, he was made Lord Chancellor of Ireland in 1789, and helped to bring about the union of the British and Irish Parliaments in 1800. He died Jan 28, 1802, and his title became extinct in 1864.

The Earls of Clare are perpetuated in several ways. Clare College, Cambridge, owes its name to Elizabeth, a sister of Gilbert, Earl of Clare, who gave money to it in the 14th century. Clare Market in the Strand, London, which existed until almost the end of the 19th century, was founded about 1657 by John Holles, Earl of Clare.

Clare John, English poet. A labourer's son, he was born July 13, 1793, at Holpstone, near Peterborough. He earned a precarious living in several ways and soon

began to write poems. By good fortune one of them was noticed, with the result that his volume, *Poems Descriptive of Rural Life and Scenery*, was published in 1820. Other volumes, *The Shepherd's Calendar* and *The Rural Muse*, followed, but their success was not great. The poet's mind gave way, and in 1837 he was put into the asylum at Northampton, where he died, May 20, 1864.

Claremont Estate near Esher in Surrey. It is 14 m. from London. Sir John Vanbrugh built the house, which was bought for the Princess Charlotte and later became the home of Louis Philippo, who died here. The Duke and Duchess of Albany made it their home on their marriage and the widowed Duchess lived here until her death in 1922.

Clarence Duke of English title. Taken from Clare in Suffolk and first given to Lionel, a son of Edward III, who married the heiress of Clare, the title several times became extinct. The last Duke was Albert Victor, elder son of Edward VII. He was born Jan. 8, 1864, created a duke in 1890, and died Jan. 14, 1902.

Clarence House is the London residence of the Duke of Connaught. It was built in 1825 for William IV, then Duke of Clarence, and adjoins St. James's Palace.

Clarendon Village of Wiltshire. It is near Salisbury. The early English kings had a palace here, and here the Constitutions of Clarendon were issued in the 12th century. Pop. 300.

Clarendon Constitutions of Laws issued by Henry II in 1164, when he was living at Clarendon. They were 16 in number and were intended to curb the exceptional privileges of the clergy. They never came into force, but were important because they led to a renewal of the quarrel between the king and Thomas Becket. Henry withdrew them after the archbishop's murder.

Clarendon Earl of English title borne by the family of Villiers. In 1661 it was given to Edward Hyde, the Lord Chancellor and historian, and it remained in his family until the 4th earl died in 1753. The heiress of the family married the ambassador, Thomas Villiers (1709-86), and in 1776 he was made Earl of Clarendon. George, the 4th earl (1800-70), was Lord Lieutenant of Ireland, 1847-52, and Foreign Minister in 1853-55, during the Crimean War in 1855-66, and under Gladstone in 1868-69. He died Jan. 27, 1870. George, the 7th earl, was chairman of the British Broadcasting Co. until appointed Governor-General of S. Africa in 1930. The Earl's eldest son is called Lord Hyde.

Clarendon Earl of English statesman and writer. Edward Hyde was born Feb. 18, 1608, at Dinton, near Salisbury, the son of a landowner there. He went to Oxford and became a barrister, and in 1640 entered Parliament. Though he objected to the unconstitutional acts of Charles I, he remained loyal to the king. In 1643 he was made Chancellor of the Exchequer.

After the death of Charles, Hyde went abroad and was then closely associated with the royal family. In 1658 Charles II made him his Lord Chancellor, and from the Restoration in 1660 to 1667 he was the king's chief adviser. He made many enemies, and in 1667 was compelled to resign. To escape impeachment he went abroad and remained in France until his death at Rouen, Dec. 9, 1674. He is buried in Westminster Abbey.

In his exile Clarendon wrote his *History of the Great Rebellion*. Although strongly partisan, this is an invaluable guide to the history of the times, while many of its passages are among the noblest examples of English prose.

Clarendon Code Four laws passed between 1661 and 1665, so-called because the Earl of Clarendon was then the chief adviser of Charles II. Intended to strengthen the position of the Church of England, the laws were as follows: (1) The Corporation Act of 1661, by which every member of a municipal corporation must take the sacrament according to the rites of the Church of England at least once a year. (2) The Act of Uniformity of 1662, which made it necessary for all clergymen to be ordained by a bishop and to use the Prayer Book. (3) The Conventicle Act of 1664, which made all religious services, except those of the Church of England, illegal. (4) The Five Mile Act, which forbade all expelled clergymen to live within 5 miles of a corporate town, unless they had taken an oath to be loyal to the established order.

Claret English name for the red wines of Bordeaux. They come from about 60 vineyards in the Medoc district of the Gironde.

Clarinet Single-reed wind instrument. The six finger holes in its cylindrical tube, which is bell-shaped at the bottom, give its fundamental scale.

Extra holes controlled by keys emit other sounds.

The clarinet acts like a stopped organ pipe and gives only the odd upper partials of the harmonic series. This involves such complexity of fingering that clarinets are made pitched in convenient keys.

Clarion Trumpet with a high-pitched note. Hence the popular use of the word for a clear loud call.

Another clarion is an organ reed stop.

Clark Francis Edward. American divine. Born in Quebec, Sept. 12, 1851, he founded the World's Christian Endeavour Union. He died May 25, 1927.

Clarke Sir Edward George. English lawyer. Born in London, Feb. 15, 1841, the son of a jeweller, he was largely self-educated. In 1880 he was elected Conservative M.P. for Southwark, and was later returned for Plymouth, a seat he held until 1900. From 1886, when he was knighted, until 1892 he was Solicitor-General. Clarke was M.P. for the City of London in 1906, resigning because of his free trade views. He published his *Autobiography* in 1918, and died April 26, 1931.

Clarkson Thomas. English anti-slavery leader. Born, March 28, 1760, he became interested in the slavery question while at Cambridge, henceforward devoting his life to secure abolition. It was Clarkson who influenced Wilberforce (q.v.), whose advocacy of abolition in parliament was supported by Pitt, Burke and Fox. Clarkson travelled extensively, both to gather evidence, and to enlist the sympathy of foreign statesmen. His health gave way in 1794, but he continued to write for the cause, seeing slavery legally abolished by parliament in 1807. He became vice-president of the Anti-Slavery Society, which was formed in 1823. He died, Sept. 26, 1846.

Classics Writing of the first rank, pre-eminently in ancient Greece.

and Rome The great Greek classics include the writings of Homer, Thucydides and the great dramatists Aeschylus, Euripides, Sophocles and Aristophanes, as well as Aristotle and Plato Latin classical writers include Livy, Tacitus, Virgil, Seneca, Cicero and others Supreme works of any age are also known as classics

Claudius Name of two Roman emperors. Claudius I was born at Lugdunum (Lyons) in 10 B.C. After the murder of Caligula, he was proclaimed emperor by the praetorian guards He was governed by his favourites, and his infamous wife, Messalina, whom at length he put to death He then wedded his niece, Agrippina, who, to ensure the throne to her son Nero, poisoned him in 54 B.C.

Claudius II succeeded Gallienus as emperor in 268 and died in 270 He was called Gothicus, and his reign was chiefly marked by his victories over the Goths and other barbarians

Claud Lorrain French landscape painter, was born at Chamagne, in Lorraine He lived in Freiburg and Rome, and returned to France, but settled in Rome in 1627, where he worked under the protection of Pope Urban VIII, and quickly became famous His landscapes are in the Italian classical tradition, and have beautiful light and cloud effects, although the figure drawing is poor His "Fête Villageoise," and "Un Port de mer en Soleil Couchant," are now in the Louvre, and his book of sketches of his pictures, *Libri di Verità* now belong to the Duke of Devonshire He died Nov 21, 1682

Clausewitz Karl von German soldier Born June 1, 1780, he entered the Prussian army In 1813 he entered the Russian service Again in Prussia he served in the Waterloo campaign, and in 1815 was appointed head of the military academy He died at Breslau, Nov 18, 1831

The teaching of Clausewitz was that war must be conducted with all the skill and ruthlessness possible, and must aim at the total destruction of the enemy His ideas are set out in his famous *Vom Kriege* (on War), which has been translated into English and other languages

Claustrophobia Medical term for a certain kind of anxiety neurosis It is characterised by a morbid fear of being in a confined space Treatment is by psychoanalysis

Clavichord Keyboard stringed instrument It made music by the contact of tangents of brass with metal strings These tangents also mark off the vibrating lengths of strings from the belly bridge

Clavicle One of the important bones of the vertebrate skeleton In man the clavicle, or collar bone, is curved and extends from the breastbone to the top of the shoulder blade

Clay Earthy substance comprising essentially silica, 46.3 p.c., alumina, 39.8 p.c., and chemically combined water, 13.9 p.c. It is tenacious, plastic when wet, and when heated to 300°C. loses its plasticity irreversibly Sometimes formed of weathered volcanic rock in place, it has mostly been deposited as mud derived from disintegrated granites. Clays provide fireclays, pipe clays, pottery clays and clays for brick making

Clay Cross Urban district and market town of Derbyshire It is 5 m from Chesterfield on the L.M.S. Ry. Coal mining is the staple industry Pop (1931) 9843

Claymore Name applied to the double edged broadsword formerly used by the Highlanders of Scotland It possessed a cross hilt of which the guards were turned down

Clayton-le-Moors Urban district of Lancashire It is 6 m from Blackburn Its industries are concerned with the cotton trade Accrington, on the L.M.S., is the railway station Pop (1931) 7910

Clayton, with a station (Clayton Bridge), on the L.M.S. Ry., is a northern suburb of Manchester Another Clayton, on the L.M.S. Ry., is near Bradford, Yorkshire

Clear Island and cape in the County of Cork, Irish Free State About 4 m from the mainland it has an area of roughly 1500 acres, and a pop. of 595 Cape Clear is the most southerly point of Ireland

Clearing House Institution for the purpose of settling accounts between its members by the payment of balances only The London clearing house settles all differences between the banks arising out of cheque and other transactions The total amounts owing to and from are set off one against another, and the account is settled by a transfer of the difference The office is in Post Office Court, Lombard St., London, E.C.

Cleat Wedge-shaped piece of wood used to prevent a rope slipping, or to act as a step, e.g., when fastened to a ship's mast The name is also applied to a wooden or metal implement for helaying ropes, and to the wedges on a ship's side which catch the shores of a dry dock

Cleator Moor Market town and urban district of Cumberland It stands on the Eden, 4 m from Whitehaven, on the L.M.S. Ry. It is a mining centre and has blast furnaces for the iron ore found on the moorland near Pop (1931) 6582

Cleavage In geology a term used to denote the tendency of certain rocks to split into plates or slabs along planes independent of the planes of bedding In mineralogy, cleavage is applied to the tendency of mineral crystals to split along definite planes bearing some constant relation to the faces of the crystal

Cleckheaton Market town of Yorkshire (W.R.). On the L.M.S. Ry., it is 6 m from Bradford The chief industries are the manufacture of woollens and coal mining Pop 12,500

Clee Range of hills in Shropshire They are near Ludlow and extend for about 10 m Brown Clee (1700 ft.) is the highest point.

Cleethorpes Urban district and watering place of Lincolnshire It stands on the Humber estuary, about 3 m from Grimsby, with which it is connected by tramways. It is 158 m from London on the L.N.E. Ry. Pop (1931) 28,624 Nearby is the village of Clee, whose beautiful old church has a Saxon tower and a Norman nave

Clef Term used in music. The clefs, which are placed at the beginning of a staff, determine the absolute pitch of certain notes, and therefore, together with the position on the staff, of all the notes. They are marked as follows

G or Treble Clef C (Alto) Clef F (Tenor) Clef F or Bass Clef

Cleft Palate Imperfect development of the roof of the mouth, present at birth. It results from failure of the process forming the nose to unite with the two sides of the upper jaw, as it normally does before birth. If the gap extends forward it produces hare lip. The malformation can usually be remedied by an operation in early life.

Cleisthenes Athenian statesman. He was the author of the law called ostracism, which enabled the public assembly to decree by a secret ballot the banishment of any citizen who appeared dangerous to the state. He lived about 510 B.C.

Clematis Genus of hardy and half-hardy plants of climbing habit of the natural order *ranunculaceae*. The wild clematis of the hedgerows is familiar as travellers' joy or old man's beard. Many hybrid varieties are in cultivation, mostly derived from *C. viticella*, a native of S. Europe and parts of Asia, and *C. languinosa*, a large flowered blue-coloured species of Chinese origin. The popular *C. jackmani* with deep velvety purple blooms is derived from these two.

Clemenceau Georges. French statesman. Georges Eugène Benjamin Clemenceau was born Sept. 28, 1841. In 1871 he was a member of the National Assembly. Between 1871 and 1876 he was engaged in municipal work in Paris, ending as President of the Municipal Council. From 1876 to 1893 he was a member of the Chamber of Deputies. He opposed Boulanger and supported Dreyfus, the vehemence of his activities winning for him the name of "the tiger" and involving him in several duels. In 1880 he founded *La Justice*, the first of his several journals the others were *Le Bloc*, *L'Aurore* and *L'Homme Libre*.

Early in 1906, having been a senator since 1902, Clemenceau became minister of the interior. Later, in 1906, he was made premier, a post he held until 1909. His term of office was notable for the establishment of the Entente Cordiale, following the trouble with Germany in 1908, and the separation of church and state. He was active in opposition for nine years until, in 1917, he was called upon to save his country. He saw the war brought to a successful conclusion and presided over the peace conference at Versailles. He resigned in Jan., 1920, and lived in retirement until his death, Nov. 24, 1929.

Clemenceau wrote a novel which appeared in England as *The Strongest*. His two books dealing with the events of 1914-20 appeared just before his death.

Clemens Samuel Langhorne. See MARK TWAIN.

Clement Name of fourteen popes. Clement I, or Clement of Rome, was the fourth Bishop of Rome. Clement II was pope in 1047. Clement III was pope from 1187 to 1191. Clement IV.,

a Frenchman, was pope from 1265 to 1268. Clement V, also a Frenchman, was pope from 1305 to 1314. He was the first pope to live at Avignon. Clement VI, another Frenchman, was pope 1342 to 1352. Clement VII was a Medici, he reigned from 1523 to 1534.

Clement VIII. was pope from 1592 to 1605, and Clement IX. from 1667 to 1669. Clement X. was pope from 1670 to 1676, and Clement XI. from 1700 to 1721. Clement XII. was pope 1730 to 1740. Clement XIII., pope from 1758 to 1769, was followed by Clement XIV., pope from 1769 to 1774. This pope in 1773 suppressed the Jesuits.

Clement's Inn Formerly one of the London chancery inns. It existed in the 15th century and was attached to the Inner Temple until its abolition about 1800. Its name comes from the Church of S. Clement Danes and the name is still used for a block of buildings near that church in the Strand. The Inn is the Shepherd's Inn of Thackeray's *Pendennis*.

Cleon Athenian demagogue. He gained great influence over the people and was appointed commander of the army. He gained a victory over the Lacedaemonians in Sphacteria, but afterwards he was defeated by Brasidas and slain. Cleon is bitterly attacked by Aristophanes in the *Knights* and other plays, and his name has become proverbial for a demagogue. He lived about 400 B.C.

Cleopatra Queen of Egypt. A daughter of Ptolemy Auletes, she was born in 69 B.C. and became, in 51 B.C., joint ruler of Egypt. In 48 B.C. she was driven out, but Caesar, having become her lover, restored her. After his death she became the mistress of Mark Antony, which led to war between Antony and Octavian, afterwards the Emperor Augustus. Antony was defeated, and after his death Cleopatra killed herself.

CLEOPATRA'S NEEDLES are two great obelisks built at Heliopolis about 1500 B.C. and later removed to Alexandria. In 1878 one of these was brought to London and erected on the Victoria Embankment. It is 68 ft high. The other, a little higher and much heavier, was erected in Central Park, New York, in 1879.

Clerestory Upper storey of a building which is pierced with windows for admitting light uninterrupted by adjoining roofs. It is chiefly used in the naves, choirs and transepts of Gothic cathedrals and large churches.

Clerkenwell District of London. It is to the north-east of the city and part of the borough of Finsbury. The most interesting building is the gatehouse of the priory of S. John of Jerusalem, a religious house that stood here in the middle ages. It is now the chancery of the modern Order of S. John of Jerusalem. Clerkenwell is known as a centre of the jewellery and watch-making trades.

Clerk-Maxwell James. Scottish scientist. Born in Edinburgh, June 13, 1831, he went to Trinity College, Cambridge, where he was second wrangler. He was in succession professor at Aberdeen, at King's College, London and at Cambridge, where he died Nov. 5, 1879. Mathematical physics was his main study. His ideas on the connection between light, heat, magnetism and electricity, carried forward by others, have led to remarkable results.

His great work is *A Treatise on Electricity and Magnetism*, 1873

Clermont-Ferrand City of France It stands near the Allier River, 112 m from Lyons, and is the capital of the department of Puy de Dôme The buildings in Clermont include the beautiful Gothic cathedral Ferrand is a busy manufacturing centre Clermont is a market for the produce of Auvergne The two towns are connected by a long avenue bordered with trees In 1195 at the Council of Clermont, Pope Urban II proclaimed the first crusade Pop (1931) 103,143

Clevedon Urban district, market town watering place of Somerset It is on the Bristol Channel, 16 m from Bristol, on the G W Rly Clevedon Court was the home of Tennyson's friend, Arthur Hallam, and his family have associations with the village and church Pop (1931) 7033

Cleveland Hilly district of Yorkshire In the north of the county, It extends from the Tees almost to Whitby The highest point is nearly 1600 ft. It is famous for its iron ore, the working of which has made Middlesbrough a great industrial town The district gives its name to a breed of horses and to a hunt.

Cleveland City and port of Ohio, United States It stands on the south side of Lake Erie at the mouth of the River Cuyahoga, 375 m from Chicago The industries include iron and steel works, oil refineries, motor car works and clothing factories. Cleveland has many parks and open spaces. Pop (1930) 900,429

Cleveland Duke of English title Its first holder was Barbara Villiers, mistress of Charles II, created duchess in 1670 The daughter of Viscount Grandison and wife of the Earl of Castlemaine, she bore the king three sons who became dukes of Cleveland, Grafton and Northumberland, and died at Chiswick, Oct 9, 1709 The Cleveland title became extinct in 1774 In 1833 it was given to William Henry Vane, descended from a daughter of the first duke, but it again became extinct when the 4th duke died in 1891 The duke's seat was Raby Castle, Durham, now the seat of Lord Barnard.

Cleveland Stephen Grover American president Born in New Jersey, March 18, 1847, he became a notable reformer, and in 1884, and again in 1892, he was elected to the presidency as a Democrat. During his second term of office the trouble with Great Britain about the boundary of Venezuela occurred. Retiring in 1897 he died at Princeton, June 24, 1908

Cleves District of Germany, round the town of Cleves, which is near the frontier of the Netherlands, 45 m from Düsseldorf It covers about 850 sq m The town is a pleasure resort. Pop 180,000

Clew Bay Opening of the Atlantic Ocean In Co Mayo, Irish Free State, it pierces the land for about 14 m There are many small islands in the bay and Clare (q v), a larger one, at its entrance

Clewer District of Berkshire Clewer Within is part of the borough of Windsor Here are the headquarters of the Clewer Sisterhood. Founded in 1849 as the community of S John the Baptist, it conducts schools, hospitals and homes for fallen women. Clewer Without is outside the borough.

Cliché In stereotype printing a papier maché mould made from set type From the mould a casting is made, and with this the actual printing is done

The word is more widely used for hackneyed expressions which, possibly striking at first, become stale and threadbare with use

Clifden Market town and seaport of Co Galway, Irish Free State It stands on Ardara Bay, 50 m from Galway, on the Gt S Rlys Its trade is chiefly in fish Pop 800

The Irish title of Viscount Clifden was given in 1781 to James Agar, a landowner of Kilkenny In 1899 it was inherited by Thomas C Agar Robartes, 2nd Baron Robartes, whose estates are chiefly in Cornwall

Cliff-Dwelling Habitations of primitive peoples in Western Colorado, Arizona, Utah and New Mexico They were constructed of lime and stone, in the hollow surface of a cliff, accessible only by ladder or ropes from below, and invisible from above They were built by people of Pueblo origin. The most famous are in the Mesa Verde Canyons, and the Cliff Palace has 150 rooms, and 23 ceremonial chambers.

Clifford Name of a great English family Taking its name from Clifford in Herefordshire, it is now represented by Lord Clifford of Chudleigh the holder of a title dating from 1672 The first lord, Thomas Clifford (1630-73), was one of the chief advisers of Charles II, being a member of the cabal and lord treasurer The family seat is Ugbrooke Park, Devonshire The barony of de Clifford, which dates from 1299, is now held by the Russell family

Clifford John. English divine Born at Sawley, Derbyshire, Oct. 10, 1836 In 1858 he became minister of a Baptist chapel in Praed Street, removing in 1877 to Westbourne Park Clifford was one of the leading Nonconformists of his time, a fervent politician and the leader of the passive resistance to the education measure passed in 1902 He died Nov 20, 1923

Clifford's Inn Former London Chan- cery Inn Attached to the Inner Temple, it became a centre for lawyers in 1344 and remained so until dissolved in 1902 The hall built in 1767 still stands The inn was behind S Dunstan's Church in Fleet Street, and the buildings on its site are still called Clifford's Inn.

Clifton Suburb of Bristol To the west of the city, it stands on the Avon and has a noted suspension bridge, opened in 1864 Formerly a popular pleasure resort, it is now a residential district

At Clifton is Clifton College, a public school for boys, founded in 1862 It has accommodation for about 800 boys, and ranks as one of the great public schools

Another Clifton is a village near Nottingham It stands on the Trent and is famous for Clifton Grove, a beautiful avenue of trees overlooking the river Clifton Hall has been for centuries the seat of the Clifton family The barony of Clifton, dating from 1608 is held by Elizabeth A. M. Bligh The oldest son of the Earl of Darnley is called Lord Clifton

Climate Average succession of atmospheric conditions which regarded individually, constitute weather These conditions embrace variations of temperature, moisture and pressure The sun's

ecliptic path conveniently delineates five climatic zones the torrid or tropical, between the tropics, $23\frac{1}{2}^{\circ}$ N to $23\frac{1}{2}^{\circ}$ S, the arctic, north of the circle, $66\frac{1}{2}^{\circ}$ N, the antarctic, south of the circle, $66\frac{1}{2}^{\circ}$ S, and the intermediate north and south temperate zones

Clinic Institution at which people attend for illness First founded in London in 1696 for the provision of medicines for the poor, clinics have greatly increased in number, particularly in the U S A, and their activities now include preventive as well as curative functions The London School of Clinical Medicine is at the Dreadnought Hospital, Greenwich

Clinical medicine deals with the treatment of patients at the bedside

Clinometer Instrument used in calculating the position of distant, and even invisible objects, and in setting gun sights to the correct angle Other forms are used by airmen and surveyors

Clinton Name of a famous English family In 1299 John de Clinton became a baron One of his descendants was made Earl of Lincoln in 1572 This title became merged in that of Duke of Newcastle, whose family name is Pelham Clinton In 1692 the barony of Clinton fell into abeyance, but in 1721 it was revived and later came to the family of Hopburn-Stuart-Forbes Trefusis The family estates are in Devon

SIR HENRY CLINTON was a soldier and an M P In 1778 he was appointed to command the British forces in N America, but after the surrender of Yorktown he resigned He died at Gibraltar, where he was governor, Dec 23, 1795 His son, another Sir Henry Clinton (1771-1829), was a leader at Waterloo

Clio One of the muses in Greek mythology She was the goddess of history

Clipper Long, slender, sailing vessel, with rectangular sails and three backward-sloping masts It was developed by American builders from French principles in the first half of the 19th century Clippers were renowned for their speed The *Cutty Sark*, engaged in the China tea trade, is perhaps the most famous of these vessels

Clipstone Village of Nottinghamshire It is in Sherwood Forest, 5 m from Mansfield, on the river Maun King John had a palace here and there was a camp here during the Great War

Clitheroe Borough and market town of Lancashire It stands on the Ribble, 38 m from Manchester, on the L M S Rly The industries include cotton mills and paper making works Clitheroe had a castle, of which ruins remain Near is Pendle Hill Pop (1931) 12,098

Clive Catherine English actress Born in London in 1711, she joined Garrick in 1746 She married, in 1731, a barrister named George Clive, and is always known as Kitty Clive She died Dec 6, 1785

Clive Robert English soldier Born, Sept. 29, 1725, at Streche, near Market Drayton, he received a desultory education and in 1743 went to India as a writer in the E India Co In 1748 he helped to defend the fort against the French, and soon his daring and resource made him a leader In 1751, with a few men, he captured Arcot, which he held during a long siege and then gained other successes which established the power of Britain in that region

From 1753 to 1755 Clive was in England, where he was hailed as a conqueror Again in India, he was sent to regain Calcutta after the tragedy of the Black Hole, and in July, 1757, won his greatest victory at Plassey

After Plassey, Clive made his nominee, Mr Jaffer, nawab of Bengal and himself ruled the country until 1760, when he returned to England, entered Parliament and in 1762 was made an Irish peer In 1765 he went back to India as governor for the E India Co On Nov 22, 1774, Clive shot himself

Cliveden Residence in Buckinghamshire It stands on the Thames, 3 m from Maidenhead and is famous for its woods The first house was built for George Villiers, Duke of Buckingham The present one was built from designs by Sir Charles Barry, and was bought from the Duke of Westminster by Mr Waldorf Astor, afterwards Viscount Astor His son, the 2nd viscount, closed the house in 1931

Clock Mechanical instrument for keeping time Its mechanism consists of a train of wheels actuated by a spring or other means, and provided with a device to render its speed uniform

Clocks were known in the 13th century, but were probably invented much earlier

One of the largest is Big Ben at Westminster but a larger one has been placed on the building on the Embankment, London, erected by Shell Mex Ltd Many are wonderful pieces of mechanism and some, notably one at Wells, have been in use for centuries Of domestic clocks the grandfather clock is popular as an antique Standard time is recorded on a clock at Greenwich Observatory

Clockmaking is a highly skilled art The Clockmakers' Company, one of the London livery companies, dates from 1631 Its collection of old clocks and watches, with books about them, is in Guildhall

Clog Dance Lancashire dance In it the skilful toe-and-heel tapping of the wooden soles makes sound patterns of varying rhythm and volume There is also a negro clog dance

Clogher Village of Tyrone, N Ireland It stands on the Blackwater, 80 m from Dublin, and has a railway station At one time it had a bishop, and sent members to Parliament The cathedral still stands The word Clogher means golden stone

Cloisonné Method of enamel decoration The designs are outlined upon the base with soldered metal fillets, and the cells filled with enamel paste or powder, the whole being vitrified in the furnace and ground smooth It passed from Celtic into Byzantine art, and was adopted after 1838 for Japanese enamels

Cloister Four sided enclosure attached to monastic, cathedral and collegiate buildings The arcades are often magnificently vaulted and adorned with traceried windows, sometimes glazed Notable examples may be seen at Westminster Abbey, Magdalen College, Oxford and Canterbury, Salisbury and Gloucester cathedrals

Clones Market town and urban district of Monaghan, Irish Free State It is 65 m from Belfast on the Gt Northern of Ireland Rly There are remains of the old abbey and of a round tower Pop (1926) 2365

Clonmacnoise Village of Ireland It stands on the

Shannon, 8 m from Athlone, and its ruins show it to have been one of the most important ecclesiastical centres in the country. An abbey was founded here in 540, and there are remains of it as well as of seven churches and two round towers. The remains of a castle are further proof of its early importance.

Clonmel Borough of Tipperary, Irish Free State, also the county town. It stands on the Suir, 28 m from Waterford, on the GS Rlys. The west gate is a feature of the town, and there are remains of the castle. Pop (1926) 9,050.

Clontarf Seaside resort of Dublin, Irish Free State. A summer resort on Dublin Bay, it is famous as the scene of the great battle in which Brian Boru defeated the Danes in 1014.

Close Enclosed piece of land. In England it is chiefly used for the piece of land round a cathedral. In it are the houses of the dean, canons and other members of the staff. In Scotland a close is a passage leading to a group of dwellings.

Close Time Time during which birds or animals must not be killed or taken. It usually covers the breeding season and varies with the habits of the animal.

Closure Word used for a system for ending debate in Parliament before all who wish to speak have done so. The idea was borrowed from France and was introduced into the British Parliament in 1882 to prevent members who did not like a bill delaying its progress by making long speeches, sometimes for hours at a time.

Cloth Woven fabric. The materials may be animal, vegetable or asbestos fibre and metallic wires. The unqualified word usually denotes wool or hair fabrics, each trade, however, applying it to its own speciality. Richard I prescribed 2 yds as the standard width of woollens, Flemish influence brought about the recognition of half width or narrow cloth. Broad cloth nowadays implies fine quality as well.

The Clothmakers' Company is one of the twelve great livery companies of London. It dates from 1528 and has a fine hall in Mincing Lane. It has an income of over £50,000 a year, and has done a good deal for technical education in Bradford.

Bartholemew Fair in London was sometimes called Cloth Fair because cloth was the chief article sold. The Cloth Hall is a feature of some of the towns in the Netherlands.

Clothyrd English measure of length. It was merely the yard of 36 in used for measuring cloth. As the shaft of an arrow was generally a yard long, the arrow was often called a clothyrd.

Cloud Mass of watery particles suspended in the air at considerable heights. The earliest classification of cloud forms, Luke Howard's (1803) comprised cirrus or cat's tail cumulus or heaped, stratus or high fog, three double compounds of these, and one of all three, nimbus or rain-cloud. This classification expanded by adding alto-cumulus and alto stratus, was adopted by the International Meteorological Conference in 1891.

Cloudberry Species of wild berry resembling a mulberry. The plant is of low growth with rough erect stems about 8 in in height. The fruit is orange yellow and of a slightly acid flavour.

Found in N Europe and other cold regions, it grows in Great Britain only on high moorlands in the north and in parts of Wales.

Clough Arthur Hugh. British poet. Born Jan 1, 1819, he was educated at Rugby and Balliol College, Oxford. From 1849-52 he was warden of University Hall, London, and in 1853 was appointed an inspector under the Board of Education. He died at Florence, Nov 13, 1861. Clough's best-known poem probably is 'Say not the struggle naught availeth'. He was a friend of Carlyle, Emerson and Matthew Arnold.

Clough's sister, Anna Jemima Clough, was the first principal of Newnham College, Cambridge. She died Feb 27, 1892.

Clove (*Eugenia caryophyllata*) Pungent aromatic spice, the dried, unexpanded bud of an evergreen shrub of the natural order *myrtaceae*. The volatile oil of cloves is used medicinally as a carminative and digestive stimulant. Supplies are obtained from Zanzibar and the W and E Indies, especially Amboyna from which the earliest supplies came.

Clovelly Seaside resort of Devonshire. It is a noted beauty spot on Barnstaple Bay, 11 m from Bideford. The main street descends 400 ft by steps to a little cove. Pop 640.

Clover Genus of leguminous herbs (*trifolium*) native to the north temperate regions. Of the 170 species 18 are native to Britain. Several are cultivated for fodder, especially red, *T. pratense*, white or Dutch, *T. repens*, crimson or Italian, *T. incarnatum*, and alsike or Swedish, *T. hybridum*. They play an important part in the rotation of crops on British farms as they collect nitrogen and add it to the soil.

Clovis Frankish king. A son of Childeric I, he succeeded his father in 481, and is regarded as the founder of the Frankish realm, of which he made Paris the capital. He became a Christian, and died in 511.

Clowne Village of Derbyshire. On the L.M.S. Rly, it is 152½ m from London and is in a coal mining district. There is a cattle market. Pop 5880.

Cloyne Market town of the Irish Free State. It is 15 m from Cork, and has a 14th century cathedral and a round tower. The Anglican bishopric was united with that of Cork in 1835. There is still a Roman Catholic bishopric. Pop 700.

Club Organisation for social, political or kindred purposes. There were associations of men resembling clubs in Greece and Rome. In England the most famous is that called simply The Club, which gathered round Dr Johnson.

To day the best-known clubs are the London clubs with their magnificent houses in Piccadilly, Pall Mall and the adjacent streets. Some, such as the Carlton and the Reform, are political, others, such as Brooks' and White's, are social, others are for members of the services and for university men. The chief is the Athenaeum. Clubs for women, of which the Lyceum and the Forum are notable, are a modern departure.

In addition there are a large number of social and political clubs for working men. Others are benefit clubs, which exist to provide members with clothing, holidays, Christmas fare and so on, payment being made by

weekly contributions. A further class are those associated with athletics, rowing, golf, tennis and other sports.

In 1930 there were 11,780 clubs registered in England and Wales. Of these 2827 were trade union clubs, 1321 were Conservative clubs, 1696 were athletic clubs, and 726 were golf clubs.

Club Foot Deformity of the foot, either hereditary or the result of infantile paralysis. It usually takes the form of a shortness with the heel drawn up. Byron had a club foot, but was a marvellous swimmer.

Clumber Nottinghamshire seat of the Duke of Newcastle. It is about 3 m from Worksop. In 1929 the beautiful house was closed and some of the art treasures taken to Nottingham Castle.

Clumber gives its name to a variety of spaniel.

Clun Town of Shropshire. It stands on the river of the same name, 9 m from Craven Arms, and was a borough until 1886. There are slight remains of a castle. Pop 1900.

The River Clun rises in Clun Forest, a tract of land on the borders of Wales, and joins the Teme at Leintwardine in Herefordshire. Its length is 18 m. The forest, one in name only, covers 12,000 acres.

Cluny Town of France. It is 12 m from Maçon and has an agricultural trade. In 910 a Benedictine abbey was founded here. The monks had a stricter rule than other Benedictines, and in time the Cistercians, as they were called, ranked as a distinct order which, by the 16th century, had some 2000 houses, and there were 35 in England, Bernonsey and Lowes having Clunian priories.

The church at Cluny was at one time the largest in Christendom and its library one of the most noted.

Cluster System of stars having some physical association. Star clusters congregate mostly towards the Milky Way. Some are irregular, e.g., the familiar Pleiades. Many have a globular form.

Cluster Cup Stage in the life history of an order of minute fungi. They are chiefly parasitic on living plants in the form of rust and mildew. Wheat rust (*Puccinia graminis*) throws off special spores which are carried to barberry leaves. These develop beneath the epidermis, barberry cluster cup, or barberry fungus, comprising cup-shaped membranes enclosing ascidium spores which, on reaching the wheat plant, again repeat the life history.

Clutch Mechanical device for disconnecting parts of machinery, such as the gears of motor-cars.

Clwyd River of Denbighshire, Wales. It enters the Irish Sea at Rhyl, and is about 30 miles in length. The vale of Clwyd is a fertile valley noted for its scenery.

Clydach Industrial centre of Glamorgan-shire, 5 m from Swansea, on the River Tawe. Here, refining works for metals have been opened.

There are several other villages named Clydach in Wales. A river in Brecknockshire, a tributary of the Uek, also bears this name.

Clyde River of Scotland. It rises in Lanarkshire and flows mainly north for 106 m, until it widens out and becomes the Firth of Clyde. Its course is marked by

some lovely scenery, especially near Lanark, where are Cora Linn, Stonebyres Linn and other falls.

As far as Glasgow the Clyde can be ascended by the largest vessels, and its banks, with shipbuilding yards and engineering works, form one of the greatest industrial areas in the world. It is connected with the Forth by the Forth and Clyde canal and a ship canal between the two rivers is proposed.

The Firth of Clyde extends from Dumbarton to Ailsa Craig, 65 m away. In it are Bute, Arran and other islands.

Clyde Lord Scottish soldier. Colin Campbell was born in Glasgow, Oct. 21, 1792. In 1808 he entered the army and served in Walcheren, right through the Peninsular War and in America during the war of 1812-14. In 1842 he was in China and he fought against the Sikhs in 1848-49, and was knighted. In 1854 Campbell led the Highland Brigade in the Crimea, winning fame at the Alma and Balaklava. In 1857 he left for India to command the troops there during the mutiny. He relieved Lucknow and saw the end of the rebellion. In 1858 he was made a baronet, and also a field-marshal. He died at Chislehurst, Aug. 14, 1863.

Clydebank Burgh and river in Dumbartonshire and Renfrewshire. It stands on the north bank of the Clyde, 6 m west of Glasgow, on the G.W. and L.N.E. Ryds. It has extensive shipbuilding yards and engineering works. Other products include sewing machines, chemicals and soap. The burgh was formed by a union of several villages, among them Dalmuir, Kilbowie and Yoker, which were large industrial areas in the 18th century. Pop (1931) 46,963.

Clydesdale Valley of the River Clyde, a district in Scotland. It is fertile, famous for its horses, and its name to a breed of horses, which are used for dragging heavy loads. There is a town called Clydesdale, and the eldest son of the Duke of Hamilton bears the title of Duke of Clydesdale.

Clynes John Robert. Born at Oldham, Lancashire, he entered a cotton mill and later made an organiser of the Amalgamated Textile Union, of which later he was president. In 1906 he was elected Labour MP for the Manchester division of Manchester. He was chairman of the parliament in 1910. Clynes began his official career as secretary to the Minister of Labour in 1918, when he was also food controller in the Ministry of Food. He was the first Labour Lord Privy Seal and was a member of the House of Commons, in the second Labour Government, 1929-31. In 1931 he was elected to the House of Commons, regaining his seat in 1935.

Clytaemnes In Greek mythology, wife of Agamemnon, who was murdered by her son, Orestes, after he had returned from the Trojan War. Clytaemnes was an ambitious woman, and she and Agamemnon were both killed by her son, Orestes.

Cnossus From the Greek word for a bull, it has been suggested that the word Cnossus is derived from the Greek word for a bull, which is 'cnossus'. The word Cnossus is also used to describe a type of bull, which is known as a Cnossus bull.

the treasures of fresco painting, ceramics, sculpture and metal work have revealed a civilisation of the most wonderful kind. Its modern name is Katsbas.

Coach Large covered vehicle on four wheels. Coaches were first made at Kocs, in Hungary, and introduced into England and France in the 16th century for the wealthy. They were drawn by two, four, six or eight horses. The coach of the Lord Mayor of London gives a good idea of their appearance. Early in the 17th century coaches were used for ordinary travelling, and soon mail and stage coaches were in general use.

Large motor vehicles which carry passengers are called motor coaches. As a pastime driving a coach and four horses survives. Two cubs, the Four in Hand and the Coaching, exist to further it and each holds an annual meeting in Hyde Park, London.

At one time the building of coaches was an important industry in Long Acre, London. The Coachmakers' Company, one of the London livery companies, dates from 1677 and has a hall in Noble Street.

Coadjutor Term applied to a person appointed to assist a bishop. In the Roman Catholic Church a coadjutor bishop is usually appointed with the intention that he shall succeed the one he assists.

Coal Carbonaceous material forming stratified deposits in the earth. It represents the remains of ancient land vegetation which has undergone slow chemical change, chiefly reducing the oxygen and increasing the carbon content up to 75 or 90 per cent. In the lignites and brown coals the mineralisation is at its lowest, and these consist of earthy or compact masses giving a brown or black streak. They contain a greater proportion of volatile matter, with 60 to 75 per cent of fixed carbon and are very inflammable.

Common coal is black, compact, less inflammable than lignite, and contains 75 to 85 per cent of carbon with a lower proportion of volatile matter.

Steam coals are less bituminous, burn well with a large flame and little smoke. Anthracite, the most mineralised of coals, consists almost entirely of carbon and has a sub-metallic lustre; it gives out little or no smoke. Large supplies come from Pennsylvania. South Wales is the chief source of the British supply.

The world's total production of coal in a single year is about 1,050,000,000 tons. The United States produces 390,000,000 tons, Great Britain 219,000,000 tons, and Germany 110,000,000 tons. The rest of the world produces little more than 300,000,000 tons chiefly in France, Poland, Russia, Japan, Belgium and India. Various estimates of the world's coal reserves have been made, but none are very reliable as new fields are discovered from time to time, and it is found possible to work at greater depths. There are believed to be enormous deposits untouched in Canada, S. Africa, China, Japan and elsewhere.

The chief British coalfields are Lanarkshire, Northumberland, Durham, Yorkshire, Nottinghamshire, Derbyshire, Lancashire, Warwickshire, Staffordshire and South Wales. A new field has been found in Kent. The number of workers is about 957,000. The manufacturing industries take 70,000,000 tons a year, house holders take 40,000,000 tons, gas works 17,000,000 and railways 14,000,000. The collieries themselves take about 20,000,000 tons

and much of the balance is exported abroad. To an unusual extent the industry of coal mining in Great Britain is regulated by the state. In 1908 the working hours of the miners were limited to eight a day. During the Great War a government coal controller was appointed. In 1919, to avert a threatened strike, a royal commission was set up under Sir John Sankey to inquire into the conditions of the industry. A reduction of hours and an increase of wages were advised and carried out, but the nationalisation of the mines, also advised by the majority, was not accepted. However, a welfare fund for the miners was instituted and a department of mines, now part of the Board of Trade, was formed.

On March 31, 1921, government control of the mines ceased and at once a strike which lasted for three months began. The agreement provided for a system of profit sharing, and for three or four years the industry was fairly prosperous and contented, but in 1925, the employers, faced with increased competition from France and Germany, declared their inability to continue the existing rates of wages. To keep the miners at work the Government promised a subsidy while a royal commission under Sir Herbert Samuel inquired into the position. This reported early in 1926. It declared against the subsidy but made various proposals for reforming the industry. The men refused to accept its findings and on March 1 they ceased work. The strike lasted until Nov. 30. The men then accepted the owners' terms, each district making its own arrangements. The law limiting the hours of work to seven a day was repealed and other legislative changes made to give effect to the settlement.

In 1930 the Labour Government passed into law a measure which provided for marketing and amalgamation schemes, and reduced the hours of work to 7½ daily. The principle of a quota for each district was introduced. There was further legislation in 1932. In Dec. 1935, and Jan., 1936, Britain was threatened with another national coal strike, which however, was averted when, on Jan. 23 the miners agreed to accept the proffered terms. These included a wage increase ranging from 5d to 1s per day.

COAL-GAS—When coal is distilled, volatile products evolve, leaving coke. Coal gas and coal tar are two of these. When the volatile products are cooled coal-gas is left. After purification, it consists of a mixture of gases, divisible into three classes, one of which contains the illuminants, ethylene, propylene, butylene, acetylene, allylene, and benzene. Coal gas is obtained from any bituminous coal, and is used widely for lighting and many industrial and commercial purposes.

COAL-TAR—Dark, viscid oil, obtained as a by-product during the distillation of coal. Benzol is obtained up to 140° C, and in 1858 it was discovered that aniline dyes could be prepared from benzol. Two more redistillations up to 170° C produce solvent and burning naphtha. From 170°-230° naphthalene and carbolic acid are given. From 230°-270° cresosote oil and lubricating oil are formed, and later, anthracene oil, anthracene, lamp black, pitch and coke. These products in turn are used largely in the making of drugs, perfumes, explosives, dyes, disinfectants, and motor car fuel.

COAL-OIL.—An important landmark was established in 1935 with the first commercially successful attempt to produce petrol from coal. Experiments were begun as early as 1910 by

Bergius in Germany, and it was by development of the Bergius process of hydrogenation that the present results were obtained. The process is carried out at the Imperial Chemical Industries' works at Billingham.

Coalbrookdale District of Shropshire. It stands on the Severn, 11 m from Shrewsbury and 143 from London, on the G W Rly. Its coal mines and ironworks are less productive than formerly.

Coalition In politics, a working arrangement between two or more parties, usually made in order to carry on the government. In Great Britain there was a coalition between Fox and Lord North in 1783. In 1895 the Conservatives and Liberal Unionists united. In 1915 a coalition government was formed to carry on the Great War and another coalition under Lloyd George lasted from 1916 to 1922. In Canada there was a coalition ministry for the same purpose under Sir R. L. Borden. The British national ministry formed in 1931 was not a true coalition.

Coalport Village in Shropshire. It gives its name to a type of porcelain. Works were established at Caughley, in the same county, about 1750. In 1790 they came into the possession of John Rose, who, in 1814, moved them to Coalport. He also acquired the Nantgarw & Swansea Works. Rose invented a new leadless glaze about 1820. The factory is still in operation.

Coalville Urban district of Leicestershire. It is 5 m from Ashby-de-la-Zouch and 113 m from London by the L M S Rly. The chief industries are collieries, foundries and tile making. Pop (1931) 21,886.

Coast Boundary between land and sea. It has varied greatly through repeated elevation and depression, being subject to increasing, weathering, river deposition and beach transport. Continental coasts are those in which the sea impinged upon the solid land, marine coasts those formed of soft materials sorted out by the sea. Coast scenery is governed by the relation of hard to soft rock, dip of strata and valley pattern imposed by crustal movements, presenting such types as fjord coasts, lagoon coasts and ironbound coasts.

In England the coast is crumbling away in parts of Norfolk, Suffolk and the Isle of Wight. In other areas the sea is receding.

Coastguard Body of men engaged to patrol the coast. In Great Britain they are recruited from the navy and under the direction of the Board of Trade. They have stations at various points along the coast which is divided into districts, each under an inspector. The men were originally employed to stop smuggling and this they still do as well as render aid in case of shipwreck.

COAST LIFE SAVING CORPS Voluntary organisation created in 1932. Originally raised to help the coastguard service, it was made up of three main branches, the first including the members of existent life saving appliance companies and brigades, numbering between 4000 and 5000 men. The second branch consists of watchers, as required at places where there are no coastguard stations, and at coastguard stations when relief is needed. Finally, there is an intelligence section, which includes all persons who volunteer to assist the coastguard in an emergency, as with motor cars, telephones, etc.

Coatbridge Burgh of Lanarkshire. It is 9 m from Glasgow, on the L M S Rly. It stands on the great Lanarkshire coalfield and has blast furnaces and works for smelting tin and producing iron, steel and tinplate. Pop 43,900.

Coates Albert. English musical conductor. He was born, April 23, 1882, in St Petersburg. Educated in England he returned to Russia and conducted Imperial Opera at St Petersburg for five years. In 1919 he was conductor to Sir Thomas Beecham at Covent Garden. Later he was conductor of London Symphony Orchestra, and Royal Philharmonic Society, and Director of Philharmonic Orchestra, Rochester, New York from 1923-25, when he returned to England. He wrote the opera, *Samuel Pepys*, in 1920.

Coates John. British singer. Born at Bradford, June 29, 1865, he was educated at Bradford Grammar School. He first appeared in London as a tenor singer at the Savoy Theatre in 1894, and first sang in royal opera in 1901. He has sung in America, France, Germany, South Africa and Australia. After seeing service in France in the Yorkshire Regt., resumed his musical career in 1919. In 1928 he celebrated the 50th anniversary of his first appearance as a boy vocalist.

Coates Joseph Gordon. New Zealand politician. Born in 1878, he was elected to the House of Representatives in 1911, and in 1917 went to France on active service. In 1919 he was made minister of justice and later took charge of railways and other departments. In 1925 he succeeded W. F. Massey as premier, retaining that post until the end of 1928. In the Coalition Cabinet which assumed office in 1931 he was Minister of Public Works until 1933, and thereafter Minister of Finance and of Customs.

Coati Genus of arboreal mammals inhabiting Central and South America. With flexible, upturned snouts and long tails, they feed upon birds, lizards and insects, which they hunt in troops. Some are tamed and kept in captivity.

Coat of Arms Heraldic achievement of an individual or community. It is borne on a shield or escutcheon, generally with crest and motto and sometimes badge and supporters. Their use, fostered by the need for distinguishing warriors when acting together, especially during the Crusades, expanded rapidly. The practice of embroidering them on the surcoat over the armour originated the term coat of arms.

Arms are granted in England by the College of Arms and in Scotland by the Lyon King-at-Arms. Fees amounting to over £100 are charged. Corporations, schools, and other corporate bodies can obtain coats of arms in the same way.

Coats Name of a famous Scottish family. James Coats began to make thread at Paisley before 1800 and the business was continued by his sons, Peter and Thomas. It soon became the largest of its kind in the world. In 1890 it became a public company and absorbed the rival firms of Clark, Chadwick and others. Peter Coats (1808-90) had a son James, who in 1905, was made a baronet. Of the sons of Thomas Coats (1809-83) one became Sir Thomas Glen-Coats, Bart (1846-1922) and another, George (1849-1918), became Baron Glentanar.

Coats Land Antarctic region It is on the southern edge of the Weddell Sea. It was discovered in 1903 by Dr Bruce and named after the Palalay family who provided the funds for his expedition

Cobalt Metallic element It is widely distributed in nature in as sociation with nickel, copper and arsenic, chiefly in the minerals cobaltine, smaltine and an earthy variety of wad. Cobalt is a greyish white, hard, tenacious and malleable metal of economic importance only in the form of its alloys and compounds

Cobalt Steel Is of value for making magnets and the valves of internal combustion engines Various compounds of cobalt are used as pigments and in making varnishes The chief supplies come from Ontario but cobalt is also found in Australia, S Africa and other parts of the British Empire Its chemical symbol is Co, and its atomic weight 58.95

Cobalt Town of Ontario, Canada. It stands on Cobalt Lake in the north of the province, 330 m from Toronto with which it is connected by railway Silver, cobalt and nickel abound Pop 5600

Cobbett William English reformer Born at Farnham, Surrey, March 9, 1762, in 1802 he started his *Weekly Political Register* in which he advocated a number of reforms In 1810 he was sent to prison and fined £1000 for denouncing flogging in the army He was elected M P for Oldham in 1832, and died near Guildford, June 18, 1835 Cobbett's most popular book is his *Rural Rides*—a description of England as he saw it.

Cobden Richard English politician Born at Heyshott, Sussex, June 3, 1804, from 1847 to 1857 he was M P for the West Riding of Yorkshire and from 1859 to 1865 for Rochdale When in Manchester Cobden became the leader of a little group who agitated for the repeal of the corn laws which came about in 1846 For nearly 20 more years Cobden worked assiduously for the causes of free trade and peace, which he believed were closely linked So earnest was his advocacy of free trade that since his day Cobdenism has been a synonym for it. He died in London, April 2, 1865

To press forward Cobden's ideas the Cobden Club was founded in 1866 Its address is 69 Victoria St., London, S W 2

Cobham Village of Surrey, sometimes called Church Cobham It stands on the Mole, 10 m from London, on the Southern Ry There are an old church and a water mill 700 years old Pop 5100

Another Cobham is a village in Kent. It is 4 m from Gravesend and has an old church with some notable crosses There was a college of priests here in the 14th century and there are remains of this, as well as some 16th century almshouses

Cobham Sir Alan John English airman Born, May 6, 1894, he was educated at Camborwell He went to France in 1914 and in 1917 received a commission in the Air Force When peace came he joined an aircraft firm Among his long flights were those from London to Rangoon and back 1924, London to Cape Town and back and London to Australia and back 1926 He won the King's Cup in 1924, the Britannia Trophy in 1925 and 1926, and was commander pilot of the first flying boat expedition round Africa

Knighted in 1926, he has published several books on his experiences

Cobham Viscount English title It dates from 1718 when Sir Richard Temple of Stowe was made a viscount His sister, the wife of Richard Grenville, succeeded to the viscountship, which passed to her descendants the Earls Temple, afterwards created Marquess and Duke of Buckingham In 1889, when the last Duke of Buckingham died, the viscountship passed to a distant relative, the 5th Baron Lytton, a descendant of a sister of the 1st viscount

Lord Lytton, who then became the 8th Viscount Cobham was a noted cricketer He died in 1902, when his son, James Cavendish Lytton, became the 9th viscount The family seat is Hagley Hall, Worcestershire

There is a barony of Cobham revived in 1916 for a member of the Alexander family

Coble Flat bottomed fishing boat used on the Northumbrian coast It has three pairs of oars and a lug sail It is used mostly in the cod and turbot fishery

Coblentz City of Germany Situated at the confluence of the Moselle and the Rhine, 57 m above Cologne, it is dominated by surrounding hill forts and by Ehrenbreitstein across the Rhine There is a trade in wine In 1918 the city was occupied by American troops Pop (1925) 58,322

Cobnut Fruit of several species of hazel (*Corylus*) The parent form *C. avellana*, is native to Britain The red and white filberts of Kent are famous

Cobourg Port and market town of Ontario Situated on Lake Ontario, it is 73 m east of Toronto It is a summer resort and there are a few manufactures It has a station on the C N Ry's Pop 5,834

Cobra Genus (*Naja*) of venomous snakes able to dilate the neck into a hood The best known, the Indian black snake *N. tripudians* bears a binocular mark on the neck The king cobra, or hamadryad (*N. bungarus*) is larger and fiercer, but rarer The African *N. haje* is the Cape spitting snake and the Egyptian asp

Coburg Town of Bavaria. It is 34 m from Bamberg on the river Itz Coburg was the capital of the Duchy of Saxe-Coburg-Gotha, which, owing to the marriage of Queen Victoria and Prince Albert, was closely associated with England The ducal palace is now a museum. Pop 24,000

Coca (*Erythroxylon coca*) Bolivian and Peruvian shrub of the flax order The leaves produce a tingling sensation when chewed, followed by deadening of the sensation of hunger S American Indian tribes have for centuries used the leaves for mastication The plant now grows in the W Indies and S Asia It yields the alkaloid cocaine

Cocaine Alkaloid extracted from coca leaves First separated in 1860, the hydrochloride serves as a local anaesthetic in dentistry and minor operations It is sometimes taken to relieve pain, but even a small dose may induce the habit of taking the drug, while large doses will cause death So pernicious is the habit of taking cocaine that the League of Nations has attempted by international action to stop the traffic in it

Cocco (*Colocasia antiquorum*) West Indian plant name of the Polynesian taro

The rhizomes beaten, are fermented and baked as bread

Coccoliths Minute, saucer-shaped bodies. They are found in immense quantities in deep-sea deposits associated with similar rod-like bodies called rhabdoliths. They have been detected in limestones back to the Cambrian period, especially in chalk.

Cochin China French colony in Indo-China. Since the French occupation in 1867 it has had a Lieutenant-Governor. Its area is 26,478 sq m., the capital Saigon, and its pop (1931) 4,467,352.

Cochineal Dye used in cooking for crimson tints. It is obtained from the body of a female insect which inhabits Mexico and Peru.

Cochran Charles Blake. English showman. Born in Sussex, Sept. 25, 1872, he went to the United States and became an actor. In New York he gained a good deal of experience about stagecraft and theatrical work generally, which he turned to good account on his return to London. He made a reputation by the spectacular display of *The Miracle* at Olympia in 1900 and its elaborate revival at the Lyceum in 1932, and was responsible for some important boxing and other contests. In 1925 he published *The Secrets of a Showman*.

Cockatoo Family of birds of the parrot order inhabiting Australia and the Malay archipelago, but not New Zealand, they have recurved crests which can be erected at will. Their coloration is mostly white, tinged with yellow or red. The Australian sulphur crested cockatoo is popular as a pet.

Cockatrice Mythical monster. It was supposed to possess a deadly touch, at which plants withered, and an evil eye reputed to kill men and animals. Hatched by a serpent from a cock's egg, it could be killed by the sound of the crowing of a cock.

Cockayne Imaginary land. The "land of cakes," it was the favourite scene of mediæval French and Italian fables, sometimes by way of ridiculing the equally mythical Avalon, or Island of the Blest.

Cockburn Sir Alexander James Edmund. British lawyer. Born Dec. 24, 1802, he was educated at Cambridge and became a barrister. In 1847 he entered Parliament as M.P. for Southampton. In 1850 he became Solicitor General in the Liberal ministry and from 1851 to 1856 he was Attorney General. In 1856 he was made Chief Justice of the Common Pleas and in 1859 Lord Chief Justice. He tried the Tichborne case and represented Great Britain in the Alabama arbitration. He died Nov. 20, 1880.

Cockchafer (*Melolontha*). Popular name of a genus of lamellicorn beetles. The brown elytra make a whirring sound in flight. The two destructive British species include the common cockchafer (*M. vulgaris*) which is far more injurious to crops elsewhere in Europe. The rose chafer (*Celonia aurata*) is green.

Cockermouth Urban district and market town of Cumberland. It is 32 m from Carlisle, on the L.M.S. Ry. There are a church, a grammar school, and the ruins of a castle in which Mary Queen of Scots, was imprisoned. Pop (1931) 4789.

Cocker Spaniel Breed of dog. A heavily built type of field spaniel. It has short, stout limbs, pendulous ears and long, silky coat. This is black in modern English, liver or liver-and-white in the smaller or Welsh variety. It is readily trained to start game in woodland or marshland, and owes its name to its service in woodcock shooting. It gives notice by barking.

Cock Fighting Sport of pitting gamecocks against one another. It was introduced into Europe during the Persian wars, and was a favourite mediæval diversion, although forbidden by Edward III. and Henry VIII. Charles II. had a cockpit in Whitehall, London.

The sport has been illegal in England since 1849.

Cock Lane London thoroughfare in Clerkenwell. It is notorious for an imposture called the Cock Lane Ghost in 1752. A certain William Parsons and his wife, intent on blackmailing a neighbour, contrived, through the 11-year old daughter, Elizabeth, some mysterious noises and a luminous figure. Crows, including Samuel Johnson, visited the house. The authors were exposed and punished.

Cockle Family of bivalve molluscs. The typical genus, *Cardium*, has equal convex shells, heart shaped in profile, with radial ribs and scalloped edges. The common British *C. edule*, raked out of the sand at low water, is boiled and eaten.

Cockney Colloquial name for a person born in London, more strictly within the sound of the bells of St Mary-le-Bow, Cheapside.

Cock of the Rock Genus of perching birds of the chattering family (*Rupicola*), also called cock manikin. The three species, inhabiting Peru and Ecuador have compressed semi-circular, helmet-like crests. The plumage is collected and used for millinery purposes.

Cockpenny See formerly paid at various grammar schools, notably in Lancashire and Yorkshire, at Shrovetide. In return the master provided gamecocks for the day's diversions.

Cockpit Enclosed arena in which cock fighting took place. It was a round building, lit from above, and in the middle was the arena, about 20 ft in diameter.

Also the cabin on warships where wounded men were treated. In the cockpit of the *Victory* Nelson died, at the Battle of Trafalgar in 1805. It is also used for the part of an aeroplane fuselage which contains the airmen.

Cockroach Reddish-brown insect, short-winged, flat-bodied with leathery integuments and long antennae. The female carries her eggs in a horny capsule. The larvae are white. The cockroach belongs to the *Blattellæ* and is voracious and odorous. Arsenic or phosphorus mixed with flour or oatmeal, is useful for killing them.

Cock's Comb Annual plant with small oval leaves and a ridged head of red bloom somewhat resembling a cock's comb in shape. A native of Asia, it grows in British gardens.

Cocktail Popular aperitif. Most varieties contain spirits, bitters and flavouring matter. The cocktail originated in the United States and now nearly every large

hotel has a cocktail bar, while cocktail parties have become a form of entertaining

Cocles Horatius Roman legendary hero With two comrades he defended a bridge over the Tiber against Porcena's army of invaders When it had been broken down he swam back across the river He was given as much land as he could plough in a day

Cocoa Corruption of the word cacao, the name of a tree The seeds provide the raw material from which cocoa powder is manufactured The world's output of cacao beans is about 520,000 tons, chiefly from America and Africa The average consumption in Great Britain and Northern Ireland is 2.9 lb

Cocconut Palm (*Cocos nucifera*) Tree of great economic importance It is cultivated in many tropical countries, flourishes near the sea and is the source of many valuable products The outer husk of the fruit furnishes cord for matting, ropes, brushes, etc The kernel is edible, and, when dried forms copra, which is the source of coconut oil used in making soap, candles and margarine The refuse makes oil cake for cattle

Cocoon (French, *cocon*, a small shell) Case which some larvae of the lepidoptera make and use as a shelter in which to pass their pupal stage The cocoon of the silk moth yields silk

Cocos Islands Group of coral islands in the Indian Ocean The islands, about 20 in number, are 1,161 m from Singapore They produce coconuts and are noted for their crabs Discovered by Captain Keeling in 1600, they were annexed by Great Britain, and since 1903 have been governed as part of Singapore Near here, in Nov 1914, the *Sydney* destroyed the German cruiser *Emden* Pop (1931) 1142

Cod Fish which frequents the North Atlantic Ocean It averages 3 ft in length, but sometimes reaches 6 ft The cod is a very valuable food and the cod fishery an important industry It is chiefly found off the shores of Newfoundland and in the North Sea The fishing season lasts from March to Oct The liver yields cod liver oil, and isinglass is another product In 1930 250,927 tons of cod were landed in the United Kingdom and Ireland, its value being £3,454,480

Code Collection of laws or rules It may be a systematic restatement in a convenient form of existing law, such as several issued during the Roman Empire pre-eminently that by Justinian, whose code has profoundly affected the modern world It may be a complete body of statute law displacing previous legislation such as the Code Napoléon, or the Indian penal code

There are also codes of words and ciphers to facilitate telegraphic communication, codes of signals, and codes for international collections, such as the Strickland code for the systematic naming of animals

Codicil (Latin, *codicillus*, a little hook) Name applied in English law to the supplement added to his will by a testator who desires to alter or add to the provisions of the main document See WILL

Cody Samuel Franklin British airman Born in the United States in 1861, he settled in England in 1896 and was naturalised He was employed at Aldershot in the early days of aviation and experimented with

man lifting kites In 1908 he flew in a machine he had made and remained in the air for 27 minutes He was killed while flying at Huntly, Aug 7, 1913

Cody William Frederick American show man Born in Iowa, Feb 26, 1846, He served as a scout with the Federal armies during the civil war, and against the Indians In 1883 Cody started a travelling show, which was very popular in Great Britain and other parts of Europe He died at Denver Jan 10, 1917 Cody won the name of Buffalo Bill by killing buffaloes when engaged to supply meat

Co-Education Instruction and training of the sexes together They are so taught in junior schools and at colleges and universities but the term co-education is usually reserved for the teaching of boys and girls between the ages of about 10 and 16 in the same establishment and in the same way

Coercion Application of force, to compel a person or persons to a certain line of action, which is usually distasteful Coercion Acts are acts of parliament passed from time to time by the British Government for the enforcement of law and order in Ireland They were followed by much disorder, which reached a climax in the Phoenix Park murders The Act of 1882, directed against public assemblies, the Act of 1887 and others passed at various times, including that of 1920 which set up tribunals to suppress crime, have been called Coercion Acts

Coffee Genus of evergreen trees and shrubs They grow in warm countries and produce berries, the beans of which are ground to make a popular beverage The plants are extensively grown in Brazil, Arabia, and elsewhere

The first coffee came from Arabia, but Brazil is now the main source of the world's supply

Coffee House Place for providing coffee and other refreshments The first coffee houses in England were opened in Oxford in 1650 and in London in 1652 The modern coffee house is a rival to the public house and is controlled by temperance reformers

Coffer Fish (*Ostracion*) Genus of tuft gilled fishes allied to the file fishes The body is encased in a mosaic like cuirass of six sided bony plates, sometimes with ridges, and with horns projecting above the eyes There are no ribs

Cognac Town of France Situated 25 m west of Angoulême It was the birthplace of François I who concluded here a treaty against Charles V in 1526 It was also a Huguenot stronghold The finest French brandies, known as cognac, are distilled here Pop 10,500

Cohesion Physical force binding together molecules of the same material as distinct from the adhesion of molecules of different materials Upon cohesion matter depends for hardness tenacity, elasticity, malleability and ductility

Cohort Name given in the Roman army to a unit of infantry The term is also used in biology for a group of allied families of plants or animals

Coif Close fitting cover for the head in mediaeval times Later it was worn as a nightcap, and also by English sergeants of law as a mark of their profession

Coil Wire wound spirally or otherwise for creating a magnetic field when electric currents are passed through it, an inserted iron bar being magnetised. Induction coils, in which a lower voltage current in a primary coil, induces a higher voltage current in an outer secondary coil, are used in telephony and for medical and other purposes. Choking coils steady rapid fluctuations in alternating currents. Resistance coils offer definite resistance to the passage of current. Search coils carried by aircraft assist landing in fog.

Coin Metallic unit of exchange. Coinage as a medium of exchange and measure of value replaced the cumbersome method of barter, and its issue is an exclusive privilege of Government. It is of two kinds: standard money of intrinsic value such as the gold sovereign, and token money whose intrinsic value is normally less than its nominal value, such as the silver currency.

Gold, silver, bronze and nickel are the chief metals used for coins.

In Great Britain the silver coins are for 6d 1s, 2s and 2s 6d. Threepenny pieces are occasionally seen. Bronze coins are the penny, the halfpenny and the farthing. In the British Empire New Zealand uses the British coinage. Australia, S. Africa and the Irish Free State use the same units, but with their own designs. Canada has the dollar and various cent pieces and India the rupee.

In Great Britain in 1930 the number of coins struck at the royal mint was 185,090,208, of which 73,847,176 were for Imperial, 27,797,032 for colonial and 83,446,000 for foreign use.

Coir Outer covering of the shells of coconuts. It is an extremely strong fibre which is made into yarns used in the manufacture of coconut matting and coarse brushes.

Coke Product obtained by heating coal in confined ovens for eliminating its volatile constituents. It comprises up to 90 p.c. of carbon, with gases and incombustible ash, sulphur is a frequent impurity. Coke burns with intense heat, without smoke or spark, and is sometimes used as a domestic fuel, usually in closed grates.

Coke Sir Edward English lawyer. Born at Mileham Norfolk Feb. 1 1552. He entered the House of Commons in 1589 and was made speaker in 1593. In 1594 he was chosen attorney-general, in which capacity he prosecuted Essex, Raleigh and others. In 1606 he became chief justice of the common pleas and in 1613 chief justice of the King's Bench.

As a judge, Coke resisted the claims of James I to make extensive use of the royal prerogative. In 1617 he was dismissed, and became a champion of the rights of Parliament. In 1621 he was imprisoned but on his release he helped to frame the Petition of Right. Coke died at Stoke Poges, Sept. 3, 1634. His chief work is his *Institutes*.

Colbert Jean Baptiste French statesman. Born at Rheims, Aug. 29, 1619, he was made minister of finance by Louis XIV in 1661, and for over 20 years was the leading statesman. He died Sept. 6, 1683.

Colchester Borough, market town and river port of Essex. It stands on the Colne, 52 m. from London, on the L.N.E. Riv. There are some manufactures, shipping and corn and cattle markets. The town is also a military centre and is famous for its oysters, the beds being the property of the corporation. The Norman castle has an

enormous keep and contains a museum. There are considerable ruins of two religious houses.

As Camalodunum, Colchester was an important Roman city—probably the most important after London. Pop. (1931) 48,607.

The title of Baron Colchester was borne by the family of Abbot from 1817 to 1919 when the third baron died. Charles Abbot, the first baron, was Speaker of the House of Commons from 1802 to 1817.

Cold Absence of heat. This being radiant energy, molecular movement is held to cease at -273° C., the temperature of absolute cold. Helium is liquefied within $2\frac{1}{2}^{\circ}$ of this absolute minimum. In medical practice cold applied to the body subdues pain, lessens inflammation and feverish temperatures, arrests bleeding and stimulates by cold bathing. Prolonged exposure to cold, reducing the oxygenation of the blood, may result in death. Cold is used in food preservation and storage. An attack of catarrh is often called a cold.

COLDS A cold indicates an inflamed condition of the mucous membrane lining the respiratory tract, causing hoarseness, running at the nose, sore throat, etc. It is infectious and will spread throughout the household unless every care is taken.

Treatment—Quinine has a preventive value, and, if taken in time, will often prove effective. A hot mustard bath with a hot drink of whisky and water, lemon or black currant juice, etc., and rest in a warm bed will also prove beneficial in the initial stages. An aperient should be taken and the bowels kept open during the course of a cold.

A Cold in the Head can best be relieved by inhaling menthol in boiling water, or by the use of a nasal douche.

A Cold in the Chest should be treated by rest in bed in a warm room, by steam kettles, hot applications to the front and back of the chest (turpentine stupes, thermogene wool, linseed poultices, etc.), and by hot, demulcent drinks.

Colds should never be neglected, since many ailments start with what appears to be a common cold. Patent cold or cough mixtures should never be given to children. Chronic sufferers should consult a doctor as vaccine inoculation is sometimes advised, or there may be some cause such as enlarged tonsils, or adenoids which require removal.

Cold Harbour Village of Surrey. It is 4 m. from Dorking and has a large and picturesque common. Among other English villages of this name is one near Harpenden.

Cold Storage Method of preserving perishable food. It consists in maintaining the atmosphere at a suitable temperature, often at or below zero. Refrigeration has played an important part in the foreign meat trade, enabling frozen carcasses to be sent to great distances. Ice safes are also much used by retail butchers and the invention of an electrical method is extending refrigeration to domestic use.

Coldstream Burgh of Berwickshire, Scotland. It stands on the Tweed, 13 m. from Berwick. Before the bridge was built here in 1766 the river was crossed by a ford. Hasty marriages, as at Gretna Green, were celebrated at Coldstream. Pop., (1931) 1233.

Coldstream Guards Oldest regiment of the

British army. One of the five regiments of foot guards, it dates from the time of Cromwell's new model army, and takes its name from the village of Coldstream. Charles II made it a regiment of foot guards. The Coldstreamers have a long record of active service dating from 1678 to the Great War. The headquarters are in Birdcage Walk, London, S W 1, and the motto is *Nulli Secundus*.

Colenso Village of Natal, S Africa. It stands on the Tugela, 15 m from Ladysmith, with which it is linked by railway. There was fighting here when the British were trying to relieve Ladysmith, and the village was captured Feb 20, 1900.

Colenso John William. English divine. Born at St. Austell, Cornwall, Jan 24, 1814, and educated at Cambridge he became famed as a mathematician and writer of popular books on algebra and arithmetic. Having been ordained he had a living in Norfolk from 1846 to 1853, when he was made Bishop of Natal in S Africa. He compiled a Zulu grammar and dictionary. He died at Durban, June 20, 1883.

Coleoptera Order of insects comprising the beetles. The fore wings are modified into a pair of stiff, horny sheaths called elytra—found also among earwigs—encasing the transparent, membranous hind wings. These are the flight organs, and when inactive they generally fold transversely beneath. In the many beetles lacking hind-wings, the elytra are sometimes fused together. In oil beetles they overlap. About 150,000 species are named.

Coleraine Urban district and sea port of Londonderry, N Ireland. It is on the Bann, 4 m from its mouth and 61 from Belfast and is a centre of salmon fishing. Linen is manufactured and there is some shipping. Pop (1926) 7800.

Coleridge Baron. English judge. Born at Ottery St. Mary, Devon, Dec 3, 1820. John Duke Coleridge went to Eton and Balliol College, Oxford, and became a barrister. In 1865 he was elected M.P. for Exeter as a Liberal. In 1868 he was made Solicitor General. In 1871 Attorney General, in 1873, Chief Justice of the common pleas, and in 1880, Lord Chief Justice. He died June 14, 1894. Lord Coleridge's harony, created in 1873, passed to his son Bernard (1851-1927). He was a Liberal M.P., 1885-94, and a judge of the high court, 1907-23.

Coleridge Hartley. English poet. He was born Sept 19, 1796 at Clevedon, Somerset, being the eldest son of S. T. Coleridge. After an early education under Southey he went to Oxford. He produced several books, but is only remembered by some poems and as the son of his father. He died on Jan 6, 1849.

A sister, Sara (1802-52), wrote some books and married a cousin, Henry Nelson Coleridge.

Coleridge Samuel Taylor. English poet and philosopher. Born at Ottery St. Mary, Devon, Oct 21, 1772, and educated at Christ's Hospital, London and Jesus College, Cambridge, his radical opinions and his debts led to his departure from the university without a degree, and for a short time he was a soldier. Having published his first poems, he became associated with Southey and Lamh. He then married (1795), and lived for a time at Clevedon and in Bristol. He moved

to Nether Stowey, became a Unitarian preacher and made friends with Wordsworth.

From 1804-06 he travelled in Europe. He then lived at Keswick, but his later years were passed in London. He lectured occasionally and wrote a good deal, but his power of sustained effort was seriously weakened by his habit of taking opium. However, this was partly overcome before the end, and Coleridge appeared as a talker of unusual brilliance. He died June 23, 1834 and was buried at Highgate.

Coleridge's intellectual gifts were of a very high order. His *Table Talk* shows one aspect of his genius. His *Aids to Reflection* and *Confessions of an Enquiring Spirit* another, and his *Biographia Literaria* that of a literary critic whose influence was very great indeed. His lectures on Shakespeare and Milton are remarkable efforts. *The Rime of the Ancient Mariner* is his greatest creative achievement. His other poems include the unfinished *Christabel*.

Colesberg Town of S Africa. In the Cape Province. It is 608 m from Capetown and 307 m from Port Elizabeth. It stands high and is the centre of cattle and sheep farming. There was a good deal of fighting in this region in 1809-1902. Pop 1000.

Colet John. English scholar. Born in London about 1467, he studied at Oxford and abroad and was then ordained. He was dean of St Paul's from 1505 until his death, Sept 16, 1519. Colet, one of the leaders of the Renaissance in England, founded St Paul's School.

Colic Severe abdominal pain due to spasm of an involuntary muscle. A symptom of disease, not a disease itself, it may arise from indigestible food associated with constipation or diarrhoea. The relief afforded by pressure distinguishes it from inflammation. Lead colic is caused by lead poisoning, one form, Devonshire colic, is due to cider acting on leaden drinking vessels.

Treatment—Massage of the abdomen, warm applications, teaspoon doses of dill water and 1 teaspoonful of olive or castor oil. Gallstone colic and kidney colic in adults calls for immediate medical attention. Apply hot fomentations until arrival of doctor.

Coligny Gaspard de. Huguenot leader. Born of a noble Burgundian family, Feb 16, 1519, he led the Huguenots, fought on their side in the civil war and in 1569 became commander of their forces. On Aug 24 1572, the admiral was murdered in Paris, one of the victims of the massacre of St Bartholomew. Coligny's daughter, Louise, married William the Silent, Prince of Orange.

Colinton Suburb of Edinburgh. It is 4 m from the city, on the L.M.S. Rly. Here are barracks and also the new gaol.

Colitis Inflammation of the colon or large intestine. It is a localised form of enteritis or intestinal inflammation usually marked by diarrhoea. Mucous colitis, a chronic inflammatory condition of the mucous membrane, is often accompanied by neurasthenia. Ulcerative colitis may be dysenteric caused by a known amoeba or known bacilli, or non-dysenteric, a form frequently chronic in Britain, this lasts for two, three or four months, and is unassociated with specific micro-organisms.

Regulated diet and frequent irrigation are essential to keep it in check

Coll Island of Scotland One of the Hebrides, it belongs to Argyllshire and lies 10 m from Ardnamurchan Point It is 13 m long and covers about 25 sq m

Collar Band worn round the neck of cloth, jewels precious metal or chain mail.

Collars are badges of certain callings, e.g., those of the clergy The sailor's large collar was originally designed to protect the clothing from the greasy pigtail then worn

The collar bone is a bone in the upper part of the human body, more correctly called the clavicle (q.v.)

Collateral Word meaning situated at the side or parallel The word has several applications in law Collateral relations are those not in the direct line Collateral security is an additional security for the fulfilment of an obligation or contract, and is surrendered or discharged when that fulfilment is completed Thus a bill of exchange for a debt or mortgage may be fortified by a collateral deposit of shares

Collation Term meaning bringing together. In bibliography, it denotes the minute comparison of MSS or editions of books one with another, in book-binding assembling the unbound members for binding In monastic custom reading and discussing edifying works, followed by a light meal was called a collation The word is used sometimes for a meal

Collect Concise prayer, varying according to day, week or season Of 82 collects in the Book of Common Prayer, 57 were translated from the Sarum breviary The remainder were added by the compilers or revisers of 1549, 1552 and 1661

Collection Word meaning the offertory or taking of money from those assembled at a religious service The examinations held in the Oxford colleges at the end of each term are called Collections.

Collectivism Term first used when Mikhail Bakunin described himself as a collectivist anarchist. A congress at Havre in 1880 adopted a collectivist programme demanding the state ownership of all means of production, to secure for the community as a whole an equitable distribution of the fruits of their associated labour It is loosely used as a synonym for socialism

College Organised association of persons having common rights, duties or pursuits. Colleges grew up in the older universities as places of abode for students and teachers The most general use of the word, however, is for an educational establishment between a university and a school, colleges of agriculture, mining and so on

A third kind of college is an association of professional men, as the Royal College of Physicians, the College of Nursing, the Royal College of Music. In the United States the persons elected to choose the president form the electoral college. In Rome there is a college of cardinals

In England a collegiate church is a church free from the authority of a bishop It is governed by a dean, canons and prebendaries Westminster Abbey and St. George's Chapel, Windsor, are examples

College of Arms Corporation of English heralds controlling matters affecting armorial bearings

and pedigrees, also called the Herald's College. Endowed by Richard III in 1483, its headquarters are in Derby House, Queen Victoria Street, London, E.C. It deals with all matters affecting the grants and use of coats of arms and armorial bearings

Collie Breed of sheep-dog common in Scotland and N England Lighter and more elegant than the old English breed with small ears whose tips fold back, it is keen-witted with snappy temper, trained to protect and herd sheep The rough-haired variety has a thick, soft undercoat and neck frill; the smooth-haired a short, stiff, flat coat. Utilised as domestic pets, collies are often crossed with black-and-tan setters, and should average 22-24 in in height.

Collie Town of W Australia, 124 m south of Perth It is in the centre of a coal field The name is also that of a river which passes the town Pop (1931) 3446

Collier Jeremy English divine Born Sept. 23, 1650, he was educated at Ipswich and Cains College, Cambridge. Ordained in 1679 he became rector of Ampton, Suffolk He was twice in prison and in 1696 was outlawed He associated with non-jurors, and in 1713 was ordained as one of their bishops. He died April 26 1726, supporting the Stuarts to the last. His *Short View of the Immorality and Profaneness of the English Stage*, 1698, is his most notable work

Collier John English painter He was born in London Jan 27 1850, the second son of the 1st Lord Monckswell. Educated at Eton and Heidelberg, he studied art at Munich, Paris and the Slade School, London His paintings show a keen sense of accurate detail, skill in composition and drawing, and a fine sense of colour His problem pictures attracted much attention He died in 1934

Collings Jesse English politician Born at Lymington, Devon, in 1831, he settled in Birmingham, where in 1878 he was mayor In 1880 he became Liberal M.P. for Ipswich, and from 1886 to 1918 represented a Birmingham division Collings is best known for his association with Joseph Chamberlain and for his advocacy of the cause of the agricultural labourer, for whom he demanded "three acres and a cow" He died in 1920

Collingwood Town and port of Ontario It stands on Georgian Bay, 90 m from Toronto, on the CN Riv From here steamers go to ports on Lakes Superior and Huron Pop 5900

Collingwood Baron English sailor Born in Newcastle, Sept 26, 1750, Cuthbert Collingwood saw fighting in the American War of Independence and on June 1, 1794, commanded the *Barfleur* against the French, and was a leader in the Battle of Cape St Vincent. As Nelson's lieutenant at Trafalgar, in the *Royal Sovereign* he led the second line and on Nelson's death took command of the fleet. In 1805 he was made a peer He died March 7, 1810

Collins Michael Irish politician Born in 1890, he was educated at Clonsilla and King's College, London In 1916 he was imprisoned for sharing in the Easter Rebellion, and in 1918 was elected, as a Sinn Féin M.P. for South Cork He organised the Irish Volunteers, and was head of the republican army during the warfare of 1920-21 In 1921 he helped to negotiate the treaty with

Great Britain, and he became finance minister in the provisional government. As commander in chief of the Free State Army, he was conducting the war against the rebels when he was killed, Aug 22, 1922

Collins William English poet. He was born Dec 25, 1721. Educated at Winchester and Oxford, his short and desultory life was passed chiefly in London. Some of his poems are remembered, especially his *Odes*. He was a friend of James Thomson. He died at Chichester, June 12, 1759

Collins William Wilkie English novelist. Born in London, Jan 8, 1824, he passed a few years in business before becoming a harrister. He then took to literature, and became famous in 1860 with his novel *The Woman in White*, which first appeared serially in *Household Words*. Other novels were *No Name*, *The Moonstone*, *The New Magdalen* and *Armada Hide and Seek* and *The Dead Secret* were less popular. Collins died Sept 23, 1889

Collins's father, William Collins (1788-1847), was a noted painter. In 1820 he was made an R.A., and he died Feb 17, 1847. His younger son Charles Allston Collins (1828-73) was a painter and a writer. He married a daughter of Charles Dickens who was closely associated with his brother Wilkie.

Collodion Cotton Variety of nitrocellulose soluble in ether alcohol. It is prepared from purified cotton waste immersed in a comparatively weak nitric acid and sulphuric acid bath. This produces pyroxylin, used for plastering gelatine, artificial silk, celluloid and photographic films

Colloid Substance in a finely divided state, intermediate between the microscopical limit of visibility and the molecular state. These limits are approximately one ten thousandth and one millionth of a millimetre respectively. Sugar and salt solutions, being molecularly dispersed, pass through membranes rapidly; gelatines and other so called colloids, in coarser states of agglomeration diffuse but slowly. This colloidal state of matter begins with cytoplasm the ultimate basis of life. Utilised for preventing flocculation of lubricants and photographic films, it also prevents human milk from coagulating

Collusion Secret understanding between two or more persons to prejudice another's rights, or by bogus action to seek results otherwise unattainable. Actions for divorce are dismissed if collusion is proved

Colman Name of many Irish saints. The most famous was S. Colman of Connor, who was born about 605 and became a monk of Iona, and in 661 Bishop of Lindisfarne. He died at Innishowlin, Mayo, on Aug 8, 676. S. Colman founded many churches and monasteries

Colman George English dramatist. He was born in Florence in 1731 and educated at Westminster School and Christ Church, Oxford. In 1760 his first play *Polly Honeycomb*, appeared in London and in 1761 *The Jealous Wife* was produced by his friend, David Garrick. Colman was manager of two London theatres, Covent Garden, 1767-74 and the Haymarket, 1777-85. With Garrick he wrote *The Clandestine Marriage*. He translated the *Comedies* of Terence. He died Aug 14, 1794

Colman Ronald English film actor. Born at Richmond, Feb 7, 1891, he entered the army in 1909 and saw service in the Great War. In 1919 he married Thelma Ray, and in 1920 he went to America and became famous. Among the pieces in which he appeared are *Beau Geste*, *Bulldog Drummond* and *Arrowsmith*

Colmar Town of Alsace, France. It is 39 m from Strassbourg. Except between 1871 and 1914, when it belonged to Germany, Colmar has been part of France since 1673. Before that time it was a free city. There is a trade in wine and timber. Pop 46,518

Colne Borough and market town of Lancashire. It is 35 m from Manchester, on the L.M.S. Rly. An interesting building is the cloth hall, dating from the time when the town was a centre of the woollen industry. To day the chief industry is the manufacture of cotton goods. Pop (1931) 23,790

Colne Name of two English rivers. One in Essex has a length of 35 m before it falls into the sea at Mersea. Colchester stands on it, and it is famed for its oyster beds and its yachting

The other Colne rises near Hatfield and flows for about 35 m to the Thames at Staines. Sometimes called the Coin, it divides Middlesex from Buckinghamshire. Another Coln is a small river in Gloucestershire, a tributary of the Thames

Colney Hatch District of Middlesex to the N.E. of the city, just outside the County of London. Here is a mental hospital maintained by the London County Council. It was opened in 1851, and can accommodate 2000 patients

Cologne City and river port of Germany. It stands on the Rhine, and is the third largest city in the country. Its fine old buildings include the cathedral, one of the finest Gothic edifices in the world

There is also a Roman Catholic cathedral at Deutz, an historic town hall and other buildings that date from the time of the Hanseatic League. There is a university refounded in 1919, and several technical and other schools. The city has some noble squares and parks

Cologne has many manufactures and there is a large trade along the river. It is an important railway junction. In 1918 it was occupied by British troops, who remained until 1925. Pop 700,222

Colombes Suburb of Paris. It lies to the north west of the city. Races are held here and there is a stadium in which international football matches are played, and other sporting events take place

Colombia Republic of S. America. In the north of the continent, it covers 447,536 sq. m., and has a coastline on both the Pacific Ocean and the Caribbean Sea. Bogota is the capital, other centres are Medellin, Barranquilla, Cartagena, Cali, Cuenca and Bucaramanga. The western part of the country is traversed by three great ranges of the Andes, and the highest point is nearly 19,000 ft. The people live mainly near the coast and the interior is largely unexplored and uncultivated. The chief rivers are the Magdalena and its tributary the Cauca. The chief product is coffee, bananas are grown for export. Gold is worked, and there are other minerals

The country is governed by a president, elected for four years, and a congress of two

houses Until 1819 Colombia was a Spanish possession. It was then united with Venezuela and Ecuador to form a republic. Later it was itself a republic called New Granada. Its present name was taken in 1863. Panama was a province until separated in 1903. Pop (1928) 7,851,000

Colombo Capital and chief port of Ceylon. Situated on the west coast, its fine artificial harbour encloses 660 acres of water. A port of call for vessels trading with India, the Far East and Australasia. It has extensive coal and oil depots. The industries are chiefly concerned with the preparing and marketing of tea and other products of the island. Pop (1931) 284,155

Colon Part of the large intestine. It extends from caecum to rectum. Beginning in the lower part of the abdomen on the right side, it passes upward as the ascending colon, across as the transverse colon, and drops along the left side as the descending colon. It is lined with a mucous membrane. Inflammation of this membrane is called colitis.

Colon Seaport of the republic of Panama. Situated on an island near the Caribbean entry of the Panama Canal, it is a distributing centre for imports and local produce. Founded as the Atlantic terminal of the Panama Railway in 1850, its first name was Aspinwall. The climate has been improved by measures taken by the United States authorities. The American settlement of Cristobal adjoins it, and the pop of the two was (1930) 33,460.

Colon Standard monetary unit of Salvador and Costa Rica, worth about 2s.

Colonel Military title. It was in general use in the French and English armies in the 17th century, if not earlier, being then given to an officer who raised his own regiment. Cromwell was at one time a colonel.

To-day a colonel ranks between a major-general and a lieutenant-colonel. Each regiment of the British Army has a colonel-in-chief, an honorary position, sometimes filled by a member of the royal family. The rank is shown by a crown and two stars.

Colonial Office Department of the British Government responsible for the affairs of the colonies. The colonial office came into existence in 1854. In 1925 the office of secretary for dominion affairs was created, but until 1930 the post was held by the colonial secretary. The Colonial Office is in Whitehall. The secretary is assisted by a parliamentary under-secretary, a permanent secretary and a large staff of civil servants.

Colonisation Act of founding settlements abroad. In the ancient world the great colonising races were the Phoenicians and the Greeks, who established colonies round the Mediterranean. The Romans did a certain amount of colonisation.

A new era in colonisation began with the discovery of America. In this movement the French, British, Dutch, Spanish and Portuguese nations took the largest part. Each founded a colonial empire, and for nearly 300 years wars about these possessions were almost incessant. France and Spain in the course of time lost their empires, and Portugal lost most of hers. The Netherlands retained a good deal, and Britain, although a valuable portion was lost in 1783, became the owner of the greatest colonial empire ever known.

In the 19th century France made up for her losses in America by acquiring a vast colonial empire in Africa where Britain added to her already extensive area. Germany became a colonising power, though neither a successful nor a permanent one. With the partition of Africa towards the end of the 19th century the work of colonising the vacant spaces of the earth may be said to have ended.

Colonna Name of a famous Italian family. One member was made pope as Martin V. in 1417. A later member, Prospero Colonna (1452-1523), was a successful soldier who fought in turn for France, Spain and the Pope. Pompeo Colonna was also a soldier and in 1517 was made a cardinal, but this did not prevent him from helping Charles V. to capture and plunder Rome in 1527.

Vittoria Colonna, a daughter of the house, won fame by her poems and her friendship with Michelangelo and other noted men. Left a widow in 1525, when her husband was killed at Pavia, she entered a convent and died in Rome, Feb 25, 1547.

Colonnade Row of pillars in architecture, much used in ancient times, particularly in Rome, Syria, Pompeii and elsewhere. A modern example is the colonnade projecting in front of the National Gallery, London. Another is the colonnade in front of St Peter's, Rome.

Colonsay Island of Scotland. One of the Hebrides, it belongs to the county of Argyll. It covers about 12 sq. m., but is sparsely populated. St Columba founded a college here.

Colony Settlement of a state in a country outside that state's geographical boundaries. Colonies are usually acquired by governments by conquest, discovery or cession. The word is also used for a group of persons who live in a foreign country.

British colonies are divided into crown colonies and self-governing colonies.

Colophon Concluding note in some MSS. and many early printed books. It gave such details as name of author, scribe or printer, date and place of production, sometimes adding pious expressions. After the introduction of title pages it dwindled to a decorative tailpiece, or the word *finis*, and then vanished. It has been revived by publishers in modern times.

Colorado Western state of the United States. Bounded N by Wyoming, N.E. by Nebraska, E by Kansas, S by Oklahoma and New Mexico, and W by Utah, it occupies 103,948 sq. m. It is traversed by the Rocky Mts., where 180 summits exceed 12,000 ft. There are 14,350,743 (1932) acres of national forests, 8,448,684 acres under crops, and 19,338,377 acres under pasture. Colorado is rich in minerals and produces gold, silver, zinc, lead, coal and a great quantity of oil.

It became a state in 1876. Denver is the capital and the largest town. Others are Pueblo and Colorado Springs. Colorado is governed by a general assembly of two houses. It sends two senators and four representatives to Congress. Pop (1930) 1,035,791.

Colorado River of N. America. It is formed by the union of the Green and Grand rivers, rising in Wyoming and Colorado respectively, and flows through the arid plateau between the Rocky Mts.

and the Sierra Nevada before falling into the Gulf of California. It is 2,200 m long and is famous for the canyons or gorges in its course. These have a total length of 1000 m, the chief being the Grand Cañon in Arizona.

Colorado Beetle Potato pest. The beetle, *leptino tarsa decemlineata*, now general in the U.S., completely destroyed potato and other solanaceous crops until controlled by poisonous powders (containing Paris green) dusted or sprayed on the foliage.

Colosseum Amphitheatre in Rome. It was finished in A.D. 80 and held about 50,000 people. Its length was 600 ft. and its width 500 ft. The arena was 285 ft. by 185 ft. The building was used for gladiatorial and other shows, and in it many Christians were martyred. Considerable remains still stand.

Colossians Epistle to the Twelfth book of the New Testament. It bears evidence of having been written by the Apostle Paul during his captivity in Rome about A.D. 62, and addressed to the citizens of Colossae, a once flourishing city in Asia Minor.

Colossus Statue, especially of gigantic or colossal proportions. The Colossus of Rhodes, overthrown by earthquake about 224 B.C., was one of the Seven Wonders of the World. Nero erected in his Golden House a colossus of himself which Hadrian afterwards removed to the Colosseum. The Colossus of Memnon at Thebes are two seated sandstone statues, 70 ft. high, of Amenhotep III.

Colour Sensation or class of sensations arising from stimulation of the optic nerve. This is effected normally by light rays emanating from luminous bodies or reflected from non-luminous bodies. These light rays, varying in wavelength, furnish in combination the white colour of sunlight, which is resolvable through a prism into the rainbow band from violet to red, bounded by ultra-violet, such as X-rays, and infra-red or heat rays. An object's perceived colour depends upon its power of absorbing some light waves and reflecting the rest. If it absorbs none or nearly none, it appears white; if all, or nearly all, black; if all except the red, red and so on.

Colours Flags or standards of a regiment. In the British Army at one time these were carried into battle, usually by an ensign, and formed a rallying point. The last notable appearance of colours in battle was in the Zulu War of 1879. Each regiment has two colours, the King's and the regimental, the latter recording the honours. Regimental colours of the past may be seen in cathedrals and churches, e.g., at Winchester.

Colours In sports the cap and blazer worn by those who have represented their college or school at a certain sport. At the older universities blues are the equivalent of colours elsewhere. In horse racing each owner has his colours, which are registered and worn by his jockey. Similarly there are distinguishing colours at greyhound races.

Colston Edward, English merchant. Born at Bristol Nov. 2, 1636, he became wealthy through trading with the West Indies. In 1710-13 he was M.P. for Bristol. He died at Mortlake, Oct. 11, 1721. Colston gave a great deal of money to build schools and

almshouses and for church purposes. The Colston Hall, Bristol, was built in his honour.

Coltsfoot *Trussilago farfara*. Herb of the composite order. It is native to Britain, Europe, W. Asia and N. Africa. Its yellow heads appear before the leaves, which are densely covered beneath with hair. The leaves are smoked for asthma and yield an extract used as a cough remedy, as in coltsfoot rock.

Columba Irish saint. Born in Donegal, Dec. 7, 521, he became a monk. He settled in Iona and from his religious house there monks were sent out to convert Scotland and the N. of England to Christianity. Columba died June 9, 597. He was canonised and his feast is kept on June 9.

Columbarium Sepulchral chamber. Like a dove cot, it had rows of wall niches for preserving cinerary urns. Their use has been revived since the re-introduction of cremation.

Columbia District containing Washington, capital of the United States of America. Situated 40 m S.W. of Baltimore, it occupies 62 sq. m. of land and 7 sq. m. of water surface, mostly on the N.E. side of the Potomac River at the head of tidal navigation. Washington city covers one fifth of the land, including the river port city of Georgetown, now W. Washington, and several suburbs and villages. Pop. 540,000. See WASHINGTON.

Columbia is also the name of the great university of New York. It dates from 1754 and has now about (1932) 25,866 students.

Columbia River of N. America. Rising in the Rocky Mts. in British Columbia, it soon crosses into the United States, flows through the State of Washington and forms the northern boundary of Oregon before falling into the Pacific. Its length is about 1400 m. The Columbia is famous for its salmon.

Columbia is the name of the capital of S. Carolina. It is on the Congaree River, 130 m. from Charleston, and is a manufacturing centre. Pop. 39,500.

Columbine (*Aquilegia vulgaris*). Perennial herb of the buttercup order. Native to N. temperate regions, its stem bears finely divided leaves and panicles of flowers, with five petaloid sepals and five short spurred, blue or purplish white petals. These have been developed by hybridisation into handsome, long spurred, vari-coloured garden favourites.

Columbine Traditional female character in Italian and English pantomime comedy. Columbine, the graceful dancer, is the daughter of Pantaloon and courted by Clown and Harlequin. She returns Harlequin's love and the wiles and pathetic tales by which she keeps his transient affections form the basis of some pretty plays.

Columbus Christopher, Discoverer of America. Born in Genoa about 1451, he went to Portugal, married a lady of rank and conceived the idea of a voyage to the west. The kings of England and France declined to help, in Spain, however, Ferdinand and Isabella aided him to fit out an expedition.

With 88 men in three ships he left Palos on Aug. 3, 1492, and on Oct. 12 he sighted the Bahamas. He landed there and then went on to Cuba and Haiti, after which, having

lost one of his three ships, he returned to Spain. Columbus made three other voyages to America. In 1493 he took 1500 men to the W Indies, in 1498 he landed in S America, but was fetched home in disgrace, and in 1503 he was in Central America and the W Indies, where Spanish settlements had been made. Columbus died at Valladolid, May 25, 1506, and his remains were taken first to San Domingo and thence to Havana, whence, in 1898, they are believed to have been removed to Seville.

Column In architecture an upright body designed to support another. Usually a shaft, resting on a base and surmounted by a capital, it may bear a statue or a memorial.

There are some fine modern columns in London, Paris and other cities. In London there are the Duke of York's Column in Waterloo Place, and the Nelson Column in Trafalgar Square, in Paris Napoleon's, in the Place Vendôme, and the Jny Column in the Place de la Bastille.

Colwall Village of Herefordshire. It is 3 m from Ledbury, on the G W Ry. Races are held at Colwall Park. Pop 2000.

Colwick Village of Nottinghamshire. On the Trent, it is 2 m from Nottingham. The hall, once the home of Byron's Mary Chaworth, is now an hotel and races are held in its grounds. The church has some interesting tombs. The village gives its name to a kind of cheese. Pop 1100.

Colwyn Bay Watering place of N Wales. On the coast of Denbighshire, it is 220 m from London, on the LMS Ry. With Old Colwyn, which lies inland, it forms an urban district. Pop (1931) 20,885.

Colza Variety of golden-yellow, semi-drying oil. It is extracted from the crushed seeds of a cruciferous plant allied to the swedo, which is extensively cultivated for that purpose in parts of Europe. It is a well-marked commercial variety of the class known as rape oils, and is now an important lubricant. The cake, left after the oil has been expressed, is a nutritious cattle food.

Coma Condition of profound stupor from which the sufferer cannot be effectively roused. Stertorous breathing and strong heart action may be present. Primary coma is usually caused by apoplexy, concussion or other head injury, and alcoholic or narcotic poisoning. Secondary coma, induced by diabetes, uraemia, meningitis and other diseases, is often fatal.

Combination Acting together. The combination laws were Acts of Parliament passed in 1799 and 1800 to make trade unionism illegal. Their provisions included imprisonment for any working man who combined with another to obtain higher wages or shorter hours. Owing to the efforts of Francis Place the laws were repealed in 1824. Combination is now allowed, although it is illegal if against public policy. It takes the form of trade unions among the employed and of combines among the employers. See TRADE UNION.

A **COMBINE** is a union of business firms. The tendency to form combines has been very marked since the Great War. They tend to lower working costs and to organise large selling plans. In the United States, where they are known as trusts, legislation has been passed against them.

Combustion Process of burning material substances. It comprises essentially oxidation of the substances, by combination with atmospheric oxygen, accompanied by heat. The rapidity of the combustion is governed by the rate of oxidation, rusting of iron proceeds so slowly that the heat evolved is imperceptible. When substances such as greasy rags, slowly oxidising, reach the temperature of their ignition point the resultant combustion is called spontaneous.

Comedy Type of drama. It originated in the festivals of Greece. The first great comedies were those of Aristophanes. To Dante, the word meant a great drama dealing with life and death. Balzac later used it in much the same sense.

In the 17th and 18th centuries came the comedy of manners, of which Molière was the greatest exponent, represented in England by the works of Congreve and Sheridan. To-day a comedy is little more than a farce, or burlesque; when accompanied by music it is called a musical comedy. A comedian is an actor who plays humorous parts.

Comenius Johann Amos Moravian theologian, philologist and educational reformer. He was born in Bohemia March 28, 1592. Expelled from Bohemia he settled at Lissa, Poland, where he became bishop. His most famous works are the little treatise *Janua Linguarum Reserata* (The Gate of Languages Unlocked), which was completed by *Orbis Sensualium Pictus*, a kind of encyclopædia in which the words are accompanied by explanatory pictures. He died in Amsterdam, Nov 15, 1670.

Comet Earliest British passenger steamship. Built by Henry Bell (1767-1830) at Greenock. In 1811, it pined between Glasgow and Greenock thrice weekly between 1812 and 1820. It was a paddle steamer 42 ft. long, equipped with a 3 horse-power engine.

Comet Luminous celestial body moving about the sun. Bright comets contain a nucleus, an enveloping haze or coma, and usually a tail of luminous matter, so tenuous that stars seen through it lose no brilliancy. Some comets move in elliptical orbits and return at calculable intervals, ranging from the 3½ years of Encke's to the 76 years of Halley's, others, moving parabolically, may never return. Biela's, with a 6½-year period, has disappeared since 1852.

Comfrey Genus of rough, erect, tuberous-rooted perennial herbs of the borage order. They are native to Europe and W Asia. The common British comfrey (*S. officinale*) has been naturalised in N America, the other (*S. tuberosum*) is cultivated ornamentally.

Comines Philippe de French historian. He was born about 1417, and held a high position under Louis XII. He died at Argenton Oct. 18, 1511.

Comines is famous as the author of some *Mémoires* a good and reliable account of the history of France under Louis XI, and to a lesser extent under Charles VIII. They have been translated into English.

Commandant Military officer in charge of a school, base or fort. The word is used also for the woman at the head of organisations of women auxiliary to the forces, such as the V A D.

Commander British naval officer. Senior to a lieutenant-

commander and junior to a captain, he may command small vessels or be an executive officer under the captain on large vessels. His sleeve badge is three hands, the uppermost looped. Commanders of the navy and wing commanders of the R A F rank with lieutenant-colonels in the army.

In the Royal Victorian Order the third class is commander (CVO) and the second-class knight commander (KCVO). There are also commanders, knights-commander and dames commander in the Order of the British Empire. In the Orders of the Bath, St Michael and St George and the Star of India there are knights commander. The call sign was called the commander of the faithful.

Commander-in-Chief Officer of the British and other armies. For many years Great Britain had a permanent commander in chief, but now one is only appointed in time of war. India has still a commander in chief. During the Great War there was a commander in chief for each theatre, Sir John French and then Sir Douglas Haig filling this post on the Western Front, and Sir Ian Hamilton, Sir Stanley Mande and others elsewhere.

Commentary Collection of memoranda. They were made in Rome for historical material or records, Caesar's *Commentaries* being an example. Nowadays the term denotes a systematic work, comprising annotations and elucidations of great literature. There are numerous commentaries on the books of the Bible.

Commerce Trade or interchange of commodities. In certain countries there is a Ministry of Commerce, in Great Britain the Board of Trade. Degrees in commerce are given at London, Birmingham and other universities.

CHAMBERS OF COMMERCE are unofficial bodies found in every large town. They exist for the promotion of trade interests.

Commissariat Section of a military force, whose function is to arrange the provision of supplies of food. In Britain the commissariat is the Royal Army Service Corps.

Commission Act of placing a charge or trust upon a person. It also describes the charge entrusted, and the document setting forth the authority.

A body of persons appointed to act for another person or body is called a commission. Such are the royal commissions appointed to report to the king upon a certain matter. The scope of their inquiry is laid down in the terms of reference. Other commissions are permanent bodies set up by Parliament, such as the Development, Charity and other commissions.

The percentage on sales or purchases by which an agent in commerce is often remunerated is also called a commission.

The magistrates of the counties and boroughs of England, who are appointed by a commission from the king, are known collectively as the commission of the peace.

A commission of array was a method adopted in England in the 13th century and later for raising soldiers. The king gave a commission to a man to raise a certain number of men in a certain area.

Commission Authority by which an officer of the navy, army or air force holds his position. Commissions are granted by the King, through the Secretary of

State or other official, to qualified persons. All the higher officers of the services are commissioned officers.

At one time commissions were bought, but since 1870 they have been given to those who have succeeded in a competitive examination. The successful candidates then pass a period in study at Dartmouth and Greenwich for the navy, Sandhurst and Woolwich for the army, and Cranwell for the air force. They are then commissioned to a ship, regiment, battery or other unit.

Commissionaire Attendant at the entrance of public buildings, offices, etc. In England they usually wear a uniform. Many are drawn from the Corps of Commissionaires, established by Sir Edward Walter in 1859. They are men who have served with credit in the navy, army or air force and the strength of the corps is about 500. Its headquarters are at 419a Strand, London, W.C.

Commissioner Member of a commission or the holder of a commission from the King. The First Commissioner of Works is a member of the government. Special commissioners of income tax are persons who decide questions relating to the tax.

In law a commissioner for oaths is a solicitor before whom one can take an oath. A commissioner of assize is a barrister who temporarily takes the place of a judge on circuit. The head of the Metropolitan Police is called a commissioner. The representatives of Australia, Canada, the Irish Free State and the other Dominions in London are called high commissioners.

Commitment In English law a written document for the conveyance of a person to a place of custody, and for his detention there for a definite period or until he complies with an order, e.g., payment of a fine. It is usually issued after the summoning or appearance of the person named at court to answer a charge.

Commodore Temporary rank in the British Navy. It is given to an officer holding a position somewhat in advance of his actual rank. There are two classes, first and second.

Air Commodore is the title of a high officer in the Royal Air Force.

Commodus Lucius, Roman emperor. Born Aug. 31, 161, a son of Marcus Aurelius, he patched up peace with the German tribes. He reigned as a tyrant and gave himself up to gladiatorial displays and debaucheries, and was strangled by favourites in 192.

Commoner Term denoting in the United Kingdom (1) Any person not a peer, (2) Any member of the House of Commons—the elder Pitt was called the Great Commoner, (3) Any student at Oxford or Cambridge not being a scholar or exhibitioner, (4) Any person with joint rights in common land.

Common Good In Scotland, property that belongs to a burgh. In some cases it produces a large annual income which can be applied to purposes other than those for which the rates are levied.

Common Law Law common to the whole of the kingdom as distinct from specialised branches such as statute law or mercantile law. Many of its rules

have been established by ancient usage and depend on precedent

Common Pleas Court of Old English law court. Owing to the increase in the number of pleas in the reign of Henry II., five justices were appointed to hear the pleas of the people. Under the Magna Carta the court was fixed permanently at Westminster. Under the Judicature Act, 1873, its functions were transferred to the King's Bench Division of the High Court.

Commons In Great Britain land that is owned by the public. In early times common land was attached to a village or manor on which the villagers had the right to put animals to graze. There are relics of these rights in various places to-day. The lords of the manor enclosed a great deal of common land in the 15th and 16th centuries, from the beginning of the 18th century much was enclosed by Acts of Parliament. At first, each Act dealt with a single enclosure, but after a time, general enclosure Acts were passed. It has been estimated that 5,000,000 acres of common land were enclosed or converted into private property until 1860. In 1866 enclosures were forbidden in the London area, and in 1876 elsewhere. To day commons are looked after by the local authorities. The Commons and Footpaths Preservation Society exists to protect the rights of the public in this matter. The offices are at 71 Eccleston Square, London, S W 1.

Commons House of. In Great Britain and Canada the name given to the House of Parliament elected directly by the people. In England the House began in the 14th century when the representatives of the counties and boroughs separated themselves from the lords, and were called the commons. They had little power at first, but gradually asserted themselves. Their present power is due mainly to their control of finance, finally established by the Parliament Act of 1911. For practical purposes the House of Commons is omnipotent in legislation. In Canada the Senate is more of a check than is the House of Lords in England.

The number of members in the English House of Commons was at one time 670, but since the establishment of the Irish Free State it has been 615. Women have been eligible for election since 1918. England elects 492 members, Wales 36, Scotland 74, and N. Ireland 13. London sends 62 members and 12 are sent by the universities. The President of the House is the Speaker, his deputy is the Chairman of Committees. The control of business is in the hands of the Prime Minister and his assistants. Ministers and their followers sit on the Speaker's right, members of the Opposition on his left. The Canadian House of Commons consists of 245 members and its procedure is modelled on that of the British house.

Commonwealth Term used for a country which has a democratic form of government. In England, the period between the execution of Charles I. and Charles II.'s restoration was called the Commonwealth. The term still officially designates Massachusetts, Pennsylvania, Virginia and Kentucky. In 1900 the Commonwealth of Australia was formed by federation.

British Commonwealth of Nations is a current term used in preference to British Empire.

The Commonwealth Fund is an American benefaction due to Mrs S V Harkness. By

it British students can spend two years at American universities. There are 38 fellowships, each worth £600 a year.

Commune Word meaning much the same as municipality or corporation. In France to-day the commune is an administrative district, with a council elected by all adults and presided over by a mayor. There are communes of the same kind in Italy and Belgium.

The Commune of Paris has on two occasions played an important part in national affairs. In 1791-92 its action led to some of the great events of the French Revolution, in 1871, after the Germans left Paris, a commune was proclaimed and civil war broke out.

Communion Holy Participle in the sacrament of the Lord's Supper (1 Cor. x). In the Roman Catholic Church it takes the form of the Mass. In the High Church section of the Church of England it is called the Eucharist. High Churchmen, like Roman Catholics, believe in the doctrine of the real presence (q.v.). To Lutherans, Nonconformists and other Christians, the taking of the communion is symbolic only.

Communism In its more general aspects Communism is a social-economic theory deriving from the teaching of Karl Marx, its doctrinal basis the Communist Manifesto written by Marx in 1847, and its ultimate aim a completely classless society in which the principle of "from each according to his abilities, to each according to his needs" will be consistently applied.

Modern Communism gained great political importance as the creed of the governing party which obtained power under the leadership of Lenin (q.v.) in the second phase of the Russian Revolution (Oct., 1917). It was constituted a world movement by the establishment of the Third (or Communist) International in 1919, and national Communist parties have been formed in most of the countries of the world.

There is a Communist Party in Great Britain, with an organisation at 16 King St. Covent Garden, London, W.C. 2. It holds an annual congress and at the general election of 1931 its candidates secured 75,000 votes.

Commutation Process of exchanging one thing for another. Its most common use is for the payment of a sum of money to discharge a recurring obligation. Thus, a person who owns land subject to the old Land Tax can commute it by making a single payment. Sometimes the State, instead of paying a pension indefinitely pays a sum of money to close its liability.

Commutator Device in a dynamo by which an alternating current is converted into a continuous one.

Como Lake and city of Italy. The lake, about 30 m. from Milan, is 31 m. long and covers 56 sq. m. The Adige flows through it. Its surroundings make it a region of unusual beauty and a popular pleasure resort.

The city of Como stands at the south end of the lake. The chief industry is silk manufacture and it is a tourist centre. Pop. 48,699.

Comorin Cape. The extreme southern point of India, in the state of Travancore. It is low and sandy and has the village of Comorin at the apex of the headland, where the temple of Kannyambal, the "virgin goddess" receives many pilgrims.

Comoro Group of islands belonging to France. To the N.E. of Madag.

gascar, they cover about 750 sq m and are mountainous. The chief products are sugar, vanilla and copra Pop 119,305

Companion of Honour Order Instituted in 1917, it is limited to 50 members, and is conferred for conspicuous national service. Companions use C.H. after their names. The badge, a plaque with mounted knight, and an oak tree supporting the Royal Arms, centres an enamelled blue oval bearing the motto "In action faithful and in honour clear," affixed to a crown suspended on a gold-edged carmine ribbon.

Company Association of persons for trading. Trading companies existed in England in Elizabethan times, and some became chartered companies. The E. India Co. was a company of this kind.

An Act of 1862 allowed a body of traders to form themselves into a company with limited liability. In 1908 the law was consolidated, and a new class of company created. These are private companies enjoying the protection of the limited liability system, but they cannot offer their shares to the public nor can they have more than 50 shareholders. In 1928 a new Companies Act provided, among other things, that directors must give more information to shareholders in the balance sheets.

Company Word in very general use for an association of any kind. A body of actors is called a company, and the crew of a vessel is the ship's company. In the British infantry, the battalions are divided into companies.

Compass Mathematical instrument for describing circles and for measuring distances.

In music, the term compass is applied to the range of notes from the lowest to the highest, that can be produced by a voice or instrument.

MARINER'S COMPASS This consists essentially of a magnetic needle mounted upon a pivot over a card having the cardinal points marked upon it. The British Navy has a compass department at Dilton Park, Langley, Bucks.

Compass Plant Popular name of two distinct composite plants growing on N. American prairies. Their lower leaves, standing vertically, tend to grow with edges set north to south, the sides catching the morning and evening sun. The native rosinweed (*Silphium laciniatum*) first received the name *Lactuca scariola* allied to the cultivated lettuce, was introduced later.

Compensation Reparation for loss or injury. By law compensation must be paid if property is damaged by riot. Tenants of agricultural property are entitled on leaving to compensation for any improvements made by them and since 1927 tenants of business premises have had a similar right. If property is taken by a railway company or a local authority, compensation must be paid and it can also be obtained if a man's business is damaged in this way.

Compensation can be obtained also if a person or his property is injured while travelling in a public vehicle. A considerable body of law deals with compensation to workmen injured in the course of their employment. See WORKMEN'S COMPENSATION.

The Compensation Fund is a fund raised from the owners of public house licences. It is used to compensate those whose licences are taken away, except in cases of misconduct.

Competition Act of striving for some thing which another simultaneously seeks.

In the domain of economics it is the prevalent method employed for stimulating production and adjusting the operation of the forces of supply and demand, locally or internationally. Unfettered competition is restricted by the varying measures of self protection adopted by states by factory legislation or wage regulation, by industrial combinations and rules and by international trusts.

Compiègne Town of France. It stands on the Oise, 52 m. from Paris. The chief buildings are the 18th century palace two old churches, S. Antoine and S. Jacques and a 16th century hotel do ville Pop 17,852.

Near the town is the forest of Compiègne which covers nearly 60 sq m. On Sept 1, 1914, during the Retreat from Mons there was some fighting here between the British and the Germans.

Complement What is needed for completion. It may be the angle needed to complete a right angle, e.g., 60 deg complements 30 deg, the colour needed to obtain white light, e.g., orange complements blue. The complement of a ship is its crew.

Compline Last of the canonical hours, nine o'clock. Introduced in early monastic foundations, it is retained in the Roman Catholic Church, usually combined with vespers. It is sometimes used in the Church of England and in 1931 the Archbishop of York suggested it should have a regular place in a revised time table for public worship.

Composition Word meaning to put together. It may be a piece of music or an essay. In graphic art it is the balance and arrangement of parts of a picture. In law it refers to an arrangement made by an insolvent person with his creditors. He compounds, or makes a composition to pay them a certain sum in the £. It is illegal for a debtor to make a composition with some of his creditors only.

Compost Mixture of materials designed to enrich the soil. Mineral vegetable and animal ingredients are used in varying proportions, such as peat, dung, fish, fibrous loam, leaf sweepings, coarse river sand, road drift, stable refuse, lime and wood ashes.

Compound Substance produced by the chemical combination in definite proportions of two or more elements. Compounds are identified by formulae disclosing their compositions. Thus H₂O, symbolising the compound water, states that each molecule contains two atoms of hydrogen and one of oxygen. Compounds acquire their own identity and properties, and are thereby distinguished from mechanical mixtures.

Compounding Making an agreement. Legally to compound felony, i.e., to refrain from prosecuting a person for an offence in return for a sum of money is an offence against the law. Another kind is legal. This is an arrangement by which the landlord, and not the tenant pays the rates on property.

Compressed Air Air mechanically reduced in bulk at a pressure exceeding that of atmospheric air, to which the relaxation of the extra pressure restores it. The expanding air is utilised in

operating mining drills, lifts, pumps, railway brakes, torpedoes, and hammers. Pneumatic tubes transmitting postal and other matter combine compressed air release with exhaustion.

Compressibility Quality of being reducible in bulk. Inversely proportionate to the pressure, it is sometimes measured by the unit of atmospheric pressure, 14.7 lb per sq in. It varies in different substances, gaseous, liquid or solid.

Compton Edward English actor. Born in London, Jan 14, 1854. In 1881 he organised the Compton Comedy Co., and was a leading member of his profession for many years. He died July 16, 1918. Compton's children included the actresses Fay and Nell Compton, and the novelist who took the name of Compton Mackenzie.

Compton Henry English bishop. He was born at Compton Wynnyates, Warwickshire in 1632. At first a soldier, he was ordained in 1662. In 1674 he was made Bishop of Oxford and in 1675 Bishop of London. In 1686, James II suspended him. Compton was one of those who invited the Prince of Orange to take the throne and he crowned William and Mary in Westminster Abbey. He remained Bishop of London until his death at Fulham, July 7, 1713.

Compton Wynnyates Residence of the Marquess of Northampton. It is near Kington, in Warwickshire and one of the most perfect specimens of Tudor domestic architecture. Built about 1529 it is notable for its tower, chapel, panelled great hall, secret staircases, priest's room, and gardens.

Comptroller Variant of controller. It is borne by the comptroller and auditor general who is responsible for seeing that all payments made by the Treasury have been authorised by Parliament. He cannot be dismissed except by Parliament. His office is on Victoria Embankment, London, E.C.

There is a Comptroller of the Royal Household, a political office held by a member of the government.

Compurgator Name given in England in Anglo-Saxon times and later to a man who swore that another was innocent of a crime. A man could clear himself if he could get a certain number of his neighbours to swear to his innocence. These were the compurgators.

Comrie Village of Perthshire. A tourist resort, it is 7 m from Crieff, on the L & N E Rly. Pop 2200.

Comte Isidore Auguste Marie François Xavier French philosopher. Born at Montpellier Jan 19, 1798, he was educated there and in Paris. He came under the influence of S. Simon, and in 1830 published the first volume of his *Cours de Philosophie Positive*. His life was overshadowed by poverty and quarrels with friends. He died Sept 5, 1857. See POSITIVISM.

Comyn Scottish family. It took its name from Comines in Belgium and one of its members crossed to England with William the Conqueror. For some 200 years the Comyns were powerful and prominent. William Comyn was Chancellor of Scotland in 1133, and in the 12th century the Comyns were earls of Buchan, Athole, Angus and Monteith. The Black Comyn was one of the regents of Scotland in 1286 and in 1290 claimed the throne, but

without success. The Red Comyn was killed by Robert Bruce in 1306 at Dumfries.

Concerto Musical composition in sonata form for a solo instrument with orchestral accompaniment. In the 17th century concerto often meant sonata as Bach's Italian Concerto. Corelli, in 1686 introduced the secular concerto for concert use.

Conchology Study of the shells of molluscs. The acquisition and arrangement of shells as objects of interest and beauty preceded systematic study. The shapes of shells are enhanced in importance and interest when compared with those of fossil forms.

Conciliation Method employed for settling industrial disputes. In 1896 an Act established a system of councils for this purpose, consisting of employers, employed and neutrals. To-day there is a principal conciliation officer at the Ministry of Labour and there is an Industrial Court at 5 Old Palace Yard, London, S.W.1.

Conclave Locked room, or the assembly of persons within it. Specifically the word denotes the secret meeting of Roman Catholic cardinals to elect a Pope. In the 13th century the civil magistrates confined the electors until a choice was made. In 1928 it was decided to build a palace in the Vatican for conclaves.

Concord Township of Massachusetts. Situated 17 m N.W. of Boston, it was the scene of a skirmish, April 17, 1775, between British and provincial troops, which inaugurated the American War of Independence. It was the birthplace of Thoreau, and has associations with Emerson. Among the picturesque old houses still standing are some associated with Hawthorne and his writings. Pop (1930) 7,477.

Another Concord is the capital of New Hampshire, and a railway centre. Pop 23,000.

Concordance Classified arrangement, usually alphabetical, of the words in a book, with citation of, and reference to, relevant passages. The earliest English concordance of the New Testament was Gibson's, 1535. Complete English Bible concordances include Marbeck's, 1550, Cruden's 1737, and Young's, 1879.

Concordat Formal compact between Church and State, specifically between the See of Rome and temporal sovereignties for the regulation of ecclesiastical affairs. After the Papal States were incorporated with the Italian Kingdom in 1870 the Pope lost all temporal jurisdiction until a concordat created the Vatican city in 1929.

Concrete Constructional material of broken brick, stone, etc., mixed with sand and a cementing agent in definite proportions in water. It furnishes when set, a durable, strong artificial stone. Used in Rome and medieval Europe the invention of Portland cement enhanced its importance.

Concrete comprises a matrix, sometimes limo but usually Portland cement, together with sand and an aggregate of coarser materials, in proportions varying from 1 : 1.2 to 1 : 4.9. In reinforced concrete the mass is formed round strengthening cores of steel rods, corrugated or expanded bars, wire mesh or netting. Concrete is sometimes dumped for dock or bridge foundations in immense bags, or as blocks.

Concubinage Cohabitation without legal marriage. Such unions, recognised among the Jews and other Semitic peoples, for relieving barren marriages, were also recognised in Greece and Rome, but conferred no legitimacy on the children.

Concussion After a severe blow or fall, a dazed appearance, loss of memory or speech or unconsciousness may occur. Keep the patient perfectly still and quiet, in bed if possible in a dark room. Beyond keeping him warm, do nothing, but procure medical aid as soon as possible. Do not give stimulants.

Condé Town of France. Near the Belgian frontier where the Haine falls into the Schelde, it is a coal-mining centre. There was fighting here in the early days of the Great War. See Mons.

Condé gave its name to a famous family, a branch of the Bourbons. Louis de Bourbon who was made Prince of Condé before his death in 1569, belonged to the same family as King Henry IV and like him was a Huguenot. His grandson Louis, called the Great Condé, born Sept. 8, 1621, was a great soldier. After winning several victories over the Spaniards, he became a rebel against his king. He then entered the Spanish service, but returned to France in time to lead her armies against William III. He died Sept. 11, 1686. The last Prince of Condé, Louis Henry Joseph, committed suicide Aug. 27, 1830.

Condenser Appliance for concentrating matter. The exhaust steam of steam engines condenses in water cooled or air-cooled coils. In cotton spinning, condensers compress lint for handling in woollen manufacture; they condense roll-carded fibre into slubbing. In sugar making condensers prepare clarified juice for vacuum pans, in electricity they accumulate the product of two conducting surfaces, as in Leyden jars.

Condor American vulture (*Sarcophagus gryphus*). Among the largest birds of flight, spanning 10 ft or more, it has black plumage with white round the neck. It is found in the Andes.

Condottieri Italian word denoting leaders of mercenary military companies, often applied to the soldiers also. In the 14th century an Englishman Sir John Hawkwood, was a leader of condottieri in Italy.

Conduction Transmission of heat from points of high temperature to points of low temperature, or of electricity from points of high potential to points of low potential, without sensible movement in intermediate particles.

Conductor Leader or director of a chorus or orchestra. Italian choir leaders in the 16th century used a roll of paper called a *sol fa*, or a baton when conducting. In later years the conductor was seated at the harpsichord and combined with the leading violinist to set the time and coordinate the vocal and instrumental performers. In 1820 Spohr inaugurated the modern practice whereby the conductor faces the musicians, heating time and controlling the performance with the baton or by hand. Famous conductors include Sir C. Hallé, Sir F. Cowen, Dame Ethel Smyth, Malcolm Sargent, Sir Henry Wood, and Toscanini.

Conduit Channel for flowing fluids. Water conduits are nowadays often reinforced concrete ducts. Conduits protect

electrical wiring systems in buildings, and accommodate underground gas and hydraulic mains, telegraph, telephone, light or power cables. Small trolley conduits enclose the conductors of sub trolley electric railways.

Coney Island Pleasure resort of New York. It is 5 m long and lies off the shore of Long Island. Part of the borough of Brooklyn, it is reached by railway and steam. There are three beaches: W. Brighton, Brighton and Manhattan. W. Brighton is perhaps the most popular pleasure resort in the world.

Confectioner One who makes or sells sweetmeats, pastries and other preparations whose fundamental ingredient is sugar. Till the 18th century, druggists monopolised such preparations. Later separate industries developed in England. All are subject to the Sale of Food and Drugs Acts, and the industry supports four trade journals in London.

Confederation Alliance of states for defined common purposes. Theoretically it is distinct from federation as it emphasises individual independence. The United States passed from confederation to federation in 1789. To day there are federations, such as the United States, Germany and Australia, but strictly speaking no confederations.

Confessio Tomb of an early Christian confessor or martyr. Sometimes an altar surmounted the grave, the name including both and also the subterranean crypt. The sacred relics, if removed to another place, were deposited in a confessio beneath the high altar. This occurred at St Peter's, Rome, whose high altar stands over the saint's tomb.

Confession Disclosure of sin in the ear of a priest in order to receive absolution. Auricular confession prevails in the Roman Catholic and Greek Churches. It became obligatory once a year at least after the fourth Lateran Council in 1215. The Council of Trent declared it essential. The Protestant churches reject confession, but the Anglo-Catholic party in the Church of England favour it. The apartment occupied by the priest when hearing confessions is called the confessional.

A confession of faith is a statement of belief or creed. Such are the Westminster Confession and the Confession of Augsburg.

In law a confession is a statement by an incriminated person acknowledging guilt, directly or indirectly. If elicited through threat or inducement by a person in authority such statements are not admissible as evidence.

Confirmation Religious ceremony administered by a bishop in Episcopal and Lutheran churches after due instruction. In the Roman Catholic Church it ranks as a sacrament. In the Anglican churches confirmation is a fulfilment of the baptismal vows and a necessary preliminary to partaking of the sacrament. The form of service is prescribed in the Prayer Book.

Confucianism System of teaching based on ancient Chinese classics. These were edited or transmitted by K'ung fu-tze, 551-478 B.C., whose name was Latinised by Jesuit missionaries as Confucius. On the religious side it perpetuates national animism and ancestor worship. The classics include also the *Confucian Analects*, summarising the master's sayings and the con-

versations of his greatest interpreter, Mang tze (Mencius), 372-289 B C

In the 1st century A D Buddhism and Taoism rivalled Confucian teaching, which nevertheless secured state recognition. The republic abandoned the traditional relation of the emperor to heaven in 1912, and Confucianism is now but one of the cults tolerated in China. The number of adherents of this faith is estimated at 350,000,000

Conger Edible marine fish of the eel family (*C. vulgaris*). It is scaleless, wide-mouthed with close set cutting teeth, and continuous dorsal fins, greyish-white below and pale-brown above. It sometimes exceeds 8 ft. in length and 100 lb in weight. It is found in British waters, in the Mediterranean and in the seas around Australia and Japan

Congleton Borough and market town of Cheshire. It stands on the Dane 158 m from London and is served by the L M S Rly and a canal. It is an industrial and agricultural centre. Pop (1931) 12,885

Conglomerate Rock formed of water worn pebbles. It is consolidated into pudding stone with sand clay or a calcareous siliceous or ferruginous cement. The enclosed pebbles vary from inches up to 20 ft. across

Congo Belgian Colony in Central Africa. It occupies a good part of the basin of the Congo River. The area is 918,000 sq. m. Leopoldville is the capital and the colony is under a Governor General who also administers Ruanda and Urundi, which are mandated territories. The colony has railway connection with Capetown, Beira and Benguela. Its mineral wealth, especially copper, is large. The agricultural products are palm oil, cotton and cacao. A nature reserve, the Albert Park, has been established. Pop 3,903,263

Congo River of Central Africa. It rises in British territory between Lakes Tanganyika and Nyasa, and feeds Lakes Bangweulu and Mweru. Emerging thence as the Lualaba and crossing the Belgian Congo Highlands to N'ganga, it traverses, as the Congo, the great equatorial forest region, receiving the Ubunzi Kasai and other streams. Long navigable stretches such as Stanley Falls to Leopoldville, 1068 m., are separated by impassable rapids. Ocean going vessels can ascend 86 m to Matadi. The river's total length is 3000 m and it drains 1,425,000 sq m

Congregationalism Protestant religious body. It originated in England about 1550, when certain communities claimed to worship under their own ministers, independent of ecclesiastical authority. Early in the 17th century, owing to persecution, some of them fled to the Netherlands, and from there a party went to North America.

In England in 1662 the Act of Uniformity ejected many clergymen from the established church and a number of these became ministers of independent congregations. In the 19th century these began to draw together and became known as Congregationalists. In 1832 the Congregational Union of England and Wales was founded; later, unions were formed elsewhere. In 1875 the Memorial Hall in Farringdon Street, London, E C was opened as their headquarters. Their foreign mission work found expression in the London Missionary Society.

The denomination has training colleges for ministers in London, at Oxford (Mansfield College), Nottingham, Cambridge (Cheshunt College), Manchester, Bristol, Edinburgh and elsewhere

Congress Chief legislative body of the United States and other countries. In the United States it consists of two houses sitting at Washington, the House of Representatives, which consists of 435 members elected by the states according to population, and the Senate of 96 members two from each state. The two houses sit separately, but the consent of both is necessary to legislation. Senators are elected for six years and representatives for two. Ministers are not members of Congress and its legislation may be pronounced invalid by the Supreme Court. The president can veto its legislation, but Congress can overcome this by passing the vetoed measure again by a two-thirds majority. The library of Congress is one of the largest in the world

Congress Meeting or assembly. It has been used since the 17th century for meetings of the representatives of different countries, chiefly when peace treaties were discussed. Important congresses of this kind were the Congress of Vienna (1814-15) and the Congress of Berlin (1878-79). There are religious, social and industrial congresses, such as the Church Congress and the Trade Union Congress

Congreve William English dramatist. Born in Yorkshire in 1670 he was educated at Trinity College, Dublin. Two of his comedies, *The Old Bachelor* and *The Double Dealer* appeared in 1693, and a tragedy, *The Mourning Bride*, in 1697. His supreme comedies, *Love for Love*, 1693, and *The Way of the World*, 1700, are the nearest to Molière in English literature. He died Jan. 19 1729, and was buried in Westminster Abbey

Conisborough Town of Yorkshire (W R). It stands on the Don, 5 m from Doncaster, on the L N E Rly. The chief industry is coal mining. The town has ruins of a castle. Pop (1931) 18,179

Coniston Lake in Lancashire. In the S of the Lake District, it is 5½ m long. Near are the Coniston Fells and the Old Man of Coniston, a peak 2630 ft high. Near the lake is the village of Coniston, which is the terminus of a railway from Foxfield. Here, at Brantwood, Ruskin lived and he is buried in the churchyard. The village has a Ruskin museum. Coniston grit and Coniston limestone are terms used by geologists to describe formations found in the Lake District

Conjuring Art of deceiving the senses by tricks or illusions. The tricks are sometimes accomplished by mere manual dexterity or sleight of hand, but they are more often aided by momentary weakening of the spectator's attention by the performer's patter, or by movements of a wand. Mechanical apparatus is needed for a large class of illusions. The most famous exhibitions of this kind are those associated with Maskelyne in London. Robert Houdin and Charles Bertram were noted performers

Connaught (or Connacht). One of the four provinces of Ireland. It consists of five counties in the west—Galway, Mayo, Sligo, Leitrim and Roscommon—and covers 6870 sq m. Wholly in the Irish Free State, it is the most thinly peopled part of Ireland.

Connaught Duke of British title. It dates from 1874, when Arthur William Patrick Albert, third son of Queen Victoria, was made duke. He was born May 1, 1860, and entered the army, seeing service in Canada, 1870, and Egypt, 1882. He became a field marshal and held several high commands. From 1911-16, he was Governor General of Canada. The duke married in 1879 Louise, daughter of Frederick Charles, Prince of Prussia. She died March 14, 1917. Of their three children, two were daughters, Margaret, who married Gustavus Adolphus, later King of Sweden, and died May 1, 1920, and Patricia, who married the Hon A. R. M. Ramsay.

The duke's only son, Arthur Frederick Patrick Albert, was born Jan 13, 1883, and entered the army. In 1913 he married a cousin, Alexandra, Duchess of Fife, and from 1920-25 he was Governor General of South Africa.

Connecticut State of the United States. In New England, it covers 4965 sq. m. The rivers include the Connecticut, Thames and Farmington. It is thickly populated. Tobacco and fruit are grown, marble and slate are quarried. Hartford is the capital, but New Haven and Bridgeport are larger.

One of the 13 original states. Connecticut sends two senators and six representatives to Congress. Its local government consists of a Senate and a House of Representatives. Pop. (1930) 1,606,903.

Connemara District of the Irish Free State. It is the western part of Co. Galway and is a wild and thinly populated area. It is hilly, with heights of over 2000 ft. and lakes amid the hills.

Conning Tower Armoured structure on a warship used for observation and steering. In a submarine the conning tower is fitted with hatches at the bottom and on a level with the bridge for use when submerging.

Conrad Joseph English novelist. Teodor Jozef Konrad Korzeniowski was born Dec. 6, 1857, in the Ukraine, and spent his early years there and in Poland. He then became a sailor and served on French and English vessels, qualifying in 1884 as a master. In 1894 he settled in England and was naturalised. In 1895 he published *Almayer's Folly* which placed him in the front rank of creative artists. His stories, which deal largely with the sea and seamen, include *The Nigger of the Narcissus*, *Lord Jim*, *Typhoon* and *Nostromo*. In his later period he wrote *Chance*, *Victory*, *The Arrow of Gold*, *The Rescue*, *The Rover* and the unfinished *Suspense*. *The Mirror of the Sea* and *A Personal Record* are largely autobiographical. Conrad died Aug. 3, 1923.

Conscience Sense or knowledge that one's conduct is right or wrong. According to one theory it is the eternal moral law acting on the mind of the individual. According to another it is the accumulated experience of the ages.

A conscience clause is a clause in an Act of Parliament which allows persons liberty of conscience in religious and other matters. Clauses of this kind allow persons who object to vaccination to obtain exemption from the law compelling the vaccination of children. Education Acts contain clauses allowing persons who do not believe in religion to withdraw their children from school during religious instruction. The term conscientious objector is generally

used for one who objects to military service because war is contrary to his religious or other beliefs. In Great Britain the laws enforcing compulsory military service in 1916-17 allowed exemption to conscientious objectors under certain conditions. The Representation of the People Act, 1918, disfranchised conscientious objectors from voting for five years unless they had performed work of national importance.

Conscience money is money sent voluntarily for the payment of taxes when payment has previously been evaded.

Conscription Enrolment for military purposes by lot. It was introduced into England in 1757, for completing the county quotas of men raised by the lords lieutenant. Substitution was allowed. This militia ballot still remains suspended from year to year. France introduced conscription by lot for men between 20 and 25, substitution being allowed in 1798. It was again introduced in 1818, but replaced after 1872 by universal compulsory military service.

Compulsory conscription provided the vast armies raised in the Great War. It was introduced into Prussia in 1808, and during the 19th century most of the European nations adopted it. Great Britain introduced compulsory service in Jan. 1916, and later extended its scope. It was also introduced into Canada and by the United States after her entry into the war. After the war, Germany and Austria prevented from maintaining large armies, abandoned compulsory service, as did Great Britain and her Dominions. France, Italy and other countries, however, still retain it.

Consecration In ecclesiastical practice the rite of setting apart persons, buildings and things for the service of God. In the Church of England and the Roman Catholic church the priest consecrates the bread and wine at the communion service. All buildings intended for religious worship are consecrated by a bishop, as is land set aside for burials.

Consent Legal and other term meaning agreement. In English law consent is an essential part of a contract, and the courts will regard with suspicion any consent in which there is an element of compulsion. English law has fixed 16 as the age of consent for cases of sexual intercourse. A girl under that age cannot legally consent to the act, which is therefore a criminal offence. It has been proposed to raise the age of consent above 16.

Conservancy Body of men who look after rivers. Usually the members are elected by county councils, landowners and others interested in keeping the rivers from flooding and their waters from contamination. The most important is the Thames Conservancy Board. It was set up in 1857 and has offices on the Thames Embankment.

Conservative Name of a political party in Great Britain now officially known as Unionist. As a party label it took the place of Tory early in the 19th century, and towards the end, owing to the adherence of the Liberal Unionists opposed to Home Rule for Ireland, was changed to Unionist.

The Conservative party stands for conserving, or preserving, the institutions of the country especially the crown and the established church. It is in general suspicious of large reforms and

is the party with agricultural interests. It enjoyed political power under Sir Robert Peel (1841-46), formed three short ministries under Lord Derby and was in power under Lord Beaconsfield (1874-80) and Lord Salisbury (1895-1902).

The Conservative Club is a London club confined to members of the party. Its house is at 74 St. James's Street, S.W. 1.

Conservatoire School for the intensive study and conservation of the art of music. Notable conservatoires are at Paris, Berlin and Leipzig.

Conservator One who preserves from injury or violation. Edward III, in 1327, appointed for each county conservators of the peace. In 1414 conservators were appointed in each port outside the jurisdiction of the Cinque Ports, to safeguard maritime trade.

To-day the word is used chiefly for persons elected to look after rivers. See CONSERVANCY.

Consett Market town and urban district of Durham. It is on the Derwent, 16 m. from Newcastle-on-Tyne, on the L.N.E. Riv. It is in a coal mining area and there are large iron works. Pop. (1931) 12,251.

Consideration Something given or accepted as a *quid pro quo*; in contract law, an act, forbearance, or the promise thereof, offered and accepted as an inducement. In English law no contract, unless in writing, is valid or enforceable unless there is a consideration.

Consistory Court for trying ecclesiastical causes. In England there is one in each diocese. It is presided over by the diocesan chancellor and hears appeals from the archdeacon's court. Appeals from its decisions lie to the court of the archbishop and the Privy Council. Under the Clergy Discipline Act, 1892, clerical offences against morality are tried by special consistories, with assessors to assist. Papal consistories are secret consultations with the college of cardinals for various purposes. The Lutheran Dutch Reformed and French Reformed churches have consistory courts.

Console Name applied originally to a kind of table, supported on brackets or legs, designed to be placed against a wall. Popular in France from the time of Louis XIV. to that of Napoleon. Console tables were richly decorated and of graceful shape.

Consolidated Fund Fund into which part of the British national revenue is paid and from which certain payments are made. It was established in 1786 and was called consolidated because it consolidated moneys hitherto paid into several funds. To-day the receipts from customs, excise stamps, etc., are paid into it. Payments to the civil list, the charges for the national debt and the salaries and expenses of the judges, are paid from the consolidated fund.

Consols Shortened form of consolidated annuities, representing an important section of the British national debt. Before the Great War the national debt consisted chiefly of consols but to-day, of the total debt of nearly £8000 million, only £276,000,000 is in 2½ per cent. consols and £354,000,000 in 4 per cent. consols.

Consort Generally a partner or associate. The word is most frequently applied to a wife or husband, and particularly

to the wife or husband of a monarch, who is known either as the queen consort or prince consort.

Conspicuous Gallantry Medal Silver medal given to warrant officers and men of the navy and marines for gallantry in action. It dates from 1874 and is known as CGM. The ribbon is blue, white and blue in equal stripes.

Conspiracy In law a combination of two or more persons to procure unlawful objects, or to procure lawful objects by unlawful means. It is a misdemeanour punishable by imprisonment and a tort for which damages can be claimed.

Conspiracy and combination were for a long time regarded as almost identical. By the common law of England it was a conspiracy, and therefore illegal, for workmen to combine to go on strike. The repeal of the Combination Acts of 1824 made combinations legal.

Constable Title derived from the Roman count of the stable. The lord high constable of England was one of the great offices of state, but it has long fallen into disuse except at coronations, when it is revived. France had a constable who discharged important duties, and the office, purely honorary, still survives in Scotland. The Tower of London and Windsor Castle have constables, and at one time most castles had.

To-day a policeman is a constable. Each force has a chief constable at its head and the members are police constables. Special constables are men to assist the police in times of special need.

Constable John, English painter. Born at East Bergholt, Suffolk, June 11, 1776, he studied in London at the R.A. schools. In 1819 he was elected A.R.A. and in 1829 R.A. His reputation began in France and it was a few years before he was equally popular in England. He died in London, March 31, 1837.

Constable is one of England's great landscape painters. Some of his best works reproduce scenes from his home country, "Dedham Vale" and "The Valley Farm," for example. Others rightly regarded as masterpieces are "The Hay Wain," "The Cornfield," "Hampstead Heath" and "Salisbury Cathedral." He also painted some portraits. Several Constables are in the National Gallery, London. Others are in the Louvre and the Metropolitan Museum, New York.

Constance Second largest Alpine lake. It lies between Germany and Switzerland, is 46½ m. long and covers 205 sq. m. The Rhine flows through the lake, on the bank of which are several towns and pleasure resorts, including Lindau and Bregeuz. Friedrichshafen is on the German side.

Constance Town of Baden, Germany. Situated 30 m. from Schaffhausen, at the point where the Rhine emerges from the lake. Constance was once a free city and its bishop was a powerful prince. In 1414 a church council was held here and at it John Huss was sentenced to death. Although he had received a safe conduct, he was burned in the city in July, 1415. Pop. 27,500.

Constans Name of two Roman emperors. Flavius Julius Constans was the youngest son of Constantine the Great. He received of his father's empire Africa, Illyricum and Italy in 337. He then defeated

his brother, Constantine II, and acquired Britain, Gaul and Spain in 340. He died in 350.

Flavius Heraclius Constans succeeded his father, Constantine III, in 642. He opposed the growing Mohammedan power, and effected substantial improvements in military and naval organisation, but warred unsuccessfully with the Lombards. He was murdered in 668.

Constanta Port of Rumania, also spelled Constanța. It is on the Black Sea, 140 m from Bucharest. It is Rumania's chief seaport and from it much oil and grain are exported. Pop. (1930) 58,258.

Constantine City of Algeria. Situated 40 m from its port, Philippeville, it stands on a limestone plateau. There are some Moorish remains. Textile goods, ornamental leather and metal work are produced. Constantine the Great rebuilt and renamed it. Pop. 93,750.

Constantine Name of ten Roman emperors, the first of whom was Constantine the Great (c. 280). His second son, Constantine II (337-340), reigned over Britain, Gaul and Spain. Constantine IV, Pogonatus or Bearded (668-685), overcame a Saracen siege of Constantinople by the recently invented Greek fire. Constantine V (741-755) secured the condemnation of image worship by a council. Constantine VII, Porphyrogenitus or Born in the Purple (912-959), was a liberal patron of learning. Under Constantine IX (1042-1055) the Western and Eastern churches definitely separated. Under Constantine X (1059-67), the Magyars occupied Belgrade, and Turkish tribes reached Macedonia. Constantine XI, Palaeologus (1448-53), the last East-Roman emperor, fell at the taking of Constantinople by the Turks in 1453.

Constantine King of Greece. The eldest son of George I, he was born in Athens, Aug. 3, 1868. In 1889 he married Sophia, a sister of the Emperor William II, and in 1913 he became king. He declared himself neutral when the Great War broke out, but his sympathy with the Germans led to trouble and in 1917 he was deposed in favour of his son, Alexander. He lived for a time in Switzerland, but returned to Greece and recovered the throne in 1920. On Sept. 22, he again abdicated and he died Jan. 11, 1923.

Constantine Roman emperor called the Great. Flavius Valerius Aurelius Constantinus was born at Naissus, the modern Nish, about 288. His father was Constantius Chlorus, on whose death he became emperor. It was necessary, however, for him to deal with his rivals before he could be said to rule. One of these, Maxentius, was killed in battle near Rome in 312. On this occasion Constantine is said to have seen the cross in the sky with the words "In this sign thou shalt conquer." The result was that the Christians were tolerated, the emperor himself became attached to their faith and the momentous union between the Christian church and the Roman state began. By defeating Licinius at Adrianople in 323 Constantine became ruler of the whole Roman Empire. He presided over the council of Nicea in 325 and in 330 transferred the capital from Rome to Byzantium. He died at Nicomedia, May 22, 337.

Constantinople Former name of the Turkish city of Stamboul or Istanbul (q.v.).

Constantius Name of three Roman emperors. Flavius Valerius Chlorus, the Pale (250-306), was adopted by Maximian and granted the caesarship of Britain, Gaul and Spain in 292. He recovered Britain after the revolt of Carausius and Allectus in 296, followed Maximian as Augustus in 305 and died at York, being succeeded by his son Constantine the Great.

Flavius Julius Constantius (317-361), Constantine the Great's third son, received the eastern empire. The death of his brothers and the usurper Magnentius gave him the west also. Constantius III was an Illyrian soldier. He suppressed the Alans rising in 416, they married Placidia, sister of Honorius, and reigned with him for seven months. He died in 421.

Constellation Group of fixed stars usually associated with an imaginary figure, such as a bear or a lion. The naming of prominent star groups, such as Ursa Major and Orion, traceable to the pre-Semitic population of the Euphrates valley, passed to the Greeks who recognised 48 such groupings, including the twelve zodiacal signs. The southern sky was similarly mapped out by 16 18th century astronomers. There are now recognised 28 northern, 12 zodiacal and 49 southern constellations.

Constipation Incomplete or irregular evacuation of the bowels, arising from functional causes, debility or disease. The condition causes a species of auto-intoxication or poisoning of the system, producing headache, lassitude, loss of appetite, coating of the tongue, and severe indigestion. Chronic constipation invariably affects the general health and may lay the foundation of many serious complaints.

Treatment—Lead a natural, healthy life with plenty of outdoor walking exercise. Avoid excess of food, two good regular meals being the ideal. Avoid eating between meals, but drink several tumblers of water daily between meals and not during them. Introduce into the daily menu such natural foods as fresh fruit, salads, and green vegetables, wholemeal bread, prunes, etc.

Aperients, however mild, should not be taken habitually, and castor oil should not be given in cases of constipation. Good aperients are cascara, senna, Epsom salts, sulphate of magnesia, etc. Mediolan paraffin, merely acting as a lubricant, is more suitable for prolonged use.

Constituency Body of persons entitled to elect representatives to a legislative body.

Constituent Assembly Body assembled to formulate a constitution. During the French Revolution the States General, constituting themselves a National Assembly in 1789, elaborated a constitution. After the Great War constituent assemblies met in Germany, Czechoslovakia and other countries.

Constitution Assemblage and union of the essential parts of a body or system. It may be of natural origin, as with the universe, stars and living bodies, or a system of principles and rules, either recognised by prescriptive usage or written, governing a state or association.

The British constitution comprises the collective principles of public policy whereby Britain is governed. It has developed from age to age by successive compacts between the

crown and the parliament, until the supremacy of the latter, as representing the people, has been established

The Constitution of the United States is contained in a document, the terms of which cannot be changed without special procedure. The British constitution is unwritten.

The Constitutional Club is a London club, chiefly for Unionists. It is at 28 Northumberland Avenue. Constitution Hill, London runs from Hyde Park Corner to Buckingham Palace.

Consubstantiation Doctrine that, in the eucharist Christ's body and blood, being ubiquitous, are necessarily present and coexistent with the elements, which nevertheless may or do retain their nature as bread and wine. It was taught by some mediaeval schoolmen and adopted by Luther. The Council of Trent rejected it, reaffirming the Roman doctrine that the eucharistic elements are transubstantiated into the body and blood of Christ.

Consul Ancient Rome's two chief magistrates. When the line of kings ended in 509 B.C., the two praetors elected were also called consuls. At first patricians, the Licinian law (367 B.C.) required one to be a plebeian. Holding office for one year, they presided over the senate. Under the empire their authority declined, but the office lingered until A.D. 541. The title was revived in 1799 when Napoleon was styled First Consul in France.

Consul Official commissioned by a state to protect the interests of its subjects in a foreign country. British consuls report to the Foreign Office, under which they act, rendering services also to the mercantile marine for the Board of Trade. The general division comprises consuls general, consuls, vice-consuls, consular agents and attachés.

The British consular service has members all over the world. They assist British traders and travellers and in special cases, can celebrate marriages or take evidence for a lawsuit. In London, all the great countries of the world have consulates where persons who wish to travel to those countries must go to get their passports put in order.

Like an embassy a consulate is regarded as the soil of the country there represented.

Consumption In economics a term used for the use and therefore the disappearance of the products of industry. An example of useful consumption is the provision of coal to a furnace, an example of wasteful consumption is the drinking of considerable quantities of liquor. Industrialists have devoted their attention to stimulating production, leaving consumption to look after itself. After the Great War, however, the world's productive power seeming so much in excess of its consumptive capacity, more attention was given to the problem of consumption.

Consumption Old name for the disease known as tuberculosis (q.v.). It is a disease affecting any organ of the body and is so called because, by it, the tissues are gradually consumed or burned away.

Contagion Communication of disease by personal contact. Communicable diseases are indiscriminately designated contagious or infectious. They include smallpox, whooping cough, mumps, typhus and tuberculosis. Scarlet fever is better designated infectious than contagious. Infection

is communicable through wearing a previous sufferer's clothes, breathing air contaminated by his exhalations, handling his utensils, or by carriers (q.v.).

Contagious Diseases Acts were passed in the 19th century to control and regulate the prostitutes in military areas in the United Kingdom and India. Their aim was to protect the soldiers from venereal diseases. They were repealed in 1886, on the ground that state regulation of vice was undesirable.

Contempt of Court In English law a phrase meaning any disobedience of the orders of a court of law. It includes unseemly behaviour in the court itself. It is contempt of court for a newspaper to comment upon a case that is being heard, or for anyone to assault a person who is employed by the court to deliver a writ or summons. Another kind is to disobey an order for the payment of money. In all these cases the judge can send the offender to prison.

Continent Continuous land mass, in contact with continuous water masses called oceans. The land surface of the earth comprises five great masses: (1) Eurasia, including Europe, 3,750,000 sq. m. and Asia, 17,000,000 sq. m.; (2) Africa, 11,500,000 sq. m.; (3) America, including North America 8,000,000 sq. m. and South America 6,800,000 sq. m.; (4) Australia, 3,000,000 sq. m.; (5) Antarctica, 5,000,000 sq. m.

Continental System Napoleonic plan for a blockade, designed to exclude British merchandise from Europe. The British command of the sea, the Peninsular War and Russia's break with France ended his attempt to ruin Britain's trade.

Continuation School In Great Britain an institution providing instruction for children after leaving an elementary school. The Board of Education after 1902 encouraged county and county borough councils to set up continuation schools in connection with technical schools. Acts from 1918 onwards obliged local education authorities to establish part-time continuation schools. Continuation schools exist in the United States, Germany and elsewhere.

Contour In surveying, a curve of equal elevation or depression on a map. The coast line is the datum level from which all contour lines are measured.

Contraband In time of war materials and commodities which international law forbids subjects of neutral states to supply to belligerents. Materials of direct application to hostile use are absolute contraband and are distinguished from articles fit for such use, which are conditional contraband. Ammunition is absolute contraband, copper and cotton are conditional. There were many cases of seizure during the World War.

Contract Agreement to perform a certain action. This is a very important branch of English law. It is not necessary to put a contract into writing, though in many cases this is desirable. A contract requires two main conditions to be valid. These must be offer and acceptance and the acceptance must be absolute, not conditional. The acceptance must also be definite. Silence does not give consent to a contract. A contract

must be for a consideration, unless it is made under seal.

CONTRACT NOTE The document sent by a stockbroker to his client giving details of a transaction. It must be stamped.

Contract Bridge Form of bridge first played in America. It is governed by an elaborate set of rules, but the general principles are the same as those of auction bridge (q.v.). The chief difference is that tricks scored in excess of the number contracted for do not count towards game and that, after having won a game, the winning side is vulnerable for the rest of the rubber. To be vulnerable means that its points, both for winning and losing, are greater than those of its opponents. Points are given to players for fulfilling their contract, whilst those who fail to do so lose points.

Contractor Person or firm contracting with a government, public body or private party to construct works or supply commodities for a certain price. There are usually time limits, sometimes with penalties for any breach of the terms. Firms who undertake government contracts must be on the King's Roll of those who employ or service men. Members of such firms, if members of the House of Commons must resign their seats on receiving a government contract.

Contralto In music a female voice approximating to the mezzo-soprano. It has an average compass of from

Control Superintendence and authority over someone or something. In Great Britain certain authorities are called boards of control. One is the Board of Control for Lunacy and Mental Deficiency. Its members, called commissioners, are chief medical men. Its offices are at Carlton House West, Tothill St. London, S.W.1. It was set up in its present form in 1913. In 1915, a board of control was set up to supervise the sale of intoxicating liquors in certain areas, the chief being the one in and around Carlisle.

Controller Device for regulating power and speed in electric cars and rotating turrets. On trains of cars a multiple controller brings all motors under simultaneous control.

Another kind of controller is a person in control of a business or department. In the public service there is a controller of stamps, and during the Great War there was a food controller and controllers of wool, timber, paper and other supplies.

Convener One who convenes or calls a meeting. In Scotland the term is used for chairmen of county councils and presidents of committees.

Convent Assembly of persons gathered together in retirement from the world and also the building housing them. A convent is now a Christian nunnery where devout women spend their lives in prayer and works of charity and education.

Conventicle Term used before and after the Reformation

for a secret or unauthorised gathering for religious worship or for its place of meeting. It applied especially to Wycliffite and Presbyterian meetings or meeting places.

Convention Term denoting a formal meeting, or formal agreement after a conference. Convention parliaments are those summoned without the king's writ. The meetings of the political parties that choose the candidate for the U.S. presidency are called conventions. In 1932 both the Republicans and the Democrats held their conventions in Chicago.

Agreements between states on matters of non-political interest are usually called conventions, such as those concerning fisheries between Great Britain and the United States. Conventions negotiated at international conferences regulate postal services, telegraphs, sugar bounties, copyright, patents, trade marks, the slave trade, the succour of wounded in war, and international courts.

Conversion In law an act by which a person interferes with the property or possessions of another in a manner inconsistent with the other's right of ownership. The remedy is by an action in the courts.

In financial matters conversion is making a change in the form of a security. Consols were converted from a 3 per cent. into a 2½ per cent. stock in 1887. In July, 1932, the British Government announced the conversion of £2,084,000,000 of 5 per cent. War Loan to 3½ per cent.

Conversion In theology a change of spiritual attitude from one religion or church to another. In a more intimate sense it denotes a radical personal change, sudden or gradual, from an attitude of self-seeking and enmity towards God to one accepting God's proffered grace.

Converter Oval shaped iron retort lined with refractory materials in to which molten iron is poured to be converted into steel. It was invented by Sir H. Bessemer, who lined it with acid materials such as clay, flint and quartz. The usual capacity is from 20 to 25 tons. Basic lined converters are also used for the extraction of copper.

Conveyancing Act of effecting by written documents the transfer of real property, or modifying the interests therein. By the Conveyancing Act of 1881, and its amendments this profession, formerly monopolised by barristers, is open to solicitors. Conveyancing counsel assist the chancery court by investigating titles. Stamp duties are charged on the conveyance of property. These work out at about 1 per cent. on the purchase price, but half duties only are charged on properties worth less than £500.

Conveyer Mechanical contrivance for transporting materials in bulk. Such devices may consist of tubes through which rotating worms convey liquid or solid materials. Other types are flexible or metallic bands or belts, push plates, travelling troughs and tilting buckets.

Convocation Assembly summoned by constituted authority. At Oxford University it is the governing body. The convocations of Canterbury and York are assemblies for ecclesiastical purposes. Each consists of an upper house composed of the bishops and a lower house in which are deans, archdeacons and proctors representing

the benefited clergy In 1886 a house of laymen was added.

Convolvulus Typical genus of twining herbs. Gardeners cultivate the European *C. altharoides* and *C. tricolor*, calling the latter convolvulus minor. The tropical American *ipomaea purpurea* or morning glory, is called convolvulus major. Both yield handsome blue, crimson, striped and white blooms. See BINDWEED.

Convoy Troops or warships which accompany supplies or merchant vessels to afford them protection in time of war.

Convulsion Involuntary contraction and relaxation of muscle in rapid alternation, usually accompanied by unconsciousness. Convulsive fits are symptoms of many disease states, requiring professional aid. Three fourths of the deaths from nervous diseases in children within their first year are due to convulsions. They may arise from teething, irritation or worms, and are commonly treated by warm baths with cold cloths to the head. In adults they frequently accompany epilepsy, hysteria and cerebral congestion.

Conway River of North Wales. It rises in the mountains of Merionethshire and flows between the counties of Denbigh and Caernarvon to Beaumaris Bay. It is 30 m long and flows through some of the most beautiful scenery in Wales.

Conway Borough, market town and seaport of Caernarvonshire. At the mouth of the River Conway and sometimes called Aberconway it is 224 m from London and 13 from Bangor on the L.M.S. Rly. The town is famous for its castle. Pop (1931) 8769.

Conway Training ship. She is moored at Rocky Ferry, Birkenhead, and is used for the Mercantile Marine Service Association. The first ship used for this purpose was H.M.S. *Conway*, a 28 gun frigate. Later the frigate *Winchester* and the battleship *Nile* were used as part of the Conway establishment to train boys for the service.

Cony Name used for rabbit skin when made into fur. Spelt coney, it is used in the Bible for a rabbit-like mammal of the ungulate order, the Syrian hyrax.

Cooch Behar State of India. It is in Bengal and is governed by a maharajah, who has a salute of 13 guns. The chief town is also called Cooch Behar. The state covers 1300 sq m. Pop 592,500.

Cook James. English seaman and explorer. He was born at Marton, Yorkshire, Oct. 27, 1728. His earlier years were spent in the merchant service, but in 1755 he entered the navy and four years later was appointed to command a sloop. He surveyed and charted the estuary of the St. Lawrence and the coasts of Newfoundland and Labrador. In 1768 he was appointed to command a scientific expedition to the South Seas. During his voyage, which lasted two years, he explored the Society Islands, circumnavigated New Zealand and charted the coasts, and surveyed the whole east coast of Australia.

Soon after his return to England, Cook sailed on his second and greatest voyage, in which he practically completed the exploration of the southern hemisphere, determined the position of Easter Island, discovered New Caledonia, Norfolk Island and the Isle of Pines, and disproved the hypothesis of an antarctic continent, as then understood. On his return in 1775, he was promoted port

captain, elected a fellow of the Royal Society and awarded the society's gold medal.

Captain Cook's last voyage was undertaken to discover the north-west passage. On his way he discovered the Hawaiian Islands and surveyed the west coast of N. America up to the Bering Strait and beyond. His farther progress being stopped by ice, he returned to Hawaii, where he was killed by the natives, Jan 17, 1779.

Cook Sir Joseph. Australian politician. Born in England in 1860 he became a miner in Staffordshire. In 1885 he settled in Australia and joined the Labour Party there. A member of the New South Wales legislature, 1891-1901, he was Postmaster-General, 1894-98, and minister for mines and agriculture, 1898-99. In 1901 he entered the Commonwealth parliament, becoming leader of the Free Trade party. Leaving the Labour Party, he was minister for defence under Alfred Deakin in 1909-10, Prime Minister in 1913-14, in 1917-20 minister for the navy in the coalition ministry, and treasurer 1920-21. In 1919 he was Australian representative at the Versailles peace conference. Knighted in 1918, he left political life and was High Commissioner in London, 1921-27.

Cook Thomas. English business man. Born at Melbourne, Derbyshire, Nov. 22, 1808, he was a temperance advocate and in 1841 he arranged with the Midland Counties Rly for a special train to carry people from Leicester to a temperance meeting at Loughborough. This led to similar overtures and Cook became a tourist agent, acting for the Midland Rly. Excursion trains were run to the exhibition of 1851 in London, and soon the business of Thomas Cook & Son was founded. In 1865 its headquarters were moved to London, and in time it had branches all over the world. For long the chief office was in Ludgate Circus, but in 1925 it was moved to Piccadilly. Cook died July 19, 1892.

Cook Islands Group of nine islands in the Pacific Ocean. Between 155° and 166° E and about 20° S, they were discovered by Captain James Cook in 1777. They are partly volcanic and partly coralline. The soil is fertile and the climate good. The chief island is Rarotonga. Others are Mangai, Atitaki, Atiu, Mauke and Mitiaro. The group also includes the Hervey Islands, Savage Island and Palmerston Island, and the whole of the islands are sometimes grouped as the Hervey Archipelago.

The group was proclaimed a British protectorate in 1888 and annexed by New Zealand in 1901. The natives are mainly Polynesians of Samoan descent. The principal products are coconuts, copra and fruits. The total area is 280 sq m. Pop 13,900.

Cookery Art of heating food to render it nutritious, digestible and palatable. There are six ways of cooking meat—grilling, roasting, baking, boiling, frying and stewing. Stewing requires immersion of the meat in warm liquor and the slow cooking of it to transform its juices into rich gravy. All the other methods aim at the retention of the juices by sealing the meat by the intense heat first applied to its surface. Grilling and roasting are the most primitive and satisfactory methods, boiling is the most economical. Baking is roasting in a closed oven. Frying requires immersion in hot oil or fats.

The National Society's Training College for Teachers of Domestic Science, Berridge House,

West Hampstead, N W 6, and the National Training School of Cookery, Bockingham Palace Road, S W 1, are the principal London training institutions. Cookery is taught also in the domestic science or homecraft sections of the Polytechnics and technical institutes in most large towns.

Cookham Riverside town of Berkshire. It stands on the Thames, 27 m from London, on the G W Rly. It is a boating and fishing centre, and there is a lock. Pop 5850.

Cookstown Market town and urban district of Co Tyrone, Northern Ireland. It is 53 m from Belfast, on the Gt. Northern (Ireland) Rly. There is agricultural trade and linen is manufactured. It has chemical works. Pop 3700.

Cooktown Seaport of Queensland. There are sugar plantations in the neighbourhood, and pearl fishing is carried on. It is about 1000 m from Brisbane and is the terminus of a railway line that serves the mines in the interior. Pop 1257.

Coolgardie Town of Western Australia. It is 360 m to the west of Perth by railway. The gold mines around, opened in 1892, are much less productive than formerly. Coolgardie is, however, an important railway junction on the transcontinental line.

Coolidge John Calvin. Thirtieth President of the U.S.A. He was born at Plymouth, Vermont, July 4, 1872. He studied law and was admitted to the Bar in 1897, and after various legal and political appointments, became Governor of Massachusetts in 1919, when he dealt firmly with the Boston Police Strikers. In 1921 he was made Vice President of the U.S.A. and in 1923 President. He was re-elected for 1925-29. During his term of office, portions of the national debt were paid off, income tax was reduced, and the country was very prosperous.

Coombe District of Surrey. It is 2 m from Kingston on Thames and 10 m from London, on the S Rly. With Malden (q.v.) it forms an urban district. Coombe Abbey in Warwickshire is the seat of the Earl of Craven.

Coonamble Town of New South Wales. In an agricultural district, it has an experimental farm maintained by the state. Ostriches are reared. It is about 375 m by railway from Sydney. Pop 3820.

Cooper Term used for a maker of barrels. The Coopers Company, one of the London livery companies, dates from 1501. Its hall is in Basinghall Street.

A different use of the word is for coöperage. This means selling drink and tobacco that have not paid duty to fishermen at sea. It was done by Dutch ships called koopers, but has been largely stopped by international agreement. By English law it is illegal.

Cooper Gladys (Lady Pearson). English actress, born Dec 18, 1889, at Lewisham. She first appeared as Blonhell in *Bluebell in Fairyland* in 1906, and in London in 1906, as Lady Swan in *The Belle of Mayfair*. Her chief successes have been in *Diplomacy*, *The Naughty Wife*, *Magda*, *Iris*, and *The Last of Mrs Cheyne*. She married Sir Neville Pearson in 1928.

Cooper James Fenimore. American author. Born at Burlington,

N J, Sept 15, 1789, he was educated at Yale. He served on a merchant ship and later in the U.S. Navy. Cooper wrote more than 30 novels, dealing chiefly with Red Indian life. They include *The Last of the Mohicans*, *The Pathfinder* and *The Deerslayer*. He died at Cooperstown, New York, Sept 24, 1861.

Cooper Samuel. English painter. Born in London in 1609, he was called "Vandyke in little," and became the greatest miniature painter of the time and perhaps of all time. His works, which include portraits of Charles II, Catherine of Braganza, Cromwell, Milton and others, are characterised by boldness and freedom of style. He died in London, May 5, 1672.

Cooper Sir Astley Paston. English surgeon. Born in Norfolk, Aug 23, 1768, he studied at St Thomas's Hospital, London, and under John Hunter. In 1800 he became surgeon to Guy's Hospital, and 13 years later was appointed professor of comparative anatomy at the Royal College of Surgeons. He made many advances in surgery, specialising in hernia and other abdominal complaints, and in recognition of his work was made a baronet in 1820. He died Feb 12, 1841.

Cooper Thomas. English Chartist and poet. Born in Leicester, March 20, 1805, in 1841 he became prominent in the Chartist movement, and in 1843 for advocating strikes was sent to prison for two years. Hitherto a free thinker, in 1856 he began to lecture on Christian evidences. He died at Lincoln, July 15, 1892. While in prison Cooper wrote *The Purgatory of Suicides*, *The Paradise of Martyrs* and an *Autobiography*.

Cooper Thomas Sidney. English painter. Born in Canterbury, Sept 26, 1803, he studied in London, and at Brussels from 1827 to 1830. He was elected R.A. in 1867, and in 1882 presented an art gallery to his native city. His animal pictures are well known. Examples are in the National Gallery, Tate Gallery and Wallace Collection. Cooper died Feb 7, 1902.

Co-operation Acting together for mutual benefit. Co-operation in agriculture, which takes the form of setting up creameries, bacon factories, etc., to deal with the produce of a group of farmers, is one form. There are also co-operative societies for the building of houses.

In the narrower sense co-operation is used for the movement started by Robert Owen in 1821. His idea was that a body of consumers should band themselves together to supply their own wants and so eliminate the capitalist. In 1844 a few of his followers opened a store in Rochdale, the profits taking the form of a dividend. Non-members were supplied with goods, but received a lower dividend.

The Rochdale society soon numbered 5000. Similar stores were opened in Leeds, Derby, Oldham, Nottingham, Halifax, Manchester, Bolton, and elsewhere and the movement spread to the south. Some of the societies soon had a chain of shops and auxiliary establishments. Management was in the hands of committees elected by the members.

Despite many failures and much default, the movement grew. In 1861 a central pur-chasing agency, which became the Co-operative Wholesale Society, was established.

In Great Britain there are 1135 retail societies, 92 productive societies and 3 wholesale societies. The turnover of the retail societies for 1934 was

over £207,000,000 The wholesale societies, which own factories for making clothing, and other industrial establishments have a yearly turnover of about £100,000,000 The dividends of the retail societies average about 1s 10d in the £ or just under 10 per cent The co-operators hold an annual congress and conduct a weekly paper, *The Co-operative News* They have secured the return of several members to Parliament

Cooper's Hill District of Surrey It is near Staines, overlooking the Thames Here in 1870 a college was opened for training candidates for the engineering service in India It was closed in 1906

Coot (*ulca atra*) Water fowl belonging to the rail family It is widely dispersed throughout northern Europe and Asia The plumage is uniform black, but the males are distinguished by a light bare callosity on the head, from which the bird is sometimes called the bald coot The coot breeds in inland waters, but in winter usually resorts to estuaries and other waters such as the Broad's and Southampton Water

Cootamundra Town of New South Wales It is 260 m from Sydney, a railway junction and an agricultural and mining centre Pop 3350

Coote Sir Eyre British soldier Born in Co Limerick in 1726, as a captain in the 39th foot he served with distinction in the advance on Calcutta and at the battle of Plassey In 1759 he commanded the forces at Madras, and next year defeated the French under Lally at Wandiwash He was knighted, and in 1779 went out to India as commander-in-chief, achieving his great triumph in 1781 by the overthrow of Hyder Ali He died at Madras, April 28, 1783

Copal Resin used in the manufacture of varnish It is obtained from various sources, the most important commercially being *trachylobium hornemannianum*, which yields what is known as Zanzibar, or East African copal It is both raw and in the fossil state, the latter being more valuable

Co-partnership Arrangement whereby workers, over and above standard wages, share in net profits and in the control of and responsibility for an undertaking

In 1930 there were in existence 491 schemes of this kind with 238,000 employees concerned They distributed on the average £9 18s to each co partner There is an Industrial Co partnership Association with headquarters in London

Cope Liturgical vestment Once the cope was a *cappa*, or raincoat worn by clergy and laity alike Now it is semi-circular, richly decorated and held in place by a morse or a piece of silk fastened across the breast Anglican bishops wear the cope at important ceremonies

Cope Sir Arthur Stockdale English portrait painter A son of C W Cope, R A, he was born Nov 2, 1857, educated at Norwich Grammar School and Wiesbaden, and received his training at the Royal Academy Schools and Paris In 1876 he began exhibiting at the Royal Academy and in 1910 was elected P.A His numerous works include portraits of King George and King Edward In 1917 he was knighted

Cope Sir John. English soldier He entered the army about 1720 and served abroad in 1742 During the Jacobite rebellion

in 1745 he was made commander-in-chief of the English forces and met the rebels at Prestonpans His troops fought so badly that a court of inquiry was held, but he was exonerated. He died July 28, 1760

Copenhagen Capital of Denmark. It is situated mainly on the east coast of the Island of Zealand and with its southern portion, called Christianshavn, on the adjacent Island of Amager, began to assume importance in the 12th century, but it was not until the middle of the 15th that it passed into the possession of the crown and became the capital Christian I founded the university in 1479 Pop (1931), 771,168

There are several palaces, one, the Rosenborg, is now an art gallery and museum The Charlottenborg is also public property The city hall is a fine edifice and the Thorvaldsen is one of several museums Of the many churches, the most noted are the cathedral and the Frederick and Holmen's

Copenhagen is Denmark's banking and financial centre and the headquarters of its literary, educational and artistic activities The chief industries are connected with shipping Its industries include textiles, watches, clocks, porcelain, brewing, distilling and sugar refining

The most celebrated incident in the history of Copenhagen is the battle of April 2, 1801, when a British fleet under Hyde Parker, with Nelson as second in command, was despatched to force Denmark's withdrawal from the "armed neutrality" By a daring manoeuvre of his division of the fleet, Nelson gained a brilliant victory, and the object of the expedition was achieved

Copernicus Nicolaus Polish astronomer Born at Thorn, Feb 19, 1473, he studied mathematics at Cracow, canon law and astronomy at Bologna and medicine at Padua From 1507 to 1513 he lived at Heilsberg, and later Frauenberg where he elaborated his treatise *De Revolutionibus Orbium Coelestium*, which demonstrated the true relations of the earth to the sun and planets Copernicus was reluctant to publish the whole work The summary, however, made such a deep impression, that at last, in 1540, he consented to publication. He died May 24, 1543

Copper Metallic element. Its chemical symbol is Cu and atomic weight 63.1. Of reddish colour, it is malleable and ductile, but nearly as tenacious as iron It was known and used by man long before the discovery of iron Bronze, which is the alloy of copper with tin, was the first compound metal, and in the manufacture of weapons was not completely superseded by iron until comparatively late in historic times The name copper points back to the time when Rome drew most of its copper supplies from Cyprus, hence, *aes Cyprium*, which was colloquially shortened to *cuprum* and later corrupted into *cuprum*

Copper is found in two forms—native or virgin copper and copper ores The former, of which the largest deposits are in the Lake Superior region, consists of metallic crystals practically identical with smelted copper The latter, which are numerous and widely distributed, include the oxides cuprite and melanconite, the carbonates malachite and chrysolyte and the sulphides—most valuable of all the ores—chalcocite, chalcopyrite, urbescite and tetrahedrite The United

States produces nearly half of the total world output of copper. According to the most recent returns available in 1933, this amounted to 1,430,000 tons. Of the other copper producing areas, Chile, Canada, Mexico, Spain, Japan and Australia are the most important. Recently work has been started on vast deposits in Rhodesia. Great Britain was for over 2000 years one of the great sources of copper and tin, but has now practically exhausted her supplies.

Copper Age Term used by archaeologists for the period in which man used implements made of copper. It is supposed to follow the stone age, and to be followed by the bronze age. Its date was somewhere about 2000 B.C.

Copperhead Poisonous snake of N. America. During the American Civil War the name was applied by Lincoln's supporters to those Northerners who advocated an agreed peace with the South. Hence it came to be a nickname for the Democratic party.

Coppermine River of the north west territories, Canada. It flows into Coronation Gulf. It was first explored by Sir John Franklin in 1821. It is nearly 500 m long, and consists largely of a series of lakes and rapids.

Copra Dried coconut kernel. It yields an oil used for the manufacture of margarine, soap, candles etc.

Coprolites Fossilised excrements of extinct saurians and fishes. They are valuable as manure, by reason of their richness in calcium phosphate. East Anglia is rich in such deposits. To prepare the manure they are ground to powder and treated with sulphuric acid.

Copts Name of a Christian sect in Egypt. The Coptic community represents, not only the indigenous Christianity, but also the ancient race of Egypt.

The Copts form about one fourth of the total population of Egypt, but hold a position of great influence in the business and professional life of the country. The Coptic language, which bears the same relation to ancient Egyptian as modern Greek to classical Greek, is no longer in use, save to a limited extent in the services of the church.

The Coptic Church has an ancient ritual, not unlike that of the Greek Church. It does not use the crucifix or reserve the sacrament. Its head is the patriarch of Alexandria under whom are bishops in Egypt and Abyssinia.

Copyhold Method of holding land. On English manors much land was held on conditions laid down on the rolls of the manor and this was called copyhold. The conditions were usually a payment of some kind or a service to the lord of the manor, perhaps the payment each year of a fowl, or the performance of some days of work on the lord's land. Gradually these services were changed into money payments, but the land was still called copyhold. It was a less complete form of ownership than freehold, but more complete than leasehold. This form of land tenure was abolished by the law of Property Acts of 1925.

Copyright The sole right to reproduce a book, play, picture, photograph, piece of music, or any other artistic work, or any substantial part thereof. In Great Britain the existing law was established by the Act of 1911, under which copyright of a book exists for the lifetime of the author

and 50 years after his death. The provisions that deal with music and musical contrivances, such as gramophone records, are very elaborate.

In cases of an infringement of copyright an author can ask the court for an injunction to prevent publication of the offending book or can claim damages. Copyright *can* be transferred from one person to another.

By the Berne convention of 1908 certain countries recognise one another's copyrights. To obtain protection in the U.S.A. a British author must have an edition of his work set up in type in that country and published simultaneously.

Coquelin Family of French actors. Benoît Constant Coquelin was born Jan. 23, 1841, made his début in Molière's *Dépit Amoureux* and by rapid steps became France's leading actor. He toured America with Sarah Bernhardt, visited London in 1892, 1902 and 1908, and died in Paris, Jan. 27, 1909.

Coquelin's brother, Ernest Alexandre Honoré Coquelin, was born May 16, 1848. His career was also brilliant until his death, Feb. 8, 1909.
